The bridge which forms the communication between Francfort and Saxenhauſen is four hundred and fifty paces in length; and over a gate as you enter upon it is a Latin inſcription in gold letters to the following purpoſe: "In "the reign of Leopold I. the moſt auguſt emperor of the "Romans and Germany, king of Hungary and Bohe-"mia, the true father of his country, under whoſe happy "auſpices the empire enjoys an uninterrupted pro-"ſperity, this fortified gate was repaired by the city of "Francfort." The Jews quarter conſiſts of a very narrow ſtreet about an Engliſh mile in length, and extremely dirty. At each end of it is a gate, which is carefully ſhut every evening, and the keys carried to the magiſtrates. The houſes are moſtly four, five, or ſix ſtories high; but the apartments are extremely filthy. This quarter is ſaid to contain three or four thouſand perſons; but, according to the Jews themſelves, they amount to ſome thouſands more. The principal commerce they carry on here is in buying and ſelling old goods, in going from inn to inn to ſell toys to ſtrangers, and in exchanging ſuch money as is not current here. They are obliged, under ſevere penalties, to fetch water when a fire happens in any part of the city, however diſtant it may be from their quarter; and in return the magiſtracy permit them to chooſe twelve judges out of their own body for deciding the differences and quarrels that happen among them; but thoſe who will not ſubmit to their deciſions, are allowed to appeal to the tribunals of the Lutherans. As to their dreſs, it is ſuitable to the filthineſs of their dwellings. The men generally wear cloaks, that are extremely coarſe and thread-bare, with flapped hats, old greaſy ruffs, and thick pointed beards. Their women indeed are not quite ſo ragged and dirty as the men; they wear over their cloaths ſhort cloaks of black crape, bound about their necks by claſps of gilt copper, and round their ſhoulders a border of tinſel about a foot broad, ſhining like gold. Their head-dreſs formerly reſembled that of the Chriſtian women; but the magiſtrates have obliged them to wear a coarſe wrapper about their heads, ending at their forehead in two large horns about four fingers in breadth, one of which is covered with black gauze, and the other with a piece of lawn dyed blue. Girls are not permitted to enter the ſynagogue, and are diſtinguiſhed from the married women by their head-dreſs, which is a piece of red taffety bordered with gold gauze. Many Jeweſſes wear earrings that repreſent the ſigns of their houſes, or ſhops; as for inſtance, if a cat be the ſign, the wife or girl of the houſe carries dangling at her ears two cats in miniature of copper gilt.

But though the Jewiſh worſhip and that of the Papiſts is tolerated in this city, and the latter in particular have many churches and convents; neither the French nor German Calviniſts are permitted to have one place of religious worſhip within the walls, and are obliged to go every Sunday to Bockenheim, which lies about a league from the city in the territory of Hanau. The wealthy perſons among them have frequently offered a large ſum to the magiſtracy, for leave to aſſemble for public worſhip in Francfort, were it in ever ſo mean a place; yet ſuch is their unchriſtian partiality againſt their brother reformers, and ſuch enemies are they to religious liberty, that this privilege has been obſtinately refuſed them. However, Mr. Buſching ſays, that it is thought they will at laſt be permitted to build a church juſt without the town. The number of coaches which generally go to the two churches at Bockenheim every Sunday amount to about two hundred and fifty, many wealthy perſons in Francfort being of the reformed church; and it is there a common ſaying, "That the Roman catholics have the "churches, the Lutherans the magiſtracy, and the Cal-"viniſts the money."

Among

Among the natural curioſities at Francfort, that of the hazel-tree, mentioned by Mr. Keyſler, is highly worthy of notice: it is to be ſeen in Mr. Haſſel's garden in the city, and is mentioned in the Francfort Chroniicles above two hundred years ago. "The lower part of its trunk, "ſays that gentleman, is ſeven Francfort ells in circum- "ference, that is, fifteen feet nine inches: its height is "equal to that of the houſes near it, and it ſtill bears "nuts every year. The ſhells of the nuts it pro- "duces are very thick; but the kernel has the ſame "flavour as thoſe of other nuts. The emperor Leopold "dined twice under this tree. The ſoil of this garden, "he adds, muſt be particularly favourable to hazel-trees; "for though the adjacent ground yields only common "ſhrubs, four hazel-trees planted within theſe fifteen "years in Mr. Haſſel's garden, are already above twenty "feet high. Theſe recruits are the more neceſſary, as "the above-mentioned old tree begins to decay."

The fairs held at Francfort are famous all over Europe; and Mr. Keyſler obſerves, that ſome merchants, who are competent judges, aſſured him, that ten millions of dollars would hardly purchaſe the merchandize expoſed to ſale at one of theſe fairs, the goods in the ware-houſes and ſhops included. Of the manufactures carried on here, thoſe of ſilk and porcelain are the moſt conſiderable.

This has always been an imperial city. In the diet it holds the ſixth place among the imperial cities of the Rhine, and alſo votes in the diet of the Upper Rhine.

The magiſtracy here conſiſts of a judge, the bench of ſchoffen or aldermen; the ſecond bench of the council; together with the third, which is compoſed of artificers and tradeſmen. The laſt is alſo ſummoned in affairs of general concern, and executes the offices relating to the police; but the direction of important affairs is lodged in the two former, out of whom the two burgomaſters are annually choſen. Law-ſuits are here determined by the ſchoffens and ſyndics. The members of the conſiſtory are two ſchoffen, the *ſenior miniſterii*, the two eldeſt paſtors, and two civilians. The territory belonging to the city contains a number of villages, ſeats, and farms; and the ſides of the Maine are adorned with a vaſt number of gardens and vineyards, in which ſome of the vines are propped up by ſtakes, and others ſupported in the form of arbours; but the wines they produce are not very ſtrong.

We ſhall now take notice of the imperial cities of Friedberg and Wetzlar.

The imperial city of Friedberg ſtands near the Uſbach, on a very fertile ſpot on the ridge of hills called the Hohe, and was formerly much larger than it is at preſent. This city enjoys the twelfth ſeat on the bench of the imperial towns of the Rhine. The magiſtracy, with the greateſt part of the burghers, are Lutherans. It is governed by a burgrave and ſix nobles, who are members of the general council, and of that of the ſtates; and when any affairs relating to the empire and circle come on the carpet, notice is given them of it by the magiſtracy, that they may jointly agree on the perſon to be deputed, and on the nature and extent of his powers.

The imperial town of Wetzlar is ſeated on the Lahn, near its confluence with the Wetzbach, and on the other ſide the Dill. The magiſtrates and moſt of the burgherans are Lutherans. Beſides the cathedral, which the Proteſtants hold in common with the Catholics, they have a chapel, and a grammar-ſchool in a building that was originally a Franciſcan convent, and the church of the hoſpital of the Holy Ghoſt. The Catholics have not only the uſe of the cathedral, but a Franciſcan convent, with a church, and a Jeſuits college. The Calviniſts have likewiſe a church here. In the town-houſe are held the meetings of the imperial-chamber, which in the year 1693 was removed hither from Spires.

Wetzlar was an imperial city ſo early as the days of the emperor Frederic I. and has the thirteenth bench of the imperial cities of the Rhine, and alſo a vote in the diets of the Upper Rhine.

SECT. VIII.

Of the Dutchy of Deuxponts, and the Principality of Naſſau. An Account of the Family of Naſſau, and the Titles, Arms, and principal Places belonging to each of thoſe Princes.

THE dutchy of Deuxponts, which is ſituated in the moſt ſouthern part of the circle, is in general a mountainous barren country; yet is interſperſed with ſome fertile valleys. It extends in its greateſt length about forty miles, and from eight to twenty-five in breadth. It belongs to the duke of Deuxponts, whoſe annual revenue ariſing from this dutchy is computed at three hundred thouſand florins.

Deuxponts, the capital of this dutchy, is called by the Germans Zweybrucken, and in Latin Bipontium, all which ſignify Two Bridges, a name which it received from its two bridges over the rivulets of Bliſe and Swolb, on which it ſtands; and this name it gave to the whole dutchy. It is ſituated in the forty-ninth degree thirty minutes north latitude, and in the fourth degree thirty-one minutes eaſt longitude. It is a ſmall, but neat well-built town, and has a fine palace erected in the modern taſte. Of the great church here, the Calviniſts have the nave, and the Catholics the choir. The Lutherans have likewiſe a church, and in this town is alſo a gymnaſium. During the thirty years war it ſuffered extremely, as it alſo did in 1677, when it was taken by the French.

In a vale at a ſmall diſtance is Schuſlic, a pleaſure-houſe erected by Staniſlaus, the dethroned king of Poland, during his reſidence at Deuxponts; but it is now gone to ruin.

The principality of Naſſau, which we ſhall next deſcribe, is bounded on the north by Weſtphalia, on the eaſt by Solms, on the ſouth by the biſhopric of Mentz, and on the weſt by the electorate of Treves. The length of the whole principality is computed at fifty-ſeven miles, and its breadth at thirty-two.

Though it is for the moſt part mountainous and woody, it is not without fine arable and meadow land.

The founder of the preſent princes of Naſſau was count Henry I. ſurnamed the Wealthy, who, in the thirteenth century, left to his two ſons, Walram and Otho I. the county of Naſſau, with its feudal, patrimonial, and hereditary lands.

With reſpect to the firſt line, William Henry, prince of Naſſau-Uſingen, left two ſons, who were the founders of the two preſent ruling lines; namely, prince Charles, of the Naſſau-Saarbruck-Uſingen line, and prince William Henry, of that of Naſſau-Saarbruck, who, on the twenty-third of September, 1735, agreed to a partition, by which the laſt gave to the former all the inherited and eſcheated land on this ſide the Rhine, and the former gave to the latter thoſe lying on the other ſide of that river.

The only remaining line of the deſcendants of Otho is that of Naſſau-Dillenburg-Dietz, which ſubſiſts in the prince of Orange, hereditary ſtadtholder of the United Provinces.

The titles of the prince of the elder line deſcended from Walram are, Prince of Naſſau, count of Saarbruck and Saarwerden, and lord of Lahr-Wiſbaden and Idiſtein.

His arms for Naſſau are a lion, in a field azure, ſemée of billets or: for the county of Saarbruck, azure, a lion argent ſemée of croſslets argent: for the county of Saarwerden, ſable, a ſpread-eagle argent: for Mors, or, a feſſe ſable: for Weilnau, or, two leopards paſſant gules: for Mehreinberg, verte, a ſaltier croſs or, ſemée with croſslets or: for Mahlberg, or, a lion ſable: for Lahr, or, on a feſſe gules.

The titles of William V. prince of Orange, and ſtadtholder of the United Provinces, with reſpect to the territories of Naſſau are: Prince of Naſſau, count of Katzenellnbogen, Vianen, and Dietz, and lord of Beilſtein. His arms for Naſſau are, azure, a lion or, ſemee of billets or; for Katzenellnbogen, or, a lion rampant gules; for

Vianen, or, a feſſe argent; for Dietz, gules, two lions paſſant or.

The princes of the antient line of Walram have no ſeat or voice in the college of princes; but have five votes at the diet of the circle of the Upper Rhine. The princes of the younger branch acquired a ſeat and vote in the college of princes in 1659, and have two other votes, both which are inherent in the ſtadtholder of the United Netherlands, who has alſo two votes in the diet of Weſtphalia.

The county of Naſſau-Dietz lies on the river Lahn, and was formerly called the Golden Country, on account of its fertility, and conſiſts of nine prefecturates, the principal places in which are the following:

Dietz, the capital of a prefecturate of the ſame name, is ſeated on the Lahn, over which it has a bridge of ſtone, and is divided into the Old and New Town. The prince has a palace here which ſtands on a hill. The Calviniſts have two churches here, and the Lutherans one. At a ſmall diſtance from the town is Oranienſtein, a ſeat belonging to the prince ſeated on the Lahn.

Weilburg, a handſome town which ſtands on an eminence by the river Lahn, over which it has a bridge of ſtone. The prince's palace here contains ſome very elegant apartments, with a fine garden belonging to it, and a magnificent chapel. All the roads near the town form beautiful viſtas, they being laid out in a direct line, and each planted on both ſides with a row of trees. In the neighbourhood is a large menagerie, with a pleaſure-houſe.

In the country belonging to Naſſau-Saarbruck-Uſingen is Wiſbaden, a handſome, populous, and thriving town, ſeated in the lordſhip of the ſame name, and in a good wine country. The prince's palace in this place was built in the beginning of the preſent century. The warm baths here were known to the antient Romans, and are ſtill famous. This town ſuffered greatly in the wars of the ſeventeenth century; but has been ſince conſiderably improved by prince George Auguſtus.

The prince of Naſſau-Uſingen has a beautiful ſeat in the village of Biberich, which is ſituated on the Rhine: it was erected by prince George Auguſtus, and embelliſhed by prince Charles: the building is large and magnificent, and ſtands in a delightful ſituation.

The lands belonging to Naſſau-Saarbruck, are ſituated between Lorrain, which lies to the weſt, and Deux-ponts to the eaſt; but though it is for the moſt part ſandy and woody, it abounds in iron and pit-coal, and the ſoil in ſome places produces good corn.

Saarbruck, the capital of this little diſtrict, lies on the river Saar. It was ſet on fire, and its walls deſtroyed by the Imperialiſts, on their recovering it from the French in 1676; but was again rebuilt, and at preſent conſiſts of about two hundred houſes, with a Lutheran and Calviniſt church. The prince's palace in this place was erected by prince William Henry. Oppoſite to this town on the other ſide of the river is St. Johann, with which it has a communication by means of a bridge. It is equal to Saarbruck in extent, and is defended by a rampart and moat. The Catholics are in the poſſeſſion of the old church, and ſince the year 1727, a new one has been erected for the Lutherans.

SECT. IX.

Of the Principality of Herſfeld, the Counties of Solms, Upper Iſenburg, and Witgenſtein; the Lordſhip of Weſtburg, and the other ſmall States in the Circle of the Upper Rhine.

BESIDES the countries already deſcribed in the circle of the Upper Rhine, there are a conſiderable number of others, moſt of which are very ſmall and inconſiderable, and are only remarkable for having a ſeat and voice in the college of princes, and in the diets of this circle.

One of the chief of theſe is the principality of Herſfeld, or Hirchfeld, which borders on Upper and Lower Heſſe, and is about twelve miles long, and the ſame in breadth. It is ſubject to the houſe of Heſſe Caſſel, who on that account have an additional vote in the college of princes, and at the diet of the circle of the Upper Rhine.

Herſfeld, its capital, is ſeated on the Fulda, forty miles to the ſouth of Caſſel, and is a neat but ſmall city, in which is a palace, a cathedral, a town church, a ſeminary, and a wealthy hoſpital.

The county of Solms is chiefly ſituated on both ſides the Lahn, and borders on the territories of Heſſe and Naſſau, and the diſtrict of the city of Wetzlar. It abounds in corn and cattle, and has many iron mines, which employ ſeveral founderies and other works.

The counts of Solms, which are ſuppoſed to be a branch of the family of Naſſau, are divided into the two principal branches, that of Solms-Braunſels, and that of Solms-Lich, each of whom has the following title, Lord of Munzenberg, Wildenfels, Sonnenwald, &c. and their arms are, for Solms, or, a lion azure; for Munzenberg, party per feſſe or and gules; for Wildenfels, ſable, a lion argent.

The counts of Solms have four votes in the college of the imperial counts of Wetteravia, and a like number in the diet of the circle of the Upper Rhine.

The principal place in the whole county is Braunfels, which is ſeated on a hill, where is a handſome caſtle or palace belonging to the prince, fortified after the antient manner, and is a place of great ſtrength. It contains within it a church that alſo ſerves the inhabitants of the town, which ſtands on the outſide. Both the caſtle and town are ſupplied with water by works erected at the foot of the hill. In the ſeventh century this town was twice deſtroyed by fire.

Upper Iſenburg is thus called to diſtinguiſh it from the county of Lower Iſenburg, in the Palatinate, and properly conſiſts of the lordſhip of Budingen. It is a fine corn-country, that has alſo ſome conſiderable woods, paſtures, and vineyards; and is watered by ſeveral little ſtreams, as the Kinzig, the Semen, and the Nidder.

The four princes of the houſe of Iſenburg govern different parts of this country, and ſit in the college of the imperial counts of Wetteravia, and in the diets of the circle of the Upper Rhine.

The principal places in this county are the two following:

Offenbach on the Maine, a ſmall town, which contains a palace, a German Calviniſt, a French Calviniſt, and a Lutheran church; and has ſeveral flouriſhing manufactures.

Budingen, though a ſmall town, is the capital of the whole country. The palace here has a fine parterre, contiguous to which is an orphan-houſe, in which a woollen manufacture is carried on. Here is alſo a free-ſchool.

The county of Witgenſtein is nineteen miles in length, and its greateſt breadth is ſomewhat above thirteen. It borders on Heſſe-Darmſtadt, the principality of Naſſau-Dillenburg, and the dutchy of Weſtphalia. Some parts of it are very mountainous, but yield plenty of wood, with mines of ſilver, copper, and iron. It has good paſtures; but produces little grain, except oats.

This county is divided between the two houſes of Sayn-Witgenſtein of Witgenſtein, and Sayn-Witgenſtein of Berleburg. Each houſe has a diſtinct vote both in the college of the counts of the empire, the diet of the Upper Rhine, and the college of Wetteravia. The joint revenue of theſe counts is computed at fifty thouſand rix-dollars a year.

The principal places in this county belonging to each of the counts are the following:

Witgenſtein, ſeated on a high mountain, and the patrimonial-houſe of the antient counts of Witgenſtein, and where thoſe of Sayn-Witgenſtein ſtill reſide.

Berleburg, a ſmall town ſeated on the little river Berlen, near the place where it falls into the Eder. In this town is a fine palace, and two other houſes belonging to the count.

There are alſo the counties of Falkenſtein and Wartemberg, whoſe counts enjoy the ſame privileges; but as they have no towns worthy of notice, we ſhall not trouble our readers with a dry deſcription of theſe ſmall diſtricts.

B. Williams Sculp.

The lordſhip of Weſterburg is a ſmall territory ſeated between the electorate of Treves and the territory of Naſſau, and contains fine paſtures, and conſequently ſheep and horned cattle. It alſo produces barley, rye, oats, and pulſe, with plenty of very fine earth-nuts. The woods are thinned, but it has a remarkable mine of what is called wood-coal, which is alone ſufficient to furniſh that neighbourhood with fuel. The colour, filaments, and twigs of this coal, nearly reſemble thoſe of wood, and the depth of the pit is about twenty feet. In this country are alſo deer and other game; the rivers abound with trout and cray-fiſh, and the ponds with pike, carp, and other kinds.

This lordſhip belongs to the counts of Weſterburg, of which there are ſeveral branches: it only contains the little towns of Weſtburg and Walterſburg, and ſeveral villages.

There are alſo a few other lordſhips, as thoſe of Kirchingen, Bratzenheim, &c. but they and ſome other little ſtates are too inconſiderable to deſerve a particular deſcription in a work which has for its ſubject not a particular country, but the whole terraqueous globe.

The biſhopric of Straſburg is alſo juſtly conſidered as a ſtate of the empire, on account of a part of this biſhopric lying in the Upper Circle of the Rhine; as is alſo the biſhopric of Baſil, for the ſame reaſon; and both theſe biſhops have a ſeat on the ſpiritual bench of the council of the princes of the empire, and at the diets of this circle; but as the principal part of the biſhopric of Straſburg, and the city of Straſburg itſelf, is in Alſace, and the chief part of the biſhopric of Baſil, with its capital, is in Swiſſerland, they will be more properly deſcribed in treating of thoſe countries.

CHAP. XVIII.

The Circle of WESTPHALIA.

SECT. I.

Of Weſtphalia in general; and firſt of the Biſhopric of Paderborn. Its Situation, Extent, Produce, and Rivers: the Prerogatives of the Biſhop. A Deſcription of the City of Paderborn, and ſome remarkable Springs.

THE people who inhabit the country between the Weſer and the Rhine were antiently called Weſtphalians, and from them that territory received the name of Weſtphalia; but the circle of Weſtphalia, which conſtitutes a part of that country, compriſes in it other territories; and we ought carefully to diſtinguiſh between the circle of Weſtphalia, Weſtphalia itſelf, and the dutchy of that name.

This circle is ſurrounded by the Burgundian circle, the United Provinces, the Northern or German Sea, the Upper Rheniſh, and the Electoral Rheniſh circles; it being two hundred miles long, and between a hundred and fifty and two hundred broad.

Certain ſtates were formerly reckoned in this circle, which at preſent no longer belong to it, as Utrecht, Guelders, and the biſhopric of Cambray; in other reſpects alſo the antient and modern liſts of the countries of the Weſtphalian circle differ greatly from each other. We ſhall include under it the biſhoprics of Paderborn, Munſter, Liege, and Oſnabrug, the dutchy of Verden, the principality of Minden, the dutchy of Cleve, Juliers, and Berg, &c. the principalities of Eaſt Frieſland and Mors, &c.

The ſummoning princes and directors of the circle are the biſhop of Munſter, and with him the electors of Brandenburg and the Palatinate, as dukes of Cleve and Juliers, both of whom, in this directory, enjoy together but one voice. The diets of the circle were uſually appointed at Cologne; but none have been held ſince the year 1718. The archives belonging to it are kept at Duſſeldorf.

With reſpect to religion, this circle is one of the mixed, and both the catholic and proteſtant ſtates nominate two aſſeſſors, to aſſiſt at the imperial and chamber-court of the empire.

We ſhall begin this circle with the biſhopric of Paderborn, which is bounded on the eaſt by Heſſe, and by the river Weſer, which divides it from the principality of Calenberg; on the north by the county of Lippe; on the weſt by the counties of Rietberg and Lippe, and the dutchy of Weſtphalia; and on the ſouth by the ſame, and the county of Waldec. Its greateſt extent from eaſt to weſt amounts to fifty-two miles, and from north to ſouth about forty-two miles.

It is for the moſt part a very fertile country, and in particular produces a good breed of cattle. It has alſo iron mines, ſalt and medicinal ſprings, with rivers that abound in fiſh; but it is moſt remarkable for its bacon and veniſon.

The Weſer waſhes a ſmall part of the country to the eaſt, and the Diemel, after traverſing a great part of the biſhopric, diſcharges itſelf into it. The Bever and the Nette receive their ſource in this country, as does alſo the Great Hemmer, the Hee, the Nieſe, and other little ſtreams, which fall into the Weſer: the Lippe, which riſes here, runs by Weſel into the Rhine. The other rivers are the Alme, the Pader, and the Ems.

In the whole biſhopric are twenty-three towns, three boroughs, ſixty-four pariſhes, and ſixteen monaſteries, all ſubject to the biſhop.

The inhabitants are in general of the Romiſh religion; but there are many Lutherans among them, who frequent the churches of that perſuaſion in the neighbouring countries.

The biſhop is a prince of the empire, and ſits at the diets of the empire between the biſhops of Hildeſheim and Freyſingen, and as a prelate is under the archbiſhop of Mentz. The epiſcopal chapter conſiſts of twenty-four prelates and capitulars, who muſt be twenty-one years of age before they are admitted, and muſt prove their noble extraction four degrees backwards.

The revenues of this ſee, which is ſuffragan to Mentz, is thought to be about twenty-five or thirty thouſand pounds.

The arms of the biſhopric are, a croſs or, in a field gules.

The high colleges here are the general-vicarſhip, the privy-council, the regency-chancery, the aulic-chamber, the officialſhip, and the temporal aulic-court.

This biſhopric is divided by high mountains, called the Egge, into the Fore and Upper Foreſt diſtrict.

Paderborn is the capital of the biſhopric, and is an antient city that ſtands in a pleaſant fruitful country, in the fifty-firſt degree forty-five minutes north latitude, and in the eighth degree twenty-five minutes eaſt longitude, and takes its name from the river Pader, which riſes in the center of it. Five of the largeſt ſprings riſe under the cathedral and the adjacent houſes, diſcharging ſo copious a ſtream that at twenty paces diſtance ſeveral mills, and afterwards a ſtill greater number in the town, are driven by it. In the cathedral formerly ſtood the images of the twelve apoſtles made of the fineſt ſilver; but in 1622 duke Chriſtian of Brunſwic took them away, and cauſed rixdollars to be ſtruck from them, with this inſcription, GOD'S FRIEND, THE PRIEST'S ENEMY. He alſo took the ſilver coffin of St. Liborius, which he likewiſe converted into money. Here is a collegiate church, two pariſh-churches, a Benedictine abbey, a college of Jeſuits, five other cloiſters, an univerſity erected in the year

1615, and a gymnaſium. This city antiently enjoyed the immunities belonging to a city of the empire; it was reckoned among the Hanſe-towns, and carried on a great trade; but this trade is decreaſed, and the inhabitants, for the moſt part, ſubſiſt by agriculture and the breeding of cattle.

At Metborn, two miles from Paderborn, are three ſprings, two of which are not above half a yard aſunder, and yet are of very different qualities: the one is limpid, of a bluiſh colour, luke-warm, and contains ſal-armoniac, ochre, iron, vitriol, allum, ſulphur, nitre, and orpiment: the other is as cold as ice, turbid and whitiſh, yet has much the ſame contents; but the water has a ſtronger taſte, and is heavier than the other. It is ſaid to be a perfect cure for the worms, yet the fowls that drink of it are immediately thrown into convulſions; but are ſoon recovered by an infuſion of common ſalt and vinegar. The third ſpring, which is about twenty paces diſtant from the other two, is of a greeniſh colour, but very clear; the taſte has a mixture of ſweet and ſour.

In this territory is the famous field of battle, where the brave prince Arminius, general of the German forces, defeated and ſlew Quintilius Varus, and routed the Roman army under his command; a moſt important victory, which freed the Germans from the Roman yoke.

SECT. II.

Of the Biſhopric of Munster.

Its Situation, Produce, and Rivers; the Religion of the Inhabitants; the Arms, Prerogatives, and Revenue of the Biſhop; with a Deſcription of the City of Munſter, and Coesfeld.

THE biſhopric of Munſter is bounded on the north by the principality of Eaſt Frieſland, the county of Oldenburg, and the prefecturate of Wildeſhauſen, which belongs to the electoral houſe of Brunſwic; to the eaſt by the biſhopric of Oſnabrug, with the counties of Tecklenburg, Lingen, and Ravenſberg; to the ſouth by a ſmall part of the dutchy of Weſtphalia, the county of Mark, and the dutchy of Cleve; and to the weſt by the United Provinces, the county of Zutphen, and the provinces of Upper Uſſel, Groningen, and the county of Bentheim; and is the largeſt of all the Weſtphalian biſhoprics.

This country is generally level, yet is interſperſed with ſome agreeable eminencies, but has no high mountains. The extenſive heaths ſerve for the breeding of cattle; it has alſo fruitful plains, fine woods, and good quarries of ſtone.

The rivers here abound with fiſh; the principal of them are the Ems, which traverſes the whole length of the biſhopric, and is increaſed by ſeveral ſmaller ſtreams, particularly by the Aa, which riſes in this country; the Lippe, which forms its boundary to the ſouth; the Vecht, which riſes here; and the Berkal. The lake of Dummer, which is near five miles in length, and half a one in breadth, lies between this biſhopric and the county of Diepholz.

Munſter, beſides its capital, contains twelve towns that are ſummoned to the land diets, with twelve others that have not this privilege, and the ſame number of ſmaller towns.

At the Reformation the doctrines of Luther gained ground in this country; but the exerciſe of that religion was afterwards ſuppreſſed. There are ſtill, however, ſeveral nobles, among whom ſome are of the Lutheran, and others of the Calviniſt church; and at Weerdt both are tolerated: the popiſh religion, however, prevails.

The principal commerce of the inhabitants is in hogs and Weſtphalia hams. They generally endeavour to preſerve a neutrality, when their neighbours are at war; and though there are ſeveral fortreſſes in the dioceſe, they pay twelve thouſand crowns per annum for the protection of the ſtates of Holland, who have uſually a great ſway in the choice of a biſhop.

The provincial ſtates of this biſhopric conſiſt of the clergy, the nobility, and the above-mentioned towns, and are uſually held at Munſter.

The arms of this biſhopric are, a feſſe or, in a field azure.

The biſhop is a prince of the empire, and in the college of the princes takes place alternately with the biſhop of Liege; but in ſuch a manner that Oſnabrug always ſits between both. He is the firſt ſummoning prince and director of the circle of Weſtphalia, and at the diets of the circle, enjoys the firſt ſeat and voice. As biſhop he ſtands under the archbiſhop of Cologne. The chapter conſiſts of forty members, who are all nobles, and muſt prove their nobility; and once a year the ſhield and helmet of the youngeſt canon are carried in proceſſion with public beat of drum, that every one may enquire into his pedigree. The epiſcopal domains are more conſiderable than thoſe of Oſnabrug; and the chapter maintains ſeven regiments. The revenues of the biſhop are ſaid to amount to ſeventy thouſand ducats. He becomes heir to ſuch ſtrangers as die here without children; a very unjuſt cuſtom, unknown in any other part of the empire.

This biſhopric is divided into four quarters, each of which is ſubdivided into a number of prefecturates, the principal places in which are the following.

Munſter, in Latin Monaſterium, the capital of the biſhopric, is ſeated in a very fruitful and pleaſant ſpot on the river Aa, in the fifty-ſecond degree ſixteen minutes north latitude, and the ſeventh degree twelve minutes eaſt longitude, thirty-eight miles ſouth-weſt of Oſnabrug. It is ſurrounded with double ditches and ramparts, and has alſo a citadel called the Brille, erected by biſhop Chriſtopher Bernhard, in order to curb the town. The city is almoſt of a circular form, and has eight gates. The houſes are moſtly in the antique taſte, and the principal of them are in the four market-places, particularly the ſenate-houſe, and the halls belonging to the companies. In the ſouth-eaſt part of the city is a large ſquare, where the fronts of the houſes reſt upon pillars, and form handſome piazzas. This city has five collegiate and ſix pariſh churches, beſides a college belonging to the Jeſuits, a great number of convents, and other religious houſes, moſt of them ſtately piles, and ſome of them very delightfully ſituated in the midſt of beautiful gardens.

This city is famous for the peace concluded there in the year 1648, between the Swedes and the emperor, and the princes of the empire, by which an end was put to a war which had laſted thirty years, with vaſt profuſion of blood; a treaty which eſtabliſhed the fortune of many ſovereigns, the liberties of the empire in general, and the free exerciſe of the Proteſtant religion in the empire; and a treaty upon which thoſe that have been ſince made with Germany and the northern parts, have in a great meaſure been founded.

Coesfeld, a town ſituated in a fine plain, is, next to Munſter, the principal town in the whole biſhopric. It was formerly one of the Hanſe-towns, and at preſent contains two pariſh churches, one college of Jeſuits, four nunneries, and one monaſtery, and has likewiſe a princely judge. In the year 1591, it ſuffered greatly by fire, and in 1631, it was taken by the Heſſians.

SECT. III.

Of the Biſhopric of Liege.

Its Situation, Extent, Produce, and Rivers. The States of the Country; the Religion and Commerce of the Inhabitants; with the Titles, Arms, and Prerogatives of the Biſhop; the Offices by which the Government is adminiſtred; and a particular Deſcription of the City of Liege, as alſo of Huy, Dinant, and Spa.

THE biſhopric of Liege lies in the Netherlands, and is bounded on the north by Brabant; on the eaſt by Limburg and Juliers; on the ſouth by Champagne and Luxemburg; and on the weſt by Brabant, Namur, and Hainault, extending from north to ſouth above ninety-five miles; but dividing and running much to the ſouthward, is of very different breadth: ſome ſmall diſtricts of this biſhopric lie within the juriſdiction of Brabant and Luxemburg.

This is a delightful tract, abounding in corn-fields, paſture grounds, and cattle: the hills are covered with vineyards, which produce wines that reſemble the middling

dling wines of Burgundy and Champagne, and the country has conſiderable foreſts, with many quarries of marble and free-ſtone; alſo mines of copper, lead, and iron, brimſtone, vitriol, and pit-coal. This biſhopric is likewiſe celebrated for its mineral waters, as thoſe at Spa and Chau-Fontaine.

The principal rivers by which the country is watered, are the Maeſe and the Sambre.

The provincial ſtates conſiſt of the chapter of the nobility, and the burgo-maſters of the towns; theſe have two general treaſurers and ſix receivers. Each of the two firſt ſtates chooſe four deputies annually. The burgomaſters of the city of Liege are born deputies of the third ſtate; but have four deputies of the ſmaller towns to aſſiſt them. Theſe deputies meet in the epiſcopal palace of Liege.

The principal exports of this country, and particularly of the city of Liege, conſiſt of beer, arms, nails, ſerge, leather, and pit-coal, all which are exported from hence in prodigious quantities.

The titles of the biſhop of Liege are the following. By the grace of God, biſhop and prince of Liege, duke of Bouillon, marquis of Franchimont, count of Looz, Hoorn, &c.

His arms on account of Liege, are a pillar argent, on a pedeſtal of the ſame, with a crown or, in a field gules: on account of Bouillon, a feſſe argent, in a field gules: on account of Franchimont, three lions in a field argent; and on account of Looz, four feſſes gules in a field or.

The biſhop of Liege in the council of the princes of the empire, takes rank alternately with Munſter; but ſo that Oſnabrug always ſits between them. This biſhopric is the third in rank in the circle of Weſtphalia. The eccleſiaſtical juriſdiction of the biſhop is divided into ſeven archidiaconates, and the chapter conſiſts of ſixty perſons.

The prince's privy council, which is filled with ſpiritual and ſecular counſellors, decides all affairs relative to the ſuperiority and immunities of the country, and the rights and prerogatives of the prince. The aulic and rent-chamber determines all matters with reſpect to his revenues. The officialſhip has the direction of every thing relating to religion. The court of the ſcoffen, or high judicial court, determines all criminal cauſes. The ordinary council examines every thing that comes before it by appeals from the feudal and allodial court, as alſo all cauſes inconſiſtent with the privileges of the emperor. The feudal court judges in all feudal diſputes, and the allodial court in all allodial controverſies. The court of the twenty-two judge ſuch officers as abuſe their power.

This biſhopric contains twenty-ſix towns, which are divided into the Walloon and Flemiſh, and has fifteen hundred pariſhes, ſeventeen abbies for monks, who muſt be gentlemen, and eleven for ladies: ſo that the annual revenues of the biſhop are computed at three hundred thouſand ducats, and he is ſaid to be able to maintain eight thouſand troops, without oppreſſing his ſubjects, the bulk of whom are of the Popiſh religion.

The principal places in this biſhopric are the following:

Liege, by the Germans called Luyck, is ſeated on the river Maeſe, in the fiftieth degree forty-ſix minutes north latitude, and the fifth degree twenty-eight minutes eaſt longitude, in a vale between two mountains, one of which ſtands to the north, and the other to the eaſt. The city itſelf is generally divided into the Old or Upper, and into the New or Lower Town, and the laſt is ſubdivided into two parts, namely, into the iſland and the quarter beyond the Maeſe. The Upper Town ſtands on the declivity of the northern mountain, which is called the Holy Walburg, and extends on the ſouth to an arm of the Maeſe, by which it is ſeparated from that part of the Lower Town called the Iſland; but to the north terminates on the Great Maeſe, which divides it from the quarter beyond that river. The Lower Town, alſo called the Iſland, is encompaſſed by two branches of the Maeſe, which unite at the point of the iſland; and the quarter beyond the Maeſe is a peninſula ſituated between the river and the eaſtern mount named Cornillon. Theſe ſeveral parts of the town have a communication with each other by bridges.

This city is well fortified, and defended by a citadel, erected on the mountain of the Holy Walburg. At the foot of this mountain ſtands the grand epiſcopal palace, part of which was burnt down in the year 1734; but was rebuilt in 1737, at the expence of the provincial ſtates, in a regular and fine taſte. In it are not only held the meeting of the ſtates; but the high colleges. The council-houſe, which was ruined by a bombardment in 1691, was magnificently rebuilt in 1714, and contains a public library. This city has ſixteen gates, ſeventeen bridges, ſome of which are very handſome, twelve public ſquares, one hundred and fifty-four ſtreets, moſt of which are broad and ſtraight, a cathedral, and ſeven collegiate churches, thirty-two pariſhes, five abbies for men, and the ſame number for women, thirty-two cloiſters of both ſexes, two colleges of Jeſuits, one ſeminary, ten hoſpitals, and a chartreuſe. The endowments of the eccleſiaſtics are ſo rich, and the ſituation ſo pleaſant, that Liege is commonly ſtiled the paradiſe of the clergy. The houſes are high, and generally built of bluiſh marble. Here are alſo two fine quays adorned with rows of trees, and the city is four miles in circuit.

The cathedral of St. Lambert is extremely large; but is a heavy ſtructure: it contains a great number of pretended relics, beſides buſts and ſtatues of ſilver, and a St. George on horſeback, which is ſaid to be of gold. Among the many collegiate and pariſh churches, that of St. Paul is remarkable for its ſtructure and fine ornaments. All the regular orders have very beautiful convents, and among the reſt is the college of Engliſh Jeſuits, and a fine nunnery for Engliſh ladies. In St. William's convent lies Sir John Mandeville, the famous romantic Engliſh traveller, and near his grave are kept the ſaddle, ſpurs, and knife he uſed, and on his tomb is an inſcription in old French, requeſting paſſengers to pray for him.

The city of Liege is not only called the paradiſe of the clergy, but the hell of women, they being obliged to drag the boats, carry burthens, and work harder than in any other place; as a conſequence of this it is termed the purgatory of men, as their wives generally domineer over them.

In this city are a multitude of brewers, who export great quantities of beer. The manufacturers of arms and nails in this city have a great demand for them. Its leather and ſerge is alſo famous; and from this town, and its territory, the Dutch receive moſt of their pit-coal. The magiſtracy have been ſeverely handled by their biſhop for pretending that Liege is a free imperial city, and diſputing his authority. In the year 1691, it was bombarded by the French, and in 1702, taken by the duke of Marlborough.

About two miles from the city is the epiſcopal palace of Sering, in which the biſhop uſually reſides during a conſiderable part of the ſummer; and near it, on the Maeſe, is a well built village, that contains many pleaſure-houſes.

Hui, or Huy, is ſeated on the Maeſe, which at this place receives into it the little river Huy. It lies in a pleaſant vale, and is divided by the Maeſe into two parts, that have a communication with each other, by means of a ſtone bridge. The ſmall river Huy alſo dividing into ſeveral branches, forms a number of little iſlands in the town, that are inhabited and joined together by bridges. To the north of the town lie five or ſix ſuburbs. Huy was once well fortified; but it has been frequently beſieged and taken, particularly in the year 1715, when its fortifications were deſtroyed; but tho' it has undergone various misfortunes, it has ſtill many fine houſes, with one collegiate, and fourteen pariſh churches; an abbey, a cloiſter of regular canons of the order of the Holy Croſs, ſixteen convents of both ſexes, and a number of chapels and hoſpitals. On the river Huy are ſeveral paper-mills and iron-works, and the adjacent country yields corn, wine, allum, ſulphur, and pit-coal.

Dinant, in Latin Dionantum, a city ſeated on the Maeſe, amidſt hills and rocks, and conſiſting of the Town properly ſo called, of the Lower Town, the Iſland quarter,

quarter, and ſome ſuburbs. It contains one collegiate, and ſeven other churches, a college of Jeſuits, with ſix cloiſters and hoſpitals. Before the town are ſome fine quarries of marble, and other ſtone. The principal trade carried on here conſiſts in leather. In 1554 it was ſeverely handled by the French. In 1674 it was taken by the Auſtrians, and the following year by the French, who did not reſtore it till the peace of Nimeguen.

Spa, or Spaw, a town celebrated for its mineral waters, is ſeated in a valley ſurrounded with mountains, and contains three hundred houſes. The part called the Old Spa, which is properly only a ſuburb to the other, conſiſts of miſerable cottages, and when ſtrangers arrive, the poor inhabitants ſend out a ſwarm of children to get what they can by begging. The houſes of New Spa are little, dark, old faſhioned wooden buildings, and yet it is affirmed, that they can make twelve hundred beds for ſtrangers. The church of the Capuchins, and the pariſh church are both ſeated upon eminences, and make a good appearance at a diſtance. The inn called the court of London is very large, and as it is the beſt in the place, is moſt frequented by ſtrangers. The name of the five principal wells are Tunnelet, Watpotz, Savliniere, Geronſlerd, and Pouhon. The inhabitants are employed in making toys, and other things for ſtrangers, to whom they are very civil, and ready to do them all good offices. Near the city there are excellent fiſh, and good game, to accommodate thoſe who go to the Spa.

SECT. IV.

The Biſhopric of OSNABRUG.

Its Situation, Extent, Produce, and Rivers. Of the Inhabitants, their Employments, Religion, and Trade. The Regulations eſtabliſhed with regard to there being alternately a Proteſtant and Popiſh Biſhop. Its Revenue, Arms, public Offices, and Chapter: with a particular Deſcription of the City of Oſnabrug.

THE biſhopric of Oſnabrug is ſeated in the center of the circle of Weſtphalia, and is bounded on the north by the biſhopric of Munſter; on the ſouth by Munſter and the county of Ravenſburg; on the eaſt by the ſame county and the principality of Minden; and on the weſt by Munſter, and the counties of Lingen and Tecklenburg; but the prefecturate of Rechenberg lies ſeparate. This biſhopric extends forty-ſeven miles from north to ſouth, and between nineteen and twenty-eight from eaſt to weſt.

Almoſt one-half of this biſhopric conſiſts of heath-lands that yield paſturage, and above ten ſorts of turf. The country, however, produces as much rye as ſupplies the neceſſities of the inhabitants and five hundred ſtills. Conſiderable quantities of wheat, oats, and moſt of the barley uſed here, are imported from the principality of Minden and the county of Schauenburg; and, as there are but few cattle bred in this biſhopric, great numbers are brought from Eaſt Frieſland. The country has but little wood, but, beſides their turf, they have ſome coal-pits. Marble is alſo found here.

The principal rivers are the Haſe and the Hunte, both which riſe in this country.

The inhabitants are diligent and laborious, and the country people here ſeldom ſit, as in other parts of Germany, by ſtoves; but uſually by the fire-ſide, where they perform their principal work, which is ſpinning; and about ſix thouſand peaſants go every year to Holland, in order to mow, cut turf, and do other work for hire; and it is ſaid that the meaneſt of them bring home twenty, and the beſt workmen ſeventy florins; ſo that the ready money thus brought into the country may be reckoned at two hundred thouſand florins a year.

There are in this biſhopric many vaſſals who belong partly to the chapter and popiſh clergy, and partly to the burghers. The number of Catholics and Proteſtants is thought to be nearly equal, though the former have thirty-two churches, and the latter only twenty; but no Jews are tolerated in the country.

The moſt beneficial employment of the inhabitants conſiſts in ſpinning yarn, and manufacturing a coarſe kind of linen, which is conveyed by the Engliſh, Dutch, and Spaniards to their ſettlements in Africa and America: there are alſo ſome coarſe woollen cloths made in this country.

At the peace of Oſnabrug, in 1648, it was ſettled that this biſhopric ſhould alternately have a catholic and a Lutheran biſhop, and in conſideration that the houſe of Brunſwic had for the ſake of a general peace made ſeveral valuable ſacrifices, namely, of the coadjutorſhips of Halberſtadt and Magdeburg to the elector of Brandenburg, of that of Bremen to the king of Sweden, and of the biſhopric of Ratzeburg to the dukes of Mecklenburg, the Lutherans, who were to have the alternative, were to be a younger prince of the houſe of Brunſwic-Lunenburg, the preſent royal family of Great Britain; and on failure of that, the alternative was to paſs to Brunſwic-Wolfenbuttle, now Brunſwic-Bevern: ſo that the proteſtant alternative has been enjoyed by prince Erneſt, grandfather to his late majeſty, and afterwards the next turn by another prince Erneſt, the late king's uncle, who was created duke of York; and upon the deceaſe of the archbiſhop of Cologne, who was the laſt incumbent, Frederic, the ſecond ſon of the king of Great Britain, was elected biſhop in 1764.

But though this biſhopric is alternately hereditary in the houſe of Hanover, it is not ſo with regard to its popiſh biſhops, who are choſen out of different families by the chapter, which conſiſts of twenty-five canons, the revenues of eighteen of whoſe prebends are enjoyed by the Romiſh eccleſiaſtics; thoſe of four, by the Jeſuits, for the ſupport of their college; and the other three by Lutheran canons only, who are capable of electing, but not of being elected biſhops, as the catholic canons are. When there is a popiſh biſhop, he is ſuffragan to the archbiſhop of Cologne as metropolitan; but when there is a proteſtant biſhop, the exerciſe of the metropolitan juriſdiction is to be ſuſpended. Since the reformation introduced here in 1534, the biſhop of either denomination has, with the dignity and power of a temporal prince, little more than the name of a biſhop.

The revenue of this biſhopric amounts to between twenty and thirty thouſand pounds.

The arms of this biſhopric are an orb gules, ſet with ſix ſpokes in a field argent.

The biſhop is a prince of the empire, and may ſit in the diet of the empire in the council of the princes between the biſhops of Munſter and Liege.

The public offices are the prince's privy-council, which has the care of the epiſcopal board-lands, and the ſupreme inſpection of the country. The prince's chancery of lands and juſtice, conſiſting of two catholic and two Lutheran counſellors, one of whom is at the ſame time a director; as alſo of a catholic and Lutheran ſecretary. From this court an appeal lies immediately to the ſupreme court of the empire. The epiſcopal officialſhip enjoys, in civil cauſes, a juriſdiction jointly with the chancery; but, with reſpect to ſuch eccleſiaſtical matters as belong to the catholics, jointly with the archdeacons, from whom, notwithſtanding, an appeal may lie to the official. The prince's Lutheran land-conſiſtory is compoſed of a ſecular preſident, two ſpiritual counſellors, and a ſecretary.

The biſhopric is divided into prefecturates, each of which has a noble ſeneſchal, together with a rent-maſter, who collects the revenues belonging to the biſhop; a rural count, or judge, a court clerk, and a fiſcal. Theſe prefecturates conſiſt of pariſhes, and the pariſhes of peaſantſhips, which are properly ſmall villages that have no churches, and frequently only certain little diſtricts in which many peaſants reſide together.

All the officers muſt ſwear to be true to the ſovereign and the chapter. On the deceaſe of a biſhop the chapter takes poſſeſſion of all, and fills up, in conjunction with the magiſtrates of the city of Oſnabrug, the vacant offices; for almoſt all the officers, the rural counts excepted, loſe their poſts on the deceaſe of a biſhop, till they are again reinſtated in them by the chapter, which retains or diſcards them at pleaſure; but the new biſhop again makes a change in the officers.

The

The principal city in this biſhopric is Oſnabrug, or Oſnabruck, in Latin Oſnabruga, which is ſeated in a vale by the river Haſe, in the fifty-ſecond degree forty-two minutes north latitude, and the ſeventeenth degree thirty-eight minutes eaſt longitude. It is a neat well built city; but the buildings are antique. It has ſeveral handſome public ſtructures, and is encompaſſed with walls and ditches, but commanded by a mountain within cannon-ſhot, upon which is an abbey or rather a place for men of quality to retire to for devotion. The number of houſes, excluſive of the public buildings, amounts to twelve hundred; but the place is not populous. The epiſcopal palace was built by biſhop Erneſt Auguſtus, and belongs to the electoral houſe of Brunſwic-Lunenburg, who uſually reſigns it to the catholic biſhop for his uſe. This palace is well fortified, and ſeparated from the town by a bridge. This ſtructure is erected in the form of a hexagon, and at each corner is a turret, with a court in the middle. It was in one of the apartments of this palace that king George I. expired, on the eleventh of June, 1727, in the arms of his brother prince Erneſt; and, it is ſaid, in the very room where he was born.

The chancery is but an indifferent building. In the hall of the council-houſe, where the celebrated peace of 1648 was concluded, are the pictures of the ſeveral ambaſſadors who aſſiſted at it. There are alſo ſhewn here, in a thin folio, the portraits of the biſhops of Oſnabrug, which George Bergen drew with his pen. In St. Peter's cathedral are ſhewn the ſilver coffins in which lies St. Criſpin and Criſpinian; and here are alſo interred ſeveral biſhops. The cathedral church of St. John is the ſecond pariſh-church belonging to the Romans. The Lutherans have two pariſh-churches, which are thoſe of St. Mary and St. Catharine.

The Romans have not yet the privilege of making proceſſions in the city. In their church-yards the Lutherans are buried, but the catholics are not interred in thoſe belonging to the Lutherans.

There is here a college of Jeſuits, with a monaſtery of Dominicans, and a nunnery of Auguſtines; alſo a commendry belonging to the Teutonic order of St. George, with a ſmall church, and a ſeat of the order of St. John. Till the year 1595 the Lutherans and Papiſts had a ſchool here in common, at the *Collegium Carolinum*, in which were teachers of both churches; but in that year a ſeparation was made, when the Lutheran gymnaſium aroſe, in the poſſeſſion of which the town was confirmed in 1603, by the aulic-chamber of the emperor and empire. In the *Collegium Carolinum* the Jeſuits have their ſeminary.

The church belonging to the cloiſter of Auguſtines, which was deſerted at the time of the reformation, has been converted into a priſon and houſe of correction. There are here alſo three well built hoſpitals, and ſome ſmaller ones, with a Romiſh and Lutheran orphan-houſe.

The principal ſubſiſtance of the inhabitants depends upon the linen trade, and the foreign manufactures retailed here. The magiſtracy are Lutheran, and re-choſen annually on the ſecond of January. This was the firſt town in Weſtphalia that received the Lutheran doctrine, Dr. Herman Hecker, a monk of the order of St. Auguſtine, and former maſter to Luther, preaching it here from the pulpit in the year 1519. This city denies the power of the biſhop in affairs relating to the church and police; and is alſo poſſeſſed of the criminal juriſdiction, with the right of fortification, and has a conſiſtory of its own, as alſo the exciſe, and the privilege of collecting the rates of the burghers, with an annual revenue of about eight or nine thouſand rixdollars. It is poſſeſſed likewiſe of the right of coining copper money, which it exerciſed for the laſt time in the year 1740.

SECT. V.

Of the Principality of MINDEN.

Its Situation, Extent, and Produce: the Religion and Trade of the Inhabitants: the ſeveral Offices by which the Government is adminiſtered: the Revenues received by the King of Pruſſia from this Country; and a particular Deſcription of the Cities of Minden and Lubbecke.

THE principality of Minden lies to the weſt of the biſhopric of Oſnabrug, and is nearly a hundred and fourteen miles in circuit. It conſiſts for the moſt part of good corn-land, and agriculture being carried on with great diligence, the inhabitants ſupply the neighbouring countries with corn, and particularly with wheat and barley; flax alſo is cultivated with ſuch ſucceſs, that they are likewiſe able to ſupply their neighbours with it. The meadows and paſtures breed a conſiderable number of cattle. They have alſo wood, pit-coal, turf, and an important ſalt-work, which ſupplies both the Pruſſian and the adjacent countries with that commodity. The Weſer traverſes the country, and is of great advantage to its commerce.

With reſpect to the religion of the inhabitants, thoſe of the Romiſh church enjoy only in the city of Minden, and the Calviniſts every quarter of a year at the citadel of Peterſhagen, their public worſhip; and all the other churches in the country belong to the Lutherans; yet the Jews are allowed their ſchools at Minden and Lubbecke.

The inhabitants are chiefly employed in agriculture, the breeding of cattle, the ſpinning of linen, and weaving of buckram. They alſo make a kind of half linen and half woollen ſtuffs: conſiderable quantities of yarn are exported from this principality, and the coarſe linen made here is ſent to England and Spain. There are here conſiderable breweries, a great trade in corn, ſope, horſes, and all ſorts of cattle.

Charlemagne erected this country into a biſhopric; but the preciſe year of its foundation is not known, though it is ſuppoſed to be about the year 803, from which time, to the peace of Weſtphalia, are reckoned ſixty biſhops: but at the peace of Oſnabrug, in 1648, the biſhopric of Minden was reſigned as a principality to the electoral houſe of Brandenburg, inſtead of the ceded countries of Pomerania. On the fifteenth of October, 1649, the elector Frederic William cauſed the citadels of this principality to be poſſeſſed by his officers; and on the twelfth of February, 1650, received the homage of the inhabitants.

Over this principality and the county of Ravenſberg a regency is appointed, which alſo, in conjunction with the two ſuperintendents of theſe countries, and the Proteſtant court-chaplain of Minden, conſtitutes the conſiſtory. Both colleges conduct in common ſuch affairs as relate to the ſovereign; but the regency alone enjoys the adminiſtration of juſtice, that over the knights in the firſt inſtance, and over the others in the ſecond. The war and domain-chamber manage all affairs relating to war, trade, and manufactures. Out of theſe colleges, or offices, another of health is appointed, which, when any infectious diſeaſe prevails among the inhabitants, or cattle, makes the neceſſary proviſion for putting a ſtop to it. Here is alſo a provincial medicinal-college, in which a member of the war and domain-chamber preſides, and takes care that the country be provided with ſkilful phyſicians, apothecaries, ſurgeons, and midwives. At Minden and Lubbecke the civil power is adminiſtered by the magiſtrate, but in the country by officers appointed for that purpoſe; and it is alſo in ſome meaſure exerciſed by the chapter, the provoſt of the chapter, and ſeveral religious foundations.

The annual revenue ariſing to the ſovereign from the domain-lands are, according to Dr. Buſching, rated at ſomewhat more than a ton and a half of gold in rixdollars; and the revenues of the war-cheſt, ariſing from this principality and the counties of Ravenſberg, Tecklenburg, and Lingen, are eſtimated at about two tons and a half of gold.

The principal places in this country are the following:

Minden, the capital of the principality, is ſeated on the weſt ſide of the Weſer, in the fifty-ſecond degree thirty-one minutes north latitude, and in the eighth degree thirty-eight minutes eaſt longitude. It is a neat and well fortified town, environed with ramparts and ditches,

ditches, and has a ſtone-bridge over the Weſer. Its commodious ſituation for trade and navigatien, its brewery of a pleaſant white beer, and in ſome meaſure alſo its agriculture and breed of cattle, ſupply its inhabitants with the means of procuring a comfortable ſubſiſtence. The cathedral is a noble and large, though dark ſtructure, and near it is a handſome chapter-houſe. The chapter conſiſts of eighteen perſons, who are partly Roman catholic and partly Lutheran, and has a chapter-croſs which hangs at an azure ribbon, and was conferred by the king in 1756. The church of St. John alſo belongs to the Papiſts, and contains a collegiate foundation of ten catholics. St. Martin's, the principal church belonging to the Lutherans, has alſo a collegiate foundation of nine perſons, who are partly Roman catholic and partly Lutheran, together with ſix vicars. Near St. Martin's church is a female foundation for twelve perſons, the abbeſs of which has a pretty extenſive feudal ſeat. The third Lutheran church is that of St. Simeon. The churches of St. Paul and St. Nicholas alſo belong to the Lutherans; but it is ſeldom, and only at certain times, that divine ſervice is performed in them. It has likewiſe an orphan-houſe, and three alms-houſes.

This city has ſuffered greatly by war, and has ſeveral times been beſieged and taken. Upon the plain in the neighbourhood of this city a memorable battle was fought on the firſt of Auguſt, 1759, in which the confederate army under prince Ferdinand of Brunſwic totally routed the French, when the troops of the allied army, particularly the Britiſh foot, ſignalized their valour in ſo extraordinary a manner, againſt much ſuperior numbers of the enemy, as gained them immortal honour.

Lubbecke, a ſmall town, which ever ſince the year 1279 was encompaſſed with walls, ramparts, and ditches. It enjoys conſiderable immunities, and in particular the juriſdiction over a conſiderable diſtrict. In it are thirteen gentlemen's ſeats, and one of the order of knighthood is always firſt burgomaſter; hence the magiſtracy bear the title of knights, burgomaſter, and council. The inhabitants, moſt of whom are of the Lutheran religion, trade in yarn and linen; they alſo carry on agriculture, and the breeding of cattle, brew beer, and diſtil ſpirits. Near the pariſh-church is a collegiate foundation, conſiſting of one dean and four canons, among whom there muſt be always a Roman catholic.

SECT. VI.

Of the Dutchy of Verden.

Its Situation, Extent, Produce, and Rivers: the Religion of the Inhabitants: the Offices by which the Government is adminiſtered; with a Deſcription of the City of Verden.

THE dutchy of Verden terminates on the dutchy of Bremen and Lunenburg, and is computed to be about twenty-eight miles in length and breadth. It conſiſts, for the moſt part, of heath and high land, as alſo of foreſts; but on the rivers Weſer and Aller is good marſh land.

The Aller waters almoſt all the ſouth part of this dutchy; but the Weſer only ſome of the weſterly boundaries, where it receives the former into it. The other rivers of this dutchy are the Wumme, which riſes on the borders of Lunenburg, and traverſing the dutchy from eaſt to weſt, receives the ſmaller rivers that riſe here, as the Fintau, the Veerſe, the Werdau, and the Rodau; after which it enters the dutchy of Bremen.

The inhabitants are of the Lutheran religion, and the country has the ſame conſiſtory with Bremen, and alſo one and the ſame general ſuperintendent; but at Verden is alſo a ſpecial ſuperintendent, who is a member of the royal conſiſtory, and has under his inſpection the twelve provincial pariſhes of this dutchy.

Verden was a biſhopric founded by Charlemagne; but at the peace of Weſtphalia, in 1648, the crown of Sweden obtained the biſhopric as a dutchy. It was afterwards taken by the Danes; but by virtue of the alliance concluded at Wiſmar in 1715, it was ceded, together with Bremen, by the king of Denmark, to the electoral houſe of Brunſwic-Lunenburg; and in the year 1718 the king of Sweden made the ſame ceſſion.

In the council of the princes of the empire the king of Great Britain, as duke of Verden, has a ſeat on the temporal bench, after the prince of Halberſtadt, and alſo at the diets of the circle of Weſtphalia.

This dutchy has the ſame regency with that of Bremen, namely, a chancery, and an aulic-court; in the latter of which an aſſeſſor ſits, both for the nobility of this dutchy, and for the town of Verden. The land ſtates of this dutchy conſiſt of the nobility and town of Verden. Both the council of nobles here, and that of the town of Verden, appear, in conjunction with the land-ſtates of Bremen, at their diet at Baſdel, when any affairs are to be diſcuſſed there that have a relation to both dutchies.

The city of Verden is ſeated on the Aller, which here divides itſelf into two branches, and is at preſent only frequented by the ſhips that go up and down the Aller. There are here four churches; the cathedral, near which is the church of St. Andrew, that of St. Nicholas, and that of St. John. In this town is alſo a Latin-ſchool.

SECT. VII.

Of the Dutchy of Cleve.

Its Situation, Extent, Produce, and Rivers: the Religion of the Inhabitants: the Offices by which the Government is adminiſtered: the Revenues the King of Pruſſia receives from this Dutchy; with a Deſcription of the Cities of Cleve, Emmeric, and Weſel.

THE dutchy of Cleve, or Cleves, terminates to the eaſt on the biſhopric of Munſter; to the ſouth on the dutchy of Berg, the principality of Mors, the archbiſhopric of Cologne, and Pruſſian Gueldres; to the weſt on Brabant and Gueldres; and to the north on Gueldres and Munſter; extending forty miles in length from north to ſouth, and fifteen in breadth from eaſt to weſt.

This country abounds in corn, fruit, and all manner of plants: it has very fat meadows, in which are bred a conſiderable number of horned cattle and horſes. In general it is well cultivated, and has many delightful ſpots, particularly near the city of Cleve: all kinds of game are here in plenty, particularly on the weſt ſide of the Rhine. This river divides the country into the eaſtern and weſtern parts, receiving into it the rivers of Roer, the Emſer, and the Lippe. The Maeſe touches alſo on a part of the dutchy, and receives into it the Niers, which riſes in the dutchy of Juliers. The Old Iſſel alſo traverſes a part of this dutchy. All theſe rivers abound pretty much in fiſh; and the ſalmon, pike, and carp of the Rhine, are particularly admired.

The inhabitants are moſtly of the Romiſh church; but the Calviniſts, Lutherans, Mennonites, and Jews, are allowed the free exerciſe of their religion. There are ſix collegiate churches, two commanderies of the Teutonic order, one *commendam* belonging to the order of St. John, the abbey of Elten and Hamborn, ſeventeen monaſteries, and about thirty nunneries.

The voice of Juliers, Cleve, and Berg in the council of the princes of the empire has been dormant ever ſince the death of duke John William. In the circle of Weſtphalia the elector of Brandenburg, and the elector Palatine, as dukes of Cleve, Juliers, and Berg, bear alternately the office of ſending the circular letters to ſummon the ſtates to vote; but in the *directorium* have but one voice between them.

In the city of Cleve is the royal regency appointed over this dutchy and the county of Mark, to which the antient aulic-judicatory has been united, and in it too is a conſiſtory held monthly; ſo that this high college regulates all the affairs of church and ſtate, and appeals lie to it from all the other courts. The war and domain-chamber of Cleve, Mors, and the Mark, take cognizance of every thing relating to œconomy, the foreſt, tolls, contributions, exciſe, mines, war, &c. and under it is the provincial council eſtabliſhed in 1563, that regulates every thing relating to the police; but civil and criminal affairs are adminiſtered by the provincial judicatories appointed

pointed in the year 1753 at Cleve, Xanten, Weſel, and Dinſlacken; and to theſe the ſubjects of the adjoining prefecturates are referred.

The annual revenue ariſing to the king of Pruſſia from the domains of Cleves and the Mark, are eſtimated at about three hundred fifty-ſix thouſand rixdollars, and the ſum brought to the war cheſt from Cleve, the Mark, and Mors, to about three hundred forty thouſand.

The principal places in this dutchy are the following:

Cleve, in Latin Clivia, is ſaid to derive its name from its ſituation among cliffs and the declivity of a hill, where it ſtands between the Rhine and the Maeſe, in one of the fineſt countries in Germany. It is ſeated in the fifty-firſt degree fifteen minutes north latitude, and in the ſixth degree twenty-four minutes eaſt longitude. It is ſmall but pleaſant, well built, and well peopled, having ſeveral fine houſes belonging to perſons of quality; but thoſe of the ordinary burghers are mean. The caſtle is large, and delightfully ſeated on the top of a hill; but is irregular and not very ſtrong. It has ſtately apartments, and there the king of Pruſſia reſides when he comes to this city. The inhabitants chiefly ſubſiſt by the circulation of money occaſioned by the reſidence of his deputies, who govern the dutchy, and by the meeting of the ſtates, who aſſemble in the caſtle. There are here a German Calviniſt and a French Calviniſt church, one belonging to the Lutherans, and another to the Mennonites, together with an academy belonging to the Calviniſts, with a popiſh collegiate church, two monaſteries, and a nunnery. The river Hel, which runs by the foot of the caſtle, is navigable by ſmall veſſels to the Rhine; and on the weſt ſide of the city are what is called prince Maurice of Naſſau's park, in which are many ponds, canals, fine water-works, grottos, and the like. Above them is the high hill of Sternberg, from whence may be ſeen Utrecht, though it is fifty miles diſtant, with near forty other cities and great towns, twelve of which are ſeen through ſo many walks cut through the woods. The prince's houſe ſtands in a wood on the eaſt ſide, and, among other curioſities, has a noble collection of old Roman urns, and ſeveral other monuments of antiquity.

Emmeric, or Embric, in Latin Emerica, or Embricum, is a large, rich, and beautiful town, pleaſantly ſituated on the eaſt ſide of the Rhine, four miles to the eaſt of Cleve. It is a very antient city, and has a pretty good trade, and was formerly one of the Hanſe-towns. Here is always a ſmall garriſon; but though the fortifications were formerly very conſiderable, they have of late been neglected. The governor, with the magiſtrates, and many of the burghers, are Proteſtants, and have a church here. The Roman catholics have two churches, one of which is collegiate, with two monaſteries, a nunnery, and a college of Jeſuits.

Weſel, in Latin Weſalia, is the largeſt and beſt built town in the dutchy, it being populous and well ſeated for trade. It was formerly one of the Hanſe-towns, and an imperial city; but was exempted by the dukes of Cleve from the contributions paid by thoſe towns to the military-cheſt of the empire. It grew rich by the concourſe of merchants, who fled hither from the perſecution in the Spaniſh Netherlands, and was garriſoned by the Dutch, to whom it was mortgaged by the elector of Brandenburg. It was taken and plundered by the French in 1672; but was reſtored two years after to the elector, after it had been diſmantled. Though this place ſubmits to the king of Pruſſia as its ſovereign, it is governed by its own laws. Both the town and its two ſuburbs are well fortified, after the modern way, with baſtions, half-moons, and ditches; and in the middle curtains there are galleries which run into the ditch, and have ſeparate places for the men and women in caſe of a ſiege; and it is eſteemed one of the ſtrongeſt towns in all Europe. It has a good citadel towards the Rhine, a ſmall harbour for veſſels that trade on that river, and an arſenal well filled. The Calviniſts, Lutherans, and Roman catholics have all churches here. There are here a Lutheran academy, three monaſteries, a foundation for ladies, called Averdorff, who are for the moſt part Lutherans, and a commendam of the order of St. John. The city has a ſeat and voice at the provincial diet.

SECT. VIII.

The County of the MARK.

Its Situation and Produce: the Religion and Trade of the Inhabitants: the Offices by which the Government is adminiſtered; with a Deſcription of Ham, Unna, Iſerlon, and Saeſt.

THE county of the Mark is bounded on the north by the biſhopric of Munſter, on the eaſt by the dutchy of Weſtphalia, on the ſouth by the dutchy of Berg, and on the weſt by the dutchy of Cleve; and is eſteemed the largeſt county in all the circle of Weſtphalia.

It enjoys a fertile ſoil that produces wheat, rye, barley, oats, buck-wheat, peas, vetches, lentils, beans, rape and turnip ſeed, as alſo ſuch plenty of flax and hemp as to ſupply the neighbouring countries with them. It alſo produces plenty of fruit, together with good kitchen-roots and herbs. It has fine meadows and paſtures, with a good breed of cattle, and all manner of game. In the mountains are mines of ſilver, copper, lead, iron, and coal, with quarries of ſtone.

The inhabitants of this country are Lutherans, Calviniſts, and of the Romiſh church; all being allowed the free and public exerciſe of their religion, and no reſtraints laid upon the conſciences of the people. There are many manufactures here, the produce of which not only ſupplies the country, but great quantities are exported, particularly of iron and ſteel worked in a variety of ways.

This country is ſubject to the electoral houſe of Brandenburg, who in 1753 appointed ſix judicatories over the whole county, each of which has its own juſtice, aſſeſſors, and clerks: at the ſame time, for the regulation of affairs relating to the police, four circles are appointed, in each of which was placed a provincial-council.

The principal places in this county are the following:

Ham, in Latin Hammona, is the capital of the whole county, and is ſeated near the borders of the biſhopric of Munſter, by the influx of the Aſſe into the Lippe. It has no walls, but is encompaſſed with ditches, ramparts, and paliſadoes. This city is pretty large and well built. It has a citadel in which a commandant reſides, and contains alſo a *gymnaſium illuſtre* belonging to the Calviniſts, in which are three profeſſors, and a Latin ſchool, with a large church that alſo belongs to the Calviniſts, a Lutheran church, and a cloiſter of Obſervants, with noble appointments for the poor. Juſt before the north gate is the Norder hoſpital, a noble foundation for proteſtant and popiſh ladies; but the ſmall church near it is only uſed by the Catholics.

This town has a conſiderable trade, and was formerly one of the Hanſe-towns. It has frequently ſuffered very much by fire, particularly in 1741, when three hundred and fifty houſes were burnt down, with the council-houſe and the church belonging to the Calviniſts; but better buildings have been erected in their ſtead.

Unna, the ſecond town of the county, is ſeated in a fine plain, on a rivulet called the Kottelbecke, and is ſurrounded with walls and ditches. It has a Lutheran pariſh-church, and hoſpital church, in which the Calviniſts perform divine worſhip, as a Lutheran preacher does on Saturdays. Here is likewiſe a nunnery, together with a Romiſh chapel and a Lutheran ſchool. The town is poſſeſſed of a very extenſive and profitable territory; and moſt of the burghers ſubſiſt by agriculture, diſtilling, and brewing. This was alſo antiently one of the Hanſe-towns.

At no great diſtance is the mountain of Haſlo, on which is the free ſecular foundation of Frondenberg, belonging to the Ciſtercian order, which has an abbeſs and twenty-four ladies belonging to it, and into which both the Proteſtants and Roman catholics are received: beſides ſeveral tythes and corn-rents, above a hundred farms belonging to the peaſants are ſubject to it.

Iſerlon, alſo called Lon, is a conſiderable town well inhabited, and ſeated in a mountainous tract. The Lutherans have here three churches, with a Latin ſchool;

the Calviniſts have one church, and the Roman catholics, in 1746, erected one for themſelves. The principal employment of the inhabitants conſiſts in manufactures and trade; for here are made all works in iron and braſs, woollen ſtuffs, velvets, and ribbons. This town has been frequently laid waſte by fire.

Soeſt, in Latin Suſatum, is a city of conſiderable circuit, in which are extenſive courts and gardens, but is meanly built. It is ſituated twelve miles to the eaſt of Ham, and is fortified with double walls, on which are thirty towers, and is alſo defended by a large deep ditch. The Catholics are in poſſeſſion of the cathedral and two monaſteries; but the Lutherans have ſeven churches, in one of which the Calviniſts perform public worſhip. The Lutheran Latin ſchool is one of the three archigymnaſia (as they are called) of Weſtphalia. To this town belongs a conſiderable extent of arable land, and its principal trade conſiſts in corn.

This was formerly one of the Hanſe-towns, and the inhabitants choſe their own magiſtrates; but, in 1752, the king aboliſhed the old magiſtracy, and appointed a ſtanding one. They had here an antient body of laws, which was the foundation of thoſe of Lubec.

We ſhall conclude this account of the Mark with a conciſe account of the imperial city of Dortmund, in Latin Tremonia, which is ſituated twenty-ſix miles to the weſt of Soeſt, and was antiently one of the Hanſe-towns. It is pretty large, but ſlightly built, and contains four Lutheran churches, one nunnery, and two monaſteries. It has likewiſe one of the three archigymnaſia of Weſtphalia, and enjoys a ſeat and voice on the Rheniſh bench of the college of the imperial cities. The territory belonging to this city is an antient county, that contains many villages.

SECT. IX.

Of the Dutchies of JULIERS *and* BERG.

Their Situation, Extent, Produce, and Rivers: the Offices by which theſe Dutchies are governed: the Revenues the Elector Palatine receives from them; with a Deſcription of the Cities of Juliers, Duren, Duſſeldorp, Benſberg, and Eſſen.

THE dutchy of Juliers is bounded on the north by the dutchy of Gueldres, on the eaſt by the archbiſhopric of Cologne, on the ſouth by Luxemburg and Treves, and on the weſt by Liege and Limburg, extending about ninety miles in length, and in breadth in ſome parts above forty-three, but in others much leſs.

This dutchy has a fruitful ſoil, that produces all ſorts of corn in abundance, and has alſo good meadow and paſture lands. The breed of cattle is conſiderable, particularly of horſes, which are ſent to the neighbouring countries, and alſo into France. Much wood is cultivated here, and in ſome parts pit-coal is found.

With reſpect to the rivers, the Maeſe terminates this country on the weſt ſide, and the Rhine on the eaſt. The Roer riſes here, and having traverſed a great part of the country, receives into it the little rivers Worm and Dente, alſo called Inda or Inga. The Erfft alſo riſes here, and traverſes the country to the eaſt. The other rivers are the Niers and the Ahr.

The provincial ſtates of Juliers united in the laſt century for the maintenance of their privileges: theſe united ſtates conſiſt of the nobility of both countries, and the four principal towns of each dutchy. The inhabitants aſſert, that they do not depend on the unlimited arbitrary will of their ſovereign; but were always governed according to their antient cuſtoms, rights, and immunities.

The inhabitants are partly of the popiſh and partly of the proteſtant church, and both enjoy the free exerciſe of their religion, and perfect liberty of conſcience.

Theſe dutchies are ſubject to the elector Palatine, whoſe arms on account of the dutchy of Juliers, bear a lion ſable, in a field or; and for the dutchy of Berg, a lion gules, crowned azure, in a field argent.

The provincial colleges of Juliers and Berg, with the privy-council, the aulic-council, the chancery, and the aulic-chamber, are held at Duſſeldorf, in the dutchy of Berg. An annual ſum is granted to the ſovereign by the ſtates of Juliers and Berg, which in the year 1755 amounted to five hundred and eighty thouſand rixdollars, to which was added a free gift of fifty thouſand florins.

The dutchy of Juliers is divided into twenty-nine prefecturates and ſigniories, the principal places in which are the following:

Juliers, or Julich, alſo called Gulich, and in Latin Juliacum, is the capital of the country, and is ſituated on the Roer, in the fiftieth degree forty-eight minutes north latitude, and the ſixth degree forty-ſix minutes eaſt longitude. The river here is very ſubject to overflow its banks: the city is well fortified, and has a citadel, which is ſaid to be as ſtrong as the beſt engineers in Germany could make it; it being thirty years in building. Within it is a ſpacious piazza, with the palace of the antient dukes. The ſtreets are broad and regular, and the houſes neatly built of brick. It has a Roman catholic collegiate church, with one belonging to the Calviniſts, and the Lutherans have another before the town. In the ſuburbs is a Carthuſian monaſtery, nobly endowed by the dukes. This city is very antient, and obtained its name in the time of the Romans.

Duren is reckoned the ſecond among the towns that have a voice and ſeat among the diets. It is ſmall, uniform, and well built, with ſtreams of water running through the ſtreets. It was made an imperial city by Charles IV. but ſubdued by the duke of Juliers in 1407. Charles V. took it by ſtorm, put the garriſon to the ſword, and burnt it in 1543; but it was afterwards rebuilt and reſtored to the duke. The handſomeſt ſtructure in this town is St. Martin's church, where they pretend to have the head of St. Anne, the mother of the Virgin Mary, which formerly brought abundance of pilgrims to this place.

The dutchy of Berg, ſo named from its mountains, is ſeated on the eaſt ſide of the Rhine, oppoſite to the electorate of Cologne, and is bounded on the north by the dutchy of Cleve and the principality of Mors, from which it is ſeparated by the Rhine; on the eaſt by the dutchy of Weſtphalia and the county of the Mark; on the ſouth and weſt by the archbiſhopric of Cologne. In its greateſt extent it is above ſeventy miles, and in its greateſt breadth twenty-eight.

It is a very mountainous country, but has ſome fruitful tracts, as alſo good meadow and paſture lands, with great quantities of timber, pit-coal, iron, and other ores. In the upper parts near the Rhine are vineyards.

The Rhine, which flows to the eaſt of this country, receives into it all the other rivers, as the Sieg, into which the Agger pours itſelf, and the Wipper: the Roer, which flows out of the county of Mark, runs to the northward through the narroweſt part of this dutchy, and in Cleve falls into the Rhine.

There are here eleven towns, and the ſame number of boroughs, in which are manufactures of cloth, linen, and ſteel. The ſtate of religion here is the ſame as in the dutchy of Juliers.

This ſtate is divided into ſixteen prefecturates, the principal places in which are the following:

Duſſeldorf, or Duſſeldorp, a city ſeated on the Rhine, in the fifty-firſt degree thirteen minutes north latitude, and the ſixth degree fifty-eight minutes eaſt longitude, twenty-three miles to the north-eaſt of Juliers. It has its name from the rivulet of Duſſel, which runs through it, and afterwards falls into the Rhine, over which is a bridge of boats at this place. This city is not large, though it is populous and ſtrongly fortified. The New Town, which the elector John William cauſed to be built before the gate of Berg, conſiſted of one broad fine built ſtreet; but it has fallen to decay. In the town is the old princely citadel ſeated on the Rhine, and commands a fine proſpect. It has two galleries, the uppermoſt of which conſiſts of five rooms, which are adorned with paintings by the greateſt maſters, as Titian, Julius Romanus, Rubens, Van Dyck, Paul Veroneſe, &c. and alſo with excellent ſtatues of braſs, antiques, and the like. Under this gallery is another which contains ſtatues in marble and plaiſter, which are copies of the moſt celebrated ſtatues at Rome and Florence. In

the citadel is the ſeat of the aulic-chamber, and in the ſquare oppoſite to it is an equeſtrian ſtatue of metal erected to the honour of the elector John William. In the collegiate and pariſh-church are the tombs of the antient dukes of Juliers and Berg. The Jeſuits have alſo a college, a gymnaſium, and a ſeminary, together with a beautiful chapel. In the town are likewiſe ſome monaſteries and nunneries, as alſo a Lutheran and a Calviniſt church. Before one of the gates is a chapel built after the model of the houſe of Our Lady at Loretto, and adorned with fine paintings; and in the year 1752, a riding-academy was founded here.

Benſberg, a fine pleaſure-houſe belonging to the ſovereign, built by the elector John William. It ſtands three leagues from the Rhine, and is built with a very hard ſtone; but the ornaments, particularly the columns that ſupport the gallery in the front, are a kind of grey marble, dug out of the neighbouring quarries. The apartments are large, and adorned with the fineſt paintings; beſides which they have a moſt extenſive proſpect as far as the city of Cologne, over the Rhine and all the flat country. This ſeat is ſaid to have much the air of Verſailles, though it is neither ſo large nor ſo lofty. The ſtructure was deſigned by an Italian; but the outſide is cenſured, on account of the multiplicity of its ornaments.

Fifteen miles to the north of Duſſeldorf is Eſſen, an imperial city famous for a noble and rich abbey, founded about the year 877. The abbeſs is a princeſs of the empire, and to her the greateſt part of the city is ſubject, as are alſo ſeveral large manors; and her deputy has a place in the diet among the prelates of the Rhine. Their revenues were at firſt ſettled for the abbeſs, fifty-two nuns, and twenty canons; but they are ſince retrenched, and none admitted but the daughters of noblemen, who may marry at pleaſure. The king of Pruſſia is protector of the abbey, and both in the city and cloiſter the people are allowed the free exerciſe of religion. The magiſtrates are Lutherans; but it has alſo ſome Roman catholic churches, and a commandery of the Teutonic order. The city is pretty large, and is a place of trade; ſome good cloths are made there; but the making of fire-arms, for which it was once famous, is fallen to decay.

SECT. X.

Of the Principality of Mors: the Counties of Tecklenburg, Lingen, and Ravenſberg; with the principal Places in each.

THE principality of Mors is encompaſſed by the dutchies of Cleve and Berg, the archbiſhopric of Cologne, and the dutchy of Gueldres; it being little more than nine miles in length, and as many in breadth.

It abounds in corn, cattle, and veniſon. Its limits are waſhed by the Rhine, and it is likewiſe watered by ſeveral ſmall rivers and brooks. It belongs to the king of Pruſſia, who on account of this principality has a particular ſeat and voice in the council of the princes of the empire.

This principality has its own peculiar regency, who manage every thing relating to the affairs of the ſovereign; together with civil, criminal, and eccleſiaſtical concerns: but what relates to war and the police, is conducted by the tax-council, which is under the direction of the war and domain-chamber. From the territories of this principality the king annually receives about thirty thouſand rixdollars.

The principal place in this little principality is Mors, a ſmall fortified town which contains a citadel, and is the place where the provincial colleges hold their meetings. It has a Calviniſt church, and a Latin ſchool.

Crefeld is alſo a ſmall town, in which is a citadel; but has manufactures of velvet, ſilk, linen, and other articles.

The county of Tecklenburg terminates to the north and eaſt on the biſhopric of Oſnabrug, and to the ſouth and weſt on that of Munſter, extending about twenty-three miles in length, and about ten in breadth.

It has a ſufficient quantity of land capable of bearing all ſorts of corn, with a good breed of cattle, and plenty of fowl and veniſon. Its rivers and brooks abound with fiſh: theſe are the Haſe and the Date; and in the mountains are quarries of ſtone. A great deal of linen is made and exported from this country.

In the beginning of the Reformation count Conrad introduced the Lutheran doctrine; but count Arnold, of Bentheim and Tecklenburg, his daughter's ſon, bringing in the Calviniſts, the whole country embraced their ſentiments.

The king of Pruſſia, on account of this country, enjoys an additional ſeat and voice in the Weſtphalian college of imperial counts, and alſo at the diets of the circle of Weſtphalia. The ſovereign's domains in this county bring in annually about twenty-four thouſand rixdollars. The amount of the taxes, exciſe, &c. is included in the ſum mentioned above under Minden.

The places in this county are too inconſiderable to deſerve deſcription.

The county of Lingen is ſurrounded by the biſhoprics of Munſter and Oſnabrug, and in part by the county of Tecklenburg. The ſoil of the country is in general not very fertile. In the upper country are ſome coal-pits and quarries of ſtone.

The prevailing church here is the Calviniſt; but the greateſt number of the inhabitants of the country are Roman catholics; for at the time of the Reformation count Conrad was obliged to reſign this part of the country to popiſh lords, and it became entirely under the Spaniſh dominion.

Lingen is under one common government with the county of Tecklenburg; and with reſpect to the police and other affairs, it is under the domain-chamber of Minden, which has a deputation college at Lingen.

The royal annual revenues ariſing from the domains, contributions, and exciſe, are eſtimated at about eighty thouſand florins.

This country is divided into the Upper and Lower County, the principal place in which is

Lingen, the capital, which is ſeated near the Ems, was formerly fortified, but at preſent is barely ſurrounded with a ditch. It is the ſeat of the regency of the united counties of Lingen and Tecklenburg, and of the deputation of the war and domain-chamber of Minden. It has a church belonging to the Calviniſts, another belonging to the Lutherans, and a third poſſeſſed by the Roman catholics. It has alſo a ſeminary, founded in the year 1697 by William III. king of England.

The county of Ravenſberg is environed by the biſhoprics of Munſter and Oſnabrug, the principality of Minden, the counties of Schauenburg and Lippe, the biſhopric of Paderborn, and the county of Rittberg.

Its ſoil is in ſome parts ſandy; but in others bears corn, flax, and hemp; and the paſtures are in ſome places very good.

The Weſer ſeparates this county from the principality of Minden, and is of great advantage to the commerce of the inhabitants. Its other rivers are the Rehme, the Werre, the Aa, the Elſe, the Warmenau, the Heſſel, and the Lutterbach.

Moſt of the inhabitants are Lutherans, who have thirty-three pariſh-churches; but the Calviniſts enjoy the public exerciſe of their religion only at Herford and Bielefeld; though the Papiſts are poſſeſſed of churches not only in thoſe towns, but in three others. A certain number of Jews are alſo tolerated.

The moſt profitable employment of the inhabitants conſiſts in ſpinning and weaving of linen. There are not only many thouſand weavers in this county, but conſiderable quantities of linen are alſo brought from the neighbouring countries to Herford and Bielefeld, where they are bleached and ſold. Both the fine and coarſe linen made here is exported all over Europe, and alſo to America. At Bielefeld is alſo a manufacture of ſtockings, and at Herford of ſtuffs.

This county is ſubject to the electoral houſe of Brandenburg, and in 1716 was placed under the regency of Minden. Its principal towns are the following:

Bielefeld,

Bieleſeld, the capital of the county, is ſeated at the foot of a mountain, and on the banks of the Lutterbach, which runs through the town. It is well built, and contains near eight hundred dwelling-houſes; with two principal churches belonging to the Lutherans, viz. that of St. Nicholas, at which the ſuperintendant of the county is upper preacher; and that of St. Mary, in which is a chapter, conſiſting of ſeven Lutheran and five Roman catholic capitulars. There are here alſo a Calviniſt church, a Popiſh chapel, and a Franciſcan monaſtery, with a church in it; an infirmary, in which is a Lutheran chapel; an orphan-houſe, in which is a ſtocking manufacture; a ſpinning-houſe, a houſe of correction, and a Latin ſchool. In the town are alſo ſeventeen ſquares. The nobility hold their provincial diets here, and in this place keep their archives. It was formerly a Hanſe-town; at preſent the principal employments of the inhabitants conſiſt in weaving and bleaching of linen.

Herford, formerly Hervorden, is watered by the rivers Werra and Aa, which run through the city, dividing it into three parts. That in the middle is called the Altſtadt, and contains three hundred and ſixty-two burghers houſes, a Lutheran church, and a cloyſter of Grey friars. About one-third of this part is called the Liberty, and contains the abbey, which is an imperial, free, ſecular foundation, and its abbeſs, who is ſtiled a princeſs and prelateſs of the holy Roman empire, ſits at the diet among the abbeſſes on the Rheniſh bench, and at the diets of the circle of Weſtphalia. This foundation is Lutheran, and the chapter conſiſts of a deaconeſs, a female churchwarden, and a number of canoneſſes of the ſtate of princeſſes and counteſſes, of whom the abbeſs may receive any number ſhe pleaſes. The abbeſs Johanna Charlotte, princeſs dowager, erected an order at this place, in the year 1729. The croſs is pendant to a ſcarlet ribbon, bordered with ſilver, hanging from the right ſhoulder to the left ſide. On one ſide is the Virgin Mary ſtanding, with the child Jeſus, and the inſcription MEMINISSE ET IMITARI; and on the other the name of the abbeſs. The canoneſſes alſo bear a ſtar on their left breaſt, in which is repreſented the Virgin with the child Jeſus.

In the Altſtadt are alſo the court-chapel, the chapel of St. Anthony, and the Juliers and Weſtphalian courts.

The ſecond part of the town, which lies to the north-eaſt, is called the Neuſtadt, and contains three hundred and nineteen houſes belonging to the burghers; the Lutheran church of St. John the Baptiſt, in which is a chapter of twelve capitulars, one of whom muſt be a Roman catholic; the brother-houſe, the ſiſter-houſe, with the commandery-court of the order of St. John, in which is a chapel.

The third, and ſmalleſt part of the city, which lies to the weſt, is called the Radewig, and contains a hundred and twenty-ſix houſes belonging to the burghers, with the Lutheran church of St. James. Thus there are eight hundred and ſeven houſes of the burghers in the different parts of the city. within the walls are alſo ſpacious courts and gardens, many vacant places where the houſes have been burnt down, ſome paſture ground, and a ſmall corn-field.

On the mountains oppoſite to Herford, at the diſtance of about ſix hundred paces from that city, is the collegiate church of St. Mary, a noble, free, and ſecular foundation, conſiſting of a female dean and provoſt, with a female churchwarden, and nine other ladies of the foundation, all of noble birth, the ſuperior of whom is the abbeſs of the above foundation in the city. Theſe ladies alſo wear the ſign of the order, with the ſtar on the left breaſt.

SECT. XI.

Of the Counties of Schauenburg, Hoya, and Pyrmont; with the principal Places in each.

THE county of Schauenburg is ſeated on the Weſer, and is ſurrounded by the principality of Hanover, the counties of Lippe and Ravenſberg, and the principality of Minden; extending near thirty miles from north to ſouth, and twenty from eaſt to weſt.

It is in many places very mountainous; but yet contains a great deal of fertile land, with ſome excellent paſtures, and conſiderable quarries of free-ſtone. It has alſo an allum mine, and pits of excellent coal. Its rivers abound with fiſh: theſe are the Hamel, the Caſpaw, the Weſer, and the Exter. It has alſo a lake, which is five miles long, two broad, and about ſixteen feet deep.

In the whole country are only ſeven little towns, and three boroughs. The inhabitants chiefly ſubſiſt by agriculture and the breeding of cattle; moſt of them are Lutherans; but the Calviniſts are allowed the public exerciſe of their religion.

This country belongs to the king of Great Britain, the landgrave of Heſſe-Caſſel, and the count of Schauenburg-Lippe; the two laſt are poſſeſſed, by virtue of this county, of an additional ſeat and voice in the college of the Weſtphalian counts of the empire, and in the circle of Weſtphalia. The whole county brings in annually about a hundred thouſand rixdollars to its princes.

The principal places in this county are the following:

Stadthagen, in Latin Haga-Schauenburg, is ſeated in a level and pleaſant ſpot, and is encompaſſed with ditches, a rampart, walls, and ſeveral towers. The citadel is at preſent the reſidence of the princeſs Charlotte Frederica Amelia, counteſs dowager of Schauenburg-Lippe. Prince Erneſt founded a ſeminary in this town, which in 1619 was raiſed to an univerſity, which in 1621 was removed by that prince to Rinteln. To the eaſt of the Lutheran church ſtands the coſtly mauſoleum of prince Erneſt, conſiſting of an heptagonal tower of hewn-ſtone covered with plates of copper, in which is to be ſeen an excellent monument of marble and braſs, repreſenting Chriſt's tomb guarded by the watch, and out of it our Saviour riſing triumphant. Here is an orphan-houſe, founded in 1738 by Johanna Sophia, counteſs dowager to count Frederic Chriſtian, and for the moſt part formed after the model of the orphan-houſe at Hall. Here was alſo a Franciſcan cloiſter, of which nothing now remains but the church, one-half of which has been repaired, and allowed the Calviniſts, for the uſe of their public worſhip.

Buckeburg, a ſmall town, defended by a citadel, is ſeated twelve miles to the weſt of Schauenburg. It has a large and beautiful church, and of late years has been much adorned with fine houſes. It has a fountain in the market-place, and the count has a palace erected in a magnificent taſte after the Italian manner. Here is a ſchool belonging to the town, and the Calviniſts have a peculiar church and an orphan-houſe.

Schauenburg is an old ruinous citadel, ſeated on a high mountain between the towns of Rinteln and Oldendorf. This fort gave name to the whole country; but the fort itſelf obtained the name from the extenſive proſpect it affords, the word Schauenburg ſignifying, in German, Seeingtown, and the hill on which it ſtands is named Oelberg, or Eye-mount.

Rinteln is a fortified town, ſeated on a tract environed by mountains, and lying between the Weſer and the Exter. Over the former is a bridge of boats from March till the beginning of December. The univerſity, as well as the town, belongs at preſent to Heſſe-Caſſel. The profeſſors of divinity are of the Lutheran religion; but thoſe in the other faculties are Calviniſts. The Lutherans have the town-church, but the Calviniſts and the garriſon make uſe of that which belongs to the univerſity. The town is environed by ramparts, ditches, and bulwarks. The inhabitants chiefly apply themſelves to agriculture, the breeding of cattle, and brewing.

The county of Hoya is bounded on the north by the county of Delmenhorſt, the territory of the city of Bremen, and the Weſer; on the eaſt by Lunenburg and Hanover; on the ſouth by the principality of Minden; and on the weſt by the county of Diepholz; extending about thirty-eight miles in length, and about thirty-three in its greateſt breadth. It has ſome large heaths, and its ſoil is for the moſt part ſandy; but it contains arable land and paſture, and yields as much rye, oats, and buckwheat as the inhabitants have occaſion for; and in ſome parts are produced good wheat, barley, and flax.

The

The rivers are the Weſer, the Aller, the Delme, and Hunte. This county has only one city, and ſeventeen boroughs. The inhabitants in general apply themſelves to agriculture, the breeding of cattle, and the keeping of bees; to ſpinning, the weaving of linen and woollen ſtuffs, and the knitting of ſtockings. They are all of the Lutheran church, and the country contains fifty-four pariſhes.

The electoral houſe of Brunſwic poſſeſſes, on account of Hoya, an additional ſeat and voice in the college of the counts of Weſtphalia.

In this county are no places of any conſequence, and therefore we ſhall not trouble our readers with any account of them.

The county of Pyrmont is bounded on the north and eaſt by Hanover, and on the ſouth and weſt by Hanover, Wolfenbuttle, and the territory of Paderborn. The lower part of the county conſiſts of an uncommonly beautiful and pleaſant vale, through which runs the Emmer, and all around it is environed by lofty green mountains; and in it are the celebrated mineral ſprings. The religion of the inhabitants is the Lutheran, and they have a ſuperintendent that reſides at the capital.

The arms of this county are an anchor-croſs in a field argent. The prince of Waldeck, on account of this ſmall country, enjoys both a ſeat and voice in the Weſtphalian college of the counts of the empire, and alſo at the diets of the circle of Weſtphalia. His annual revenues ariſing from this county are eſtimated at near thirty thouſand rixdollars, to which the mineral ſprings and ſalt works chiefly contribute.

This county contains the citadel and New Town of Pyrmont, with ten villages.

The citadel of Pyrmont is fortified with a broad ditch, high ramparts, and ſubterraneous paſſages. From the ditch of the citadel a canal has been carried quite down to the ſpring, where is a mineral fountain, which riſes about twenty feet high. A little above is a houſe in which an aſſembly is held, and near it is the houſe that incloſes the ſpring: about forty feet diſtance from this fountain-head riſes the great bubbling ſpring, which is uſed for bathing, and makes a great noiſe; and at a hundred and twelve feet diſtance to the weſt lies the lower ſpring, which is the weakeſt of them all.

The New Town of Pyrmont is ſeated between the ſpring and the village of Oeſtorf. To the ſouth of it ſtands an orphan-houſe, and on the north is a good ſtone-quarry, in which is a pit reſembling the grotto del Cane near Naples, from which ſtrong ſulphureous fumes aſcend, and over which, in the year 1720, a ſtone-vault was built. About thirty rods from this ſulphureous cavern riſes a briſk ſpring, the waters of which are of a pleaſant, vinous, acid taſte.

SECT. XI.

Of EAST FRIESLAND.

Its Situation, Extent, Produce, and Rivers. The Languages and Trade of the Inhabitants. The Manner in which it became ſubject to Pruſſia: its Arms; the Revenue the Prince receives from it, and its principal Towns.

THE principality of Eaſt Frieſland receives its name from its ſituation with reſpect to Frieſland, one of the United Provinces, and is bounded on the north by the German ſea, on the eaſt by the county of Oldenburg, on the ſouth by the biſhopric of Munſter, and on the weſt by the province of Groningen and the German ſea, extending from north to ſouth forty-five miles, and from eaſt to weſt about forty-two. This principality has a moiſt and thick air; but it is frequently purified by the ſea breezes. Spring and ſummer appear here ſomewhat later than in other parts of Germany. The country throughout is level and low, whence it is ſecured by expenſive dykes againſt the inroads of the floods. Along the ſea-coaſt lies a marſh that is uncommonly fertile; but is more uſed for meadow and paſture than for agriculture. Indeed the paſtures here are remarkably good, and produce horned cattle, horſes, and ſheep in great numbers, and of an extraordinary ſize. The milk of the cows, which is remarkably rich, is yielded in great quantities, and of it is made excellent butter and cheeſe. In the heart of the country the ſoil is for the moſt part ſandy, and in ſome places fenny; but yields turf for burning, which, from the great ſcarcity of other fuel, is of the higheſt advantage. The produce of the earth, and particularly kitchen-herbs, here grow to a larger ſize than in other countries; but are ſeldom ſo good. Veniſon and fowl are alſo to be had here, and in this country are geeſe that weigh twenty-four pounds and upwards. In harveſt a great number of fieldfares and ſnipes generally appear.

The principal river of this country is the Ems, which here receives into it the Leda, or Soeſta, and at laſt runs into the German ſea. Near the place of its efflux it is very broad, and, dividing into two branches, ſurrounds the iſland of Borcum. The ebb and flood are to be obſerved here nine miles up in the country, and ſo high the ſalt-water comes.

Between Eaſt Frieſland and Groningen is a bay called the Dollart, which roſe out of a conſiderable tract of country that was ſwallowed up by the ſea, on which were many villages; but the Dollart now decreaſes greatly on the Eaſt Frieſland ſide, yielding much new land, which has been gradually dyked in. The ſea here affords oyſters, muſcles, crabs, and a variety of other fiſh.

The languages ſpoken here are the Eaſt Frieſian, the German, and Dutch; and in the laſt ſermons are preached in many places near Groningen. Next to the Lutherans the Calviniſts are the moſt numerous. In the town of Embden, and in the lordſhips of Godens and Lutzburg, the Roman catholics enjoy the quiet exerciſe of their religion; as do the Mennonites at Embden, Leer, and Norden. In this county are alſo a number of Jews.

Trade and navigation are briſkly carried on here. The produce of the country and the commodities exported from hence are large horſes, numbers of which are ſent by ſea even to Rome, and ſold by the pair for coach-horſes, for three or four hundred dollars, and more, according to their ſtrength and beauty; horned cattle, butter, cheeſe, rape-ſeed, winter-barley, and fine linen made at Leer and Godens. On the other hand, every thing wanted in the country, that is either neceſſary or convenient, is conveyed thither in ſhips; and at Embden the king of Pruſſia has eſtabliſhed an Aſiatic company.

The princely houſe of Eaſt Frieſland becoming extinct by the death of prince Charles Edward in 1744, the king of Pruſſia, in conſequence of the expectancy granted to the houſe of Brandenburg by the emperor Leopold in the year 1694, took poſſeſſion of the country; but the illuſtrious houſe of Brunſwic-Lunenburg declared and made known to the regency of Eaſt Frieſland, and the whole body of the ſtates, its rights obtained, by means of a brotherhood, and an hereditary union entered into in 1691 with prince Chriſtian Eberhard; and alſo made proper declarations to the aulic-council of the empire againſt the ſuit of the king of Pruſſia, for being inveſted with the poſſeſſion he had ſeized.

The arms on account of Eaſt Frieſland Proper are, an harpy or, bearing a coronet, with wings expanded in a field ſable, and having two ſtars or, in the four corners of the field.

The prince of Eaſt Frieſland has a ſeat and voice in the council of the princes of the empire, and at the diets of the circle of Weſtphalia.

The revenues of Eaſt Frieſland, it is ſaid, greatly exceed a hundred thouſand rixdollars. The regency conſiſts of two ſenates, and is held at Aurich. Theſe ſenates, with the aſſiſtance of the general ſuperintendent and town miniſter of Aurich, conſtitute the conſiſtory. The other officers are the war and domain-chamber, the provincial-college, which collects, adminiſters, and computes the taxes and contributions, and a provincial medicinal-college.

The principality of Eaſt Frieſland conſiſts at preſent of three towns, and nine prefecturates that were formerly lordſhips; but are now, as well as the towns, become hereditary ſtates of the ſovereign prince: it has alſo lordſhips that have their own hereditary lords; but are ſubject to the ſupreme juriſdiction of the prince.

The principal places of this principality are,

Aurich, the antient reſidence of the prince, and ſtill the ſeat of the provincial colleges, ſtands in the center of the country. The antient reſidentiary caſtle is environed with ramparts and ditches, and the Calviniſts at preſent perform their religious worſhip in the garriſon church. There is here alſo a Lutheran church, a provincial houſe, a Latin ſchool, and a public alms-houſe. The magiſtracy conſiſts of two burgomaſters, two counſellors, and one ſecretary.

Embden, a large and ſtrong ſea-port town, ſeated on the Ems, in the fifty-third degree five minutes north latitude, and in the ſeventh degree twenty-ſix minutes eaſt longitude. On the land-ſide it is fortified by a double ditch, bulwarks, and baſtions, and on the other by a ſtrong wall and the river; it has alſo an old fort and a citadel, and by means of ſluices the country around it may be laid under water. The harbour is one of the largeſt and moſt convenient in Germany, which renders Embden a place of great trade. The houſes are neat and lofty. It has a fine council-houſe, to which ſhips may arrive by means of a broad canal drawn from the Ems, called the Dolf. Among the public buildings are what is named the Great church, the Gueſt-houſe, in which is a church, and the New church, all which belong to the Calviniſts, and a Latin ſchool. Here are alſo many Lutherans, and likewiſe Roman catholics, Mennonites, and Jews. The town has annexed to it ſeveral lordſhips which lie to the eaſt; the inhabitants of which are Calviniſts.

Norden is ſeated at a ſmall diſtance from the German ſea, and is the oldeſt town in Eaſt Frieſland. It is open, but pretty large; it has a good harbour, and is a place of trade. It has a Lutheran church, with a Latin ſchool, and a gueſt-houſe, that was formerly a cloiſter; there are here, likewiſe, ſome Calviniſts and Mennonites. Its juriſdiction is under the prince's adminiſtrator, the burgomaſter, and council.

SECT. XII.

Of the Counties of Oldenburg, Delmenhorſt, Bentheim, and Steinfurt.

THE county of Oldenburg is bounded on the weſt by Eaſt Frieſland, on the ſouth by the biſhopric of Munſter, on the eaſt by the county of Delmenhorſt and the Weſer, and on the north by the ſigniory of Jever and the Jade; extending forty-eight miles in length, and thirty-eight in breadth. In ſome parts it is pretty fertile, and has excellent paſturage, which produces a good breed of horned cattle and horſes; but has a great deal of mooriſh land of no other ſervice but for producing the turf which is here uſed for burning. The land is ſecured againſt inundations by large and expenſive dykes and dams.

This country is ſubject to the king of Denmark, who on this account is poſſeſſed of a ſeat and voice in the Weſtphalian college of the counts of the empire, and in the diets of the circle of Weſtphalia.

Oldenburg, the capital of the county, is ſituated on the river Hunte, which receives into it the Haare, as it paſſes through the town, in the fifty-third degree eight minutes north latitude, and in the eighth degree thirteen minutes eaſt longitude. The town ſtretches out in length, and is well fortified with walls and ditches. It has alſo a handſome round caſtle, in which its antient counts uſed to reſide, and is built of free-ſtone three ſtories high. In the principal church, which is that of St. Lambert, is the burial-place of the counts of Oldenburg, and there are two other churches. The town conſiſts of what are termed free houſes, free inhabitants, and the garriſon. The free inhabitants are exempt from all ſuch burthens as thoſe to which the burghers are ſubject, as the quartering of ſoldiers and keeping watch; theſe conſtitute nearly one-third of the inhabitants, and are ſolely ſubject to the chancery of the royal regency eſtabliſhed here; but the burghers are under the town magiſtracy, and the garriſon under the commandant.

The county of Delmenhorſt, which lies between the county of Oldenburg and the Weſer, is about ſeventeen miles long and ſeven broad, and likewiſe belongs to the king of Denmark, who on this account alſo enjoys a particular ſeat and voice in the college of the Weſtphalian counts of the empire, and alſo at the Weſtphalian diet.

Its principal town is Delmenhorſt, which is ſeated on the little river Delme, from which it received its name. It had antiently a college of canons, the revenues of which were applied in 1575 to the maintenance of the churches, ſchools, and the poor.

The county of Bentheim has the United Provinces on the north and weſt, and the biſhopric of Munſter on the eaſt. It is about forty-five miles in length, and eighteen in the greateſt breadth.

This country is both fertile and pleaſant. In the mountains are excellent quarries, from which ſtones are conveyed to the Netherlands and the biſhopric of Munſter. In the plains are fruitful fields, with good meadow grounds. The woods afford excellent timber and game; and there is here a good breed of cattle. The principal river of this county is the Vecht, which runs through its whole length, and may be navigated for the greateſt part of the year with ſmall craft and floats of timber, and is very rich in fiſh.

The inhabitants are laborious and deal in yarn, wool, linen, cattle, honey, ſtones, wood, and other articles, which are chiefly exported to Holland. Some of the inhabitants are of the Calviniſt religion, and others Lutherans; but the former are the moſt numerous: there are alſo a conſiderable number of Roman catholics; but they are permitted the public exerciſe of their religion only at Bentheim.

The count of Bentheim-Bentheim enjoys a ſeat and voice in the college of the Weſtphalian counts of the empire, and in the diets of the circle of Weſtphalia.

The principal town in this county is

Bentheim, which ſtands partly on a mountain, and partly on a river of the ſame name. The place of reſidence for the counts ſtands on a remarkable high rock, and is ſurrounded with towers. In this town is a Calviniſt pariſh-church, and a church belonging to the Roman catholics.

The county of Steinfurt is nearly twenty-three miles long, and the ſouth tract only ſeven, but the northern twelve miles broad. The Aa, which riſes on its ſouthern limits, traverſes the whole country, and at length diſcharges itſelf into the Vecht.

The count of Bentheim-Steinfurt, who is deſcended from the ſame family as the count of Bentheim-Bentheim, has alſo a ſeat and voice among the counts of the empire in the Weſtphalian college, and in the diets of that circle.

The only town in this county is Steinfurt, which is ſituated on the Aa. The inhabitants are for the moſt part Calviniſts, who have here a church, and the Roman catholics another. The celebrated ſeminary in this town, called *Arnoldinum*, from its being founded by count Arnold in 1591, has five profeſſors, with ſix preceptors, and was formerly very flouriſhing. Juſt by the town is a commandery of the order of St. John.

SECT. XIII.

Of the free imperial City of AIX LA CHAPELLE.

THE imperial city of Aix la Chapelle, called by the Germans Aachen, or Acken, and in Latin Aquiſgranum, is ſeated between the dutchies of Juliers and Limburg, in a valley ſurrounded by hills, woods, and vineyards, in the fiftieth degree forty-four minutes north latitude, and in the ſixth degree twenty-eight minutes eaſt longitude. The circuit of the whole city is a league and a half. It is encompaſſed with two walls; the inner wall has ten gates, and the outer eleven. The town-houſe is a noble ſtructure of free-ſtone, and one of the fineſt in Germany. It is adorned with all the ſtatues of the emperors ſince Charlemagne, and with curious hiſtory paintings,

paintings, among which is a fine piece of the reſurrection, and another of Charlemagne's giving the city her charter. The uppermoſt ſtory conſiſts of one hall a hundred and ſixty feet in length, and ſixty in breadth, in which the emperors uſed to entertain the electors and other princes, who aſſiſted at their coronation.

In the market-place, oppoſite the town-houſe, is a noble fountain, with four ſprings, which run from above into a copper ciſtern thirty feet in diameter, and weighing twelve thouſand pounds. On the top of the fountain is a large braſs ſtatue gilt of Charlemagne in armour. As the city lies in a valley ſurrounded with mountains, there are twenty other public fountains of clear water, beſides many private ones. Without St. James's gate are ten hot mineral ſprings, and ſome cold ones, beſides ſeveral in the adjacent fields. The ſtreams that run through the city keep it very clean, and drive ſeveral mills.

With reſpect to the celebrated baths of this city, there are three within the inner walls, which are called the Emperor's, St. Quirinus's, and the Little Bath. Charlemagne was ſo much delighted with the firſt, that he frequently invited his ſons and nobles to bathe and ſwim there with him; but it is now divided into five bathing-rooms. The Little Bath joins to it, and the ſprings of both riſe ſo hot, that they let them cool ten or twelve hours before they uſe them. They are ſtrongly impregnated with nitre and ſulphur, and ſometimes cakes of brimſtone and ſalt-petre of a conſiderable thickneſs are taken out of them. Their taſte is at firſt unpleaſant, and their ſmell reſembles that of a rotten egg. Near theſe baths is a ſpring of warm water, much reſorted to in ſummer mornings, and drank for chronical diſeaſes. Thoſe in the New Town, which are the Roſe Bath, the Poor's Bath, and St. Corneille's, are not near ſo hot and clear as the former; but they are of much the ſame nature, and their ſmell offenſive. Near the hot ſprings lie many cold ones, by which their heat might be tempered, and with a little expence they might be made ſome of the moſt delightful baths in the world.

Here are thirty churches, beſides the cathedral, which is a large Gothic pile conſecrated by pope Leo III. in the preſence of the emperor Charlemagne, and three hundred and ſixty-five biſhops. The ſteeple at the weſt end is adorned with ſeveral pyramids, and on the top is a large globe and croſs. The inſide of this ſtructure has a vaſt number of marble and braſs pillars, gilt ſtatues, braſs doors and partitions, and a great deal of Moſaic work. Over the place where Charlemagne was interred hangs a large crown of ſilver and gilt braſs, adorned with ſixteen ſmall towers, ſurrounded with forty-eight little ſtatues a foot high, and thirty-two that are ſtill leſs, all of ſilver; among which are commonly placed forty-eight candleſticks, and at certain grand feſtivals no leſs than four hundred and fifty tapers. The four principal relics ſhewed here at the jubilee, which happens once in ſeven years, are firſt, what they call the gown or ſhift worn by the Virgin Mary at our Saviour's birth, made of a kind of flax which ſeems to be neither linen nor calico; but as it is only expoſed from the top of the high tower, it may be either linen, calico, or any other ſtuff, without the people being able to diſcover the difference, or what garment it is. The ſecond is a coarſe linen cloth, which, they pretend, was girt about our Saviour when he hung on the croſs. The third is a piece of the cord with which he was bound; and the fourth ſome of the earth on which the blood of St. Stephen dropt at his martyrdom, encloſed in a veſſel of gold adorned with precious ſtones, on which the emperors were uſually ſworn at their inauguration.

At the end of the cathedral our Saviour is repreſented ſitting in majeſty on a throne, dreſſed in a long robe. Round the throne are the four animals repreſented in Ezekiel's viſion. Over his head is a circle of golden ſtars, and underneath the ſymbol of the croſs that appeared to Conſtantine when he defeated Maxentius. Here is alſo a repreſentation of the twenty-four elders, mentioned in the Revelations, riſing from their ſeats, laying aſide their crowns, and falling proſtrate before the throne.

The windows are curiouſly gilt, and the pavement is of chequered marble. This church contains an immenſe treaſure, conſiſting of veſſels of gold and ſilver gilt, copes embroidered with pearls, and other rich veſtments. Over the chief altar is a ſilver cheſt adorned with gold, of antique workmanſhip, and curiouſly engraved, in which are kept the four relics above-mentioned. A pulpit at the entrance of the choir is covered with plates of gold and ſilver, and adorned with precious ſtones; among which is a very large agate, the gift of the emperor Henry II. The altar of the choir is covered with plates of gold repreſenting our Saviour's paſſion. In the upper part of the church, oppoſite the prince's altar, between the pillars, is a throne or chair of white marble, ſuppoſed to have been placed there by the emperor Charlemagne, in which the emperors uſed to ſit when conſecrated, and receive the firſt homage of the electors and the chapter of the cathedral, in quality of king of the Romans. It is not poliſhed, it being formerly covered with plates of gold.

This city was for a long time reckoned the capital of the empire, and the proper reſidence of the emperor; and in it ought to be performed the coronation of the king of the Romans, and of the emperor. Hence in the foundation of St. Mary in this city, is a part of the jewels of the empire commonly uſed at theſe coronations, as a ſword of the emperor Charlemagne, a manuſcript book of the Goſpels, in a cover of ſilver gilt; St. Mary's church has alſo the honour of having every emperor one of its ſworn canons. In general there are twenty one religious orders of both ſexes in this city, who take up almoſt one third of what is called the Little Town.

The greateſt part of the inhabitants are of the Romiſh religion, and though there are alſo many Proteſtants, yet they are not permitted to enjoy the benefit of public worſhip; but both the Lutherans and Calviniſts are obliged to go for that purpoſe to Vaels, in the dutchy of Limburg, an hour's journey from the city. This city claims the firſt place on the Rheniſh bench in the college of the cities of the empire, and has the ſecond among the imperial cities that have a ſeat and voice at the diets of the circle of Weſtphalia.

The title of its magiſtracy is that of burgomaſter, ſheriff, and council of the holy Roman imperial free city of Aix la Chapelle, and its arms are an eagle diſplayed ſable, with the head, crown, feet and claws or, in a field argent.

In this city are manufactures of cloth, copper, and braſs. In 1656, it was almoſt entirely deſtroyed by fire; in 1668 and 1748, it was diſtinguiſhed by celebrated treaties of peace concluded there, and in 1756, was damaged by an earthquake.

About the diſtance of a furlong from the ſouth gate of Aix la Chapelle, lies the delightful village of Porcet, or Borcet, which is ſaid to have derived its name from the wild boars that formerly abounded in the neighbouring woods. Here are many hot ſprings, on both ſides of a ſmall cool rivulet that runs through the village, and are conveyed by pipes and conduits into fourteen houſes, in which are formed twenty-eight baths, ſome of which are much hotter than thoſe in the town, and muſt be cooled eighteen hours before they can be uſed. They are for the moſt part five or ſix yards ſquare, and their water is clear and pleaſant. One quite open to the air, called the Poor Man's bath, has a ſpring ſo hot that the people ſcald pigs, and boil eggs with it; but it is obſerved, that it only hardens the yolks and not the whites. Theſe baths are not ſo ſtrong as thoſe in the city, and conſequently better for weak people; and thoſe of all ages and conditions bathe in them for their diverſion, without any danger. The village of Porcet is well built, has four handſome churches, and a nunnery of Bernardines, whoſe abbeſs is a princeſs of the empire; but there lies an appeal from her court to the Echevins or ſheriffs of the city.

The adjacent country abounds with corn, fruit, and paſturage; the woods furniſh the people with materials for building, as the quarries do with ſtone. They have alſo rich coal mines, beſides others of iron, lead, vitriol, ſul-

ſulphur, and lapis calaminaris; and are well ſupplied with neceſſaries by the Rhine and the Maeſe. The territory of the city called the kingdom of Aix la Chapelle, are large and contains a conſiderable number of villages, and about three thouſand ſubjects. It is incloſed on all ſides with mountains; and the nobility who dwell in this territory are ſubject to the juriſdiction of the city.

SECT. XIV.

Of the Principalities of Naſſau-Siegen, and Naſſau-Dillenburg; with the Counties of Lippe, Sayn, and Wied-Runkel.

THE principality of Naſſau-Siegen lies in a tract called the Weſterwalde, or Weſt Foreſt, and is fourteen miles in length; but in the broadeſt part ſcarcely five. This principality is very mountainous and woody; yet contains ſome good arable land, and particularly good paſtures, whence it has a conſiderable breed of cattle; but it is moſt famous for its iron and ſteel manufactories.

This principality contains one town, two boroughs, and about one hundred and fifty villages. In 1624 the Calviniſts were in poſſeſſion of all the churches, ſchools, and religious revenues: but in 1626, count John the Younger embracing the Popiſh religion, ſought to introduce it not only into his ſhare of the country; but alſo throughout the whole dutchy; however, he was never able fully to accompliſh it. The line of Naſſau-Siegen becoming extinct, this principality devolved to the line of Naſſau-Dietz, and is poſſeſſed by William V. prince of Orange, and hereditary ſtadtholder of the United Provinces; who on this account has a particular ſeat and voice in the council of the princes of the empire, and at the diets of the circle. His revenue ariſing from this principality is eſtimated at one hundred thouſand rixdollars.

This country is divided into ſeven prefecturates, the principal place in which is,

Siegen, a town ſeated on the river Sieg, has an old and new citadel, the former of which was antiently the reſidence of the Popiſh, and the latter of the Calviniſt princes. The Papiſts perform their religious worſhip in St. John's church, and the Calviniſts in the church of St. Nicholas alone. In this town is a college of Jeſuits; and in its neighbourhood are many mines and ſmelting-houſes.

The principality of Naſſau-Dillenburg is ſeated near the former, and is nineteen miles long, and fourteen broad. It has profitable woods, and good quarries of ſtone, and from its iron founderies and forges, with the trade carried on in that metal, moſt of the inhabitants derive their ſubſiſtence, there not being a ſufficiency of arable land. In this principality riſe the rivers Sieg and Dill.

This country contains five towns, and two boroughs, the inhabitants of which are of the Calviniſt church.

The princes of this country had the ſame origin as the other princes of Naſſau, and this principality is alſo ſubject to the ſtadtholder of the United Provinces, who likewiſe enjoys an additional vote on account of this principality, in the council of the princes at the diet of the empire, and in the diet of Weſtphalia. His revenues from this principality amounted in 1731 and 1732, to one hundred and ſixty-one thouſand florins.

The principal town in this principality is,

Dillenburg, which is ſeated on the Dill, and after its being burnt down in 1724, was better built than it was before. The palace, or citadel, is a fortification in the old taſte. In the pariſh church are the burial places of the antient counts, and the ſucceeding princes. In the large park are two royal ſeats, and near the town is a copper foundery erected by prince Chriſtian, in which are annually ſmelted about one hundred and fifty centners of copper.

We now come to the county of Lippe, which is ſurrounded by the counties of Rietberg, Ravenſberg, Schauenburg, and the principality of Hanover. It is mountainous; but contains ſome arable land. Its principal rivers are the Emmer, and the Weire, and here riſes the Humme and the Bever.

The inhabitants conſiſt of Calviniſts and Lutherans; but the former are the moſt numerous. In the whole county, according to the Rev. Dr. Buſching, are five towns, four boroughs, and fifty-two villages and hamlets.

The houſe of Lippe is divided into ſeveral branches, between whom the country is divided. They all ſtile themſelves counts and noble lords of Lippe, and their arms for the county are a roſe gules, in a field argent; and on account of Schwalenberg, a prefecturate in this county, a ſwallow in its natural colours, ſtanding on a ſtar or, in a field gules. Theſe counts have together but one voice in the college of the counts of Weſtphalia at the diets of the empire, and at the diets of the circle of Weſtphalia.

The principal places in this county are the following:

Detmold, a town ſeated on the Werre, and defended by a citadel, the uſual reſidence of the regent houſe of Detmold. The town is divided into the Old and New, and has a Latin ſchool belonging to the Calviniſts that has ſix teachers.

Lemgow is ſeated on the Vega, and is the largeſt town in the county. The Lippehof, one of the count's palaces, was erected by count Chriſtopher Lewis. In this place is an abbey, the abbeſs of which is always a counteſs belonging to the regent houſe of Lippe. There are here two Lutheran churches, one belonging to the Calviniſts, and a flouriſhing Lutheran ſeminary that has ſeven teachers. This was formerly one of the Hanſe-towns; but its antient manufactories of cloth and ſtuffs are much decayed.

The county of Sayn is a ſmall diſtrict that lies chiefly in the Weſterwalde, containing two prefecturates, in which are three principal towns and as many boroughs. The inhabitants are a mixture of Lutherans, Calviniſts, and ſome of the Romiſh religion. The margrave of Brandenburg-Onolzbach, on account of the prefecturate of Sayn-Altenkirchen, and the burgrave of Kirchberg, on account of the other prefecturate named Sayn-Hachenburg, have a voice in the college of the Weſtphalian counts of the empire; but in the circle of Weſtphalia both houſes have only one voice among thoſe of the counts.

The principal places in this county are, the little town of Altenkirchen, in which is the council-college of Onolzbach-Sayn, and alſo a chancery, with a Lutheran and Calviniſt church; and

Hachenburg, a ſmall town, defended by a citadel, in which the burgrave of Kirchberg reſides; both the town and citadel are fiefs of the elector of Cologne.

The county of Wied is divided into two parts, each enjoyed by a different branch of the ſame family; theſe are the Upper county, or the county of Runkel, and the Lower county, alſo called the county of Wied. Hence the two counts are diſtinguiſhed by the titles of Wied-Wed, and Wied-Runkel, and are poſſeſſed of a voice at the college in the diets of the empire belonging to the college of the Weſtphalian counts, and in the circle of Weſtphalia.

In the Upper county are the following places:

Runkel, a borough ſeated in a valley on the river Lahn, conſiſting of about a hundred and twenty houſes, defended by a citadel which ſtands on a high hill, and was formerly the reſidence of the counts. A chancery is ſtill kept here, and here reſides the ſuperintendent, who has the inſpection of the preachers. The inhabitants ſubſiſt by agriculture, gardening, and the breeding of cattle; and

Dierdorf, a town alſo defended by a citadel, in which the count of Wied-Runkel at preſent reſides. In the year 1755 the Capuchins of the Rheniſh circle were allowed to build a cloiſter in the new built ſuburbs.

In the Lower county is New Wied, a ſmall but regular built town ſeated on the Rhine, over which the count of New Wied and the elector of Cologne, in 1742, cauſed a flying bridge to be laid.

The dutchy of Weſtphalia terminates to the eaſt on the biſhopric of Paderborn, Waldec, and Heſſe; to the ſouth on the counties of Witgenſtein and Naſſau, and likewiſe on the dutchy of Berg; to the weſt on the ſame

and the county of the Mark; and to the north on the biſhopric of Munſter and the county of Lippe; extending fifty-five miles from north to ſouth, and forty from eaſt to weſt; but the dimenſions both of length and breadth are unequal. It gives the title of duke to the elector of Cologne, to whom it is ſubject; though the duke is not reckoned among the ſtates of this circle. This country has many woods and much veniſon, and in ſome parts abounds with corn and paſturage, and its rivers run with an impetuous torrent from the mountains: but the towns in this dutchy, and particularly the city of Cologne, are already deſcribed in that electorate, to which they more properly belong, in treating of the electoral Rheniſh circle.

There are ſeveral little counties in this circle, which we purpoſely omit, and alſo ſeveral lordſhips that are too inconſiderable to be mentioned in a work of this kind.

CHAP. XIX.

Of SWABIA.

SECT. I.

Of Swabia in general, and more particularly of the Circle of that Name. Its Climate and Produce. The Regulations with reſpect to the Diets of the Circle, to Religion, military Forces, and the general Government of the Country.

SWABIA, called by the Germans Schwaben, and by the French Souabe, derives its name from the Latin Suevia, the country inhabited by the antient Suevi, who were ſo called from their long hair, which they braided and tied, ſays Dr. Buſching, like a ſchweif, or train. The greateſt part of Swabia at preſent belongs to the circle of that name, which we ſhall now deſcribe. It borders on the Upper circle of the Rhine, Franconia, Bavaria, Auſtria, and Swiſſerland, and contains about ſeventeen hundred and twenty-nine ſquare German miles; it extending a hundred and ten Engliſh miles from north to ſouth, and a hundred and thirty from eaſt to weſt.

It is divided between ſeveral princes, biſhops, and free cities; as the houſe of Auſtria, the dukes of Wirtemburg, the elector of Bavaria, and the princes of Baden; beſides the imperial cities of Augſburg, Ulm, &c.

The air is healthy, and the ſoil in general fertile; and though ſome parts are mountainous and woody, yet the hills afford mines of ſilver, copper, and other metals; and the foreſts a great deal of pine or fir timber, beſides great ſtore of game, and a good breed of horſes, horned cattle, and ſheep; while the other parts yield conſiderable quantities of corn, wine, and flax: but we ſhall give a more particular account of the produce of this circle in treating of the different ſtates into which it is divided.

The princes ſummoned to the diets of the circle are the biſhop of Conſtance and the duke of Wirtemberg; but the latter is ſole director, though he previouſly communicates to the former the deliberations that are to come before the circle. Theſe diets are commonly held at Ulm, in time of peace twice a year. Each of the five benches has its director, who ſets his ſeal to all the acts of the circle and other diſpatches. The biſhop of Conſtance is the perpetual director of the bench of eccleſiaſtical princes, as the duke of Wirtemberg is of that of the temporal princes. The directors of the benches of prelates and counts are choſen only for life. Ulm is perpetual director of the bench of the imperial towns; but Augſburg always votes firſt. The leſſer aſſemblies here always conſiſt of ten ſtates of the circle, including the two princes nominated to it who frequently meet during the general convention of the circle, when affairs too prolix for the general aſſembly are to be diſcuſſed, and then they are ſtiled the ordinary deputation. The chancery and record-office belonging to the circle are at Stutgard, the reſidence of the directory of Wirtemberg. It has alſo ſtated diets, in conjunction with the circles of Franconia and Bavaria, for the aſſaying of coin.

In the year 1681 the military force of the empire, by a decree of the diet, was ſettled in time of peace at forty thouſand men, and the quota of the circle of Swabia alone came to one thouſand three hundred and twenty-one horſe and two thouſand ſeven hundred and ſeven foot; a like aſſeſſment was alſo paſſed for the circles of Upper Saxony, Lower Saxony, Burgundy, Lower Rhine, and Weſtphalia. The number of troops in this circle conſtantly kept on foot conſiſt of four regiments of infantry, each compoſed of twelve companies, one regiment of dragoons, and one of cuiraſſiers, each conſiſting of eight ſquadrons. The commander of the circle is ſtiled general field-marſhal.

With reſpect to religion, this circle is reckoned among the mixed. It at preſent nominates to the imperial chamber two aſſeſſors, one of whom is a Catholic, the other a Lutheran. On the death of a catholic profeſſor, his death is certified by the imperial chamber to the biſhop of Conſtance, who acquaints the catholic ſtates with this event, and by a majority of votes they elect one of the perſons propoſed by the biſhop, or refer the nomination to him; after which the biſhop preſents the perſon to the imperial chamber. But when a Lutheran aſſeſſor dies, the imperial chamber makes it known to the duke of Wirtemberg, who certifies it to the margrave of Baden-Durlach, and the city of Ulm, by a writ from the imperial chamber, upon which, in conjunction with the other proteſtant ſtates and members, they hold a meeting for the nomination of another perſon, who is propoſed to the duke of Wirtemberg; and that prince not only preſents to the imperial chamber the perſon thus nominated by the proteſtant ſtates, but when he cannot concur with their nomination, may, as ſummoning prince of the circle, preſent another; or, when he approves the perſons nominated to fill this dignity, preſents them both in his own name and that of the proteſtant ſtates to the imperial chamber, leaving the choice to thoſe who are the beſt judges of their abilities.

Under the emperor Frederic III. the circle of Swabia was divided into four quarters, which diviſion ſtill continues, and on many occaſions has been found to be beneficial. The head of the firſt is the duke of Wirtemberg, of the ſecond the margrave of Baden, of the third the biſhop of Conſtance and the abbot of Kempten, and of the fourth the biſhop of Augſburg.

SECT. II.

Of the Biſhopric of CONSTANCE.

Its Situation, Extent, and Soil. The Titles and Arms of the Biſhop: his hereditary Officers and Revenue. A Deſcription of the Lake of Conſtance, and the Iſland Reichenau; with the Curioſities in the Abbey on that Iſland. Likewiſe a Deſcription of the Cities of Merſburg and Conſtance.

THE biſhopric of Conſtance lies on both ſides of the lake of that name, and the borders of Swiſſerland, and is commonly reckoned among its allies; for indeed a part of it lies in Swiſſerland, as well as a part of it in Germany. It is ſeated to the ſouth-eaſt of Furſtenberg, and to the eaſt of the canton of Schaffhauſen, extending about thirty miles from eaſt to weſt, and twenty-four from ſouth to north. In this biſhopric the meadow grounds and ploughed lands turn to little account,

the ſoil being clayey, ſandy, or marſhy, and ſubject to inundations. In the towns and villages the only trade carried on is in wine.

The biſhop of Conſtance ſtiles himſelf, By the grace of God biſhop of Conſtance, lord of Reichenau and Oehningen: by others he is termed The moſt noble prince and lord, &c. The arms of this biſhopric are, a croſs argent, in a field gules.

He has four hereditary officers, the hereditary marſhal, the hereditary chamberlain, cup-bearer, and ſteward. The biſhop votes in the imperial diet among the princes, ſitting on the eccleſiaſtical bench between the biſhops of Straſburg and Augſburg. The antient taxation of the biſhopric in the papal treaſury is two thouſand five hundred florins; but in 1704 only four hundred and ten were paid for the confirmation of biſhop John Francis.

The biſhop's board-revenue, according to a report made from the chapter to the court of Rome in 1712, amounted only to twenty thouſand florins. However, his whole annual revenue is by ſome authors computed at twelve or fourteen thouſand pounds ſterling, which is ſaid to be chiefly raiſed by the toll on the lake and the Rhine. His chapter conſiſts of twenty canons who attend the chair, and four who are expectants of vacancies.

The eſtabliſhed religion of this dioceſe is the Roman catholic.

In deſcribing the remarkable places in this biſhopric, we ſhall begin with the lake of Conſtance, the broadeſt part of which extends into Swiſſerland, and that towards Germany divides itſelf into two arms, one of which is called the Zellerſee, or lake of Zell, and the other the Bodmen, Uberlingerſee, or lake of Uberlingen. In the latter is the iſland of Meinau, as in the former is that of Reichenau. The whole lake from Bregentz to Zell is alſo diſtinguiſhed by two appellations; the part from Bregentz to Conſtance being called the Upper lake, and that from Conſtance to Zell the Lower lake: the latter is between twenty and thirty fathoms deep, and has along its banks near forty cities, towns and villages; yet the Upper lake ſurpaſſes it, for it has no leſs than fifty, and its greateſt depth is ſaid to be three hundred and fifty fathoms. Here is alſo its greateſt breadth, for between Buchorn on the one ſide, and Roſchach on the other, is no leſs than five leagues. Near Lindau and Bregentz, beſides the fiſh commonly caught in theſe parts, is a kind of ſalmon-trout, which being pickled when full grown, are exported as a rarity. They are generally an ell and a half, or two ells long, and weigh between thirty and forty pounds. As the fiſhermen cannot always make a good market of ſuch large fiſh, they tie a bit of wood to a line, which having paſſed through the fiſhes gills, they throw them again into the water, and tie the other end of the line to a ſtake near their huts. Thus, without any danger of loſing the fiſh, they allow them a range of thirty or forty paces to ſwim in, and preſerve them alive and ſound, till they meet with a number of purchaſers, or have an opportunity of ſelling one of them for ſome marriage, or other entertainment, where a fiſh of that magnitude is required.

In half an hour's ſailing you may go from Zell to the iſland of Reichenau, which lies in the middle of the Lower lake, and on account of its fertility and the wealth of the abbey built there, is not improperly ſtiled Reichenau, or Augia-dives. The iſland is half a mile long, and abounds with fine vineyards and all kinds of fruit. The abbey is a handſome building, and ſo rich that the abbot had formerly five hundred vaſſals, and his yearly income amounted to above ſixty thouſand guildres. But ſince the year 1540, upon a repreſentation from the biſhop of Conſtance to the pope, that by the propagation of the Lutheran doctrines his revenues had been conſiderably diminiſhed, this opulent abbey, together with that of Oeningen, were annexed to the ſee of Conſtance.

This abbey is particularly remarkable for the large emerald preſented to it by Charles the Fat; but ſince the attempt, a few years ago, to rob the abbey, it cannot be ſeen without ſome difficulty; the prior, for its greater ſecurity, letting but few, even of the brethren of the order, know where it is concealed. It is kept in a red wooden frame ſomewhat larger than a folio, and weighs twenty-eight pounds three quarters. Several jewellers have offered for it fifty thouſand guildres per pound. This valuable ſtone is a parallelogram, only at one corner it is irregular, as if a piece had been broken off. At its greateſt length it is three ſpans and a half, its ſhort ſide is a ſpan and a half, and it is two inches thick. Upon it is ſcratched the initial letters of ſome names; but ſuch fancies are now no longer permitted.

In the church belonging to this abbey lies the above emperor Charles the Fat, once diſtinguiſhed by his power, and the amazing extent of his dominions, but afterwards forſaken by every one; ſo that he died in extreme indigence, or was put to death by his own people at Neidingen, on the Danube, in 888. In the ſixteenth century his tomb was repaired, and an epitaph added, which ſays, That "Charles the Fat, king of "Swabia, and great-grandſon of Charlemagne, having "by force of arms entered Italy, and ſubdued it, was "crowned Cæſar at Rome, and obtained the Roman em-"pire; alſo, upon the death of his brother Lewis, all "Germany and France fell to him by right of inheri-"tance. But at length failing in courage, and growing "weak in body and mind, he was, by a ſtrange reverſe "of fortune, forſaken by all his friends, and buried in "this obſcure place. This tomb-ſtone is at preſent re-"moved, and the building of the new ſacriſty occaſions "the grave itſelf to be concealed."

Upon the altar of this church the monks pretend to ſhew one of the water-pots uſed at the marriage at Cana in Galilee, of which upwards of twenty are ſhewn in other places, all of a different magnitude, colour, and ſhape. The convent alſo boaſts of being poſſeſſed of the body of St. Mark the Evangeliſt; but this is diſputed with them by the Venetians.

The next place we ſhall mention is Merſburg, or Morſpurb, a city ſeated on the lake of Conſtance, and the uſual reſidence of the biſhop, containing a ſeminary for the ſecular clergy and a convent for Dominicans. In the year 1647 the palace here was burnt down by the Swedes. The country in the neighbourhood of this city produces plenty of wine, and near it, in the lake, ſtands a croſs on which is an inſcription, importing that the lake is there two thouſand nine hundred fathoms broad, and a hundred and eight deep.

Conſtance is an antient city ſeated on the lake of the ſame name, in that part where the Rhine iſſues out of it, in the forty-ſeventh degree forty-two minutes north latitude, and in the ninth degree ten minutes eaſt longitude. It was formerly an imperial city, but in 1548 was put under the ban by the emperor Charles V. it having then deſerted the popiſh religion; but the next year Ferdinand I. brought it under the power of the houſe of Auſtria; and though the ſtates of Swabia refuſed their aſſent, yet its ſubjection was ratified at the diet of Augſburg in 1559. The town is fortified, and has on the other ſide of the Rhine the fort of Peterſhauſen for its defence. This city is of a middling ſize, and towards Lindaw makes a good appearance; but the burghers are thought not to exceed five hundred and fifty. The pulpit of the cathedral is ſupported by a ſtatue of John Huſs, who was here ſentenced to be burnt, and his being made to ſerve as a pedeſtal to the pulpit was intended as a mark of farther diſgrace, though it ſeems more natural to admit of an honourable conſtruction. It is here the current opinion among the ſuperſtitious vulgar, that the place where that reformer was burnt is curſed, ſo that no graſs will grow upon it. Our guide, ſays Mr. Keyſler, who was a ſubſtantial citizen, but a Roman catholic, was ſo infatuated with this notion, that he maintained it while we were walking about the place, which was covered with verdure; ſo that had we thought proper to enter into the diſpute, we might have convinced him by appealing to his very ſenſes.

It was once a rich city, and has a tolerable trade, by means of the lake and the neighbourhood of the Rhine. It is well built, and ſtrongly fortified. The churches are magnificent, particularly St. Stephen's cathedral, though it is old; and the exchange, town-houſe, markets, bridges, and other public buildings, with the biſhop's palace,

palace, are handſome ſtructures. The ſuburb on the north ſide is ſeparated from the city by the Rhine, over which is a bridge three hundred and thirty-ſix paces in length, under which is ſaid to be a mill that moves ſixteen mill-ſtones at once. The Jeſuits have a college here, and an indifferent church; beſides which here are five convents of friars, two nunneries, and four pariſh-churches.

This city has been famous for its councils. Thus in 1044, or 1045, an aſſembly of princes met here under the emperor Henry III. and put a concluſion to the troubles of Germany by what is called the peace of Conſtance, at a juncture when there were three popes, who were ſet aſide, and a new one choſen, who in 1056 took the name of Clement II. In 1414 a council was alſo held here, ſummoned by the emperor Sigiſmond, upon three popes pretending to infallibility; one ſet up by the Italians, a ſecond by the French, and a third by the Spaniards, who were all three depoſed by this council, and Martin V. choſen in their room. The ſame council condemned the doctrines of John Wickliff, John Huſs, and Jerome of Prague, cauſing the bones of Wickliff to be dug up and burnt, and John Huſs and Jerome of Prague to be cruelly burnt alive, though the former had a ſafe-conduct granted him by the emperor; and this cruel and infamous council, which appears to be the moſt numerous ever held upon any occaſion, made the canon, "That faith is not to be kept with heretics, nor with "thoſe ſuſpected of hereſy."

SECT. III.

Of the Biſhopric of AUGSBURG.

Its Situation, the Prerogatives of the Biſhop, his Arms, and Revenue; with a particular Deſcription of the City of Straſburg.

THE lands belonging to the biſhopric of Augſburg lie ſcattered between the rivers Lech, Iler, and the Danube; but the greateſt part of them near the former. This country extends beyond the Lech to the dioceſe of Ratiſbon and Freyſingen; ſouthward to thoſe of Brixen and Chur; weſtward to the biſhopric of Conſtance, from which it is ſeparated by the Iler; and northward beyond the Danube, to the biſhoprics of Eichſtatt and Wurtzburg. That tract of it which lies towards the Tiroleſe is very mountainous; but the reſt principally conſiſts of fine corn-land and paſtures.

The prince and biſhop of Augſburg ſits and votes in the college of princes, between the biſhop of Conſtance and Hildeſheim, and in the diet of the circle of Swabia poſſeſſes the ſecond ſeat among the eccleſiaſtical princes; he is alſo the head of that fourth quarter of Swabia, which lies between the rivers Lech, Danube, and Iler.

The arms of this biſhopric are party per pale gules and argent.

The chapter of the cathedral conſiſts of forty perſons of quality, who muſt give proof of their nobility for ſixteen deſcents. The temporal and ſpiritual colleges belonging to the dioceſe are the general vicariate, the eccleſiaſtical council and conſiſtory, the regency, the treaſury, and the court of fiefs. The epiſcopal revenue is eſtimated at near a hundred thouſand rixdollars.

This biſhopric is divided into fourteen prefecturates, the principal places in which are the following:

Dillingen, the reſidence of the prince, is ſituated on the Danube, and had formerly counts of its own to whom it gave title. There is here an univerſity, in which is a college of ſecular canons. In this town is alſo a college of Jeſuits, with a convent of Capuchins, and two nunneries.

But the principal city in this biſhopric is the imperial city of Augſburg, originally called Vindelica, and afterwards Auguſta Vindelicorum, or Rhætorum, which lies in a fertile, healthy, and delightful country, in the forty-eighth degree twenty-three minutes, and in the tenth degree fifty-nine minutes eaſt longitude, between the rivers Lech and Wertach, which unite near this place. Its utmoſt extent is about nine thouſand common paces, and its length from the Red-gate to Fiſher-gate four thouſand. The city is environed with ramparts, walls, and deep ditches, and has four large and ſix ſmall gates, and between ſome of them a wicket of curious contrivance for admitting perſons in the night-time. It is commonly divided into three parts; but others divide it into the Upper, the Middle, the Lower Town, and the ſuburb of St. James. Some of its ſtreets are ſteep; but below theſe, it has others that are broad, and well paved, whence it may in general be termed a fine city. Beſides the cathedral it has ſix popiſh pariſh churches, five monaſteries, among which is a Jeſuits college, the abbies of St. Ulrich and Afra, thre enunneries, and ſix Lutheran pariſh churches, to which belong fourteen miniſters, and a Lutheran gymnaſium, in which is a good library. In the year 1755, the imperial Franciſcan academy for arts and ſciences was founded here. It has alſo ſeveral hoſpitals for the poor, for orphans, and ſick people, with other charitable foundations.

But to be more particular, the town-houſe, which is reckoned the fineſt in all Germany, was completed in the year 1620, after being ſix years in building. At the top of the front, juſt below the pediment, is a large ſpread eagle caſt in braſs and crowned, ſaid to weigh twenty-two hundred weight, and to have coſt fifteen thouſand German florins, or above one thouſand eight hundred and ſeventy pounds ſterling; it holds with its talons a gilt ſceptre and globe. The great portal, which is twenty feet in height, and twelve in breadth, is of very beautiful red marble, adorned with a balcony ſupported by two handſome columns of white marble. In the great hall next the ſtreet are eight large pillars of red marble, fourteen feet and a half high. Here the city mainguard is kept, and are provided with ſix field pieces. Round the room are braſs buſts of the twelve Cæſars. In the upper ſtory is a ſtill larger hall ſupported by Corinthian columns of red marble, with baſes and capitals of braſs; the chambers contiguous have abundance of hiſtorical and political paintings, with well choſen ſentences, exhorting the judges to obſerve impartial juſtice, prudence, peace, and the fear of God. In the third and uppermoſt, called Golden-hall, are fifty-three windows, which render it extremely light; but it has no columns, and inſtead of being arched, the ceilings are divided into a number of little brown and gilt compartments, on which as on the walls are good paintings. The floor is of red, white, and grey marble; but in the other halls only of white plaiſter. The height of this upper hall is fifty-two feet, and its breadth fifty-eight, and its length one hundred and ten. This noble room is adorned with fine pictures. The four contiguous chambers in which meetings are held for aſſaying of the coin, giving audience to envoys, and for other important affairs, bear the appellation of the four princes chambers, as having been the reſidence of the four electors who aſſiſted at the election of Ferdinand IV. king of the Romans, in 1663. Every part abounds with hiſtorical paintings illuſtrated by ingenious inſcriptions. The whole breadth of the town-houſe is one hundred and forty-ſeven feet, and the length of the front one hundred and ten; its height towards the weſt one hundred and fifty-two; but its eaſtern height meaſures one hundred and ſeventy feet.

In a ſquare near the town-houſe is the fine fountain of Auguſtus, the moſt ſplendid in the city. It is a large marble baſon ſurrounded by an iron baluſtrade, admirably wrought, with four braſs ſtatues as big as the life upon the edge, two of men, and two of women, ſuppoſed to repreſent four little rivers, the Lech, Wertach, Sinkel, and Source. In the middle of the baſon riſes a ſquare pedeſtal, at the foot of which are four large ſphinxes with water ſtreaming from their breaſts. A little above them are four infants holding four dolphins in their arms, from whoſe mouths the water ſpouts in plenty, and over theſe infants are feſtoons and pine-apples, all of braſs. Upon the pedeſtal is a brazen ſtatue of Auguſtus crowned with laurel, and armed after the manner of the antient Romans.

The moſt beautiful fountain next to this, is that called the fountain of Hercules, which has a large hexagon baſon with ſeveral braſs figures, particularly one of Hercules combating the hydra, which are by many good judges

judges eſteemed better executed than thoſe of the former.

The tower called Berlach, which ſtands near the town-houſe, has three hundred ſteps to the top, and above the weather-cock is the ſtatue of a woman. In an area near this ſtructure is a very fine tower adorned with the four ſeaſons in braſs, and in the center is the ſtatue of the emperor Auguſtus with appoſite inſcriptions.

In the biſhop's palace, which is but a mean building, is ſhewn the hall in which the Augſburg confeſſion was preſented to the emperor Charles V.

On the braſs door of the cathedral is repreſented the virgin Mary taking Eve out of Adam's ſide. The monks of St. Ulric diſpoſe of a duſt or powder called St. Ulric's earth, recommending it in the name of that ſaint, who they pretend drove all the rats out of the city and neighbourhood into a hole which they ſhew in his church. This duſt is dug up from the place where he lies buried. But as this effect has never been aſcertained by naturaliſts, it muſt go for nothing, eſpecially as this highly extolled earth fails of its power over the rats in other places.

On the fine well-contrived aqueducts for the conveyance of water from the Lech, are ſeveral corn, ſawing, flatting, and ſmelting mills. There are here alſo waterworks which throw that uſeful element to the top of five towers, from which it is conveyed through the city in ſuch a manner, that the greateſt part of the houſes are ſupplied with water. The palaces of the counts of Fugger are very magnificent; and the Fuggery, as it is called, conſiſts of one hundred and ſix ſmall houſes erected in 1579, by the brothers Ulric, George, and James Fugger, in James's ſuburb, for the reception of poor burghers and inhabitants, to whom they are let at a very ſmall rent.

Augſburg has always been famous for ingenious artiſts, particularly in clocks, goldſmiths work, and ivory turning. There are here ſhewn clocks valued at fifteen or twenty thouſand crowns each; but the worſt is, they are ſo very nice as not to be durable. Their ivory work is no leſs admirable, and among the reſt contain well ſhaped cups with a ring made of the ſame piece, which plays between the foot and bowl of the cup without a poſſibility of coming off. Theſe are ſo nicely made in miniature, that the learned Mr. Keyſler ſays, they incloſe one hundred of them with their rings in a pepper corn of an ordinary ſize. Upon examination, the traces of the tool with which they were turned are viſible. They have other curious baubles, as fleas faſtened about the neck with ſteel chains, ſo finely wrought, that though they are a ſpan long, a flea will lift up the chain when it leaps, one of theſe fleas with this curious chain, they ſell for ten-pence. The trade of this city is very conſiderable, though it is much inferior to what it was formerly.

This city is very remarkable for the ſingular variety of habits worn by the inhabitants; this affair being ſo exactly regulated by the magiſtrates, that the difference of the religion, and quality of the people, are for the moſt part ſeen by their cloaths. For inſtance, ſays Mr. Miſſon, I ſaw a Roman catholic merchant's widow in mourning for her huſband: ſhe had a handkerchief well whitened and ſtarched with wings and cornets, a black petticoat, and a cloak of the ſame colour made like that of a man's, which reached down to her knees, a large white veil behind hanging at the corner of her handkerchief, and reaching down to her heels, enlarging itſelf by degrees, and a piece of the ſame linen with the handkerchief four feet long, and at leaſt two broad, very much ſtarched, and ſtretched on a ſquare of wire, faſtened juſt below the hips, and covering all the fore part of the body.

The garriſon of Augſburg uſually conſiſts of three hundred men, and the burghers are computed at ſix thouſand. One half of the council is Lutheran, and the other half Roman catholic. The magiſtracy at preſent conſiſts of forty-five perſons, thirty-one of whom are patricians, four of ſuch as have married the daughters of patricians, five of the body of merchants, and five of the commonalty.

This city in the diet of the empire poſſeſſes the ſecond place on the bench of the imperial cities of Swabia; but in that of the circle has the firſt ſeat and voice. In the year 1686, an alliance was concluded here between the emperor, Spain, Sweden, and ſome other princes and circles, in oppoſition to France; but towards the concluſion of the year 1703 and 1704, it ſuffered much by the Bavarians and French.

To the juriſdiction of this city belongs the village of Oberhauſen; but in eccleſiaſtical matters it is ſubject to the biſhop, who, conformably to an agreement made in 1602, grants inſtitution to the miniſters.

SECT. IV.

Of the Dutchy of WIRTEMBERG.

Its Situation, Extent, and Produce: The Number, Religion, and Manufactures of the Inhabitants. The Titles, Arms, and Prerogatives of the Duke. The Order of Hunters. The Revenues, Forces, and principal Towns and Palaces of Wirtemberg.

THE dutchy of Wirtemberg, or Wurtemberg, conſiſts of a great number of towns and lordſhips, ſome of which were purchaſed, others devolved to the princes by marriage, and others were acquired by conqueſt. To the north it terminates on the biſhopric of Spire, the Palatinate, the county of Hohenloe, and the diſtrict of the imperial city of Hall in Swabia; to the eaſtward it is bounded by the county of Limpurg, the diſtricts of the imperial city of Ulm, the lordſhips of Rechberg and Wieſenſteig, and the county of Oettingen; on the ſouth-eaſt by the Auſtrian dominions; on the ſouth by thoſe dominions, Briſgau, and other ſmaller diſtricts; and on the weſtward it confines on Furſteinberg, the dioceſe of Straſburg, and the marquiſate of Baden-Baden and Baden-Durlach, from which it is ſeparated by the Black Foreſt. Its extent from north to ſouth, excluſive of the moſt ſouthern detached parts, is ſixty-ſix miles, and it is of the ſame extent from eaſt to weſt, without including the lordſhip of Heydenheim, which lies apart from it.

This is indiſputably the moſt conſiderable and fertile part of the circle of Swabia, and is indeed one of the beſt countries in all Germany. This dutchy abounds ſo much in grain, that conſiderable quantities are exported; but this chiefly conſiſts of ſpelt, rye and wheat being much leſs cultivated. Flax and hemp are alſo produced here, and the former thrive beſt in the coldeſt parts. The vallies formed by the ſkirts of the Alb, ſome of which are three or four hours in length, are covered as it were, with foreſts of fruit-trees, of which indeed there is no ſcarcity in moſt of the other parts of this country, cyder and perry being the liquors drank in common by the country people, when wine happens to be dear. This dutchy alſo abounds with very rich palatable and wholeſome wine, called by the general name of Neckar, though each has a particular title of its own, which it receives from the part where the fruit grows. The grapes alſo that yield the beſt wines bear the name of the countries whence the wines were tranſplanted, as the Chiavenna, Valteline, and Hungarian. The vineyards of Wirtemberg have been much improved by the learned Mr. Bilfinger, who procured ſhoots from France, Italy, Hungary, Cyprus, and even Schiras in Perſia, for his vineyard at Cantſtadt, where moſt of them throve ſo well, that they have been tranſplanted from thence into many other vineyards.

The foreſts of this country are conſiderably decreaſed; for the conſumption of oak in particular has been very large, and beech and birch now require to be uſed ſparingly; but great quantities of turf are now dug, which makes up for the ſcarcity of wood for fuel. Great profits are made by grazing, particularly in the Black Foreſt. The largeſt breed of ſheep is found on the Alb, and moſt parts of the country abound in game.

With reſpect to the minerals of this country, there are mines of ſilver and copper, and alſo ſome of iron; but the latter does not produce a ſufficient quantity to ſupply the country. Sulphur is alſo met with in ſeveral places,

places, and many parts yield coal. *Terra ſigillata*, reckoned preferable to that of Malta, and a fine clay for earthenware, are found here. In this country are alſo found fine variegated marble, ſome of which are equal to thoſe of Italy, and remarkably tranſparent alabaſter, agate, cryſtalline pebbles which cut glaſs, black amber, and fine mill ſtones.

Here are a conſiderable number of baths and mineral ſprings. The rivers which riſe in this dutchy are chiefly the following: the Neckar, which divides the dutchy from north to ſouth, and in the Lower Palatinate falls into the Rhine, being firſt encreaſed by the Ens, the Fils, and Rems.

The number of inhabitants in this dutchy is known with great certainty, an exact enquiry being made every year by the general ſuperintendents, and reported to the annual ſynod. In the year 1754 were numbered four hundred and ſeventy-ſeven thouſand one hundred and fifteen ſouls, and they have hitherto been obſerved to increaſe. In the dutchy are alſo ſixty-eight cities, with about twelve hundred boroughs, market-towns, villages, and hamlets.

The eſtabliſhed religion of this country is Lutheraniſm; and though duke Alexander embraced the Roman, yet in 1729, 1732, and 1733, he gave aſſurances to the ſtates, in formal inſtruments, that no innovation ſhould be made in any part of the dutchy, and that in all the churches and ſchools no other religion but that of Lutheraniſm ſhould be taught; that no new Romiſh churches, chapels, altars, or images ſhould be erected, nor any ſuch as were forſaken again uſed; that no proceſſions, pilgrimages, or catholic burying-places ſhould be allowed; that the hoſt ſhould never be carried openly, nor any part of the catholic worſhip be performed, except only in the duke's chapel; but that the popiſh inhabitants of the town of Ludwigſburg ſhould have the privilege of performing their ſervice in private; that the privy-council ſhould conſiſt only of Lutherans; and that they alone ſhould have the management of every thing relating to the church, the revenue, and the police.

The Calviniſts are only tolerated here, and their place of worſhip at Stutgard is a private houſe. In this dutchy are alſo ſome Waldenſes, who are huſbandmen, and live in the Italian villages, as they are called; only in a few towns they have eſtabliſhed manufactures of hats and ſtockings, and are allowed the public exerciſe of their religion.

In the whole dutchy are five hundred and fifty-five pariſhes, and about fifty deaconries, beſides eight hundred and twenty-nine chapels of eaſe. The pariſhes are divided into thirty-eight ſpecial ſuperintendencies, and thoſe into four general ones. The ſpecial ſuperintendents hold, together with their deanries, the pariſhes of the towns where they reſide, annually viſit the churches and ſchools within their department, once or twice a year convene the miniſters ſubordinate to them, and make their report to the conſiſtory.

This country has ſeveral conſiderable manufactures, as thoſe of porcelain, potters-ware, the caſting of plate-glaſs for looking-glaſſes, damaſk, and other linen and woollen ſtuffs; the printing of cotton, manufactures of ſilk, the making of hats and ſtockings, gilt and marble paper, &c.

The titles of the duke are, duke of Wurtemburg and Teck, count of Mompelgard, lord of Heydenheim and Juſtingen.

The arms for Wurtemburg are, three ſtags horns ſable, in a field or: for Teck or, and ſable lozenges: for Mompelgard, two barbels endorſed with tails averted, in a field gules: for Heydenheim, a Saracen's head, with a kind of huſſar's cap gules, in a field or: for Juſtingen, azure, a ſtaff in bend with branches on both ſides; and laſtly, the imperial ſtandard borne by the ducal houſe of Wurtemburg, as hereditary ſtandard-bearer of the empire.

The dukes are likewiſe grand-huntſmen of the empire; and, in alluſion to this, duke Eberhard Lewis, in the year 1702, founded the order of hunters, and in 1719 renewed and increaſed its ſtatutes, the reigning duke being always grand-maſter. The enſign of the order is a gold croſs reſembling that of Malta, enamelled with red, and at each of the four corners a golden eagle, with a hunting-horn between the middle and lower point of each part. In the center is a ſmall ſhield, on one ſide of which is a W in relievo, with a ducal hat over it; and in the other three golden hunting-horns. This croſs is worn appendent to a broad watered ſcarlet ribbon, paſſing from the left ſhoulder to the right ſide. On the left breaſt of the coat is a ſilver ſtar embroidered with the enſign of the order in the middle, and in a green circle round it AMICITIÆ VIRTUTISQUE FOEDUS. The grand feſtival of this order is on St. Hubert's day, which is alſo celebrated with a great hunting-match at the place where the grand-maſter happens to reſide.

The duke of Wirtemburg, in virtue of this dutchy, ſits and votes in the college of princes, and is the ſummoning prince and director of the circle. Mr. Keyſler, in his travels, computes the whole revenue of this country at two millions of guilders per annum. The country itſelf levies the contributions and exciſe.

The duke's court is one of the moſt numerous in Germany, his liveries rich, his ſtables furniſhed with the fineſt horſes, and his hunting equipages magnificent. He has a grand-marſhal, cup-bearer, maſter of the horſe, gentlemen of the bed-chamber, and twenty pages, all men of good families, many footmen, &c. He keeps in pay a body of horſe-guards, horſe-grenadiers, dragoons, and foot-guards, beſides five regiments of foot, and a body of artillery.

The duke has ſeveral hunting-ſeats, which he viſits alternately in the deer and boar ſeaſons, ſo that every five years he ſees his principal foreſts. It is an old cuſtom all over the country of Wirtemburg, to adorn the chambers and galleries with the largeſt and moſt branching horns; ſo that it is natural to imagine, that the hunting-ſeats are ſtill more plentifully ſupplied with theſe decorations. At Waldenburg, the name of the perſon who ſhot the deer is inſcribed over moſt of the remarkable branches; and the walls of ſeveral rooms are filled with theſe marks of the duke's dexterity.

At Stutgard are the privy-chancery, in which the duke himſelf preſides; the privy or miniſterial council, conſiſting of nobles, men of letters, and officers; the college of government, which has a preſident, and among its members are alſo nobles and men of letters; the conſiſtory, which has a preſident, director, and counſellors; the board of war, which has a preſident and other members; the treaſury has a preſident, a receiver, a ſolicitor, and other officers; the eccleſiaſtical college has a director, adminiſtrators of the church revenues, and other members and officers; with ſeveral other boards, as thoſe of the mint, trade, foreſts, domains, mines, &c.

In the high court of juſtice cauſes are terminated in the laſt reſort, no appeal being allowed to the aulic or any other tribunal: this court was in 1514 removed for ever to Tubingen, where it holds its ſeſſions once a year; and conſiſts of a chief juſtice, aſſeſſors, who are compoſed of nobles, men of ſtudy, and country gentlemen, as alſo of a ſecretary. Mr. Keyſler ſays, that this court of judicature is a jewel equal to that of appeal among the other electors. A very conſiderable benefit ariſing from it, is the ſpeedy adminiſtration of juſtice, the pleadings being verbal, and a ſentence given every day. It is remarkable that the preſident, or chief juſtice, has during the ſeſſions only three guilders *per diem*; the aſſiſtants, who are noble, two; and others, who do not live at Tubingen, one dollar; and ſuch as are inhabitants a guilder, and a rundlet of wine preſented to each aſſiſtant at the end of the ſeſſion, which ſeldom laſts above ſix weeks.

It is remarkable that in all the cities, towns, and villages in this dutchy, there are certain officers called private overſeers, who inſpect into the offences, clandeſtine meetings, and other miſdemeanors of their fellow-citizens, and make their report to the magiſtracy of the place, that theſe matters may be farther inquired into. Theſe private inquiſitors, who take an oath to diſcharge their office with fidelity, receive no ſalary; but are generally rewarded with a counſellor's place, or ſome other office in the government. As nobody knows his accuſer, this office may be attended with the moſt dreadful abuſes, if theſe informations are conſidered as any thing more

than premonitions with reſpect to the judge, or as an incentive to more regularity and caution. This is pretty much of a piece with the ſecret informations of Venice; and I queſtion, ſays Mr. Keyſler, whether the like is to be met with in all Germany.

The principal places in this dutchy are Stutgard, Ludwigſburg, and Tubingen.

Stutgard, the capital of the dutchy, lies in a delightful country full of gardens and vineyards, on the bank of the Niſenbach, in the forty-eighth degree forty-ſeven minutes north latitude, and in the ninth degree eight minutes eaſt longitude. The city is not large, but contains two well built ſuburbs. The new ducal palace was begun in the year 1746. Near the old palace ſtands the chancery, which is a handſome ſtructure built of ſtone, and on the other ſide of the palace towards the eaſt are the menagerie and pleaſure-houſe, the latter of which is admired for its curious architecture. It was erected in the year 1584 wholly of ſtone, and contains two ſtories, in each of which is a ſaloon. The hall has few equals in Europe; it is two hundred and twenty feet in length, eighty broad, and ninety high, without a ſingle pillar; its roof, which is arched, being faſtened in a maſterly manner with wooden ſcrews. In 1707 marſhal Villars, the French general, entering this hall miſtook it, and ſaid with ſome admiration, *Voici un beau temple*; that is, "This is a fine church." On the roof are painted ſeveral ſcripture hiſtories; but the ſides are covered with views of all the foreſts of the dutchy of Wirtemburg, and ſome merry adventures that happened in the chace.

Near it is the orangery, which is compoſed of large and very high trees, but is not well contrived; for the want of height occaſions many of the trees to bend at the top; and the grottos near it are not the moſt beautiful. The new building, as it is termed, is of fine free-ſtone, with a grand ſtair-caſe of the ſame, and a ſpacious hall, whoſe gallery reſts on twelve lofty pillars, on which are painted the twelve months. The roof ſhews the moſt antient tranſactions of the family of Wirtemburg, and the ſides are filled with maſquerades and public entries, and a large painting of the battle of Hochſtet. The uppermoſt chambers ſerve for armouries, and beſides old and new armour contain ſome ſtuffed horſes, that were particular favourites of the duke's, with ſtags, wild boars, and hounds. In the lower part are the duke's ſtables.

In the muſeum are ſeveral portraits of the ducal family, with petrifications, mechanical and mathematical inſtruments, curious pieces of penmanſhip and turnery, gems, coſtly veſſels, mummies, and antient medals. Among other curioſities you ſee the picture of a woman with a large beard, as ſhe appeared in 1587, when ſhe was in her twenty-fifth year; her name was Barteld Gratje; and ſhe is again painted as ſhe looked in her old age.

In the dutchy-houſe both the committees of the country and the ſecular diets aſſemble. The ſee of the biſhop, which was antiently at Beutelſpach, was removed to this place in 1321, on which account the church of the Holy Croſs is ſtiled the cathedral. Among the German Lutheran churches are the hoſpital church and St. Leonard's. The French Lutheran congregation have their public worſhip in the palace-church belonging to the convent of Bebenhauſen, and the French reformed meet in a room of the old palace. In this town is alſo a ſpecial ſuperintendency, and a *gymnaſium illuſtre* of ſeven claſſes. The ſilk manufactories of Stutgard make all ſorts of ſilk ſtuffs, ſtockings, and ribbons.

Ludwigſburg, a palace two leagues from Stutgard, is one of the fineſt palaces in Germany. The looking-glaſs and lackered cloſet are well worth ſeeing, as alſo the large ſtair-caſe for ambaſſadors, with its grand ceiling and the gallery of pictures. Among theſe are ſome admirable night-pieces, and many pictures of horſes and dogs. The chapel belonging to the palace is very elegant, but rather too ſmall. Oppoſite the lower part of the palace, on an eminence in the pheaſant-garden, ſtands the Favorita, a moſt beautiful building in the neweſt Italian taſte. Here is alſo a curious menagerie of foreign fowls; and the green-houſe is a very fine one.

Ludwigſburg is reckoned the ſecond ducal ſeat, and third principal town. Towards the beginning of the preſent century, there were here no more than two farm-houſes; but Eberhard Lewis having built the palace, houſes have been gradually raiſed near it, ſo as at length to form a handſome town, that lies higher than the palace, and is the ſeat of a general ſuperintendency. Here are made linen damaſk, good cloth, and marble paper.

The city of Tubingen, which is ſituated on a mountain, conſiſts of about five thouſand inhabitants, and is famous for its univerſity. The Ammer, Neckar, and Luſtenauer vallies give this place ſuch an agreeable ſituation, and beautiful proſpects, as few cities in Germany can boaſt. The caſtle is now only conſidered as a hunting-ſeat, to which the duke uſually comes with his court once in five years. It has good apartments, and in former times muſt have been reckoned very ſtrong; for beſides the ſteep declivity of the mountain, it is ſurrounded by a deep trench. It is every where vaulted underneath, and among other cellars is one that has not perhaps its equal. It is in a rock, and lined with free-ſtone, though it is three hundred feet in length, and twenty in height. The thickneſs of the arch of the cellar is twenty-two feet. This vault communicates with another, in which is a large well of fine clear water walled in, and three hundred fathoms deep. The undulating ſound cauſed by dropping a ſtone, or firing a piſtol down the mouth, has ſomething amazing and dreadful.

Tubingen is eſteemed the ſecond town of the dutchy, and beſides its univerſity, has a *collegium illuſtre*, all the ſcholars of which are princes or counts; and it is never opened, but when youths of ſuch families come to ſtudy there. Here is alſo a Latin ſchool of four claſſes, and a ſpecial ſuperintendency. In this town is a woollen manufacture.

Urach, a town in a diſtrict of the ſame name, is chiefly remarkable for there being near it on a high and ſteep mountain, a very extraordinary machine called the Wood-ſlider; it conſiſts of a thick iron pipe about three feet broad, upwards of two feet high, and nine hundred feet long, through which the wood hewn in the foreſt beyond Urach, which abounds both in beech and fuel, after being cut into logs or billets, is carried down from the eminence with prodigious celerity, and thrown into the Erms, which forwards it into the Neckar, whence it floats to Berg near Stutgard, where it is at laſt ſtopped, and piled up in the duke's wood-yards. In this manner every year about Eaſter, upwards of nine thouſand cords of wood are brought from the Alb to Stutgard, beſides what is uſed in the duke's court. The produce of what is ſold is applied to the payment of the eccleſiaſtical and civil officers.

SECT. V.

The Margravate of BADEN.

Its Situation and Diviſions, with the Titles and Arms of the Margraves of Baden-Baden; its Situation, with a Deſcription of Raſtadt, and the Palace named Favorita. Of Baden-Durlach, the Palace of Carlſruhe, and the Town of Durlach.

THE margravate of Baden, or Baaden, is ſeated on the eaſtern ſide of the Rhine; it is properly the tract of land between the rivers Pfinz and Schwartzbach, and is watered by the little rivers Alb, Pfedderbach, Murg, Saubach, and Sultzbach, all which diſcharge themſelves into the Rhine. The northern part of this country is called the Lower Margravate, or from Durlach its capital, the margravate of Baden-Durlach; but all the reſt is termed the Upper Margravate, or from Baden its capital, the margravate of Baden-Baden. But to theſe margraves alſo belong other lands. The whole margravate is a fertile country, abounding with corn, hemp, flax, bees-wax, and wood.

The margraves of both titles deſcend from the ſame ſtock, and the titles of each of them are, Margrave of Baden and Hochberg, landgrave of Sauſenberg, count Sponheim and Eberſtein, lord of Roteln, Baden, Weiler, Lahr, and Mahlberg; but the houſe of Baden-Baden adds the diſtricts of Ortenau and Kehl.

The arms for the margravate of Baden are Party per bend gules, in a field or: for Sanſenberg, a lion rampant gules, crowned or, in a field argent: for Sponheim, chequée gules and argent, azure and or: for Eberſtein, a boar ſable on a mount verte, in a field or, and a roſe gules, with ſeeds azure, in a field argent: for the landgravate of Briſgau, a crowned lion gules, in a field argent: for Roteln, a lion paſſant gules, in a field gules, and two feſſes waved argent, in a field azure: for Baden-Weiler, gules party per pale or, with three chevrons ſable: for Lahr, argent per feſſe gules: for Mahlberg, a crowned lion ſable, in a field or.

We ſhall firſt treat of the margravate of Baden-Baden, which terminates to the weſtward on the Rhine, and a ſmall part of it lies on the weſt ſide of that river; on the north-weſt it is bounded by the lower margravate of Baden-Durlach; on the eaſtward by the dutchy of Wurtemberg, and the county of Eberſtein; on the ſouthward by a part of the biſhopric of Straſburg, and the principality of Heſſe-Darmſtadt. The lordſhip of Mahlberg, which alſo belongs to this family, lies ſomewhat higher up the Rhine.

Baden-Baden has a vote in the college of princes, and among the temporal princes in the circle of Swabia. The margraves of Baden-Baden, and Baden-Durlach, are alſo the chiefs of the ſecond quarter of the circle of Swabia. The principal colleges and offices of this prince are the privy council, the court of juſtice and treaſury. His annual revenue, according to Keyſler, is four hundred thouſand florins.

The principal places belonging to the Upper margravate are the following:

Raſtadt, a city regularly built, with a ſtately palace, or caſtle, the center of which affords a view of the ſtreets. This palace was formerly adorned with a great number of fine paintings; but they were conſiderably diminiſhed by father Meyer, who had ſuch influence over the counteſs dowager, as to cauſe pictures to the value of fifty thouſand guilders, which he judged too naked and libidinous, to be committed to the flames. This city is ſituated in a fine plain near the river Murg, which, a little below it, falls into the Rhine. It was built by the margrave Lewis William with regularity and elegance, and in the year 1714 a peace was concluded here between the emperor and France.

The Favorita is a beautiful ſeat at ſome diſtance from Raſtadt, built by the widow of the margrave Lewis William. It has a chamber of very beautiful porcelain, and a cabinet lined with looking-glaſs, with many curioſities of art and nature, particularly above forty pictures in which that princeſs appears in the different maſquerade habits ſhe formerly wore. Amidſt the gradual alteration of the complexion and features, in ſuch a long ſucceſſion of time, the ſame look is every where obſervable; and Mr. Keyſler obſerves, that theſe fine portraits may be compared to the admirable performances of Rubens in the Luxemburg gallery, where queen Mary de Medicis is repreſented under a variety of changes. The hall reaches in height through all the ſtories, and its cupola, round which is a baluſtrade leading to all the ſeveral floors, is very lightſome, and adorned with beautiful paintings. Some of the other rooms are hung with a Chineſe manufacture of paper and ſilk: another with lace-work; the cieling of another is enriched with gems, as agate, jaſper, cornelians, amethyſts, &c. imitating fiſhes, birds, and flowers. There is alſo a magnificent table of the ſame workmanſhip. The excellent order of the kitchen, larder, hall, and medicinal-room, cannot fail of pleaſing an œconomiſt; and accordingly that princeſs took no little pleaſure in walking with her gueſts through theſe ſubterranean apartments.

On the left, at the end of a little orangery, is a pheaſant-garden, and on the right a wild thicket leading to an hermitage which ſtands in the centre of it. The outer walls are covered with large pieces of bark. The door ſeems to reſt on the trunks of old trees, and all that is to be ſeen on the inſide are the coarſe images of Jeſus, Joſeph, and Mary; the niches, like the doors, are ſupported by old trunks of trees. There is a mean bed without curtains; an altar without decorations; and at the angles at the narrow walks in the garden ſtand wooden images of the old hermits as large as the life, ſome of them in hairy habits. In ſhort, this hermitage owes its agreeableneſs to an exact imitation of the natural ſimplicity of a ſolitude adapted to devout contemplation.

The Lower margravate of Baden terminates to the weſt on the river Rhine, to the ſouthward on the Upper margravate of Baden and the dukedom of Wurtemburg, to the eaſtward on the ſame dukedom, and to the northward on the biſhopric of Spire.

The margravate of Baden-Durlach enjoys two votes in the college of princes, one for the Lower margravate of Baden, and the other for the margravate of Hochberg in the Briſgau. Theſe countries likewiſe entitle him to two votes in the diet of the circle of Swabia, where he has a ſeat among the princes.

The great colleges here hold their ſeſſions at Carlſruhe; theſe are the privy-council, the treaſury, the chamber of accounts, the court of juſtice, the eccleſiaſtical-council, and the matrimonial-court.

The reigning family, and the country in general, profeſs Lutheraniſm; but the Calviniſts, Papiſts, and Jews, are tolerated at Carlſruhe, and ſeveral other places. The whole country of Baden-Durlach contains a hundred and twenty pariſhes, which are under the inſpection of ſeven ſuperintendents.

The revenues of the prince are computed at four hundred thouſand florins.

The city of Carlſruhe, or Charles's Reſt, is ſeated in a diſtrict of the ſame name, that is one continued plain, every where ſandy, yet produces corn, hemp, flax, turnips, peas, and other vegetables; and the villages along the Rhine abound in hay, and breed great numbers of cattle. The city receives its name from Charles William, who built it; and on the ſeventeenth of June, 1715, laid the foundation-ſtone of the palace there, on which occaſion he inſtituted the order of Fidelity. This city has a *gymnaſium illuſtre*, in which are eight maſters, the four firſt of whom are ſtiled profeſſors. The Lutherans have ſeveral churches, the Calviniſts and Catholics have alſo theirs, and the Jews a ſynagogue. The town is very regularly built, but both the houſes and the palace are only of wood and brick; thoſe houſes that are near the palace are the largeſt, and have a range of piazzas.

The firſt object of attention in building of the palace, and for which no expence was thought too great, is the turret on the body of the building, from whence one has not only a view into all the main ſtreets, which are divided by three croſs ſtreets; but alſo into twenty-five viſtas, ſome ſet with trees, and others cut through the woods; and the beauty of the proſpect is ſtill heightened by other variegated walks in the ſame woods. Some of theſe walks bear the names of the miniſters who ſerved his highneſs at the time when theſe improvements were made, and moſt of the ſtreets in the town are called after princes.

The garden, though ſmall, is very elegant, it having no leſs than four thouſand orange, lemon, bay, and other ſuch trees; among which, ſays Mr. Keyſler, two thouſand ſeven hundred are orange-trees. In ſome of the lower parts of the garden are pretty eſpaliers of young lemon-trees; and behind the palace is a decoy, where about two thouſand wild-ducks are daily fed. The chief defect in Carlſruhe is the want of water, and what the garden has is conveyed thither by hand-pumps.

In the upper diſtrict of Durlach, which is a very fruitful country that produces not only plenty of corn, hemp, and flax, but good wine, is Durlach, the capital of the margravate, and once the reſidence of the prince. It is ſeated on the river Pfinz, in the forty-ninth degree twenty minutes north latitude, and in the eighth degree twenty minutes eaſt longitude. It had formerly a palace called Carlſburg, with a ſpecial ſuperintendency, and a grammar ſchool; but in 1689 was laid in aſhes by the French. At a ſmall diſtance from the town is a very large decoy for wild-fowl; and in this diſtrict is Seehof, the manſion-houſe of a fine eſtate belonging to the prince, near which are moſt beautiful meadows for the uſe of his ſtables.

SECT.

SECT. VI.

A conciſe Account of the free imperial Cities of Swabia.

WE have already given a deſcription of Augſburg in treating of that biſhopric, and ſhall therefore begin with the city of Ulm, which is ſeated on an uneven ſpot of ground on the Danube, over which it has a ſtone bridge, in the forty-eighth degree twenty-three minutes north latitude, and in the tenth degree ſix minutes eaſt longitude. Here that river receives into it the Blau, which runs through a part of the city, and juſt beyond it is joined by the Iler. This city is pretty well fortified, but ſtrangers are never ſuffered to go upon the ramparts without paying a guilder; the very burghers are under the ſame reſtraint: this being the privilege of the patricians and their friends, which ſolely proceeds from avarice; for theſe patricians ſhare the hay and fruits that grow upon the ramparts among themſelves, which makes them thus ſtrictly cautious to prevent any diminution of their profit.

The inhabitants are moſtly Lutherans, and to them belongs the cathedral, which is a large ſtructure, that ſtands almoſt in the center of the city, and has ſeven miniſters. The building is three hundred and ſixty-five feet in length; and the windows, particularly ſix in the choir, are moſt beautifully painted, and one of them is ſaid to have coſt three thouſand German florins. The ſteeple of this cathedral is four hundred and one ſteps high, and affords a moſt extenſive proſpect, all the adjacent country being level. The Lutherans have alſo the church of the Holy Ghoſt, that of the Bare-footed friars, and an hoſpital. The Roman catholic inhabitants perform their public worſhip at the convent of St. Michael at Wengen, in which are regular canons of the order of St. Auguſtine, and in the houſe of the Teutonic order. The Lutheran ſeminary is founded in a convent that formerly belonged to the Bare-footed friars. Among the other ſtructures is the ſplendid foundation of Samlungſtift, which is particularly appropriated for the daughters of patricians; and among the public civil buildings are the town-houſe and the arſenal.

The houſes are for the moſt part of timber and plaiſter; they make but an indifferent appearance, and the ſtreets are neither wide nor handſome; they have ſeveral ſquares, but they are mean and very irregular. It is reckoned near ſix miles and a half in circumference: its ditches, which are well fortified, are almoſt every where double, and on one ſide of the town the Danube runs through them with great rapidity, while the others are kept full of water by ſluices. This city was once ſo rich, that it paſſed for one of the wealthieſt in the empire; and the Germans were accuſtomed to ſay, "The ready caſh of "Ulm, the neatneſs of Augſburg, the induſtry of Nu"renburg, and the arſenal of Straſburg, were the four "wonders of Germany."

The magiſtracy here is Lutheran, and conſiſts of forty-one members, above half of whom are patricians. This city maintains ſix companies of ſoldiers. Large quantities of wine are brought hither from the Rhine, the Neckar, the lake of Conſtance, and the Veltlin, and carried up the Danube. It alſo trades in linen and other goods. This city poſſeſſes the fourth ſeat on the bench of Swabian cities in the diet of the empire; but in the circle of Swabia has not only the ſecond place on the Swabian bench, but the perpetual *directorium*. Here are kept the archives of the imperial towns in Swabia and Franconia, and the diet of Swabia is alſo uſually held here.

The free imperial city of Eſſlingen is ſeated on the Neckar, eight miles to the eaſt of Stutgard. What is properly called the city ſtands on a branch of that river, and contains St. Denis's church, together with the New or Dominican church, the *Frauenkirchen*, and another which belonged to the Bare-footed friars, the orphan-houſe, the grammar ſchool, and the *collegium alumnorum*; as alſo the fine town-houſe, and the rich hoſpital of St. Catherine. It has three ſuburbs, namely, the Upper ſuburb, which, as well as the city, ſtands on a branch of the Neckar; the ſuburb of Beuten, near which is the citadel; and the ſuburb of Blienſau, which is ſituated on an iſland between the main ſtream of the Neckar and the above-mentioned branch, and is famous for containing in it the arſenal of the circle of Swabia.

The principal church belongs to the Lutherans, who compoſe the magiſtracy; and the Roman catholics perform their public worſhip in the chapel of the ſtewards of the convent of Cayſerſheim. In the diet of the empire this city poſſeſſes the fifth place on the bench of the imperial cities of Swabia; but the third on the bench of cities in the circle of Swabia. Eſſlingen is under the protection of the duke of Wirtemburg, by whoſe territories this city and the country belonging to it are ſurrounded. This city, in the year 1701, ſuffered greatly by fire.

The free imperial city of Reutlingen ſtands about five miles diſtant from Tubingen, on the little river Echetz, which runs into the Neckar. This city is ſmall, and has only one pariſh-church, an hoſpital, an orphan-houſe, and a grammar-ſchool. Both magiſtrates and burghers are Lutherans, and the former uſually conſiſt of twenty-eight perſons, of whom the civil judge and twelve others are commoners. In the diet of the empire it is poſſeſſed of the ſixth ſeat and vote on the bench of the imperial towns of Swabia; but in that of the circle, of the fourth on the bench of towns. It is alſo under the protection of the duke of Wirtemburg.

The imperial and free city of Nordlingen is ſeated in a pleaſant fertile country on the river Eger, and till the year 1238 ſtood on the adjacent hills of Emeranſberg; but being then conſumed by fire, was built on the ſpot where it now ſtands. Almoſt all the burghers are Lutherans, who have three churches, and a Latin ſchool; but the Roman catholics have their church near the German houſe. The magiſtracy are alſo Lutherans. This city likewiſe poſſeſſes a ſeat on the bench of the imperial towns of Swabia, and in the diet of the circle.

In the year 1647 it was beſieged by the army of the empire for ſeventeen weeks, during which it ſuffered greatly by an accidental fire; and in 1702, a famous compact was entered into here between the five circles; after which this town was better fortified, as being a bulwark to the circle of Franconia againſt Bavaria.

We ſhall now deſcribe the free imperial city of Hall, otherwiſe called Swabian-Hall, which, together with its territories, is ſeated on the river Kocher, between the counties of Hohenlohe and Limburg, the margravate of Anſpach, and the dutchy of Wirtemburg. It is ſo ſurrounded by mountains, that it is not eaſy to approach it; and is divided from the ſuburbs by the river, over which is a ſtone bridge. The town conſiſts of three parts, namely, of Old Hall, in which ſtands the principal church of St. Michael, with the college, the hoſpital, another church, and the ſalt-houſes; of the part above the Kocher, in which ſtands the houſe of the order of St. John, and St. Catharine's church; and the third part is compoſed of Gelbinger-ſtreet. The city is Lutheran, and the magiſtracy conſiſts of twenty-four perſons, under the direction of two burgomaſters, as preſidents. The city owes its origin to its ſalt-ſprings, which are ſaid to have given occaſion to ſeveral noblemen to ſettle there, and among other buildings to erect ſeven towers of ſtone; whence the place at firſt obtained the name of Siebenburgen, or Seven-caſtles, and afterwards it became gradually enlarged, till it arrived at its preſent ſtate. This city alſo poſſeſſes a ſeat in the diet of the empire, and in the circle of Swabia. It has ſeveral times ſuffered greatly by fire, particularly in the year 1728.

The imperial town of Uberlingen is ſeated on a rock, in a bay of the lake of Conſtance, and its moats are formed of ſo many ſtone quarries. The town is divided into three parts, the Upper Town, the Lower Town, and the Gallenberg. The inhabitants are of the Romiſh religion, and have a collegiate church dedicated to St. Nicholas, a houſe of the order of St. John, an imperial hoſpital, three convents, and two other churches. Near the town is a good mineral ſpring. Uberlingen poſſeſſes a place in the diet of the empire among the imperial towns of Swabia, and among thoſe of the circle.

The

The free imperial town of Rothweil is ſeated on an eminence by the Neckar, and its territories border on thoſe of the dutchy of Wirtemburg. The inhabitants are of the popiſh religion, and there are here a monaſtery of the order of St. John, a college of Jeſuits, and three convents. It enjoys the ſame privileges as the other cities, in having a repreſentative at the imperial diet, and in that of the circle.

Heilbron, a free and imperial city, is ſeated on the Neckar, in a very pleaſant and fruitful wine-country on the borders of the dutchy of Wirtemburg and the Palatinate. It received its name from Heilbron, which ſignifies Health-ſpring, from a ſpring that, by means of ſeveral conduits, ſupplies the city with excellent water in ſeven different places. It is not uſed medicinally, as it was formerly, but continues in great repute for its extraordinary clearneſs and ſalubrity. To the uſe of this ſpring the emperor Charles V. attributed his recovery from a dangerous fit of ſickneſs. This event is commemorated by the following inſcription in High Dutch, which Mr. Keyſler obſerves is to be ſeen on a houſe belonging to the prelates of Sconthal, but at preſent inhabited by the poſt-maſter: "On the twenty-fourth of "December, 1546, the emperor Charles V. was brought "hither in a litter; and on the eighteenth of January, "1547, he rode from hence in perfect health on horſe-"back." On each ſide of this monument ſtand Fortitude and Clemency, with four other virtues, and two crowned pillars, with the inſcription PLUS ULTRA. In this houſe is alſo to be ſeen a portrait of Charles V. which he left behind him when he went away. It is well executed, and reſembles all the portraits of that emperor done by Holbein. Our author mentions there being one year ſuch plenty of wine in this country, that the inhabitants had not a ſufficient number of caſks to put it in, and that wine of the growth of the year 1725 was ſold for half a creutzer, or about a farthing a quart.

The city of Heilbron is well built, and has three pariſh-churches, the principal of which is dedicated to St. Kilian. The college and town-library are in a convent that formerly belonged to the Minorites. There is here alſo a manſion-houſe, and commandery of the Teutonic order, with a nunnery of the order of St. Clare. The form of government is ariſtocratical, and the magiſtrates, as well as moſt of the inhabitants, are Lutherans. Heilbron was for a conſiderable time under the protection of Wirtemburg, and afterwards under that of the elector Palatine. It poſſeſſes a ſeat in the diet of the empire among the imperial towns of Swabia, and in the bench of thoſe on the circle.

Gmund, or Gemund, another free and imperial town, is ſeated on the Rems, on the borders of Wirtemburg. The inhabitants are of the Romiſh religion, and have five churches, the principal of which is that of the Holy Croſs. There are here alſo four monaſteries and two nunneries. The magiſtrates are elected out of the body of the people. This city enjoys the ſame privileges as the reſt, with reſpect to the imperial diets, and thoſe of the circle.

The free imperial town of Memmingen is ſeated in a beautiful and fertile plain on a ſmall river called the Aach, which runs into the Iler. This town is Lutheran, and its principal church of St. Martin belongs entirely to thoſe of that communion; but the church of Our Lady is poſſeſſed in common by them and the Roman catholics. There is here alſo an Auguſtine monaſtery, with a church, a Franciſcan nunnery, a monaſtery belonging to the monks of the Holy Croſs, with an hoſpital near it, in which is a church, a chapel dedicated to the wiſemen of the Eaſt, a ſmall church, and another hoſpital near the church of Our Lady. The magiſtrates are of the Lutheran religion, and conſiſt of nineteen perſons, part of whom are patricians, and part choſen from the body of the people. This city has alſo a repreſentative at the imperial diet, and in that of the circle. The inhabitants carry on a good trade with Swiſſerland, Italy, and the other neighbouring countries in Bavarian ſalt, home-ſpun linen, corn, hops, and other goods.

Lindaw, or Lindau, is an imperial city ſituated on an iſland in the lake of Conſtance; but has a communication with the continent by means of a very large wooden bridge; and is divided by an arm of the lake, ſo as to form another ſmaller iſland that is ſeparated from the city, and conſiſts of vineyards and gardens, and is walled quite round. Hence, on account of its ſituation, it has been ſtiled the Venice of Swabia. The pariſh-church is dedicated to St. Stephen: it has alſo a well endowed hoſpital, and a grammar-ſchool, conſiſting of four claſſes. The caſtle, and the heathen-wall, as it is called, ſtand near the gate at the bridge which leads to the continent, and are ſuppoſed to be Roman works; the latter of which is attributed to Tiberius Nero, and the former to Conſtantinus Chlorus, at the time of their encampment in this iſland, during their expeditions againſt the Vindelici and Alemanni. It is alſo ſuppoſed that near this caſtle formerly ſtood a town, and that the little church of St. Peter was built on the firſt introduction of Chriſtianity into this country.

There is here an imperial abbey, the abbeſs of which is a princeſs, who holds the firſt ſeat in the imperial diet among the abbeſſes on the Swabian bench of prelates, and has alſo a ſeat in the ſecular bench of princes in the diet of the circle. It is remarkable that every abbeſs, on her acceſſion to her government of the abbey, has the privilege of releaſing the firſt maleſactor capitally condemned within the juriſdiction of the city.

The magiſtracy conſiſt of the privy and large-council. The city had formerly a provincial tribunal, but ever ſince the end of the fifteenth century this has been annexed to Altorf, and Lindaw annually pays two tons of wine, as an acknowledgment to the prefecturate of Altorf. This city has a place among the imperial cities on the Swabian bench of the diet of the empire, and in that of the circle of Swabia. At the diet held here in 1496, was eſtabliſhed the chamber of juſtice. In 1647, it held out a ſiege of nine weeks againſt the Swedes, who were at laſt obliged to retire; and, in 1728, a conſiderable part of the city was conſumed by fire.

The imperial town of Dinkelſbuhl is ſeated on the Wernitz, near the margravate of Anſpach, and ſtands on three hills, on which formerly grew ſpelt, whence its arms are an ear of ſpelt or. The inhabitants are a mixture of Lutherans and Roman catholics, the latter of whom are poſſeſſed of the great church, and two convents; but the former of the hoſpital church, their own conſiſtory, and two German ſchools. The magiſtracy here is one half Lutheran and the other Roman catholic. This city enjoys the ſame privileges with the reſt with reſpect to the diets of the empire and the circle.

Biberac, another imperial city, is ſeated on the little river Reis, or Ruſs, in a pleaſant fruitful valley, ſurrounded with hills, fields, gardens, and meadows. Its name ſignifies the reſidence of bevers, and it is thus called from the number of thoſe animals near it; hence its arms are azure, a bever crowned or. Half of the magiſtrates are Lutherans, and half Roman catholic. St. Martin's, or the great church, and the rich hoſpital, with its church, are common to both ſects. The Lutherans are alſo poſſeſſed of the church of St. Mary Magdalen, and each of them have a grammar-ſchool. Its deputy has a ſeat in the diet of the empire, and alſo in that of the circle. There are here many weavers, and its principal trade conſiſts in fuſtians.

The imperial city of Ravenſburg is ſeated in a valley on the Schuſs, a ſmall river that falls into the lake of Conſtance. It has four gates, many convents, a handſome town-houſe, and the churches are well built. In the middle of the town is a high watch-tower, in the place of one blown down by a whirlwind in 1552, on which is an inſcription, that the watchman, or trumpeter, who, according to cuſtom, ſounds the hour of the night, fell down from the top with the tower, without receiving the leaſt hurt, while his wife and ſon, who were below, were killed. The Lutherans and Catholics are on the ſame footing with each other, both with reſpect to ſpiritual and temporal affairs, and the magiſtracy is ſhared between them. The church ſituated near the Carmelite convent is common to both ſects; but the Trinity church is in the poſſeſſion of the Lutherans alone, and the Roman catholics have two pariſh-churches.

It has alſo a ſeat in the general diet, among the imperial cities on the bench of Swabia, and on the bench of the circle.

Kempten, an antient imperial city, is ſeated on the Iler, which flows between the town and the ſuburbs. Both the burghers and magiſtrates are of the Lutheran religion, and have a handſome pariſh-church, and a grammar-ſchool.

In this city is a very antient Benedictine abbey, which Hildegard, conſort to Charlemagne, repaired in the year 775, and if ſhe was not the original foundreſs, ſhe ſettled on it her ſhare of her mother's inheritance, in acknowledgment of which the abbey took her image for its coat of arms. The prince and abbot of Kempten is grand-marſhal to the empreſs, and at her coronation takes from her the ſceptre, which he afterwards delivers back. He has a ſeat in the imperial college of princes, and in the diet of the circle of Swabia; as the city of Kempten has among the cities on the bench of Swabia, and in that of the circle. In the year 1633 this city was taken ſword in hand by the Imperialiſts, with the ſlaughter of at leaſt two-thirds of the burghers.

The imperial city of Kaufbeuren is ſituated in a valley on the banks of the Wertach. The burghers are partly Lutherans and partly Roman catholics; but its magiſtracy conſiſts of eight Lutherans, and only four of the Romiſh religion. In the town court and great-council all the members are Lutherans, except two Roman catholics. Here are a college of Jeſuits, and a Franciſcan nunnery. This town has likewiſe a ſeat among the imperial towns on the bench of Swabia in the general diet, and in the diet of the circle.

Weil, alſo called Weilerſtadt, in Latin Wila, is an imperial town ſeated on the river Wurm, and ſurrounded by the dutchy of Wirtemburg. The Popiſh religion prevails here. The pariſh-church of St. Peter was formerly collegiate. Here is alſo a convent of Auguſtine and Capuchin monks, together with a rich hoſpital. This city enjoys the ſame privileges as the reſt with reſpect to the diets. In the year 1388 count Ulric of Wirtemburg loſt his life in a battle near this city, and in 1648 it was taken by ſtorm by the French.

Wangen, together with its diſtrict, is ſeated on the river Argen, and is but a ſmall place, notwithſtanding its having the ſame privileges with reſpect to the diets. The inhabitants are Papiſts, and have here a pariſh-church, an hoſpital, and a convent of Capuchins.

Iſny, another imperial town, is ſeated on the river of the ſame name in the Algau. Its magiſtrates, and the greateſt part of the burghers, are of the Lutheran religion; but among the latter are ſome Roman catholics. Here is an abbey of Benedictine monks. It has a place in the diet of the empire, and in the circle of Swabia among the other imperial towns. In 1721 it ſuffered extremely by fire.

The antient imperial town of Leutkirch is ſeated on the river Eſchach, which a little below this place runs into the Aitrach. It has a Lutheran and Roman catholic church, together with a nunnery of Franciſcans; but the greateſt part of the magiſtracy are Lutherans.

The antient and imperial town of Wimpfen, in Latin Wimpina, was in the time of the Romans called Cornelia. It is ſeated on the river Neckar, and properly conſiſts of two towns, the moſt conſiderable of which is called Wimpfen on the hill, and the other Wimpfen on the vale. In the former is a Lutheran pariſh-church, a grammar-ſchool, and a popiſh hoſpital, or foundation of the order of the Holy Ghoſt: in the latter is a popiſh abbey dedicated to St. Peter, and a convent of Dominican monks. The magiſtracy are, however, compoſed entirely of Lutherans. In 1726 a ſharp action happened here between count Tilly and the margrave of Baden-Durlach. In 1645 and 1688 Wimpfen was taken by the French.

Giengen is ſeated on the river Brenz, and is entirely ſurrounded by the dutchy of Wirtemburg. The inhabitants are of the Lutheran religion, and enjoy the ſame privilege of ſending a deputy to the general diet of the imperial towns of Swabia, and in that of the circle, as all the other imperial towns. In 1634 this place was entirely deſtroyed by the Imperialiſts.

The little free imperial towns of Pfullendorf, Buchorn, Alen, Bopfingen, Buchau, Offenburg, Gengenbach, Zell, and Hammerſbach, are ſcarce worthy of any deſcription, ſince they are inconſiderable places, and are only diſtinguiſhed by their having a ſeat in the diet of the empire, among the imperial towns on the bench of Swabia, and in that of the circle.

SECT. VII.

Of the ſmall Principalities of Hohenzollern and Furſtenberg, the Counties of Oettingen, and Eberſtein, with the Lordſhip of Mindelheim.

THE principality of Hohenzollern is a fruitful country advantageouſly ſituated in a narrow tract near the Danube, between Furſtenberg and the dutchy of Wirtemburg. It took its name from the caſtle of Zollern, which ſtands by a river of the ſame name, and is a long and narrow tract extending about thirty-four miles in length, and about ten where broadeſt; but in other places ſcarce five. It is tolerably fertile, and is governed by its own princes.

The family is divided into the two branches of Hechingen and Sigmaringen: each reigning prince has a council and treaſury; but the former alone has a vote in the college of princes, though both have a voice in the diet of the circle.

The titles of the reigning princes are, Prince of Hohenzollern, burgrave of Nurenberg, count of Sigmaringen and Voringen, lord of Haigerloch and Wohrſtein, and hereditary chamberlain of the Holy Roman empire; yet the annual revenue of the prince of Hohenzollern-Hechingen is computed to amount to no more than thirty thouſand florins, and that of Hohenzollern-Sigmaringen does not exceed this ſum.

The former of theſe princes reſides at Hechingen, which is ſeated on the river Starzel, and has an abbey dedicated to St. James. The reſidence of the latter is at Sigmaringen, a town ſeated on the Danube.

The principality of Furſtenberg is a narrow tract, which, according to ſome authors, extends about ſeventy miles in length on both ſides the Danube, which has its ſource within its limits; but no where exceeds eighteen miles in breadth; but this account does not ſeem to be very accurate, and Dr. Buſching, who is extremely explicit in ſome particulars, takes no notice of its form and extent. The county of Heiligenberg, which compoſes a conſiderable part of this principality, is bounded on the eaſt by Konigſec and Ravenſburg, on the eaſt it terminates on the territory of Conſtance, to the weſt it borders on the juriſdiction of Uberling and Peterſhaus, and to the north on the imperial town of Pfullendorf and Hohenzollern.

The prince of Furſtenberg is entitled to ſix votes in the diet of the circle, two among the princes for Heiligenberg and Stuhlingen, and four among the counts and barons, as lord of Moſkirch, Baar, Hanſen, and Gundelfingen. In the imperial diet he poſſeſſes only one vote in the college of princes, and another vote in the college of the counts of Swabia, for Heiligenberg and Werdenberg.

There are no places in this principality worthy of a particular deſcription, there being only a few ſmall towns and villages.

The county of Oettingen lies to the eaſt of the dutchy of Wirtemburg, extending about eighteen miles between the marquiſate of Anſpach on the north, and the dutchy of Neuburg and the Danube on the ſouth: its greateſt breadth is about twelve miles. The lords of this country are divided into three branches; but all the three lines have one cuſtom-houſe and ſteward in common, which are both accountable to the chamber of regency. The inhabitants are partly Roman catholic and partly Lutheran. The country is divided into four prefecturates, the principal place of which is

Oettingen, the capital of the county, and the reſidence of the princely line of Oettingen-Spielberg, is ſeated on the Wernitz, and is the ſeat of the regency and treaſury, and alſo of the Lutheran conſiſtory of the princes and counts in common. There are here a ſociety for the improvement

provement of arts and ſciences, a grammar-ſchool, a college of Jeſuits, a commandery of the Teutonic order, and an orphan-houſe.

The county of Eberſtein lies in the Black Foreſt, between the dutchy of Wirtemburg and the margravate of Baden, and is watered by the Murg, by means of which a great number of floats of timber are carried into the Rhine. It belongs to the margrave of Baden-Baden, to whom it gives an additional ſeat and vote in the college of Swabian counts at the diet of the empire, and alſo in that of the circle. This county contains

Eberſtein, a market-town, near which is a caſtle.

Gerſpach, a ſmall town ſeated on the river Murg, the inhabitants of which are a mixture of Proteſtants and Papiſts.

In this county is alſo a Benedictine abbey for ladies, called Frauenalb, from its being ſeated on the river Alb; and likewiſe ſeveral villages.

There are ſome other little territories too minute for deſcription in ſo extenſive a work as this; we ſhall therefore only add the following lordſhip:

Mindelheim is ſituated between the biſhopric of Augſburg on the north-eaſt, and the territories of the abbey of Kempten on the ſouth-weſt. It is a pleaſant fruitful territory, about ten miles ſquare. In the beginning of the laſt century duke Maximilian of Bavaria made himſelf maſter of it, and tranſmitted it to his deſcendants; but the elector of Bavaria being put under the ban in the year 1706, the emperor raiſed this lordſhip to a principality, and conferred it as a fief on the moſt illuſtrious duke of Marlborough, who was created a prince of the empire, and alſo inveſted with a ſeat and vote, not only on the bench of princes of the circle of Swabia, but likewiſe in the imperial diet. However, by the peace of Raſtadt and Baden, in 1714, Mindelheim reverted again under its antient title of a lordſhip to the elector of Bavaria, who on that account enjoys both a ſeat and vote on the bench of counts and barons of the Swabian circle.

Mindelheim, the capital, is ſituated in a plain on the river Mindel, about twenty-ſeven miles to the ſouth-weſt of Augſburg, and is an open town, with a caſtle on a hill, built more for ornament than defence: it has a pariſh-church, a college of Jeſuits, a gymnaſium, and a Franciſcan convent.

SECT. VIII.

Of the Auſtrian Countries in Swabia not included within the Circle, and the principal Places they contain.

THE extent of the imperial dominions in Swabia cannot be determined, with reſpect to their length and breadth, with any degree of certainty, they being in many places interſected by other territories.

This country is of moderate goodneſs; it produces all ſorts of corn, and towards the lake of Conſtance, likewiſe wine. The countrymen, who are Roman catholics, ſubſiſt here in ſummer by labouring in the fields and vineyards, and in winter chiefly by ſpinning.

This part of Swabia is divided into Upper and Lower juriſdictions; in the former are thirteen prefecturates, and in the latter ten divifions, the principal places in which are,

Rotenburg, a ſmall town ſeated on the Neckar, and in the lower county of Hohenberg. It was deſtroyed by an earthquake, in the eleventh or twelfth century; but was afterwards rebuilt, and at preſent contains a citadel, with a fine college of Jeſuits, and a Carmelite cloiſter. Before the gate ſtands a celebrated church named Weckanthal, and in its neighbourhood is a medicinal ſpring.

In this part of Swabia is Auſtrian Briſgaw, which lies on the eaſt ſide of the Rhine, that river dividing it from Alſace; it is ſeated between the Ortnaw on the weſt, and the principality of Furſtenberg on the eaſt. The principal places in this diſtrict are the following:

Freyburg, the capital of the province, is ſeated in the river Treiſam, and was formerly an important fortreſs. It has been three times taken by the Swedes, and as often by the French, who in 1745 demoliſhed its fortifications. It has a regency appointed over a part of the Auſtrian territories in Swabia, an univerſity, a college of Jeſuits, and ſeveral cloiſters.

Old Briſach, thus called to diſtinguiſh it from New Briſach, which belongs to the French, and is ſeated on the other ſide of the Rhine. Old Briſach is ſeated on an eminence, and was formerly an excellent fortreſs, which in 1688 was taken by the French; but in 1697 was again reſtored, and in 1703 was taken a ſecond time; but in 1715 was again given up to the houſe of Auſtria; but at length, in 1741, the preſent empreſs cauſed the fortifications to be razed.

Rheinfelden, one of the foreſt towns, is ſeated on the ſouth ſide of the Rhine, and is defended by good fortifications. On the oppoſite bank of that river is a covered way built in the manner of a horn-work, and having a communication with the town by means of a bridge. The Rhine at this place runs with great violence into a rocky tract a mile in length called the Gewild, through which ſhips are let down by ropes.

Villingen, a town ſituated in a fertile tract on the Briege. The ſtreets are regularly laid out and well paved. This place, by means of the circumjacent mountains, and narrow paſſes leading to it, is extremely well ſecured. It has alſo ſome fortifications: hence in 1633 and 1634 it was beſieged in vain, and in 1704 bombarded without effect by the French, though it had been taken by them in 1688. It has always ſerved the Auſtrians as a magazine for proviſions and military ſtores. It has an abbey of Benedictines, and in its neighbourhood is a good bath.

CHAP. XX.

Of the Circle of BURGUNDY.

SECT. I.

Of the Circle of Burgundy in general; with a particular Account of the Auſtrian Share of the Dutchy of Brabant. Its Situation, Rivers, Government, and Arms; with a Deſcription of its principal Cities, particularly Louvain, Bruſſels, Antwerp, and Mechlin.

THE tenth and laſt circle of the German empire is that of Burgundy; but the greateſt part of its territories have been torn from it. France has gradually brought under her dominion the dutchy of Lorrain, which was formerly reckoned in this circle, and alſo a part of the dutchy of Luxemburg, together with a part of the county of Flanders, and the counties of Artois and Burgundy, or French Compté, and a part likewiſe of the counties of Hainault and Namur. The provinces of Gueldres, Holland, Zealand, Utrecht, Frieſland, Overyſſel, and Groningen, have raiſed themſelves to liberty and independency; nay, after their union, by the force of arms, they reduced to ſubjection a part of the dutchies of Brabant and Limburg, and likewiſe of the county of Flanders, with the city of Maeſtricht, and its territory. Laſtly, the king of Pruſſia has alſo the poſſeſſion of a part of Upper Gueldres.

Thus the circle of Burgundy at preſent conſiſts only of the principal part of the dutchies of Brabant, Limburg, and Luxemburg; and alſo of a part of the counties of Flanders, Hainault, Namur, and a part of the upper quarter of Gueldres. Theſe territories, which, together with the Netherlands, devolved, on the death of Charles V. to the Burgundian Spaniſh line of the houſe of Auſtria, fell, after the death of Charles II. king of Spain, to the German line of the houſe of Auſtria, the emperor Charles VI. having, by the peace of Baden in 1714, and by that of Vienna in 1725, ſecured them to his houſe, and after his death they came to his daughter and heireſs Maria Thereſa.

This circle is wholly Catholic.

The Burgundian envoy ſits at the imperial diets in the council of the princes of the empire; and the Auſtrian governor-general reſides at Bruſſels.

We ſhall begin this circle with the Auſtrian ſhare of the dutchy of Brabant, which terminates to the north, on that part of the dutchy poſſeſſed by the republic of the United Provinces, to the eaſt on the biſhopric of Liege, to the ſouth on Hainault and Namur, and to the weſt on Flanders and Zealand. The whole dutchy, which is a hundred and four miles in length, and ninety-five in breadth, was formerly the firſt in rank of all the ſeventeen provinces of the Netherlands. The ſouthern part of this dutchy is very mountainous.

The air of Brabant is good, and its ſoil very fertile. Its greateſt riches conſiſt in its flax.

A part of the country is watered by the river Demer, which receives into it the leſſer rivers of Gheete, Dyle, Senne, and Nethe; after which it takes the name of Rupel, and loſes itſelf in the Scheld, which, to the weſt, borders on Brabant.

Near Bruſſels a canal has been carried on from the river Senne to the village of Willebroec, where it diſcharges itſelf into the river Rupel, which ſoon after unites in ſuch a manner with the Scheld, that a perſon may ſail from Bruſſels to the North ſea. This canal was begun in 1550, and finiſhed in 1561, at the expence of eight hundred thouſand florins. In 1753 a canal was begun to be carried on from Louvain to the Rupel, which divides the Dam between the Louvain and Mechlin into two equal parts, and is now brought to bear. Among other public works a ſtone-cauſeway between Louvain and Bruſſels was built in 1710, and another in 1726 reaching from Louvain to Thienen and Liege.

The whole country profeſſes the Romiſh church; and in 1559 an archbiſhopric was erected at Mechlin by Pope Paul IV. under whom are fourteen collegiate churches and two hundred and three cloiſters. To the ſame archbiſhopric are ſubject the prelates of Antwerp, Ghent, Boiſleduc, Bruges, Ypres, and Ruremond.

For the promotion of learning in this country here are ſeveral ſchools and ſeminaries, as alſo the univerſity of Louvain.

The ſtates of Brabant conſiſt of three claſſes, the abbots of a number of towns, and all the princes, dukes, counts, and barons of this province, with the burgomaſter and penſioners of the towns of Louvain, Bruſſels, and Antwerp. This college uſually meets four times a year, when it chooſes four deputies; namely, two out of the clergy, and two out of the nobility, who have their meeting daily. There is alſo a council penſioner, who is perpetual ſecretary of the college.

The arms of this dutchy are a lion or, in a field ſable.

Both the above ſtates and the chancery of Brabant meet at Bruſſels, and at the ſame place are alſo the ſtate council, the privy council, the domain and finance council, the rent chamber, and the fief court of Brabant.

In the Auſtrian part of Brabant are reckoned nineteen walled cities, and a conſiderable number of immunities or boroughs, the inhabitants of which enjoy the rights of burghers. The principal places in this dutchy are Louvain, Bruſſels, Antwerp, and Mechlin. We ſhall begin with the firſt.

Louvain, called by the natives Loeven, and in Latin Lovanium, is ſeated on the river Dyle, and is of very conſiderable extent; but while ſome repreſent the circle within the walls as twelve Engliſh miles, others affirm that the walls are only ſix or ſeven miles round. It was formerly the capital of the country, and had a flouriſhing trade from the manufactures of linen and woollen eſtabliſhed there, which in the beginning of the fourteenth century, maintained upwards of one hundred and fifty thouſand manufacturers; but the cloth weavers making an inſurrection in 1382, and being puniſhed on that account, a great number of them withdrew to England, and together with its manufactures, the city alſo decayed; but its trade has been attempted to be revived by making the new canal.

Within the walls are large meadows, beautiful vineyards, with pleaſant gardens and orchards. It ſtands in the fifty-firſt degree twelve minutes north latitude, and in the fourth degree forty minutes eaſt longitude, in a very fruitful ſoil, and in ſo pleaſant and fine an air, that wine is made both within the walls and without.

The town-houſe is a fine building in the old taſte, adorned with ſtatues on the outſide, and much embelliſhed within. The magiſtrates meet here twice a week, and are more numerous than in moſt other towns in the Low Countries; for they have two burgomaſters, ſeven aldermen, two recorders, ſix ſecretaries, and four treaſurers, beſides a council of twenty-one, eleven of which are country gentlemen, and the other ten are deacons of the trades.

The city contains five pariſh churches, which are very noble ſtructures, and among them the collegiate church of St. Peter is one of the moſt magnificent in the whole country. Its ſteeple has been eſteemed a maſter-piece; it was five hundred and thirty feet high, and on each ſide of it was another four hundred and thirty feet in height; but the larger ſteeple was blown down in a ſtorm in the year 1606. The chapter of this church conſiſts of a provoſt, a dean, a chanter, eighteen honorary prebends, and ten canons, who muſt all be profeſſors of different ſciences in the univerſity. The chapels belonging

ing to this church are finely adorned with ſculpture and painting.

Without the town is a college of Jeſuits, fifteen monaſteries, and as many nunneries. The church belonging to the Jeſuits convent was built in 1666, and would paſs for a beauty even at Rome. Their pulpit of oak is the fineſt piece of that kind in the world: on the bottom is repreſented the fall of man, and above, the redemption of man by the virgin's treading on the ſerpent's head. Among the nunneries, the convent for the Engliſh is the fineſt in the Low Countries, and very richly endowed.

The univerſity was founded in 1425, by duke John IV. and contains forty-one colleges. It enjoys very great privileges, granted by the popes and the dukes of Brabant. The principal perſon in the univerſity is the rector magnificus, who enjoys his office for three months; but is generally continued for three more. He is choſen from among the profeſſors of the five faculties, divinity, the canon law, the civil law, phyſic, and the liberal arts. Here are two other honourable poſts, that of conſervator of the privileges of the univerſity, and the chancellor: the former is elective, and the latter annexed to the provoſtſhip of St. Peter's church. The hall where the public exerciſes are performed, is a large building of free-ſtone, and a great ornament to the city, and in it are three ſpacious rooms, where lectures are read in divinity, law, and phyſic, to which the ſcholars in every college may reſort.

In the year 1542, Martin Roſſem, the general of the Guelderlanders, attacked this city without ſucceſs. In 1572, William prince of Orange beſieged it; but the burghers, aſſiſted by the ſtudents, made ſo brave a reſiſtance, as to oblige him to raiſe the ſiege. In 1635 it was beſieged in vain by the French and Dutch, and on the fifth of Auguſt 1710, the French entered the city by ſurprize; but were bravely repulſed by the inhabitants, who obliged them to retire in confuſion; for this Charles V. king of Spain, and afterwards emperor, ſent them a golden key, which is ſtill kept as a curioſity in the town-houſe. However, in 1746, the French made themſelves maſters of this place, and kept it till the year 1749.

The territory belonging to the juriſdiction of Louvain is very large, and contains eighteen large manors, or diſtricts.

Bruſſels, called by the French Bruxelles, and in Latin Bruxellæ, is the capital of Brabant, and the uſual reſidence of the governor-general of the Netherlands; it is ſeated on the little river Senne, which runs through it, in the fiftieth degree fifty minutes north latitude, and in the fourth degree ſix minutes eaſt longitude. This city makes a noble appearance, it being on the brow of a hill, and from below, the whole of it is ſeen. Indeed, no city in Europe makes a more beautiful figure at a diſtance, except Naples and Genoa; and like them, when you are in the town, it is all up and down hill. It has ſeven gates, out of each of which are large ſuburbs, in which the citizens have their gardens. The city is ſurrounded with a double brick wall and a pretty large interval between, and ſmall ditches; but the place is too big to hold out a long ſiege, it being about ſeven miles in circuit.

The ſtreets are very ſpacious, though ſteep, and the houſes are generally pretty high. Here are ſeven fine ſquares, among which that of the great market-place is one of the moſt beautiful in Europe. The town-houſe where the magiſtrates meet, takes up one ſide, and is a noble pile, which has a tower about three hundred and ſixty-four feet high, with a ſtatue on the top, of St. Michael in copper gilt, the patron of this city, killing the dragon, and though ſeventeen feet high, it ſerves for a weather-cock. In this ſtructure is the apartment wherein the ſtates of Brabant meet, which is the beſt adorned of any in Europe. Here are particularly three large rooms, one of which contains the reſignation of Charles V. in tapeſtry, ſo finely executed, that it is ſaid to exceed every thing of the kind in Europe. It is ſet up in gilt frames; and the other rooms belonging to this aſſembly are finely adorned with original paintings.

Oppoſite to it is the imperial palace, the entrance into which is by a ſpacious court. The palace ſtands on an eminence, and on the left hand is a large hall that leads to the imperial chapel, which is adorned on the outſide like that of Henry VII. in Weſtminſter-abbey. Fronting the gate of the court is the entrance into the royal apartments, which are very noble, but irregular, having been built at different times, and under them is a terras fronting a beautiful parterre, on which are braſs ſtatues of the emperors and dukes of Brabant: indeed, the whole ſquare is ſurrounded with pillars of the ſame metal. Upon one of the towers is a bird pierced with an arrow, in memory of the Infanta Iſabella ſhooting a bird. Behind the palace you deſcend by a pair of hanging ſtairs into the above parterre, which is adorned with fountains and ever-greens; and behind it is the park, where every body has the liberty to walk, and is adorned with viſtas, grottos, fountains, and other water-works; it is alſo well ſtocked with deer. What is moſt ſurpriſing in this park is the eccho, which makes ten or twelve diſtinct reverberations. At the further end of the park is a fine pleaſure-houſe built by the emperor Charles V. after his abdication; whence it is called the emperor's houſe.

Round the other parts of the great market are the halls of the different trading companies, who have each a large room for themſelves, and the reſt of the building ſerves for a tavern. Theſe halls are all of an equal height, and the fronts are adorned with ſculpture, gilding, and Latin inſcriptions.

The armoury was formerly well furniſhed; but has now only ſome few remains, as the armour of Charles V. the duke of Alva, the cardinal Infante, and ſome others; as alſo the figures of ſeveral emperors and dukes in armour on horſeback, and on foot, with curious antique arms, according to the different manner of the ſeveral courts of Germany.

Near the arſenal are the palaces of the prince of Orange, the prince of Ligne, the duke of Aremberg and Arſcot, the princes of Epinoy, Rubenpre, and Egmont, and in the gardens of the latter is a fine labyrinth. But the moſt agreeable gardens on account of their ſituation, are thoſe belonging to the dukes of Bournonville, from which you not only ſee every houſe in Bruſſels, but have an extenſive view into the country. In all theſe palaces are collections of original paintings by the moſt celebrated maſters, both Italian and Flemiſh.

The opera-houſe in Bruſſels was built by the duke of Bavaria in the year 1700. This is one of the nobleſt and largeſt in the world, it being erected in the Italian taſte, with rows of lodges, or cloſets, which the nobility generally take for the winter ſeaſon to accommodate their families and friends, and of which they keep the keys. That of the prince de Ligne is lined with looking-glaſs; ſo that he can ſit in a corner of his lodge with half a dozen friends, drink a bottle, or eat a ſupper, which they often do, by a good fire, and at the ſame time ſee the repreſentation in the looking-glaſs, without being ſeen either by the actors or the company.

There are in this city twenty public fountains, adorned with ſtatues at the corners of the moſt public ſtreets. In that of the herb-market are repreſented four beautiful young women that ſqueeze the water out of their breaſts, which ſpout night and day to a great diſtance. The fountain in the middle of the town-houſe is much admired; it repreſents Neptune and his Tritons ſpouting out water, as a horſe alſo does from his mouth and noſtrils.

The churches of this city are very magnificent, ſeven of theſe are parochial, and among them the church of St. Gedula, which is alſo collegiate, is the largeſt and fineſt. It ſtands on the top of a hill near the Louvain-gate, and is ſurrounded with iron baluſtrades. It is an old Gothic building, with two large ſteeples at the eaſt end; but is finely embelliſhed within. On the pillars in the body of the church are, on one ſide, the ſtatues of our Saviour and ſix apoſtles, and on the other the Virgin Mary, with the ſix other apoſtles, all as big as the life. The little chapels on each ſide are finely adorned

with paintings and marble baluſtrades. In the choir are ſeveral fine monuments of illuſtrious princes, as the archduke Albert and his wife; Iſabella, Infanta of Spain; John duke of Brabant, with his wife; Mary daughter to Edward IV. king of England: but the fineſt is that of Erneſt archduke of Auſtria, and governor of the Netherlands. In one of the little chapels they worſhip three hoſts, which they pretend were ſtabbed by a Jew, about the year 1369, and bled. Theſe are expoſed every feſtival in a chalice richly ſet with diamonds. In order to perpetuate the memory of this event, there is a yearly proceſſion on the Saturday after the thirteenth of July, when theſe hoſts are carried round the city, and attended by all the regular and ſecular clergy, the magiſtrates, courts of juſtice, and even the governor of the province. The chapel where they are kept is built entirely of marble, and the altar is of ſolid ſilver.

Here is a college of Jeſuits, which has a very fine church, eleven monaſteries, and twenty-one nunneries; among which are two Engliſh, one of Dominican ladies, founded by cardinal Howard in the reign of Charles II. king of England, of which one of the houſe of Norfolk is always abbeſs, the other is of Benedictine nuns.

The Beguinage, or the foundation of pious maids, reſembles a little town, and is ſurrounded by a well and ditch, and divided into pretty little ſtreets, where every Beguine has her own apartment. Their number generally amounts to ſeven or eight hundred, and ſometimes more. They are governed by four elderly women, whom they chooſe out of their own body, and have a confeſſor, or chaplain, appointed by the biſhop of Antwerp. Their church is a fine piece of architecture lately built.

The Mount of Piety in this city is a public office for lending money upon pledges at a moderate intereſt, and was eſtabliſhed by the archduke Albert, and Iſabella his wife, in the year 1617. It is a vaſt building, like a monaſtery; and there are private paſſages for going in, without being ſeen from the public ſtreets. The archduke put it for ever under the protection of the archbiſhop of Mechlin and the chancellors of Brabant, as governors; and they put in a ſuperintendent and other proper officers, by which it is governed. This has ſucceeded ſo well, that the magiſtrates in all the great cities of the Netherlands have erected others in imitation of it.

The antient inhabitants of Bruſſels have ſhewn a ſingular fondneſs for the number ſeven; for here are ſeven principal ſtreets that enter into the great market-place, in which are ſeven ſtately houſes; ſeven pariſh-churches; ſeven noble families, eminent for their antiquity and great privileges; ſeven midwives, ſworn and licenced by the ſenate to viſit the poor as well as the rich, whenever called; ſeven public gates of the Doric order, remarkable for leading to ſo many places of pleaſure or different exerciſes, namely, one for hunting, a ſecond for fiſhing, a third for fowling, a fourth leads to pleaſant fields, a fifth to paſture grounds, a ſixth to ſprings and vineyards, and a ſeventh to pleaſant gardens.

This city is ſaid to have entertained at one time ſeven crowned heads, beſides the dukes of Savoy and Lorrain, with nine thouſand horſe belonging to their retinues. The inns, or eating-houſes, at Bruſſels, are equal to any in the world; and a ſtranger has the advantage of dining any time between twelve and three, on ſeven or eight diſhes of meat, for leſs than an Engliſh ſhilling. The wines here are alſo very good and cheap, and for an Engliſh ſix-pence every hour you may have a coach that will carry you wherever you pleaſe.

In the beginning of this ſection we have mentioned the canal which paſſes by this city. By the way of this canal treckſchuyts go twice a day from Bruſſels to Antwerp and back again. Theſe treckſchuyts, or draught-boats, are ſo called from their being drawn by a horſe, and are long covered boats, with windows on the ſides, and two benches within placed lengthways, on each of which fourteen or fifteen paſſengers may conveniently ſit. Each boat is drawn by a ſingle horſe, at the rate of about three miles an hour, and the fare of each paſſenger amounts to no more than about two-pence farthing for every hour. The canal is made like thoſe in Holland, with broad ſtraight quays planted with trees, where the ladies take the air in their coaches, going out at the gate of Villevort, or Vilvorden, where there is a fine road, with four rows of trees on each ſide along the canal for ſeveral miles, and from the canal is a ſtately flight of ſteps which leads to the walls, on which one may walk, under the ſhade of trees, quite round the city.

It muſt be confeſſed, ſays Mr. Miſſon, that few cities in Europe can compare with Bruſſels for good company; as abundance of people of quality either live in, or reſort to this city, who are eaſy of acceſs, eſpecially to ſtrangers. Every night, both in winter and ſummer, they take a tour in their coaches, where the men, as is practiſed at Rome, never go in the ſame coaches with the women, but for a very different reaſon; for as in Italy it is done to avoid the converſation of both ſexes, they ſeparate here out of a mere piece of gallantry; for the gentlemen always keeping one circle, and the ladies another, they meet continually, and thus have the opportunity of talking to, or ogling one another at pleaſure; but the worſt of it is, that their continual ſalutations as often as they meet is no ſmall interruption to this general ſociety.

There is another pleaſant cuſtom, ſays the ſame author, obſerved among the citizens of Bruſſels on the nineteenth of January, when the women undreſs their huſbands and carry them to bed, and the huſbands are obliged to treat their friends the next day. They give two reaſons for the original of this cuſtom. The firſt is, that the city being reduced to ſuch extremity, as to be obliged to ſurrender to the enemy, the women only were allowed to eſcape, and to carry with them what they eſteemed moſt valuable; when, inſtead of their ornaments, they all marched out with their huſbands on their backs. Others alledge, that a good number of the citizens of Bruſſels, following St. Lewis in his firſt cruſade, moſt of them had the good fortune to eſcape the general deſtruction; and afterwards coming home in a body, their wives rejoicing at their return, met and caught them in their arms, and carried them home.

Among the peculiarities of this country it is obſervable, that people, both at Bruſſels and other towns in the Netherlands, have dogs to draw the little carts in which they ſell fruit and other commodities about the ſtreets.

Bruſſels is particularly famous for its tapeſtry, camblets, and bone-lace, which are exported from thence.

With reſpect to its hiſtory, we ſhall only obſerve, that in 1695 it was furiouſly bombarded by the French during forty-ſix houts, by which means fourteen churches and above four thouſand houſes were reduced to aſhes; but within four years they were rebuilt with greater beauty than before. In the year 1708 it was beſieged by the elector of Bavaria; but the duke of Marlborough made him decamp with precipitation. In 1746 it was taken by the French; but was reſtored to the emperor by the treaty of Aix la Chapelle.

The territory and juriſdiction belonging to this city is of very large extent, and contains ſeveral manors and lordſhips, in which are many conſiderable villages.

The city of Antwerp, called by the natives Antwerpen, by the French Anvers, and in Latin Antverpia, or Andoverpum, is the capital of a marquiſate of the ſame name, and is ſeated in a low and ſenny ground on the eaſt ſide of the Scheld, in the fifty-firſt degree fifteen minutes north latitude, and in the fourth degree fifteen minutes eaſt longitude. It is built in the form of a creſcent, and is ſaid to be three thouſand ſix hundred and thirty-five geometrical paces in compaſs. The ſtreets are generally large, ſtraight, and well paved; but the houſes are built in a manner peculiar to itſelf, half of brick, and half of wood, with a kind of battlements on the top, and very high roofs, which give them an antique appearance. The fortifications are not ſo much celebrated for their ſtrength as their beauty; the ramparts being almoſt every where adorned with double rows of trees, which in ſummer afford delightful and ſhady walks. The citadel, however, is a ſtrong and regular fortreſs. The Scheld, both at Antwerp and two leagues above and below it, is deep and broad, which greatly contributed to the flouriſhing ſtate of this city in former times, when it had the reputation of being the richeſt and moſt frequented port in Europe. The records of this city mention

tion a merchant, named John Daens, who having lent a million of gold to Charles V. afterwards invited that emperor to dinner, where, after a noble entertainment, he threw the emperor's bond into the fire, which was of cinnamon, a ſpice which at that time bore a higher price than at preſent.

In the city are twenty-two public ſquares, and two hundred and twelve ſtreets. Moſt of the houſes have court-yards before, and gardens behind. The principal ſtreet is called Mere, which is ſo broad that ſix coaches may go a-breaſt, and the houſes here are generally of free-ſtone. At the upper end of this ſtreet is a fine braſs crucifix thirty-three feet high, placed on a marble pedeſtal. The city has ſeven gates, from each of which runs a long ſtreet terminating at the cathedral, which is placed about the middle of the city. On the top of the gate which leads to the quay ſtands the ſtatue of a giant. This gate, as well as ſeveral others in the city, was deſigned by the famous painter and architect Sir Peter Paul Rubens, who was a native of Antwerp.

The citadel, which is eſteemed one of the ſtrongeſt in Europe, is very regular. It is an exact pentagon, and ſtands on the ſouth ſide of Antwerp, on the banks of the Scheld, and commands the town, the river, and the neighbouring country. The erecting of this fortreſs, by order of Philip II. king of Spain, was the firſt check given to the trade of this city, which was before a free port. It has five baſtions, which, from the regularity of the figure of the citadel, defend one another: it has large and deep double ditches, with only one gate, and is ſaid to be about two thouſand five hundred paces in circuit.

The exchange of Antwerp has four ſpacious gates oppoſite to each other, and always open. The walks round it are ſupported by forty-three pillars of blue marble, all carved with different figures, not two of them being alike. This ſtructure is ſaid to be a hundred and eighty feet long, and a hundred and forty broad. Underneath are vaults, or magazines, well ſtored with merchants goods; and above is an academy for painting, ſculpture, architecture, and the mathematics. The building of this exchange coſt the city of Antwerp three hundred thouſand crowns. From this ſtructure, which was the firſt of the kind in Europe, Sir Thomas Greſham took the model of the Royal exchange he erected in London, as did alſo the burghers of Amſterdam that of theirs.

The town-houſe is a very grand piece of architecture built with free-ſtone, with a fine frontiſpiece adorned with a variety of ſtatues, a cupola, and an eagle at the top. It ſtands in the great market-place, which is a very ſpacious ſquare, in which are all the public executions. The houſe of the Hanſe-towns, for the convenience of the Eaſtern merchants from the Baltic, called Eaſterlings, was built in the year 1568, when the trade of Antwerp flouriſhed, and is a ſquare building of ſtone two hundred and thirty feet each way, with magazines in the upper parts for dry goods, and cellars below for wet. In the middle ſtory, which has a gallery quite round an inner ſquare, are three hundred lodging-rooms for merchants. But this ſtructure is now turned into horſe barracks, the cellars of which ſerve for ſtables, and the rooms above for hay-lofts.

The markets of Antwerp are at a proper diſtance from each other, each having a particular ſquare. The fiſh-market by the river is very ſpacious; but the moſt curious of them all is the Friday-market, as it is called, where, on every Friday, all ſorts of houſhold-goods, pictures, and jewels, are ſold by auction, and often at a very cheap rate; for when a perſon dies who leaves a family of children, his pictures are all ſent to the Friday-market, and the money ariſing from their ſale is equally divided among them.

No city in the Netherlands has ſo many churches and ſuch fine ſtructures as thoſe of Antwerp, which is the ſee of a biſhop ſuffragan to the archbiſhop of Mechlin. There are here four collegiate churches, three other pariſh churches, four abbeys, and about ſixty cloiſters of the firſt rank. The cathedral of Our Lady, which is alſo a parochial church, is a very grand pile, upwards of five hundred feet long, two hundred and thirty broad, and three hundred and ſixty high. Its ſpire is four hundred and ſixty-ſix feet in height, the croſs at the top one hundred and fifty-one, the diameter of the clock thirty feet, and its circumference ninety. In its belfry are thirty-three great bells, and two ſets of chimes. The three principal gates of this cathedral are adorned with marble and gilding, and the altars are embelliſhed with fine paintings, ſome of them by Rubens. The picture which repreſents the taking down of our Saviour from the croſs, in which the figures are as big as the life, is reckoned a maſter-piece. Here are alſo ſome curious pieces by Quintin Maſſeys, a blackſmith, who falling in love with a painter's daughter, aſked her in marriage; but her father anſwered, that he would never beſtow her on any except a painter. Upon this the blackſmith going to Italy, entered the Lombard ſchool, and in a few years returning a greater maſter than the father of her he admired, he married her. At the entrance into this cathedral he is interred, where his effigy is put up with this inſcription:

Connubialis amor de Mulcibre fecit Apellem.

That is,

"Connubial love transformed Vulcan into Apelles"

In this cathedral Philip II. king of Spain, after the voluntary reſignation of his father, the emperor Charles V. held on the twenty-firſt of January, 1555, a chapter of the order of the Golden Fleece, in which he created nineteen new knights, among whom were the ſeven following kings: Henry VIII. of England, Francis I. of France, his uncle Ferdinand king of the Romans, Chriſtian king of Denmark, John of Portugal, Sigiſmond of Poland, and Maximilian of Bohemia, whoſe banners are ſtill hanging in the choir.

The church belonging to the Jeſuits college is eſteemed one of the fineſt in Europe. The front is a noble piece of architecture, on the top of which is a ſtatue of Ignatius Loyola. All the inſide is paved with white marble, and the galleries were ſupported by fifty-ſix marble columns. The great altar is alſo of marble, intermixed with jaſper, porphyry, and gold; and on the ceiling are thirty-eight pictures from the hiſtory of the New Teſtament, done by Rubens and Vandyke. The carving is moſt excellent, and the flower-work by Segers, a Jeſuit. The chapel of the Virgin adjacent to it is ſtill more magnificent. The picture of the Aſſumption of the Virgin on the great altar was done by Rubens, and called by him his favourite piece; round it are ſix ſtatues of alabaſter repreſenting the founders of this chapel. The church was much damaged ſome years ago, and the marble galleries beaten down by thunder; but it has been pretty well repaired, though the galleries have not been rebuilt. In the Jeſuits college is alſo a library, which takes up four chambers.

The Carmelite church is famous for its having a large ſilver ſtatue of the virgin Mary.

On the banks of the river near the ramparts ſtands the noble and rich abbey of St. Michael, where all ſovereign princes lodge on their coming to this city. The apartments are truly grand, and the refectory or hall, where the monks dine, is ſaid to be as large and as well painted as that of St. George at Windſor. The monks are of the order of St. Norbertus, archbiſhop of Magdeburg, who came to Antwerp in 1124, and eſtabliſhed this order here; and his pretended miracles are painted round the church belonging to the abbey.

There are nineteen nunneries in this city, among which is an Engliſh one of the order of St. Thereſa; but the nuns wear no linen, eat no fleſh, and lie upon ſtraw: even the grates have ſuch a diſmal appearance, that they give the place the reſemblance of a priſon.

Among the many privileges granted this city by its princes, one is, that any perſon born in Antwerp is a citizen, though both the father and mother are foreigners.

Towards the middle of the ſixteenth century there were computed to be no leſs than two hundred thouſand inhabitants and ſtrangers who lived in the city; but during the civil wars it ſuffered much, particularly in 1576, when it was plundered for three whole days together by the Spaniards. But what has moſt contributed to reduce this city, was the peace concluded at Munſter in 1648,

1648, between Spain and the United Provinces, when it was agreed, that no large ſhip ſhould go directly to Antwerp, but unlade its wares in Holland. In 1659 many of the inhabitants, on account of an inſurrection, being obliged to quit the town, and an infectious diſeaſe ſome years after carrying off great numbers, the place fell of courſe into great decay. However, the tapeſtries and lace made here are very fine; and for the promotion of trade an important inſurance company has been erected.

With reſpect to the hiſtory of this city, it is proper farther to add, that Francis of Valois, duke of Alençon, and brother of king Henry III. of France, being inſtalled duke of Brabant at Antwerp in 1582, and appointed governor of the Netherlands by the ſtates-general, thought his authority circumſcribed within too narrow bounds; and to render himſelf more abſolute, reſolved to ſurpriſe the city. Accordingly on the 17th of June 1583, cauſing ſeventeen companies of infantry to enter the gates, he himſelf drew near the walls with his army, who were all Frenchmen, as if only to review them. But the citizens, diſcovering his deſign, made ſo brave a defence, that they drove the French out of Antwerp, killed about fifteen hundred of them, among whom were about three hundred noblemen, and took upwards of two thouſand priſoners. After which the duke retiring into France, died with grief.

In 1585 the duke of Parma, governor of the Netherlands for the king of Spain, took Antwerp, after a ſiege of twelve months, which was one of the moſt remarkable in hiſtory. He re-eſtabliſhed the Roman catholics, who had been but lately baniſhed the city, and reſtored it to the crown of Spain. It was ſeized by the French on the death of Charles II. in the year 1700; but tho' it was provided with a ſtrong garriſon, it ſurrendered to the duke of Marlborough in 1706, about a month after the memorable victory that great general obtained over the French at Ramillies. In ſhort, the barrier treaty between the emperor and the republic of the United Provinces was concluded here in 1715; and the French made themſelves maſters of this city in 1746, but reſtored it to the emperor, at the peace of Aix-la-Chapelle.

The territories belonging to this city are very extenſive.

The city of Mechlin is large, well built, and ſeated on the Dyle and Demer, ſixteen miles to the ſouth-eaſt of Antwerp, in the fifty-firſt degree twenty minutes north latitude, and in the fourth degree thirty-one minutes eaſt longitude. It has many artificial canals, and broad and clean ſtreets. It is a fortified place, but of no conſiderable ſtrength, and is the ſee of an archbiſhop, who bears the title of primate of all Belgium, as alſo the reſidence of a governor, who has a provincial court here. It is divided into ſix pariſhes, each of which has a fine church. The cathedral is a large and noble ſtructure, that is ſaid to have the higheſt ſteeple in the country. The pariſh church of Our Lady is collegiate, and the parochial church of Our Lady of Hanſwyck is a priory of regulars of the order of St. Auguſtine, and of the congregation of St. Genevieve. There are here nine monaſteries, a commandery of the Teutonic order, a college of Jeſuits, and an archiepiſcopal ſeminary; there is alſo ſaid to be a Beguinage, which generally contains about ſeven hundred young women, who maintain themſelves by working, and make no vows. St. Rombant, an Iriſhman, and biſhop of Dublin, is the patron of this city, and his remains are kept in a ſilver ſhrine.

In the arſenal are caſt great guns, mortars, &c. Here Philip II. king of Spain built an hoſpital for wounded and ſuperannuated ſoldiers.

The magiſtracy conſiſts of a high bailiff, two burgomaſters, and twelve echevins. The concurrence of this little lordſhip is neceſſary to the enacting of laws, and raiſing of money. The inhabitants carry on a conſiderable trade in corn, thread, and blankets; but the principal manufacture of this city is that of the fine laces ſo famous throughout Europe.

The moſt remarkable circumſtance relating to the hiſtory of this city is, that in the year 1547, a tower being ſet on fire by lightning, communicated to two hundred quintals of powder, which inſtantly blowing up, deſtroyed almoſt the whole city.

SECT. II.

Of the Auſtrian Part of the Dutchies of Limburg and Luxemburg, with a particular Deſcription of the Cities of Limburg and Luxemberg.

THE Auſtrian part of the dutchy of Limburg conſiſts of good arable land, and particularly abounds in a fine breed of cattle. In the neighbourhood of Limburg are found iron, lead, and calamy. Great part of this dutchy being at preſent ſubject to the ſtates-general, it will be deſcribed under the republic of the United Provinces: we have only to add here a very few particulars. The arms of the dutchy are a lion azure in a field or.

The ſtates of the country conſiſt of prelates, nobles, and high juriſdictions. The Auſtrian part of the dutchy is under a governor, and conſiſts of nine ſmall diſtricts, the principal place in which is,

Limburg, the capital of the province, ſeated on a fine and fruitful hill, at the foot of which runs the little river Weſe, in the fiftieth degree forty-ſix minutes north latitude, and in the ſixth degree fourteen minutes eaſt longitude. In its neighbourhood are ſeveral quarries of different ſorts of marble, and all around are ſurpriſing mountains, rocks, and precipices. It was regularly fortified and defended by a caſtle on a very ſteep rock, flanked with towers and baſtions of free-ſtone; but in 1675, the French under the prince of Condé laid ſiege to it, while the French king himſelf, with another army, hindered the prince of Orange from relieving it; ſo that after eleven days open trenches, the governor was obliged to ſurrender; and in 1677, the French, foreſeeing that they ſhould be obliged to reſtore the city at the peace, blew up the caſtle, deſtroyed the fortifications, and burnt the whole town, except the church and parſonage-houſe. The next year it was reſtored with the province, by the treaty of Nimeguen; but in 1703, the allied army under the duke of Marlborough made themſelves maſters of the city, which the French had ſeized in 1700, and took the whole French garriſon, with the governor, priſoners of war, and it was ſoon after reſtored to the emperor. The city is again pretty well fortified; but has only two gates. The pariſh church of St. George is a fine and large ſtructure, with a ſteeple of free-ſtone; but has ſuffered very much in the ſeveral ſieges it has undergone. Here is alſo a convent of Capuchins, and another of penitent nuns.

The dutchy of Luxemburg is bounded on the eaſt by the electorate of Treves, on the ſouth by the dutchy of Lorrain, on the weſt by Champagne, on the north by the biſhopric of Liege and the dutchies of Limburg and Juliers. In its utmoſt extent from north to ſouth it is about ninety-five miles, and about as many from eaſt to weſt.

It lies in the center of the foreſt of Ardennes, but its ſoil is not very fertile, though it produces ſome corn, and has a good breed of cattle, with wine and all ſorts of game; but its principal riches conſiſt in its many iron-works and founderies for cannon.

It is watered by many ſmall rivers, the principal of which are the Semois, the Ourt, the Laſſe, and the Chiers, which diſcharge themſelves into the Maeſe, together with the river Sure, which receives into it ſome ſmaller ſtreams, and alſo the Kyll, both which flow into the Moſelle. The Maeſe waſhes this dutchy on the weſt, and the Moſelle waters a part of the country to the ſouth-eaſt.

The inhabitants are of the Romiſh religion, and in the whole dutchy, beſides the principal city, are twenty ſmaller towns.

The arms of the dutchy are a lion gules, in a ſhield divided into ten parts, azure and argent.

The ſtates conſiſt of the clergy, the nobles, and the deputies of ſeveral towns. The abbot of St. Maximin, who poſſeſſes large revenues in this dutchy, is primate of the

ATLAS.

British Statute Miles.

the ſtates, though his abbey is ſeated near Treves. Over the dutchy is appointed an Auſtrian governor. At the city of Luxemburg is a judicatory of nobles filled up intirely by perſons of antient nobility, who have at their head a preſident, ſtiled a judge. The provincial-council was erected by the emperor Charles V. and conſiſts of a preſident, three noble and three learned counſel, a general procurator, and a ſecretary.

In the whole dutchy are twenty-three ſmall towns, beſides the capital, which we ſhall next deſcribe.

Luxemburg, the capital of the dutchy, is ſeated on the river Elz, at its confluence with the rivulet of Petreuſe, and is one of the ſtrongeſt fortifications in the Netherlands. It is divided into the Upper and Lower town: the former reſembles an heptagon, and lies partly in the plain and partly on a rock; the latter is ſeated amidſt deep valleys, and conſiſts of two ſuburbs. The principal church is that of St. Nicholas, which is parochial, but not very remarkable; and therefore when any public act of devotion is to be performed, it is done either in the church of the Jeſuits or Recollects, which are both large and beautiful. Here are three other pariſhes, one of which belongs to the Benedictine abbey of Munſter; there are alſo three convents of men, and the like number of women.

This city ſuffered greatly by the wars between France and the Netherlands. In 1542 it was ſacked by the French under Charles duke of Orleans; but retaken the following year by Gonzague, general of the emperor Charles V. In 1683 it was bombarded by the French, and afterwards taken: they kept it by virtue of the treaty of Ratiſbon, but were obliged to reſtore it to the Spaniards by that of Ryſwic. The French retook it in 1701, and by the treaty of Utrecht it was given to the United Provinces as a barrier; but was ſurrendered to the late emperor in 1715.

As the Auſtrian part of the dutchy of Gueldres is very ſmall, we ſhall defer an account of it till we come to the United Provinces, to whom the greateſt part of this country belongs.

SECT. III.

Of FLANDERS *in general.*

Its Situation, Extent, Fertility, Produce, and Rivers. The Religion and Manufactures of the Inhabitants, and the Diviſions of the Country.

FLANDERS terminates to the north-weſt on the Northern ſea; to the north on the Scheld, which parts it from Zealand; to the eaſt on Brabant and Hainault; and to the ſouth and ſouth-weſt on Hainault and Artois. Its extent, taken by a right line drawn from the borders of Artois along the ſea-coaſt to Antwerp, amounts to about ninety-five miles, and from the northernmoſt end of Cadſand to Marchiennes to above ſeventy-ſix; and if we draw it to the end of the narrow tract of the prefecturate of Douay, to ninety-five miles.

This country enjoys a temperate and wholeſome air, particularly to the ſouth, it being partly level and partly mountainous. Its ſoil is in general fertile, and fit for agriculture; and towards the ſea, and the borders of France, its degree of fertility is uncommonly great. The land bears almoſt all ſorts of corn and garden-ſtuff; and ſome tracts, particularly thoſe of Bruges and Ghent, may export corn, though that produced in other parts is ſometimes not ſufficient to ſupply the great number of its inhabitants. The riches of the country conſiſt in its flax. The paſture grounds here are in many parts extremely fine, on which account the breeding of cattle is an important article, and here is made a great deal of fine butter and cheeſe. The breed of horſes and ſheep is likewiſe very conſiderable. Flanders produces fruits of various ſorts; it has plenty of fowl, and, as it has foreſts and woods, it has a great number of deer, wild boars, and hares. It has likewiſe plenty of ſea and river-fiſh.

Its principal rivers are the Scheld, which receives the Scarpe, the Lys, the Lieve, and the Dender. Some uſeful canals have been dug here, among which that which extends between Ghent and Bruges is the principal.

The Flemings are of the Romiſh church, and king Philip II. erected three new biſhoprics here, thoſe of Ghent, Bruges, and Ypres. The inhabitants boaſt of their being the inventors of ſome important arts. They were the firſt in Europe who began to ſupport themſelves by weaving, and by dying of cloths and ſtuffs; and at Courtray was diſcovered the manner of weaving all ſorts of figures in linen. In the fourteenth century William von Beukelſzon, a native of Viervilet, taught the method of curing herrings; and in the fifteenth century John Van Eyck invented painting in oil. Indeed at preſent the manufactures of Flanders are far from being in their former flouriſhing ſtate. There are here, however, ſtill made ſilk and woollen ſtuffs, brocade, cotton, camblets, linen, lace, tapeſtries, wrought curtains, bed coverlets, and other worked ſtuffs.

This country became ſubject to the earls of Flanders in the ninth century; and in 959 Baldwin III. the fourth count, introduced weaving, and alſo appointed fairs and trade. In 1369 Philip the Bold, duke of Burgundy, marrying Margaret III. daughter and heireſs to count Lewis I. at length obtained the county or earldom of Flanders; and his daughter Mary marrying Maximilian, archduke of Auſtria, Flanders became poſſeſſed by the houſe of Auſtria. The northern part of this country was ceded to the States-general partly by the peace of Munſter, and partly by the barrier-treaty in 1715; and France in 1667 ſeized on the ſouthern part.

Flanders conſiſts of three parts: the largeſt of theſe, which is properly called the County of Flanders, and was formerly under the dominion of the French, has been divided, according to the languages ſpoken in it, into the German and Walloon. German Flanders terminates to the north on the North ſea, to the eaſt on Imperial Flanders, to the ſouth on the Lys, and to the weſt on Artois and the New Foſs; but Walloon Flanders borders to the north on German Flanders, to the eaſt on the Scheld, to the ſouth on the territory of Cambray, and to the weſt on the Lys and the county of Artois. All this part the emperor Charles V. by virtue of the ſtipulation made with Francis I. in 1526, ſet free from its dependency on France. The ſecond part, which was called the Signiory of Flanders, or Imperial Flanders, from its being under the ſupreme juriſdiction of the holy Roman empire, comprehends the county of Aloſt, the land of Waes, and the four prefecturates, as they are called, together with the land on the other ſide of the Scheld. The third part has obtained the name of Proper Flanders; this being neither dependent on France nor the Roman empire, but is under the juriſdiction of the counts of Flanders. To this part belong Dendermond, Bornheim, and Geerſberg, with their diſtricts.

The parts poſſeſſed by France and the United Provinces will be treated of in thoſe countries, and we ſhall here only conſider the territories in Flanders belonging to the houſe of Auſtria. In treating of this country we ſhall deſcribe what is called its four members, which are the diſtricts of Ghent, Bruges, Ypres, and the Frankenland; the principal places in which are Oſtend and Newport.

SECT. IV.

Of the Territories in Flanders belonging to the Houſe of Auſtria; with a particular Deſcription of Ghent, Bruges, Ypres, Oſtend, and Newport.

THE city of Ghent, the capital of Flanders, called by the natives Gent, or Ghendt, by the French Gand, and in Latin Gandavum, lies thirty-five miles to the north-weſt of Bruſſels, in the fifty-firſt degree twelve minutes north latitude, and in the third degree thirty-ſix minutes eaſt longitude. On account of its many running waters which unite near this city it has great advantages, both with reſpect to trade and ſtrength; for not only the Scheld receives the Lys in this town, but from hence to Damme runs the Lieve, which is properly a canal, the digging of which was begun in the

year 1228, and, beſides ſeveral rivulets, receives into it the Caele. The canal which extends from hence to Bruges, and from thence to Oſtend, was begun in 1613, and is very remarkable. From another canal, which runs to the north, a branch extends from Rodenhuyſen to Sas van Ghent. Beſides theſe, there are here ſeveral other canals and rivers. The city of Ghent is of conſiderable extent, its compaſs within the walls being computed at forty-five thouſand ſix hundred and forty Roman feet. The rivers and canals within the city divide it into twenty-ſix iſlands, which are joined by as many great bridges, and ſeventy-two ſmaller ones; and, by ſhutting up the ſluices, the country for a mile round may be laid under water. It is defended by a citadel built by the emperor Charles V. conſiſting of four regular baſtions; but is not ſo conveniently ſituated for the defence of the town, as to command it, and keep the inhabitants in awe.

This city, at the requeſt of king Philip II. was erected into an epiſcopal ſee, and made ſuffragan to Mechlin: the celebrated Cornelius Janſenius, from whom the Janſeniſts, that have raiſed ſuch diſputes in France, have their name, was the firſt biſhop. This dioceſe contains ſeven deaneries, and a hundred and eighty-three pariſhes, ſeven of which are within the city. The cathedral, dedicated to St. John the Baptiſt, is a fine, large, and antient ſtructure. There is alſo a collegiate and ſix pariſh churches. The abbot of the Benedictine abbey of St. Peter ſtiles himſelf primate of Flanders, and preſident of the aſſembly of the Netherland cloiſters. Here are alſo two abbies for monks, two colleges of Jeſuits, ſeven other monaſteries, and what is called the Templehof, which belongs to the order of St. John, with twenty-two nunneries, two Beguine-houſes, a ſeminary belonging to the biſhopric of Ghent, with ſeveral hoſpitals and chapels.

There are in this city thirteen market-places, ſeven of which are large, particularly that called the Friday's-market is the moſt extenſive, and remarkable for a noble ſtatue of the emperor Charles V. dreſſed in his imperial robes, and ſtanding on a pedeſtal in the middle of the ſquare.

Upon a bridge built over the Lys ſtand two braſs ſtatues, repreſenting a man ready to cut off the head of another. The ſame figures are alſo painted in the town-houſe; the ſtory of which is thus related: A father and ſon being both condemned to death, a pardon was afterwards offered to either of them that would be the other's executioner. After a long conteſt, the father prevailed upon the ſon to ſave his own life, by taking away his: but juſt as the ſon was ready to give the fatal blow, the blade either broke in the air, or flew out of the handle, which being conſidered as a moſt ſingular inſtance of the interpoſition of Providence, they were both pardoned.

The town-houſe is a double building, with two fronts, one of antient architecture, and the other in the modern taſte, and very beautiful. It was begun in the year 1600, and was twenty years in finiſhing. Near this building ſtands a high tower called the Belfrey, to which is an aſcent of above three hundred ſteps. Here is a fine clock, with a chime of bells, the largeſt of which, called Rowland, weighs eleven thouſand pounds. On the top of this tower is a dragon of gilt copper, ſaid to have been ſent from Conſtantinople by Baldwin IX. earl of Flanders.

The trade of Ghent principally conſiſts in cloths, ſtuffs, and ſilks, of which ſuch quantities are made here, that among the fifty companies of tradeſmen, thoſe concerned in theſe commodities are ſaid to form a third part.

The magiſtracy conſiſts of burgomaſters, echevins, or aldermen, and counſellors, annually choſen from among the principal inhabitants; and theſe have at their head an high-bailiff. This city is the ſeat of the council of Flanders, from which lies an appeal to the grand council of Mechlin.

In the year 1539 the inhabitants, being over-loaded with taxes, revolted againſt the emperor Charles V. and implored the aſſiſtance of Francis I. king of France; but he refuſed to comply with their requeſt. Charles, who was then in Spain, ſet out immediately, paſſed thro' France, and having arrived at Ghent, puniſhed the inhabitants with ſingular ſeverity: he cauſed twenty-ſix of the principal citizens to be executed, baniſhed a ſtill greater number, confiſcating all their effects; took from the city its artillery, arms, and privileges; condemned the inhabitants to pay a fine of above twelve hundred thouſand crowns; ſentenced the magiſtrates to walk in public proceſſion with a rope about their necks; and that the citizens might never be able to recover their former privileges, he built the above-mentioned citadel. By theſe means he made almoſt a deſart of one of the largeſt and moſt populous cities in Europe. But it has ſince in a great meaſure recovered its antient ſplendor, though it is ſaid that not half of its extent within the walls is built upon.

In 1576 the States-general of the Netherlands, except thoſe of Luxemburg and Limburg, concluded the famous treaty called the Pacification of Ghent, the principal articles of which were, that the Spaniſh, and all other foreign troops, ſhould evacuate the Netherlands; that Holland and Zealand ſhould continue united with the other provinces; and that the Roman catholic religion, and the antient privileges of the country, ſhould be maintained. This treaty was approved and ratified by king Philip II. but with no deſign to keep it; for the duke of Arſchot being appointed governor of the province of Flanders, made a magnificent entry into the city of Ghent, and three days after the citizens aſſembled, and demanded the reſtoration of all the privileges they had been deprived of by Charles V. which being refuſed them, they ſeized the duke, the biſhops of Bruges and Ypres, with ſome other lords, whom they kept priſoners; after which they took an oath to the prince of Orange, ſubſcribed to the Union of Utrecht, and d'Imbiſe, who had aſſiſted in this great event, was made firſt echevin of the city; but in 1584 they again ſubmitted to the king of Spain; upon which d'Imbiſe was depoſed, and ſoon after publickly beheaded. In 1678 the city was beſieged by the French, and the king himſelf came before it, when, though the citizens cut their dykes, and laid part of the country under water, both the town and citadel were ſoon taken; but, about four months after, the French reſtored it to the Spaniards by the treaty of Nimeguen. On the death of Charles II. king of Spain, in the year 1700, the French again ſeized this city; but in 1706 it ſurrendered to the allies, after the battle of Ramillies. In 1708 the French ſurpriſed it, together with Bruges, and threw an army into it for its defence; but the city of Liſle having been taken by the allies at the cloſe of the ſame year, the French were obliged to ſurrender Ghent, after a few days ſiege. It continued in the poſſeſſion of the houſe of Auſtria till the year 1745, when the French again made themſelves maſters of it, but reſtored it to the emperor at the peace of Aix la Chapelle.

The diſtrict of Ghent is very conſiderable, and contains the county of Aloſt, with its capital; Oudenard, celebrated for the glorious victory obtained near it in 1708, by the duke of Marlborough; the town and caſtellany of Courtray; the county of Waes; the town and lordſhip of Dendermonde, and other places.

The city of Bruges, in Latin Bruga, by the Flemings called Brugge, or Bruggen, from a bridge named Brugſtock, near which ſtood a chapel that gave occaſion to the building of the city, is ſeated in the thirty-firſt degree ſixteen minutes north latitude, and in the third degree fifteen minutes eaſt longitude. Here are ſeveral canals, one of which leads to Oſtend, Newport, Furnes, and Dunkirk; and can carry veſſels of four hundred tons, which come up to the baſon of Bruges. The ſalt-water is kept from mixing with the canal by means of ſluices and other machines. Beſides this a canal leads to Ghent, another to Damme, and a third to Sluys. Theſe contain ſtagnant water, though the ground is eighteen feet lower towards the ſea than in the town at the Ghent gate: but the water in the city may be ſoon renewed by letting it run gently into the ſea, by means of three ſluices. As Bruges has neither rivers nor ſprings, freſh water is conveyed thither from the rivers Lys and the Scheld, by means of pipes.

The ſtreets of Bruges are large and ſtraight; it has alſo ſeveral fine ſquares, particularly the Friday's market-place, from whence ſix great ſtreets lead to the ſix principal gates. At one end of this ſquare ſtands a fine ſteeple five hundred and thirty-three ſteps high, with a curious chime of bells. This ſquare is planted with ſeveral rows of trees.

The ſquare called the Burg, from the caſtle of that name, is ſurrounded with many fine buildings, as the town-houſe, which is a handſome Gothic ſtructure, adorned with the pictures of many earls and counteſſes of Flanders, the cathedral, the biſhop's palace, and the chapel of the Holy blood of our Saviour.

The cathedral is a very antient building, and has thirty-two canons. Here are alſo two other collegiate churches, one of which is dedicated to Our Lady, and has a chapter compoſed of a provoſt and twelve canons; the other is the church of St. Saviour, and has a chapter, conſiſting of a dean and ſixteen canons; the former of theſe two laſt ſtructures is very beautiful, and has a fine ſteeple, ſo high that it may be ſeen at ſea in ſailing to Oſtend.

There are here five other parochial churches, fourteen chapels, a college of Jeſuits, twelve monaſteries, and nineteen nunneries. The pulpit in the Dominican church is eſteemed an admirable piece of workmanſhip; the wood which ſupports the top is cut out like ropes, and ſeems to bend like them. Among the pictures there is here ſhewn a remarkable one of the marriage of our Saviour with St. Catharine of Sienna; the Virgin Mary joins their hands, St. Dominic performs the office of prieſt, and old king David plays upon the harp at the wedding.

The Carthuſians have a large monaſtery, and the circuit of their kitchen-garden, cells, and little gardens, is about an Engliſh mile. All the fathers divert themſelves in taking to one trade or other, and convert their cells into workſhops.

The Carmelite church is one of the fineſt in the city, and has a beautiful monument of Henry Jermyn, lord Dover, a peer of England; but the moſt noble monument in the city is that of the Bernardines. The abbot's apartment is very magnificent, and thoſe of the monks very neat. They keep a ſumptuous table, on which is placed every thing in ſeaſon, and have country-ſeats depending on the abbey, to which they go a hunting, and even keep their own churches.

Among the many nunneries in this city are two Engliſh, one of Auguſtine nuns, who are all ladies of high rank: theſe nuns generally entertain ſtrangers at the grate with wine and ſweet-meats. The other Engliſh nunnery, called the Pelicans, is a ſtricter order, and the nuns wear a coarſer dreſs.

There are few cities where the poor and orphans are ſo well taken care of as at Bruges; for here are ſeveral alms-houſes and hoſpitals for their maintenance, among which is one called the School of the Orphans, founded in 1411, where a hundred and thirty orphan boys are educated and brought up to learning, or ſome trade, according to their genius or inclination. They are dreſſed in cloth coats, half of which is brown and the other half red, and wear flat caps. This ſchool has produced ſeveral biſhops and abbots, who, to ſhew their gratitude, have ſent their pictures to adorn the ſchool.

Bruges carries on a conſiderable trade in worked cottons, fine woollen ſtuffs, linen and lace made here; and here are many perſons employed in manufacturing fuſtians and tapeſtries. The tradeſmen are divided into ſixty-eight companies.

About two hundred years ago this city was very flouriſhing, as merchants from all parts of Europe reſorted hither, where the ſeveral nations had their diſtinct houſes magnificently built, with ware-houſes for the merchandize they either imported or exported. Each nation had alſo its reſpective conſul, and here are ſtill ſhewn ſeventeen antient palaces in which thoſe conſuls reſided; alſo the cloth-hall, ſayes-hall, and baize-hall, which are ſpacious rooms that belonged to the Engliſh; under the firſt of theſe runs a canal of ſuch depth, that it is ſaid bilanders of burthen can enter the very hall.

But the trade of this city at firſt ſuffered greatly by the revolt of the inhabitants againſt the archduke Maximilian, who had married Mary the heireſs of the houſe of Burgundy. The citizens had even the preſumption to keep that prince in cuſtody, to affront his ſervants, and uſe his officers ill; but when their rebellion had continued about twelve months, dreading the conſequences, they implored their ſovereign's mercy. This happened in 1490. Fifty or ſixty of the inhabitants were, however, ſentenced to ſuffer death, a ſtill greater number was baniſhed, and the city was obliged to pay a large fine.

Ever ſince the cities of Antwerp and Amſterdam have enlarged their commerce, that of Bruges has been declining; ſo that it is far from being ſo populous as formerly. There are ſtill, however, in Bruges ſeveral very rich merchants, who meet daily in the great market-place, which has been their exchange ever ſince the year 1715.

Here are ſeveral courts for the adminiſtration of juſtice, both in civil and criminal affairs; the principal is that of the magiſtrates of Bruges, compoſed of two burgomaſters, twelve echevins, or aldermen, twelve counſellors, ſix penſioners, and two treaſurers. Theſe have the government of the city, and adminiſter juſtice among the inhabitants.

There is another court for the government of the liberty, which has a magiſtracy of its own, conſiſting of four burgomaſters, twenty-ſeven echevins, ſix penſionaries, and two treaſurers. The two laſt hold their employments for life. This court is held at Bruges in an old caſtle called the Burg, or Fortreſs. In the hall where they meet are ſeveral good pictures, particularly the laſt judgment, by Backer, a diſciple of Rubens.

We are now come to Ypres, or Ipres, in Latin Ipra, which is ſeated on the little river Ipre, or Iperlee, in the fiftieth degree fifty-ſeven minutes north latitude, and in the ſecond degree fifty-one minutes eaſt longitude.

The buildings make a pretty handſome appearance, though the fronts are of timber. Its public ſtructures are the cathedral of St. Martin, five pariſh-churches, one college of Jeſuits, ſix monaſteries, one epiſcopal ſeminary, eight nunneries, and ſome hoſpitals and alms-houſes. Here is alſo a ſchool for poor boys, and another for poor girls, where they are taught what trade they like beſt; and, when able to get their living, are ſent out with a certain ſum of money to ſet them up. One-third part of this town conſiſts of churches, convents, and other religious houſes. It is the ſee of a biſhop under the archbiſhop of Mechlin, and one of the barrier places which was ceded to the States-general in 1715. It has undergone ſeveral calamities by fire, and has been frequently taken by the French, particularly in the year 1744, when it was given up by the Dutch garriſon almoſt as ſoon as the French came before it, together with the territory belonging to the town, which conſiſts of a very fruitful country, containing two or three ſmall towns, and as many villeges.

Oſtend, in Latin Oſtenda, is called by the Flemings Ooſtende, and is ſeated in the fifty-firſt degree fourteen minutes north latitude, and in the ſecond degree fifty-nine minutes eaſt longitude, in a marſhy ſoil, among a variety of canals; it being almoſt ſurrounded by two of the largeſt of them, into which ſhips of great burthen may enter with the tide. It is well fortified, and has a ſtrong rampart, a deep ditch, and eight regular baſtions; and the ſea may be let in round the town for a conſiderable extent of ground, by which means it is rendered almoſt impregnable. The city is alſo defended by ſeveral forts which encompaſs it.

The buildings in Oſtend are but low, yet are pretty uniform, and the ſtreets are ſtraight and regular. Its principal church is that of St. Peter, which was burnt down in 1712, and handſomely rebuilt. Here are ſeveral convents of friars and nuns, and an hoſpital founded by the citizens in 1403. The inhabitants labour under want of freſh water, which they are obliged to get from Bruges, whence the brewers fetch it in boats, and lodge it in a large reſervoir, near the harbour.

The

The body of the magiſtracy is compoſed of a bailiff, a burgomaſter, ſeven echevins, and a treaſurer. They are all changed every year, except the bailiff, whoſe place is for life.

This city is particularly famous for the long ſiege it ſuſtained againſt the Spaniards, from the fifth of July, 1601, to the twenty-ſecond of September, 1604, when it ſurrendered upon good terms. Its brave defence againſt the archduke Albert of Auſtria, and the marquis Ambroſe Spinola, may be juſtly aſcribed to the ſupplies ſent from England, and the good conduct of Sir Francis Vere, a native of that country. The Spaniards are ſaid to have loſt near eighty thouſand men before the place; though, when they firſt inveſted it, they did not expect it to hold out a fortnight, which induced the archdutcheſs to make a vow, that ſhe would never ſhift herſelf till it was taken. The number who were killed or died during the ſiege is reckoned at about fifty thouſand, not that ſo many men were in the place at once, but ſupplies were continually ſending from England and Holland. Hiſtory informs us, that during the firſt ſix months the beſiegers fired a hundred and ſixty-five thouſand five hundred cannon-balls of about thirty pounds weight; and that in the whole courſe of the ſiege the city had received above three hundred thouſand cannon-ſhot frequently under covert of the dead bodies, with which the beſieged filled the breaches. When at laſt they ſurrendered, it was neither for want of men nor proviſions, the harbour having been open all the time, and ſupplies conſtantly coming in, but merely for want of ground, which the enemy had gained foot by foot, till the beſieged had not ſo much left as would contain men enough to defend it. Prince Maurice had ſeveral times attempted to relieve it, but to no purpoſe, the Spaniards being too ſtrongly intrenched, and his army too ſmall to force them. Hiſtory alſo mentions this remarkable circumſtance, that the Spaniards ſhot ſuch a number of bullets againſt the ſandhill bulwark, where they ſtuck, that it became a wall of iron, and daſhed the freſh bullets that hit it to pieces. In ſhort, when the garriſon, by virtue of the capitulation, retired to Sluys, prince Maurice received them with as much honour for their brave defence, as if they had come from a conqueſt. In 1658 cardinal Mazarine attempted to take this city by ſtratagem, and ſent marſhal d'Aumont with ſome men of war to ſurpriſe it; but the marſhal himſelf, with the ſhips, was taken. Upon the death of Charles II. king of Spain, the French ſeized Oſtend; but in 1706, after the battle of Ramillies, the allies beſieged and took it from them. During this laſt ſiege the town-houſe, which was a pretty building, was entirely beaten down, with its chime of bells, reckoned the fineſt in Flanders; but this ſtructure has been rebuilt in a more ſtately manner.

The late emperor Charles VI. formed a ſcheme for drawing to this city the trade of the Eaſt Indies; for which purpoſe he eſtabliſhed here the famous Oſtend company. This ſcheme was privately encouraged by ſome Engliſh and Dutch merchants; but it made a great noiſe, and met with a ſtrenuous oppoſition from the maritime powers, who took ſome of the ſhips of that company, while on their return from the Indies; and, after many negotiations, at laſt, in 1731, cauſed that company to be aboliſhed. Oſtend was alſo taken by the French in 1745, but reſtored to the houſe of Auſtria by the treaty of Aix la Chapelle in 1748.

We ſhall conclude this ſection with a conciſe deſcription of Nieuport, or Newport, which ſtands about nine miles from Oſtend, and is a ſtrong ſea-port town on the little river Iperlee. Its harbour is ſecure; but only ſhips of middling burthen can enter it even at high-tide, when it has about thirteen feet water. Though this city be pretty well fortified, yet its principal ſtrength conſiſts in its ſluices, by means of which all the adjacent country may in a minute be laid under water. The ſtreets are wide and ſtraight, but the houſes are low and built with timber. It has but one pariſh-church, which is reckoned the fineſt in all Flanders, beſides ſeveral convents, a noble hoſpital for the ſupport of forty orphans, and a convent of Engliſh Carthuſian friars. The inhabitants chiefly ſupport themſelves by fiſhing and making nets and cordage for ſhips.

In the year 1600 a battle was fought near this town between the forces of the United Provinces, commanded by prince Maurice of Naſſau, and the Spaniards, to the diſadvantage of the latter; and in 1745 it was taken by the French.

SECT. V.

Of the Auſtrian Part of the County of HAINAULT.

Its Situation, Extent, Produce, Rivers, and Diviſions of the Country; with a Deſcription of the City of Mons.

THE Auſtrian part of the county of Hainault, called by the Germans Hennegau, is bounded on the north by Flanders; on the eaſt by the dutchy of Brabant, the county of Namur, and the biſhopric of Liege; on the ſouth by Champagne and Picardy; and on the weſt by Artois and Flanders; extending fifty-ſeven miles from north to ſouth, and about ſixty-four from eaſt to weſt.

The air is good and moderate, and the ſoil produces a great deal of corn and rich paſtures, on which are bred a great number of cattle. Its woods and foreſts afford timber for building and fuel: it has alſo pit-coal, iron, beautiful marble, and ſlates.

Its principal rivers are the Scheld, which iſſues out of Picardy; the Selle, which receives into it the Hayne and the Hauniau; the Sambre, which iſſues out of Picardy; and the Dender, which riſes here, and runs into Flanders.

In the whole country are reckoned twenty-four towns; the number of villages is by ſome computed at nine hundred and fifty, but by others only at ſix hundred and fourteen. The clergy are uncommonly rich, and in this county are ſixteen abbies for monks, and ten for nuns, together with twelve chapters, and many monaſteries and convents.

The ſtates of this country conſiſt of three chambers: to the firſt belong the clergy, to the ſecond the antient genuine nobility, and to the third the deputies of the towns: each chamber has only one voice; and the plenipotentiaries of each have their ſeat at Mons. Both the clergy and the nobility have two plenipotentiaries, whoſe office laſts three years; but the towns have ſix. The ſovereign alſo ſends two deputies. All theſe meet weekly; but the ſtates only at the command of the ſovereign.

By the peace of the Pyrenees France obtained the towns of Landrecy, Queſnoy, Aveſnes, Marienburg, and Philipeville; as alſo by the peace of Nimeguen, Valenciennes, Bouchain, Condé, Cambray, Bavay, and Maubeuge, with their reſpective diſtricts; and by the peace of Ryſwick, ſeveral villages. The houſe of Auſtria ſtill enjoys in this county thirteen ſmall towns, with ſeveral principalities and ſome villages. The principal place in this county is,

Mons, a very large, fine, ſtrong, and rich city, the capital of Hainault, is called by the Flemings Bergen, and in Latin Montes; it is ſeated on a hill near the junction of the rivers Haine and Trouille, and is alſo partly built in the plain, in the fiftieth degree thirty minutes north latitude, and in the third degree thirty-ſix minutes eaſt longitude. The little river Trouille divides it into two parts, and fills its three ditches; after which it runs into the Haine. Here are ſluices by which the neighbouring country may be overflowed, except the ſouth-eaſt ſide, where the ground being ſomewhat higher, they have raiſed good baſtions, which render the approaches of an enemy very difficult. The city contains above four thouſand ſix hundred houſes. The buildings are beautiful, the ſtreets large, the market-place ſpacious, and the public edifices are very magnificent. Among the laſt is the governor's palace, in which the provincial council meets, and the town-houſe, which has a lofty tower.

This city contains ſix pariſh-churches, two of which are collegiate, one college of Jeſuits, and ſeveral cloiſters. Here is a famous abbey, or chapter, of canoneſſes, founded by St. Waltrude. The chapter conſiſts of thirteen canoneſſes, who it is ſaid muſt prove their nobility by ſixteen deſcents. They are obliged to aſſiſt at morning-ſervice in their canonical habits; but the reſt of the day may

may wear ſumptuous apparel, and even ſpend their time in dancing, ſinging, and free converſation; they are even permitted to leave the abbey and marry. This chapter is governed by four of the oldeſt canoneſſes. Their church is a very fine ſtructure, moſt of its chapels and altars being built with marble and jaſper, and adorned with beautiful ſtatues. This is alſo a pariſh-church, to which the nobility, magiſtracy, counſellors, and officers of ſtate belong.

Here is alſo a college where polite literature is taught under the direction of ſecular prieſts, and likewiſe a Jeſuits college.

The body of the magiſtracy conſiſts of a mayor and ten echevins, &c. and as this is a place of ſtrength, it has a particular governor, with other proper officers both civil and military. It has a good trade for various commodities, eſpecially woollen ſtuffs, great quantities of which are made here.

This city has frequently ſuffered the dreadful calamities of war. In May 1572 count Lewis of Naſſau, brother to the prince of Orange, took it by ſtratagem without oppoſition; but Frederic of Toledo, the duke of Alva's ſon, beſieged it in June following, and took it in September, notwithſtanding all the endeavours of the prince of Orange to relieve the place. In 1677 marſhal d'Humieres, who commanded the French, inveſted Mons, and had greatly diſtreſſed that city; when the next year the prince of Orange, afterwards king William III. advanced to its relief with thirty thouſand men, and attacked by ſurprize the French army under the duke of Luxemburg, who was encamped at Caſtiaux and St. Denys, in order to cover the blockade; the battle became exceeding bloody, and the prince obtained the advantage. The next day the blockade was raiſed, and hoſtilities ceaſed, upon the prince's acquainting the duke, that the peace had been ſigned at Nimeguen.

The French again inveſted this place in 1691, when Lewis XIV. was there in perſon, with all the princes of the blood, and marſhal Luxemburg commanded the army of obſervation. The trenches were opened on the twenty-fourth of March, and the city obliged to ſurrender on the ninth of April following, moſt of the houſes having been beaten down by the beſiegers bombs: but the city was reſtored to the Spaniards by the treaty of Ryſwick in 1697.

Upon the death of Charles II. king of Spain, the French again ſeized this city, and kept poſſeſſion of it till the year 1709, when it was inveſted by the duke of Marlborough. The grand army under the marſhals Villars and Boufflers, threatening to relieve the place, the duke advanced to give them battle, and came up with them in the woods near the village of Malplaquet, about ſeven or eight miles to the ſouth of Mons: though the French lay under triple intrenchments, he boldly attacked them, and gave them an entire defeat; but with conſiderable loſs on the ſide of the allies: after which immediately followed the reduction of this city and the province of Hainault, which was confirmed to the houſe of Auſtria by the treaty of Utrecht in 1713, and made a part of the barrier. The French under marſhal count Saxe again took this city in 1746, but reſtored it by the peace of Aix la Chapelle in 1748, after firſt demoliſhing its fortifications.

In the county of Hainault are alſo thirteen ſmall towns, and ſeveral villages; and among the latter is Malplaquet, rendered famous by the above victory obtained by the duke of Marlborough over the French, and alſo Steenkirk, near which the allies, commanded by king William III. attacked the fortified camp of the French in 1692: the French loſt more men than the confederates; and were it not for the conduct and bravery of the prince of Conti, would have been entirely defeated.

SECT. VI.

Of the County of NAMUR.

Its Situation, Extent, and Produce: the Arms and States of the Country; with a particular Deſcription of Namur, its Capital, and alſo an Account of the Barrier Towns.

THE county of Namur is almoſt ſurrounded by the biſhopric of Liege and the dutchy of Brabant; but terminates alſo to the weſt on the county of Hainault. Its greateſt extent from eaſt to weſt amounts to about thirty-one miles, and from north to ſouth to about twenty-eight. This county is very woody and mountainous; but the level parts bear all ſorts of corn. Its principal riches, however, conſiſt in its iron, great quantities of which are worked here, and converted into ſteel. It has alſo lead and pit-coal, with a great deal of marble and other ſtone. The Maeſe traverſes a great part of the county, and at Namur receives into it the Sambre.

The arms of the county are, a lion ſable in a field or, with a dexter feſſe drawn over the whole ſhield.

The ſtates of Namur conſiſt of the clergy, the nobility, and the principal town of Namur, with its territory. The ſovereign appoints the governor of that city and county.

Namur, or Namen, in Latin Namurum, the capital of the county, is ſeated between two hills at the confluence of the Sambre, the rivulet of Vederin, and the river Maeſe; and is defended by a very ſtrong caſtle, ſituated on a rock between the Maeſe and the Sambre, near their junction. This caſtle is likewiſe defended by Fort William, built by order of king William III. by the famous Coehorn. This fort is equivalent to another citadel; and beſides theſe there are ſaid to be above twelve other forts round the city, the moſt conſiderable of which is that of the Maeſe, oppoſite to the caſtle, and the fort of Cocquelet, which is ſo large that it includes two villages within its fortifications. Namur, from the above works, is eſteemed the ſtrongeſt fortreſs in Europe. It has two ſtone bridges, one over the rivulet of Vederin, and the other over the Sambre.

This city is the ſee of a biſhop, who is ſuffragan to Cambray; and, beſides the cathedral church of St. Albin, the chapter of which is compoſed of twenty canons, here are two collegiate churches, four under pariſh-churches, a ſeminary, thirteen convents of both ſexes, and a college of Jeſuits, who teach philoſophy, and whoſe church is a noble building, all of red and black marble, ſupported by ten large columns of black marble, and adorned with a beautiful frontiſpiece. The prince's palace is a fine ſquare building, in which the governor uſually reſides. Here are likewiſe ſeveral hoſpitals.

The magiſtracy conſiſts of a grand mayor, who enjoys his place for life, of a burgomaſter, and ſix echevins, who are all changed every year by the governor-general. Here is another tribunal called the ſovereign bailliage, compoſed of ſix advocates, with the governor at their head. Theſe judge in all feudal caſes; but an appeal lies to the grand council at Mechlin.

In the year 1692 Lewis XIV. beſieged this city in perſon, when, after opening the trenches, it held out only ſix days; but in 1695 was retaken by king William III. after a moſt bloody ſiege: marſhal Boufflers commanded in the town with a garriſon of no leſs than ſixteen thouſand men, and Villeroy without at the head of a hundred thouſand; but did not dare to attempt its relief. Beſides the marſhal, there were ſeveral general officers, and twenty engineers in the city; and the garriſon fought ſo deſperately, that when the city was taken no more than four thouſand men were left. Upon the death of Charles II. king of Spain, the French ſeized this city, and held it during queen Anne's wars; but at the peace of Utrecht it was reſtored to the houſe of Auſtria. In 1712 it was ceded by king Philip to the elector of Bavaria, and in 1715 was given to the States-general as a barrier town to be garriſoned by them; but in 1746 the French again made themſelves maſters of it, and kept it till the peace of Aix la Chapelle.

Within the county of Namur are Charleroi, Walcort, and Bouvigne, with a great number of abbies and priories of both ſexes, and a number of little diſtricts under the name of ſigniories.

Before we conclude this account of the Auſtrian Netherlands, it will be proper to take ſome notice of the barrier towns ſo often mentioned. It muſt be obſerved, that by the barrier treaty concluded in 1715, between the emperor and the States General, the former conſented that the latter ſhould alone garriſon Namur, Tournay, Ypres, and ſeveral other places, either with their own troops, or with ſuch as the emperor had no reaſon to

ſuſpect. The emperor was to nominate the governors, but both they and the garriſon alſo take an oath of fidelity to the States. The emperor and States General are at their own expence to keep on foot between thirty and thirty-five thouſand men for the ſecurity of the Auſtrian Netherlands; the former paying three-fifths, and the latter two-fifths. In caſe the former diminiſhed his quota, the latter might do ſo in the like proportion; but on the appearance of a war, this body is to be augmented to forty thouſand men; and in caſe of an actual war, the augmentation to be increaſed at pleaſure. The States have the diſtribution of the troops in the ſeveral places committed to them; but in the others ſuch diſtribution is to be made according to the joint conſent of both parties. In thoſe places garriſoned only by Dutch troops the States General appoint the governors, commandants, and ſtaff-officers, on condition that their lodgings, and the advantages ariſing from the works, ſhall not be productive of any charge either to the emperor, or to the provinces, nor unacceptable to the emperor from particular cauſes. Theſe officers are to defend the places entruſted to them, and in their military capacity are only ſubject to the States, though they take an oath to the emperor to hold and maintain them for the houſe of Auſtria. The troops of the States-general, when in garriſon, are permitted the free exerciſe of their religion. The States General may change the garriſons at pleaſure, and in time of war ſtrengthen the fortifications, but not raiſe any additional works, without the approbation of the Auſtrian governor-general of the Netherlands. For the ſupport of theſe garriſons, and defraying the expences of the fortifications, military ſtores, and proviſions in the barrier-towns, the States are to pay the annual ſum of five hundred thouſand rixdollars; for which purpoſe an office has been eſtabliſhed at Ypres, under the title of The Barrier-office, and this, excluſive of the revenues iſſuing from their ſhare in the upper quarter of Guelderland, the quartering-money, &c. During the war which was terminated in 1748 by the peace of Aix la Chapelle, theſe barrier towns were greatly damaged; and ſince that time many difficulties have ariſen relating to them, between the court of Vienna and the States General; and it is ſaid that the Dutch troops at preſent in them do not exceed nine battalions and two ſquadrons, and poſſibly the right of garriſoning them may in time become obſolete, and be ſuperſeded.

CHAP. XXI.

Of the UNITED NETHERLANDS.

SECT. I.

Their Situation, Extent, and Climate: the Diſeaſes of the Inhabitants; the Dykes, Dams, and Canals neceſſary to exclude the Sea, drain the Lands, and promote Commerce. The Produce of the Country, its Rivers, and Fiſheries.

THE name of Netherlands, or Low Countries, by which all the ſeventeen provinces are called, is doubtleſs derived from the low ſituation of thoſe countries; the inhabitants themſelves call the country Belgium; but the French, like moſt other nations, ſtile it Les Païs Bas, or the Low Countries. This tract lies between Germany and France, and its greateſt length, as taken north-eaſt along the ſide of the ocean, is about three hundred miles, and about a hundred and forty on the ſouth ſide.

The ſeven United Provinces, of which we are here to treat, form only the northern part of this tract, which borders to the ſouth on Auſtrian Flanders and Brabant, juſt deſcribed; to the eaſt on the upper quarters of the dutchies of Guelders and Cleve, the biſhopric of Munſter, the county of Bentheim, and the principality of Eaſt Frieſland; and to the north and weſt on the Northern ſea. The ſeven United Provinces, notwithſtanding the figure the Dutch made, and ſtill make in Europe, is no more than a hundred and fifty miles in length, and a hundred in breadth.

The whole country is full of marſhes, which are not without their advantages, as they yield good turf for fuel, and in ſome parts of the provinces of Groningen, Overyſſel, and Drenthe, they are eſteemed ſo ſecure a fence againſt Germany, that draining them in order for cultivation is prohibited by law, though this prohibition is not univerſally regarded.

But theſe moraſſes, joined to the low ſituation of the country near the ſea, occaſion a damp air, and frequent rains, which, as well as the thick fogs, are more particularly brought on by the weſterly winds, that prevail in theſe parts with great violence. The general diſtempers of the inhabitants are the gout and ſcurvy. Coughs and rheums are alſo very common here; and in the fenny parts near the ſea, where the mud, during the ebb, emits putrid effluvias, and wholeſome water is ſcarce, continual reachings are likewiſe very frequent.

As the land is for the moſt part level, and in many places lies even lower than the ſea, it is not only fenced againſt any inundations from the ocean and the rivers at a prodigious expence, by dykes and dams, but for the draining of the waters innumerable ditches are cut; whence the waters ſo drained are carried off by windmills, and conveyed into canals, from whence it is forwarded by means of ſluices into the rivers. Theſe dykes, ditches, and canals, give the country a ſingular appearance, and by being planted with beautiful rows of trees, interſperſed with villas and gardens, are of infinite convenience to merchants and travellers. The treckſhuyts, or barks, which are drawn here by horſes, go off every day during ſummer, and at certain ſtated times paſs from one place to another.

As a great part of the ſoil conſiſts of heath and ſandy downs, it is far from affording a ſufficient ſupport to the inhabitants, nor can all their induſtry uſed in agriculture, draw from it as much grain as is neceſſary for home conſumption. But this is ſo amply compenſated by its trade and navigation, that of the imported grain they not only brew good beer, and diſtil brandy with other ſpirits, but export great quantities of both. On the other hand, its rich meadows and paſtures render grazing very profitable, and the inhabitants are not only ſupplied in abundance with milk, butter, and cheeſe; but the exports of the two laſt are very conſiderable, the cheeſe of Edam and Texel being famous all over the world. In Holland the breeding of ſheep is carried on with great ſucceſs, and admits of ſtill farther improvement, it appearing on an eſtimate, that under proper regulations, a million of ſheep might be fed in that province. The wool of theſe ſheep is reckoned extremely good. Several places yield tobacco, and Zealand is noted for its madder. Theſe provinces have likewiſe a ſufficiency of culinary plants, and ſome parts abound alſo in fruit. The principal fuel here is turf and pit-coal, the latter of which is imported from England and Scotland; for wood being very ſcarce, and bearing a great price, is little uſed: every piece of timber wrought in theſe countries, whether for building or exportation, is brought from abroad. Many places make ſalt from ſea-water. The county of Zutphen yields iron: but in general the inhabitants owe both the neceſſaries and comforts of life to their extenſive commerce with foreign countries.

The provinces of Zealand, Holland, Frieſland, and Groningen, lie contiguous to the North Sea, while thoſe of Utrecht, Guelderland, and Overyſſel, have a com-

munication with it by the Zuyder-Zee or South-Sea; which is a large lake or bay environed by the provinces of Holland, Utrecht, Guelderland, Overyſſel, and Friesland. The principal rivers are the Rhine, the Maeſe, and the Scheld.

The fiſhery in the ſeveral ſtreams, rivers, and lakes of this country, though very conſiderable, ſerves only for home conſumption; but that of the North Sea is of vaſt produce, and divided into the Leſſer and Greater. The former is that carried on along the coaſt, eſpecially on the Doggersbank, between England and Jutland, on which are caught cod, haddock, turbots, whitings, ſoles, and other ſea-fiſh. The cod caught here is either carried freſh and alive to market to the neareſt towns of the Netherlands, or is ſalted at ſea, and thus forms a branch both of domeſtic and foreign commerce. The great fiſhery is that of herrings, from which the Dutch reap immenſe profits: for if it may not, as formerly, be termed the golden mine of Holland, yet it ſtill affords a comfortable ſubſiſtence to at leaſt thirty thouſand ſix hundred families. The ſeaſon for catching the herrings along the coaſts of Scotland and England, is from the twenty-fourth of June to the twenty-fifth of November. The veſſels employed in this fiſhery are termed buſſes, and carry from twenty-five to thirty laſts, which one with another ſell for about one hundred and twenty guilders. Formerly in ſome years no leſs than fifteen hundred ſuch veſſels have ſailed from the ports of the ſeven provinces; but at preſent it is ſaid that the number of them ſeldom exceeds two hundred. Though the eſtimates of the profits ariſing from the herring-fiſhery differ, as the profits themſelves really do, very widely, yet it is computed that in a good year the neat gain to the proprietors of the buſſes, after all deductions, amounts to two millions of Holland guilders; a very conſiderable ſum, which might perhaps have been gained by the inhabitants of Great-Britain, had the Dutch been ſteadily and conſtantly refuſed the privilege of fiſhing on our coaſt, and ſeizing thoſe advantages which properly and naturally belong to ourſelves.

SECT. II.

Of the Manners of the Dutch, the Populouſneſs of the Country, with a general Account of their Towns and Villages, their Language, and the Religions tolerated there. The Skill of the Dutch in the polite Arts, their Learning, Manufactures, Trade, Commerce, and Coins.

THE Dutch are robuſt, laborious, patient, free, open, affable, and pleaſant in converſation. They are great politicians, not excepting the women and ſervants, and the very children are well acquainted with the hiſtory of their country. However, the boors, and eſpecially the ſailors, are rude and clowniſh. Mr. Hanway obſerves, that he has ſeen a boatman in a great city, ſtrut up and down a room with his hat on, his hands on his hips, and with a careleſs air of inſolence, ſpit at the feet of a gentleman who was treating him with civility, and giving him an opportunity of getting a guinea for an inconſiderable ſervice. This they miſtake for liberty, while their knowledge is confined to the common means of gain, and the gratifications of the calls of nature. Cheeſe, beer, geneva, brandy, and tobacco, are the joys that ſeem to crown the labours of the common people. The principal virtue of this nation is frugality; they are at all times contented with moderate meals, and the common people never make extravagant feaſts. Very often a biſcuit, with a bit of butter, cheeſe, or a herring, with a glaſs of beer or brandy, ſuffices them for a repaſt; but in their cups they are apt to mix cruelty with their ruſticity. Indeed a Dutchman is naturally phlegmatic and ſlow to anger; but when he is heated, he is not eaſily appeaſed. Conſtant employment, coldneſs of complexion, and perhaps the nature of their food, may contribute to their being but little addicted to love.

The women who are not of high rank adorn their heads with gold lace, and other of the like ornaments, but with more frugality than is generally practiſed in Germany. Except a few court ladies, they have not much taſte or delicacy in their manners. They are generally handy, neat in their houſes to exceſs, well made, and ſome have good complexions; but there are few beautiful: their teeth are in general bad, and moſt of their children are ſickly till the age of eight or ten. The women in this country ſeldom breed after they are thirty; and as the men are remarkable for wearing many breeches, the women in cold weather uſe pots with live coals of wood or turf ſet into boxes bored full of holes, and put under the peticoats: this is not only apt to make them old from the waiſt downward, before the time ordained by nature; but the ſmell of the coals is offenſive. Thus there is a proverbial ſaying, that "The "dirtieſt piece of furniture in the houſe of a Dutchman "is his wife." But we would not be underſtood to charge the diſagreeable part of this character on every individual of that nation; there are no doubt ladies diſtinguiſhed by their charms and their delicacy. Beauty is not confined to particular nations; and the polite and well-bred are to be found in every country in Europe.

The very ſituation and nature of the country render induſtry more neceſſary there than among the people of other nations. The neighbourhood of a dreadful volcano, ſays an ingenious author, cannot render the ſituation of the inhabitants of any other place more precarious than that of the Dutch, from the lowneſs of the land; for here the ocean has often paſſed its bounds, and exhibited a lively picture of the general deluge. In 1530, a great part of the country, with ſeventy-two villages on the coaſt of Holland and Frieſland, were ſwallowed up, and near twenty thouſand people periſhed; and in 1665, an inundation broke down the dyke of Muydenburg, and laid many places in the province of Utrecht under water. The dyke between Amſterdam and Harlem, and many others were alſo broke: but the calamity was no ſooner over, than the induſtrious inhabitants, as ſoon as poſſible, repaired the damage. With reſpect to their dykes, they have lately made great improvements: they now line many of their ſhores with large ſtones. The dyke to the Zuyder Sea is raiſed about ſixteen feet perpendicular, and goes off upon an eaſy ſlope. The ſtones are here regularly laid, and form an excellent defence againſt the water; but the dykes toward the North Sea are ſaid to be more lofty, and not to be ſupported but with piles at a great expence.

The United Provinces, though formerly a bog, are well cultivated, and extremely populous; for theſe, with the country of Drenthe, contain no leſs than one hundred and thirteen cities and towns, together with fourteen hundred villages, ſome of which are very conſiderable; and there are here about two millions of inhabitants, excluſive of thoſe of twenty-five towns in the conquered lands. But the moſt populous and beſt improved of all the ſeven provinces is that of Holland. The towns here, in the form of the houſes, in the canals cut through the ſtreets, and planted with trees, as alſo in the cleanlineſs of the ſtreets themſelves, make a more agreeable appearance than is uſually ſeen in other countries; and for the villages, no part of the globe can be compared with North Holland.

The language ſpoken here is Dutch, which is a dialect of the Low German; but ſo different from the German tongue, that thoſe who only underſtand that, find the Dutch unintelligible. The French is alſo much uſed, and is generally underſtood; ſo that moſt of the news-papers and books are printed in that language.

At the time of the Reformation the inhabitants declared for Lutheraniſm, adhering only to the Augſburg confeſſion; but in 1562, a different ſyſtem of articles, correſponding with thoſe of Geneva, was drawn up for the Netherland churches; at the union of Utrecht in in 1579, the States agreed to maintain and defend it; and in 1651, the Calviniſt doctrines, as ſet forth by the ſynod of Dort, received the ſanction of the ſtates of each particular province. Hence the Calviniſts alone are admitted to any ſhare of the government, and deemed capable of holding the principal employments. The number of Calviniſt miniſters in the ſeven United Provinces, and the countries belonging to them, amount to one thouſand

thouſand five hundred and ſeventy. However, reſpect is paid to the rights of conſcience, an univerſal toleration being allowed.

The popiſh churches in the United Provinces amount to about three hundred and fifty, and the prieſts to near four hundred; of theſe fifty-one churches and ſeventy-four prieſts are Janſeniſts, and the reſt are of Jeſuitical principles, or adhere to the conſtitution Unigenitus. The papiſts are admitted only to military employments; but no perſon of that ſect is ever created field-marſhal. They are computed to make one-third of the inhabitants; the Jeſuits, however, are not tolerated, though in ſome places connived at.

The Lutherans are allowed the free exerciſe of their religion in the towns, and their places of worſhip, in the outward architecture, have all the appearance of churches. The Lutherans are, however, incapable of all poſts and employments. In the United Provinces and Brabant are forty Lutheran congregations, who have fifty-two fixed miniſters. The Saltzburghers have alſo a congregation in the diſtrict of Cadſand.

The Remonſtrants, ſo called from a remonſtrance which they preſented to the aſſembly of the ſtates in 1610, are alſo called Arminians, from the learned Jacob Arminius, who taught the doctrine of univerſal redemption. Theſe are at preſent tolerated; but inſtead of increaſing, are rather under a decline. Of this ſociety there are thirty-four congregations, under forty-three miniſters, in Holland, Guelderland, Utrecht, and Frieſland. Theſe every year hold a general aſſembly at Amſterdam and Rotterdam.

The Mennonites or Baptiſts are divided into various ſects, the principal of which are the Flemiſchers and Waſſerlanders. In many places theſe ſeveral congregations are incorporated with each other. The Baptiſt congregations throughout all the Netherlands do not exceed one hundred and eighty-ſix, and their miniſters amount to about three hundred and twelve.

The Rheinburgers, or Collegiants, obtained the firſt of theſe appellations from Rheinburg, a village near Leyden, where they meet twice a year to celebrate the euchariſt; the ſecond title had its riſe from the colleges, or particular aſſemblies, they have eſtabliſhed in ſeveral places, to the number of about eighteen or twenty.

The Quakers are at preſent dwindled to a very ſmall number; but the Moravians form a conſiderable body. The Armenian Chriſtians, who in many reſpects reſemble thoſe of the Greek church, chiefly reſide at Amſterdam, and alſo enjoy the free exerciſe of their religion. There are many other ſects that have no ſettled congregations. The Jews have been allowed the public exerciſe of their religion ever ſince the year 1619, and with reſpect to many rights and privileges, are on a footing with the other inhabitants, except their being excluded from moſt trades at Amſterdam and ſome other places. They are divided into Portugueſe and Germans, the former of whom came from Portugal in great numbers, in the years 1530 and 1550, and were very kindly received.

With reſpect to the fine arts, the Dutch have chiefly diſtinguiſhed themſelves in painting and engraving, tho' they are not without ſkilful ſtatuaries. For ſome centuries paſt, the ſciences have been cultivated among them with great application and encouragement, and the number of perſons eminent for knowledge and literature, who were either natives of the Netherlands, or invited hither, is very conſiderable. There are no leſs than five univerſities in this country, namely, Leyden, Utrecht, Harderwyck, Franecker, and Groningen, with two gymnaſiums, one at Amſterdam, and another at Deventer. There are likewiſe ſeveral famous grammar ſchools, and in Harlem is an academy of ſciences.

The United Provinces being ſo populous and well improved is chiefly owing to the variety of manufactures carried on there, and to the amazing extent of their commerce. Among the former are the beautiful tiles, of which immenſe quantities are made in South Holland and Utrecht; their ſmall bricks, called klinkers, great numbers of which are exported; their potters-ware, and tobacco-pipes, particularly thoſe of Tergow; with the Delft porcelain, great quantities of which are alſo carried to foreign countries. Good borax is alſo made in Holland, and common ſalt well refined. Here are likewiſe a multitude of oil mills, and ſtarch both blue and white furniſhes employment for a number of hands. Great quantities of thread ſpun in Germany are imported both bleached and unbleached into the Netherlands, where it undergoes farther improvements, and is uſed either for laces or linen; but the fineſt linen is made in the province of Frieſland, and the Holland damaſk is not to be exceeded. A great deal of German linen is alſo bleached and whitened by the Dutch. Hemp is likewiſe manufactured here ſeveral ways: and with reſpect to paper, immenſe quantities of it are made, and the beſt ſort is acknowledged to be as fine and beautiful as any in Europe. The timber brought from Norway and the Baltic, is ſawed by mills for the building of ſhips and houſes; and beſides being a very profitable article in their exports to Spain, Portugal, and other countries, is made uſe of by the Dutch for the conſtruction of large ſhips for many European nations; and for making a vaſt variety of toys, which are exported to foreign countries. Sugar-baking is alſo the ſource of a great trade. The woollen, cotton, and ſilk manufactures do not want beauty; but are at preſent on the decline; good leather is alſo made in the United Provinces, and ſome places are particularly remarkable for the bleaching of wax.

The great trade of theſe provinces is facilitated and ſupported by means both natural and political, as by their ſituation along the German ocean, though without any convenient or ſafe harbour; the Zuyder Sea, the navigable rivers, and multitude of canals; their civil and religious freedom, with the number, ſkill, and induſtry of the inhabitants in handicrafts, manufactures, and fiſheries; the great multitude of their merchant ſhips, the plenty of ſpecie, their national parſimony, and eagerneſs of gain; their credit among foreigners, the bank at Amſterdam, and their Eaſt India trade. By their commerce and ſhipping this little republic has been able to ſupport many wars, and ſtill maintains its freedom; but both the commerce and power of the Dutch have conſtantly gone hand in hand, riſing and falling together: that their trade and power have for ſome time paſt been under a decline is very evident, and this by ſome is imputed to a decline of parſimony and induſtry among the inhabitants; but the principal cauſe is probably the improvement of manufactures, traffic, and navigation, in ſome of the neighbouring nations. It is ſtill, however, very conſiderable, though its principal dependence is on the Eaſt India company, whoſe power and riches are too great to be conceived, and of which the reader may ſee an account in vol. I. page 116, &c.

The Dutch trade almoſt to every country and port, either as carriers, or in exporting goods, and bringing home returns on their own account: their moſt conſiderable exports are goods brought to Holland in their Eaſt and Weſt India ſhips, and among thoſe chiefly ſpices. Their trade to the Mediterranean and the Levant is conducted by a company; they alſo carry on a great trade to Spain; their trade to Portugal is very advantageous, but in that to France the imports exceed their exports. The commerce of the States with Great Britain and Ireland is very much curtailed by the ſtrict prohibitions made by the Engliſh againſt the importation of certain commodities, and by the heavy duties laid on others. Another very conſiderable branch of their trade is that to Norway, Denmark, Ruſſia, and the other countries lying on the Baltic. Their trade to Germany and the neighbouring countries is carried on along the Elbe, the Weſer, the Rhine, the Maeſe, and the Ems; but Hamburg is the port moſt frequented by them. Their traffic with the divided Netherlands daily decreaſes.

The coinage of the United Provinces is under the direction of a general mint-college. Indeed every province being a ſovereignty of itſelf, each of courſe has the privilege of coining; but all pieces, in order to obtain a general currency through the whole republic, are obliged to be of the ſame intrinſic value; without which regulation one province would not fail to cry down ſuch pieces of the others as happened to come ſhort of the due weight. The ſmalleſt piece here is named a deut, or

dite,

Assassination of the Prince of Orange.

dite, is worth about half a farthing; a grot Flemiſh is four dites, and a ſtiver two grots; two ſtivers make a ſmall ſilver piece called dubbelchen, and a ſchilling is equivalent to ſix ſtivers. There are alſo lowered ſchillings of five ſtivers and a half; and ſeſtehalves, which are of the ſame value; the eight and fourteen ſtiver pieces, are not very common. A Holland guilder is equivalent to twenty ſtivers, or one ſhilling and eight-pence. There are likewiſe half guilder and three guilder pieces; but theſe are ſeldom ſeen. A gold gulden makes two twenty-eight ſtivers, and a thaler, or dollar, thirty; a rixdollar, or Albert dollar, is two guilders ten ſtivers. There are alſo half and quarter rixdollars; a lion dollar is worth forty-two ſtivers, or three ſhillings and ſeven-pence; and a ducatoon is worth ſixty-three, or five ſhillings and two-pence. Their gold coins are the well known ducats, which are worth five Holland guilders, and four or five-pence; and whole ruydders are worth fourteen guilders.

SECT. III.

A conciſe Hiſtory of the United Provinces; their political Conſtitution, with a particular Account of the States General. The Titles and Arms of the States; the Taxes and Revenues of the Republic; with their Military and Naval Force.

THE Netherlands, with that part of Germany which lies weſt of the Rhine, was poſſeſſed by the Romans, who called it Gallia Belgica: but upon the decline of the Roman empire, the Goths, and other northern people, took poſſeſſion of theſe provinces, as they paſſed through them in their way to France and Spain: and here erected ſeveral ſmall governments that were a kind of limited monarchies, whoſe ſovereigns were ſtiled dukes, counts, and lords. The people enjoyed great privileges under theſe princes, who were contented with preſerving them, becauſe the ſmallneſs of their reſpective dominions made their greateſt ſtrength conſiſt in the affection of their ſubjects. But afterwards when all theſe provinces became ſubject to one prince, who had large dominions elſewhere, the people were treated with leſs indulgence. Charles V. was the firſt of theſe, and, as he was king of Spain, emperor of Germany, and duke of Burgundy, he had different intereſts from thoſe of his predeceſſors; and being engaged in a war with France, he brought foreign forces from his other dominions into the Netherlands, notwithſtanding the laws to the contrary.

At length the reformation breaking out, that prince exhibited very rigorous edicts againſt thoſe who ſeparated from the Romiſh church; and Grotius affirms, that, during his reign, above a hundred thouſand perſons ſuffered death for their religion; but the number and courage of thoſe who embraced the doctrines of the reformation, inſtead of being diminiſhed by the horrors of perſecution, daily increaſed, and ſometimes the people reſcued out of the hands of the officers thoſe who were led to execution. Thus the Netherlands became extremely alienated from the houſe of Auſtria, and their diſcontents increaſed on Charles's nominating his ſon Philip II. to be their governor. This prince would admit only of the Popiſh religion; and a ſanguinary perſecution againſt the heretics, as they were called, was carried on with freſh vigour, a court of inquiſition was erected, and theſe cruelties aggravated by inſupportable taxes.

Theſe oppreſſions being carried to the moſt tyrannical height by Ferdinand of Toledo, duke of Alba, whom Philip had created governor, the Netherlanders made a puſh for their freedom, and William prince of Orange, in conjunction with his brother, count Lewis of Naſſau, undertook the defence of the inhabitants, in their noble ſtruggles for religious and civil liberty. Accordingly the ſtates of Holland, in their own names, conferred the ſtadtholderſhip on the former, and ſeveral other towns and provinces declaring for him, he at firſt united them, in 1576, in one general aſſociation, under the title of The Pacification of Ghent. But this union being ſoon diſſolved, the prince laboured to the utmoſt of his power to form a more durable alliance, which he happily accompliſhed in 1579. In that year the celebrated league of Utrecht was concluded, which gave name to the United Provinces, and became the baſis and plan of their conſtitution. The prince of Orange was afterwards on the point of being nominated ſovereign of theſe countries, but was treacherouſly ſhot in 1584, by an aſſaſſin hired by the Spaniſh miniſtry. The United Netherlands, however, continuing to maintain, ſword in hand, that liberty to which they had raiſed themſelves, queen Elizabeth of England took them under her protection, and ſent them aſſiſtance. Thus the war went on proſperouſly, and their commerce arrived at ſuch a pitch, that in 1602 their celebrated Eaſt India company was eſtabliſhed, and Spain being both weakened and diſcouraged by the ill ſucceſs of a tedious war, in 1606, agreed to an armiſtice for twelve years, and in the very firſt article acknowledged the United Netherlands to be a free and independent ſtate; and, during this truce, the republic attained to a degree of power which it has never ſince exceeded.

In 1621 the war was again renewed, during which the ſtadtholder, prince Frederic Henry, greatly diſtinguiſhed himſelf. This war was brought to a period in 1648, by the peace of Munſter, at which Philip IV. king of Spain, renounced all claim to the United Netherlands.

In 1652 a war broke out between the United Provinces and England; but was terminated two years after by a treaty, in which the ſtates of Holland engaged for ever to exclude the houſe of Orange from the ſtadtholderſhip of their province.

In 1665 another war was kindled with England, which laſted till the treaty of Breda. The ſtates of Holland and Weſt Frieſland then paſſed an edict, by which they aboliſhed the ſtadtholderſhip in their province. When France formed a deſign to ſeize on the Spaniſh Netherlands, the United Provinces entered into an alliance with the crowns of England and Sweden, for the defence of thoſe countries: thus France was, in 1668, compelled to agree to the peace of Aix la Chapelle; but ſoon took a ſevere revenge by ſubverting that alliance, and inducing England, with ſome other powers, to enter into a league againſt the United Provinces, on which a war enſued. In this critical juncture the republic, in 1672, nominated the young prince of Orange, named William III. captain and admiral-general; and the populace compelled the ſtates of Holland to inveſt him with the ſtadtholderſhip, which two years after was declared hereditary.

In 1678 a peace was concluded with France at Nimeguen; but it was of no long continuance, for in 1688, the ſtates ſupporting their ſtadtholder in his expedition to England, with a fleet and a large body of troops, France declared war againſt them, which laſted till the peace of Ryſwic in 1697. At length, on the death of Charles II. king of Spain, in the year 1700, the Spaniſh provinces fell to the ſhare of the houſe of Auſtria, and the republic became involved in a war relating to that ſucceſſion, which continued till the peace of Utrecht, in 1713. On the deceaſe of the emperor Charles VI. they aſſiſted the queen of Hungary againſt France, which drew on them the reſentment of that power; and, in 1747, the French making an irruption into Dutch Flanders, the republic unanimouſly declared the late prince of Orange hereditary ſtadtholder, captain-general, and admiral in chief.

The Seven United Provinces form ſeven republics, or independent ſovereign ſtates, united together for their common defence in a cloſe alliance; but on condition, that all ſhall enjoy their own reſpective laws, liberties, and privileges. As they are confederated and allied together, it is requiſite that they ſhould meet, in order to conſult on the moſt proper method of promoting their common intereſt; but as it is impoſſible for all the members of theſe ſeveral ſtates to meet together, each particular ſtate appoints ſome perſon to repreſent it; and the aſſembly of theſe repreſentatives is called the aſſembly of the States-general.

Not only each province, but the principal cities, ſend deputies to the States-general, as do alſo the nobles. Thus the number of the repreſentatives is very conſiderable, and all are maintained at the expence of their reſpective

provinces; the deputies of Holland being allowed four florins a day, and thoſe of the other ſtates ſix. But whatever be the number of the deputies from each province, be they nobles or commoners, they have all together but one voice; and therefore in the aſſembly of the States-general there are but ſeven voices. Beſides this, being properly the aſſembly of the repreſentatives of the ſeven ſovereignties which compoſe the ſtates of the United Provinces, their power is limited either expreſsly or tacitly by this inſtruction: "Not to ſuffer the leaſt wound to "be given to the ſovereignty of that province which de-"putes them."

The States-general, however, not only make peace or war in their own name, but ſend and receive ambaſſadors and other public miniſters. The commander in chief, and all other military officers, take an oath of fidelity to them; and, during a war, ſome of their members, or of the council of ſtate, follow the army, ſit in the council of war, and without their conſent nothing of importance can be undertaken. In time of war the States likewiſe grant licences and protections.

Thus the States-general appear at firſt view to be the ſovereigns of the country; but moſt of theſe deputies are appointed only for a few years, and though they have the power of debating on the moſt important affairs that may tend to ſecure or promote the preſervation and happineſs of the ſtate, yet they have not power to conclude any point of great conſequence, without previouſly communicating it to their reſpective provinces, and receiving their expreſs conſent. This renders the reſolutions of the republic ſo tedious and dilatory, as to tire the patience of thoſe powers who have affairs to negotiate with the ſtates; but tho' this ſlow method of proceeding be attended with many inconveniences, it has ſome advantages: it affords leiſure for mature deliberation and caution, and is ſometimes an unexceptionable pretence for protracting time and waiting events.

In the aſſembly of the States-general, the provinces preſide weekly in their turn, beginning with Guelderland, who had the precedency before the union; then Holland, Zealand, Utrecht, Frieſland, Overyſſel, and Groningen. He who is firſt named in the deputation of his province preſides, and is from hence called the Preſident of the Week. He propoſes the ſubject to be debated, and collects the votes of the aſſembly, upon which he forms his concluſion, dictates to the regiſter, and afterwards ſigns the reſolution. They ſit throughout the whole year without adjournment, and their meetings are always held at the Hague.

The higheſt office in this country is that of ſtadtholder; for he is at the ſame time governor-general of the ſeven United Provinces, captain-general, and grand-admiral; but his power is extremely limited. He ſwears to obey the States-general, and can neither make peace nor war without their conſent. He may come to their aſſembly to lay before them any buſineſs in which the public is concerned; but has not ordinarily a ſeat in it. He may pardon criminals condemned to ſuffer death, and has the right of chuſing the magiſtrates of cities upon a double nomination of their reſpective ſenates, excepting only Amſterdam, with ſeveral other important privileges.

The title aſſumed by the States is that of High and Mighty Lords, or the Lords the States-general of the United Netherlands, and in public addreſſes they are ſtiled their High Mightineſſes.

Their arms are, gules, a lion rampant, holding in one paw a ſword, and in the other a bundle of ſeven arrows; beneath the ſhield, which is ſurmounted with a ducal coronet, is the motto CONCORDIA RES PARVÆ CRESCUNT.

The council of ſtate conſiſts of twelve deputies of the ſeveral provinces, and their office is either triennial, or during the pleaſure of their principals. In this council the deputies of Holland have the greateſt weight, that province being poſſeſſed of three votes, while none of the others have more than two, and ſome of them only one. The preſidentſhip indeed is held alternately by the twelve members, each in their week. The council of ſtate aſſembles every day in the ſame court with the States-general. The principal affairs which come under the deliberation of this council are, thoſe of the army and revenue; and in conjunction with the deputies of the States-general, they alſo provide every thing neceſſary for the defence of the country, both in time of peace and war. The revenues under the direction of this council are thoſe paid by the Seven Provinces, and the country of Drenthe, into the military cheſt, and by the Generalité-lands into the public treaſury; as likewiſe all contributions, confiſcations, and the like. Sometimes the council of ſtate is ſummoned before the States-general; but whenever the latter require a particular conference with them, they only ſend two or three deputies. The title of this council is Noble and Mighty Lords. The treaſurer-general is alſo honoured with this title, as being an aſſeſſor in the council of ſtate, and may deliver his opinion; but has no definitive voice. The receiver-general has a ſeat in the ſame council.

The general chamber of accounts is compoſed of fourteen deputies, each province ſending two. Their chief employment is to receive, ſtate, and balance the accounts of the ſeveral provinces. The members of this chamber are alſo ſtiled Noble and Mighty Lords.

The general chamber of finances is ſubordinate to the former, and conſiſts of four commiſſioners and a ſecretary.

The mint-office conſiſts of three counſellors, aſſiſted by a mint-maſter-general, a general aſſay-maſter, and an under ſecretary. All theſe ſeveral colleges meet at the Hague.

With reſpect to the adminiſtration of juſtice, the proceedings of the ſeveral courts are regulated by the particular laws of the reſpective towns and provinces where they are tried, the edicts of the ſtates, and the civil law. Each province has its tribunal, to which, except in criminal caſes, appeals lie from the petty and county courts, and if the party caſt is diſpoſed to ſtand a third trial, he may apply to the ſtates of the province, who appoint certain perſons learned in the laws and cuſtoms of that province to examine the decree, and paſs a final deciſion. Juſtice is ſaid to be no where ſo well adminiſtered as in theſe provinces.

The taxes payable by the inhabitants of the United provinces, and by thoſe of the conquered lands, have been rendered neceſſary by the long and ſevere wars which the republic has ſuſtained, and the number of them, eſpecially in Holland, where they are always the heavieſt, is ſo great, that a certain writer aſſerts, that the only thing which has eſcaped taxation is the air we breathe. The principal ordinary taxes are the duties on exports and imports, levied by the admiralty offices, and appropriated to defray the expences of the navy. The taxes on houſes, lands, horned cattle, &c. and on the purchaſe money of all immoveables, under which are comprehended veſſels of above eight tons burthen, for which the fortieth penny is paid; and this alone in Holland annually brings in above ſeven hundred thouſand golden florins. The twentieth penny levied on inheritances in the collateral and aſcending line. A poll tax, which obtains only in ſome provinces. The exciſe on all kinds of proviſions, neceſſaries, and liquors; and here the money levied on bread and beer is eſtimated at above one third, that on wine at ſomewhat leſs, and that on turf for firing alſo at one third. There is likewiſe a duty on horſes, coaches, and ſervants. The ſtampt paper uſed in all their ſeveral inſtruments, contracts, and bonds, is ſaid to exceed four hundred thouſand golden florins.

In particular emergencies, when the ordinary revenues are inſufficient, the tax on lands and houſes is doubled, and ſome other duties raiſed. Thus, in 1747, an edict paſſed for a voluntary aid, conſiſting of the fiftieth penny of every man's whole wealth and ſubſtance. The ordinary revenues of the republic are eſtimated at twenty-one millions of guilders; but as the contributions have fallen ſhort of the expences incurred by their long wars, the ſtate has borrowed immenſe ſums from the inhabitants, and every one of the provinces labours under very heavy debts.

The United Provinces ſtand in need of a conſiderable military force for their defence, notwithſtanding which, this has never been put on a proper eſtabliſhment. Each province keeps on foot ſuch a number of troops as it can conveniently maintain; but the Swiſs regi-

regiments are paid by the States-general. In time of peace the forces of the republic ſeldom exceed forty thouſand men, and very often their number is ſtill leſs. In time of war the republic hires troops of the German princes, and keeps them in pay till peace be reſtored. The chief command of the army is veſted in the ſtadtholder as captain-general; but the executive part, eſpecially in time of war, is filled by the field marſhal general. The fortreſſes are always kept in good repair. In 1755, the expences of the military eſtabliſhment amounted to nine million eight hundred forty-four thouſand four hundred and thirty-ſeven guilders ſixteen ſtivers; but in 1756, only to nine million ſeven hundred ſixty-five thouſand and four. The naval force of the republic formerly made a great figure, and in ſome wars the Dutch have had at ſea a hundred men of war; but the uſual number in time of peace is only thirty, and thoſe not always fit for ſervice. It however paſſes for a certain truth, that the admiralties, by the aſſiſtance of the ſeveral provinces, can in a ſhort time equip forty or fifty ſhips of the line. Their men of war are chiefly employed in cruiſing in the Mediterranean, to protect their trade againſt the Corſairs, or as convoys to the homeward bound Indiamen.

SECT. IV.

Of GUELDERLAND.

Its Situation, Climate, Produce, and Rivers. The Government of the Province, its Diviſions, and a Deſcription of Nimeguen, Zutphen, and Arnheim.

GUELDERLAND, or Gelderland, is bounded on the north by the Zuyder-ſea and Overyſſel; on the eaſt by the biſhopric of Munſter, and the dutchy of Cleve; on the ſouth is divided by the Maeſe from Brabant; and on the weſt borders on Utrecht and Holland.

The air is the beſt in all the Seven Provinces, and the ſoil for the moſt part good. The country of Zutphen has ſuch plenty of apple, pear, and cherry-trees, that it ſupplies all the other provinces with thoſe fruits. There are here alſo large tracts of arable land, with a ſufficient quantity of meadow grounds fit for paſtures.

Guelderland is watered by the Rhine, and its three branches the Waal, the Yſel, and the Lek, and on its ſouthern borders runs the Maeſe. The ſmaller rivers are the Linge, formerly called the Longwater, which takes its courſe between the Rhine and the Waal, till it falls into the Merwe; the Old Yſſel which joins the Yſſel near Doeſberg, and the Berkel, which falls into the ſame river.

In the whole province are twenty-two towns, and two boroughs. It is divided into three diſtricts, Nimeguen, Zutphen, and Arnheim, each of which has its own particular ſtates compoſed of the nobility and towns. The number of the nobility admitted in the legiſlative power is not fixed, every one legally qualified being advanced to a ſhare in the government at twenty-one years of age. The towns may depute as many as they pleaſe to aſſiſt at the diet of the diſtrict, though each town has but one vote. The aſſemblies of the ſtates of each diſtrict are always held in the capital, from which it derives its name, and the burgomaſter for the time being ſits as preſident at the diet, at which all affairs relating to that diſtrict are determined. Two general aſſemblies of the ſtates of the whole province, conſiſting of the deputies of the ſtates of the three provinces, are annually held in the three capitals, one in ſpring, and the other in autumn. The burgrave of Nimeguen always ſits as preſident, and in theſe aſſemblies all affairs relating to the whole province are regulated. Guelderland alſo ſends nineteen deputies to the aſſembly of the States-general of the United Provinces.

The diſtrict of Nimeguen contains the ſouth part of Guelderland, and lies between the Rhine, the Waal, and the Maeſe. Though this quarter is the ſmalleſt, it is the moſt conſiderable, and pays the largeſt contingent to the public expences. It contains only three towns that have a ſeat and vote in the aſſembly, the principal of theſe is the following:

Nimeguen, the capital of this diſtrict, ſtands on ſeveral little eminences along the river Waal, over which it has a bridge of boats, in the fifty-firſt degree fifty-two minutes north latitude, and in the fifth degree forty-ſix minutes eaſt longitude. Towards the land it is very ſtrongly fortified, it being the utmoſt boundary of the Netherlands to the eaſt; but the great extent of its outworks requires a very numerous garriſon. The churches here are two of Dutch Calviniſts, the principal of which is that of St. Stephen, a French church, a Lutheran church, and five belonging to the Roman catholics. On the eaſt ſide of the city, within the walls, ſtands an old burg, or caſtle, called the Falkenhof, which is ſaid to have been built by Charlemagne; and the burgrave, who reſides in it, is one of the moſt conſiderable nobles in all Guelderland. Within the walls of this caſtle are delightful walks, planted with rows of lime-trees. The ſtadthouſe, which ſtands in Burg-ſtreet, is the place where the ſtates of the quarter meet, and where the provincial diets are held.

In 1678 the celebrated treaty of Nimeguen was concluded here, and in 1702 marſhal Boufflers formed a deſign of ſeizing this place, it being then without a garriſon; but the earl of Athlone, the Dutch general, marched to its relief with ſuch expedition, that the marſhal's ſcheme was fruſtrated. Nimeguen carries on a good trade with the dutchy of Cleve, and ſends great quantities of its white beer into all the United Provinces.

The Zutphen quarter, or county of Zutphen, is ſeparated from Arnheim by the river Yſſel. The ſoil is on the weſt and ſouth ſides not inferior to any in Guelderland; but to the eaſtward near the frontiers of Munſter is full of heaths and moraſſes. It contains five towns that enjoy a ſeat and vote in the diets, the principal place in which is the following:

Zutphen, in Latin Zutphania, the capital of the county to which it gives name, ſtands on the banks of the Yſſel, over which it has a bridge of boats, fifty-five miles eaſt-by-ſouth of Hanover. The Yſſel here receives the Borkel, or Berkel, which divides the town into two parts, the Old and the New. The former of theſe is much larger than the latter; but both have extenſive ſuburbs, which chiefly conſiſt of pleaſure-houſes, yet by degrees have been included within the circuit of the walls. The town is well fortified, except towards the works in the ſuburbs, where there is leſs occaſion for ſtrength, as the country may be eaſily laid under water by means of the Borkel. There are here ſeveral pleaſant walks, particularly on the ramparts, which are planted with trees. Zutphen was formerly a Hanſe-town, and more opulent than at preſent. The Dutch Calviniſts have two churches here, and there is alſo one belonging to the Walloons, another to the Lutherans, another to the Catholics, and another to the Mennonites. A gymnaſium, founded here in 1687, has ſix maſters. This town has ſeveral times been beſieged and taken.

The Arnheim quarter, or the Veluwe, is ſeparated from that of Zutphen by the Yſſel. Its ſoil is for the moſt part very indifferent, eſpecially towards the middle, which abounding in ſand, heath, and brakes has the appearance of a wilderneſs; but the country near the river is as fertile as any other part of the Netherlands. It has five towns that enjoy a ſeat and vote in the diets, the principal of which is

Arnheim, the capital of the quarter, ſeated on the Rhine at the foot of the Veluwe hills, at no great diſtance from the place where the Yſſel and the Rhine divide their ſtreams. Over the latter of theſe rivers it has a bridge of boats, and before the Rhine-gate is a commodious harbour of a quadrangular form. The fortifications to the land-ſide were conſiderably enlarged in 1702 by that ſkilful engineer general Coehorn, who alſo encloſed within a ſtrong line an eminence to the weſt of the town, which in caſe of a ſiege might be a great annoyance to it; but is now capable of containing a ſmall camp for its defence. To the north of the town runs the molebeek, which fills the moats with water. The walls are delightfully planted with lime-trees, and may be walked round with eaſe in an hour and a half. The town itſelf is well built: here all the ſtates of this quarter have their meetings, and it is likewiſe the ſeat of the pro-

vincial chief court of juſtice, and the chamber of accounts. Antiently the dukes of Guelderland, and after them the ſtadtholders of this province, kept their court in the old palace; which, whenever the hereditary ſtadtholder comes to aſſiſt at the aſſembly of the ſtates of the province, is fitted up for his reception. In the great church, dedicated to St. Euſebius, are the monuments of ſeveral counts and dukes of Guelderland. The Dutch Calviniſts have alſo another church, and there is likewiſe a French church and a congregation of Lutherans. Arnheim was taken from the Spaniards in 1585; the French made themſelves maſters of it in 1672, and kept it till the year 1674.

The above mentioned diſtrict, called Veluwe, is ſurrounded by a narrow ſtrip of land ſo extremely fertile, as to give occaſion to a ſaying, that the Veluwe is a thread-bare coat with a very rich border.

It is proper to obſerve, that part of the upper quarter of Guelderland includes the quarter of Ruremond, which, with its capital of the ſame name, is ſubject to the houſe of Auſtria; and the ſmall town and prefecturate of Gueldres, which belong to the king of Pruſſia.

SECT. V.

Of the Province of HOLLAND.

Its Situation, Extent, Produce, and Rivers. The Populouſneſs of the Country, and the Neatneſs of the Towns and Villages. The Government of the Province; with a Deſcription of the Cities of Dort, Harlem, Leyden, Amſterdam, Rotterdam, the Hague, and the Village of Broek.

THE province of Holland is bounded on the ſouth by Brabant; on the eaſt by the provinces of Guelderland, Utrecht, the Zuyder ſea, and the North ſea; on the latter of which its whole weſtern frontiers lie. This is the largeſt of all the ſeven provinces, and, according to the computation of the celebrated John de Witt, contains four hundred thouſand acres; but later authors ſuppoſe that it contains four hundred and forty thouſand.

Its ſituation is in general very low, and ſome part even lower than the ſea, from which it is ſecured by dykes and dams, and interſected by innumerable ditches and canals, through which the water is carried off at the time of ebb. The air is foggy and unwholeſome; however, the greateſt part of the province conſiſts of fine paſture lands, and therefore the principal employment of the country people is making butter and cheeſe; for which purpoſe they keep a number of milch-cows. The more ſouthern parts of the province, which lie near Zealand, and alſo the weſt lands, as they are called, are excellent corn countries. The middle part of the province conſiſts almoſt entirely of turf grounds.

Beſides the large rivers common to the Netherlands in general, there are ſeveral ſmaller ſtreams; as the Vecht, which coming from Utrecht falls into the Zuyder ſea: the Amſtel, which receives the Crooked Amſtel, and runs through Amſterdam into the Y: the Zaan, which waters North Holland, and alſo diſcharges itſelf into the Y; as does alſo the Spaaren, which iſſues out of the lake of Harlem. On this river paſs the larger veſſels bound to Zealand, and other ports, croſſing Harlem lake: the Shie, which runs through Delft to Shiedam, where it joins the Maeſe; as does alſo the Rotte at Rotterdam: the Gouwe, which proceeds out of the Old Rhine, and at Gouda falls into the Yſſel: the Holland Yſſel, which, after receiving its waters from the Rhine-canal, as it is called, diſcharges itſelf into the Maeſe; this river is alſo joined by the Vliſt: and laſtly, the Linge, which iſſuing out of Guelderland, traverſes Holland, and loſes itſelf in the Merve.

In ſeveral parts of the country theſe rivers are joined by navigable canals, which afford a cheap communication between the ſeveral towns and villages of this populous province, as, by means of the treckſchuyts, paſſengers go from place to place at fixed hours on theſe canals, and at very cheap rates. Goods are likewiſe ſent the ſame way, which is of unſpeakable advantage to the inland trade.

The broad water, which paſſes by Amſterdam from the Zuyder ſea, and divides the province into South and North Holland, or into Holland and Weſt Frieſland, is called the Y, or, as it is pronounced, the Ey, and at Beverwick forms the Wykermeer.

This province abounds in the moſt extraordinary improvements, and is amazingly populous, the number of its inhabitants being computed at one million two hundred thouſand. The buildings in the towns are moſtly of brick, and for handſome villages and cleanlineſs in their houſes, it exceeds every other country; but in North Holland neatneſs is carried to an aſtoniſhing pitch. In that province are villages in which the houſes, together with the rooms and furniture, are clean and bright beyond imagination; the buildings themſelves, the floors, and every wooden utenſil, both within and without, even to the very gates in the roads, and the poſts in the paſtures againſt which the cows rub, as alſo the very trunks of the trees, being painted: the chimnies likewiſe, with the cow ſtalls, both on the floor and on the ſides, are kept extremely neat; but in theſe cow ſtalls the families themſelves reſide, to avoid ſoiling their ſhining rooms. Their ſtreets too are paved with brick, and very carefully waſhed and ſtrewed with a fine white ſand.

The two parts of which this province conſiſts are under one joint-regency, called the States of Holland and Weſt Frieſland, compoſed of the nobility and voting towns. The number of nobility admitted into the aſſembly of the States is not limited, and therefore not always the ſame. The nobility elect their ſeveral members by a majority of votes, but they ſeldom exceed ten. The voting towns, at the firſt foundation of the republic, were only the ſix following: Dort, Harlem, Delft, Leyden, Amſterdam, and Gouda; but William I. prince of Orange, added twelve more; ſo that at preſent they are eighteen, that is, eleven in South Holland, and ſeven in North Holland. The ſmalleſt of theſe cities has an equal voice in the provincial ſtates with Amſterdam, which pays almoſt half the charge of the whole province.

Each member at his firſt appearance in this aſſembly, is obliged to ſwear to maintain the rights, privileges, immunities, laws, and cuſtoms of the country, and to give his vote according to his conſcience, for the common happineſs and proſperity of the province, without hatred, or regard to the intereſt of any particular town or perſon; to execute all the reſolutions taken in the aſſembly with fidelity, and to keep inviolable the ſecrets with which he ſhall be entruſted.

The States of Holland enjoy entire liberty of ſpeech, and are only anſwerable for their actions to the town which deputes them, without being liable to be called in queſtion by any other authority. They meet four times a year, in February, June, September, and November. In the three former ſeſſions they fill up the vacant employments in their diſpoſal, conſult about the common affairs of the province, and determine particular differences that may happen between the towns. In November they meet for raiſing ſuch ſupplies as may have been granted by their deputies to the States General, for the ſervice of the ſubſequent year.

The reſolutions of the States are generally determined by a majority of voices; but in very important affairs they muſt be unanimous: ſo that the oppoſition of one of the ſmalleſt cities can prevent a reſolution being taken; in which caſe the aſſembly is adjourned for a day or two, that the deputies may have time to return to their reſpective cities for farther inſtructions.

The grand penſionary of Holland is a perſon of great dignity; he has no deciſive vote; he propoſes the ſubjects of debate to the aſſembly of the ſtates of that province, collects the ſuffrages of the nineteen repreſentatives, pronounces the reſolutions, and dictates the terms in which they are to be regiſtered: he is alſo the conſtant deputy to the States General, and keeps the public regiſters and great ſeal of the province. He is elected by a majority of ſuffrages in the aſſembly of the ſtates; and his office is properly only for five years, at the expiration of which a new election, or rather a confirmation of the former, muſt be obtained.

After

After the ſtates of Holland, the court of the greateſt authority is the provincial council of ſtate, which, from the two parts of this province, is divided into two aſſemblies; that of South Holland conſiſts of ten repreſentatives, of which one always repreſents the nobility, and has the precedence of all the reſt. Theſe take cognizance both of the revenue and military affairs; and, when neceſſary, convene a general aſſembly of the ſtates of the province. The aſſembly of North Holland is compoſed of ſeven deputies of the towns of that part of the province. Theſe hold a joint aſſembly every year in the month of November, to ſettle, in conjunction with the deputies of the States General, the neceſſary funds to be levied in the ſubſequent year for the ſervice of the army.

For the adminiſtration of juſtice there are two courts held at the Hague, namely, the court of Holland, and the high council. The provinces of Holland and Zealand have always been ſo ſtrictly united, as to have but one common high court of juſtice; and accordingly the court of Holland is compoſed of a preſident, with eight counſellors of that province, and three for Zealand; a ſollicitor, two attornies, a regiſter, and ſix ſecretaries: Holland chooſes the preſident two years, and Zealand the third. The members of this court are excluded from being magiſtrates of cities, directors of trading companies, or enjoying any poſt, or any other ſalary than what is annexed to their office. The nobles of Holland, and the magiſtrates of the cities, are ſubject to the juriſdiction of this court, and appeals from the judgments of the magiſtrates are decided by it.

The high council of Holland and Zealand is compoſed of a preſident and ſix counſellors for Holland, and three for Zealand, a regiſter, and a ſubſtitute. This court judges definitively in all caſes brought before them by an appeal from the court of Holland, and gives judgment from which there is no farther appeal, except by way of reviſion.

The ſenate of Amſterdam conſiſts of thirty-ſix members, part of whom have the direction of political affairs, and others the adminiſtration of juſtice. The dignity of a ſenator is for life, unleſs forfeited by mal-adminiſtration. The ſenate has the power of filling up vacancies, and directing all other affairs with a ſupreme and abſolute authority, independent of the people. They chooſe the burgomaſters and ſchepens, or aldermen, of every city. The firſt are always part of their own body, and in order to become a burgomaſter it is neceſſary that a perſon has borne the office of a ſchepen. There are twelve burgomaſters in Amſterdam, four of whom have the adminiſtration of affairs, and are from thence called regent-burgomaſters. Three of theſe are annually changed, and the fourth continues in office a ſecond year, to inſtruct the new-comers: he likewiſe preſides for the firſt quarter, and then gives place to his colleagues, who in the ſame manner preſide three months alternately, till the year is finiſhed.

The ſchepen, or aldermen, form the chief court of juſtice in every city. In Amſterdam there are nine, ſeven of whom are annually elected, and two remain a ſecond year. Theſe have the adminiſtration of juſtice both in civil and criminal affairs; but, before they condemn a perſon to ſuffer death, they always conſult the burgomaſters on the merits of the cauſe; but are not obliged to conform to their opinion, and ſometimes they give judgment contrary to it. There lies no appeal from their ſentence in criminal cauſes. Where the puniſhment is capital, not only the proof of the crime is required to be extremely evident, but the priſoner himſelf muſt confeſs it; for which purpoſe they employ the rack and other tortures; but this is never done except when the evidence is ſo ſtrong againſt the criminal as to leave no room to queſtion his guilt, whence it is ſaid, that an innocent perſon is never put to the rack.

There is another court inferior to the former, but worthy of being imitated by all Chriſtian nations, ſince it ſeems founded on the very ſpirit of Chriſtianity. This court conſiſts of eight or ten members, ſtiled peace-makers, who are generally young gentlemen of fortune, who muſt be houſe-keepers and married. Their buſineſs is to make up all quarrels, and to prevent or diſſuade people from going to law. They, with one experienced magiſtrate at their head, alſo take cognizance of civil cauſes amounting to a ſum not exceeding ſix hundred guilders, or about fifty-five pounds ſterling. Their method of proceeding is by way of citation: the creditor ſummons his debtor to appear, and, after the fact has been ſtated, and both ſides heard, the peace-makers determine what ought to be done, and order the parties to comply with it: but there lies an appeal from their deciſion to the ſchepens.

There is no where ſuch large credit given to all ſorts of perſons as in Holland, and there never was any country where ſo few languiſh in priſon. Whenever any perſon acquaints the magiſtrates of his inability to pay his creditors, and lays before them an exact account of his circumſtances, they immediately order the commiſſioners of bankrupts to take poſſeſſion of his effects, and exempt his perſon from all arreſts for ſix weeks, which time is allowed him to compound with his creditors. In the mean time his books are laid before the commiſſioners to be examined, and all letters directed to him are delivered to them before he peruſes them. If his endeavours to compound with his creditors prove ineffectual, and his failure appears to be owing to loſſes and misfortunes, the commiſſioners, when the ſix weeks are expired, ſell his effects, and make a dividend, after which the magiſtrates acquit and exempt him from all claim, whether foreign or domeſtic; nor is it in the power of any or of all his creditors to hinder this, when the failure is not fraudulent.

There is alſo another method of obtaining abſolute freedom in Holland ſtill more expeditious, which is for the debtor to apply to the provincial high court of juſtice, repreſenting his condition, and giving up all he has upon oath, after which he is exempted, as before, from all future claims, and may again engage in trade; but if the debtor here takes a falſe oath, the magiſtrates are authorized to puniſh him as they pleaſe, and even to ſentence him to ſuffer death.

Holland, with reſpect to its eccleſiaſtical eſtabliſhment, is divided into two parts, each of which has its particular ſynod. The ſynod of South Holland is compoſed of eleven claſſes, under which are three hundred and thirty-one miniſters: the ſynod of North Holland has only ſix claſſes, in which are two hundred and twenty miniſters. Beſides theſe miniſters of the eſtabliſhed church, there are aſſemblies of Engliſh Preſbyterians at Amſterdam, Rotterdam, Dort, Leyden, and Harlem; and at Amſterdam is an Engliſh epiſcopal church. The Remonſtrants amount to thirty congregations, and thirty-eight miniſters. The Lutherans compoſe nineteen congregations, and have twenty-ſeven preachers. The Roman catholics have about two hundred and fifty churches, and two hundred and thirty-five prieſts, among which are about forty churches and ſixty prieſts of Janſeniſt principles. At Amſterdam is alſo the metropolitan church of the Moravians; and alſo a Quakers meeting.

The principal cities in Holland are the following:

Dort, or Dordrecht, in Latin Dordracum, is ſeated on an iſland in the Merwe, that was formed in 1421 by a terrible inundation, which deſtroyed no leſs than ſeventy-two villages, and about a hundred thouſand perſons. This city ſtands fifteen miles to the eaſt of Rotterdam, and its ſituation is naturally ſo ſtrong, that, though deſtitute of fortifications, it has never yet been taken. The number of houſes in 1732 amounted to three thouſand nine hundred and fifty-four. It is the ſeat of the mintage for South Holland, and has a ſeminary. The harbour is very commodious, and its trade conſiderable, eſpecially in grain, Rheniſh, and other wines; as alſo in timber, which, in ſummer time, is brought from Germany down the Rhine and the Waal, and here ſawed in mills, of which there are great numbers about the city.

Harlem, Haarlem, or Haerlem, is ſituated on the river Sparin, which runs through it, and is the only paſſage for the many ſhips and other veſſels coming from Frieſland and other parts, in their way to the towns of Holland and Zealand. Harlem ſtands fourteen miles to the weſt of Amſterdam, and enjoys a communication with that city and Leyden, by means of two ſpacious canals. The houſes, which are neat brick buildings, in 1732

amounted to seven thousand nine hundred and sixty-three; but very few of them are built in the modern taste, or make an elegant appearance. There are in this city four Dutch Calvinist churches, one of French, one of Lutheran, and several mass-houses, the Papists being here much more numerous than the Protestants. Its manufactures of silk and linen, though still considerable, are greatly declined. The bleaching of thread and linen, for which this city is famous, employs a great number of hands. Once a most extravagant trade in flowers, particularly in tulips, was carried on here; but at present this passion, which was carried to a strange excess, is much abated.

The inhabitants attribute the invention of printing to Lawrence Coster of this city; on whose house, which stood in about the middle of the town, was a Latin inscription that he invented it about the year 1440: a statue was also erected to him on the same account; and in the town-house is kept in a silver case, wrapped up in silk, the first book that Coster printed. There is here an academy of sciences, founded in 1751.

In the year 1573 this city held out a famous siege against the Spaniards for ten months; during which the brave citizens were reduced to eat leather, and the vilest animals. They for a considerable time kept up a correspondence with the prince of Orange by carrier-pigeons, till the Spaniards discovering it, shot all the pigeons about the town. The citizens at last surrendered, on condition of being saved from plunder; but the Spaniards had the cruelty to punish the inhabitants for their bravery by a most inhuman massacre in cold blood. The garrison, which had consisted of four thousand men, was reduced to sixteen hundred, and of these they barbarously murdered nine hundred.

To the south of the town lie several beautiful seats, and a wood cut out into delightful walks and vistos.

Leyden, in Latin Lugdunum Batavorum, is seated on the Rhine, in the fifty-second degree fifteen minutes north latitude, and in the fourth degree ten minutes east longitude, and, next to Amsterdam, is the largest and finest city in all Holland. In 1732 the houses amounted to ten thousand eight hundred and ninety-one. The streets are long, broad, neat, and adorned with beautiful canals. Here are some fine churches belonging to the Dutch Calvinists, with a Lutheran, an English, a French, and a Mennonite meeting; as also several mass-houses, the Papists constituting the majority of the inhabitants. The university, founded in 1575 by William I. prince of Orange, is the largest and most antient in all the United Netherlands. Its library, besides a multitude of printed books, has two thousand Oriental manuscripts, many of which are in Arabic, and a large sphere adapted to the Copernican system, and moving by clock-work: it has also an anatomical theatre, an observatory, and a physic-garden. The celebrated cloth manufactures of this city are much decayed, the demand for them being greatly lessened. This city is famous for the long and severe siege it sustained in 1573 against the Spaniards, who encompassed it with seventy-two forts. This siege lasted above five months with such vigour, that the inhabitants were reduced to the greatest extremities, and above ten thousand of them perished: yet, considering the barbarous treatment Harlem met with, they resolved to hold out, and upon receiving a summons, answered, "They would never surrender, while they had one arm "to eat, and another to fight." At length they cut the main bank of the Maese and the Yssel. At first the water rose but slowly; but the wind soon changing to the north-west, turned the country round Leyden into a sea, by which means fifteen hundred Spaniards were drowned. The anniversary of this deliverance is observed on the third of October as a solemn day of thanksgiving, and after sermon the same siege is represented in a tragedy, the money arising from which is applied to charitable uses.

Amsterdam, or Armsteldam, is situated in the 52d degree 20 minutes north latitude, and in the 4th degree 90 minutes east longitude, at the influx of the Y and the Amstel, where is a sluice, by means of which that river continues its course through the town. This is one of the greatest trading towns in Europe, and though from the shallowness of the Pampus, the only passage leading to it out of the Zuyder sea, it might be thought but indifferently situated for commerce, as ships of burthen must be lightened in order to pass through it, and afterwards wait for an easterly or north-east wind, to go through the Marsdiep into the North Sea; yet the harbour is one of the largest and safest in Europe: and it has this advantage, that the other towns of the province can easily send their goods thither, and receive returns; and with a fair wind it is but a few hours passage to or from all the ports of North Holland, Friesland, Overyssel, and Guelderland. The ground is naturally marshy, and the buildings founded on oaken piles, which occasioned the facetious Erasmus to say, that in his country vast multitudes of people lived on the tops of trees. The middle of the town is intersected by a great number of navigable canals, which, while they conduce to the pleasantness and cleanliness of the place, are at the same time a great convenience to trade; but in hot and calm weather they emit fetid effluvia, which would be still worse, were not the water kept in continual motion by the working of two large water-mills, and one turned by horses. All the canals issue into the Y and the Amstel, and such as go far up into the town, being intersected by cross canals, have a communication with each other. These canals divide the town into a multitude of islands joined together by bridges, some of which are of stone and others of wood.

The city forms a semicircle on the Y, and is fortified on the land-side with ramparts and twenty-six regular bastions, and on that side the neighbouring country may be laid under water. On the side next the Y it is secured by a double row of piles driven into the river, projecting some feet above the surface; but in some places openings are left for ships to pass in and out, and in the night these openings are fenced with a boom. The piles extend in length no less than fifty thousand feet, and without them, in a place called the Laag, lie the large ships in such numbers, that their masts resemble a wood. In the intermediate spaces, between the town and the inner row of piles, are ranged innumerable small ships and barks.

The Amstel divides the town into two parts, and in 1732, when the houses were numbered, they were found to amount to twenty-six thousand eight hundred and thirty-five; but the inhabitants do not exceed two hundred thousand.

The gates of the city are very fine, particularly that of Harlem, which is adorned on each side with large columns, and a lion's head on the top of each; in the middle is the city's present arms, and on the frieze of the inside of the gate towards the town is the antient coat, which was a ship without a rudder. On each side of this gate is a guard-house, one for the burghers, and the other for the soldiers of the garrison, who are paid by the magistrates, and are under their command. There are four other principal gates; before which is a bridge of several arches, with draw-bridges, and another stone gate, that is shut every night. The bridge over the Amstel, which joins one side of the rampart to the other, consists of thirty-five arches, eleven of which are very high, and eight of them shut up; the rest of them being open for boats to go up and down the Amstel. This bridge is six hundred and sixty feet long, and seventy broad, with iron rails on each side.

Most of the streets are extremely clean; but, except those that have canals, they are much too narrow. They are, however, rendered less incommodious by the hired coaches being set on sledges drawn by one horse. Merchandise is also drawn on sledges, which are not only the most useful vehicles for the inhabitants and their trade, but are calculated to preserve the houses, which, from their being built on piles, might in time be damaged in their foundations, by having a great number of wheel-carriages. Gentlemen's coaches are, however, for the most part set on wheels; but for this liberty they pay a considerable tax. The principal streets, or rather quays of the canals, are agreeably planted on each side with trees. The houses are rather neat than elegant or commodious: the nature of the climate renders it necessary to wash them often; but the greatest part of the people carry this kind of cleanliness so far as hardly to afford themselves

themſelves time for the neceſſary care of their perſons. The entrance of their houſes is generally by ſteps, which riſe four or five feet from the ground, and the paſſage into the rooms, which runs very deep, is floored and pannelled with marble, which has an air of grandeur in miniature. They have much neat, and ſome rich furniture, which ſeems rather occaſioned by an antient cuſtom of neatneſs and elegance, than the effect of a luxurious and expenſive taſte.

Of all the buildings in Amſterdam the town-houſe is the moſt diſtinguiſhed. It is two hundred and eighty-two feet in front, two hundred and thirty-two deep, and a hundred and ſixteen high, excluſive of the cupola. It coſt three millions of guilders, or three hundred thouſand pounds ſterling, when money was more valuable than it is now, which will be leſs ſurpriſing, if we conſider that it is founded upon thirteen thouſand large piles. This is a very grand and uſeful building, and yet it is neither elegant nor agreeable. It contains the offices and tribunals for the execution of the laws in the ſeveral branches of the military, as well as civil government. It is very obſervable, that the entrance of this building is very mean; but had the doors been proportioned to the reſt of the edifice, they would have been more ſubject to be forced, upon occaſion of thoſe tumultuous aſſemblies of the people, that are not unfrequent in this country. The want of a large door ſuitable to the grandeur of the building is, according to Dr. Buſching, a deſigned omiſſion, the ſeven doors in number and uniformity repreſenting the ſeven provinces. The inſide is ſaid to be very beautifully ornamented with marble, jaſper, ſculpture, and paintings. In ſome of their vaults, or cellars, are kept the treaſures of the celebrated bank of Amſterdam; in others are confined criminals under ſentence of death, and others again ſerve as apartments for officers of ſeveral claſſes. In the upper part is an arſenal, as it is called, though it is rather a collection of old-faſhioned armour and weapons. The chimes of the tower are incomparable, and it commands a fine proſpect of the city and its environs as far as the Zuyder ſea. Among the other public buildings are the admiralty and Eaſt India-houſe, which are large and beautiful. On the harbour ſtands the arſenal and magazine for military ſtores both for ſea and land-ſervice. Among ſeveral things remarkable in this magazine is a reſervoir on the top of the houſe capable of containing ſixteen hundred tons of water, which, by means of leaden pipes, may be conveyed in caſe of fire to ſixteen different parts of the city. Near the arſenal is the dock, which is above five hundred feet long.

In Amſterdam are eleven churches of Dutch Calviniſts, two of which are parochial, with two of French, two of Engliſh, one of Arminians or Remonſtrants, two of Lutherans, and three of Mennonites. The Armenian Chriſtians have likewiſe a church here, but the Papiſts have a greater number of places of worſhip than all the above-mentioned ſects put together, and in particular have twenty-four maſs houſes that are very large. The ſynagogue of the Portugueſe Jews is a ſpacious and ſtately building of a quadrangular form, and the inſide is extremely neat. The other Jews have alſo their diſtinct ſynagogues. The number of poor-houſes is conſiderable; their incomes, and their conveniencies and cleanlineſs are worthy of admiration. Here is an hoſpital for aged men and women, conſiſting of ſeveral buildings; a new edifice for aged people of both ſexes; the diaconie for old women, which is the moſt ſtately ſtructure of them all, and in which old men alſo receive a comfortable ſupport; with a receptacle for lunatics, and ſeveral orphan-houſes, as the eleemoſinary-houſe, in which are frequently two thouſand children, the diaconie orphan-houſe, the burgher orphan-houſe, &c. There are alſo ſome houſes of correction, as the raſp-houſe, where felons raſp Brazil wood for three, four, ſeven, ten years, or for life, according to the nature of their crime. When they are incorrigible, and too lazy to work, they are often put for an hour or two into a dungeon where water comes in; ſo that they muſt be continually labouring at the pump, in order to avoid being drowned. Here are alſo ſpin-houſes, where proſtitutes, and other women of bad character, are kept to ſpinning. All theſe foundations, and the good police of the city, have ſuch an effect, that there are no beggars in the ſtreets. Here are officers who take up all vagabonds, and convey them directly to houſes provided for that purpoſe, where they are forced to work every man in his own buſineſs, in proportion to his ſtrength and ability. Here the poor who want work, and offer themſelves, are received. In Amſterdam and moſt of the conſiderable cities in Holland, is alſo a public office, where all poor travellers that can give any account of themſelves may go and take a loaf, a penny, and a paſſport, by virtue of which they are received gratis into the boats which carry paſſengers and goods from town to town.

They have alſo a charitable foundation, which is extremely remarkable. As perſons of all nations reſort to Amſterdam, many of whom have not much to ſpend, and the taverns are generally very dear, they have ſpacious edifices, where all poor ſtrangers of both ſexes who are obliged to make any ſtay in this city are received, neatly lodged, and have bed, board, and waſhing, for three days and nights, during which time, if any of them fall ſick, they are removed into a neighbouring hoſpital; but after the expiration of three days, they muſt remove from thence, and are not allowed to return for ſix weeks, on pain of being ſeverely puniſhed.

Amſterdam abounds in artificers and manufacturers. Beſides which, this city is alone in poſſeſſion of half the immenſe trade which the Dutch carry on to the Eaſt-Indies, and governs the whole. Its commerce with Spain and the Spaniſh Weſt-Indies is very great, nor is it leſs conſiderable to the Levant, Italy, and Portugal. Amſterdam alſo engroſſes almoſt the whole northern trade carried on by the Dutch to Norway, and the countries ſituated in the Baltic.

Rotterdam, a large and populous city, fourteen miles to the ſouth-eaſt of the Hague, in the fifty-ſecond degree ten minutes north latitude, and the fourth degree twenty-ſix minutes eaſt longitude. It is ſeated on the Merwe, which at this place receives the Rotter, after it has taken its courſe through the city. This river is very broad, and of a depth ſufficient to admit ſhips of tolerable burthen; but if they draw above fifteen feet water, they are obliged to take the way of Helvoetſluys to Rotterdam. The mouth of the Merwe lies five German miles to the weſt of Rotterdam, where it gradually becomes ſhallow by the gathering of the ſands. The canals within the town are ſo deep, that the largeſt ſhips come up and take in, or deliver their cargoes at the very doors of the warehouſes. Accordingly this city, next to Amſterdam, is the place of greateſt trade, eſpecially to England and Scotland.

In 1732, its houſes were computed at ſix thouſand ſix hundred and twenty-one. The fineſt ſtreet in Rotterdam is called the Haaring-ſliet; moſt of the houſes are noble ſtone buildings. The Boomties, or Boomquays ſtreet extends delightfully along the Maeſe, here called the Merwe, which is here near a mile and a half in breadth. It is upwards of half a mile long. It has a row of lofty trees, and the houſes reſemble palaces; on the other ſide runs the river, which has ſhips continually ſailing in or out, or lying at anchor. This is the place of general reſort for people of condition, to whom it ſerves as a mall.

The principal public buildings here are the bank, the Eaſt and Weſt-India-houſes, the arſenal, and the exchange. The firſt admiralty college of the United Provinces has its ſeat here, under the direction of twelve commiſſioners.

There are here four churches belonging to the Dutch, one of French, and one of Engliſh preſbyterians, with an Engliſh epiſcopal church, whoſe miniſter has a hundred pounds ſterling per annum from the king of Great-Britain, beſides ſurplice fees, ſaid to amount to two hundred pounds more; there are alſo a Scots and a Lutheran church, the laſt of which is new and handſome. The ſynagogue of the Portugueſe Jews is a very fine ſtructure, though not ſo magnificent as that in Amſterdam. Among other public buildings is the great bridge acroſs the Merwe, in the middle of which is a fine braſs ſtatue of the celebrated Eraſmus, who was a native of this city.

The

The Hague is a moſt beautiful place, ſituated in a very delightful country, ten miles north-weſt of Rotterdam; but, from its having neither gates nor walls, is called a village. It is, however, ſurrounded by a moat, bordered with a walk of lofty and ſhady trees, and at the avenues of the town is paſſed by means of drawbridges. The ſtreets are broad, ſeveral of them are without canals, and the houſes are, for the moſt part, extremely well built. The number of coaches belonging to the noblemen and gentlemen, and the gay appearance in point of dreſs, give a very different idea of life from that of the trading cities. People here are more polite and eaſy in their behaviour, than in other parts of Holland; the moſt conſiderable perſons in Europe meeting there, as well as the aſſembly of the States General, which alſo draws thither the greateſt part of the people of the firſt diſtinction in the United Provinces. Indeed, the Hague may be conſidered either as a great city, or as a rural ſcene, while, as it is cuſtomary in great cities, they have plays and other amuſements.

In 1732, the number of houſes were found to amount to ſix thouſand one hundred and ſixty-four, beſides the public edifices, and among the former are very large and regular buildings. There are alſo here ſeveral ſquares, which being planted with trees, and forming pleaſant walks, occaſion a great reſort of people. Beſides the States General, and thoſe of the provinces, which render it the reſidence of foreign ambaſſadors, envoys, and other foreign miniſters, here is the council of ſtate for the United Netherlands, the council of war, the general chamber of accompts, the general mint-chamber, the council of Brabant, and ſeveral others.

The old palace of the counts of Holland at preſent belongs to the ſtadtholders, and has been repaired with ſome very magnificent additions. In the center of the area between the buildings of this palace, is the great hall where the trophies of the republic in their many victories over various enemies are hung up. Within this building are not only the above colleges; but a number of bookſellers ſhops, and the church of the French Calviniſts. At the Hague are alſo three churches of Dutch Calviniſts, an Engliſh church, one belonging to the Lutherans, ſeveral maſs-houſes, and two Jewiſh ſynagogues, two alms-houſes, an houſe of correction, and an orphan-houſe. The canals are not kept with ſuch care as at Amſterdam and other places, on which account the air is thought to be leſs pure and healthy than in many other parts of Holland.

The environs of the Hague are extremely delightful; and in its neighbourhood is a fine pleaſure-garden, in imitation of that of Vaux-hall: on the eaſt ſide the town is bounded by beautiful meadows, to the ſouth by ſplendid ſeats, to the weſt by ſand-hills along the North Sea, on which ſide is a ſtraight avenue paved with brick, and a walk for paſſengers, planted with ſeveral rows of trees leading to the village of Scheveling, which is at two miles diſtance; and to the north is a delightful wood, in which the ſtadtholder has a ſeat known by the name of The Houſe in the Wood.

It will not be improper to mention here Broek, a large and handſome village of North Holland. The houſes are all built of boards; they ſeldom exceed one ſtory, and the roofs are tiled. The boards which form the outſide are painted according to every one's fancy, and this is ſo often done, that the houſes ſeem always new. The windows are generally faſhed and decorated with beautiful curtains. The inſide of the dwellings is not only neat, but embelliſhed beyond what can be eaſily imagined, and all who have the ſmalleſt piece of ground before their houſes, never fail to convert it into an agreeable garden, diverſified with gravel walks, ſhell-work, images, and little hedges, or painted rails. The village is watered by canals, which are kept with the greateſt care, and all the ſtreets paved with bricks, which in ſome places are diſpoſed in the form of flowers, and are frequently waſhed. That theſe ornaments may not be defaced, or their cleanlineſs interrupted, the ſtreets are deſignedly made too narrow for carriages to paſs through. The cattle, inſtead of being permitted into the village, are kept by the meaner ſort of peaſants, who dwell among the paſtures, and all paſſengers muſt put up at the inns without the village. Not only the wooden furniture in the houſes, but the very broomſticks are painted, as are alſo the gates and rails in the meadows. The inhabitants either trade or ſubſiſt on their fortunes, and among the latter are frequently many merchants, and tradeſmen of Amſterdam, who having acquired a plentiful fortune, retire here to enjoy it in tranquility.

There are likewiſe within the province of Holland ſeveral ſmall iſlands, that lie in the Zuyder ſea, and formerly joined to the continent. The inhabitants of theſe iſlands being from their childhood innured to that element, make excellent mariners.

The principal of theſe iſlands is the Texel, which has a fruitful ſoil, and many of the inhabitants breed ſheep, and beſides trading in wool, make with the milk a kind of green cheeſe, which is much admired. In the whole diſtrict are ſix villages, and on the eaſtern coaſt is a commodious road, ſtiled the Moſco-road, which is the rendezvous of the outward-bound India ſhips.

SECT. VI.

Of the Province of ZEALAND.

Its Situation, and the Manner in which the Iſlands of which this Province is compoſed are ſecured by Dykes. Of the Air, Climate, and Produce of the Country; with a conciſe Account of the States, and a Deſcription of the Cities of Middleburg, Fluſhing, &c.

ZEALAND or Zeeland entirely conſiſts of iſlands formed by the many outlets of the Scheld. On the eaſt it is bounded by Brabant, to the ſouthward by Flanders, to the weſtward by the North Sea, and on the north by Holland. The name of this province, which ſignifies Sea-land, ſufficiently points out its ſituation.

The iſlands of Walcheren and Schouwen, on the weſtern coaſt, are defended againſt the violence of the ſea by downs or ſand-hills; and on the other ſides, like the reſt of the iſlands of Zealand, by vaſt dykes, or banks, which at the bottom are twenty-five German ells broad, and at the top ſo wide that two carriages may paſs abreaſt. The height is alſo proportioned to their thickneſs; yet in high tides and ſtormy weather, the waves, in many places, ſometimes force a paſſage, or even flow over them. The firſt formation of theſe dykes muſt have been attended with immenſe labour and expence, ſince the very repair and maintenance of them require large ſums. The dykes of this province alone would form a length of forty miles, each mile reckoned at fourteen hundred rods, and ſuppoſing the expence of one rod with another was ſix Dutch guilders, the expence of the ſeveral outward dykes taken together amount to three hundred and forty thouſand pounds ſterling.

Though the inhabitants of the other provinces, as well as foreigners in general, complain that the air is here heavy, diſagreeable, and unhealthy; yet no people look better, or enjoy a more confirmed ſtate of health than the natives, who are bred up in the country.

The ſoil is fertile, and famed for its excellent wheat, and alſo for madder, the cultivation of which employs many of the inhabitants. It likewiſe abounds in fruit, and its rich paſtures are covered with flocks of fine ſheep. The water around the iſlands ſupply the people with plenty of fiſh, particularly with oyſters, lobſters, and muſcles of an uncommon ſize and goodneſs. But though Zealand enjoys plenty of all kinds of proviſions, fuel is very ſcarce, eſpecially turf, which being brought from the other provinces, bears a great price. They alſo uſe great quantities of Engliſh coals.

In the whole province are eleven cities, and a hundred and ten villages, ſome of which are very large. The inhabitants are ſaid to be the moſt wealthy in all the Netherlands, which is in a great meaſure owing to their trade by ſea, for which they have every convenience that can be deſired. Their numerous privateers alſo, in time of war, are ſuppoſed to have brought great riches into the country.

The ſtates of Zealand conſiſt of ſeven members, the preſident of which is the firſt nobleman of the province, and the other members or ſtates are the deputies of ſix voting towns, which are Middleburg, Zirkzee, Goes, Tholen, Fluſhing, and Veer. Zealand has two high courts of juſtice in common with Holland, of which we have already given an account. This province always ſends four deputies to the aſſembly of the States General, who hold their office during life, and are alternately choſen from among the magiſtrates of the ſeveral voting towns, only Middleburg always ſends one.

Middleburg, the capital of Walcheren, and of the whole province, is a large, handſome, rich, and ſtrong town, which ſtands nearly in the center of the iſland, to which ſituation it owes its name, and is ſeated in the fifty-firſt degree forty-ſeven minutes north latitude, and in the third degree forty-one minutes eaſt longitude. A canal a mile and a half in length affords this city a communication with the Weſt Scheld, and is capable of receiving the largeſt ſhips. Middleburg is fortified with a wall, ſtrengthened with thirteen baſtions. Here the ſtates of the province hold their meetings, as alſo the deputies who aſſemble in St. Nicholas's abbey. It is likewiſe the ſeat of the admiralty-college, the chamber of accompts, and the mint.

Here are ſeveral fine ſquares and ſtately public buildings, particularly the town-houſe, which is a noble pile, with a very high tower and clock, which laſt coſt a hundred and fifty thouſand guilders. It contains ſeven Calviniſt churches, with an academy, an Engliſh, French, Lutheran, Mennonite, and Popiſh church, and a Jewiſh ſynagogue. It is a place of great trade, particularly in wines. In 1574, after a ſiege of two years, it fell into the hands of William I. prince of Orange, and has ever ſince been in the poſſeſſion of the States. The high road from hence to Fluſhing is all the way beautifully planted with trees.

Fluſhing, in Dutch Vliſſingen, is a well fortified town at the mouth of the Hondt, or Weſtern Scheld, and defends not only the paſſage into that river, but alſo that to the other iſles of Zealand, and even into Flanders by ſea. It lies eight miles to the ſouth of Middleburg. Its harbour, which is large and ſecure, lies between two moles, or dykes, on the ſouth-eaſt of the iſle of Walcheren, and two canals. Its new harbour was formed at the general expence of the province in 1688, and is ſeventeen hundred Rheinland rods in length, with two hundred in breadth, and will admit, even up to the town, a fleet of eighty large men of war. To the right of the new haven, leading to the provincial baſon, is a large dock, to the weſtward of which lies the entrance into the old harbour, which is divided into two departments, and ſerves for merchant-ſhips. The ſea runs quite up to the other end of the town; ſo that loaded veſſels come up to the very doors of the merchants. The houſes are in general well built, and, beſides other fine ſtructures, the town-houſe is a magnificent and regular pile. In the town are three churches of Dutch Calviniſts, one of French, one of Engliſh, and one of Mennonites. In the year 1749 one of the churches, the prince's palace, and the naval ſtore-houſe, were deſtroyed by fire; but the firſt was ſoon rebuilt. This was one of the cautionary towns delivered up to queen Elizabeth by the States as a pledge of their fidelity, and as a ſecurity for the money that princeſs had expended in aſſiſting them againſt the Spaniards, and of which the celebrated Sir Philip Sidney was governor in 1585; but it was redeemed again in 1616, under the reign of king James I. for an inconſiderable ſum, much leſs than the money they ſtood indebted to England.

With reſpect to the other iſlands, South Beveland is both the largeſt and moſt pleaſant, containing the town of Goes, and a conſiderable number of villages. North Beveland was once indeed the moſt pleaſant and fertile country of all Zealand; but in 1530 and 1532 it ſuffered ſuch a terrible inundation, that great numbers of people and cattle periſhed, and nothing was to be ſeen on the whole iſland but one ſteeple, which roſe above the ſurface of the water. But about a century after, the ground being raiſed by the continual increaſe of the mud, the iſland was dyked in and cultivated, and at preſent contains a ſmall town and ſeveral villages. The iſland of Shouwen has the town of Zirkſee, which has a ſeat and vote in the ſtates of the province; with a ſmall town and ſome villages. There are alſo the iſlands of Duiveland and Ter Tholen, in which there are ſeveral villages, and in the latter alſo a town of the ſame name with the iſland.

SECT. VII.

Of the Province of UTRECHT.

Its Situation and Produce: the Number of its Cities, Towns, and Villages: the States of the Country, and its eccleſiaſtical Government; with a Deſcription of the Cities of Utrecht and Amersfort.

THE province of Utrecht, excepting in one ſmall ſlip of land to the northward, which borders on the Zuyder-ſea, is wholly environed by Holland and Guelderland. It extends about thirty-two miles from the ſouth-eaſt to the north-weſt, and twenty-two from the ſouth-weſt to the north-eaſt. This country enjoys a good air, and in moſt parts the ſoil is very fruitful. Indeed to the eaſtward, near the borders of the Veluwe, it conſiſts either of ſandy hills or ſmall eminences, which are in general covered with trees; but in ſome places contains ſpots of indifferent paſture-ground. On the ſouth ſide, between the hilly part and the river Lek, it has good arable land, and to the weſtward the country perfectly reſembles Holland; it chiefly conſiſting of rich meadows, though there are many ſpots of turf grounds.

In the province of Utrecht are five cities, and ſixty-five towns and villages. Its ſtates are compoſed of the clergy, the nobility, and the towns: indeed the former are merely nominal, and conſiſt of nobles and citizens of the Calviniſt religion, and not of eccleſiaſtics. They are, however, elected from the chapters of the five churches at Utrecht, and ſtill in the aſſembly of the ſtates repreſent the antient clergy of the country. The college of the deputies of this province conſiſts of twelve members, each claſs of the ſtates ſending four. The chamber of accompts is under the direction of four commiſſioners, and the provincial court of juſtice is compoſed of a preſident, ſix ordinary and three extraordinary aſſeſſors.

The Calviniſt congregations of this province have ſeventy-nine miniſters, who hold a ſynod once a year at Utrecht. The Papiſts have above thirty churches in this province, under forty-five prieſts; the Lutherans two congregations and three miniſters; the Remonſtrants the ſame number; and the Baptiſts two.

The province of Utrecht is divided into four quarters, and has five cities, which have a vote in the ſtates of the province; the principal of which are the following:

Utrecht, in Latin Ultrajectum, the capital of the province, ſtands in a delightful corn country, in the fifty-ſecond degree ten minutes north latitude, and in the fifth degree ſeven minutes eaſt longitude. It is ſituated on the river Rhine, which here divides itſelf into two branches, called the Old and New Rhine, both of which traverſe the city through its whole length, after which they unite again. This city is pretty large, it being about an hour and an half's walk in circuit, and is alſo very populous, though it has no other defence than a wall on the old canal. The inhabitants chiefly conſiſt of traders and artificers; but along the new canal are large and handſome houſes inhabited by gentlemen.

Among the ſeven churches belonging to the Dutch Calviniſts, the principal is the cathedral, which is dedicated to St. Martin, and ſtands in the center of the city; but only conſiſts of the choir, the greateſt part of the old cathedral being deſtroyed by a terrible ſtorm in 1674, ſince which the tower has always remained ſeparate from the body of the church. The chapter belonging to this cathedral is compoſed of forty members, who purchaſe their places, for which they generally pay between ſix and ſeven thouſand guilders. The other chapter churches in this city are the Old Minſter, or that of St. Salvator, St. Mary's, St. Peter's, and St. John's. In the firſt of theſe a part has been partitioned off, as a place of worſhip for the Engliſh who reſide here, though they are not

very numerous. Over the church is a muſeum, which contains a variety of curioſities and antiques. St. Peter's church has been aſſigned to the French Calviniſts, who conſtitute a numerous congregation. The Lutherans, the Remonſtrants, and the Mennonites, have each of them a church, while the Papiſts meet in houſes of which they have ſeveral appropriated for that purpoſe. In this city alſo reſides the chief of the Janſeniſts in the Netherlands, who ſtiles himſelf archbiſhop of Utrecht, and is elected by the nominal chapter, which, including the dean, conſiſts of eight canons. The ſtates of the province meet in a building called the States chamber, which is alſo the ſeat of the other provincial colleges. In the German-houſe reſides the commander of the Teutonic order; here is alſo a celebrated univerſity, which is dependent only on the city magiſtracy, and not on the whole province. Its phyſic-garden is particularly curious, and for the recreation of the ſtudents, on the eaſt ſide of the city, juſt without the gate, is a beautiful mall, conſiſting of ſeven ſtraight walks, two thouſand paces in length, regularly planted with limes; but that in the middle is properly the mall.

In this city the memorable union was formed between the Seven United Provinces, in the year 1579. In 1672 the French took this city without the leaſt reſiſtance, and in 1712 a congreſs of plenipotentiaries was opened here from all the ſtates in Europe, which, within two years, terminated in a general peace.

Amersfort, or Amersfoort, is ſituated fourteen miles to the north-eaſt of Utrecht, on the river Ems, which has its riſe in theſe parts from the confluence of ſeveral rivulets, and firſt receives that name here, where it becomes navigable. It is a ſtrong town ſituated at the foot of a hill, in a pleaſant and fertile country. The buildings, particularly thoſe of the Old Town, are very neat. It has three churches, one of which is a large and ſtately ſtructure. The hoſpitals of Amersfort reſemble thoſe of the larger cities, and here is a public ſchool, where ſeveral perſons of eminence have had their education. At this port are ſhipped all the goods brought out of Germany by the Heſſian waggons, and conſigned to Amſterdam. Its new erected manufactures of dimity and bombazines are in a thriving way. It formerly ſuffered much from the inhabitants of Guelderland, who took it in 1543, and in 1629 this city was alſo taken by the Spaniards, who afterwards quitted it.

SECT. VIII.

The Province of FRIESLAND.

Its Situation, Extent, and Produce: the Manner in which the antient Inhabitants eſcaped from the Inundations occaſioned by the breaking of the Dykes: their Language, Religions, and Government; with a Deſcription of Lewarden, Franeker, and Harlingen.

FRIESLAND, in Latin Friſia, is thus called from the antient Friſians, a martial people, who are ſaid to derive their name from Friſſen, to dig, they having recovered this country from the ſea and rivers by digging, or caſting up dykes. This country is bounded on the eaſt by the river Lawers, which parts it from Groningen; on the ſouth by Overyſſel; on the weſt by the Zuyder-ſea; and on the north by the German or North ſea. Its greateſt extent from north to ſouth is thirty-ſeven miles, and from eaſt to weſt thirty-two.

The air and ſoil of this province very nearly reſemble thoſe of Holland, eſpecially in the north-weſt parts, which lie lower than the ſea, and are particularly remarkable for their fine paſtures, among which are excellent oxen, cows, and ſheep, with numerous breeds of large horſes, many of which are exported to Germany and other countries. In the more elevated parts are good corn lands, and the wheat produced in them is particularly eſteemed for the fineneſs of the ears and the whiteneſs of its flour. The Frieſland peas have alſo an agreeableneſs in their taſte ſuperior to moſt others. Here is likewiſe a great deal of turf ground; but the turf is inferior to that of Holland.

The inhabitants along the ſea-coaſt are under the neceſſity of ſecuring themſelves by means of dykes, at a vaſt expence. Formerly, when the care of theſe dykes was only the concern of the proprietors of particular eſtates, they were very low, and frequently ſuffered to fall to decay; whence they became unable to withſtand the impetuoſity of the waves, eſpecially when driven by a ſtrong north-weſterly wind. By theſe breaches the country was laid under water, and great numbers of people, as well as cattle, periſhed. To preſerve themſelves from theſe calamities, the inhabitants raiſed ſeveral eminences from twenty to twenty-five feet high, and of conſiderable circumference, to which, if not prevented by the rapidity of the inundation, they betook themſelves, with their cattle and houſhold-furniture, and there remained till the flood had ſubſided.

Frieſland may vie with Holland in the number of canals with which it is in all parts intercepted. In the whole province are eleven towns, and three hundred and thirty-ſix villages.

The inhabitants ſtill retain that ſtrong paſſion for liberty which diſtinguiſhed their anceſtors, together with their cuſtoms and manner of living, even to the antient Friſian dialect and accent, which renders the language of the country people unintelligible to the other Netherlanders. Frieſland is famed for its woollen ſtuffs; but more eſpecially for its linen, which is the fineſt in Europe, the price of the beſt ſort being at prime coſt no leſs than twelve Holland guilders an ell.

The majority of the inhabitants are Calviniſts; there are alſo many Papiſts, and a ſtill greater number of Mennonites; which is the leſs to be wondered at, as Menno Simon, from whom they derived their name, was born at Witmarſum, and firſt propagated his doctrines in this province. Theſe Mennonites form fifty-eight congregations, under the direction of a hundred and fifty-two paſtors: the Papiſts have twenty-four congregations, and thirty-one prieſts: the Lutherans have only two congregations, and three miniſters; and the Remonſtrants have no more than one; but the Collegiants have ſeveral colleges.

The whole province is divided into three quarters, namely, Oſtergo, Weſtergo, and Zevenwolde, each of which is again ſubdivided in grietenyes, or prefecturates. Each of theſe prefecturates annually chooſes two deputies, one of which is a nobleman, and the other a wealthy freeholder, diſtinguiſhed by his abilities and his virtue. The number of theſe prefecturates being thirty, Frieſland has of courſe ſixty deputies, who are diſtinguiſhed according to the three quarters. Eleven towns alſo ſend two deputies each to the aſſembly of the ſtates, which is thus compoſed of eighty-two perſons, who are annually elected.

The college of the deputy ſtates conſiſts of nine perſons, ſix from the prefecturates, and three from the towns. This college puts in execution the reſolutions of the ſtates with reſpect to civil and military affairs, as alſo thoſe relating to the provincial revenues, the diſpoſal of employments, and the like. The provincial court of juſtice is compoſed of twelve aſſeſſors, aſſiſted by an attorney-general and a ſecretary. This court alone takes cognizance of criminal cauſes; but in civil, the firſt hearing is in the courts of the prefecturates and towns.

With reſpect to its eccleſiaſtical eſtabliſhment, Frieſland is divided into ſix claſſes, under which are two hundred and ſeven miniſters. Each claſs annually ſends two miniſters and the like number of elders to the ſynod, which is held eight days after Eaſter.

The principal places in this province are the following:

Lewarden, or Leeuwarden, the capital of the province, ſtands about ſixty miles to the north-eaſt of Amſterdam, and is a rich, populous, and ſtrong town, the ſeat of its chief colleges, as alſo of the mint, and the reſidence of the principal nobility of Frieſland, whence its buildings, as well public as private, are very magnificent. It has ſeveral canals which run through the ſtreets, and are of great advantage to the trade of the inhabitants, which is very conſiderable, eſpecially as theſe canals are continued not only to the ſea, but to the moſt conſiderable towns in the province. The fortifications of this city are however

ever neglected. While Friesland enjoyed its own stadtholders, they resided in the Prinzenhof, in this city, which gave it an air of splendor and dignity; but they lost this honour in the year 1747, when William IV. was declared hereditary stadtholder of all the United Netherlands. The town-house is a noble structure begun in 1715. The Dutch Calvinists have here three churches, and in that of St. James, which is also called the Great Church, is the vault of the stadtholder's family. The French Calvinists have one church here, the Lutherans one, the Mennonites three, the Papists several, and the Jews a synagogue. Formerly a bay extended from the North Sea to this city, and was so large, as to be called the Middle Sea; but it being gradually dried up, the ground has been cultivated and built upon.

Without the city lies Marienburg, a palace belonging to the house of Nassau Orange.

Twelve miles to the west of Lewarden lies Franeker, which is situated on a canal, but is neither large nor fortified, though endowed with an university founded by count Lewis of Nassau. The halls of this university are in a building which formerly served as a convent to the fraternity of the Cross, and has a physic-garden belonging to it. There was here an antient castle, which falling to ruin, was lately pulled down. Here is also a good grammar-school, and an orphan-house. St. Martin's church is a fine building, with a handsome steeple.

Harlingen is, next to Lewarden, the largest and most populous town in all Friesland. It is situated on the sea, or rather on the Flie-water, and has a commodious harbour, with a depth of water sufficient for ships of the greatest burthen; but the entrance being obstructed by the gathering of the sands, part of the lading must be taken out before they can come in. It is pretty well fortified on the land-side, and, in case of necessity, the inhabitants can lay the whole country under water. To the west it is guarded against the invasions of the sea by dykes of prodigious strength. The Calvinist Dutch have two churches; but the wealthiest part of the inhabitants are Mennonites. Here are also some Lutherans and Papists. In 1580, the States made themselves masters of the town, and raised a strong castle here, which at that time stood close to the sea-shore.

SECT. IX.

Of the Province of OVERYSSEL.

Its Situation, Produce, Civil and Ecclesiastical Government; with a Description of its principal Towns, viz. Deventer, Campen, and Zwol.

THE province of Overyssel, or Overissel, is bounded on the north by Friesland and Drenthe; to the east by the county of Bentheim, and the bishopric of Munster; to the southward by Guelderland; and on the west by the Zuyder Sea. Its name shews that it is on the other side, or beyond the Yssel, or Issel, with respect to those provinces that lie to the west of that river, as Holland and Utrecht.

The soil is for the most part marshy, yielding only turf; but along the Yssel is very good corn-land, with several pastures, though these have not the richness of the pastures in other countries; but instead of being the property of particular persons, they belong in common to the inhabitants of the nearest villages; however, the meadows along the rivers have excellent grass. The ground is in most parts low and level, except a ridge of small hills, which run near the center of the province from south to north. It is also a fine sporting country.

The province of Overyssel is, from the nature of its soil, not so well cultivated and inhabited as some of the other provinces, and therefore has only sixteen towns, with eighty villages, all which are ranged under three divisions, named Salland, Twenthe, and Vollenhoven.

Its states consist of the nobility and the towns, both of which have an equal weight in the public deliberations. The nobility are more numerous than in any other province, and a nobleman, in order to be admitted to the assembly of this class, must not only prove his descent, and that he is of the Calvinist religion; but that he is upwards of twenty years of age, and in his district has an estate qualifying him to be summoned to the assembly, that is, of twenty-five thousand guilders. Any nobleman likewise who is in the army, and is possessed of these qualifications, is capable of being a member of the regency, provided he be not below the rank of captain; but when military affairs come under consideration, he must quit the assembly. The towns which send representatives to the states are Deventer, Campen, and Zwol, where the states alternately hold their annual meetings.

In this province is a college that may be considered as a chamber of state, or rather of finances, and is composed of six members, three of whom are appointed by the nobility, and three by the towns. It has likewise a chamber of accounts, and a chancery. In juridical affairs the three principal towns determine in the dernier resort; where, as from the sentences of the country courts, appeals may be brought before a higher tribunal, called the claringe, only held at Deventer, and before it the nobility and gentry have their first hearing. It is composed of the nobles and other persons elected by the three towns, who have a president at their head. This province sends five representatives to the States General, that is, two from the nobility, and one from each of the three towns.

The national clergy, consisting of eighty-four ministers, are divided into four classes, and each class sends three ministers and one elder to the annual synods. The Papists of this province are possessed of twenty-seven churches, and have thirty priests; the Baptists have sixteen, and thirty-five ministers; and the Lutherans three, and the like number of ministers.

The three great towns of the province that send deputies to the assemblies of the States, are the following:

Deventer, in Latin Daventria, is situated in a fertile pleasant country on the banks of the Yssel, and is the capital of the Salland quarter. It stands in the fifty-second degree twenty-five minutes north latitude, and in the sixth degree five minutes east longitude. Deventer is encompassed by a good wall, strengthened by eight bastions, some ravelins and outworks. It is not very large in circuit; but is close built, populous, and enjoys a very good trade. Here are three churches of Dutch Calvinists, one of French Calvinists, one of Lutherans, a meeting of Mennonites, and a mass-house. A gymnasium illustre was founded by the states of the province about the beginning of the seventeenth century. It was antiently a free imperial Hanse town, and has still the right of coining both gold and silver. The inhabitants at present brew excellent beer, of which great quantities are exported, and the Deventer cakes are celebrated all over these provinces. In 1589, the Spaniards made themselves masters of the town by treachery; but it was recovered by prince Maurice in 1591. In 1672, the French having reduced it without much opposition, conferred it on the bishop of Munster, whose troops kept possession of it till 1674.

Campen, a large city and port, is seated on the river Yssel, which a little before it discharges itself into the Zuyder-sea, is divided into several branches, the two principal of which form an island called Campen. The wooden bridge over the Yssel is a curious structure, it being seven hundred and twenty-three feet in length, and twenty broad: it is founded on piles; but the piers are at such a distance from each other, that it seems suspended in the air. It was formerly defended by a small fort on the other side of the river; but in 1673, that fort was destroyed by the troops of Munster. Though, according to the modern taste in fortification, this town must not be classed among the fortresses, yet on any emergency, it is able to lay the adjacent country under water. It is much smaller than Deventer, and not so compactly built; but carries on a small trade, and was one of the Hanse towns; it has also the right of coining gold and silver.

There are here three churches belonging to the Dutch Calvinists, in one of which the French Protestants are also permitted to assemble. The Mennonites, Papists, and Lutherans, are indulged in the free exercise of their religion. In 1672, the troops of France and Munster, having

having made themſelves maſters of this town, committed great outrages.

The laſt town we ſhall deſcribe in this province is Zwol, which is ſeated in a pleaſant country on the Aa, which here takes the name of the Black-water. It is ſeated at about an hour's diſtance from the Yſſel, and ſomewhat farther from the Vecht; but has a communication with the latter by means of a canal called the New-Vecht. The Black-water being deep enough for ſhips of burthen, affords the town a communication with the Zuyder-ſea, whence it is the handſomeſt and moſt wealthy place in all Overyſſel. The north part is not only watered by the Aa, but interſected by two canals, and on the outſide of two of the gates are very handſome ſuburbs. It is a very ſtrong place, it being environed both with a wall and a rampart, ſtrengthened by large and good baſtions, with ſeveral outworks, among which are three forts to the ſouth-weſt, which have a communication with each other, and with the town, by means of ſtrong lines. The Dutch Calviniſts have here three churches, beſides which there is a French congregation of the ſame perſuaſion. The Papiſts meet in four maſs-houſes; the Mennonites are likewiſe very numerous; but there are few Lutherans. Zwol was antiently a free imperial Hanſe town, and ſtill poſſeſſes the privilege of coining. In 1672, it was taken by the biſhop of Munſter, who kept poſſeſſion of it till the year 1674.

SECT. X.

Of the Province of GRONINGEN.

Its Situation, Produce, and Rivers: its Civil and Eccleſiaſtical Government, with a Deſcription of the City of Groningen.

GRONINGEN, or Groeningen, is bounded on the north by the German ocean, on the eaſt by the biſhopric of Munſter, and the principality of Eaſt Frieſland, on the ſouth by the territory of Drenthe, and on the weſt by the little river Lawers, which ſeparates it from Frieſland.

In its air and ſoil it nearly reſembles the contiguous province of Frieſland. The land for the moſt part lies low, and abounds in fine paſtures, whence grazing is one of the principal employments of its inhabitants, and it has alſo ſome corn-land. The turf here is neither ſo good, nor in ſuch plenty as in Frieſland. On the ſouth ſide of the province towards Drenthe, the ground conſiſts of heaths and ſands, interſperſed with foreſts. Between its north-eaſt ſide and Eaſt Frieſland, the German ocean forms a large bay called the Dollert, which has a communication with the North Sea by means of the mouth of the Ems.

The principal river in this province is the Hunſe, which is formed out of ſeveral ſtreams, all which unite in the town of Groningen: in that city alſo riſes the Fivel, which winding to the north-weſt, falls into the Ems. This province, like Frieſland, is every where interſected with canals and dykes for carrying off the ſuperfluous water.

It contains only three towns; but its villages amount to one hundred and ſixty-five. The ſtates conſiſts of the town of Groningen, and the Ommeland or circumjacent country; of the latter ſome are elected by the nobility, and others by the peaſants; but by way of qualification, they muſt be poſſeſſed of land within the province to a certain value. The city of Groningen is the only place where the ſtates hold their meetings, and the time of their aſſembling is generally in the month of February. Here is alſo the college of the ſtates deputies, which is compoſed of eight perſons, that is, four as repreſentatives of Groningen, and the like number from the Ommelands. Theſe execute the reſolutions of the ſtates. The chamber of accounts conſiſts of ſix perſons, and Groningen ſends ſix deputies to the States General.

The miniſters of the eſtabliſhed church, who amount to one hundred and ſixty-one, are divided into ſeven claſſes, and the ſynod meets annually at the beginning of May, one year at Groningen, and the next at Appingedam, and ſo on to five other towns, each of which belongs to a particular claſs. To this ſynod every claſs ſends three miniſters, with a certain number of elders. The Roman catholics in this province are poſſeſſed of about ten churches, under the direction of thirteen prieſts; the Baptiſts have twenty-ſeven churches, and ſixty-one miniſters; the Lutherans have three churches, and ſixty-one miniſters; and the Collegiants, two colleges in the town of Groningen.

This province is divided into two parts, the city of Groningen and its precincts.

Groningen, or Groeningen, the capital of the province, is ſituated in the fifty-third degree twenty-eight minutes north latitude, and in the ſixth degree thirty-one minutes eaſt longitude, at the confluence of ſeveral rivulets, out of which are formed the Hunſe and Fivel. The former of theſe ſtreams admits large ſhips from the ſea quite up to the city, and is of courſe of great convenience to its commerce. Its extent was formerly inconſiderable, till in 1613 it enlarged itſelf towards the weſt and north, and its ramparts were repaired with the addition of ſeventeen baſtions and a good counterſcarp; but though theſe fortifications uſed to be carefully ſurveyed every year by deputies from the college of the ſtates, yet they are now ſuffered to run to ruin. However, at about a quarter of an hour's diſtance from the town, has been erected a modern work in the form of a line, which is kept in a defenſible ſtate.

Groningen is the place where all the great provincial colleges aſſemble, and is conſequently the reſidence of the richeſt and moſt eminent families both among the nobles and commons. It contains three churches of Dutch Calviniſts, beſides the univerſity church, in which the ſermons are preached in Latin by the profeſſors of divinity. Among theſe the principal church is that of St. Martin, which is a fine ſtructure, at one end of the great market, with a high tower. St. Mary's church ſtands at the end of the fiſh market, and has alſo a very high tower, and harmonious chimes. The Lutherans are alſo poſſeſſed of one church, the Mennonites of two, and the Roman catholics of five. Here are three market-places, the largeſt of which is the ox market, ſurrounded with fine buildings; and among theſe are the town-houſe, exchange, and weigh-houſe. In the three market-places terminate ſeventeen ſtreets, ſix of which extend in a ſtraight line to the like number of gates, and there are twenty-ſeven ſpacious ſtreets in all. Moſt of the houſes have pleaſant gardens with fruit-trees. The prince's palace is on the north ſide of the city, and is adorned with pictures of all the princes of Orange and counts of Naſſau. The univerſity has profeſſors in all the ſciences, and in their library is a well-atteſted inſcription that a ſoldier lived there ſixteen days after receiving a wound in the right ventricle of the heart. They have alſo a public ſchool for the languages, with ſeven maſters, who have each a houſe and a handſome ſalary.

This city has often been taken; but in 1672 the inhabitants made ſuch a brave reſiſtance againſt the biſhop of Munſter, that after the loſs of ten thouſand men that prelate was at laſt obliged to raiſe the ſiege. We have now gone through the Seven United Provinces, and have only to conſider the countries dependent on them.

SECT. XI.

Of the County of DRENTHE, *or* DRENT.

Its Situation, Produce, Towns, and Villages; with its civil and eccleſiaſtical Government, and a Deſcription of the Town of Coverden.

THE country of Drenthe, or Drent, borders to the northward on the province of Groningen; to the eaſtward on the ſame province and the biſhopric of Munſter; to the ſouthward on Bentheim and Overyſſel; and to the weſtward on Frieſland.

The ground here is viſibly higher than in Frieſland and Groningen, it bearing a nearer reſemblance to that of Overyſſel. The more elevated parts are woody, but along the rivers it affords good paſturage. Its moſt com-

mon grain is rye, and a few places alſo produce wheat. With reſpect to the harveſt of the latter, a ſingular cuſtom prevails, that it muſt every where be begun on a certain day, which is proclaimed by tolling the bells in all the villages, and one ſtated day it muſt likewiſe be every where concluded. The ſouthern parts are overrun with marſhes.

The places in this country are, two market-towns, thirty-ſeven villages, one fortreſs, and two forts. The ſtates conſiſt of the nobles and freeholders; but every nobleman belonging to them muſt be poſſeſſed of an eſtate ſufficient to qualify him to ſit and vote, and there being only eighteen ſuch eſtates, the legiſlative part of the nobility amount only to that number. There are alſo thirty-ſix freeholders, who are annually elected by thoſe villages that have a right of voting. The ordinary aſſembly of the ſtates every year is held at Aſſen towards the beginning of March. The preſident of this aſſembly is the intendant of the country, and is always nominated by the hereditary ſtadtholder.

This country was formerly a county of the German empire. But it threw off the yoke of Philip II. king of Spain, and became a free ſtate; yet probably on account of its ſmallneſs was never able to obtain the privilege of ſending a repreſentative to the States General, it being only under their protection, and to every hundred florins raiſed by the Seven United Provinces it pays only one.

Beſides the above aſſembly of the ſtates, here is another college compoſed of the intendant and four deputies, two from among the nobles, and two from the freeholders. This college meets eight times a year to execute the reſolutions of the States, and on theſe occaſions has two more members added to it, one out of the nobility, and the other from among the freeholders. The ſupreme court of juſtice here conſiſts of an intendant, an aſſeſſor, and twenty-four counſellors, who decide without appeal.

The clergy are divided into three claſſes, under the direction of forty miniſters. Each claſs ſends a determinate number of miniſters and elders to the ſynod, which is always held at Aſſen in November; but has no connection with the ſynod of the Seven United Provinces. The principal places in the county of Drenthe are the following:

Aſſen, the capital of the county, is ſituated nearly in its center, on the rivulet of Hoorendiep, and is well built.

Coeverden, or Covorden, a ſtrong fortreſs near the frontiers of the county of Bentheim, and ſtrengthened with ſeven baſtions, that take their names from the Seven United Provinces, and likewiſe with the ſame number of half-moons and ravelins, together with a counterſcarp; beſides which there is a citadel diſtinct from the town, fortified with five baſtions. Theſe works are kept in repair at the expence of the States General. The fortreſs itſelf ſtands on a ſandy ground; but is on all ſides environed by a moraſs, which terminates on the out-works. A ſmall quantity of rain lays all this moraſs ſo effectually under water, that the place immediately becomes inacceſſible. Its ſtrength has procured it the name of the key to Overyſſel, Frieſland, and Groningen.

In the year 1592 it was ſeized by prince Maurice for the States, and immediately fortified in the beſt manner; and in 1607 count William Lewis of Naſſau-Dietz put it into ſo good a ſtate of defence, that it was thought impregnable; but ſome of the governors permitting the inhabitants to drain and incloſe the adjacent lands, and convert them into fields and meadows, this overſight, with the want of artillery and military ſtores, occaſioned its being taken by the biſhop of Munſter, after a very ſhort ſiege, in 1672, though not without a ſtout reſiſtance: however, on the laſt day of the ſame year the States recovered it by ſurprize.

SECT. XII.

Of the Generalité Lands, including Dutch Brabant; their Government, and the Religions of the Inhabitants; with a Deſcription of the Cities of Bois le Duc, Breda, Bergen-op-Zoom, Maeſtricht, and Sluys, in Flanders.

BY the Generalité Lands is meant that part of the Netherlands that has been ſubdued by the Seven United Provinces, by their joint arms, and ſolemnly ceded to them by treaties and conventions. The nobility and towns of theſe countries, particularly thoſe of Brabant, have frequently ſought to become members of the ſtate, and to be allowed to vote as a diſtinct province in the aſſemblies of the States General; but this has as often been denied them. They, however, retain all the privileges they enjoyed when they fell under the power of the republic. The hereditary ſtadtholder of the United Provinces is governor-general over all theſe countries; and the States General, probably from a principle of œconomy, never appoint particular governors to any particular province. They have indeed governors of fortreſſes, but their power is limited to the ſoldiers. The States General and the council of ſtate annually ſend ſome of their members to execute all affairs of importance, who, at their return, lay an account of their proceedings before the aſſembly.

Juſtice is here adminiſtered by ſeveral colleges; firſt by the court of Brabant, under whoſe cognizance is that part of Limburg which belongs to the States, and this college holds its ſeſſions at the Hague: the ſecond is the Flanders court, which meets at Middleburg; and the third the court of the upper quarter of Guelderland, which has its ſeat at Venlo.

The eſtabliſhed religion in theſe countries is the Calviniſt; but the Catholics, being much more numerous, are permitted an entire freedom in public worſhip, except in proceſſions and other public ſolemnities.

The Generalité Lands conſiſt firſt of a part of Brabant. This diſtrict contains the whole quarter of Bois le Duc, and a ſmall part of the Antwerp quarter, it bordering towards the north on Guelderland and Holland; to the eaſtward on the dutchy of Cleve and the upper quarter of Guelderland; to the ſouthward on the biſhopric of Liege and Auſtrian Brabant; and to the weſtward on Dutch Flanders and Zealand.

The court for Brabant, which is the high tribunal for this country, and likewiſe of that beyond the Maeſe, meets at the Hague, and conſiſts of a preſident and eight aſſeſſors, with ſeveral officers for various caſes, as thoſe for widows, orphans, and other deſtitute perſons. It is inveſted with an unlimited power, and grants patents, privileges, favours, and pardons; confers honours, naturalizations, &c.

The ſoil of Bois le Duc is ſandy, and for the moſt part naturally barren; but by the indefatigable induſtry of the inhabitants is brought to yield good pulſe, rye, and buckwheat, with oats and flax, though it affords little or no wheat and barley. It has alſo good fruit, and plenty of poultry and wild-fowl. The inhabitants are very fond of field ſports, eſpecially of falconry, and moſt of the falconers of the European princes are of this country.

The principal city in the quarter of Bois le Duc is the city of the ſame name, called in Latin Silva Ducis: it is ſituated in the fifty-firſt degree thirty-ſix minutes north latitude, and in the fifth degree twenty-five minutes eaſt longitude, at the confluence of the rivers Dommel and Aa, which, after their junction, are called the Dieſt. At about an hour's diſtance from hence, this river loſes itſelf in the Maeſe. Formerly Bois le Duc was ſurrounded by a deep moraſs; but ſome parts of this moraſs becoming dry, rendered it neceſſary to ſtrengthen the works towards theſe acceſſible places. It was alſo defended on the north-weſt ſide by a citadel, on the ſouth by two forts, and on the north ſide by a ſmall fort. The city is pretty large, and interſected by many canals; it has three churches belonging to the Dutch Calviniſts, with one of French, one of Lutherans, and ten maſs-houſes; the majority of the people being of the Romiſh religion. The trade and ſhipping of Bois le Duc are conſiderable. It was firſt founded in 1184 by Godfrey III. duke of Brabant, who cauſed a wood here to be cleared and uſed in building the houſes, and to this circumſtance it owes its name, which ſignifies the Duke's wood. In

1559 pope Paul IV. erected a biſhopric here; but on its being taken by the States in 1629, the ſee was aboliſhed.

Within that part of the quarter of Antwerp is the barony or free lordſhip of Breda, which conſiſts of good corn land and paſtures; but has many heaths and moraſſes. Its principal rivers are the Merk, or Mark, which, after receiving ſeveral other rivulets, is called the Dintel. This barony belongs to the houſe of Naſſau; the ſovereignty of it is lodged in the States General. The principal city it contains is the following:

Breda, the capital of the barony of the ſame name, is ſeated on the river Merk, which at this place receives the Aa. The latter of theſe two ſtreams being a little before increaſed by the Byloop, is here rendered navigable, and has a communication with the German ocean. It ſtands in the fifty-firſt degree thirty-five minutes north latitude, and in the fourth degree fifty-two minutes eaſt longitude. Its fortifications, without very great improvements, are unable to ſtand a long ſiege, though the city itſelf is partly covered by a moraſs, and, by means of the Merk and Aa, the inhabitants are able to lay a part of the country under water. It conſiſts of about fifteen hundred houſes, is well built, and contains a regular caſtle encompaſſed with a moat; and fronting the entrance is a ſquare delightfully planted with trees. The great church, now in the hands of the Proteſtants, has ſeveral very fine monuments, and a handſome ſpire three hundred and ſixty-two feet high: the Dutch have alſo another church, and the French have alſo one, as have likewiſe the Lutherans; but though the Roman catholics are more numerous, they are allowed only three chapels. The town-houſe is a large ſtructure, and there are four ſpacious market-places; but its commerce and woollen manufactures are greatly declined.

In 1590 prince Maurice took this city by ſtratagem; but the Spaniards recovered it in 1625, and in 1637 the States again made themſelves maſters of it. Here king Charles II. reſided when invited over to England, and his famous declaration was dated from Breda. In 1667 the treaty between him, Lewis XIV. of France, and the States General, was concluded here.

Twenty miles to the weſt of Breda is Bergen-op-zoom, the capital of a marquiſate of the ſame name; through it runs the rivulet or rather moat of Zoom. The ſouth ſide of the town ſtands on a ſmall eminence. It has been long celebrated as a ſtrong fortreſs; and its wall, which is about an hour's walk in circuit, is defended by five baſtions and ten horn-works. Beſides the other fortifications on the north ſide, a ſtrong line was drawn there in 1727, that has a communication with Moermont, Pinſen, and Rover forts, and the South or Water fort of five baſtions commands the entrances of the old and new harbour. The adjacent country may alſo be laid under water; and as long as Zealand continues clear of enemies, ſupplies and reinforcements may be thrown into it by means of the Scheld. It contains about eleven hundred houſes, with an old palace called the Hof, that was once the reſidence of the marquiſſes of Bergen; and at preſent the chamber of accompts, and the feudal court belonging to the marquiſate, are kept in it. Here is a Dutch Calviniſt church, and another divided into two partitions, which is aſſigned to the French Calviniſts and the Lutherans. The Papiſts have likewiſe a chapel. The States General keep a good garriſon here, and the governor is always a perſon of diſtinguiſhed reputation.

This town was firſt walled in 1287. In 1588 and 1622, it held out againſt two powerful armies of Spaniards; but in 1747, the French made themſelves maſters of it by ſurpriſe, after a ſiege of ten weeks. It was, however, reſtored in 1749, though in a very ruinous condition; but the houſes and Dutch church demoliſhed in that ſiege, have been ſince rebuilt.

Maeſtricht is one of the moſt antient and remarkable cities in the Netherlands, particularly for its ſtrength. It is ſeated in the fiftieth degree fifty-one minutes north latitude, and in the fifth degree thirty-eight minutes eaſt longitude, on the banks of the Maeſe, by which it is divided into two parts, joined to each other by a grand ſtone bridge. The ſmalleſt, which is ſituated to the ſide of the dutchy of Limburg, is called Wyk. Maeſtricht is one of the ſtrongeſt fortreſſes belonging to the republic, and alſo one of the principal keys of the Maeſe. Some defect having been obſerved in the outworks, the late ſtadtholder William IV. about a month before his death, took a ſurvey of them, and a plan was formed for their removal. The Jeker, a ſmall river that runs through the ſouth ſide of the town, and falls into the Maeſe at the bridge, may be checked in its courſe by means of ſluices, and the level country laid under water.

The houſes within the walls amount to about three thouſand, beſides which there are three Calviniſt churches, that is, two of Dutch, and one of French, with a Calviniſt grammar ſchool, a gymnaſium, a Lutheran church, two Popiſh collegiate, and four parochial churches, eight convents of monks, eleven nunneries, one Jeſuits college, and a commandery of the Teutonic order. Though the Papiſts are permitted the free exerciſe of their religion, yet they are allowed to make their public proceſſions only twice a year, and then only round the two collegiate churches. The town-houſe is a ſtately edifice, and has a public library. There are two other elegant buildings: theſe are the houſe of the deputies of the States General, and that of the governor. This city had once a conſiderable cloth manufactory; but it is now greatly decayed.

The ſovereignty of the town belongs jointly to the States General and the biſhop of Liege; but the former alone garriſon it, and are likewiſe poſſeſſed of the ſole power over the convents and eccleſiaſtics, by virtue of which they grant privileges and immunities of all kinds. In other reſpects the town is under the joint government of the States and the biſhop; and the towns are divided into two departments, each electing half of the magiſtracy, which conſiſts of an equal number of Calviniſt Brabanters and Papiſts, born in the biſhopric of Liege. Every year both ſovereigns ſend four deciding commiſſaries, as they are called, that is, two each, for the final determination of cauſes, and other affairs relating to the town.

Antiently Maeſtricht was immediately ſubject to the head of the German empire; but in 1204 the emperor Philip ceded it to Henry II. duke of Brabant. In 1632 this city was taken by the troops of the States General, and in 1648 their poſſeſſion of it was confirmed by the crown of Spain, at the peace of Munſter. In 1672, the French made themſelves maſters of it, and in 1676, king William III. endeavoured to recover it; but without ſucceſs. It was, however, reſtored to the Dutch at the peace of Nimeguen. In ſhort, in 1748, agreeable to the preliminaries of the peace of Aix la Chapelle, it was ceded to the French, who again evacuated it at the concluſion of the peace.

About two muſket-ſhots from this place ſtands a hill, called St. Peterſburg, which being much higher than the town, and having been very detrimental to it in a former ſiege, the States General cauſed a very ſtrong fort to be erected upon it in 1701, under the name of St. Peter's fort. This lying within the territory of Liege, the biſhop complained loudly of this proceeding; but in 1717 the affair was accommodated. On this hill is an excellent horizontal quarry, with an entrance to it cloſe by the Maeſe, ſo that carts go in and unload at the bank of the river. Within this quarry are long paſſages ſupported by innumerable ſquare pillars, which are every where twenty feet high, and in many places more. It has ſeveral vent holes cut in it, as alſo ſome ſmall reſervoirs, and in war-time it is a ſafe refuge to the country people, who being acquainted with all its windings, ſecure their cattle and valuable effects in this ſubterranean retreat, which affords room for forty thouſand men. A ſtranger who ſhould viſit it without an experienced guide, would be in danger not only of bewildering himſelf, or of ſtumbling againſt the corners of the pillars; but of being ſuddenly ſhot by villains lurking there. The upper part of the hill conſiſts of good corn land, and on the ſide towards the Maeſe ſtands the monaſtery of Slavante.

To

To the States General alſo belong the moſt northern part of Flanders; a ſmall diſtrict lying between the German ocean, the Hondt, the Scheld, and Auſtrian Flanders. This country was ceded by Spain at the peace of Munſter, to the States General, and afterwards enlarged by the emperor at the barrier treaty of 1715, and contains Sluys, and the little towns of Ardenburg, Ooſtburg, Hulſt, and other ſmall places.

Sluys, and in French l'Ecluſe, ſtands on a bay in the German ocean, named the horſe-market, from the ſuppoſed reſemblance it bears in ſtormy weather, to the noiſe of a market filled with thoſe animals. The town is pretty large in circuit; but the greateſt part of it is taken up with garden and bleaching grounds. It is ſtrongly fortified, and the country towards the ſouth and ſouth-weſt may be laid under water; but the north ſide being higher, has a double wall. On the eaſt it is fenced by the bay, and by a moraſs, which every flood is laid under water. All the efforts of an enemy cannot hinder its communication with the ſea, whence it may receive all neceſſary ſupplies and reinforcements. Its air, however, is ſo unhealthy, that the garriſon is changed every year. The governor's power extends to all the fortified towns in Flanders, belonging to the States General. The harbour is ſo choaked up, that to the very great detriment of the town, it admits only of ſmall veſſels. The old caſtle which ſtood by the ſide of the harbour, is at preſent converted into lodgings for the governor and other military officers. In 1405, the Engliſh miſcarried in their attempt on this place. In 1587 it was taken by the Spaniards; but in 1604 recovered by prince Maurice. The beſieged held out for three months, till they had eaten up all the leather, mice, and rats they could find.

CHAP. XXII.

Of the Thirteen United Cantons of SWISSERLAND, with their Allies.

SECT. I.

The Situation, Extent, and Face of the Country, with reſpect to its Mountains and Vallies. Its different Climates, Foſſils, and Minerals. Its Springs, Rivers, and Lakes. Its Fruits, Vegetables, and Animals.

SWISSERLAND, or Switzerland, the Helvetia of the antients, is bounded on the north by Swabia; on the weſt by the Sundgaw, Burgundy, and the country of Gex; to the ſouthward by Savoy, the Milaneſe, and the territories of Venice; and to the eaſtward by the county of Tyrol and Swabia. Its greateſt length, according to Buſching, is about two hundred and eighteen miles, and its breadth one hundred and forty-two.

Though Swiſſerland is ſituated between the forty-fifth and the forty-eighth degree of north latitude, yet lying among the Alps, the higheſt mountains of Europe, the air is much ſharper than in moſt northerly latitudes. This is indeed the higheſt country in this part of the earth, the greateſt part of it conſiſting of chains of hills ranged one upon another, with only narrow vallies between. Theſe hills are alſo compoſed of ſtupendous rocky maſſes, two, four, and even ſix being piled on each other, and from four to twelve thouſand feet high. One peak of a mountain called the Gotthard, is by du Cret computed at ſixteen thouſand five hundred French feet. The lower parts of theſe high mountains are covered with woods and paſtures, the herbage in which is of a remarkable length and richneſs. The middle abounds with a great variety of odoriferous herbs, thickets, buſhes, and excellent ſprings, and in ſummer are reſorted to by herdſmen with their cattle. The third part of theſe mountains almoſt entirely conſiſt of craggy and inacceſſible rocks, ſome of which are quite bare, without the leaſt herbage growing upon them, while others are continually covered with ſnow or ice. The vallies between theſe icy and ſnowy mountains appear like ſo many ſmooth frozen lakes, and from them vaſt fragments of ice frequently fall down into the more fruitful ſpots beneath. It is from theſe maſſes, and the thawing of the ice and ſnow, that the greateſt part of the ſtreams and rivers in Swiſſerland are derived. The ice hills begin in the canton of Glaris, and after paſſing through the territory of the Griſons, and from thence into the canton of Uri, terminate in the diſtrict of Bern. The moſt lofty of theſe mountains are thoſe in the canton of Uri, namely, St. Gotthard, Furka, Criſpalt, and Luckmanier, which ſend forth rivers to all the principal parts of Europe.

This is the moſt dreary part of all Swiſſerland; for on the ſummits of theſe mountains an eternal cold almoſt conſtantly prevails, with hard gales of wind, and very damp fogs; while the valleys, except ſome towns and villages, with a few fields and vineyards, thick woods, and rich paſtures, are covered with lakes, and the ſummer heats are there frequently ſo inſupportable, that the inhabitants betake themſelves to the mountains, though in winter their houſes are almoſt buried in ſnow. In many places within a ſmall compaſs, the four ſeaſons are ſeen at once, and ſometimes ſummer and winter are ſo near each other, that one hand may take up ſnow, and the other pluck the flowers.

During the greateſt part of the year the clouds hang beneath the peaks of the higheſt mountains, and from thoſe peaks they reſemble a ſea, from which the peaks riſe like iſlands. Sometimes they break, and thus diſplay a view of the extenſive country beneath. From the riſing and ſinking of theſe clouds, the inhabitants form pretty certain conjectures with reſpect to the weather. Not one of the above mountains is without a cataract, and as the eye by reaſon of the intervention of the clouds is not always able to reach the beginning of them, they look as if poured down from heaven upon the rocks.

The water thus falling from one rock to another, makes an aſtoniſhing noiſe, and raiſes a miſt around it, on which when the ſun beams play, is formed a very beautiful ſight, particularly at the foot of the cataract, where is exhibited a rainbow of the moſt lively colours.

Among theſe mountains are many medicinal ſprings, ſome of which form cold and others warm baths, celebrated for their extraordinary virtues.

Very different from this is the remaining ſmaller part of Swiſſerland, including the county of Thurgaw, which is a part of the cantons of Zurich, Schaffhauſen, Berne, Baſil, Solothurn, and Freyburg; for though this diſtrict is not without mountains, ſome of which are even two thouſand or two thouſand five hundred feet high; yet it is much more level than the above-mentioned part, and the foot of the mountains, and ſometimes alſo the very ſummits, are covered with vineyards, corn-fields, meadows, and paſture grounds. Here are likewiſe no rocky precipices, no cataracts, few trees, and, in ſummer, neither ſnow nor ice. The mountains, inſtead of being interrupted with vaſt chaſms or abyſſes, are generally entire, and compoſed of a few eminences, the ſummits of which are ſo far from ſhooting into peaks, that they are flat or round to the extent of many miles, without any conſiderable inequality, and frequently afford not only paſturage, but arable land. It is only during long

long rains that the clouds ſink below the eminences. The fields, though generally ſtony, are fertile, and the meadows are in moſt places planted with fruit-trees. "There is no country in the world better ſupplied with "water, ſays Mr. Addiſon, than the ſeveral parts of "Swiſſerland that I travelled through. One meets every "where in the roads with ſprings continually running "into huge troughs that ſtand underneath them, which "is wonderfully commodious in a country that ſo much "abounds with horſes and cattle. It has ſo many "ſprings breaking out of the ſides of the hills, and ſuch "vaſt quantities of wood to make pipes with, that it "is no wonder they are ſo well ſtocked with fountains." Indeed theſe comparatively level parts of Swiſſerland are watered only by a few rivers; but thoſe are large.

There are here found great numbers of petrifactions, and the foſſil tribe is very conſiderable, as chalk, mundic, ſeveral kinds of clay for the making of earthen-ware, and crucibles, as alſo terra-ſigillata and ſulphur. In many parts ſlate is very common; and though white marble be ſcarce, it abounds in a black ſort interſperſed with veins of white, as alſo in brown, yellow, and, in ſome places, in a green, and even carnation coloured marble. Red porphyry, ſpeckled with white, has likewiſe been found in the icy mountains. Common gypſum and alabaſter are not uncommon, and of the latter here is the fine ſort ſo much prized by ſculptors. A kind of ſtone full of glittering ſparks of a brown colour, and capable of a very fine poliſh, is very common here; and ſeveral ſorts of cryſtal compoſed of lamina and angular columns. Its other foſſils are ſandſtone, ſaltpetre, ſalt, pit-coal, and near Roche a pure and tranſparent ſulphur, with a rich ſulphureous ore. Gold-duſt is found among the ſand of ſome of its river; but in no great quantities. Swiſſerland has alſo ſilver, copper, lead, and more particularly iron ores, of which Gunzen, a lofty mountain in the county of Sargans, yields three kinds, namely, black, red, and iron coloured, which being mingled by fuſion, without any other ingredient, form a true ſteel. It muſt, however, be owned, that the metals of this country are generally obſerved to be brittle, and accordingly all metallic attempts, a few iron mines excepted, have turned out to the diſadvantage of the undertakers.

The principal rivers are the Rhine, a name given by the Swiſs to all ſtreams and rivers in general: it has its riſe in the country of the Griſons, and, with reſpect to its ſource, is divided into the Anterior, the Middle, and Hinder. The Anterior or Upper Rhine iſſues from a ſmall lake on a mountain commonly called the Oberalp, and by ſome Cima del Baduz. The ſource of the Middle Rhine lies in Luckmanier, a part of the Adula chain, and, after a courſe of about ſix hours, joins the Anterior Rhine. The Hinder Rhine riſes about three hours diſtance in a mountain called by the Italians Monte del Uccello, or Birds-hill. The other rivers are the Ruſa, which iſſues from the lake called Lago di Luzendro, on the mountain called St. Gotthard, and having joined two rivulets, precipitates itſelf through a deep and narrow valley down ſeveral rocks; but at length becomes more gentle, then falls into the lake at the four Foreſt towns; but at Lucern again makes its appearance under its former name, and ſoon after receives the Leſſer Emmat, or Emmen, which riſes in the mountains, and at laſt diſcharges itſelf into the Aar, or Aren. This laſt river, which proceeds from the mountain of Grimſel, at length falls into the Rhine. The Rhone is firſt formed by a water which iſſues out of two rocks of ice on the Furka chain, and precipitates itſelf with a thundering noiſe between two rocks of an aſtoniſhing height, which receiving ſeveral rivulets in its courſe, runs into the lake of Geneva, and iſſuing again from thence traverſes the territory of that city, and after watering a ſmall part of Savoy enters France. The Teſin, in Italian Teſino, riſes partly from two lakes on the mountain of St. Gotthard, and partly from ſeveral other lakes on the mountains, and after paſſing through the valley of Livis, and the Lago Maggiore, enters the dutchy of Milan, and at length loſes itſelf in the Po.

The large lakes are thoſe of Geneva, Neuenburg, Biel, Zurich, the four Foreſt towns, Thun, and Brien, with many others: that part of the lake of Conſtance which waters the borders of Thurgaw, and the abbey of St. Gall, belongs alſo to the Helvetic Confederacy.

Theſe ſeveral rivers and lakes are of conſiderable advantage to Swiſſerland, by ſupplying it with fiſh, and furniſhing the inhabitants with the means of water-carriage.

The levels and valleys produce grain; but not in a ſufficient quantity to anſwer all the demands of home conſumption. Barley is ſowed in a very elevated ſituation, the oats in a warmer ſoil, rye in a warmer ſtill, and the warmeſt of all is aſſigned to ſpelt. Flax is much cultivated and worked, and the like may be ſaid of hemp. They have alſo begun to plant tobacco. The Païs de Vaud, the cantons of Berne and Schaffhauſen, the Veltlein, and the Valais, produce the beſt wines in Swiſſerland. There are here plenty of apples, pears, nuts, cherries, plums, cheſnuts, and the parts towards Italy abound in peaches, morells, almonds, figs, citrons, pomegranates, and others. Moſt of the cantons abound in timber.

Of wild animals the chamois are the moſt remarkable, and of two different ſpecies; one of which make their conſtant abode in the higheſt and wildeſt mountains, to which ſcarce any acceſs can be found. Theſe are of a reddiſh brown, and for the moſt part ſomewhat ſmaller than the others. The ſecond ſpecies are of a light brown colour, and do not confine themſelves to the ſummits of the mountains; but likewiſe reſort to the woods and thickets in the vales.

The marmouſet is a kind of badger, and towards winter grow ſo exceeding fat as to weigh twenty pounds, by which means they become an eaſier prey to the peaſants and hunters. They burrow either in the earth, or under a rock.

Among the Alps are likewiſe found a ſpecies of hares, which in ſummer perfectly reſemble other hares, but in winter become all over white, in ſo much that they are ſcarce diſtinguiſhable among the ſnow. Here are alſo yellow and white foxes in great numbers, which in winter come down to the valleys.

Among the birds, the moſt remarkable is the lammergeyer, which delights in the higheſt peaks, and reſembles a large eagle, of ſo prodigious a ſize, that its wings frequently extend fourteen feet: it preys alike upon wild and tame animals. There are alſo ſeveral ſorts of fowls fit for eating, as the moor-cock, the rail, the ſnipe, the partridge, and ſome others.

SECT. II.

Of the Perſons, Dreſs, Manners, and Cuſtoms of the Swiſs; their Magazines for Corn; their Management of their Cattle; the Populouſneſs of the Country; their Languages, Religions, and the Unanimity that generally prevails amongſt them: with the Sciences, Manufactures, and Coins of Swiſſerland.

THE Swiſs are generally tall, well made, ſtrong, and laborious; they are diſtinguiſhed by their honeſty, their ſteadineſs in their reſolutions, and their bravery. It is the principal endeavour of the ſeveral cantons to preſerve the greateſt plainneſs and ſimplicity of manners, and to baniſh from among them every thing that has the appearance of pomp or ſuperfluity; for ſhould dreſſing, feaſting, and balls, once get among the cantons, their military roughneſs would be ſoon loſt; their tempers would become too ſoft for their climate, and their expences exceed their income; and, as the materials of luxury muſt be brought from other nations, they would ſoon ruin a country that is not over-ſtocked with money. Hence every thing is prohibited that may introduce vanity and luxury. Beſides the ſeveral fines ſet upon plays, games, balls, and feaſting, they have many cuſtoms which greatly contribute to the preſervation of their antient ſimplicity.

The citizens, at the head of the government, are obliged to appear at all their public aſſemblies in a black cloak and a band. The dreſs of the women is extremely plain, thoſe

thoſe of the firſt quality generally wearing nothing on their heads but furs, which are to be had in their own country. Indeed, perſons of different ranks of both ſexes are allowed their different ornaments; but theſe are far from being expenſive, and are merely marks of diſtinction. Thus the chief officers of Bern are known by the crowns of their hats, which are much deeper than thoſe worn by people of inferior rank. The peaſants are uſually clothed in a coarſe cloth manufactured in the country; while their holiday cloaths deſcend from father to ſon, and are ſeldom worn out till the ſecond or third generation; ſo that it is not very uncommon to ſee a countryman in the doublet and breeches of his grandfather.

As theſe little ſtates abound more in paſturage than in corn, they are all provided with public granaries, and in exigencies, where the ſcarcity is not univerſal, have the humanity to aſſiſt one another. The adminiſtration of affairs relating to the public granaries being much the ſame in every particular government, it will be ſufficient to give the rules obſerved in theſe reſpects by the little commonwealth of Geneva. Three of the little council are deputed for this office, and obliged to keep together a ſufficient quantity of proviſions, to laſt the people in caſe of war or famine at leaſt two years. Their magazines muſt be filled in times of the greateſt plenty, in order that they may afford to ſell cheap, and increaſe the public revenue at a ſmall expence to its members. Beſides, that the three managers may have no temptation to pay too great a price out of the public treaſury, or to impoſe upon the public by purchaſing bad corn, none of them muſt, upon any pretence, furniſh the granaries from their own fields; and that the filling of the magazines may not prejudice their market, and raiſe the price of proviſions at home, they muſt buy no corn within twelve miles of the city. In ſhort, that ſuch a quantity of corn may not ſpoil by keeping, all the inns and public-houſes are obliged to furniſh themſelves out of it, by which means the moſt conſiderable branch of the public revenue is raiſed. The corn being ſold out at a much dearer rate than it was bought up, the principal income of the common-wealth, which pays the penſions of moſt of its officers and miniſters, is raiſed on travellers, or ſuch of their own body as have money enough to ſpend at taverns and public houſes.

The inhabitants derive their principal ſubſiſtence from the grazing of cattle, which is here very profitable; both the valleys and the middle part of thoſe enormous mountains the Alps, yielding excellent fodder. White meats are the uſual food of the peaſants, and ſuch as labour in the mines. In the beginning of the ſummer their cattle are driven up among the Alps, and there committed to the care of perſons ſtiled Senns, who pay them a certain ſum for keeping them. The Senns on all the Alps likewiſe keep hogs, which are fed with the whey after making two ſorts of cheeſe and butter; and theſe people alſo drink this whey themſelves. The Swiſs cheeſe is much eſteemed in other parts of Europe; but the beſt is that of Berne and the canton of Freyburg. Great numbers of horſes are likewiſe bred here, which are bought up for the French cavalry.

Swiſſerland is more populous than foreigners generally imagine, the women being remarkably prolific; yet in ſeveral provinces there is not ſo much as a ſingle town, and in the whole country little more than a hundred. The Proteſtant cantons are better inhabited, and more wealthy, than the Popiſh, which is owing to the celibacy occaſioned by the number of convents for both ſexes. The number of inhabitants is computed at two millions, and theſe are divided into three claſſes; the nobility, the burghers, and the peaſants. D. Zimmermann, in his Eſſay on National Pride, maintains that in Swiſſerland ſelf-murder is more common than even in England.

In Geneva and Swiſſerland it is cuſtomary to divide their eſtates equally among all their children, and thus every one lives at his eaſe, without becoming dangerous to the republic: for an overgrown eſtate no ſooner falls into the hands of one who has many children, than it is divided into ſo many parts, that though it renders the ſharers of it rich enough, they are not raiſed too much above the level of the reſt. In theſe little republics this is abſolutely neceſſary; for as the rich merchants are obliged to live much within their eſtates, they might, by heaping up vaſt ſums, become formidable to the reſt of their fellow-citizens, and deſtroy that equality which is ſo neceſſary in theſe kinds of governments.

The inhabitants in general ſpeak German, and in this language all their ſtate and public affairs are tranſacted, as alſo thoſe in the republic of the Griſons and the Valais. In a part of the town of Freyburg, and its dependencies, with thoſe of Bern and the city of Geneva, the principality of Neuenburg, the Upper and Lower Valais, the tythings of Syders and Sitten, the French is uſed; but it is generally only the Patois, or a baſtard ſort. In ſeveral diſtricts of the Griſons they ſpeak the Chur Italian, with this difference, that in ſome places it borders on the Latin, and is accordingly termed Ladinum, while in others it has no ſmall affinity with the Italian. Indeed in many places the Italian language prevails; but in each with different degrees of purity.

The two prevailing religions are the Calviniſt and Popiſh; the former is profeſſed by four cantons, five annexed places, and three governments: the latter is eſtabliſhed in ſeven cantons, three incorporated diſtricts, twelve governments, and the like number of protected places. In two cantons among the Griſons, five governments, and two protected places, both religions are on an equal footing. Each town, place, and ſtate, has its own particular conſtitution, for the management of its churches, ſchools, and other eccleſiaſtical affairs.

"I have often conſidered, with a great deal of pleaſure, "ſays the ingenious Mr. Addiſon, the profound peace "and tranquility that reigns in Swiſſerland and its al- "liances. It is very wonderful to ſee ſuch a knot of "governments, which are ſo divided among themſelves "in matters of religion, maintain ſo uninterrupted an "union and correſpondence, that no one of them is for "invading the rights of another, but remains content "within the bounds of its firſt eſtabliſhment. This I "think, muſt be chiefly aſcribed to the nature of the "people, and the conſtitution of their government. "Were the Swiſs animated by zeal or ambition, ſome "or other of their ſtates would immediately break in "upon the reſt; or were the ſtates ſo many principali- "ties, they might often have an ambitious ſovereign at "the head of them, that would embroil his neighbours, "and ſacrifice the repoſe of his ſubjects to his own glory."

The ſciences are cultivated in Swiſſerland with an application equal to that of any other nation, and the many eminent ſcholars it has produced are illuſtrious proofs of the genius of the inhabitants. There are many good foundations for the inſtruction of youth, eſpecially among the Calviniſts, who, beſides the gymnaſiums and ſchools in many places, have academies at Zurich, Bern, Lauſanne, and Geneva, with the celebrated univerſity of Baſil. The Papiſts have alſo ſeveral gymnaſiums and a Jeſuits college at Lauſanne. The Calviniſts have likewiſe literary ſocieties for the improvement of the German tongue at Bern, Zurich, and Baſil: others apply their attention to the cultivation of the ſciences, among which is the Helvetic ſociety at Baſil, and the œconomical ſociety at Bern. Some Swiſs have alſo diſtinguiſhed themſelves in the fine arts, and the number of maſterly painters this country can boaſt may be ſeen in the Lives of the Swiſs Painters, publiſhed at Zurich in 1755. This country has alſo produced ſome excellent engravers.

Swiſſerland has a great number of manufactures. In thoſe parts that produce tobacco, that plant is prepared both for ſmoking and ſnuff. Great quantities of flax and hemp are ſpun into thread of different fineneſs, for the weaving of linen. Thread, lace, and ſtockings, are likewiſe made here; and Winterthur is noted for its neckcloths for men and women. Among its linen manufactures are its dimities, cotelines, limoges, and trieges. Cotton is ſpun and wove into muſlin and ſtuffs for gowns; into handkerchiefs, ſtockings, and gloves. Cottons are alſo printed with figures of the moſt beautiful colours. In Swiſſerland are made ſeveral ſorts of ſilks, particularly paduaſoys and organſines, gold and ſilver brocades, velvets, handkerchiefs, ribbons, and ſtockings. Its woollen manufactures are druggets, calamancoes, ſattins, damaſks, camblets, ratines, flannels, blankets, lindſey-

lindsey-woolsey, and stockings. Bleaching and dying are likewise performed in the best manner. The other manufactures are those of hats, coarse and fine paper, leather for all uses, particularly the Neuenburg chamois, and the Schwitz calf's leather, are particularly famous. Horn is worked into a variety of utensils. Winterthur and Lausanne are famous for their earthen-wares, particularly for their beautiful white and painted stoves; and several places make a very pretty porcelain. The marble of this country is sawn and polished at home; but the greatest part of the beautiful crystals met with here are carried to Italy. Their gold and silver manufacturers deal in laces, fringes, &c. and the best gold-beaters are those of Basil. Several places trade largely in toys; neat and good watches are made here, and Swisserland is not without skilful printers, braziers, founders, cutlers, &c.

The situation of this country between Germany, France, and Italy, with its navigable lakes and rivers, particularly the Rhine and the Rhone, by which it has a communication both with the German ocean and the Mediterranean, together with droves of pack-horses for the conveyance of goods over the mountains, where no carriages can pass, render the trade of this country very extensive. Its principal exports are cheese, butter, horses, horned cattle, sheep, some wine, and several of the above manufactures. On the other hand, this country imports grain from Swabia, Tirol, and Alsace, as also hemp and flax; with wine, wool, salt, several species of manufactures, and particularly American and Asiatic goods.

The coinage in all the cantons and incorporated states is not alike: Zurich, Basil, Schaffhausen, and St. Gall, follow the standard of Germany; while Bern, Lucern, Uri, Schwitz, Underwald, Zug, Freyburg, Solothurn, Geneva, Neuenburg, and the Valais, keep to the old Burgundian standard.

The lowest coin here, according to Dr. Busching, is the heller, or haller, which is the sixteenth part of a penny, two of which make a pfenning, or angster; Zurich coins drey hallerlins, or three hallers; and Bern dreyerlin, or vierer. Another small piece here is the rap, six of which go to a plapper, and ten to a batz, and fifteen of the last make a Swiss guilder. Six angsters are equal to a Zurich shilling, seven hellers to a kreutzer, and four hellers to a Bernlander, or Chur batz. Bern and Zug have likewise their half kreutzers; Zug, Freyburg, and Solothurn, coin three kreutzer pieces; and Bern some of ten and twenty. The batzes are of three sorts; the good, which are coined at Schaffhausen, are of the value of sixteen pfennings; the Zurich batzes are equal to fifteen pfennings; and those of Berne to fourteen: there are also half batzes. A gemein gulden usually passes for fifteen good batzes, and sixteen Zurich batzes; a Bern gulden for fifteen Bern batzes, or thirty-six Zurich shillings; and a lander for thirty-two. In the country of the Grisons seventy blutzgers, or thirty-five Zurich shillings, make a gulden. The gold coins here are whole, half, and quarter ducats.

SECT. III.

The History of Swisserland; with a general Account of the Regulations with respect to the thirteen United Cantons in general: the Titles by which they are addressed by foreign States, their military Establishments, and the Contingents of each State; with the Regulations with regard to such of their Troops as enter into the Service of foreign Princes.

THE antient Helvetians were a Gaulish or Celtic people, and Helvetia, which received its name from them, was divided into four cantons or territories. Julius Cæsar was the first who reduced the inhabitants under the dominion of the Romans, who founded colonies here; and their dominion continued till the fifth century, when the country was over-run by the Burgundians and Germans, and at length became united to the German empire; but about the year 1300 the emperor Albert I. not only refused to confirm their antient privileges, without condescending to alledge any reason for his refusal, but set over the Swiss two noblemen of the most infamous characters for avarice and arrogance, whose administration becoming insupportable, the people addressed their petitions and complaints to the emperor, but without success.

This so encouraged their tyrants, that Grisler, the governor of Underwald, set his hat upon a pole at Altorff, and, in the wantonness of power, demanded that the same respect should be paid to it as to himself. The histories of Swisserland say, that one William Tell refusing to submit to this mark of slavery, Grisler had him brought before him, and telling him that he heard he was an excellent marksman, commanded that he should shoot an arrow at an apple placed upon his own son's head; and that if he missed it, he should be hanged. Tell, though with a trembling hand, struck off the apple without touching his son, and thereby saved his life; but Grisler perceiving that Tell, though he was to have but one shot, had an arrow in his belt, demanded the reason; on which he frankly confessed, that had he been so unfortunate as to have killed his son, he would have shot it at him. The tyrant, who had promised to give him his life on his acknowledging the truth, now ordered him to be bound and carried prisoner for life to a place on the lake of Lucern; but Tell happily escaping out of the boat in crossing the lake, retired into the mountains, where he waited for an opportunity of destroying the tyrant, and at length shot him as he was passing along the road.

The people now universally expressed their hatred against the tyrants, and the inhabitants of Uri, Schwitz, and Underwald, who had from time immemorial possessed the right of being governed by their own magistrates, with other important privileges, united in order to defend themselves to the last extremity. For this purpose they chose three commanders, gentlemen of approved courage and abilities; these were Gerhard Stauffach, Walter Furst, and Arnold Melchthal, who secretly agreed to surprise and demolish the castles in which the imperial governors resided.

This resolution being effected, these three places joined again in a league for ten years, which gave birth to the Helvetic confederacy. The emperor Albert thinking this a proper time for totally reducing these places by force of arms, hasted to Baden to begin the preparations; but being on his return murdered by John of Hapsburg, the design was dropped till the house of Austria invented another pretence for falling on the United Cantons. These and other parts of Swisserland adhering to the emperor Lewis of Bavaria, Frederic of Austria, his competitor, was so extremely irritated, that he put the inhabitants of Schwitz under the ban of the empire, because during their contests with the abbey of Einsidlen, they had made some of the monks prisoners; and they were excommunicated by the bishop of Constance. Soon after Leopold, duke of Austria, in 1315, attacked the Confederates with an army of twenty thousand men; but was defeated at Morgarten, in the canton of Schwitz. Upon this, on the eighth of December, in the same year, they entered into a perpetual alliance, which proved the origin of the present Helvetic confederacy. In 1332 Lucern acceded to it; in 1351 they were joined by Zurich and Glaris; and in 1352 their number was increased, by their being joined by Zug and Bern. For the space of 125 years this confederacy was composed only of these eight cantons; but in 1481 Freyburg and Solothurn, and in 1501 Basil and Schaffhausen, were admitted into the confederacy; and in 1513 Appenzel also acceded to it.

The federal union, however, extends no farther than is necessary for their mutual defence, and accommodating differences that may arise between two or more towns or cantons, and in all other affairs they are left to their liberty, particularly with respect to concluding alliances with foreign powers, their granting auxiliaries, receiving subsidies, permitting a passage to foreign troops, and also in their transactions among each other; as the sending of envoys to foreign states, adjusting the value of their coins, or calling them in, and other matters of public concern, though, both in their foreign and domestic affairs, great pains are taken to produce an unanimity of opinion, in order to add the greater weight to their resolutions. Besides, every town and canton is an

independent

Wale del. Hall sculp.

W.m Tell's bold Answer to the Tyrant, after having shot the Apple from his Son's Head.

independent ſtate of itſelf, enjoys the privilege of modelling its own form of government, and of making laws, without any obſtruction from the other members of the confederacy.

Thus the whole Helvetic confederacy properly conſiſts of thirteen diſtinct republics, or free ſtates, united by oath for their mutual ſecurity and defence. It has now for ſome centuries ſupported itſelf in an abſolute freedom and independency; increaſed all the privileges of majeſty; made wars, concluded treaties, received and ſent envoys from and to the ſeveral European powers; entered into alliances with them; given what form they thought proper to their conſtitution; enacted laws and ordinances, both in temporal and ſpiritual affairs; and exerciſed all the various prerogatives of ſovereignty.

Accordingly, at the peace of Weſtphalia in 1648, it was acknowledged to be a free ſtate, even by the emperor and empire. The former gives it the title of "The "moſt valiant, firm, and full of dignity, our beſt be- "loved friends the common confederates of all the thir- "teen cantons and other places of Swiſſerland." The French king addreſſes them in the following manner, "To our very dear and great friends and confederates "the burgomaſters, advoyers, landammen, and coun- "cil of the Swiſs league in Upper Germany." The king of Great Britain ſtyles them, "The illuſtrious and "moſt mighty lords, the conſuls, ſeneſchals, landam- "men, and ſenators of the confederated Swiſs cantons, "our very dear friends." The king of Swden ſtiles them, "The noble, moſt mighty, magnificent, and re- "nowned people, our dearly beloved friends, conſuls, "ſeneſchals, landammen, ſenators and communities of "the thirteen confederated Swiſs cantons." The king of Pruſſia writes to "The high born, noble, moſt firm, "wiſe, and very learned, our ſingularly beloved friends, "of all offices and other poſts of honour, the burgo- "maſter, prætor, bailiffs, and council of the thirteen "confederated cantons of Zurich, Bern, Lucern, &c." And the pope's addreſs to the catholic cantons runs thus: "To our beloved ſons the prætors, landammen, &c. "the counſellors of the eight Swiſs cantons; that is to "ſay, of Lucern, &c. the defenders of the faith." The United Cantons in rank are reckoned next to Venice. To them belong in common twenty-one bailliages, two towns, and the like number of lordſhips. Eleven other free Helvetian republics are united, either with the whole confederacy, or with particular ſtates.

The form of government in the ſtates of the Helvetic republic is in ſome monarchical, in others ariſtocratical, and in others again democratical. Their ſovereigns are the princes of the empire, as the biſhop of Baſil, and abbot of St. Gall. The ariſtocratical governments are the cantons of Zurich, Baſil, and Schaff hauſen, with ſome incorporated places, as the towns of St. Gall, Muhlhauſen, and Biel, which are governed by ſix burgomaſters; the cantons of Bern, Lucern, Freyburg, and Solothurn, over which are appointed juſticiaries; and Neuenburg and Geneva, where the ſupreme power is lodged in bailiffs. The democratical form of government prevails in the ſix cantons of Uri, Schwitz, Underwald, Zug, Glaris, and Appenzell, which are under the direction of landammen, and alſo with ſome variation in the eight acceding places, as the Griſons and the Valais; but in all of them every male from ſixteen years of age has a vote.

The revenues of the ſtates are the uſual imports, tythes, annual incomes, payments annexed to the ſovereignty, and their ſubſidies.

With reſpect to their military eſtabliſhment, the only regular forces are thoſe of the garriſons of Zurich, Bern, Baſil, Geneva, and Arburg; but every burgher, peaſant, and ſubject, muſt exerciſe himſelf in the uſe of arms; appear on the ſtated days for ſhooting at a mark; furniſh himſelf with proper cloathing, accoutrements, powder and ball; be always ready for the defence of his country, and punctually comply with every article of war. For this end almoſt every canton, particularly thoſe of Zurich, Bern, Baſil, Freyburg, and Solothurn, have claſſed their ſubjects into regiments of horſe and foot under the command of proper officers, who are compoſed of the burghers of the ſeveral towns.

According to ſeveral ordinances, and the conventions for the common defence and immediate aſſiſtance of any injured party, the contingents of the ſeveral cantons are as follow:

	Men.
Bern	2000
Zurich	1400
Lucern	1200
Uri	400
Schwitz	600
Underwald	400
Zug	400
Glaris	400
Baſil	400
Freyburg	800
Solothurn	600
Schaffhauſen	400
Appenzell	600
Abbot of St. Gall	1000
The Town of St. Gall	200
Biel	200
Baden	200
Thurgau	600
The Free Bailliages	300
Sargans	300
The Rheinthal or Rhein Vale	200
Lauwis	400
Luggaris	200
Mendris	100
Mayenthal	100
Total	13,400

Beſides which, each canton and incorporated diſtrict is to have in readineſs one field-piece, with all other implements, powder, ball, &c. that on the firſt notice their ſuccours may be ſent without delay. Alſo every confederated and incorporated diſtrict, for the ſecond and third draught, is to furniſh and hold in readineſs double the ſame proportion. Such towns and territories as levy cavalry are alſo immediately to march.

Thus, as in the Seven United Provinces of the Netherlands, the weak are defended by the ſtrong, and thoſe who can ſend at one time only one or two hundred men, are generouſly protected by thoſe who are willing to ſend as many thouſands; and all are mutually engaged in one common intereſt, in the defence of their liberties and their reſpective laws. Happy would it be for mankind in general, were all its princes united by a like confederacy!

The above corps, compoſed of the troops of all the different cantons, form two armies, one conſiſting of the troops of Zurich, Lucern, Schwitz, Zug, Baſil, Solothurn, Appenzell, the town of St. Gall, the Thurgaw, the Free Bailliages, Sargans, and Lauwis: to the other belong thoſe of Bern, Uri, Underwald, Glaris, Freyburg, Schaff hauſen, the abbey of St. Gall, Biel, Baden, the Rhein Vale, Luggaris, Mendris, and Mayenthal. Over the firſt of theſe armies the towns of Zurich and Lucern nominate each a commander in chief; Schwitz and Zug, each a major-general of the artillery; Solothurn, a quarter-maſter-general; Appenzell, a provoſt-marſhal; and the town of St. Gall, a waggon-maſter. In the latter, the two commanders are appointed by Bern and Uri; the two major-generals, by Underwald and Glaris; the general of the artillery, by Freyburg; the quarter-maſter-general, by Schaff hauſen; the provoſt-marſhal, by the abbot of St. Gall; and the waggon-maſter, by Biel.

Any territory in viſible danger of an attack or ſurprize by the enemy, may claim from the next territory all the three draughts collectively, and this territory again is to demand ſuccour of the next; and ſo on, each being obliged to march its contingent to the rendezvous. For the more expeditious aſſembling of theſe armies, ſignals are ordered to be made on the mountains and high places.

Swiſſerland is well provided with arſenals, particularly at Bern; but the only fortified places are Geneva, Solothurn, Zurich, Bern, Baſil, and Arburg.

The Swiſs engage in the ſervice of foreign princes and ſtates, either merely as guards, or as marching regiments.

In

In the latter caſe, the government permits the enliſting volunteers, though only for ſuch ſtates as they are in alliance with, or have entered into a previous agreement on that article; and no ſubject is to be forced into foreign ſervice, nor even to be enliſted without the concurrence of the magiſtracy. All the advantages ariſing to theſe regencies from theſe levies are uſually an annual ſubſidy, paid by the ſtate in whoſe favour the levies are granted, and perhaps a promiſe of reciprocal aid when neceſſary. A public benefit, however, attending this cuſtom is, that theſe men, on their return home, after a long ſervice abroad, greatly improve the ſtanding militia of the country. The greateſt number of Swiſs troops is kept by France.

In order to give a more particular deſcription of the ſeveral parts of Swiſſerland, we ſhall begin with the thirteen cantons, and afterwards ſhall add the incorporated territories.

SECT. IV.

Of the Canton of ZURICH.

Its Situation, Extent, and Produce: a Deſcription of the Lake of Zurich; and of the City of the ſame Name.

ZURICH is bounded on the north by Swabia and the county of Schaffhauſen, on the eaſt by Thurgau and the county of Tockenburg, on the ſouth by the canton of Schwitz, and on the weſt by the canton of Zug and the Free Provinces.

This canton is, according to the learned Scheuchzer, an epitome of all Swiſſerland, as containing hills, valleys, plains, corn lands, vineyards, lakes, rivers, vegetables of all kinds, and whatever elſe is neceſſary to the ſupport of life. Grain is cultivated all over the country; but it ripens later in the mountainous parts, where the air is coldeſt, than in the ſandy valleys. The hilly grounds on the eaſt, weſt, and ſouth borders, afford a ſpecimen of the fertility of the Alps, as abounding in cattle, milk, butter, and cheeſe; and towards Schaffhauſen and the Thurgaw the country produces good wine, which, tho' at firſt tart, improves by keeping, and after ſome years becomes ſmooth, pleaſant, and wholeſome. Fruits are alſo found every where in great plenty. The moſt remarkable minerals and foſſils are, the fine white chalk at the village of Mur, different kinds of clay for making earthen-ware, pit-coal, and turf; and in ſeveral places are veins of ſulphur.

The principal lake in this country is that of Zurich, which is one of the largeſt in Swiſſerland, it being twenty-four miles in length, and about three in breadth. The proſpect from it is extremely delightful, the little eminences by which it is bordered being all over diverſified with corn fields and vineyards, and behind theſe is every where a gradual aſcent of larger hills terminating in the ſtupendous mountains of Glaris, Schwitz, and the Griſons, whoſe ſummits are always covered with ſnow. The Rhine waters the north ſide of this canton, where it is joined by the Thur, the Toſs, and other ſmaller ſtreams. Out of the lake of Zurich iſſues a river which flows through the town, and having a little below it received the Hill, begins to be called the Limmat; till traverſing the county of Baden, it at laſt loſes itſelf in the Aar.

This canton is, next to Bern, the largeſt and moſt populous, it being thought capable of bringing near fifty thouſand fighting men into the field, without any conſiderable detriment to its agriculture or manufactures.

The Reformation was begun here by Zwinglius, in 1517, in the city of Zurich, and in 1524 ſpread through the whole canton. Religious affairs are under the direction of an eccleſiaſtical council compoſed of eight members, two of whom are clergymen, and of a ſynod of ten deaneries, including under them a hundred and fifty miniſters.

On the acceſſion of this canton in 1351 to the perpetual alliance with Uri, Schwitz, Underwald, and Lucern, the latter, on ſwearing to the alliance, made no difficulty of yielding the preſidency to Zurich, which it has ſince conſtantly retained; but this honour, inſtead of being any real advantage, is rather a burthen, all affairs relating to the collective body of the confederacy being tranſacted in its offices, and from thence communicated to the other towns and places.

The city of Zurich, the Tigurum Thuricum of the antients, is ſeated in the forty-ſeventh degree fifty-four minutes north latitude, and in the eighth degree thirty-two minutes eaſt longitude, in a very pleaſant and fertile country on the outlet of the lake, and is eſteemed the handſomeſt town in Swiſſerland. It is large and well fortified, and contains five arſenals, which are well ſtored. Its churches are the Great Minſter, which has prebends; the Frau-Munſter, a parochial church; but the largeſt eccleſiaſtical foundation before the Reformation was an abbey for ladies, the abbeſs of which bore the title of princeſs. To theſe are to be added St. Peter's and the Prediger church. There is here an academy, which has fifteen profeſſors, with two colleges. Here is alſo a German ſociety, which owes its origin to profeſſor Bodmer, and is aſſociated with that of Bern. The town-library, which is very conſiderable, with the public muſeum, are in the Water-church. In the prebend-library are ſeveral valuable manuſcripts. The town-houſe is a very fine pile of building, and ſo well deſigned, that it would make a good figure even in Italy. The frontiſpiece to this edifice has pillars of a beautiful black marble ſtreaked with white, which is found in the neighbouring mountains; and the chambers for the ſeveral councils, with the other apartments, are very neat.

The burghers are divided into thirteen companies, the firſt of which is chiefly compoſed of gentry. Out of theſe companies are choſen the city regency, that is, the greater and leſſer council, in whom the ſovereignty and adminiſtration of all civil and military affairs are lodged. The great council conſiſts of one hundred and ſixty-two members, and to this aſſembly none can be admitted under thirty years of age. The leſſer council is compoſed of fifty members, who muſt all have attained their thirty-ſixth year, and is divided into two equal bodies, each of which is alternately poſſeſſed of the regency for the term of ſix months.

The principal perſons in the city are two burgo-maſters, freely elected by the burghers and counſellors from the above councils, and theſe hold the government by turns, each for half a year. Next to them are four ſtadtholders, or maſters of companies, and two treaſurers, who continue in office twelve years by annual rotation. The privy council is compoſed of twelve members, who are the two burgomaſters, the four ſtadtholders, two treaſurers, the obman of the convents belonging to the public, and three others elected by the counſellors. In this aſſembly the affairs of the canton are firſt diſcuſſed, and if thought neceſſary, they lay them before the leſſer and greater councils. The chamber of accounts conſiſts of twelve members; theſe are the two burgomaſters, one ſtadtholder, two treaſurers, the obman of the convents, three members of the leſſer, and three of the greater council. Theſe inſpect the city receipts and diſburſements, the accounts of the treaſurers and city builders excepted, and likewiſe take cognizance of the fiefs. The council of reformation is compoſed of eight members of the leſſer, and four of the greater council, and ſuperintends the execution of the ſumptuary laws, the reformation of manners, defamatory expreſſions, and acts of violence. To the marriage court belong eight members, who determine all matrimonial diſputes, and inflict puniſhments on all perſons convicted of whoredom, prohibited games, ſwearing, ſuperſtitious practices, profanation of the ſabbath, and the like. The city court hears cauſes relating to debts and pecuniary claims; and the revenue court decides conteſts in matters under its juriſdiction. To the above-mentioned obman of the convents is committed the management of the church revenues, both in the city and country.

Zurich has all the manufactures that are to be met with in the moſt ingenious and flouriſhing nations, as cloths, ſtuffs and linen crapes, calamancoes, half ſilk and half worſted cipers, calicoes, ſilk handkerchiefs, ſattins, organſines, and ſeveral other ſorts of ſilks; ſilk ſtockings,

ſtockings, cotton ſtockings, muſlins, lawns, gold and ſilver thread, and galloons; beſides a foundery for bells, cannon, and other things.

The arms of the city of Zurich are, a ſhield argent and azure, party per bend.

SECT. V.

The Canton of BERN.

Its Situation, Extent, Produce, Rivers, Lakes, Mountains, and Vallies. The military Affairs of the Canton; with a particular Deſcription of the City of Bern, and its Government; the Welſchen or foreign Lands, and alſo a Deſcription of Lauſanne.

BERN is terminated to the eaſt by the cantons of Uri, Underwald, and Lucern; to the northward by the Auſtrian foreſt towns, and the cantons of Baſil and Solothurn; to the weſtward it borders on the canton of Solothurn, the diſtrict of Biel, the principality of Neuenburg, Franche Comté, and the land of Gex; and to the ſouthward on the lake of Geneva, the dutchy of Savoy, and the Valais. It pretty nearly environs the whole canton of Freyburg, extending about a hundred and fifty-one miles in length, and ſeventy-five in breadth, it being the largeſt of the thirteen cantons, and forming in the whole little leſs than one-third of the confederacy.

Scheuchzer ſtiles this canton, with reſpect to its extent, figure, and fertility, the moſt valuable gem of all Swiſſerland. The levels yield an exuberance of grain and fruit, and the high lands afford rich paſtures covered with cattle; whence the inhabitants are in no want of milk, butter, and cheeſe. The fineſt ſpots here are in the country bordering on the lakes of Biel, Neuenburg, and Geneva, which not only yield the choiceſt fruits, but alſo excellent wine. Here is clay of different colours, of which earthen-ware is made. In this canton is alſo found mundic, with a beautiful blue and white ſandſtone, uſed at Bern for building. There are here alſo gypſum, pit-coal, ſulphur, and iron ore. Some gold is likewiſe found among the ſands of the Emmat and the Aar. The latter of theſe rivers is the largeſt in the whole canton, and has its ſource within it, receiving the larger Emmat, the Sanen, the Senſen, the Wigger, the Aa, the Huſs, and the Limmat, and at length loſes itſelf in the Rhine. The Candel, or Cander, is an impetuous torrent that iſſues from the Gaſter Alp, being joined by the rivulet of Alp, and afterwards by the Simmen, whence it continues its courſe through a new canal three thouſand feet in length, in the making of which an eminence a hundred and fifty-two feet high was levelled.

Among the lakes the principal is that of Geneva, the greateſt part of which is within this canton, and which we ſhall deſcribe in treating of Geneva.

To this canton likewiſe in ſome meaſure belong the lakes of Neuenburg and Biel, the latter of which is alſo called the Nydaw lake, and is very full of fiſh: it receives into it the Thiele, which iſſues from the Neuenburg lake. The borders of this lake are fruitful; they are planted with many vineyards, and almoſt in its center are two ſmall iſlands, the largeſt of which, called St. Peter's, is a delightful ſpot covered with meadows, vineyards, and the moſt beautiful woods.

The Simmenthal, or Simmen Vale, in this canton, ſays Dr. Buſching, extends between twelve and thirteen hours in length, with a breadth of only one quarter or a ſixth, and is on both ſides bounded by a ridge of high mountains, of equal length, but of very different quality, ſome of them being extremely fertile, and others barren, while others again are merely bare rocks. The rivulet of Simmen, or Siemeny which traverſes the whole length of the vale, is ſaid to have a ſeven-fold ſource, and from this circumſtance to derive its name, which it has ſince communicated to the vale. The ſtupendous height of the rocks, whence vaſt fragments frequently fall into the road, render the entrance into the vale ſomewhat frightful, eſpecially during the ſpring, when, by the diſſolution of the ice and ſnow, whole maſſes of rocks ſeparate from each other, and render it really dangerous. In this long valley are ſeveral villages; but the inhabitants in few places ſow either wheat, oats, or rye; they receiving great profit from their graſs, which is extraordinary rich, breeding vaſt numbers of cattle, from which they obtain milk, butter, and cheeſe. The beſt ſort of the latter, which is made of cream, is in great repute abroad, under the name of Saan cheeſe. The greateſt part of the inhabitants, inſtead of bread, eat thin barley-cakes, with the ſecond ſort of cheeſe; but the principal food of the common people is potatoes, and they drink milk or whey: but the more wealthy have wine, which is of a high price, it being brought over the mountains from Vivis. Some parts produce good fruit, and the rivulets abound both with red and common trout.

The territory of Haſsli, which is alſo in this canton, according to the above author, extends about eleven hours from the ſummit of the Grimſel hill. In the upper valley are fine woods of beech and pine, with plenty of graſs for cattle, both on the heights and low lands. The mountains yield moſt excellent roots, and are frequented by chamois goats, and other animals that reſort to the mountains; as alſo by wild fowl of all kinds. This country likewiſe abounds in mines, particularly in thoſe of lead and iron, as alſo in fine cryſtals.

Over the high mountain called the Grimſel hill is a road leading to Upper Geſtelen in the Valais, that is paſſable only in ſummer; and even then, on account of the ice and ſnow, is very difficult, troubleſome, and dangerous, and is with great labour and expence kept in repair by the inhabitants of the Haſsli vale. In many places this road is hewn out of the hard rock in a ſerpentine form, ſecured with walls, and connected by bridges that extend from one rock to another; and on the top of the road towards the north is a lake. On this road, at the foot of a hill, is an inn or hoſpital, where every five years the land-holders of the Haſsli vale appoint an hoſpitaller, as he is ſtiled, who continues there from the middle of March to Martinmas, that is, as long as the road is paſſable, and accommodates travellers with meat and drink, for which thoſe pay who are able, but the poor are entertained gratis. The expence is defrayed by an annual collection made throughout the whole confederacy, and even in ſome places beyond it.

Southward from the hoſpital an ice vale extends two hours in length, and afterwards for ſix hours more winds to the weſt with the mountains, terminating at laſt at the high ice-mountain of Schreckhorn; and in this vale, which is called the Grimſtelthal, lies the ſource of the river Aar, or Aren. On a part of the Grimſel hill, called Zinkenberg, a cryſtal-pit was diſcovered in 1719, which yielded cryſtal to the value of upwards of thirty thouſand rixdollars; many pieces dug in it weighing from four to ſeven and eight hundred pounds, moſt of which were without flaw, and as tranſparent as water.

The canton of Bern is well cultivated and very populous, containing thirty-nine large and ſmall towns, and above thirteen villages, with about four hundred thouſand perſons. The German is the prevailing language in the greateſt part of the canton; but in the Foreign Lands, as they are called, the French is moſtly uſed.

The whole canton is Proteſtant, except a few Papiſts, who reſide in the Vale of Frick. The churches of the German territory of Bern are ranged under ſix chapters, each of which has a dean, who is appointed by the daily council of Bern, and alſo a treaſurer aſſiſted by certain jurats; and theſe, every year, in conjunction with ſuch officers of the bailliage as live within their department, hold a chapter or ſynod.

In the year 1353 the city of Bern concluded a perpetual union with Uri, Schwitz, and Underwald, and thus became a member of the confederacy. One article of this union was, that Bern ſhould likewiſe aſſiſt Zurich and Lucern, when required by the three above-mentioned cantons, as allies of thoſe ſtates, and, at the requeſt of thoſe cantons, Zurich and Lucern were alſo to aſſiſt Bern. This canton, on account of its power and opulence, has been allowed the ſecond rank among the confederates.

Its arms are gules, a bear ſable, rampant, on a bend or.

The military affairs of this canton are under the care of a war-office, inſtituted in the capital. This office appoints the muſters, and alſo the majors who conduct them; gives orders in every thing relating to the furniture and diſcipline of the militia, and alſo the implements of war. Every male from ſixteen to ſixty is entered in the war-roll, and about one-third of them divided into regiments under the title of fuſiliers and auſſugers, who are recruited from the other two-thirds. The fuſiliers are all ſingle, picked men; but the auſſugers are married. In time of war both ſerve, but the firſt draught is made from the fuſiliers. A regiment of theſe, including the ſtaff-officers, conſiſts of two battalions, each containing five companies, and to every company are a hundred and ten men, including ten commiſſion and non-commiſſion officers; but of the auſſugers, a regiment conſiſts of twelve companies, each containing two hundred and eighteen men, thirteen of whom are officers.

Every perſon when entered on the roll is to provide himſelf with arms, which, as well as the cloathing, are to be all uniform. The colour univerſally uſed is brown, and the diſtinctions between the regiments conſiſt entirely in their facing. Among the horſe is a regiment of cuiraſſiers, who are furniſhed by the vaſſals in the Païs de Vaud and the Walſchen lands: the reſt of the horſe, one troop of curiaſſiers excepted, who are burghers of Bern, conſiſt entirely of dragoons. Every regiment contains ten troops, making in the whole five ſquadrons, who all find their reſpective horſes, arms, and accoutrements; on which account thoſe who keep horſes are generally choſen for the cavalry.

That the men thus diſtributed into regiments, and the others alſo may be provided with arms, and be rendered expert in the uſe of them, commiſſaries at arms are ſtationed all over the canton for muſtering and exerciſing the people in every department throughout the year, and for ſeeing that all their arms and accoutrements are in good order. The country is alſo divided into certain diſtricts, each under the direction of a land-major, who receives pay from the ſtates, and is to ſee that the ſoldiers are kept in conſtant readineſs to march. This officer frequently makes a progreſs for the inſpection of the officers and private men, and every year brings thoſe of his circuit to a general muſter.

A commander in chief is never appointed but in time of war, and even then he is aſſiſted by a council compoſed of the moſt eminent members of the regency and other experienced officers, without whoſe concurrence he can undertake nothing, but with their approbation any thing. As in ſuch caſes ſeveral different corps are neceſſarily put in motion, ſo each has a commander and counſellor at war. During a peace the preſident of the war-office at Bern is the firſt military officer.

Though the grand train of artillery be kept in the arſenal at Bern, yet a conſiderable number of field pieces are diſtributed all over the country, eſpecially at the manſion houſes and caſtles where the governors and prefects reſide. To this artillery belong three companies of matroſſes, and one of bombardiers, each conſiſting of one hundred men, under their proper officers; and every diſtrict knows the horſes and carriages it is to furniſh for the artillery, ſtores, and baggage. There is alſo a company of a hundred and twenty men, compoſed of various artificers, for adjuſting and repairing the artillery; as alſo another of guides, with its officers. Theſe laſt are always compoſed of ſuch as are thoroughly acquainted with the roads, bye-ways, and different parts of the country.

In time of peace the only force conſtantly kept up is a guard in the city of Bern, conſiſting of two hundred men, commanded by a town major, who is always a member of the great council, and three lieutenants, with ſeventy-five men, and three non-commiſſioned officers included, as a garriſon for Fort Arburg.

For the better regulation of levies to be made for any foreign power, Bern has a particular office called the recruit-chamber, the commiſſioners of which conſiſt of two members of the daily council, and five of the great council. From this office licences for ſuch levies are iſſued, and here the recruits make their appearance and are regiſtered.

The prefects over the countries ſubject to Bern reſide, while in office, in their ſeveral departments, and have their deputies, clerks, and collectors. In civil cauſes they ſit as judges in the bailliage courts; but from them appeals lie to the court of appeals at Bern. They puniſh petty crimes, and in greater ones draw up the indictments and form the proceſs, which being tranſmitted to the leſſer council at Bern, ſentence is there paſſed, but the execution is referred to the prefects.

The city of Bern, in Latin Berna, or Arcotopolis, is ſeated on the river Aar, which waſhes three ſides of it, forming a peninſula. Down the river at the ſtone-bridge the peninſula is ſo narrow as to be reduced to a ſingle ſtreet; but gradually widens along the ſide of an eminence three or four hundred paces in length, after which it is firſt divided into two ſtreets, then into three or four, and laſtly into five. On this eminence is a fine plain, both ſides of which are watered by the Aar, which here flows in a deep channel, and on the top towards the weſt is fortified with walls, moats, and out-works. The houſes, except thoſe in the higheſt and loweſt parts, with a few bye ſtreets, are built of ſtone, particularly in the main ſtreets, which are adorned with piazzas, neatly paved with ſquare flags, for the convenience of walking dry in rainy or ſnowy weather. The ſtreets, eſpecially the high ſtreet which runs through the center of the city, are paved with flints; and the latter is ſo broad as to admit of two carriages a-breaſt on each ſide of the canal which runs through it. The banks of this canal are lined with free-ſtone, it paſſes through moſt of the ſtreets, and makes ſufficient amends for the expence of bringing it from a conſiderable diſtance, by its being, excluſive of other uſes, of great ſervice in caſe of fires, and very convenient for carrying off the ſoil of the town into the Aar.

What appears very extraordinary at Bern is their public walks by the great church. Theſe are raiſed a prodigious height, and, that their weight might not break down the walls and pilaſters which ſurround them, they are built upon arches. The ingenious Mr. Addiſon obſerves, that theſe walks being as high from the ſtreets and gardens that lie at the foot of them, as moſt ſteeples in England, they afford the nobleſt ſummer proſpect in the world; for they give a full view of a prodigious range of mountains that lie in the country of the Griſons, and are covered with ſnow. Theſe are about twenty-five leagues diſtance from the town, though their height and colour makes them ſeem much nearer. The cathedral ſtands on one ſide of theſe walks, and is a maſter-piece in Gothic architecture. The chief miniſter is the head of the city clergy, and bears the title of dean; and formerly this church had alſo its prebends. The inferior miniſters and deacons belonging to it now officiate in the Dominican church, where was once a convent of monks of that order; but it is now divided into an hoſpital and houſe of correction, and the upper part of the choir being vaulted over, has been converted into a muſic-room for the *collegium muſicum*. A French congregation has alſo its meetings in this church. The church on the Nydec ſtands at the lower end of the city, near the bridge over the Aar, and has a particular miniſter, with an aſſiſtant. The hoſpital of the Holy Ghoſt, which ſtands in the uppermoſt part of the city, has been made parochial, and provided with a miniſter and aſſiſtant.

There is here an academy, to which belong eight profeſſors: it has three halls for public lectures, examinations, and other exerciſes, with apartments for a provoſt and twenty ſtudents in divinity, who are maintained gratis, and alſo a large public library, with a muſeum. There is likewiſe here a grammar-ſchool. Here is an œconomical ſociety, compoſed of men of letters. Under the town-hall is a large granary, and on the lower ſide ſtands the office of record. The arſenal is a very extenſive building, in which, beſides the artillery, are arms of all kinds for twenty thouſand men. Here are ſhewn the figure and armour of the count who founded the town, and thoſe of the famous Tell, who is repreſented at the head of the hall, aiming at the apple on his little ſon's head, who ſtands oppoſite to him: theſe are images of wood, in which the hands and eyes are admirably expreſſed. He appears to have been a tall raw-boned man, with a very honeſt countenance, and, according to the

faſhion

fashion of those times, one half of his coat is red, and the other black and yellow stripes alternately; his breeches and stockings are of one single piece, and an arrow sticks in his coat behind his head: the boy is laughing, as apprehending no kind of danger. They likewise shew abundance of arms, which they took from the Burgundians in the three great battles which established them in the possession of their liberties, and destroyed the great duke of Burgundy himself, with the bravest of his subjects.

The hospital is a very spacious structure, completely finished in 1742. The infirmary is another very large building.

This city is divided into four quarters, namely, those of the bakers, the butchers, the smiths, and the tanners, each having the privilege of chusing a knight-banneret. Besides these there are other companies; but it is the privilege of the former, that the four bannerets are chosen only out of those bodies.

The burghers of the city are divided into the qualified for government, and the perpetual inhabitants. The latter, consisting of such who were made freemen since the year 1635, enjoy all privileges; but are incapable of the magistracy, and all public employments, which are the peculiar portion of the former, as the descendants of those who were burghers before that year. Though the city was erected in the year 1191, as a check to the violent proceedings of the nobility, yet six very ancient noble families found means to be classed among the qualified burghers: these, besides being respected above all others, have this privilege, that when any of them are admitted a member of the senate or lesser council, he takes place of all other members, though his senior in office, and immediately follows the knights-bannerets, or tribunes of the people.

The great council, into which none is admitted under thirty years, is not to consist of less than two hundred persons; and when complete, their number amounts to two hundred and ninety-nine; but never to three hundred. This council makes war, peace, and alliances; manages every thing relating to the revenues, gratuities, aids, and buildings, above the value of one hundred rixdollars; chooses the lesser council, and nominates the several officers of the prefecturates: the members also preside in all capital causes for crimes committed within the district of the city, and likewise in civil causes, when the sum in debate exceeds the value of five hundred pounds.

In the lesser or daily council, sit the two prætors, twenty-five council-men, among which are the four knights-bannerets, and the two treasurers. These meet every day, sundays and holidays excepted, for the dispatch of all business, whether political, criminal, civil, or any other, that does not fall under the cognizance of the great council, or of any particular office.

The heads of the aristocracy are the two prætors, by the French called avoyers: their office is for life, and they act alternately every other year. The acting magistrate presides in the great and lesser council, dressed in a black robe, and sitting in a chair of state, somewhat raised; yet he is possessed of no vote, except in case of an equality, where he has the casting voice. However, on most occasions his opinion is asked. To his custody is committed the city seal, and by him all letters and other instruments are signed. The prætor out of office takes place next to the other, and, in his absence, acts as his representative, and is invested with the same marks of distinction.

Next to the prætors sits the treasurer of the German lands, who holds his place for six years, after which there must be an interval of four more before he can be a second time elected treasurer. His province is to elect and superintend the revenues of the several districts in the German lands, as also the stock belonging to the cantons in the English funds, for which he passes his accounts twice a year.

The knights-bannerets, who are the next in rank, precede all other members of the lesser council, and derive their title from their office of keeping the banners or flags of the four several parts of the town. These are impowered to see that the militia under their banner, have their arms in readiness. They are elected from the four above-mentioned tradesmen: no member of the daily council who is not free of those companies, can be made a banneret, nor can two bannerets be of the same company, each of the four having one of their own. They continue in office four years, but resign at the end of every year, that their election may be confirmed by a fresh choice. They are possessed of certain privileges in the legislature, and may stand candidates for any office not peculiar to the lesser council, and each of them is vested with the intendancy of some districts, consisting of several villages about the city.

These are followed by the treasurer of the Païs de Vaud, which office is the most profitable of all.

The country governments of the cantons being very lucrative, used to occasion great struggles; so that to prevent disputes and cabals, it was ordered in the year 1711, that these and other posts of great profit should be disposed of by lot. The candidates first draw lots about their turns in drawing for the office; after which, as many balls as there are candidates are put in a bag. These balls are all silver gilt, except one with gold, which entitles to the government. This office is indeed held only six years; but is attended with such emoluments, that within that short space, they lay up thirty or forty thousand dollars. No batchelor is capable of this or any other profitable employment: unquestionably the scope of the ordinance was to promote marriage, and thereby good order and the increase of the subjects.

In the center of the city is a large stone seat encompassed with iron rails, on which sits the acting judge, and the two members of the council next to him, when any sentence of death is to be pronounced.

The commonalty of both sexes wear straw hats, and the women's coats come so near the arm-pits, that not above an hand's breadth is left for the shape. The peasants of the canton of Bern are the wealthiest in Switzerland, there being scarce a village without at least one inhabitant worth twenty, thirty, or even sixty thousand guilders. Within these sixty years the manners of the country are become greatly altered, and a fondness for show, pleasure, and sumptuous living, is increased in a manner unknown to their simple ancestors; yet many vices are neither so bare-faced nor so common as in other cities.

To the city of Bern belong many governments, each containing a number of villages, particularly the Walschen Lands, otherwise called the Foreign or Italian Lands, which were conquered by the city of Bern in the year 1536. It will be proper here to mention the city of Lausanne.

This city, which was antiently called Lausodunum, or Lausonium, is seated in a valley, at about the distance of half a league from the lake of Geneva. The city has several gentlemen's houses in it, that are tolerably well built, and very commodious, and is furnished with two public fountains.

The wall of the cathedral was opened by an earthquake in 1634, and some years after shut by a second; but though it is at present not above an inch broad, and filled up with mortar; when Mr. Addison was there, several persons in the town were living who had formerly passed through it. The tower is not without beauty; but having been twice burned, only half of it is now standing. A smaller tower belonging to this church, was also set on fire by lightning, when they prudently beat it down by a chain ball, by which the body of the church was saved, and since that was done, a spire has been raised upon it. This church has two hundred and seventy-two stately pillars, and a fine choir. The choir is serated from the nave of the church by a fine gallery supported by eleven pillars of black marble. To this church are three gates, two great ones and a smaller; one of the largest has a fine portico, adorned with the statues of the twelve apostles, and the Virgin in the middle. The other has also a magnificent portico adorned with small figures in relievo, representing historical passages, besides some statues as big as the life.

Here were formerly eight churches more, together with two convents; but they have been most of them demolished since the Reformation, only St. Francis's church,

a handsome large structure, is still preserved for the use of the lower part of the city.

The town-house is a very handsome building, in the finest part of the city, adorned with a portico that has two fine pillars of green marble.

On the east side of the cathedral is a spacious walled terrace, like that at Bern, with this difference, that the terrace of Bern is much higher walled, and that of Lausanne has the advantage in prospect, it commanding the lake, and all the low country towards Geneva. This country, indeed, from its nature and improvements, affords a delightful view in the variety of little hills and dales, fields, meadows, vineyards, and woods, together with the neighbourhood of the lake.

The city is governed by a great and lesser council, the former of which consists of sixteen members, who have the burgomaster for their president; next to him is the treasurer, with the five bannerets, belonging to so many divisions of the city. From these councils, in causes not exceeding twelve hundred florins, appeals lie to a superior council composed of sixty members: but contests relating to larger sums, are carried before the council of Bern. It is remarkable, that there is one street in this city, in which the people have the privilege of acquitting or condemning any one of their own body in affairs of life and death; and as every inhabitant of this street has a vote, houses sell better here than in any other part of the town.

This city was formerly a bishop's see, originally founded at Avenche; but Lausanne closing with the Reformation, and coming under the sovereignty of Bern, the bishop withdrew to Freyburg. A part of the episcopal revenues was applied to the academical gymnasium erected here in 1557, and the bailiff of Bern resides in the bishop's palace, where he judges in all disputes brought before him from the country courts.

SECT. VI.

The Canton of LUCERN.

Its Situation, Extent, Rivers, and Government, with a Description of the City of Lucern.

THE canton of Lucern, which is the most considerable next to Zurich and Bern, is bounded on the east by the cantons of Underwald, Schwitz, and Zug, and on all other sides by the canton of Bern; extending thirty miles in length, and twenty in breadth.

This canton produces a sufficient quantity of corn for Uri, Schwitz, and Underwald; and as the pasturage is also excellent, the inhabitants likewise apply themselves to grazing.

The principal rivers are the Russ, which issues from the lake of Lucern, and receives the Emmat, and several other streams. The Wigger has its source in this canton, and also the Suran.

There are only four towns in this country, and the whole canton is entirely Popish, under the see of Constance. It has on all occasions been the principal abettor of Popery in Swisserland; and in 1747, and the following years, it resumed the antient severities against the Protestants, and some of these heretics, as they were called, were put to death with many aggravations of insult and cruelty.

This canton acceded to the Helvetic alliance in 1332, on which the third place was allotted to it; but it is reckoned the first and most powerful of the Popish cantons. Accordingly, whenever they assemble on religious concerns, provided such assembly be not held in one of their capital towns, the envoy of Lucern always presides. The summons are likewise issued from this city, and the recorder is always a member of the council of Lucern.

The city arms are, argent and azure party per pale, and its government is aristocratical.

The city of Lucern, in Latin Lucerna and Lucaria, is situated on the banks of the Russ, which divides it into two unequal parts, that have a communication with each other by three covered bridges. It is encompassed with a single wall, and is rich and populous, it being a well built and polite place. The inhabitants have a great trade with the merchants of Germany and Italy. The most remarkable things to be seen here, are the organ of the great church, which is very fine, and of an extraordinary size, and the skeleton of a giant in the town-house. The religious buildings are the cathedral of St. Leodigarius and Maurice, the Jesuits college, which contains a church, and four monasteries.

The depositaries of the supreme power are the lesser and greater council: the former is composed of thirty-six members, divided into two equal parts, that relieve each other every half year: the members are chosen by the lesser council alone. The greater council consists of sixty-four persons elected from among the burghers. It is likewise vested with the penal jurisdiction, judges in the last resort, and confers the freedom of the city. At Lucern usually resides a nuncio from the pope, under the title of *legatus a latere*.

The lands and towns subject to this city are divided into fifteen prefecturates.

SECT. VII.

The Canton of URI.

Its Situation, Extent, and Face of the Country; with a remarkable Road; and a concise Account of the Produce of the Country, and of its Capital.

THE canton of Uri borders towards the west on the cantons of Bern and Underwald; to the north on the canton of Schwitz; and to the eastward joins on the canton of Glaris, the Grisons, and the seven Italian districts, with the dutchy of Milan and the Valais; extending about thirty miles in length, and twelve in breadth.

It almost every where consists of dreadful mountains and deep vallies, the summits of which are perpetually covered with ice and snow. The loftiest among them, and indeed the highest in all Swisserland, is that of St. Gothard, over which is carried a fine road in one continued ascent of eight hours to the very summit of this stupendous mountain. This road deserves particular notice, it being in most parts six feet wide, and every where well paved during its whole ascent. The Russ runs by its side, sometimes to the right, and at others to the left, over which are several handsome bridges, most of which are of stone. This road in summer is perfectly safe, not only for horses but even for carriages, though in winter the fall of masses of snow have proved fatal to many travellers. It lies between very high mountains, the lower parts of which are covered with thick woods, but above are quite bare. Several parts likewise exhibit the most beautiful cataracts, either from the Russ, or other smaller streams; while many of them, by reason of the rocks that obstruct their passage, are resolved into a mist, which, by the refracting rays of the sun, form a variety of rainbows, and at the same time both charm and cool the traveller. But as he advances he is terrified at the view of frightful rocks hanging over the road, and so worn out underneath, as if they were just going to fall and crush him to atoms. On the other hand, when he finds himself shut in on all sides by such prodigious high mountains of vastly different aspects, some quite bare, and others tufted with trees, and abounding with a hundred sorts of medicinal herbs, he has reason to admire the wonderful works of the Creator, and to extol the industry and ingenuity of the inhabitants, who at immense hazard, toil, and expence, keep these roads open. For this purpose they join rocks together by arched bridges, cut a way through several rocks; and when the road seems ready to sink, support it by stout walls and buttresses with great posts, which they drive deep into the earth, and stones, which they fasten to one another by iron hooks.

At about two hours distance above the village of Gestinnu lies the largest bridge over the Russ; it is of stone, and is of a surprising height, with only one arch, which is an exact semi-circle, the piers of which rest upon two rocks also of a prodigious height; and here the noise of the rapid torrent adds to the terrors of the scene. It is fifty feet over, and its height above the water about seventy. It can scarcely be imagined how it was pos-

sible

ſible to erect a bridge there; and the inhabitants thinking it beyond the power of man to accompliſh, ſuppoſe it to be performed by the devil, and therefore call it Teuffelſbruck, or the Devil's-bridge.

Immediately beyond this bridge is a road hewn out of the ſolid rock, for the ſpace of near three hundred paces, and of a breadth ſufficient for two horſes to paſs conveniently a-breaſt. At the end of this road the country aſſumes a very different aſpect; for as the way below the bridge is bounded by two ridges of mountains, in this the traveller finds himſelf in a vale, in which is a village called Hoſpital, that extends through a valley, if that name may be given to the ſummit of a mountain eight thouſand feet high, that has other mountains ſtanding on it riſing three thouſand feet more, and ſome even higher. In this valley the road again aſcends towards the ſouth, it being paved and of a great breadth, and on each ſide defended by the higheſt mountains in Europe. In this part the road is perfectly delightful, the bare mountains, with their cataracts, having a majeſtic appearance; and the paſtures, which are cloathed with a rich verdure, are covered with great numbers of fine horſes. About half an hour farther on among the mountains lies the lake of Lozendro, out of which iſſues the Ruſs, which is at firſt no more than a narrow brook; but it ſoon receives the greater part of its waters from an adjacent mountain of ice. On the upper part of this vale are ſeveral ſmaller lakes, which may be termed the ſources of the river Teſſino, which runs beneath them on the ſide of Italy. Here is alſo a Capuchin convent, in which two fathers conſtantly attend, and for a ſmall conſideration travellers are very conveniently accommodated; but the poor are obliged to put up with the fare of an adjoining almshouſe.

On the Alps, in this canton, during the ſummer, are fattened many thouſand heads of cattle; but the beſt paſtures are on a hill called the Oberalp, the cheeſe of which is famed for its goodneſs. There is here a ſmall lake about a hundred paces in length, which abounds in fiſh, and receives moſt of its waters from the Criſpalt, a high mountain in the neighbourhood. Out of it iſſues two rivulets, one of which running eaſtward falls into the Ruſs, and the other directing its courſe eaſtward into the country of the Griſons, there forms the Upper Rhine.

The vales between the high mountains are, in ſummer, very hot and fertile, when not expoſed to the north winds. Among the mountains are alſo found numbers of beautiful cryſtals.

The inhabitants being inured to a rough and hard way of living, are vigorous, brave, and ſtrenuous aſſertors of that liberty which was ſo deeply purchaſed by their heroic anceſtors. They were once a free people, under the juriſdiction of the emperor; but Albert I. aiming at their entire ſubjection, placed a ſevere governor over them, who, by his tyranny, gave riſe, as hath been already mentioned, to an union between Uri, Schwitz, and Underwald. They threw off the Auſtrian yoke in the beginning of the year 1308, and in 1315 theſe three cantons entered into a perpetual alliance. At that time Uri held the firſt place among the confederates; but at preſent it has only the fourth.

The arms of Uri are or, a bull's head gardent ſable, having a ring gules paſſing through its noſtrils.

The government of this canton is democratical, and divided into ten diſtricts, the principal place in which is the following:

Altorf, or Altdorf, that is, the Old Village, in Latin Altorfium, the capital of the canton of Uri, is ſituated in a plain on the lake of Lucern, near the mouth of the river Ruſs, at the foot of the Alps, about twenty-three miles to the ſouth-eaſt of Lucern. The houſes are neat, and the ſtreets broad, ſpacious, and well paved, while the gardens and country houſes round it are delightful. It is the ſeat of the government, and of the courts of juſtice, who hold their meetings in the town-houſe. The provincial armoury is alſo kept here; beſides which it has a large new granary, erected in 1733. It has three churches, the principal of which is that of St. Martin; and moſt of the gentry reſide here. In the year 1400 the greateſt part of the town was deſtroyed by fire, and in 1693 it again ſuffered by the ſame calamity.

SECT. VIII.

The Canton of SCHWEITZ, *or* SCHWITZ.

Its Situation, Extent, Lakes, and Rivers; with a conciſe Deſcription of its Capital, and of the Abbey or Hermitage of Einſidlen.

THE canton of Schweitz, Schwitz, or Switz, in Latin Suitienſis Pagus, though only the fifth in rank, has the honour of giving name to the whole country, either becauſe the wars of the Swiſs for the recovery of their liberty began here, or becauſe here was formed the firſt confederacy, in defence of their natural and antient rights and privileges. This canton is bounded on the north by the cantons of Zurich and Zug; on the eaſt by Glaris; on the ſouth by Uri; and on the weſt by Lucern, Zug, and Zurich; extending from north to ſouth about twenty-eight miles, and from eaſt to weſt twenty-three.

It greatly reſembles the canton of Uri, but the parts about the lakes are more fertile. The lakes here are thoſe of Zurich, Zug, and Waldſtadten. The Sill has its ſource in this canton, and, after receiving the united ſtreams of the Biber and the Alps, enters the territories of Zurich.

The canton of Schwitz conſiſts entirely of boroughs, villages, and ſcattered houſes, without ſo much as one town. The whole country is alſo popiſh, and in church-affairs ſubject to the biſhop of Conſtance. The inhabitants are likewiſe hardy, vigorous, brave, and extremely tenacious of their liberties.

Its arms are gules, a croſs argent, placed on a canton, and its government is democratical.

The canton is divided into ſix parts, improperly called quarters, to each of which belong certain families or clans, who are not to remove their conſtant dwelling into any other quarter. The moſt remarkable places here are,

Schwitz, or Schweitz, the capital of the canton, ſituated in a pleaſant valley, between mountains generally covered with ſnow, in the eighth degree forty-three minutes eaſt longitude, and the forty-ſixth degree fifty-ſeven minutes north latitude. It is the ſeat of the ordinary regency, conſiſting of ſixty counſellors, as alſo the reſidence of ſeveral families of diſtinction; but it has only one pariſh church and three convents; with a mint, an hoſpital, and an arſenal. It was deſtroyed by fire in 1642, but rebuilt with great advantage; and is the reſidence of ſeveral families of diſtinction.

The abbey of Einſidlen, which is ſeated on the Sill, is on all ſides ſurrounded by lofty mountains, on which antiently ſtood a thick gloomy foreſt. About the year 906, St. Benno repairing hither, laid the foundation of the abbey and convent, which is of the Benedictine order, and under the direction of an abbot, who is ſtiled prince of the holy Roman empire. In 1704 the convent was rebuilt, and is now a large ſplendid edifice; the hall of which is finely painted. It has alſo a well choſen library, with a magnificent apartment and other convenient rooms for the many recluſes here, and the entertainment of ſtrangers. The minſter church of Our Lady is embelliſhed with very maſterly paintings, coſtly gildings, and very beautiful ſtucco work; but the moſt remarkable place in it is a chapel, ſtiled the Holy, in which is an image of the bleſſed Virgin, which attracts a great reſort of pilgrims, who have brought great wealth to the church; and among other offerings is an oſtenſorium, near two ells high, in which, ſays our author, are three hundred and twenty pounds and a half of gold, with eleven hundred and ſeventy-four large pearls, three hundred and three diamonds, thirty-eight ſaphires, a hundred and fifty-four emeralds, eight hundred and fifty-ſeven rubies, forty-four garnets, twenty-ſix hyacinths, and nineteen amethyſts. Near the abbey is Einſidlen, a market-town.

There is a very level fruitful part of this canton along the lake of Zurich, which is called the March, that is the Frontier, it being antiently the boundary between

the Helvetians and Rhetians, or Griſons, from whom it was only ſeparated by the river Limmat. It antiently belonged to the houſe of Auſtria; but in 1408 was taken by the troops of Appenzel, who made a preſent of it to this canton, as an acknowledgment for their aſſiſtance. In this diſtrict is contained,

Lachen, its capital, and the place where the court and council hold their meetings, ſeated on the ſouth ſide of the lake of Zurich, and is the port where travellers land who go by water from Zurich to the cantons in the mountains.

Altendorf, a village about a muſket-ſhot from the former, where, in 1704, a large fragment from the mountain, at the foot of which it ſtands, ſuddenly fell on a part of this village, and the neighbouring meadows, deſtroying a number of people and cattle, as well as houſes.

SECT. IX.

The Canton of Underwald.

Its Situation, Extent, Produce, Government, and principal Town.

UNDERWALD, or Unterwalden, in Latin Subſilvania, is bounded on the north by the canton of Lucern, and by the lake of the four cantons; on the eaſt by high mountains, which ſeparate it from the canton of Uri; on the ſouth by the ſame canton, and that of Bern; and on the weſt by that of Lucern; extending about twenty-five miles in length, and ſeventeen in breadth.

It takes its name from a large foreſt of oaks nearly in the middle of the country, that traverſes it from north to ſouth, and is divided into two parts, that above the foreſt and that below it. The canton is ſmall, but abounds in fruit and cattle. The mountains are covered with rich paſtures, and fields and the vales are remarkably fertile: for in ſpring, when the ſnow is off the ground, they are full of cattle, which being afterwards driven up the Alps, the herbage ſhoots again in ſuch a manner, as to be mowed twice in a ſummer; and in autumn the cattle, on their return from the Alps, meet again with plenty of graſs, till the ſnow ſets in again. All the lower parts of the country produce an exuberance of very fine fruit, and the canton is ſo well provided with wood, that, without any detriment, ſeveral ſpots might be cleared and improved into meadow or arable land. It has little or no wheat, and no wines are made here. In this canton are alſo good quarries of marble, and three ſulphureous ſprings. Here riſes the river Aa, and in this canton are the ſmall lakes of Lungern, Ruden, and Sarner.

There are in this canton only ſmall market-towns, villages, and ſcattered houſes. The inhabitants in their apparel and manner of life adhere to the old faſhions. They are univerſally popiſh, and form a part of the dioceſe of Conſtance.

The arms of this canton are argent, party per feſſe, with a double warded key erect, in pale gules and argent.

The government is purely democratical, the regency being the depoſitary of the whole ſupreme power, in which all males above ſixteen years of age have a right of admittance. As the country, however, conſiſts of two vales, each forming a ſeparate republic, ſo they have each their particular council and officers. To the general aſſembly of the Helvetic confederacy each vale ſends a repreſentative; but both act as for the ſame canton, the two repreſentatives enjoying only one ſingle voice.

The principal town in this canton is Stanz, or Stans, which is ſeated on the ſouth ſide of the lake of Lucern, and has a handſome church, adorned with ſtatues of black marble from quarries near the town. It has alſo a convent of Capuchins, and a nunnery. On the graves of this place are croſſes of wood and iron, and on ſome of them hang little copper kettles of holy water, which the women ſprinkle on the graves with little bunches of herbs.

SECT. X.

Of the Canton of Zug.

Its Situation, Extent, Produce, and Government; with a conciſe Deſcription of the City of Zug.

ZUG is a very ſmall canton, bordering towards the north on that of Zurich; to the eaſtward on the ſame canton, and that of Schwitz; to the ſouthward alſo on the latter, and that of Lucern; and to the weſtward on the Free Provinces, and a part of the canton of Lucern: but is not above twelve miles either way.

The paſtures here are excellent, and it alſo produces a ſufficiency of grain, with plenty of fruit, and ſome wine. On one ſide of the lake of Zug the country is covered with cheſnut trees, which form a very profitable branch of trade by the ſale of the nuts into the neighbouring countries. The woods have plenty of game; and in general it is a fine rich canton. The above lake yields carp, that weigh from fifty to ninety pounds weight, with pike of fifty pounds, and plenty of trout and other fiſh. Out of this lake runs the river Loretz, which joins the Ruſs.

The only city in this canton is Zug, all the other places here being only ſmall towns and villages. The whole country is popiſh, and under the juriſdiction of the dioceſe of Conſtance. This canton is the ſeventh in rank, and among the leſſer ones the fifth; beſides which it is in a particular manner connected with Lucern, Uri, Schwitz, and Underwald, commonly called the five territorial confederates.

Its arms are azure, a feſſe argent.

The government of this canton is entirely democratical, the ſupreme council being lodged in a council which annually meets in the town of Zug, and in which every male of ſixteen years of age is poſſeſſed of a vote. It is compoſed of deputies from the five diviſions of the canton. The chief perſon here is named the amman, who is alternately elected from the town and the territory; but the town amman continues in office three years, while that of the country enjoys his office only two. This officer muſt always reſide in the town. Next to him is the ſtadtholder, who keeps the provincial ſeal. The daily diſpatch of incidental occurrences, and the ordinary public affairs are committed to the ſtadt and amſtrath, which conſiſts of forty members, that is, thirteen from the town, and twenty-ſeven from the country. The penal juriſdiction is lodged in the amman, aſſiſted by certain aſſeſſors from the town and country. Beſides the town, every quarter in the canton has a diſtinct council and recorder of its own for the management of its affairs. For the adminiſtration of juſtice, the city has two courts, named the greater and leſs, one half of the members of which are appointed by the city, and the other half by the two quarters of Ægeri and Bar.

The principal place in this canton is the city of Zug, in Latin Tugium; it is ſituated on the eaſt ſide of the lake of the ſame name, which is about ſeven miles long, and at the foot of an agreeable hill, which gradually riſes to a great height, in the forty-ſeventh degree ſeven minutes north latitude, and in the eighth degree thirty-four minutes eaſt longitude, ſixteen miles to the eaſt of Lucern. It has ſpacious ſtreets, and the houſes are well built. It has a collegiate church, a pariſh church, a convent of Capuchins, and a nunnery. In 1435, the town ſuffered by a melancholy accident; when a ſtreet by the ſide of the lake was ſwallowed up by it, with a whole row of houſes, and the town-wall on that ſide, and yet it is ſaid, that no more than fifty perſons were drowned.

SECT. XI.

The Canton of Glaris.

Its Situation, Extent, the Face of the Country, and its Produce: its Rivers and Lakes; the Religion and Government of

of the Country; with a Deſcription of the City of Glaris its Capital.

THE canton of Glaris, or Glaurus, is bounded on the eaſt by the county of Sargans, and the country of the Griſons; to the ſouth by the latter, and the canton of Uri; to the weſt by the latter, and the canton of Schwitz; and to the northward by the March and Gaſter, extending, according to ſome authors, near twenty-five miles from north to ſouth, and eighteen from eaſt to weſt.

On the eaſt, ſouth, and weſt borders, it is environed with mountains of ſo great height, that they are continually covered with ice and ſnow, particularly by the Todiberg, which is eſteemed one of the higheſt in all Swiſſerland, and is almoſt impaſſable, notwithſtanding a road has with great labour been made over it from the great vale in Glaris to the country of the Griſons. From the north, where the country is open, a valley extends to the ſouthward for the length of eight hours; but below Schwenden, the mountain named Freyberg, divides into two ſeparate vales, the greater and the leſs; the former of which lies to the weſt, and the latter to the eaſt of that hill: beſides which, there are ſeveral other vallies among the ridges of the mountains.

Though theſe vales are in many parts extremely proper for agriculture, very little grain is ſown in them; the inhabitants being chiefly employed in grazing horſes, and ſheep on the Alps; and with theſe cattle they alſo feed many thouſand heads of horned cattle, carry on a profitable trade, and likewiſe export cheeſe, butter, and tallow. On theſe mountains are large woods of pine, with cryſtal pits. The high mountain named Blattenberg yields vaſt quantities of ſlate, which being poliſhed and formed into tables, or put into wooden frames for writing, are exported to all parts. Of all the mountains in Swiſſerland, that named Freyberg affords the ſafeſt refuge for the chamois goats; only twelve ſworn hunters being permitted to ſhoot them, and theſe at no other time but between St. James's day and Martinmas.

Among the Alps are ſeveral mineral waters and baths The largeſt river here is the Linth, which iſſues out of two rivulets in this canton, and traverſing the country from ſouth to north, receives the Sernſt, which is formed by the conflux of ſeveral ſmall ſtreams. The Lontſch iſſues from the lake of Clonthal, and the Sees is the outlet of the lake of Wallenſtadt, which extends from weſt to eaſt no leſs than four hours, though it is not one in breadth. Towards the eaſt and weſt it lies quite open; but its north and ſouth ſides are terminated by very high craggy rocks and precipices. The barks and paſſage boats receive great advantage from the remarkable regularity of the winds in theſe parts, which early in the morning ſet in with an eaſterly breeze, and thus continue till about ten o'clock, when a calm takes place till noon, and then is ſucceeded by a weſterly wind till ſun-ſet; when if the weather be fair, the eaſterly breeze then returns. This regular ſucceſſion of the winds is only interrupted by a north blaſt, and that not often. Theſe phænomena, however, are accounted for from the ſituation of the lake.

The greateſt part of the inhabitants are Calviniſts, the reſt are Papiſts, and in many pariſhes they are intermixed, yet they live peaceably enough, divine ſervice being in many places alternately performed by both in the very ſame churches; ſo that on one Sunday the maſs begins, after which a curtain being drawn before the altar, the Calviniſt ſervice follows; the next Sunday the Calviniſts begin, and when they have done, maſs is performed. To the Calviniſts belong thirteen pariſhes; but there is only one that can be ſtiled entirely Popiſh, though at Glaris and Linthal, they have their eccleſiaſtics equally with the Calviniſts, and are under the biſhop of Conſtance.

The number of males in this canton above ſixteen years of age, amount to ſomewhat more than four thouſand. The principal buſineſs and trade of the inhabitants is grazing, though they are not without manufactures, as thoſe of cotton, and a kind of cloth called matzen.

The arms of this canton are gules, a pilgrim bearing a ſtaff, ſable.

Its government is democratical, the ſupreme power being lodged in the court called landeſgemeine, which is held once a year in a field without the town of Glaris, and to this council the males of both religions, who are upwards of ſixteen years of age, have admittance. Beſides theſe, each religion has its particular landeſgemeine, which are likewiſe held annually in the open fields. The principal perſons in the whole country are the landamman and the ſtadtholder, both of whom are alternately elected from among the Calviniſts and Papiſts, with this diſtinction, that the Calviniſt landamman holds his office for three years, and that of the Papiſts two; but with the ſtadtholder it is the reverſe, the Calviniſt ſtadtholder continuing in office only two years, and the Popiſh three. The landamman uſually ſummons the general and particular counſellors of his ſect: the like is done by the ſtadtholder, and each preſides in the courts he thus ſummons. The landamman keeps the ſeal of the canton; but when buſineſs calls him out of his territories, delivers it to the ſtadtholder, who is preſident during his abſence. Next to the chief officers is the banneret, who is alternately elected from among the two religions, and holds his office during life. The court called the landrath is compoſed of ſixty-three members, forty-eight of whom are Calviniſts, and fifteen Popiſh, and, when neceſſary, is held in the town of Glaris, the landamman ſitting as preſident; and each ſect has its particular landrath, for their ſeparate concerns: the landrath of each religion has alſo the criminal juriſdiction over the votaries of ſuch religion; but if the delinquent be a foreigner, he is tried by both landraths.

Military affairs are managed by the provincial captains, provincial enſigns, maſters of artillery, and bannerets. The Calviniſts have their own council of war, conſiſting of ſeven members.

The only town in this canton is,

Glaris, or Glarus, in Latin and Italian Glarona, ſituated between the lofty mountain of Glarnich, and the river Linth, in the forty-ſeventh degree north latitude, and in the ninth degree eight minutes eaſt longitude, and is a large and handſome place. The Proteſtants and Papiſts live very peaceably together, and perform divine worſhip in the ſame church one after another, in the manner already obſerved; but the Calviniſts are by far the moſt numerous. The landraths and courts of juſtice are uſually held in the town-houſe, and juſt without the town is the place where the annual landeſgemeine of the two ſects are held. This town has been ſeveral times deſtroyed by fire.

SECT. XII.

Of the Canton of BASIL.

Its Situation, Extent, Produce, and Rivers; with a particular Deſcription of the City of Baſil and its Government.

THE canton of Baſil is bounded on the eaſt by the Frickthal; on the ſouth by the territory of Solothurn; on the weſt by the ſame country, the dioceſe of Baſil, and the Sundgaw; on the north by the lordſhip of Roteln in the margravate of Baden-Durlach, extending about twenty-four miles from north to ſouth, and twenty-one from eaſt to weſt.

The country from Baſil to Lichſtal abounds in corn and wine; but beyond it is extremely mountainous, cold, and barren, except the vallies on theſe mountains, where are the moſt beautiful paſtures covered with cattle. In the city of Baſil are ſeveral medicinal ſprings, and in the reſt of the country baths of approved virtue. The Rhine waters the north-eaſt ſide of the canton, and the other rivers are the Ergets, the Birs, the Birſig, or Birſec, and the Weſen.

In the whole canton are three towns, which have conſtantly perſevered in the profeſſion of the proteſtant religion, ever ſince its introduction in 1529. It contains twenty-ſeven pariſhes, divided into three deaneries.

The

The arms of the city of Basil are argent, a figure sable, by some supposed to be the ferril of a pilgrim's staff, and by others a fish-hook.

Its government is aristocratical. The provincial militia is divided into two regiments, each consisting of ten companies and a troop of dragoons; to each regiment is a colonel, a lieutenant-colonel, and a major.

The principal places in this canton are the following,

Basil, or Basel, in French Basle and Bâle, and in Latin Basilea, is the capital of the whole canton, and the largest city in all Switzerland. It is seated in a fertile and delightful country, on the banks of the Rhine, on the confines of Alsace and the empire, in the forty-seventh degree thirty-six minutes north latitude, and in the seventh degree thirty-six minutes east longitude.

The Rhine, which divides it into two parts, called the Greater and Less, is here joined by the little rivers Birs and Birsec; the bridge over the Rhine which unites the two towns, is six hundred feet in length. On a tower which stands on the side is a crowned Moor's head, which every minute thrusts out its long red tongue: but this droll figure does not, however, says Mr. Keysler, give such a disgust, as a filthy representation in a little cabin standing on the middle of the bridge, before which the public prostitutes, at their being banished the town, are brought to undergo some ridiculous ceremonies. The city, which lies on the German side of the Rhine, is called the Lesser Town, and has its own jurisdiction; but is subordinate to the Great Town, and has no fortifications. The Great Town has five suburbs, and besides its walls, is fortified with towers, moats, and four bastions; but is not of any great strength. Basil contains two hundred and twenty streets, six market-places, and ninety-nine wells. Its situation is uneven, most of the streets being crooked, and paved with sharp stones, which are designed for the surer footing of the horses that carry loads up hill. In this part lie the three principal churches and parishes, the minster, or antient cathedral, St. Peter's, and that of St. Leonard. To the minster belong four other parishes, the priests of which also assist in that cathedral. The French perform divine service in the church of a Dominican convent.

The Teutonic order have a commandery here, as have also the order of St. John near the church of that name; the house belonging to the order is inhabited by the bailiff, and sometimes by the commander himself. The town-house, which stands on the river Birsec, is supported by very large pillars, and its great hall is finely painted by the celebrated Holbein. Those who are admirers of pictures should not neglect to take a view of these, and particularly of the Dance of Death, on a covered wall near the French church, representing a long train of persons of all sorts, holding one another by the hand, Death leading the dance. Holbein was a native of Basil, and having learned his art without any instructor, had a peculiar turn in all his pieces. The university, which was founded in 1459, has a very curious physic-garden, which contains the choicest exotics, and adjoining to the library is a valuable museum well furnished with natural and artificial curiosities, and particularly with medals and paintings; and in the cabinets of Erasmus and Amerbach, which also belong to the university, there are no less than twenty original pieces of Holbein; for one of which, representing a dead Christ, a thousand ducats have been offered. The Helvetic society apply their attention to the improvement of science, besides which there is a philological society of Germans.

Near the minster, and close by the Rhine, is a spot of ground regularly planted with trees, commanding a most beautiful and extensive prospect. On this spot stands an academy, in which are no less than eight classes. St. Peter's square is planted with elm and lime trees, and there the celebrated doctor Feesch built his noble museum, which is greatly admired by persons of literary curiosity, ordering, that, on the failure of civilians in his family, it should fall to the university. The margrave of Baden-Durlach has a stately palace in the new suburb, which contains a most splendid chamber of curiosities in art, nature, antiquities, and paintings.

In the little town is the parish church of St. Theodore, with a Carthusian convent, that was originally a nunnery of Clarists, though it now serves as an orphan-house and a house of correction. In the church of this convent morning prayers are read and sermons preached, as likewise in a building that was once an Augustine nunnery.

The supreme power is lodged in the great council, which is composed of two hundred and sixteen persons, under two burgomasters and two wardens of trades. Out of each of the fifteen companies of the greater city are elected fifteen representatives, and out of each of the three companies of the little city twelve. The lesser council is composed of six members and a president, who are selected from among the great council. Thus the four principal persons, in conjunction with the greater and lesser councils, form together an assembly of two hundred and eighty persons. The other colleges here are the privy-council, in which are discussed all affairs of importance, relating either to war or the police; and the opinion of this council is laid before the lesser, and after that before the greater council: the dreyerherren, which superintend the city revenues and treasury, as also the disbursements of the government: the supreme inspectors of the churches and schools within the town and country, who are composed of three members of the lesser council and the city recorder; besides which each town has a particular court for the determination of civil causes.

All military affairs in the city are under the inspection of two principal commissaries at war, who are always the two burgomasters, an inferior commissary, a town lieutenant, and town major, assisted by the captains of the guards in the great town and the five suburbs, and likewise by those of the lesser town.

A great trade is carried on at Basil in ribbons. The police is under great regulations; most of the offices being bestowed by lot, and none but qualified persons admitted candidates: but a person can seldom hold a lucrative employment above five years. No person is to wear silver or gold lace, under the penalty of three guilders for every offence; and all unmarried women are prohibited wearing silk cloaths. The garb of the counsellors, ministers, and professors, with their stiff ruffs, long beards, and high crowned hats, give them a very solemn and singular appearance.

Here is a remarkable singularity, which is, that the clocks in the city of Basil are always an hour faster than those of the country; the reason for which is variously related. Among others, it is said, that it was in order to bring the fathers of the famous council which sat here earlier together, for the quicker dispatch of business. However, the custom still continues. Salmon comes up to this part of the Rhine to spawn, and bits of gold are sometimes found in this neighbourhood, which shew that there are mines of gold near the river; but it does not appear that they have yet been discovered.

About a quarter of a league without the city is a lazar house, with a church on the spot where, in 1444, sixteen hundred Swiss bravely fought for ten hours a French army under the command of the Dauphin, consisting of thirty thousand; the former were all killed except sixteen, but not before they had slain six thousand of the enemy.

SECT. XIII.

The Canton of FREYBURG.

Its Situation, Extent, Produce, and Rivers: the Languages spoken there: the Government and military Force of the Country; with a particular Description of the City of Freyburg, and of a remarkable Hermitage.

THE canton of Freyburg, or Friburg, is encompassed on all sides by the canton of Bern, a few places only excepted, which border on the Neuenburg lake, and some districts belonging in common to Bern and Freyburg. Its length from north to south is near forty-seven miles, and its breadth from east to west about twenty-seven.

The north-west parts of the country are less mountainous than the others, and consequently produce plenty of corn and fruit, and even some wine; but though the other parts are mountainous, they have good pastures,

on which feed large herds of cattle. The inhabitants export great quantities of cheese to France and other countries.

The principal rivers of this canton are the Sanen, the Sansen, and the Broye, or Bruw; the first of which rises in the canton of Bern, and in the territory of Freyburg receives the second at its issue out of a lake, after which it joins the Aar in the territory of Bern. The third rises in this country, and having successively traversed the territories of Bern and Freyburg enters the Murter lake, from whence it issues again, but at length both its stream and name are lost in the lake of Neuenburg.

In this canton are seven towns, the inhabitants of which speak a kind of Patois, or a corrupt medley of German and French; but in the town of Freyburg the pure German prevails among persons of rank, that language being used in the council in all public instruments, and in the two churches; it is also commonly spoke in a small part of the town that lies towards Bern. The German likewise prevails in several parts of the canton, but the Patois is used in the greatest part.

Both the town and the country are entirely Popish, and under the jurisdiction of the bishop of Lausanne, who resides at Freyburg. The whole canton includes under it a hundred and four parishes, which are ranged under their respective deaneries. In 1481 this canton was received into the perpetual union of the Helvetic body, at which time it formed the ninth in rank; but on the accession of Basil it voluntarily degraded itself to the tenth.

The arms of the town are party per fesse, sable and argent.

The military affairs are under the direction of a commander in chief, assisted by seven other persons. The burghers of the town of Freyburg are divided into four companies; but the country militia constitute eleven regiments.

The most remarkable places in this canton are the following:

Freyburg, or Fribourg, seated on the river Sane in a deep valley among high rocks, and so irregularly that the inhabitants are forced to climb up several parts of it to a prodigious height; but this inconvenience is counterbalanced by a singular advantage; for having several reservoirs on the tops of the mountains, if a fire breaks out in any part of the town, they, by opening a sluice, convey a river to the very spot where it is immediately wanted. The town is on all sides environed with a wall and towers, though on the north, south, and eastern sides the rocks might have supplied the place of those works. The four parts into which it is divided are named the Burg, the Aue, the New Town or square, and the Spital or Square. In the first is the collegiate church of St. Nicholas, in which the service is performed in German; the states-office; the council-house, which stands on a high rock, and commands a grand prospect, particularly of the delightful course of the Sone; a nunnery; and a Capuchin convent, which contains a seminary for philosophy and divinity. Mr. Addison, speaking of this convent, says, that he here saw the Escargatoire, which is a square place boarded in and filled with a vast quantity of large snails, which, when well dressed, are esteemed excellent food. The floor is strewed about half a foot deep with several kinds of plants, among which the snails nestle all the winter. At Lent they open their magazines and, take out of them the best meagre food in the world; for there is no dish of fish which they esteem comparable to a ragout of snails.

In the second division is the church of St. John the Minor, together with the convent of Augustine Eremites, in the church of which the service is performed in German. Here is also the hospital of St. James, which likewise contains a church.

In the third division is the church of St. John the Elder, with a commandery-house of that order adjoining to it, a Franciscan nunnery, and a very large granary.

In the fourth division is the parochial church of Notre Dame, with a convent of bare-footed friars which serves as a kind of academy for philosophy, the mathematics, and divinity: in this convent the service is performed in French. There are also the fine college of Jesuits, said to be the most beautiful in Swisserland; but it stands so high, that the ascent to it consists of some hundred steps, and here the French language is also used in the church; an Ursuline nunnery; the great hospital, which contains a church; the arsenal; the defensional office; the salt-office, and the mint; the manufacture-house, and other public edifices.

The government is aristocratical, the patritii, or certain privileged families, to the number of seventy-one, being alone qualified to sit in the lesser or greater council; but before even these can have a share in the government, they must be free of one of the thirteen companies of the city. The supreme power is lodged in the lesser and greater council of two hundred members, that is, in twenty-four lesser counsellors, and a hundred and twelve burghers. The head person in the state is named the prætor, or avoyer; and of these there are two, who act annually by turns. The senior in the lesser council is always stadtholder, and at the same time colonel of the canton, and takes place next to the prætor. Every three years a burgomaster is chosen from among the lesser council, in order to attend to the behaviour of the burghers, and he has the power of punishing some crimes by his own personal authority. The general and upper *commissarii*, of whom one or two may be elected from among the lesser or greater council, superintend the fiefs, jurisdictions, lordships, and other possessions of the state. The privy-council is composed of the four bannerets, and six members from each of the four divisions of the town. This court generally sits four times a year, and, besides electing the members of the great council, is empowered to lay before the government such schemes as are thought of advantage to the public. The town court is vested with the civil jurisdiction of the city, and by order of the lesser council, to which alone the power of life and death belongs, hears also criminal cases. The country court decides all contests and processes among the inhabitants of the antient territory. The court of appeals receives appeals from most of the provinces, and its decrees are decisive, except the party cast can make it appear to the bannerets and the recorder that his honour, fortune, and life, depend on the issue; upon which he is allowed to appeal to the greater or lesser council.

About two leagues from Freyburg is an hermitage, that is esteemed the greatest curiosity in these parts. It is situated in the most agreeable solitude imaginable, among woods and rocks, which at first sight dispose a man to be serious. In this place an hermit had lived twenty-five years, who with his own hand had formed in the rock a pretty chapel, a sacristy, a chamber, parlour, refectory, kitchen, cellar, and other conveniencies: Notwithstanding the rooms lie very deep, his chimney is carried up through the whole rock, to the height of ninety feet. He had also cut the side of the rock into a flat for a garden, and by laying upon it waste earth, which he found in several of the neighbouring parts, made such a spot of it as furnished out a kind of luxury for an hermit. In short, seeing drops of water distilling from several parts of the rock, he by following the veins made two or three fountains in the bowels of the mountain that at once served his table, and watered his little garden.

The chapel is sixty-three feet long, thirty-six broad, and twenty-two in height. The sacristy, or vestry, is twenty-two feet both ways, and fourteen in height. The steeple is seventy feet high to the top of the rock, and six in breadth. The saloon, or anti-chamber, between the chapel and the refectory, is forty-four feet by thirty-four. The refectory, in which are his bed and stove, are twenty-one feet long. The hall, or parlour, is thought to be the most surprising performance, it being twenty-eight paces in length, twelve in breadth, and twenty feet high, with four openings representing large windows. At one end of it was his cabinet, with his little library. The cellar is ten feet deep, and twenty-five long.

This hermit, whose name was John de Pre, began to hollow the rock at thirty years of age, and said he was twenty-five years in compleating it, having had no sort of assistance in this work from any person but his valet. The river Sane flows by the foot of the rock, and round this wonderful hermitage is an easy descent covered by

part of a delightful foreſt, in which are ſhady woods and avenues.

It is impoſſible to view this ſtructure without a mixture of concern for the fate of its firſt owner, a man of ſuch contrivance and induſtry, who carrying back ſome young people that came to viſit him on the conſecrating of his chapel in the year 1708, was drowned in the river Sane, on which he uſed once a week to fetch neceſſaries from the town in a little boat.

SECT. XIV.

The Canton of SOLOTHURN.

Its Situation, Extent, Produce, and Rivers. The Religion of the Inhabitants, and a Deſcription of the City of Solothurn.

THE canton of Solothurn is bounded on the eaſt and ſouth by the canton of Bern, on the weſt by the territory of Baſil and the dioceſe of that name, and on the north by the canton of Baſil, extending on both ſides the river Aar about twelve miles from north to ſouth, and ten where broadeſt from eaſt to weſt.

It conſiſts partly of Mount Jura, and partly of a level country. Its ſoil is tolerably fertile, particularly in the level parts, which yield grain and fruit, and in ſome of the diſtricts of this canton are fine woods, paſtures, and vineyards. The rivers of this canton are the Aar, or Aren, which is joined by the greater Emmat.

In the whole canton are two towns and four villages. The eſtabliſhed religion is Popery, except in one of the diſtricts, which is named Bucheckberg, where the inhabitants are Calviniſts, and the miniſters are nominated by the city of Bern. The Popiſh churches here are diſtributed among the dioceſes of Conſtance, Baſil, and Lauſanne.

Solothurn can raiſe ten thouſand men. It was received into the Helvetic body in the year 1481, and is in rank the eleventh canton.

Its arms are party per feſſe gules and argent, and its government ariſtocratical.

Solothurn, in Latin Soludurum, and in French Soleurre, the capital of the canton, is ſituated in the forty-ſeventh degree ſeventeen minutes north latitude, and in the ſeventh degree thirty-five minutes eaſt longitude, in a fertile and pleaſant country on the river Aar, by which it is divided into unequal parts, and the city is ſurrounded on both ſides that river with new fortifications of free-ſtone at a vaſt expence. Its beſt fortifications are, however, the high mountains that lie within its neighbourhood. It contains a collegiate church, with an abbey dedicated to St. Urſina, a very fine Jeſuits college, a convent of bareſooted monks, and an arſenal. The Jeſuits church is the fineſt modern building in Swiſſerland, and is famous for its paintings, ſtucco-work, and frontiſpiece, to which Lewis XIV. gave ten thouſand livres. At a ſmall diſtance from it ſtood the old cathedral, on the aſcent to which are two antique pillars, which, by their proportion, ſeem to be of the Tuſcan order, and belonged to an old heathen temple dedicated to Hermes. The ſtreets are large and adorned with fountains, and the neighbouring country is planted with very fine walks.

This city is the uſual reſidence of the French envoy to the cantons, and its burghers are ranged into eleven companies, out of which both the greater and leſſer councils are elected and filled up; and, in ſhort, their government is much like that of Freyburg.

The lands belonging to this city are divided into eleven diſtricts, in which are a conſiderable number of populous villages.

SECT. XV.

The Canton of SCHAFFHAUSEN.

Its Situation, Extent, and Produce. A Deſcription of the City of Schaffhauſen, with its Government; and of a remarkable Cataract.

SCHAFFHAUSEN is the moſt northern of all the cantons of Swiſſerland, and is for the moſt part ſurrounded by Swabia, the canton of Zurich, and the Black-foreſt; extending about twenty miles from eaſt to weſt, and twelve from north to ſouth.

This country produces a good deal of corn, though not ſufficient for the inhabitants, who are ſupplied with what they want from Swabia. It abounds in paſture, hay, and fruit, and exports a great deal of red wine. Inſtead of loſty mountains it has fertile eminences. The Rhine is the only river of any note in this canton.

In the whole country there are but two towns. The inhabitants are of the Calviniſt religion, and the pariſhes, beſide thoſe of Schaffhauſen, are nineteen in number. In 1501 this canton was received into the perpetual alliance, and thus became the twelfth canton.

The arms of Schaffhauſen are argent, a ram ſaliant and ſable, with a crown or.

The town of Schaffhauſen, in Latin Scaphuſium and Probatopolis, is ſeated on the Rhine, over which it has a handſome ſtone bridge, in the forty-ſeventh degree forty-ſeven minutes north latitude, and in the eighth degree forty-ſix minutes eaſt longitude. The churches here are thoſe of St. John, which has the reputation of being the largeſt in all Swiſſerland; All Saints church, called the minſter, once belonged to a Benedictine abbey, and having been enlarged and beautified at the city's expence, is eſteemed a fine ſtructure; and on the largeſt bell, which is ſaid to weigh ten tons, and to be thirty feet round, is this inſcription:

Vivos voco, mortuos plango, fulgura frango.

That is,

"I ſummon the living, bewail the dead, and break "lightning."

For in the ages of ſuperſtition it was imagined, that bells derived a power of diſperſing tempeſts, ſuppoſed to be raiſed by evil ſpirits, from the baptizing of them, which was performed with a deal of ſhew and ceremony. There are likewiſe two other churches. Beſides theſe buildings it has a *ſchola illuſtris*. It was antiently called Schifhauſen, or Barge-houſe, as here the boats coming down the Rhine from the lake of Conſtance were obliged to land their goods, on account of the cataracts at Lauffen, at which place they were put on board other veſſels; but its name was changed to Schaffhauſen, which ſignifies ſheepfold, it having probably carried on a conſiderable trade in ſheep.

Moſt of the houſes are painted on the outſide, and are as commodious as handſome; the ſtreets are ſpacious and clean, adorned with ſeveral fountains, that have generally pillars in their baſons, and ſtatues of William Tell, the famous archer, or ſome other deliverers of their country.

At the upper end of the town ſtands a large tower, with a good number of guns mounted; but which ſerve more for ornament than defence. On the higheſt ground of all is a citadel, which commands the town, with thick walls, two wells, an arſenal, and lodgments under ground bomb-proof, capacious enough to contain two thouſand men. The town itſelf is well fortified with walls and towers even next the Rhine. Without the walls are three ſuburbs, in one of which is a plentiful ſpring, and near it is a large deep quarry.

The burghers of Schaffhauſen are computed at two thouſand; the arſenal is far from being conſiderable, yet, on any emergency, ſufficient to arm the townſmen, and other ſubjects, who, otherwiſe, are not without neceſſary arms, every common inhabitant, or peaſant, going to church with his ſword by his ſide: and whoever appears before the magiſtrate without that weapon and his cloak, incurs a ſevere penalty. Over great part of the diſtrict of Mount Jura, particularly in the canton of Bern, the men go to church not only with their ſwords, but bayonets and firelocks, which, during the ſervice, they either keep by them, or hang up in a particular corner of the church; an uſage, not improbably, derived from the frequent commotions of former times, and the wars with the Burgundians, againſt whom, as an adjacent and dangerous enemy, it behoved them to be continually upon their guard.

The

The ſupreme power in Schaffhauſen is lodged in the leſſer and greater councils, the former of which is compoſed of twenty-four, and the latter of ſixty members, an equal number of whom are choſen out of the twelve companies of the town, the firſt of which conſiſts of ſix noble families. The principal perſons in the ſtate are two burgomaſters, who enter upon their office alternately every year, and next to theſe is the ſtadtholder. The privy-council conſiſts of ſeven perſons, and the town-court of twenty-five. The matrimonial-court is compoſed of the ſtadtholder, five counſellors, and three miniſters.

The principal trade of this city conſiſts in unlading of veſſels, and the exporting of linen, copper, and other metals, by means of the Rhine.

The city entered into a league with Zurich and St. Gall in 1424, and with Zurich, Bern, Lucern, Schweitz, &c. in 1501, and in 1529 embraced the doctrines of the Reformation.

About a quarter of a league from Schaffhauſen is a tremendous cataract on the Rhine, where that river precipitates from a rock ſaid to be ſeventy feet high, and ninety paces in breadth. Even before the Rhine reaches this cataract, the ground is very rocky; and at the fall divides itſelf into three ſtreams, of which the green beds and ſilver vortices make an agreeable contraſt to the beholder; but at the ſame time his mind cannot help being filled with a mixture of dread and amazement at the roar of the waters: on the ſouth, or the Zurich ſide, is the moſt impetuous breach, the violence of the fall altering the water, as it were, to a white duſt, part of which, like a light cloud or miſt, hovers in the air, and with the intercepted ſun-beams forms a variety of moſt brilliant rainbows.

SECT. XVI.

The Canton of APPENZEL.

Its Situation, Extent, Produce, and Rivers: the Religion of the Inhabitants, their Manufactures, and military Strength; with a conciſe Account of the Town of Appenzel.

APPENZEL is bounded on the eaſt by the Rheinthal, on the ſouthward by the canton of Zurich and that of Schweitz, to the weſtward by Tockenburg, and to the northward by the territory of the town and abbey of St. Gall, extending thirty miles in length, and about twenty-four in breadth.

The country along the Rheinthal is very fruitful, but that bordering on the high chain of hills to the ſouthward is rugged and mountainous; yet its natural ſterility has been overcome by the perſevering induſtry of the laborious inhabitants, in ſuch a manner, that ſcarce any barren ſpots are to be ſeen; at leaſt they afford good paſture; but their agriculture is both chargeable and toilſome. The country produces wheat, rye, barley, oats, peas, beans, and flax in abundance and of extraordinary goodneſs, though they are too frequently injured by the froſt in the ſpring. This canton alſo produces a ſufficient quantity of wine to ſupply the whole country; but the white wine made here is tart, though the red is good; and there are ſuch plenty of fruit, that vaſt quantities of cyder and perry are made here. Wood abounds every where, ſo that the inhabitants are enabled to ſupply the adjacent countries.

This canton abounds in mineral waters, and the rivers and brooks in moſt parts contain plenty of fiſh, particularly of fine trouts. The principal river is the Sitter, which iſſues out of the Alperſee, the largeſt lake in the whole country, and being increaſed by the rivulets called the White-water, the Weiſhach, and the Urnach, enters the territories of the abbot of St. Gall. The Aach, another river that riſes in this country, after traverſing the territories of the abbot of St. Gall, where it is called the Goldach, diſcharges itſelf into the lake of Conſtance.

There is only one town in the whole canton, and only eight villages; the other dwellings of the inhabitants being ſcattered about. There are, however, twenty pariſhes, of which four, with two chapels of eaſe, are Popiſh, and nineteen Calviniſt. From the year 1522, in which the Proteſtant religion was firſt introduced till 1588, very great animoſity ſubſiſted between the country people on account of religion, till, by the mediation of the other twelve cantons, peace was reſtored. Thoſe of the Romiſh church are in ſpiritual matters under the juriſdiction of the biſhop of Conſtance.

The Proteſtants annually weave many thouſand pieces of linen, which are either vended at home, or at Trogen, St. Gall, and other places, and from thence exported into France, Italy, Spain, and Germany. The thread ſpun by the women at Appenzel, and thoſe beyond the Sitter is ſo fine, as to ſell for upwards of ſixteen guilders the pound. Great quantities of thread are alſo bought up in the Rheinthal, Tockenburg, the Thurgau, and Swabia, and manufactured here. The other conſiderable exports of this canton are cheeſe, cattle both fat and lean, horſes, wood, and charcoal.

The arms of this canton are argent, a bear erect ſable, with paws gules.

The common defence of the country is not only provided for by means of a war-office; but every man is to furniſh himſelf with a muſket, powder, and ball. Both the young and old are exerciſed at certain periods, and their arms inſpected from houſe to houſe. In each pariſh are five draughts of their young men ranged under commiſſion and non-commiſſion officers, who are always ready to march on the firſt notice. This canton is able to bring a conſiderable force into the field, and next to Bern, Zurich, Lucern, and Freyburg, is the moſt powerful of the whole confederacy. The Calviniſts are three times the number of the Papiſts, the ſoldiery of the latter not exceeding three thouſand; whereas thoſe of the former amount to ten thouſand.

The principal place in this canton is Appenzel, in Latin called Abbatis Cella, which name it obtained from an abbot's cell, built here in the eighth century. It is ſituated in a delightful valley, on the bank of the river Sitter, in the forty-ſeventh degree thirty-ſix minutes north latitude, and in the ninth degree one minute eaſt longitude, thirty-one miles to the eaſt of Zurich. It has one pariſh church, with a convent of Capuchins, a nunnery of Clariſts, an armoury, and a town-houſe: here alſo the antient general record-office of the whole canton is kept, and the courts of juſtice are held.

We have now laid before the reader as diſtinct a view as we were able of the thirteen cantons, and ſhall proceed to thoſe bailiwics, or governments, which, though not within any of the above cantons, are jointly poſſeſſed by two or more of them; and ſhall then proceed to deſcribe the aſſociated countries.

SECT. XVII.

Of the Places ſubject to the Thirteen Cantons, and firſt of Thurgau: its Situation, Extent, Produce, and Rivers; the Manner in which it was obtained by the Swiſs; with its Government, and a Deſcription of the Cities of Frauenfeld and Arbon.

THE bailiwick of Thurgau, or Thurgaw, is bounded on the eaſt by the lake of Conſtance; on the ſouth by the countries belonging to the prince and abbot of St. Gall; on the weſt by the cantons of Zurich and Schaffhauſen; and on the north by Swabia and the Lower lake, which by ſome is held to be a part of the lake of Conſtance.

Though this country is ſomewhat mountainous towards the ſouth, yet it there affords rich paſtures, and its other parts, which approach nearer to plains, produce plenty of grain, with vegetables and fruit of all kinds, as alſo wine. The ſupreme juriſdiction over that half of the lake of Conſtance which borders on this country, belongs to thoſe cantons that are ſovereigns of the Thurgau.

Its principal river is the Thur, which gives name to the country, and flows out of the territory of the abbot of St. Gall, after which it receives the Sitter, and being

ing at length joined by the Murk, passes on to the canton of Zurich.

The country is populous and well cultivated, containing six towns, a great number of seats, and upwards of one hundred and seventy villages. About one third of the inhabitants are Papists, and in church affairs subject to the bishop of Constance. The other two-thirds, who, ever since the year 1542, have been Calvinists, are divided into forty-nine parishes, which are ranged under three deaneries.

The Thurgau is a very antient bailiwic, which in 1460 was in the possession of the house of Austria; but in that year the Swiss being at war with arch-duke Sigismund, wrested this country from him, and by the peace concluded the following year at Constance, it was confirmed to them. The cantons to which the sovereignty of this country belong are, the eight old cantons of Zurich, Bern, Lucern, Uri, Schwitz, Underwald, Zug, and Glaris. These eight every two years alternately appoint a bailiff, who resides at Frauenfeld; and since the year 1499, the cantons of Freyburg and Solothurn have also obtained a seat in its criminal court.

Of the places within this country, some are immediately under the eight cantons; but the greatest part belong to spiritual and temporal justiciaries, who in their respective lordships and places, are possessed of the lower jurisdiction, and every year hold a meeting at Weinfelden, in which an officer presides who is elected by the cantons from among the persons proposed by the justiciaries out of their own body.

The principal places in this bailiwick are the following:

Frauenfeld, in Latin Gynopedium, is seated on an eminence near the river Murk, over which it has a bridge, at about an hour's distance from the place where it joins the Thur. In the mansion-house here resides the bailiff of Thurgau. The greatest part of the inhabitants are Calvinists, and within the town are two churches, one for each sect; but the mother-church stands at a small distance, at a place called Oberkirch, where also the Popish priest resides, and the dead of both communions are interred. In the council-house are usually held the general meetings of the cantons for auditing the annual accounts, especially for those cantons that are possessed of the regency of the German districts of Thurgau, the Reinthal, &c. Here is also a Capuchin convent, which contains a church.

The regency consists of a lesser council, composed of twelve members, and a greater council of thirty, including the above twelve. Two parts of these councils are of the Calvinist religion, and one Popish. The principal persons in the council are the prætors, one of whom is always a Protestant, and the other a Papist, who act alternately. These two prætors with a Calvinist burgher, all chosen by the whole body of the burghers, are stiled the three counsellors.

Arbon, or Arben, a town in the prefecturate of the same name, is situated on the lake of Constance, and is supposed to be the Arbor Felix of Antoninus. Most of the inhabitants are Calvinists; but the rest, a few Lutheran families excepted, are all Papists. It has but one church, which the Calvinists and Papists make use of alternately, and the Lutherans also attend the divine worship with the former. In the mansion-house resides the bailiff belonging to the bishop of Constance, who has a seat both in the council and the town court, whenever cases of trespasses, or life and death are to be tried there; on occasion of enacting any new laws, or issuing a new edict; but has no vote, the civil and criminal jurisdiction being vested solely in the town. The president both of the council and town court is stiled the amman, who is nominated by the bishop, and every year presented to the whole body of the people by that prelate's bailiff. This officer must be a Papist; but has no vote. The town council is composed of six Calvinist, and a like number of Popish members; but the town clerk is always a Protestant. This council has the direction of the affairs of the town, and takes cognizance of every thing punishable by the laws. Its members are annually elected in the presence of the town amman and clerk, out of the counsellors and deputies of both communions, and confirmed by the bishop of Constance.

SECT. XVIII.

Of the Bailiwics of Rheinthal and Sargans, subject to the Swiss Cantons; with a particular Description of the Baths of Pfeffers.

THE bailiwic of the Rheinthal, or Rhein Vale, lies on the Rhine, which is its eastern boundary, and in this part enters the lake of Constance; to the southward it borders on the canton of Zurich; to the westward on the canton of Appenzel, on which side also a small tract of it terminates on the territory of the abbot of St. Gall; and to the northward it is bounded by the lake of Constance. It is divided into the Upper and Under Rhein Vale.

The soil is fertile, and produces a great deal of excellent wine, the first vines being planted here so long ago as about the year 918. At the foot of the Camor or Gamor-hill, in the Upper Rhein Vale, is a famous crystal-pit, in which are found many thousand quintals of yellow, brown, and white crystal, all hard and transparent.

In this whole tract are only two towns. The greatest part of the inhabitants are Calvinists, and compose nine parishes, whose ministers are chosen from the university of Zurich.

The inhabitants of Appenzel purchased this landgravate in 1460; but in 1490 were obliged to cede it to the cantons of Zurich, Lucern, Schwitz, and Glaris, which at the same time admitted those of Uri, Underwald, and Zug, into a participation with them; as in 1500 they also did Appenzel; and in 1712 all the eight cantons concurred in paying the same mark of regard to Bern. Thus the territorial sovereignty belongs to nine different cantons, which alternately appoint a bailiff over it every two years, who resides at Rheinec; but the abbot of St. Gall enjoys half of the juridical power, and the greatest part of the revenues of the Upper Rhein Vale come into his coffers.

The whole country is divided into five courts, over each of which are two ammans, one appointed by the nine cantons, and the other by the abbot abovementioned. The latter is also possessed of the lower jurisdiction in the Upper Rhein Vale, and in civil processes an appeal lies from the courts to the abbot's council at St. Gall.

The principal places in the Rheinthal are the following:

In the Upper Rheinthal is Altstetten, a small town, in which the abbey of St. Gall is possessed of the lower jurisdiction, and some particular prerogatives, which are exercised by an amman and twelve judges. The first of these officers is chosen out of three select persons among the burghers. From the courts in this town causes are removed to the aulic-council of St. Gall; and of the amercements, one third belongs to the regent cantons, one third to the abbey of St. Gall, and the other third to the town. At Altstetten is also held the criminal court for the Upper Rhein Vale, at which the twelve judges of the town assist, in conjunction with those of other courts. The inhabitants are intermixed, some being Calvinists, and others of the Romish church. In 1410 the town was sacked and laid waste by the Austrians, and it has never since recovered its former grandeur.

In the Lower Rhein Vale the only town is that of Rheinec, a small place seated on the Rhine, but the capital of the Rhein Vale, and the residence of the bailiff of the cantons. This officer dwells in the bailliage-house, the seat which stood above the town being fallen to ruin. In 1410 and 1445 this town was destroyed by fire.

The country of Sargans is seated on the Rhine near the country of the Grisons, and, though very mountainous, breeds great numbers of fat cattle, while the valleys produce grain and fruit. In the lofty mountain of Gunz

Gunz are found three ſpecies of ore, black, red, and aſh-coloured, which on fuſion, after a proper mixture, without any other proceſs, yield a genuine ſteel.

In this country are two towns, the inhabitants of which are partly Calviniſts and partly Papiſts. The former have their miniſters from the univerſity of Zurich, and the latter in eccleſiaſtical affairs are under the biſhop of Chur.

This country was antiently ſubject to the counts of Werdenberg, from whom it was alienated; but in 1436 reverted to them again. The people then entering into a perpetual community of rights with the city of Zurich, the count, in 1437, alſo formed a perpetual community of territorial rights with Schwitz and Glaris, and permitted the caſtles of Freudenberg and Neidberg to be garriſoned with Auſtrians. This alarming both the inhabitants of this country and the city of Zurich, the latter inſtantly marched two thouſand men into the country, who laying ſiege to the two caſtles, took and demoliſhed them. On this count Henry of Werdenberg mortgaged the whole country to the cantons of Schwitz and Glaris, for the ſum of eighteen hundred florins, with a view of ſetting them at variance with Zurich. Accordingly they came to an open rupture, but a peace was ſoon concluded, and in 1485 George count of Werdenberg ſold this country to the ſeven old confederate cantons, which in 1712 admitted Bern to a ſhare of the regency. Theſe eight cantons ſend in their reſpective turns a bailiff to Sargans.

The principal places in this country are,

Sargans, the capital, which is ſeated near the Rhine, and is the reſidence of the bailiff ſent by the cantons, who chooſes an avoyer, who is always a burgher of the town.

Pfeffers, in Latin Fabarium, and in French Faviere, is famous for its rich Benedictine abbey and its baths. The former ſtands on the river Caminge, about two leagues from Sargans on a high mountain, and its abbots are ſtiled princes of the empire; yet the cantons, being ſovereigns of the country, are both inſpectors and protectors of the abbey and its territories. The baths are ſeated in a valley at the bottom of two ſteep rocks or mountains, through which the river Tamin ruſhes down with a frightful noiſe. The crags of the rocks advance ſo as to form a kind of arch. The deſcent to the baths was firſt by ropes, as into a well; afterwards a paſſage was made down to them by wooden bridges faſtened to one another, and ſuſpended between the rocks, and then with infinite labour they built the bagnios and lodging-rooms; but they were ſo darkened by the rocks, that they were forced to light up candles in them at noon-day. In 1629 theſe buildings were all burnt down, and next year the abbot cauſed others to be erected, in a pleaſanter and more lightſome place, by cutting paſſages in the rock, erecting wooden bridges, where the earth was wanting, and making an aqueduct to bring the water from the ſpring to the bathing-rooms; ſo that now they have commodious lodgings, and always good company. The water is perfectly clear, without either taſte or ſmell. It generally riſes about the beginning of May, and goes quite away about the middle of September, except after very dry winters, when it does not riſe till the middle or end of May, and then goes off later in the year. They are informed of its approach by little bubbles of water coming up in the great baſon of the bath, and ſoon after it ſuddenly flows with a great noiſe with a ſtream ſufficient to turn a mill. It is impregnated with the ſpirits of ſulphur, nitre, vitriol, and of ſeveral metals, particularly gold. It is hot in the ſecond degree, and good againſt ſeveral diſtempers, particularly obſtructions of the brain and nerves, pains in the head, epilepſies, apoplexies, deafneſs, weak eyes, palſy, obſtructions of the viſcera, fiſtulas, ulcers, &c.

With reſpect to the abbey, though it is on a high mountain, it ſtands in the midſt of a fine plain, ſhaded with woods, and intermixed with meadows. It was entirely deſtroyed by fire in 1665; but rebuilt with greater magnificence, and lined with black marble, ſtreaked with white, from the ground-floor to the roof.

SECT. XIX.

Of the Bailiwics of Gaſter, Utznach, Gams, and the Town and Diſtrict of Rapperſchweil, ſubject to the Swiſs Cantons.

GASTER, or Gaſtal, in Latin Caſtra, borders to the eaſtward on the country of Sargans; to the ſouthward on the lake of Wallenſtadt, and the cantons of Glaris and Schwitz; to the weſtward on Utznach; and to the northward on the territory of Tockenburg. It is in ſome parts mountainous; but is very fertile. This country was mortgaged by the houſe of Auſtria in 1438 to the canton of Schwitz and Glaris, which ſtill continue in poſſeſſion of it. Theſe two cantons, as ſovereigns of the diſtrict, govern it by a bailiff, who holds his office two years, and is appointed by them in turns. With every new bailiff the people renew their homage, and that officer ſwears to maintain the liberties of the country. With reſpect to the canton of Glaris, it is obſervable, that when that canton nominates a bailiff, he is only choſen by the Papiſts out of their own body. His officers are an under-bailiff, who is elected by the regent cantons, with a treaſurer, a recorder, a ſerjeant, and a meſſenger choſen by the people.

The country court is compoſed of nine judges, who, in conjunction with a bailiff, as preſident, annually hold three ſeſſions in the town-houſe of Schanis to decide civil cauſes without appeal, and impoſe fines for petty treſpaſſes; but in amercements for greater crimes, one half belongs to the town, and the other half to the regent cantons.

The principal place in this country is,

Schanis, or Schennis, a town ſituated on the banks of the Linth, or Lint. It has a church and council-houſe, with an abbey for ladies, the abbeſs of which is reckoned a princeſs of the empire; and though the ladies under her inſpection are permitted to marry, yet ſhe muſt devote herſelf to a ſingle life. The patronage and ſovereignty of this abbey, which has very large poſſeſſions, is veſted in the two regent cantons.

The diſtrict of Utznach lies between Gaſter, Tockenburg, the cantons of Zurich and Schwitz, and the territory of the town of Rapperſchweil. It was once a county of itſelf, which was mortgaged by the heirs of Frederic count Tockenburg to the cantons of Schwitz and Glaris. The inhabitants of this diſtrict, as well as the former, are of the Romiſh religion; and the above cantons, every two years, appoint a new bailiff over it, who is preſented to the people at Utznach; and upon this occaſion they renew their homage.

It contains only Utznach, a ſmall town, which has a prætor and council of its own, with five or ſix villages.

The county of Gams is very ſmall, and lies between the counties of Werdenberg and Tockenburg, and the lordſhip of Saxe. In 1497 the inhabitants put themſelves under the protection of the cantons of Schwitz and Glaris, with the reſerve, however, of their liberties; and it is, like the former, governed by a bailiff. It contains only a village or two, and a few ſcattered houſes.

The town of Rapperſchweil, with its precinct, terminates on the lake of Zurich, the canton of the ſame name, and Utznach.

The town of Rapperſchweil, in Latin Ruperti Villa, ſtands on an eminence, near the above lake, over which it has a bridge eighteen hundred and fifty paces in length, reaching to a point of land which advances a great way into the lake. The town has ſome fortifications, with a pretty ſtrong caſtle. The inhabitants both of the town and its precinct are of the Romiſh church, and in eccleſiaſtical affairs ſubject to the biſhop of Chur, who has a Capuchin convent here. Its magiſtracy conſiſts of the little and great council, the former of whom are compoſed of twelve, and the latter of twenty-four members. It was ſubject to the houſe of Auſtria, but in 1464 the inhabitants put themſelves under the protection of the cantons of Uri, Schwitz, Underwald, and Glaris, with a reſerve, however, of its liberties; yet theſe were at laſt ſeized, but in 1712 were reſtored, and the country

now remains under the ſovereignty of Zurich, Bern, and Glaris.

SECT. XX.

Of the County of BADEN.

Its Situation, Rivers, and Produce. The Manner in which it became ſubject to the Swiſs. Its Government, a Deſcription of the City of Baden, and of its Baths.

THE county of Baden is ſeated in the Argau, or Ergow, being bounded on the weſt by the river Aar; on the north by the Rhine; and on the ſouth and eaſt by the canton of Zurich; though ſeveral villages belonging to it lie on the other ſide of the Aar and Rhine. The Limmat paſſes almoſt directly through the center of the country, and mingles with the Aar, which a little before its conflux with it is joined in this diſtrict by the Reus.

The whole territory in general abounds with fruit and grain, particularly on the Limmat and Aar, where it produces good wine: it likewiſe yields great quantities of good iron ore.

In this tract are only three towns. The greateſt part of the inhabitants are Papiſts, under the juriſdiction of the biſhop of Conſtance, and the reſt are Calviniſts, except a few Jews, who are tolerated.

This country antiently belonged to the dukes of Auſtria, but in 1415 the archduke Frederic being put under the ban by the empire, and excommunicated by the council of Conſtance, the inhabitants of Schwitz made themſelves maſters of the town and county; on which the emperor Sigiſmund mortgaged it the ſame year to the city of Zurich, for four thouſand five hundred guilders; and that city, out of mere ſocial friendſhip, admitted the cantons of Lucern, Schwitz, Underwald, Zug, and Glaris, into a ſhare of the mortgage; and afterwards the city of Bern and the canton of Uri received the ſame mark of regard. Theſe eight old confederate cities and cantons were proprietors of this county, over which they every two years alternately appointed a bailiff, till the Tockenburg war in 1712, when the regent Catholic cantons of Lucern, Uri, Schwitz, Underwald, and Zug, having thrown a garriſon into the town of Baden, the cities of Bern and Zurich made themſelves maſters of it, and the five above-mentioned Catholic cantons, at the peace of Arau, gave up their ſhare in the regency of the county, Glaris alone excepted.

Thus the cities of Zurich and Bern poſſeſs ſeven parts of the regency of this county, the eighth belonging to Glaris. By virtue of this right the former nominate the bailiff fourteen years ſucceſſively, after which Glaris takes its turn for two years. The above two cities have, however, each their option, whether the bailiff ſo nominated ſhall continue during ſeven years, or another be appointed at pleaſure.

The bailiff reſides in the town of Baden; but judges only in ſuch civil cauſes as are brought before him by appeal from the courts which are held almoſt in every village, and the members are elected from among the ſeveral pariſhes, the under-bailiff ſitting as preſident.

Baden, the capital of this country, is ſituated on the Limmat, over which it has a bridge, which, though of conſiderable length, has neither walls nor rails to it. The town is ſeated in the forty-ſeventh degree thirty-five minutes north latitude, and in the eighth degree fifteen minutes eaſt longitude, between two very high hills on both ſides the river, and has two caſtles; the new one lies on the other ſide the Limmat, oppoſite the town, and is the reſidence of the bailiff, for whoſe convenience, in 1734, great improvements were made. The council-houſe conſiſts of two buildings; in one, are held the aſſemblies of the cantons in general, who meet for that purpoſe in a very handſome room. The deputies of Zurich have the moſt honourable ſeat at a little table at the upper end of it, having the ambaſſadors of the foreign powers on the right and left, and the deputies of the other cantons ranged below them on both ſides. They all ſit and are covered, except the bailiff of Baden, and his deputy, who ſtand all the while uncovered; but when the ſuffrages happen to be equal, the bailiff is allowed the caſting vote. In the other building the particular councils and courts of Baden meet. To the Papiſts belong the church of the Aſſumption of the bleſſed Virgin, which ſerves as a canonry; a convent of Capuchins, and a nunnery; and they have another church on the road to the baths. The Calviniſts aſſemble in a church built by them in 1714, which ſtands alſo on the road between the town and the baths.

Theſe baths, to which the grandeur of this city, as well as its origin, is chiefly owing, were famous ſo long ago as about the time of our Saviour. Theſe baths are about a quarter of a mile below the town, on both ſides the river Limmat. The largeſt of them are at Imrapen, a pretty little borough, which conſiſts of handſome houſes ſeated on an eminence, and has a church dedicated to the Three Kings. It is computed that the water is conveyed by no leſs than ſixty canals to the ſeveral inns and private houſes. They come from ſeveral ſprings by the ſide of the river, and it is ſaid from one in the midſt of the river itſelf. The waters are hot in the third degree, being impregnated with a great deal of ſulphur, with a mixture of allum and nitre. The ſprings always riſe the ſame, without increaſe or decreaſe; but are thought to have moſt virtue about the beginning of May and September, becauſe they then abound moſt with the flowers of the ſulphur.

The water is good for drinking as well as bathing, and recommended for the cure of diſtempers, not only of the hot kind, as fevers; but for thoſe proceeding from cold humours, pains in the head, vertigoes, &c. diſorders in the breaſt and bowels, aſthmas, obſtructions, and particularly the diſorders peculiar to women. In the center of the place is the poors bath, called St. Verena's, formed by a ſpring that riſes in the very middle of the ſtreet. Here the poor people bathe in a place quite open to the ſtreet, and its water being eſteemed a cure for ſterility in women, it is ſaid that ſcarce any young woman of diſtinction marries in this county without making it an article in the marriage-contract, that her huſband ſhall take her every year to the baths of Baden, the ladies being here permitted to wear thoſe dreſſes, and allowed thoſe diverſions, that are prohibited in other parts of Swiſſerland. Blainville obſerves, that thoſe who bathe in the public baths, who are generally ſuch as cannot afford the expence of the private ones, have their ſhoulders cupped in them, and that inſtead of cupping-glaſſes, they uſe large horns of rams or bucks; ſo that in theſe baths are ſometimes ſeen two or three hundred naked perſons of both ſexes with horns on their ſhoulders. The people who ſtay at Imrapen for the uſe of the baths, are obliged to buy the water they uſe for drinking and dreſſing their victuals, it being brought from Baden, or ſome ſprings on the other ſide of the Limmat, the water of that river being always thick and muddy, from the rapidity of its courſe among the rocks and ſand.

The harbour on the river belongs to the town; but the cuſtoms to the cantons of Zurich and Bern. The inferior magiſtrates are appointed by the governor or bailiff, and theſe, with the judges of each diſtrict, decide cauſes in his name; but capital cauſes are determined by twenty-four judges, who are choſen out of the whole county by the bailiff; but he has power to mitigate their ſentence. The great council conſiſts of forty members; but the leſſer, which is only of twelve, and included in the greater, decide all cauſes civil and criminal; and theſe two councils chooſe the prætor, the treaſurer, and other magiſtrates.

SECT. XXI.

Of that Part of the Countries ſubject to the Swiſs termed the Free Provinces; their Situation, Extent, Produce, and Government; with a Deſcription of the free independent Towns of Bremgarten and Mellingen.

THE Free Provinces contain a tract of land and certain villages lying along the river Ruſs, which traverſes all the eaſtern border of this country,

try, which is bounded towards the north by the county of Baden; to the eaſtward by the cantons of Zurich and Zug; to the ſouthward by that of Lucern; and to the weſtward by the cantons of Lucern and Bern.

This country produces an extraordinary plenty of grain and fruit. The inhabitants are of the Popiſh religion, and in ſpiritual affairs are ſubject to the biſhop of Conſtance. The inhabitants were formerly free; but at length became ſubject to the houſe of Auſtria; but the emperor Sigiſmund having in 1415, put Frederic arch-duke of Auſtria under the ban, and engaged the Helvetic confederates to invade his territories, the troops of Lucern alone took poſſeſſion of the greateſt part of the Free Provinces, and were for retaining them; but were oppoſed by the cantons of Zurich, Zug, Schwitz, Underwald, and Glaris, who claimed their reſpective ſhares, as having taken the field at the time they were conquered; it having been previouſly agreed, that what any one or more cantons ſhould conquer after the others were in the field, ſhould be eſteemed conquered by the whole body. This produced a conteſt that laſted ten years, till at length, in 1425, Bern ceded the Free Provinces to the cantons of Zurich, Lucern, Schwitz, Underwald, and Glaris. Uri alſo reſigned all ſhare in them; but in 1532, that canton was admitted into the co-regency. At the ſecond peace of Arau in 1712, it was agreed that a boundary line ſhould be drawn from Lunkhofen to Farwangen, and that all below it ſhould be the property of Bern and Zurich alone; but that all above it ſhould continue in the poſſeſſion of the ſeven cantons to which it had been hitherto ſubject, though Bern was afterwards received into the co-regency of the ſame department. Thus the Free Provinces have ever ſince been divided into the Upper and Lower.

The Upper Free Provinces lie to the ſouth of the boundary line, and their government is veſted in the eight old cantons of the confederacy, that is, in Zurich, Bern, Lucern, Uri, Schwitz, Underwald, Zug, and Glaris, the laſt of which every fourteen years appoints a bailiff over them. This officer, however, inſtead of reſiding there, viſits them only in ſpring and autumn, when the courts are held; on which occaſion he lodges at the convent of Muri, and the commandery of Hitzkirch, where, without any colleague or aſſiſtant, he decides all cauſes brought before him, and inflicts penalties on delinquents. In the interval alſo, if two parties deſire his attendance, he repairs thither; but it is at their expence, as he does likewiſe on any important affairs that will not admit of a delay.

The firſt hearing of all civil cauſes is held at the courts of the ſeveral provinces, under the preſidentſhip of the under-bailiffs. From theſe courts appeals are carried firſt to the bailiff, who paſſes his verdict ſingly; but if after this any of the parties think themſelves aggrieved, they are at liberty to carry the cauſe before the deputies of the regent-cantons, and afterwards from theſe again to the cantons themſelves.

In capital caſes the recorder uſually ſends information of the criminals to the bailiff, who generally commiſſions him, in conjunction with an under-bailiff, to try them, for which purpoſe he orders a court to be held at the inn of Bremgarten, where he takes up his quarters, and in his abſence, even to paſs ſentence on the convicts; but this ſentence muſt be tranſmitted to him, either to be confirmed or mitigated. If it be death, he goes with the judges to the uſual place of execution, which is in the high road between Bremgarten and Wollen, where the ſentence is openly pronounced, after which the execution immediately follows.

The Lower Free Provinces, which lie on the north ſide of the boundary line, have ſince the year 1712, been under the ſovereignty of Zurich and Bern, Glaris only retaining the ſeventh part, which belonged to it before, and every fourteenth year putting in a bailiff for two years; whereas Zurich and Bern are poſſeſſed of that privilege every two years alternately. The proceedings here, both in civil and criminal caſes, and in every thing relating to the government, are the ſame as in the Upper Free Provinces.

We ſhall now give ſome account of the towns of Bremgarten and Mellingen, or Meldingen.

Bremgarten is ſituated on the river Reus, between the Lower Free Provinces and the county of Baden, eight miles to the north of Zug. The town is divided into Upper and Lower: the former ſtands high; but the latter, in which is the pariſh church, with a Franciſcan nunnery, is ſeated on the bank of the Reus, over which it has a bridge, and at the farther end of it a Capuchin convent. It is a place of great trade, particularly in making paper. The inhabitants are of the Romiſh church, and within the dioceſe of Conſtance. The town, which was formerly imperial, has undergone ſeveral revolutions, and is now ſubject to the cantons of Zurich, Bern, and Glaris. The regency conſiſts of the little and great council; the former is compoſed of twelve members, among whom are two prætors or avoyers, who, when they enter upon their office, take a formal oath of fidelity to the deputies of Bern, Zurich, and Glaris, at the next annual meeting for auditing the public accounts. The great council conſiſts of forty members, out of whom is elected the town court, appeals from which are firſt carried to the little and great council, and from thence to the deputies of the regent cantons at the annual meeting; and laſtly, even to the cantons themſelves. All criminal and capital caſes are immediately tried before both councils, the town being poſſeſſed of the privilege of beheading and hanging.

Mellingen is a little Popiſh town, with one church, ſeated on the river Ruſs, and is at preſent ſubject to Zurich, Bern, and Glaris. The ingenious Mr. Addiſon, who viſited this town, gives a more particular and a more entertaining account of it than any author we have ſeen. It contains, ſays he, an hundred citizens, and about one thouſand ſouls. The government is modelled after that of the other cantons, as much as it is poſſible for ſo ſmall a community to imitate thoſe of a large extent: for which reaſon, though they have but little buſineſs, they have all the variety of officers and councils that are to be found in the greater ſtates; they have a town-houſe, adorned with the arms of their protectors, and three councils; the great council of fourteen, the little council of ten, and the privy-council of three. The chief perſons of the ſtate are the two avoyers; and when our author was there, the reigning avoyer of the commonwealth was ſon to the inn-keeper where he lodged, the father having enjoyed the ſame honour before him. The revenue of this high poſt amounts to about thirty pounds a year. Every Thurſday, he adds, the ſeveral councils meet upon affairs of ſtate, as the repairs of a trough, the mending of a pavement, or the like important buſineſs. A river which runs through their dominions puts them to the expence of a very large wooden bridge, which is covered over-head like the reſt in Swiſſerland. All who travel over it pay a certain toll for its maintenance, and the French ambaſſador frequently paſſing this way, his maſter allows the town a penſion of twenty pounds ſterling a year; on which account they are extremely induſtrious in raiſing all the men they can for his ſervice. The preſerving this bridge, and the regulation of the dues ariſing from it, are the grand affairs that cut out employment for the council of ſtate.

There are alſo the four diſtricts of Schwartzenburg, Murten, Grandſon, and Eſchalens, which are ſubject to Bern and Freyburg, who alternately appoint prætors over them, whoſe office laſts for five years; but theſe are little diſtricts that contain no place of any conſequence.

SECT. XXII.

Of the ſeven Italian Bailiwics ſubject to the Swiſs Cantons, namely, Bellinzona, Riviera, the Valle di Blegno, Lugano, Locarno, Val Maggia, and Mendris.

IN the ſeven Italian bailiwics the inhabitants are univerſally Papiſts, and ſpeak the Italian language. The three firſt of theſe belong to the cantons of Schwitz, Uri, and Underwald; and the other four to the cantons in

in general, excepting only Appenzel, which at the time of their acquiſition was not a member of the confederacy.

The firſt of theſe is the bailiwic of Bellinzona, which is bounded on the eaſtward by the Upper Griſons and the dutchy of Milan, to the ſouthward by the bailiwic of Lauis and Locarno, to the weſtward alſo by Locarno, and to the northward by the bailiwic of Riviera.

A part of it is watered by the river Ticino, into which the Mæſa diſcharges itſelf. The hills and mountains afford excellent paſturage for cattle, and likewiſe abound in cheſnuts; and the plain near Bellinzona produces good wine. All the pariſhes, three excepted, which are in the dioceſe of Milan, are under the biſhop of Como.

In the year 1500 the town of Bellinzona ſubmitted to the cantons of Uri, Schwitz, and Underwald; and three years after it was ceded to them as their abſolute property by Lewis XII. king of France; and this ceſſion was ratified by Maximilian Sforza, duke of Milan, in acknowledgment of their having reſtored him to his dutchy. Every two years theſe cantons alternately nominate a ſteward, or bailiff, under the title of commiſſary, which is always the perſon whom the two preceding years had diſcharged that office in the bailiwic of Riviera. Every year too each of the regent cantons ſends a deputy to Bellinzona, to audit the commiſſary's accounts and hear appeals, and to tranſact other public affairs.

The principal place in this bailiwic is,

Bellinzona, or Bellentz, a large, trading, and well fortified town, ſituated in a plain near the conflux of the Ticino and the Mæſa. Almoſt in the center of a large ſquare ſtands the manſion-houſe of the commiſſary. The collegiate and abbey church of St. Peter and St. Stephen is a handſome building, and in the ſuburbs without the town are two convents and one nunnery, each having its church, beſides an edifice called the Reſidence, which has been converted into a college, in which the abbey of Einſidlen appoints profeſſors for the inſtruction of youth in humanity and moral theology. The town ſtands between three hills that command it every way, and have each a ſtrong old caſtle fortified in the antient taſte, and provided with cannon. In one of them reſides the caſtellan of Uri, in the ſecond the caſtellan of Schwitz, and in the higheſt that of Underwald.

The bailiwic of Riviera, or Poleſe, is bounded on the ſouth by the bailiwic of Bellinzona; to the weſtward on that of Locarno, or Lugarus; to the northward by the Valle di Blegno and Liviner; and to the eaſtward by the Upper Griſons. This diſtrict is watered by the Ticino, which in theſe parts receives the Blegno. It came to the cantons of Uri, Schwitz, and Underwald, at the ſame time, and is governed by them in the ſame manner with the bailiwic of Bellinzona. Within its juriſdiction are only nine pariſhes, the town of Riviera, and a few villages.

The bailiwic of the Valle di Blegno, otherwiſe called di Bregno, is bounded to the ſouthward by the diſtrict of Riviera, to the weſtward by the Vale of Liviner, and to the north and eaſt joins to the country of the Upper Griſons. It is environed by lofty mountains; but the barrenneſs of ſome of them is made up by the fertility of others. The length of this territory, according to Buſching, is not leſs than ſeven hours, all watered by the Blegno; but its breadth does not much exceed half that ſpace. It feeds multitudes of cattle, and yields ſeveral kinds of grain and fruit, eſpecially cheſnuts and tolerable wine; but in ſummer the men remove to Italy to earn money by working in the fields, leaving all their work at home to the women. In the year 1512 this Valley ſuffered extremely by the fall of two mountains, which ſtopping up the courſe of the river, it ſwelled to that degree that the far greateſt part of the vale became a lake; and this inundation laſted till the year 1514, when the waters forced themſelves a paſſage.

About the year 1500 the inhabitants ſubmitted to the canton of Uri, though with a reſerve of their liberties, and that canton admitted Schwitz and Underwald into a co-regency. Theſe ſeveral cantons every two years alternately appoint a bailiff over it; but the eccleſiaſtical affairs of this diſtrict are only cognizable by the archbiſhop of Milan. It is divided into three parts, each of which contains ſeveral villages.

The bailiwic of Lugano, by the Swiſs called Lauis, is on all ſides ſurrounded by thoſe of Locarno, Mendris, Bellinzona, and the dutchy of Milan. To it belongs the greateſt part of the lake of Lugano, which is about ſeven miles long, and three broad, excluſive of its many little bays. The country itſelf, in which are no leſs than a hundred and ſix populous burghs and villages, was in 1512 conferred on the confederate cantons in general, which at that time were twelve in number, by Maximilian Sforza, duke of Milan, in return for the effectual aſſiſtance they had granted him againſt the French; and accordingly they every two years appoint a governor over it, under the title of capitaneo. It is divided into four quarters, three of which, in eccleſiaſtical concerns, are under the biſhop of Como, and the other under the ſuperintendency of the archbiſhop of Milan.

The bailiwic of Locarno, or Lugarus, is ſituated between the Milaneſe, the Mayenthal, the Livinerthal, and the bailiwicks of Riviera, Bellinzona, and Lauis, comprehending alſo a part of the Lago Maggiore. It has three or four fruitful valleys, and fine rivers that run into the lake, and is divided into four communities and forty-nine pariſhes. It came to the twelve allied cantons in the ſame manner and time with Lugano, and its government is the ſame. Its capital is of the ſame name, beſides which it has a town called Aſcona, and a few villages.

Val Maggia, or the Mayenthal, is ſurrounded by the dutchy of Milan, the Liviner Vale, and the Captainry of Locarno. It is thirty-three miles in length, and derives its name from the river Maggia, which traverſes it. It came to the twelve confederate cantons at the ſame time, and in the ſame manner as the above-mentioned bailiwics, and thoſe cantons every two years appoint a bailiff over it. It contains the towns of Cevio, or Civio, and Maggia, with a few villages.

The laſt of theſe bailiwics is that of Mendris, which is ſurrounded by the dutchy of Milan, and a part of the bailiwic of Locarno. This alſo came to the twelve United Cantons at the ſame time, and in the ſame manner, with the three preceding diſtricts, and accordingly they every two years alternately appoint a bailiff over it. In this country is a town of the ſame name, and ſeveral villages.

We ſhall now proceed to the aſſociated countries, ſummoned to the legiſlative diets of Swiſſerland in quality of allies, and that have a vote in thoſe aſſemblies. Theſe are the abbey of St. Gall, the country of the Griſons, with their ſubjects, the principality of Neufchatel, and the republic of Geneva. We ſhall begin with the former.

SECT. XXIII.

The Territories of the Abbey of St. Gall.

Their Situation and Extent: a conciſe Account of the Abbey, with the Prerogatives and Arms of the Abbot; their Government and principal Places, with a particular Deſcription of the City of St. Gall, a ſmall Proteſtant Republic independent of the Abbey.

THE abbey of St. Gall, which is of the Benedictine order, is included within the ſame walls as the town of that name, but has very conſiderable territories, and the abbot is capable of raiſing an army of twelve thouſand armed men, he being ſovereign of the whole country, and under the protection of the cantons of Zurich, Lucern, Schwitz, and Glaris.

This country is divided into the Old Territory, alſo called the territory of the people of God's houſe, and a diſtrict called the county of Tockenburg; the former is bounded on the eaſt by the lake of Conſtance and the Rhein Vale, on the ſouth by the canton of Appenzel, on the weſt by Tockenburg and the Thurgau, and on the north alſo by the latter; it being fourteeen miles long and ten broad. The ſoil bears a near affinity to that of Thurgau, and its inhabitants are Popiſh.

Till the year 1567 this abbey was parted from the city only by a ſingle hedge; but afterwards, by a particular agreement, it was divided by high walls, in which is a gate opening into the city, and another towards the territories of the abbey. Within the circuit of this convent is the minſter abbey church, in which, among the bones of other lords, are kept thoſe of St. Gallus, the original founder of the abbey; and adjoining to it is St. Othmar's church, in which are preſerved the relicks of that ſaint. Next to theſe are the palace of the abbot, with the convent itſelf, in which are uſually upwards of ſixty monks, and a library famous for its antient and curious manuſcripts. The abbot is choſen by the monks of the abbey from amongſt themſelves, and inſtantly becomes a prince of the empire, immediately ſubject to the pope himſelf. On his acceſſion to his dignity he is, by a grant from the emperor, inveſted with the regalia, and fief over the old territory belonging to the abbey, and the county of Tockenburg; but does not aſſiſt at the diets of the empire. On the other hand, by virtue of the perpetual community of defence entered into with the confederate cantons of Zurich, Lucern, Schwitz, and Glaris, the abbey was admitted as an incorporated place, and enjoys both a ſeat and voice in the general meetings of the confederacy which are granted to its deputies, immediately after thoſe of Appenzel.

The arms of the abbot are quarterly, in the firſt field dexter a bear rampant ſable, for the abbey: in the firſt field ſiniſter, azure, an *agnus Dei*, argent, for the abbey of St. John: in the ſecond dexter field, the family arms of the abbot; and in the ſecond ſiniſter or, a dog ſable, with a collar argent, for the county of Tockenburg.

Formerly the abbey had the duke of Swabia for its ſteward, the counts of Hohenzollern for its grand marſhal, the counts of Hochberg for its arch-cupbearer, and the baron of Regenſberg for its high-chamberlain; but theſe offices are at preſent borne by other perſons of diſtinguiſhed rank.

In the old diſtrict, and the county of Tockenburg, the biſhop of Conſtance is veſted with all epiſcopal rights and emoluments, in conformity to the privileges granted by ſeveral popes. The abbot of St. Gall enjoys, however, not only the diſpoſal of all the convents belonging to him, but likewiſe of all benefices, both in the old territory, the county of Tockenburg, and within his diſtricts in Thurgau and the Rhein Vale. To him likewiſe belongs the juriſdiction in civil, criminal, and mixed caſes, with the viſitation, &c. but the greateſt part of theſe prerogatives he exerciſes by a repreſentative, who is always a monk of the abbey. He has alſo an eccleſiaſtical court for the deciſion of religious conteſts, which, beſides the above repreſentative, who ſits as preſident, is compoſed of four conventuals, and ſome lay-aſſeſſors.

The members of the aulic-council at St. Gall, are the dean of the abbey, who ſits as preſident, the ſtadtholder, three conventuals, and ſome laymen. This council hears appeals from the lower courts within the juriſdiction of the abbey; but decides without appeals, only an order may be obtained from the abbot for a reviſal.

The chief town in the abbot's antient territories is Rorſchach, which is ſeated in a pleaſant fruitful country by the ſide of the lake of Conſtance, oppoſite to Lindaw. It has many fine houſes in proportion to its extent, with a good harbour, and great markets frequented by multitudes of people from all the towns and villages round the lake; and a conſiderable trade is carried on in linen, corn, fruit, cattle, and good wine. In 1409 this place being attacked by four thouſand Imperialiſts, was defended by two thouſand burghers, who fought with the utmoſt intrepidity till they were all cut to pieces, and then the town was taken and burnt; but by degrees it roſe again, and the houſes were rebuilt with free-ſtone. By the ſide of it is a magnificent convent on an eminence that commands the town, and above the convent is an antient fort belonging to the abbot. There is here alſo a college for the inſtruction of youth.

The county of Tockenburg is ſurrounded by the antient territory of the abbey of St. Gall, the Thurgau, the canton of Zurich, the diſtricts of Utznach, Gaſter, and Sargans, the lordſhip of Werdenberg, and the canton of Appenzel, and is, according to Dr. Buſching, ten hours in length, and its greateſt breadth three.

The ſoil reſembles that of Appenzel and other cantons, and the country is full of fertile mountains that abound in numerous breeds of cattle. The militia here form a body of about nine thouſand men, two thirds of whom are Calviniſts, and one-third Papiſts. The Papiſts in the upper part of the country are under the biſhop of Chur; but in the lower part within the dioceſe of Conſtance.

The abbot of St. Gall bears the title of natural ſovereign and lord of the country of Tockenburg, and the people take an oath to him and pay him ſuitable ſervices, but without any violation of their rights and liberties. He appoints a bailiff over the country, and may nominate either a native or a foreigner: he likewiſe puts in the recorder and ſerjeant, who muſt be natives and perſons of eſtate in the country. The council is compoſed of thirty Papiſts, and the like number of Proteſtants, who are choſen by the pariſhes and diſtricts. This council attends to the liberties of the people, conducts the public and private affairs of the country, impoſes taxes, ſettles the military expences and thoſe of any public improvements, and likewiſe audits the accounts of the parties concerned. This council meets once a year, and oftener when neceſſary. All males of fourteen years of age and upwards are ſummoned to take the country oath. The preſident of the country court is always the bailiff for the time being; but its twenty-four judges are appointed by the abbot, one from each of the twenty-two old pariſhes, and two from Lichtenſteig and Watweil. This court is held in the abbot's name as prince, and takes cognizance of all cauſes; and being the prince's council, the ſalaries attending it are paid by the prince, to whom belong all confiſcated eſtates and effects of malefactors executed, with thoſe of ſuicides, and fugitives for capital crimes. Half of the judges of the inferior courts are nominated by the prince, and the other half by the pariſhes. The court of appeals has for its preſident the bailiff for the time being, but the twelve aſſeſſors muſt be natives of the county and landholders. The prince here nominates three Papiſts and three Calviniſts, and the country council chooſes a like number from among their own members.

Lichtenſteig is the capital of the country of Tockenburg, and is a ſmall town ſeated on the river Thur. It is the reſidence of the bailiff, who dwells in the new manſion-houſe, and the old one is uſed for holding the country court and court of appeals; but the council of Tockenburg, with the Calviniſt ſynod, the matrimonial court, and the town-council, aſſemble in the town-houſe. The government of this place is veſted in a prætor and a council, the former alternately choſen out of both religions; the ſame equality is obſerved in filling up the council and other poſts.

We ſhall now return to the city of St. Gall, which is a little Proteſtant republic entirely independent of the abbot, and under the protection of the cantons. It is ſeated between two mountains in the forty-ſeventh degree thirty-one minutes north latitude, and in the ninth degree twenty minutes eaſt longitude, two leagues to the ſouth-weſt of the lake of Conſtance. It is ſituated near the river Steinbach, which drives ſeveral mills; but its moats receive their water from a rivulet called Iren. Here are ſpacious ſtreets, good houſes, and ſeveral public ſtructures. The cathedral of St. Laurence is a pariſh church, and without the walls is another, with a chapel. Here was a convent dedicated to St. Catharine; but now converted into a gymnaſium of nine claſſes, under the like number of maſters aſſiſted by two profeſſors, and in this building is the city library. Here is alſo a town-houſe and an arſenal. Mr Addiſon obſerves, that it is ſurpriſing to find ſuch a number of rich burghers in the city of St. Gall, and ſo few poor people, in a place that has ſcarce any lands belonging to it; but the wealth of this little ſtate conſiſts in its linen manufacture, in which people of all ages and conditions are employed. The adjacent country furniſhes them with vaſt quantities of flax, of which they are ſaid to make every year forty thouſand pieces of linen cloth, reckoning two hundred ells to each piece, and ſome of it as fine and white as any that can

be found in Holland. This linen they ſend upon mules into Germany, Spain, Italy, and all the adjacent countries. In the city of St. Gall, and the houſes ſcattered about it, there are computed near ten thouſand ſouls, of which ſixteen hundred are burghers, out of which body their councils and burgomaſters, the town amman and ſtadtholders, are choſen, as in other governments of Swiſſerland, the difference conſiſting in little more than in the number of ſuch as are employed in ſtate affairs.

The military eſtabliſhment is under the conduct of the council of war, and the burghers are divided into nine quarters, with a captain and proper officers to each; but the firſt officer is the town-major. Here are alſo a company of matroſſes and bombardiers, with one of light infantry, two of grenadiers, and a troop of horſe.

The town is generally thought to owe is original to the abbey, which it is certain has not a little contributed to its increaſe. The abbey and the town are ſaid to have a great averſion to each other, and yet in the general diet of the cantons their repreſentatives ſit together and act in concert.

About four years before Mr. Addiſon's arrival, the city and abbey were on the point of coming to an open rupture. In one of their annual proceſſions a Benedictine monk carried his croſs erect through the town, followed by a train of three or four thouſand peaſants; but he had no ſooner entered the abbey, than the whole town was in a tumult, occaſioned by the prieſt's carrying the croſs contrary to all precedence, in that manner. Inſtantly the burghers put themſelves in arms, and drew down four pieces of their cannon to the gate of their abbey: upon which thoſe who had formed the proceſſion did not dare to return by the way they came; but after their devotions were ended, went out at the door that opened into the abbot's territories. The abbot, exaſperated at this proceeding, raiſed an army, blocked up the town on the ſide that faced his dominions, and forbad his ſubjects furniſhing it with any of their commodities. But while things were thus ripe for a war, the cantons, their protectors, wiſely interpoſing as umpires in the quarrel, ſentenced the town, for appearing too forward in the diſpute, to pay a fine of two thouſand crowns; and at the ſame time enacted, that whenever any proceſſion entered their walls, the prieſt ſhould let the croſs hang about his neck without ſo much as touching it with either hand, till he came within the precincts of the abbey.

The town and abbey of St. Gall carry a bear in their arms. The Roman catholics have the memory of this bear in very great veneration, and repreſent him as the firſt convert made by their ſaint in this country. One of the moſt learned of the Benedictine monks, with tears of affection in his eyes, gave Mr. Addiſon the following hiſtory of him. It ſeems that St. Gall, who is here termed the great apoſtle of Germany, found all this country little better than a vaſt deſart; and as he was walking out on a very cold day, happened to meet a bear, when inſtead of being ſtartled at the rencounter, he gravely ordered the bear to bring him a bundle of wood, and to make him a fire; upon which the bear ſerved him to the beſt of his ability, and at his departure was ordered by the Saint to retire into the very depths of the woods, and there to ſpend the reſt of his life without ever hurting man or beaſt. From this time, added the monk, the bear lived irreproachably, and till his dying-day obſerved the order given him by the Saint.

SECT. XXIV.

The Country of the GRISONS.

Its Situation, Extent, Produce, and Rivers. The Language and Religion of the Inhabitants; their Hiſtory, Government, Manners, and military Forces: with a Deſcription of the three Leagues, or Confederacies, into which this Country is divided, and the principal Places in each; with a particular Deſcription of the City of Chur.

THE country of the Griſons is bounded on the eaſtward by Tirol and the territories of Venice; on the ſouth by the Italian bailiwics, the Valteline, and the county of Chiavenna; on the weſt by the cantons of Uri and Glaris; and on the north by the canton of Glaris, the county of Sargans, and a part of Tirol; extending from eaſt to weſt in its greateſt length about eighty-five miles, and in its breadth from ſouth to north about ſeventy-ſix.

The greateſt part of the country is mountainous, but the levels and valleys produce almoſt all ſorts of grain, with pulſe, plenty of hay, fruits of ſeveral kinds, and wine. Its hills, which are of a middling height, and enjoy a mild air, yield not only good graſs and hay, but alſo rye and barley, and in ſome parts cherries: even on the higheſt ſpots are good paſture-grounds, beſides many kinds of palatable and wholeſome berries.

The principal buſineſs of the inhabitants is the feeding of horned cattle, ſheep, goats, and ſwine. They likewiſe export a great deal of butter and cheeſe; but the breeding of horſes is ſo much neglected, that the greateſt part of thoſe uſed in the country are purchaſed of foreigners; the few that are bred there are hardy and laborious, but ill ſhaped. They have plenty of poultry and wild fowl; but the only fiſh worthy of notice are the eel-pout, and a few pikes. They have mines in ſeveral parts; but the produce of them is inconſiderable.

The principal rivers of this country are the Rhine, the Inn, and the Adda, all which have their ſource here. Beſides theſe, there are ſome ſmall rivers, or rivulets. Here are alſo ſeveral lakes, moſt of which lie on the ſummits of the mountains, where they riſe from fine ſprings.

In the whole country of the Griſons are but three towns. The German tongue is not only uſed in their general ſtate aſſemblies, and public inſtruments; but is alſo continually growing more and more in vogue. It is ſpoken at Chur, and in its territory, and almoſt every where in the Ten Juriſdictions. In many places the inhabitants ſpeak both the German and Italian. The Roman or Chur Italian is principally ſpoke among the Griſons. At Engadin, the Ladinum, a kind of Latin, is the prevailing language; and at Pregel is a corrupt kind of Italian.

Both the Calviniſt and Popiſh religions are by the laws entitled to an entire freedom. The profeſſors of the firſt form about two-thirds of the inhabitants, and their clergy are divided into ſix *colloquiums*. In every league is a dean, and each *colloquium* has its own *præſes*. The deans are annually choſen by lot in a ſynod of the three leagues, which have alſo a college at Chur for the inſtruction of youth, each of which has its inſpector, who is always a layman. The greateſt part of the Popiſh clergy in the three leagues are under the ſee of Chur, and divided into chapters.

Every community is ſo entirely of one religion, that if any perſon changes his ſentiments, he muſt go into another. The Papiſts in their proceſſions ſometimes go from one community into another; but when they enter thoſe belonging to the Proteſtants they lower the croſs, and leave ſinging till they are again upon popiſh ground.

The country of the Griſons is a part of the antient Rhætia. The people were formerly ſubject to ſeveral princes, ſome to petty ſovereigns, ſome to the biſhop of Chur, and others to the houſe of Auſtria, to whom the Rhætians behaved with ſuch extraordinary fidelity, that the emperor Frederic II. rewarded them with a grant of ſeveral privileges and immunities. In 1419, the biſhop of Chur, who bore great ſway here, in conjunction with the city of that name, concluded an alliance of fifty-one years with the city of Zurich.

The free communities in this part of Rhætia, by a mutual compact among themſelves, formed three republics, which are now called Leagues or Confederates: theſe go by the names of the Grey or Griſon League, that of the Houſe of God, and that of the Ten Juriſdictions. The firſt concluded its alliance in 1424; the ſecond claims a more antient date; the third acceded to the union in 1436; and in 1471, the three leagues entered into a perpetual alliance with each other, which has been ſince ratified and explained.

The three leagues, by virtue of theſe engagements, form one united republic; but inſtead of one united common

mon coat or ſeal, each league has its particular arms; but in inſtruments that relate to the whole body, a ſeal is uſed that has the arms of the three united leagues. However, a general diet is annually convoked by the heads of the three leagues, and annually meet on St. Bartholomew's-day, one year at Ilantz in the Grey league, the next at Chur in that of God's Houſe, and the third year at Davos in the Ten Juriſdictions. At the ſame time notice is ſent to the ſeveral communities, of the affairs on which they are to ſend their plenipotentiaries with full powers. This general diet uſually ſits a fortnight or three weeks, and two deputies are ſent from every community in each league, by which means the number of votes in the general diets amounts to ſixty-ſix; of which the Grey league has twenty-eight, that of God's Houſe twenty-three, and that of the Ten Juriſdictions fifteen; the chief of the league where the diet is held being always preſident.

In the general diet are diſcuſſed and regulated affairs of ſtate, negotiations with foreign powers, and the deciſions of all appeals. This diet likewiſe receives the public revenue, and adminiſters the oaths to new officers of the provinces. However, in affairs relating to the whole united body, and to negotiations with foreign powers, no final reſolution is taken; but at the riſing of the diet, a committee of the heads of the three leagues, aſſiſted by two repreſentatives from each, is appointed for digeſting the proceedings, and to determine what particulars are to be communicated to their ſeveral communities, either as reſolved and enacted, or on which their opinions are deſired. The reſolutions of each community are formed by a plurality of voices, each community ſending up its opinion in writing to the new congreſs.

The country of the Griſons is extremely populous; and as there are no people more free, ſo there are none more jealous of their liberty. Hence they have a ſingular method of puniſhing thoſe ſuſpected of treaſon, or of any crime againſt the ſtate, which makes the greateſt men in the country tremble. When the diet is aſſembled, the peaſants flock to it in crowds, to demand a court of juſtice for the trial of the offender, which the diet is bound to grant. This court conſiſts of ten judges, and twenty advocates of each league, who have the power of applying torture, and doing every thing neceſſary to diſcover the truth of the accuſations. Its proceedings are vigorous and ſummary, and generally end in a ſentence of death, or a heavy fine. In other reſpects the Roman law prevails among the Griſons, though ſomewhat modified by their cuſtoms. Thus a man who has an eſtate by his wife, enjoys it after her death till he marries again, and then is bound to divide it among the children he had by her.

The married women here ſcarce ever appear abroad except at church; but the young women have more liberty before they are married.

Though here is plenty of every thing, yet their habits and furniture are plain. With reſpect to their proviſions, their meat is very juicy, their fowl excellent, and the fiſh of their lakes, eſpecially their trouts, inferior to none in the world; and though the wine they drink is brought on horſes four or five days journey, they have it cheaper than in moſt parts of Italy and France. The inns upon the mountains are very good, and beſides good bread and wine, there is always a great quantity of game and veniſon, according to the ſeaſon of the year, with neat chambers and good beds. There is nothing paid in this country for importation or exportation; but every one enjoys the fruit of his labour, and the revenue of his lands.

The three leagues have contracted friendly alliances with the neighbouring cantons and their aſſociates. In 1600 they all entered into a perpetual league with the republics of the Valais, in 1602 with Bern, and in 1707 with Zurich. In 1497 the Grey league, and the next year the league of God's Houſe, entered into a like engagement with Zurich, Uri, Lucern, Schwitz, and Glaris; and in 1567, the Ten Juriſdictions ſued to be admitted into that alliance; but at a diet held at Baden received for anſwer, that though their application was not then complied with, yet the confederate cities and cantons aſſured them of their ready friendſhip and ſervices on all occaſions, and in their inſtruments and letters ſtiled them confederates and allies.

The Griſons maintain no troops, and even apply themſelves very little to the uſe of arms. But as they furniſh foreign powers with regiments, they are never without experienced officers and ſoldiers, and on occaſion the three leagues are able to bring thirty thouſand fighting men into the field. But the principal ſtrength of the country conſiſts in its high mountains and narrow paſſes, in which a handful of reſolute men are able to make head againſt a conſiderable army.

The Upper, or Grey league, which contains ſeveral high mountains, is bounded on the eaſt by the other two leagues; on the ſouthward by the dutchy of Milan, and the bailiwic of Bellinzona; on the weſtward by the canton of Uri; and on the northward by the canton of Glaris and the bailiwic of Sargans.

In this league are eight communities, the principal town in which is the following:

Ilantz, in Latin Ilantium, a ſmall town ſeated at the foot of a hill, between the Farther Rhine and the Glenner. This is the chief place in the Upper or Grey league, and every third year the general diet of the Griſons is held here, as are likewiſe the courts of juſtice. The inhabitants are Calviniſts.

The league of the Houſe of God, or, as it is called, La Caddée, from the Italian Caddea, a corruption of Caſa Dei, probably owes its appellation to the biſhopric of Chur. This country is bounded by the Grey league on the weſt; the county of Tirol, and that of Bormio on the eaſt; the Ten Juriſdictions on the north, and the county of Chiavenna and the Valteline on the ſouth. It is about ſixty-ſeven miles in its greateſt length, from the north-eaſt to the ſouth-weſt, and forty from eaſt to weſt.

The ſoil is for the moſt part rugged and barren; yet about Chur and the banks of the Rhine, they have moſt ſorts of fruit except oranges and olives.

The arms of this league are argent, a goat ſaliant and ſable.

The principal place of this league is the following:

Chur, or Coire, in Latin Curia Rhætorum, and in Italian and Roman Coira, and in the language of the country Chur, is the capital of the whole republic of the Griſons, and is ſituated in the forty-ſixth degree fifty-two minutes north latitude, and in the ninth degree thirty-two minutes eaſt longitude; fourteen miles to the north-eaſt of Ilantz; by the river Pleiſſur, which waſhes the walls of the city, and may be conveyed through all the ſtreets, and about half a league before that river diſcharges itſelf into the Rhine. The eaſt part of the city lies at the foot of a hill, as does the ſouth part at the foot of another; but towards the north and weſt is a fine plain, beautifully diverſified with corn-fields, meadows, orchards, and vineyards; and towards the north-eaſt, an eminence, alſo covered with vineyards.

This city is of tolerable extent, and all the inhabitants are Calviniſts. It has two churches, each containing a miniſter, one of whom, who officiates at the cathedral of St. Martin, is ſtiled Antiſtes. Beſides theſe, it has a church ſet apart for funeral ſermons, with a *collegium philoſophicum* of two profeſſors, founded in 1700 by the Calviniſt communities of the three leagues, and over which every league nominates its own particular inſpector. It has alſo a grammar-ſchool of three claſſes. In the town-houſe every three years is held the general diet of the Griſons, as likewiſe the extraordinary diets and congreſſes. In the town-houſe are alſo kept the ſtate-office and record-office of the Houſe of God in particular, as well as of the three leagues collectively; and under it is a magazine for keeping the goods of the merchants paſſing to and from Italy and Germany. On the cloiſter ſquare is the arſenal, in which are kept the artillery both of Chur and the whole ſtate of the Griſons. Adjoining to this is the granary, in which a corn-market is held twice a week.

The fineſt private buildings here is the palace erected by Peter lord of Salis, to which belongs a moſt beautiful garden, and the houſe of the late burgomaſter Otho Schwartz, which is built in the Italian taſte.

The ſupreme power is lodged in the burghers, who are divided into five companies, and by proclamation from the council, meet on all deliberations relative to the ſtate, in which every freeman of thoſe companies is aſked his opinion, the reſolutions are taken according to the majority of the ſuffrages, and communicated in writing to the council. Whatever is approved by three companies, the other two muſt acquieſce in.

The great council conſiſts of ſeventy perſons annually choſen by the burghers; that is, fourteen out of each company, on the firſt Sunday after St. Criſpin's-day. Theſe ſeventy chooſe the leſſer council, conſiſting of twenty perſons. The principal perſon in the city is the burgomaſter, who is annually elected by the free choice of the great council. The leſſer council, with the addition of two eccleſiaſtics, conſtitutes the matrimonial court.

The origin of this city is involved in obſcurity; but it gradually obtained all the immunities and privileges of an imperial city, and has from time immemorial been poſſed of the right of coinage. The origin of the ſee of Chur is no leſs uncertain. The ſeries of its biſhops annually begins with Aſimo, who is ſuppoſed to have lived about the year 440, and the ſee is generally held to be one of the moſt antient. The ſeveral communities of this part of the country of the Griſons, have acquired the right of protection over the ſee, and have ſhewn themſelves on all occaſions the courageous protectors both of the ſee and the biſhops.

The biſhop of Chur is a prince of the empire, and his title is, Biſhop of Chur, of the holy Roman empire, lord of Furſtenſburg and Furſtenau.

His arms are the ſame with thoſe of the city, and the biſhop enjoys a ſeat in the diet of the empire, and in the college of princes, ſits next to the biſhop of Lubec; but in church affairs he is under the juriſdiction of the archbiſhop of Mentz. He is elected by the chapter of Chur, which conſiſts of twenty-four prebends. The biſhop, with the chief of the prebends, that is, the provoſt of the cathedral, with the dean, ſcholaſticus, cantor, cuſtos and theſaurarius, live juſt without the city of Chur, on an eminence called the Hof, which is encloſed with walls and gates, and in which alſo ſtands the cathedral. The revenues of the biſhop are, however, far from being ſo conſiderable as they were formerly.

The Ten Juriſdictions border to the ſouth and eaſt on the league of God's Houſe; to the weſtward on the ſame league, and the county of Sargans; and to the north on Sargans and the principality of New Lichtenſtein. This is the ſmalleſt of the three leagues, and conſiſts of ſeven diſtricts. It for the moſt part conſiſts of rugged and deſart mountains, and has no corn or other fruit, except in that part called the Vallis Rhætica, on the banks of the Rhine; but it has plenty of paſture, cattle, milk, butter and cheeſe, not only for their own uſe, but for exportation; and the lakes abound with fiſh, eſpecially trouts. The air on the mountains is very cold, and the people often in danger from the ſnow and ice which fall from them.

The Ten Juriſdictions are Davos, Cloſter, Caſtels, Schiers, Mayenfeld, Bellfort, and Schanfig; the three laſt are each ſubdivided into two juriſdictions, which makes the whole ten.

The principal place in theſe Juriſdictions is,

Mayenfeld, or Meyenfeld, a pretty town in a fine country, which is the moſt fruitful of any belonging to the Griſons. It ſtands on the banks of the Rhine, with mountains riſing round it like an amphitheatre, well planted with vines, which produce excellent wine. Beſides its church, which is dedicated to St. Lucius, there is a caſtle, in which the bailiff reſides, and ſeveral magnificent houſes. The town has its ſeparate council and civil government, and the bailiff is choſen for two years, alternately by the Griſon leagues and the community.

SECT. XXV.

Of the Countries ſubject to the Griſons, viz. the Valteline, Bormio, and the County of Chiavenna. Their Situation, Extent, Produce, Government, and principal Towns.

WE now come to the ſubjects of the Griſons, who poſſeſs three fine countries at the foot of the Alps, near the entrance of Italy; theſe are the Valteline, Bormio, and the county of Chiavenna; the whole being, properly ſpeaking, one valley, which extends to the foot of the Rhætian Alps, and is bounded on the eaſt by Tirol, on the ſouth by the dominions of Venice and Milan, and on the weſt and north by the country of the Griſons; extending about ſixty Italian miles in length, but is very unequal in breadth.

We ſhall begin with the Valteline, in Latin Vallis Tellina, which lies between the league of God's houſe, the county of Bormio, the territories of Venice, the dutchy of Milan, and the country of Chiavenna; extending upwards of thirty-eight miles in length, and in breadth from nine to twenty-three.

It is exceeding fruitful, and throughout its whole extent watered by the Adda, which diſcharges itſelf into the lake of Como. The ſun-beams ſhine in every part of this valley, and it is fenced from the northern blaſts by high mountains. In ſome parts the heat is intenſe, but in others more moderate; and on the hills and greateſt part of the adjacent valleys the air is moſtly cool. This difference in its temperature neceſſarily cauſes a variation in the products of the earth. The levels in this valley, through which the Adda purſues its meandering courſe, exhibit a pleaſing variety of corn-fields, meadows, vineyards, and orchards of cheſnuts and other fruit. The vineyards on the mountains towards the north produce the beſt wine in the whole country, and above them are corn-fields and paſture lands. The hills on the ſouth ſide are covered with fine woods of cheſnuts, and rich paſtures, in which graze numerous herds of cattle. The country alſo abounds in an excellent red wine, of a moſt delicious flavour, and of ſo good a body, that it will keep for a whole century, improving both in taſte and wholeſomeneſs, and gradually turning paler till its redneſs at length entirely diſappears. Great quantities of this wine are exported. In moſt places the apples and pears are not very good; but the peaches, apricots, figs, and melons of this country are exquiſite. Here are likewiſe plenty of citrons, lemons, almonds, and other delicious fruit.

The ſoil would alſo produce all kinds of grain and pulſe; but the level ſpots being interſperſed with ſwampy ground, that has hitherto remained without culture, and the attention of the inhabitants being chiefly engroſſed by their trade in wine, it does not yield ſufficient corn for ſo populous a country, and therefore they are obliged to have recourſe to importation. In ſome parts they raiſe hemp. Bees and ſilk-worms are here bred in vaſt numbers. But as to their game, it is much reduced by the avidity of the hunters. The Adda yields plenty of fiſh, and is famous for its trouts, which are very fat and delicious, and of ſo large a ſize as to weigh from fifty to ſixty pounds.

There are here numbers of goats, Alpine mice, bears, boars, wolves, lynxes, foxes, martens, hares, and ſquirrels.

The men are comely, ſtrong, good ſoldiers, ingenious, and apt to learn all arts and ſciences. The women are civil, cunning, and amorous; and here are many people of quality, who are as polite as any in Italy.

The language of the inhabitants is a corrupt kind of Italian. At preſent Popery is the only religion, though before the year 1620 the Calviniſts conſtituted a conſiderable body, and had their churches and ſchools; but in that year the Papiſts of the Valteline extirpated them by a general maſſacre, in which no regard was paid either to age, quality, or ſex. Their clergy are under the juriſdiction of the biſhop of Como.

The principal officers are appointed every two years by the Griſons, and every two years each league ſends three perſons, with two clerks and a ſerjeant, to hear the complaints of the people againſt the officers ſet over them, to redreſs their grievances, and decide in caſe of appeals. A farther appeal in civil affairs alſo lies to the general diet of the Griſons. The inhabitants are poſſeſſed of particular privileges, and have certain laws and ſtatutes granted them by the Griſons, as the ſole rule of their conduct, and they chooſe their council and chancellors out of their own countrymen.

The

The whole Vale is divided into the Upper, Middle, and Lower, called Tergeros. The Upper part conſiſts of eleven communities, the Middle part of eighteen, and the Lower part of only two.

Tirano, the capital of the Upper part, is only ſix miles from the territory of Venice, and is ſeated on the river Adda. It is large, populous, and a place of ſome trade. Formerly it was encompaſſed by a wall, and defended by a citadel. On the other ſide of the Adda is a ſplendid church of white marble, adorned with many embelliſhments, which are continually increaſing, it being much reſorted to by pilgrims, who make rich offerings, and having a large income.

The country of Bormio, or of Worms, lies between the country of Tirol, the territories of Venice, and the Valteline, and is on all ſides environed by ſteep mountains, of ſuch a height that their ſummits are ſeldom free from ſnow. A conſiderable part of the country alſo conſiſts of theſe ſtupendous heights, and the narrow paſſes are ſometimes rendered impaſſable, by the ſnow rolling down from the tops of the mountains.

The air is rather cold than warm; but yet pure and healthy. In this country is produced no wine, and but little fruit; it has, however, more corn than is ſufficient for home conſumption, and the paſtures are ſo rich, that the inhabitants keep vaſt herds of horned cattle, beſides great numbers of ſheep and goats. The honey too of this country is particularly good; and it alſo abounds in iron ore; but its other metals and minerals are inconſiderable.

The Adda, which has its ſource in theſe parts, iſſues from a water that falls down a rock into the Freel, or Frayl valley, in which is a lake, and from other currents that precipitate themſelves down the mountains.

The inhabitants, who amount to about fourteen thouſand, are Papiſts, and the whole country is under the dioceſe of Como.

Though Bormio or Worms is governed by an officer named a podeſta, in the name of the Griſons, yet the inhabitants ſtill enjoy all their antient rights and privileges, and all trials here are regulated by the laws of the country; but with right of appeal to the three leagues. Every four months they elect by ballot two officiales or chiefs, from their own body, with ſixteen counſellors and thirteen juſticiaries, who try both civil and criminal cauſes.

The whole country is divided into five diſtricts, the principal place in which is,

Worms, in Latin Bormium, a town ſeated on the rivulet of Fradolf, which at a ſmall diſtance runs into the Adda. This town is the reſidence of a governor called the podeſta, ſent hither every two years from the Griſons. It is a pretty and populous place, and had formerly a good caſtle; but it has ſuffered much by fires, and that building has been conſumed.

The county of Chiavenna takes up the weſt part of this great valley, and is environed by the Upper league, that of God's Houſe, the Valteline, and the territory of Como; extending, according to Dr. Buſching, between ſeven and eight hours in length, and ſix in breadth.

It lies among high and ſteep mountains, and has ſome vallies of conſiderable extent. The ſummer heats are frequently exceſſive, during which a noxious effluvia are brought from the lake of Como, when the wind is ſouth. However, both the mountains and vallies, the St. Jacob's vale excepted, are well peopled, and the country in moſt parts not only abounds in paſtures, but in all kinds of fruit and wine; but the inhabitants have not a ſufficient quantity of corn: they, however, export ſome wine and cattle, and the culture of ſilk is an important article. They have here the lavezzi-ſtone, in Latin lebetes, out of which they turn kitchen utenſils, which they ſend all over Italy.

The principal rivers of this country are the Maira, or Mera, and the Lira, which unite their ſtreams in this country, and then fall into the lake of Como.

The inhabitants are Papiſts, and in ſpiritual affairs are ſubject to the biſhop of Como.

This country is divided into two governments, each under a commiſſary, who is appointed every two years by the three leagues. Theſe repreſent the ſovereignty, and judge both in civil and criminal caſes; but take an oath to be regulated by the particular laws and ſtatutes of the country. Ever ſince the year 1639, the court of Chiavenna, at every nomination of a new commiſſary, chooſes two lawyers, and the commiſſary one, who muſt be natives, as his aſſeſſors in penal cauſes. Civil conteſts are firſt referred to a certain number of perſons of ſenſe and probity, from whom they may be carried to the college of laywers, next to the commiſſary, then to the ſyndics whom the Griſons ſend hither every two years; and after all, the diſcontented party may bring his ſuit before the three leagues themſelves.

The city of Chiavenna, in Latin Clavenna, the capital of the county, is ſeated on the Maria, in the forty-ſixth degree twenty minutes north latitude, and in the ninth degree thirty minutes eaſt longitude, thirty-two miles to the ſouth of Chur, and is a pretty large well built town, in a delightful ſituation, among fine vineyards. It was formerly walled in, and had two forts on two peeks of a broken rock; but in 1526, both theſe were demoliſhed by the Griſons. It is the reſidence of the commiſſary, and contains a collegiate church, and within and near it are five other churches, with a convent, a nunnery, and a handſome cuſtom-houſe for the goods which are forwarded on pack-horſes to Italy or Germany, according to the conſignments of the owners. The inhabitants have dug large caverns in the neighbouring mountains, where they ſtow their wine, which by this means is kept freſh all the ſummer, and drinks as cool as if it had been all the time in ice; and near theſe grottos they have built ſummer-houſes, to which they go in the evening to partake of a collation, and to enjoy the freſh air. The city was formerly much larger than at preſent; but about five hundred and fifty years ago, all the north part of it was buried in the ruins of a mountain.

It will be proper, before we take leave of the county of Chiavenna, to mention the town of Piuri, which ſtood in a diſtrict of the ſame name, and was built on the ſide of the village of Bellfort, which has been deſtroyed by a flood, and contained one hundred and twenty-five houſes, beſides ſome handſome churches, and other public edifices, with a manſion-houſe for the podeſta or commiſſary, and an arched ſtone-bridge over the Maira. Towards the ſouth was a hill of a looſe texture, that had many currents iſſuing from it; but in the evening of the fifteenth of Auguſt 1618, a prodigious part of this mountain, with a dreadful craſh, ſuddenly fell on the town of Piuri, and alſo into Chitau, an adjacent village of ſeventy-five houſes, and overwhelmed both places ſo effectually, that not the leaſt trace of them have ſince appeared. Some repreſent the number of perſons who periſhed by this calamity as amounting to nine hundred and thirty; others compute them at fifteen hundred, and others maintain that they amounted to upwards of two thouſand. The river Maira was for ſome time obſtructed by the rubbiſh of the maſs which thus fell. The people of Chiavenna, though near the town, knew nothing of this dreadful diſaſter till they ſaw the river ſink, it not receiving a drop of water for three hours. By one of the palaces which was at a ſmall diſtance from the town, and therefore not overwhelmed with it, a judgment may be formed of the magnificence of the reſt. It was a pleaſure-houſe of the family of Francken, which, with its gardens, could not coſt leſs than one hundred thouſand crowns, and might be compared with many palaces of Italy.

SECT. XXVI.

The VALAIS.

Its Situation, Extent, Produce, and Face of the Country. The Manners, Language, and Hiſtory of the Inhabitants; their Arms and Government: with the principal Places in the Upper and Lower Valais; and among the reſt, an Account of the Baths of Leuck, of the City of Sitten, and of the famous Monaſtery on the Convent of St. Bernard.

THE Valais, in Latin Valleſia, the next of the countries ſtiled the allies or confederates of the Swiſs,

is bounded on the north by the canton of Bern and the lake of Geneva; on the weſt by Savoy; on the ſouth by Piedmont and Milan; and on the eaſt by the Mayenthal, which belongs to the cantons in general, and by the canton of Uri; extending, according to Dr. Buſching, about thirty-three or thirty-four hours in length, and in ſome parts upwards of ten in breadth.

The whole country is one large vale that extends eaſt and weſt, and on the north and ſouth ſides is bounded by very high mountains. Among the ſouthern mountains, the moſt remarkable is that called Great St. Bernard's, antiently named Mons Penninus, a name given to the whole Appennine chain. The principal hill on the north ſide is the Gemmi, which lies towards the frontiers of the canton of Bern, and is impaſſable in winter, and its deſcent towards the valley of the Valais was of a dangerous ſteepneſs, and very narrow. To remedy this inconvenience, in 1736 ſeveral rocks were blown up, the road in moſt places widened to the breadth of ſeven feet, and walls raiſed in the moſt ſteep and looſeſt parts; ſo that travelling is at preſent much more ſafe and commodious than formerly. St. Anthony's hill is alſo of an aſtoniſhing height.

The Valais is a very hot country, remarkable for its fertility. The harveſt begins in May, and laſts till the latter end of October; the corn in the bottom of the chief valley being brought in firſt; next that in the ſide vallies; and laſt of all, that on the mountains, which yield grain at an uncommon height. The low lands excel the upper in the produce of winter, and theſe again the former in ſummer fruits. Beſides the beſt kinds of grain, as wheat, barley, and rye, this country abounds in good wine, particularly in a fine muſcadel, with plenty of apples, pears, plums, cherries, mulberries, cheſnuts, and ſmall nuts; and about Sitten, Siders, and Grundis, alſo grow pomegranates, figs, almonds, and other rich fruits. Theſe parts are alſo remarkable for producing good ſaffron. Both the hills and vallies feed great numbers of cattle, and afford plenty of deer, hares, and other game. It is ſuppoſed to have alſo mines of ſilver, copper, and lead; but the produce, it is ſaid, will not anſwer the expence of working them. Here is likewiſe pit coal.

The Valais is from one end to the other watered by the Rhodan or Rhone, to which the country people give the name of Rotten, and which has its ſource on the Furke mountain. At firſt it precipitates itſelf with great noiſe among ſeveral rocks, and down to the very plain in the valley has the appearance of a ſingle cataract, with ſeveral caſcades. It is afterwards joined by the Meyenwang rivulet, which iſſues from the Grimſel mountain, and then directing its courſe due ſouth, enters the Valais, where it runs from eaſt to weſt, till after winding northward, it diſcharges itſelf with great impetuoſity into the lake of Geneva; all the ſtreams and leſſer rivers of the Valais iſſuing from the mountains mingle with it.

The Valeſians are a brave and courageous people; but it is uncommon to find either a man or woman without a large wen in their necks, which is ſuppoſed to be owing to the clayey ſandy water, that leaves a ſediment in the glands of the body. The apparel and diet of the common people are coarſe; but the quality live very ſplendidly. Moſt of their houſes are of wood, particularly of the larch-tree, which is very durable, and grows as black as ebony. They cover them with ſlate, and in ſome places build their houſes with turrets and wings.

In the Upper Valais the prevailing language is the German; but the inhabitants of Siders and Sitten, with thoſe in the Lower Valais, ſpeak a corrupt French; tho' in both parts they apply themſelves to the German, French, Italian, and Latin, which are indiſpenſibly neceſſary in their intercourſe with the cantons of Bern and Uri, Savoy, Piedmont, and the Milaneſe; and therefore a ſtranger cannot fail of being ſurpriſed at the fluency with which the meaneſt people here ſpeak theſe four languages.

The antient inhabitants of this country were the Lepontii Viberi, with the Seduni and Veragri. In the middle ages it came to be called Valeſia, and in 1032, it devolved to the German empire, as a part of the ſecond Burgundian kingdom; but three years after the emperor Conrad II. made over the Lower Valais to the counts of Savoy. The inhabitants, on ſeveral occaſions, have reſolutely maintained their liberties. In 1475, the biſhop of Geneva fell on the Upper Valais with a body of eighteen thouſand men, conſiſting of Lower Valeſians and Savoyards; but the Upper Valeſians being aſſiſted by three thouſand troops ſent by Bern, Freyburg, and Solothurn, their allies, defeated the biſhop, and even made a conqueſt of the Lower Valais, which has ever ſince been ſubject to them. In the ſame year they formed a perpetual alliance with Bern, which has been renewed with the whole Helvetic body; and in 1533, they entered into a particular union with the ſeven Popiſh cantons.

The arms of the republic of the Valais are, party per pale gules and argent, three mullets in each field, with one on the pale.

The republic of the Upper Valais conſiſts of ſeven parts, called Zenten or Tytnings. In ſix of theſe the government is democratical; but that of the ſeventh, which conſiſts of the city of Sitten, is ariſtocratical. Each Tything ſends a repreſentative to the general diet, which aſſembles twice a year, that is in May and December, at Sitten. This diet has the management of the public concerns, both civil and military, beſides appeals in proceſſes brought before the Tythings: it likewiſe gives audience to envoys, &c. Over each Tything is a chief, called a meyer, or mayor, with a particular regency and juriſdiction; but the Tything court is compoſed of the Tything judge, aſſiſted by twelve aſſeſſors and judges, who act both in civil and criminal caſes. The military affairs of each Tything are under the direction of a banneret and captain.

The principal places in the Upper Valais are the following:

Brug or Brieg, a large open town, and the capital of a Tything of the ſame name, is ſeated on the river Saltana, at the foot of the mountain of Brug, in the paſs of Simplon. Here are ſeveral fine buildings, particularly a handſome Jeſuits college and nunnery of Urſulines, and here alſo are held the Tything courts. In the year 1755, the greateſt part of the town was deſtroyed by an earthquake.

Leuck is a village ſeated on an eminence near the conflux of the Dala and the Rhone, and has two churches, a fine town-houſe, and an old caſtle, which belongs to the biſhop of Sitten. As it ſtands near the center of the Valais, the deputies of the country often aſſemble here.

The famous hot baths, called the Baths of Leuck, are in a valley about two leagues diſtance, incloſed on all ſides by high mountains, through which there is only a narrow paſſage to a wood on the ſouth ſide. They are formed by five ſprings, not far from each other. The largeſt, which fills eight baths, flows plentifully, and the water is hot enough for boiling eggs. It is for the moſt part clear; but ſometimes changes its colour. It is purgative, and good againſt colds, the gout, weak ſtomachs, diſeaſes of the liver, lungs, and ſpleen, dimneſs of ſight, convulſions, defluxions, the dropſy, ſtone, ulcers, diſtempers of the womb, &c. There is another of the ſprings good againſt the leproſy, and at a ſmall diſtance from theſe are ſeveral cold ſprings, the largeſt of which flows only from May to September, that is, during the ſummer, when other ſprings are dried up; but this is aſcribed to the melting of the ſnow on the Alps.

Sitten, or Sion in French, and in Latin Sedunem, the capital of all the whole Valais, is ſeated on the river Sitten, at a ſmall diſtance from the Rhone, in the forty-ſixth degree ſeven minutes north latitude, and in the ſeventh degree forty minutes eaſt longitude. It ſtands almoſt in the center between the Upper and Lower Valais, in a delightful plain, overlooked by pretty high hills on the eaſt ſide, on the higheſt of which is a fort, in which the biſhop reſides in very hot weather, or in ſickly ſeaſons. Here is alſo another fort, called the Valeria, which has a church, and ſeveral fine houſes. The city is neat and well built, with four churches: the moſt remarkable of theſe is the cathedral, which has at the great gate a fragment of Roman marble, with an inſcription to the honour of the emperor Auguſtus.

The

The ſubjects of this republic conſiſt of the inhabitants of the Lower Valais, which contains ſeveral diſtricts.

In this country is the mountain of St. Bernard, which has on its ſummit a large convent, where the friars maintain all travellers for three days gratis, whether Papiſts or Proteſtants; but people of faſhion and gratitude make ſome civil acknowledgement on their leaving this houſe of hoſpitality. If any one dies here, they do not inter him, but carry him to a chapel at ſome diſtance in the midſt of ſnow, where the dead body lies without corruption from the extreme coldneſs of the place. A thouſand travellers would be in danger of periſhing on this rugged mountain, were it not for theſe honeſt friars, who ſend out people with brandy and other cordials to comfort them, eſpecially in the winter, and upon great thaws, when they ſometimes find the poor travellers ſtretched on the ground, and almoſt ſtarved to death by the violence of the cold, or ready to drop down with fatigue from the difficulty of the road. This renders theſe friars ſo well beloved all over Swiſſerland, that when they ſend thither for a collection, which they do once a year, there is ſcarce a family, rich or poor, Proteſtant or Papiſt, but gives freely to the relief of the convent, which though it is ſaid to be large enough to hold ſix hundred people, and to be ſo ſhut up in ſnow and ice that nothing grows near it, yet ſuch care is taken, that this houſe wants for nothing.

St. Maurice is a large handſome town, ſeated between two hills on the Rhine, over which it has a ſtately ſtone bridge, reaching from one hill to the other. On the weſt ſide of the bridge, cloſe to a high mountain, ſtands the governor's ſeat; on the eaſtern ſide is a tower, and below both a gate, which is ſhut by night. This paſs is a great thoroughfare for all goods and perſons going from the lake of Geneva through the country of the Valais, and over the mountains of St. Bernard. In this town is an Auguſtine canonry, the abbot of which is veſted with the lower juriſdiction in ſeveral villages; and the abbey contains many pieces of antiquity, particularly a great number of Roman inſcriptions, and near the high altar is a curious Moſaic pavement.

SECT. XXVII.

The Principality of NEUFCHATEL.

Its Situation, Extent, and Produce, the Language, Religion, Hiſtory, and Government of the Country; with a Deſcription of the City of Neufchatel, and an Antiquity on the top of a Mountain.

THE next of the allies of Swiſſerland which we ſhall now mention, is the principality of Neufchatel, bounded on the north by Baſil; by the lake of the ſame name on the eaſt; the county of Bern on the ſouth; and by the Franche Compté on the weſt; it being about forty miles long, and twenty broad.

It is every way hilly, and along its northern and weſtern borders runs the Jura chain. The mountainous part produces very little, except herbage for cattle; but the inhabitants, who are chiefly artificers, procure themſelves a comfortable ſubſiſtence by their labour. However, the ſmalleſt eminences, with the valleys and plains, not only produce red and white wines, but fruit, corn, hemp, and flax.

The Neuenburg lake, ſo called from the town of Neuenburg, which ſtands on its bank, is nine hours in length, and two in breadth; but not of any conſiderable depth. It affords plenty of fiſh, particularly pike and trout: on the ſide of the town it receives the river Orbe, and into its weſtern part run the two ſmall rivers of Areuſe, or Reuſe, and Seyon. Its north ſide forms an outlet to the Zill, by which means it has a communication with the lake of Biel.

In the whole principality are three towns, one borough, and twenty-five pariſhes, with ten chapels of eaſe, ſixty-four villages, and a great number of ſcattered houſes. The current language is French; but with a mixture of the Burgundian, both in the accent and dialect.

The greateſt part of the inhabitants are Calviniſts, but in the caſtellany of Landeron Popery is the prevailing religion. The twenty-three head pariſhes, and nine of the filials, are Proteſtants, and divided into the three colloques of Neuenburg, Boudry, and the Val de Travers. All their ſeveral miniſters meet annually at Neuenburg chapel, in the month of May; and this aſſembly being veſted with the ſuperintendency of all eccleſiaſtical affairs, confirms the church officers who are newly choſen, and collates and ejects miniſters, except in the town of Neufchatel. In the caſtellany of Landeron are two Popiſh pariſhes, and one chapel of eaſe, which in eccleſiaſtical affairs are under the juriſdiction of Lauſanne.

This country anciently belonged to the laſt kingdom of Burgundy, with which, in 1032, it devolved to the German empire. Since that time it has been poſſeſſed by many different families, and in 1707 the high tribunal of the ſtate of Neufchatel, after a mature and impartial examination of the claims of ſeveral illuſtrious families, paſſed a decree in favour of Frederick I. king of Pruſſia, who immediately took poſſeſſion of it, and the uſual homage was performed to him, he on his part confirming all the liberties and privileges of the ſtate, and its alliances with the neighbouring powers. At the peace of Utrecht, concluded between France and Pruſſia in 1713, the French king acknowledged the king of Pruſſia as ſovereign-lord of Neufchatel and Vallangin; and the inhabitants are in all parts of France intitled to the ſame rights and privileges that are indulged to the natives of the Swiſs cantons, or which they enjoyed before the king of Pruſſia became their ſovereign.

On the other hand, by virtue of the community of rights which the lords of Neufchatel have entered into with the cantons of Bern, Lucern, Freyburg, and Solothurn, both the ſovereign and the town are reckoned aſſociates of the cantons.

The king, as head of the ſtate, preſides in its aſſemblies, convokes them at pleaſure, collects their ſuffrages, and, when equal, decides the point in deliberation. He has alſo the management of all military affairs, with reſpect to which he is ſtiled lieutenant-general, and with him is connected the council of ſtate. The number of the members depends alſo on the ſovereign's pleaſure. This council ſuperintends all the affairs of the ſtate and police, and decides in any occurrences or conteſts. The governor here ſits as preſident, and in caſe of his abſence the ſenior counſellor. He likewiſe ſummons them together, whenever he pleaſes, though their uſual time of meeting is every Monday and Tueſday in the morning. Under him are many general and particular officers nominated by the ſovereign, as the treaſurer, to whom the receivers pay the ſeveral branches of the revenue; the firſt ſecretary to the council of ſtate; the general procurator, who attends to the maintenance of the ſovereign's rights; the general commiſſary; the general advocate, who carries on the proceſſes of the ſovereign; the caſtellans, and the mayers or mayors, who are placed over the lower courts, with a ſtadtholder or lieutenant under them.

The principal court of juſtice, which judges without appeal, is that of the three ſtates of the ſovereignty of Neufchatel. The firſt of theſe ſtates is compoſed of four nobles, who are generally the four eldeſt noblemen in the council of ſtate. The ſecond is called the ſtate of officers, and conſiſts of the four caſtellans of Landeron, Boudry, the Val de Travers, and Thielle, and any deficiency in theſe is ſupplied by the mayers or mayors. The third ſtate is compoſed of four burghers of Neufchatel, annually elected by the town council from among their own members. In this aſſembly the governor preſides, and on an equality of votes has the caſting voice: the general procurator takes care that nothing be tranſacted contrary to the prerogative of the ſovereign. This aſſembly finally determines all ſuits brought before them from the lower courts in the ſovereignty of Neufchatel, explains the acts of the council of ſtate, and gives their aſſent to any new edicts of the ſovereign, or to the repeal or alteration of the old ones.

Among the ſuperior courts, is that for the trial of criminals, in which the decrees are executed without appeal, unleſs the ſovereign, or his governor, are diſpoſed

to favour the convict, either by mitigating, or annulling the ſentence; but to aggravate it is not in the power of either. Thoſe courts for the puniſhment of criminals are of two kinds, ſome inveſted with the high juriſdiction, and others confined to the lower; and their ſentences extend no farther than impriſonment, the pillory, whipping, &c. Of this laſt kind are all the country courts.

Their militia, excluſive of that of the precinct of the city of Neufchatel, amounts to upwards of eight thouſand men, who are ranged into ſeveral companies; and the whole military eſtabliſhment is under the direction of a general inſpector, four lieutenant-colonels, and the like number of majors.

Neufchatel, called by the Germans Welſch-Neuenburg, and in Latin Neoconum, or Novicaſtrum, the capital of the country, is ſeated on two eminences adjoining to the lake of the ſame name, which here receives into it the little river Seyon. It is a fine town, conſiſting of four large ſtreets, and an old caſtle, in which the governor reſides, to which there is an aſcent by one hundred ſteps, ſome of them cut out of the rock. The houſes are generally well built, and among them are ſeveral handſome ſtructures and good fountains. Near the caſtle is a fine old church, and a terrace that affords a view both of the town and lake. In the plain at the bottom is another church, the town houſe, and likewiſe a gymnaſium. Here are ſeveral monuments of antiquity, particularly a ſtately tower on the deſcent of one of the hills, ſaid to have been built by Julius Cæſar. Round the town are on all ſides vineyards, gardens, and country villas. The city is governed by a council of ſixty burghers, who enjoy ſuch privileges that they are almoſt independent. Neufchatel has ſeveral times ſuffered greatly by fire, and in 1750 endured as much from two inundations of the Seyon.

It ought not to be omitted that on one of the ſummits of the Jura chain, near a ſcattered village called la Cote aux Fees, is a very ſuperb temple hewn out of the rock, in which Mercury was anciently conſulted by means of certain propheteſſes. It is with great difficulty that a perſon can deſcend to the entrance, before which is a ſtately portal, where an almoſt inacceſſible rock forms an arcade of a ſtupendous magnitude.

SECT. XXVIII.

The Republic of GENEVA.

Its Situation and Produce. With a particular Deſcription of the Lake of Geneva, and of the City of that Name.

THE republic of Geneva, by the Germans called Genff, and by the French Genevé, is the laſt of the allies of Swiſſerland. This republic is but of ſmall extent, for, excluſive of the city of Geneva, it does not contain above eleven pariſhes, eight of which are partly under the juriſdiction of the duke of Savoy; yet it is a conſiderable ally of the Swiſs cantons. The country in general is very fruitful and populous: its villages are large, well built, and adorned with many fine houſes belonging to the citizens of Geneva. It abounds with fruit, and produces white and red wine; the former indeed is ſmall, but the latter excellent. The only corn ſowed here is wheat, which its ſoil bears here in great plenty; and the republick conſtantly keeps a large magazine of it againſt a time of ſcarcity, when they ſell it out at a reaſonable rate; and in a time of plenty, they alſo oblige the bakers, and thoſe who keep public houſes, to buy it of them, but at a moderate price.

The lake of Geneva reſembles the ſea, both in the colour of its water, the ſtorms that are raiſed on it, and in the ravages it makes on its banks, and is as little ſubject to froſt as the lake of Conſtance. It receives different names from the coaſts it waſhes, and has in ſummer ſomething like the ebbing and flowing of the tide, occaſioned by the melting of the ſnows, that fall more copiouſly into it at noon, than at other times of the day. It has five different ſtates bordering on it; theſe are France, the dutchy of Savoy, the canton of Bern, the biſhopric of Sitten, and the republic of Geneva. This lake is in ſhape like a half moon, whoſe convex ſide looks towards Swiſſerland; ſo that it is ſixteen leagues in length on this ſide; while towards Savoy, it does not exceed twelve. It is pretty narrow at both ends; but widens by degrees to the middle, where it is twenty-five miles over. As to its depth, it is ſaid in ſome places to be unfathomable, and is therefore navigable by larger veſſels than are commonly ſeen in rivers. Near Villeneuve, the Rhone diſcharges itſelf into it with ſuch rapidity, that for the diſtance of half a league its water, which is very foul, continues unmixed with that of the lake, which is very clear; but afterwards, ſays Mr. Keyſler, there is no viſible diſtinction, though ſome of the ancient, and ſeveral of the modern writers affirm the contrary. Formerly this lake afforded trouts of fifty or ſixty pounds weight; but now one of twenty or thirty is reckoned very large.

The Rhone, at its influx, forms an iſland, on which, together with the banks on both ſides, ſtands the city of Geneva, which is thus divided into three unequal parts, that have a communication by four bridges, and is ſituated in the forty-ſixth degree twelve minutes north latitude, and in the ſixth degree nineteen minutes eaſt longitude. The greateſt part of the city is ſeated on a hill, and has its view bounded on all ſides by ſeveral ranges of mountains; but theſe are at ſo great a diſtance, that they leave open a ſurpriſing variety of beautiful proſpects, and from their ſituation, cover the country they incloſe from all winds except the ſouth and north, and to the laſt of theſe winds the inhabitants of this city aſcribe the healthfulneſs of the air; for as the Alps ſurround the city on all ſides, forming a vaſt baſon, within which is a well watered country, there would here be a conſtant ſtagnation of vapours, did not the north wind put them in motion, and ſcatter them from time to time. From this ſituation Mr. Addiſon obſerves, the ſun riſes later at Geneva, and ſets ſooner, than in other places of the ſame latitude; and the tops of the neighbouring mountains are covered with light above half an hour after the ſun is down at Geneva. Theſe mountains alſo much increaſe the heats of ſummer, and form an horizon that has ſomething in it very ſingular and agreeable. On the one hand a long range of hills, diſtinguiſhed by the name of mount Jura, is covered with paſture and vineyards; and on the other huge precipices, formed of naked rocks, riſe in a thouſand odd figures, and being cleft in ſome places, diſcover high mountains of ſnow, at the diſtance of ſeveral leaguesbehind them. To the ſouthward, the hills riſing more inſenſibly, leave the eye a vaſt uninterrupted proſpect; but the moſt beautiful view is that of the lake, and its borders, that lie north of the town.

The part on the right ſide of the Rhone, which from a church of that name is called St. Gervais, is very much inferior both in its dimenſions and beauty to the buildings on the eminence on the left ſide of that river; but for theſe thirty years paſt, daily improvements have been made in every part of the city. The large and beautiful fortifications have drawn hither ſeveral ſorts of workmen, and occaſioned many judicious meaſures for procuring materials for building at a reaſonable rate; ſo that what might at firſt appear to raiſe the price of private building, has had a very contrary effect. New-ſtreet conſiſts of fine buildings, particularly the houſe facing the Treille, or walks made behind the town-houſe. Theſe walks conſiſt of lime-trees, and being on an eminence, afford a beautiful proſpect of the large gardens beneath them, and of the fields and meadows towards the mountains. One of the moſt magnificent houſes is that of Mr. Lullin, an eccleſiaſtic, which is ſaid to have coſt him above eighty thouſand dollars. Some ſtreets of the Lower Town have a kind of piazzas; but they are loftier than thoſe of Bern, and project farther. Shelters of this kind are very convenient in a city without coaches.

Among the public buildings we ought not to omit St. Peter's church, which was formerly a cathedral, and is a ſpacious antient ſtructure, in the form of a croſs. In the front is the figure of the ſun, which was worſhipped in the time of the Pagans, and which the city ſeveral ages after took for its device, with this motto,

POST

POST TENEBRAS SPERO LUCEM; but after the inhabitants had embraced the Reformation, the motto was changed for POST TENEBRAS LUX; the former denoting that after darkneſs, it hoped for light, and the other, that light was come. In the nave of the church behind the pulpit are the ſtatues of the twelve apoſtles carved in wood, as on the other ſide are the twelve prophets.

It is remarkable, that in the churches the kings of England and France are nominally prayed for. The Chriſtian behaviour and peaceable temper of the clergy here, may ſerve for a pattern to their brethren differing from them in ſome doctrinal points. Both the clergy and laity are averſe to any diſcourſe on the proceedings againſt Servetus, and wiſh that the whole matter was buried in oblivion.

On the Plainpalais without the city, is the general burial-place, and in this church-yard the body of Calvin lies interred; but the inhabitants of Geneva, to ſhew their averſion to ſectariſm, will not tell or ſeem to know in what place it is depoſited; but it is ſaid, that a Lutheran eccleſiaſtic was buried cloſe by Calvin.

Adjoining to the cathedral of St. Peter is the chapel of the Maccabees, where both the Germans and Italians perform divine worſhip, and where alſo the profeſſors of philoſophy read their lectures. Beſides the two churches and this chapel, already mentioned, there are four other churches. The general hoſpital is a new building that has a particular chaplain of its own. The French have likewiſe an hoſpital for the relief of their brethren. The town-houſe is a ſtately edifice of free-ſtone, ſituated on an eminence not far from the cathedral, and in it is a ſpiral paſſage paved with ſquare ſtones, where a perſon may walk or ride under cover from the bottom to the top; and at a ſmall diſtance from it is the arſenal, in which are ſhewn the ladders, a charged petard, and other implements made uſe of by the Savoyards in their famous deſign of ſurpriſing the city by night in 1602, when they were repulſed and beaten off with all the ignominy their perfidiouſneſs deſerved. The univerſity, which is reckoned among the moſt celebrated in Europe, was founded in 1558, and has twelve profeſſors belonging to it, with a very valuable library, in which are ſome curious manuſcripts. At the efflux of the Rhine out of the lake is a building in which are kept the public barges, yachts, and veſſels built for their defence.

Without the gates are handſome ſeats, delightful gardens, and pleaſant walks. The ſalubrity of the air, with the excellent proviſions, the agreeable ſituation of the place, the politeneſs of the inhabitants, the great number of manufacturers and artificers, as alſo of perſons paſſing through it from Germany or France to Italy, or from Italy to France, as likewiſe of young foreign gentlemen reſiding here to perfect themſelves in the French tongue, polite literature, and other academical exerciſes, contribute to render this city extremely delightful.

Great quantities of beautiful manufactures and fabrics are made here; and among many works of ingenuity that of watch-making is carried on with great ſucceſs. Its trade is, however, ſomewhat declined; but is ſtill very conſiderable, on account of its being a thoroughfare for goods paſſing from France to Germany and Italy, as alſo from Germany to France, they being eaſily ſhipped from hence on the Rhine or the Rhone.

The revenues of the city, beſides that ariſing from the ſale of the corn, which is inconſiderable, annually amount to about a hundred and thirty thouſand dollars, the greateſt part of which are employed in the ſalaries of the civil and eccleſiaſtical officers, in the building and repairs of the public edifices, and in the payment of the garriſon, which conſiſts of eight hundred men well diſciplined, who wear an uniform of blue faced with red.

The power has been immemorially lodged in the people, who conſiſt of about fifteen hundred burghers; their chiefs being four ſyndics, who, with twenty one councilmen, conſtitute the ſupreme court of twenty-five, of which two perſons of one family cannot be members at the ſame time.

The next is the more ſevere court, conſiſting of ſixty, and the great council of two hundred. The ſyndics are choſen by the people out of the council of twenty-one; and they continue in office but a year: however, they retain their ſeat in the council, and are capable of being choſen again. For the ſupport of credit it is enacted by an expreſs law, that no ſon who does not diſcharge his father's debts ſhall be capable of any office.

This little republic has ſome peculiar ordinances relating to matrimony. No marriage is permitted unleſs both parties be Proteſtants; all previous promiſes or engagements of a Reformed with a Roman catholic, are declared void, and the agents, with thoſe who have given their aſſent to it, are puniſhable according to the nature of the circumſtances. A woman of forty years of age cannot marry a man that is ten years younger than herſelf; if above forty, her choice is confined to five years younger. A man about ſixty is not to marry a woman who is not at leaſt above half that age; and a widow muſt remain ſuch ſix months before ſhe can alter her condition. In this particular a man is not expreſly limited; but is, however, enjoined to wait a reaſonable time, with this ſingular addition, "both to obviate "ſcandal, and to ſhew that he has felt the hand of "God."

The maintenance of a good police, and the ſuppreſſion of luxury, is the province of a particular chamber; but a very extraordinary fund here, is that ariſing from the dirt of the ſtreets. In other places money is paid for having it carried away, whereas here it is farmed for eight hundred livres paid to the city, for the excluſive privilege of taking it away for manuring land.

CHAP. XXIII.

Of ITALY.

SECT. I.

Of ITALY *in general.*

Its Names, Situation, Figure, Extent, Mountains, Rivers, and Produce. The Arts, Language, Religion, Cuſtoms, Manners, and Food of the Inhabitants, with the Diviſions of the Country.

ITALY was antiently known by the names of Saturnia, Oenotria, Auſonia, and Heſperia. The firſt was derived from Saturn, the ſecond and third from its primitive inhabitants, and the fourth, which ſignifies a weſtern country, from the Greeks; becauſe lying to the weſt of them. In ſucceeding times it obtained the name of Italia, according to ſome authors from Italus, a king, of Sicily; but in the opinion of others from the Greek word Ιταλος, which ſignifies an ox, this country, from the richneſs of its paſtures, being remarkable for the abundance of its fine oxen. Each of theſe appellations, at firſt peculiar to diſtinct territories, were afterwards given to the whole country.

Italy, including Sicily, lies between the thirty-ſeventh and forty-ſixth degree of north latitude, and between the ſeventh and nineteenth degree of eaſt longitude. Nature has fixed its boundaries; for towards the eaſt, ſouth, and weſt, it is waſhed by the Adriatic and Mediterranean ſeas, and to the north by the high and lofty mountains of the Alps. Its figure is generally compared to that of a boot, and is therefore divided into three parts; the top of the boot containing antient Lombardy; in the upper part of the leg are the territories of the church and of Tuſcany; and in the ſmall of the leg and foot is the kingdom of Naples. The length from Aoſta, at the foot of the Alps, to the promontory called Capo del Armi, in Lower Calabria, is computed at near eight hundred Italian miles, which make about ſeven hundred and twenty-ſix Engliſh ſtatute miles. Its breadth at the foot of the Alps is five hundred and ſixty Italian miles; and through the middle, that is, between Ancona and the mouth of the Tiber, one hundred and thirty-ſix; but in ſome places hardly twenty-five.

The principal mountains in Italy are the Alps and the Apennines. The Alps, of which we have given ſome account in treating of Swiſſerland, are a long chain of mountains, that begin at the mouth of the river Var, and, after many irregular windings, terminate near the river Arſia in Iſtria. They divide Italy from France, Swiſſerland, and Germany, and are variouſly denominated according to their ſituation. The Alps on the ſea-coaſt reach from Vada or Vado, to the ſource of the Var, or even to that of the Po; the Cottian Alps, from the ſource of the Var to the city of Suſa; the Greek Alps, from the city of Suſa to mount St. Bernard; the Peninian Alps, from mount St. Bernard to mount St. Gotthard; on theſe border the Rhætian Alps, which extend to the ſource of the river Piava; and laſtly, to mention no more, the Noric, or Carnician Alps, which extend from the river Piava to Iſtria, and the ſource of the Sauſtrom. We have already given an account of ſome ſurpriſing particulars relating to theſe ſtupendous mountains, and ſhall give others no leſs extraordinary in treating of Savoy and Piedmont.

The Apennine mountains take their riſe near the Alps, on the ſea-coaſt, in the territories of Genoa, and dividing Italy into almoſt two equal parts, reach to the ſtreights that ſeparate Italy from Sicily, and give riſe to an incredible variety of rivers that water this delightful country. The largeſt and moſt remarkable of the rivers of Italy are the following:

The Po, which riſes in mount Veſo, one of the higheſt of all the Alps, and after receiving upwards of thirty ſmall rivers, diſcharges itſelf into the Adriatic by ſeven different mouths. The Adige, in Latin Atheſis, has its ſource in the Rhætian Alps, and waters the cities of Trent and Verona, it being the only large river in Lombardy, and inſtead of joining the Po, runs like that river into the Adriatic. The Arno flows from the Apennine mountains, and falls into the Tuſcan ſea near Piſa. The Tiber riſes alſo out of the Apennine mountains, and at a ſmall diſtance from Rome, empties itſelf into the Tuſcan ſea. Beſides theſe there are many others.

This country produces in great plenty all the neceſſaries and conveniencies of life; for all the variety of delicacies that lie ſcattered, as it were, in other countries, are here almoſt every where met with in profuſion. Theſe conſiſt in corn, rich wines, and the choiceſt fruits; as oranges, citrons, lemons, olives, pomegranates, &c. raiſins, almonds, ſugar, oils, mulberry-trees, beyond number, to facilitate the producing of ſilk; tame and wild beaſts, alabaſter, jaſper, gold, ſilver, ſulphur, iron, alum, &c. On this account authors have been extremely laviſh in their praiſes of this fine country, which they have ſtiled the parent of plenty; the ſource of earthly felicity; the pride of our earth; the garden of Europe; and the beauty of the world. But it muſt be acknowledged that the fine plants, which, from time to time, have been introduced into the weſtern and northern countries from Italy, as the reputed mother of them, are not all original natives, the far greater part being tranſplanted to the Italian ſoil from the eaſt. Thus all the fruit-trees, the produce of which the Latins called *mala*, were tranſplanted to Italy after the conqueſt of the Romans in Africa, Greece, Aſia Minor, and Syria. The apricots came from Epirus, and are called *mala Epirotica*; the peaches are named *mala Perſica*, from their being brought from Perſia; the citrons *mala Medica*, from their being tranſplanted from Media; the pomegranates *mala Punica*, from Carthage; and cheſnuts were tranſplanted from the town of Caſtania, in the diſtrict of Magneſia, in Macedonia. The beſt pears were ſent from Alexandria, Numidia, Greece, and Numantia, as their Latin names ſufficiently indicate. The firſt plums were imported from Armenia and Syria, eſpecially from Damaſcus. Lucius Lucullus was the firſt who introduced cherry-trees from Pontus, which ſoon after became the growth of all other countries in Europe.

But however rich and fertile Italy in general may be deemed, yet no ſmall difference is diſcoverable with reſpect to the fruitfulneſs of the ſoil, the ſalubrity of the air, and the pleaſantneſs of its provinces. It is ſubject to ſeveral great inconveniences, particularly in the middle and lower parts, and in moſt countries the number of inhabitants is far from being ſufficient for the improvement and culture of this fruitful ſoil. On conſidering the multitude of people in Italy, during the reigns of the Roman emperors, its preſent deſolateneſs, which is moſt perceptible in the papal dominions, cannot but appear ſurpriſing. The ingenious Mr. Addiſon was of opinion, that the Campania of ancient Rome contained more people than are at preſent throughout all Italy, and that there is not a town of any conſequence in the whole country where the eccleſiaſtics do not make at leaſt one-third of the inhabitants.

The ancient inhabitants of Italy were the triumphant conquerors and rulers of the world. The ſofter arts have now taken place, and ſeem the chief employment of the modern Italians. Painting was indeed introduced at Rome by Caius Fabius, and was brought to conſiderable perfection before the time of Auguſtus; but a corrupt taſte ſoon after prevailing, the politer arts were obliterated, and by degrees ſunk into oblivion. Since the decay of the Roman empire, Painting paid Italy a ſecond

viſit, and the maſters that excelled in it for a long time preſerved an unrivalled reputation. Whether the firſt Greek painters came to Bologna, Florence, or any other city, has been warmly diſputed. In the thirteenth century, moſt of the church painting was either in Moſaic or freſco. The firſt painters who diſtinguiſhed themſelves, were generally alſo ſtatuaries and architects, and their works are ſtill the admiration of the curious. The invention of engraving is claimed by the Italians; but that honour is only juſtly due to the Germans; for Andrew Mantegna, who died in 1517, in the 69th year of his age, was the firſt who applied himſelf with ſucceſs to this art in Italy. The Italians ſtill maintain their ſuperior character for ſkill in ſtatuary. Some cauſes of the advancement of this ſcience among them, is their having the nobleſt models, which they keep before them; the many lectures and conferences in the academies; the liberal payments; the conſtant opportunity of diſplaying their ſkill; the incentives of praiſe; and the gaining of prizes. Almoſt every city has an academy of ſculpture and painting, and ſome places more particularly diſtinguiſh themſelves by excelling in particular branches of ſculpture. The Italians have alſo diſtinguiſhed themſelves in architecture.

Italy has produced great men in all ſciences, and formerly gave birth to thoſe generals, orators, poets, and hiſtorians, whoſe actions and writings will be revered as long as manly fortitude, polite learning, and elegant compoſition, are conſidered as ornaments of human nature. Yet its ſtate of literature cannot now be deemed conſiderable, though encouraged not only by ſeveral univerſities, but by a multiplicity of academies or literary ſocieties, which are to be found almoſt in every city. Some of theſe affect very odd and whimſical names, as the Otioſi, Humoriſti, Lincei, Fantaſtici, Immobili, Imperfecti, Inquieti, Incogniti, Diſcordanti, Occulti, Ardenti, Catenati, &c. and indeed moſt of their productions are tinctured with the ſingularity of theſe appellations.

The Italian language is originally derived from the Latin, with which the many nations of Goths, Huns, Vandals, &c. that over run Italy, ſo mingled their dialect as to give birth to a new language, at firſt very laviſh; but gradually poliſhed, and ſoftened into its preſent agreeable ſmoothneſs. Its genius ſeems particularly adapted to poetry and muſic; for which the Italians are alſo famous: and hence the Italian ſingers are more in requeſt than thoſe of any other nation.

The Popiſh is the only religion generally tolerated in Italy, and here the pope has his ſeat in quality of head of the church of Rome. The Jews indeed enjoy a kind of toleration; but it is in moſt places under great reſtrictions. However, they enjoy an entire liberty in the city of Leghorn.

The Italians are polite, affable, and ingenious; they endeavour to recommend themſelves by their wiſdom and gravity; obſerving a juſt medium between the ſtately gravity of the Spaniards, and the airy levity of the French. They are ſaid to act a buffoon, a mimic, or a ſcaramouch, better than any other nation; and to be as apiſh and whimſical during the carnival, when under a maſk, as any other people; but are too wiſe to do it with a bare face. They have a warm ſenſe of gratitude, and upon all occaſions are ready and willing to return an obligation, though ever ſo ſmall; but, on the other hand, are jealous and revengeful; very retentive of the ſenſe of an injury, eſpecially where their own honour, or that of a wife, ſiſter, or miſtreſs, is concerned, and in theſe caſes ſcruple not to proceed to treachery and murder: but as they are very courteous to ſtrangers, eſpecially after they have begun an acquaintance or friendſhip with them they are very cautious of diſobliging or quarrelling with them. They are extrenely nice in all the punctilios of civility, and no people are more profuſe of ſtrained compliments, and pompous titles. Whiſpering in company, ſpeaking in another language, and interrupting a man before he has done ſpeaking, are eſteemed the height of ill breeding, and are ſcrupulouſly avoided by all polite people; and reflecting upon perſons, either abſent or preſent, is no leſs deteſted.

The nobility and gentry laviſh their money on fine houſes, paintings, ſtatues, beautiful gardens, grottos, fountains, and caſcades, more than in keeping a ſplendid table, and indulging in the luxuries common in other parts of Europe; and though the great are fond of rich equipages, coaches, and a large retinue of ſervants, they do not ſuffer the latter to interfere with the œconomy of their table; but commonly keep their ſervants at board-wages.

They commonly ſleep about two hours after dinner, which is but a ſlight meal in compariſon with their ſuppers. Theſe laſt they begin with roaſt meats, and end with ſoops, and the like. Boiled ſnails, ſerved up with oil and pepper, or fried in oil, and the hinder part of frogs, are eſteemed delicacies; and ſeveral ſorts of fowl are eaten here by the great, which the pooreſt amongſt us would hardly touch, as kites, hawks, jackdaws, and magpies. They both eat and drink very ſparingly, and have their wine cooled by ice or ſnow.

The inns in the little towns, ſays Mr. Miſſon, are ill furniſhed with proviſions, eſpecially on ſome roads. The firſt courſe, called the antipaſto, is a diſh of giblets boiled with ſalt and pepper, and mixed with whites of eggs, after which come two or three ſmall diſhes, one after another, of different ragouts. Between Rome and Naples, the traveller is ſometimes regaled with the fleſh of buffaloes and crows; but that of the buffaloes is black and hard, and that beaſt muſt be hunted, otherwiſe it is impoſſible to chew its fleſh. In all our travels through Italy, ſays the above author, we never ſaw either a hare or a partridge in the fields: and I might alſo add, that we ſaw none in the inns, which is the more extraordinary, as there are large ſpots of ground in Italy that are almoſt uninhabited, and conſequently might be expected to abound with game, like other places of the ſame kind, in other parts of the world: beſides, the lords of theſe grounds ſeldom reſide upon them, and yet are as jealous of their rights as thoſe of other countries. Quails, however, are not ſuch rarities; for on the approach of ſpring, they come in ſuch flocks from Africa, as to cover the whole country; at which time they are ſo tired with their long paſſage, that they throw themſelves into the ſhips, and wherever they can find a place to repoſe themſelves, and may be caught in heaps without the leaſt ſtruggling; but as they are extremely lean, thoſe who take them uſually feed them ſome time before they eat them.

Among the various ſorts of wine in this country, is one called Lacryma Chriſti, or the tears of Chriſt. About Loretto their wine caſks are made ſhort and broad, like a dutch cheeſe; but towards Pavia, their length is about ſeven times their diameter.

Towards Parma and Placentia, where there are excellent paſtures, they make cheeſe of all their milk. As butter is ſcarce in Italy, they uſe oil in all their ragouts and fricaſees; but though they draw it from their own olive-trees, it is frequently worſe than in thoſe countries where none of thoſe trees grow; for what will yield a price, and keep longeſt, is always exported for the ſake of gain.

It is remarkable that the Italians begin the day immediately after ſun-ſet, and their clocks always ſtrike twenty-four hours from one ſun-ſetting to another. According to this manner of computation, the hour of noon varies daily; for when the ſun ſets at four o'clock according to our calculation, they reckon one when we count five, and conſequently it is noon at twenty hours; and in like manner, when the ſun ſets at eight on our dials, it is one o'clock with them when we reckon nine, and juſt noon at ſixteen hours; and yet with reſpect to the artificial day between ſun-riſing and ſun-ſetting, they, like us, uſe the words yeſterday and to-morrow.

The Italian manufactures and trade are in a flouriſhing condition. Italy has a great variety of excellent wines, fruits, and commodities, which it exports, and its ſilks alone make a very conſiderable article. The moſt famous annual fairs in Lombardy are held at Aleſſandria, Cremona, Bergamo, Breſcia, Verona, Reggio, and Placentia.

Each ſtate has its own coin both great and ſmall, the knowledge of which, though requiring a particular application, may be gathered from the following account, which contains only what is neceſſary.

In Savoy and Piedmont.

Twenty ſoldi make one lira, or pound, which is equal to one ſhilling Engliſh. The louis d'ors and Spaniſh piſtoles are worth ſixteen liras; the Savoyard piſtoles, fifteen liras three-fourths. Other Italian piſtoles, fifteen and a half. The Italian ſilver crown is valued at five liras and five ſoldi; a ducat or ongaro at eight liras thirteen ſoldi; a Milaneſe filippo at four liras thirteen and a half ſoldi.

In the Milanese.

Three Milaneſe liras are equal to two Piedmonteſe. One filippo is worth ſeven liras and ten ſoldi, about five ſhillings ſterling, two ſhillings being equal to three liras. A Spaniſh piſtole, twenty-four liras and between three and four ſoldi. An Italian piſtole, twenty-four liras. A ducat in gold is worth thirteen liras ſixteen ſoldi. A ducatoon of Milan, Venice, and Florence, or a ſilver crown, is equal to eight liras: and a zechine in gold is worth fourteen liras ten ſoldi.

At Venice.

Two ſoldi make one caſſetti, ten caſſetti one lira, equal to about ſix-pence two-fifths ſterling. One ducato corrento is worth ſix liras and a half, ſixty-two caſſetti, or one hundred and twenty-four ſoldi. A ducato di banco, or four ſhillings and four-pence ſterling, is an imaginary coin, and worth five liras one-ſixth. A doppia, or a Venetian, Spaniſh, Genoeſe, Florentine, and French piſtole, is equal to twenty-nine liras current, or thirty-ſix of the baſer liras. A zecchino is eighteen liras and a quarter. A ducat of gold, or ongaro, is equal to ſixteen liras. A large ſilver crown, eleven liras current, in common currency thirteen baſe liras eighteen ſoldi. A juſtinian and filippo, eight liras ten ſoldi; but common currency, ten liras two ſoldi.

At Genoa.

Twelve denari make one ſoldi, and twenty ſoldi are equal to one lira; which is about eight-pence three-fifths ſterling. A piece of eight goes here for five liras. A ſcudo d'oro, or half doppia di Spagna, is nine liras eight ſoldi. A ſcudi d'argento is worth ſeven liras twelve ſoldi. A ſcudo di Cambio, four liras. A filippo di Milano, five liras eight ſoldi. A ſcudo d'argento, ninety ſoldi moneta carta, in which coin the cuſtoms are paid. A doppia d'Eſpagna, French weight, is nineteen liras two ſoldi current. A doppia di Genoua, eighteen liras ſixteen ſoldi. A doppia d'Italia, full weight, is eighteen liras eighteen ſoldi.

At Florence.

Twelve denari make a ſoldo; twenty ſoldi a ſcudo. A ſcudo d'oro is an imaginary coin, which is reckoned at ſeven and a half liras, or one hundred and fifty ſoldi. A teſtoon is worth two liras, or three giuli. A Spaniſh piſtole is valued at twenty liras and about four ſoldi, or between thirty and thirty-one giuli. An Italian piſtole, twenty liras, or thirty giuli. A ducat, or ſilver crown, ſeven liras, or ten giuli and a half. A piece of eight, ſix liras; but in paying of cuſtom one hundred and fifteen ſoldi, or five liras three-fourths.

At Leghorn.

One gratia is equal to one ſoldo and one-third or five quatrini. One giuli di Roma is eight gratie. One teſtoon is two liras, or three giuli. One lira, which is an imaginary coin, is one giuli and a half, twenty ſoldi, or two hundred and forty denari; and one ſoldo, twelve denari. One pezzo is twenty ſoldi; one pezzo d'ollo reali, or piece of eight, is ſix liras nine giuli, or a hundred and twenty ſoldi, about four ſhillings ſterling. Seven liras make one ducat, which is the piaſtre or ſcudo of Florence. One Spaniſh piſtole is valued at twenty liras, and between four and five ſoldi or thirty-two giuli. One Italian piſtole is twenty liras, or thirty giuli.

At Bologna.

Twelve denari make ſix quadrini, which are equal to one ſoldo; twenty ſoldi, or bajochi, or Bolognini, make one lira, and two giuli are equivalent to one lira. A ſcudo, or pezzo d'otto, is four liras five ſoldi, or eighty-five Bolognini, about four ſhillings and three-pence Engliſh. One Spaniſh piſtole is ſixteen liras, and between ten and twelve ſoldi. One zechino is nineteen giuli. One ducat, or ongaro, is eighteen giuli, or nine liras ten ſoldi, or about five ſhillings and three-pence Engliſh; a ducatoon, or ſilver crown, ten giuli and a half.

At Rome.

One bajocho, a copper coin, is equal to five quatrini. Ten bajochi are worth one giulo, as alſo one paolo. Seven gazetta, and one quatrini, are likewiſe equivalent to one paolo; and one gazetta is ſeven quatrini. Ten giuli make one ſcudo monita, or current, which is about four ſhillings and four-pence ſterling. A Spaniſh piſtole is thirty-two giuli, or paoli, more or leſs. One Italian piſtole is thirty-one giuli, or paoli.

At Naples.

Three quatrini make one grana; ten grana, one carlini; two carlini, one taro; five tari, one ducato; forty-five carlini, one Spaniſh piſtole; twenty-ſix carlini, one zechino; twenty carlini, one ongaro.

With reſpect to the diviſions of this country, antient and modern, it was originally formed into a multitude of ſmall ſtates, and afterwards the Gauls ſettling in the weſtern, and many Greek colonies in the eaſtern provinces, it was, from its different inhabitants, divided into three large parts, called Gallia Ciſalpina, Italy properly ſo called, and Magna Grecia; and this diviſion is generally met with among antient geographers and hiſtorians. But the Romans at length ſubdued all Italy, after which it was divided by Auguſtus into eleven provinces; but his authority dying with him, the old diviſion was again received, and continued under the Roman emperors till the invaſion of the Goths and Herulians in the fifth century. The Grecian or eaſtern emperors at length drove out the Oſtrogoths, and made themſelves maſters of Italy. But the Longobardi poſſeſſing themſelves of the upper parts, at laſt reduced what belonged to the eaſtern emperors under the name of the exarchate; which was alſo on the other ſide aboliſhed by the Saracens, who had ſeized upon Sicily and Naples. The pope thus on the point of loſing all, had recourſe to the Franks, and Charlemagne their king, after his conquering the kingdom of Lombardy, was proclaimed Roman emperor at Rome on the twenty-fifth of December, 800. But the authority of the Roman emperor was of ſhort continuance in Italy, it being inſenſibly curtailed by the ambition and avarice of the popes, and at laſt brought to the loweſt ebb on the extinction of the Swabian line. Hence Italy was again parcelled out into a great number of ſmall territories.

Mr. Addiſon's obſervations on this ſubject are extremely juſt: "If a man conſiders, ſays he, the face of Italy "in general, one would think that nature had laid it "out into ſuch a variety of ſtates and governments as "one finds in it. For as the Alps at one end, and the "long range of Apennines, that paſſes through the "body of it, branch out on all ſides into ſeveral different "diviſions, they ſerve as ſo many natural boundaries and "fortifications to the little territories that lie among "them. Accordingly we find the whole country cut "into a multitude of particular kingdoms and common-"wealths in the oldeſt accounts we have of it, till the "power of the Romans, like a torrent that overflows "its banks, bore down all before it, and ſpread itſelf "into the remoteſt corners of the nation. But as this "exorbitant power became unable to ſupport itſelf, we "find the government of Italy again broken into ſuch "a variety of ſub-diviſions as naturally ſuits with its "ſituation."

Italy includes both the main land and the iſlands. The main land is commonly divided into three large parts, the

the Upper, Middle, and Lower. This diviſion is very proper, and coincides with that of the antient geographers. Upper Italy at preſent contains the greateſt part of the antient Gallia Ciſalpina and Lombardy, which conſiſts of ſeven large dutchies, ten ſmall principalities, and three republics. Middle Italy forms a part of Gallia Ciſalpina and of the antient Italy, or, in other words, of the grand dutchy of Tuſcany, the eccleſiaſtical ſtate, and ſome other ſmall countries. Lower Italy contains a part of the antient Italy Proper, and Magna Grecia, at preſent the kingdom of Naples. We ſhall begin with Upper Italy, and, in giving an account of the ſeveral ſtates, ſhall comprehend under one head the deſcription of the countries belonging to the ſame prince, whether on the continent, or in the iſlands.

In deſcribing the ſeveral countries of Upper Italy, we ſhall firſt treat of the king of Sardinia's dominions, and having given an account of thoſe on the continent of Italy, ſhall from thence proceed to the kingdom and iſland of Sardinia; previouſly obſerving, that this kingdom and the principality of Piedmont are independent countries, but that the dutchies of Savoy and Monferrat are fiefs of the empire.

SECT. II.

Of the Dutchy of SAVOY.

Its Situation, Extent, and Produce; a particular Deſcription of the Montagnes Maudites, or Curſed Mountains; and of the Alavanches, or monſtrous Snow-Balls. Of the Rivers and Lakes of Savoy, particularly of the aſtoniſhing Courſe of the Arve, and the Road near it. The Manners and Way of Life of the Savoyards, with a particular Account of their Method of carrying Travellers over Mount Cennis, and of their ſliding down from that Mountain. The Oppreſſion of the Nobility, with the Titles and Arms of the King of Sardinia; an Account of the principal Order of Knighthood, with the Prerogatives and Revenues of the Sovereign. A conciſe Account of the principal Places in Savoy.

THE dutchy of Savoy, called in Latin Sabaudia, is bounded on the weſt by France; on the ſouth by France and Piedmont; on the eaſt by Piedmont, the Milaneſe, and Swiſſerland; and on the north by the lake of Geneva, by which it is ſeparated from Swiſſerland. Its greateſt length from eaſt to weſt is eighty-eight Engliſh miles, and its breadth from north to ſouth ſeventy-ſix.

Savoy ſeems ſequeſtered from all incentives to luxury and ſoftneſs, by their lofty barren mountains and enormous rocks, by which the greater part of it is overrun, and are known to produce only ſome moſs and ſhrubs, with box-trees, which grow in ſuch plenty, that brooms are made of them. The valleys between the mountains yield ſome grain; but abound more in paſture; for the induſtry of the inhabitants has made the beſt improvements in the mountains themſelves which the ſoil would admit of. The wine about the lake of Geneva, Momelian, and St. John Maurienne, is not contemptible; and ſome parts have ſuch a good breed of cattle, that moſt of the oxen in Piedmont and the Milaneſe are ſent from Savoy. Mules are alſo bred for exportation; but all this is inconſiderable in proportion to the greateſt part of the country, which is taken up by huge mountains.

Some of the higheſt of theſe mountains are called the Glacieres, or Ice Valleys, and the Montagnes Maudites, or Curſed Mountains in Faucigny, the perpendicular height of the latter, from the ſurface of the lake of Geneva, is computed to be at leaſt two thouſand fathoms, which are equal to twelve thouſand eight hundred and ſixteen feet, or above two Engliſh miles; and the ſurface of the lake of Geneva is four hundred and twenty-ſix fathoms higher than the level of the Mediterranean. The aſcent to theſe mountains is very ſteep, craggy, and ſlippery, but not continued; a new ridge of mountains frequently appearing on the other ſide, higher and more ſteep than that which is left behind; till at length, from the laſt eminence to be ſurmounted, the proſpect of the frozen valley appears in full view, and on the oppoſite ſide a chain of craggy inacceſſible rocks, covered with ice and ſnow, and ſo ſcarped and ſplit, that at ſome diſtance they appear like prodigious piles of Gothic buildings and ruins, while the ſurface of the frozen valley below ſeems ſpeckled, if we may thus expreſs ourſelves with rocks of a monſtrous ſize, that are broken off, and fallen from the higher grounds. Here the air is ſo extremely cold and piercing, that though the months of July and Auguſt are alone fit for this journey, men are then forced to go cloathed as in the depth of winter. Mr. Addiſon obſerves, with reſpect to the ſharp rocks on the tops of the mountains, that they were probably once much higher than they are at preſent, the rains having waſhed away abundance of the ſoil, and left the veins of ſtone ſhooting out of them; as in a decayed body, the fleſh continues ſhrinking from the bones.

It is proper here to take notice of the Alavanches, or monſtrous ſnow-balls, which are the more dreadful as they always come ſuddenly down with ſuch incredible rapidity, that they carry all before them; ſo that whenever they happen to fall along theſe ſteep declivities, it is next to impoſſible for travellers to avoid being ſwept away with them. They are commonly occaſioned only by the dropping of ſome ſmall quantity of ſnow blown by the wind from ſome prominent rock, or ſhook off by the ſtumbling of a horſe, the firing of a gun or piſtol, or by any thing elſe that ſhakes the air. This piece of ſnow, though at firſt very ſmall, rolling down the ſteep deſcents, gathers up ſuch freſh quantities as it rolls, and increaſes ſo aſtoniſhingly in bulk, that it tears up trees and ſometimes part of a wood by the roots, with houſes, churches, men, and horſes, nothing being able to reſiſt the force of theſe balls, till they have got quite down to the bottom, where they generally break in pieces by the violence of the ſhock, and ſometimes cover a whole village, which lies buried under it. Theſe balls are more particularly dangerous for travellers in thoſe roads which are along the ſides of the high mountains, where, to prevent their being overtaken by them, they commonly fire a piſtol or gun at every quarter or half a mile, to ſhake off all the looſe ſnow that is apt to occaſion them; after which they travel through that ſpace with all the ſilence and ſpeed they can.

Theſe amazing kind of ſnow balls are not peculiar to this country; but are common in Swiſſerland, ſeveral parts of Germany, and Italy; but they are more frequently found in theſe parts of Savoy, where they are alſo larger and more dreadful. Some of them by the tract they leave behind are found to be above a hundred yards in diameter. In the year 1695 one of them fell upon a village called Valmedia, which deſtroyed eleven houſes, and as many barns and ſtables ſo entirely, that there ſcarce remained one ſtone upon another; and a number of men, women, children, and cattle were loſt. The noiſe they make reſembles a long and loud clap of thunder, and is heard among the ecchoing rocks and mountains at ſeveral leagues diſtance; and yet ſo rapid is their motion, that paſſengers have not time to avoid them.

The chief rivers in this country are, the Rhine, which flows out of the lake of Geneva, and on that ſide ſeparates it from France; into it run the following rivers: the Arvo, which riſes in Faucigny, and, near Geneva, diſcharges itſelf into the Rhone: the Suſſes and Siers, the ſources of which are in the Genevois, and fall into the Rhone near the Seiſel: the Iſere, which riſes at the foot of Mount Iſeran, and, among other rivers, receives the Arc, which, having a great many water-falls, is very rapid, and full of foam.

The river Arvo, juſt mentioned, runs for many miles between high craggy and inacceſſible rocks, which ſeem as if ſplit on purpoſe to give its rapid waters a free paſſage. The ſurpriſing echoes and continual ſounds occaſioned by its ſtreams, the trampling of the horſes and mules, the hallowing of paſſengers, &c. in theſe places are reverberated three, four, and even in ſome parts ſix or ſeven times, with ſuch frightful loudneſs, as ſtrikes the traveller unaccuſtomed to them with terror; and the firing of a gun, or piſtol, is here more terrible than the loudeſt claps of thunder. The roads which are cut along the ſides of the ſteep rocks, and in many places are not above five or ſix feet wide, afford both above and below

the dreadful proſpect of a ſteep precipice, with impending monſtrous rocks that ſeem juſt ready to fall, which, joined to the roaring noiſe of the river, ſtrikes the amazed beholder with horror. The great cataracts of that river in ſeveral places are more or leſs loud and terrible, according as the waters are more or leſs ſwelled by the melting ſnows, with which the tops of the mountains are covered. One in particular, called by the inhabitants the Nun of Arpena, falls from a prodigious high rock with great noiſe and violence. The fall of this cataract is here ſaid to be above eleven hundred feet. We ſhall only add, that the Arvo, which travellers are obliged to croſs over ſeven or eight times, has all along that way bridges, ſome very ſtrong and beautiful, and others ſo old and crazy, that it is almoſt impoſſible to paſs over them without fear.

Beſides the four rivers above-mentioned there are many ſmaller ones, with innumerable ſprings and rivulets which flow down from the adjacent hills; and what appears ſurpriſing, many of theſe, which are ſeveral yards in breadth, run a long way by the ſides and declivities of the hills two or three miles above the valleys, watering a number of large villages ſituated along the hills before they fall down into the plains. The beds of theſe rivulets ſeem indeed to have been made by art, and are deep enough to receive the waters that come from the higher parts of the mountains, which increaſe with their courſe, till meeting with ſome impediments, they fall with great violence into the flat grounds, and there either form themſelves into lakes, or diſcharge themſelves into ſome of the greater rivers.

The principal lakes are thoſe of Annecy in the Genevois, and Bourget in Savoy. The laſt has a fiſh unknown in other countries, called lavaretta, which frequently weighs four or five pounds, and is ſo palatable, that it never fails of bringing a good price at Chamberry. Here are alſo ſome remarkable ſprings, particularly near the lake of Bourget is one that riſes and falls with ſome noiſe; but not at ſtated and regular times. After Eaſter this alteration is frequently perceived ſix times in an hour; but in dry ſeaſons not above once or twice: it iſſues from a rock, and is called la Fontaine de Merveille. Of a different kind are the ſprings of this country, that ſometimes throw up more or leſs water, according to the alterations in the Rhone; but not by ſuch a ſhort and frequent flux and reflux as in the ſpring juſt mentioned.

The Savoyards, from the nature of their country, are generally ſo poor, that a traveller meets few people on the public road, who do not recommend themſelves to his benevolence; and a farmer with a yoke of oxen, two horſes, four cows, a few goats and ſheep, and a ſmall parcel of land, is eſteemed a man of conſiderable fortune. Their bread is of oats; but the more wealthy uſe ſome wheat. Their other food conſiſts of butter, cheeſe, walnuts, garden-ſtuff, and ſometimes, though ſeldom, fleſh meat; and their drink is milk and good water. However, thoſe who live in the valleys fare ſomewhat better. They are all, however, chearful, have healthful florid complexions, and are remarkable for their fecundity. Among both ſexes a great many are ſeen deformed and lame; and the women in particular have wens that reach from ear to ear. One-third at leaſt of the males ſeek a ſubſiſtence in France and other countries in quality of chimney-ſweepers, ſhoe-blacks, rary-ſhew men, &c. yet they are ſo honeſt, that they may be truſted to change gold; and if they are once able to ſet up a little ſhop, they are ſuch maſters of the thriving talents, that it is often the foundation of a very conſiderable fortune; yet ſo prevalent is the love of their country, that when they have acquired a little ſtock abroad, they generally return home.

The inhabitants of Mount Cennis, and the neighbouring mountains are called Marrons, or Marroniers. "One "would imagine, ſays Mr. Keyſler, that from the heavy "burthens they daily carry up theſe ſteep mountains, "they would ſoon or late fall into conſumptions. In our "cities in Germany, what a noiſe do our chairmen "make, if they are to carry a perſon of any bulk two "or three hundred paces; while here the chairmen, "without the leaſt panting or reſting, run directly up "a mountain, whoſe height is a good hour's journey, "and then on the plain above outſtrip us; and as ſoon "as they have refitted the chairs, which is diſpatched "in a few minutes, they carry the company over the "worſt part of the way, for two hours together, making "only four pauſes, and thoſe very ſhort; ſuch is the "effect of cuſtom, and of the ſimple diet to which they "owe their uncommon longevity, many of them attaining to above a hundred years of age. Their uſual "drink is milk, and they ſeldom taſte any wine. The "better to ſecure their footing, their ſhoes are without "heels, and the ſoles rubbed with wax and roſin. The "machines in which travellers are carried are a kind of "ſtraw chairs, with low backs, two arms, and inſtead "of feet a little board hanging down by cords for reſting "the travellers legs. The ſeat, which is made of bark "and ropes twiſted together, is faſtened to two poles, "and carried like a ſedan, with broad leathern ſtraps."

In winter the plain on the top of Mount Cennis, being covered with ſnow, is croſſed in ſledges drawn by a horſe or a mule. The deſcent is in ſome places always performed in chairs; but from Mount Cennis to Laneburg, it is conducted in a very extraordinary manner. On the ſpot where the declivity begins is a houſe called la Ramaſſe, where the travellers getting into a ſledge, with his guide, ſlides down with ſuch ſwiftneſs, that he is carried about three miles in ſeven or eight minutes, the rapidity of the motion almoſt taking away his breath. The guide ſits forward ſteering with a ſtick, and has on each ſide an iron chain, which he drops like an anchor, either to ſlacken the courſe of the ſledge, or to ſtop it. Travellers having been ſometimes much impoſed upon, the king has lately laid a tax on all kind of carriages over the mountain; and on both ſides is an officer, to whom travellers, in caſe of any impoſition, may apply for redreſs.

In Savoy every one ſpeaks French, and moſt of the names of the towns and villages are of that language; but the inhabitants in their cuſtoms and diſpoſitions reſemble the Germans. They are all of the Romiſh religion; but do not acknowledge the decrees of the council of Trent.

The nobility both in Savoy and Piedmont are greatly oppreſſed; the king's ordinances are, however, in ſome reſpects of advantage to them, by having eſtabliſhed in all fiefs the perpetual right of primogeniture. In 1724 the king reſumed all the alienated domains, by which means the dignity of the antient nobility gradually declines, as it alſo does by the continual increaſe of the new; for whoever purchaſes an eſtate that has the title of a marquiſate or barony, is thereby enobled and ſtiled marquis or baron, and ſuch eſtates may be purchaſed of the king for ſix or eight thouſand livres. Every nobleman muſt prove from whence he derives his arms, or elſe is deprived of the right of uſing them, and muſt be at the expence of purchaſing a new coat; and an eſcutcheon intirely new coſts from ten to ſixteen thouſand livres. In order to bear the title of duke, prince, marquis, count, or baron, it is neceſſary to have a patent ſigned by the king or his anceſtors, and the ſame alſo regiſtered.

The liberty of hunting is under ſevere reſtrictions, and of all mines diſcovered and worked a certain ſhare belongs to the king. No perſon is to fell trees even in his own wood, without leave obtained from the intendant; nor is any timber to be exported. No money is to be placed at intereſt or lent on mortgage out of the country: nor is any penſion or order of knighthood except that of Malta to be accepted of, from any foreign prince. The nobility are prohibited from entering into any foreign ſervice, or travelling abroad without a written licence from the king. None are to be ſeen with fire-arms out of their fief; and a perſon not poſſeſſed of a fief, and even the officers in the army, are not to keep any.

A foreigner who intends to ſettle in the country muſt be naturalized and take the oath of allegiance; but if he afterwards happens to be above three years out of the country, he forfeits all his privileges. No foreigner, who is not naturalized, is capable of being heir to a Savoyard or Piedmonteſe.

The preſent royal family of Savoy has long been dignified with the title of royal highneſs on account of their

claim to the kingdom of Cypus, though till the year 1713 that houſe was only in poſſeſſion of the ducal dignity. In that year Victor Amadeus II. duke of Savoy, obtaining the kingdom of Sicily on the peace with France, aſſumed the royal title, and was actually crowned king of Sicily at Palermo. Such he continued till 1718, when, agreeably to the quadruple alliance, he reſigned the kingdom of Sicily to the emperor Charles VI. and in the room of it had Sardinia ceded to him as a kingdom, which he took poſſeſſion of in 1720.

The titles of the king of Sardinia run thus: Charles Emanuel III. by the grace of God king of Sardinia, Cyprus, and Jeruſalem; duke of Savoy, Montferrat, Chablais, Aoſta, and the country of Geneva; prince of Piedmont and Oneglia; marquis of Italy, Saluzzo, Suſa, Ivrea, Ceva, le Maro, Oriſtan, and Sezana; count of Maurienne, Geneva, Nice, Aſti, Aleſſandria, Tende, Gocean, and Romont; baron of le Vaud and Faucigni; lord of Vercelli, Pignerol, Tarentaiſe, of la Lomeline, and Val de Seſia; prince and perpetual vicar of the holy Roman empire in Italy.

The king's arms are quarterly with a point central, ſhield and heart-ſhield. The dexter field is again quartered. In the firſt argent is a croſs potencee or, with four ſmaller for the kingdom of Jeruſalem: the ſecond chequered argent and azure, with a crowned lion, gules, for the kingdom of Cyprus: the third or, with a crowned lion gules, for the kingdom of Armenia; and the fourth argent, a crowned lion gules, by ſome thought to indicate the dutchy of Luxemberg, or, according to the others, the kingdom of Cyprus. The ſecond field conſiſts of three parts; the dexter gules a horſe rampant argent, for the dutchy of Lower Saxony: the ſiniſter is ſable and or chequered with a wreath of green, for the dutchy of Upper Saxony; and the lower point ſuperadded argent three chapes of a cimeter gules, for the dukedom of Engern. The third field is party per pale, the dexter is argent variegated with ſmall ſhields ſable; and a lion ſable, for the dutchy of Chablais: the ſiniſter for the dutchy of Aoſta, a lion argent in a field ſable. The fourth field is alſo party per pale, and for the dutchy of Genevois, contains chequered or and azure: the ſiniſter for the dutchy of Montferrat, a target gules. The point or is a black eagle, for the county of Maurienne. The central ſhields argent, with a croſs gules, and four Moors heads with ribbands argent at the cantons, for the kingdom of Sardinia. The heart-ſhield gules, a croſs argent, denoting the dutchy of Savoy.

The principal order of knighthood is that of the Annonciada, or Annunciation, which was inſtituted by Amadeus VI. in 1562. The badge is always worn appendant on the breaſt from a gold chain round the neck. The collar is about an inch broad, and each link contains theſe four letters F. E. R. T. wrought in the manner of love knots. The ancient motto of the houſe of Savoy, alluding to theſe initial letters, is *Fortitudo Rhodum Ejus Tenuit*, that is, His courage preſerved Rhodes. From this collar faſtened to a ſmall chain, hangs a medal repreſenting the angel appearing to the virgin Mary, ſet round with gold on a ſilver ground, in the innermoſt circle of the Star with the abovementioned four letters. The circle is alſo environed by a ſilver wreath, and the wreath with fiery tongues formed in gold. All the knights of this order have the title of excellency; but none can be inſtalled, without being firſt of the inferior order of St. Maurice, inſtituted by Amadeus VIII.

The order of St. Maurice, by maintaining in its commanderies three gallies againſt the Turks, bears ſome affinity to the order of Malta. The knights indeed are allowed to marry, but not to widows: ſecond marriages are alſo prohibited; but in both caſes a little money laid out at Rome procures a diſpenſation.

The king's prerogative is unlimited, and though ſuperſtition is carried to as great a height in this country as any where in Europe, yet, in church affairs, the authority of the pope has been reduced as low as poſſible. No bull can be made public without a licence from the privy council; nor can the inquiſition of Turin moleſt or lay any one under an arreſt, without previouſly acquainting that council. All eccleſiaſtical preferments are at the king's diſpoſal, aud he is inveſted with the power of aſſigning penſions on them to the amount of one third of their income. He can alſo nominate a perſon for the dignity of cardinal, who muſt be created at the next promotion. His palace-chapel, with the eccleſiaſtics that ſerve in it, and the foundation of Superga, inſtead of being under the archbiſhops of Turin, are ſubordinate to the lord almoner, who has a diſtinct juriſdiction. What the convents poſſeſſed before the year 1600 has been left to them as endowments out of the royal domain; but every thing elſe, whether moveables or immoveables, are ſubject to taxes equally with the laity. All civil contracts, though relating to eccleſiaſtics, muſt be tranſacted in the preſence of the temporal judge; before whom are alſo tried cauſes wherein eccleſiaſtics are concerned, either as plaintiffs or defendants.

The principal boards, or colleges, are the privy council, which conſiſts of a prime miniſter, two ſecretaries of ſtate, and other perſons of rank and great employments; the council of Sardinia is compoſed of the ſovereign, the firſt preſident, and ſome other members; and the council of ſtate, which has alſo its peculiar members.

The royal revenue, by the reaſſumption of the antient crown lands, has received an addition of upwards of a million of Piedmonteſe livres. All future alienations of the domains are prohibited; the fiefs, as they eſcheate, are alſo to be added to them, and all ſurvivorſhips to be annulled. The total of the revenue cannot, however, be preciſely determined. The taxes are raiſed without farming, except that of tobacco, but are ſcrewed up to the higheſt pitch, and levied with an inflexible ſeverity, to the extreme vexation of the diſtreſſed Savoyards; while the Piedmonteſe landholders are conſiderably eaſed, or do not feel the burthen ſo ſenſibly.

The king's ſubjects in Savoy, Piedmont, and other parts of the continent, are ſaid to amount to above two millions.

The king's military forces in 1729 conſiſted of between twenty and twenty-two thouſand regular troops, beſides the horſe-guards, the matroſſes, and fifteen regiments of militia, which make about ſix thouſand men, and are trained up in the military exerciſes like the regular troops. In the year 1741, the army, including the militia, amounted to about forty thouſand; but in time of peace the king commonly keeps no more than fifteen thouſand.

The high court of juſtice, which is here called the Parliament, ſits at Chamberry. As the king is, on account of Savoy, a member of the antient kingdom of Arles, and a vaſſal of the empire, he has a ſeat and voice in the diet of the Germanic body.

The duchy of Savoy is divided into ſix provinces; theſe are, Chablais, Faucigny, the Genevois, Proper Savoy, the Tarantaiſe, and the county of Maurienne: the principal places in which are the following:

Chamberry, the capital of all Savoy, is called in antient records Camberiacum, and Chamarium. It is ſituated in a pleaſant valley, on the river Leiſe, in the forty-fifth degree forty minutes north latitude, and in the fifth degree forty-five minutes eaſt longitude. The ſtreets are moſtly ſtraight and clean, the town being waſhed by ſeveral branches of the Alban, and many ſprings that flow down from St. Martin's Hill. It is well built, and has ſeveral ſquares, and many ſtately edifices, though not in the modern ſtile; and is of a middling ſize, its chief ſtrength conſiſting in its walls. It is the ſeat of the higheſt court, or parliament of Savoy, and the reſidence of many of the nobility. It belongs to the dioceſe of Grenoble. The collegiate church of the Holy Chapel was founded by duke Amadeus, and the head of the chapter is ſtiled dean of Savoy. It has often been taken and retaken; and in the year 1731, was almoſt entirely deſtroyed by fire.

Aix, in Latin Aquæ Gratianæ, or Sabaudicæ, is, as well as the former, ſituated in Savoy Proper, near the lake of Bourget, eight miles to the north of Chamberry, and is celebrated for its hot baths, the uſe of which is free to every one, on giving a trifle to the rubbers. The lower flows from a very ſtrong ſpring, and has a ſulphureous taſte; but the other is quite inſipid. The water is clear,

clear, and of a green colour; but no fish or any other creature will live in it. Here are the ruins of a Roman triumphal arch.

Lanesbourg is a large village, in the county of Maurienne, seated at the foot of Mount Cenis, which lies so near it on the south and east, that, from the end of November to the 17th of January, the inhabitants never see the sun, which on that day makes its first appearance on the tops of the mountains.

SECT. III.

The Principality of PIEDMONT.

Its Situation, Extent, and Produce, particularly of its large Truffles, and its Silk. Of the Mountains and Vallies of Piedmont, and the Animals on those Mountains, particularly white Hares, the Chamois, the Bouquetin, and the Tumar; with a concise Account of the Waldenses. Of the Rivers of Piedmont. The Persons, Manners, Religion, and Trade of the Piedmontese. A particular Description of the City of Turin, and other remarkable Places.

PIEDMONT, a part of the antient Lombardy, is bounded on the north by Savoy and Italy; on the west by France; on the south by the Mediterranean and the republic of Genoa; and on the east by the duchies of Montferrat and Milan; extending about one hundred and fifty miles from north to south, but much less from east to west. It is called Piedmont, and in Latin Piedmontium, from its situation at the foot of the mountains, or Alps, which separate France from Italy. This country is in some parts mountainous, but is every where very fruitful. The plains produce fine corn, and Montferrat and the Milanese yield great quantities of Turky wheat, which commonly serves for bread, and with which people of the middle rank mix rye: the pods are used for fuel, and the stalks, being thick, serve to mend the roads. The hills produce plenty of wine, which, like the Italian wines, is very luscious when new; especially the white. There is also a tartish red wine, called vino brusco, said to be very wholesome for fat people, and, on the other hand, the sweet wine is recommended as a stomachic. The neighbourhood of Turin is famous for its fine fruits, and many long walks of chesnut and mulberry trees, which produce both pleasure and profit. Marons, or large chesnuts, are a favourite dainty among the common people: these are put into an oven, and when thoroughly hot, and cooled in red wine, are dried a second time in the oven, and afterwards eaten cold. Truffles grow here in such abundance, that Piedmont has obtained the name of the Truffle Country. Some are black, others white marbled with red, and the larger they are the dearer. Sometimes they are found of twelve or fourteen pounds weight; and many country people earn from sixty to seventy dollars a year only by digging for them.

The trade in cattle is said to bring into Piedmont no less than three millions of livres per annum. The cultivation of silk is also a profitable article, the Piedmontese silk being, on account of its fineness and strength, esteemed the best in Italy. Many peasants annually sell four or five rubbs of silk, each weighing twenty-five pounds before it is wound off from the cocons, at twenty-five sols the pound. The fine silk sells for about a Louis d'Or per pound. The Piedmontese gentry breed vast numbers of silk-worms under the care of their tenants, who have the eggs and mulberry-leaves delivered to them, and in return they give half the silk to their masters.

The mountains contain minerals. Rochemelon, which lies eastward, between Ferliere and Novarese, is esteemed the highest of all the Italian Alps, and it is a day's journey to ascend to the top, where, in clear weather, it affords a most beautiful prospect over all the Milanese, Trevigo, Venice, &c. The explosion of a musket is here only heard as the crashing of a stick when broken. On this mountain is said to have formerly stood a statue of Jupiter, but it was made to give way to an image of the Virgin Mary, before which an annual mass is read on the 5th of August, to a vast concourse of people. Even at that time of the year, they are obliged, in some places, to clamber over heaps of ice; and as, on this occasion, they are to pass one night at least upon the mountain, if they are not well provided with good covering, they suffer extremely from the frost. Mount Piso, which stands to the south of the valley of Lucern, is said to be one of the most lofty in Europe, and is supposed to be that over which Hannibal made his memorable passage into Italy. The road hewn through the rock requires near two hours travelling, and is quite dark.

The vallies of Piedmont lie to the westward, contiguous to Dauphiné in France: these are the valley of Lucern, that of Perouse, and that of St. Martin. The last is sixteen Piedmontese miles in length, but very narrow. The lower parts abound in wine and other fruit, the middle in chesnuts, and the upper in fine pastures. This valley is the strongest fortified of any; for besides the prodigious mountains, covered at least eight or ten months in the year with snow, and consequently impassable, it is accessible only by a very narrow cavity called the Tower Bridge, and no broader than the rapid river, or rather brook, of Germanesque, running through it, over which is a lofty bridge, which, on being broke down, it is impossible to enter the valley. On the Alps which surround it are seven fine lakes, on the side of the valley of Lucerne.

In the above valleys, especially that of St. Martin, among the highest of the mountains and impassable rocks, are large woods and thickets, abounding in white hares, which retain that colour all the year round; besides foxes, large pheasants, and brown and white partridges. These thickets are also remarkable for being the haunts of bears and wolves. On the highest part of the Alps, and in open places, where only a little herbage grows, are found the marmotte, a kind of rock-rat, a creature somewhat larger than a rabbit, and in colour of a mixed brown and red. The flesh, which is eaten, has much the taste of pork. This animal has a very shrill cry, and passes eight or nine months of the year, that is, while the mountains are covered with snow, in a profound sleep.

The chamois is a kind of wild goat, but much stronger; they generally keep on the mountains; but are very difficult to be caught, because they place centries on the hills about them, and on the adjacent eminences, which, upon any appearance of danger, give the rest the alarm by a certain noise; upon which the whole herd run down the next steep declivities, which they seem made by nature to climb up and down with surprising dexterity and swiftness. Their horns are short, crooked, and smooth; their flesh is very good, and of their skins is made the true chamoy leather.

The bouquetin is another kind of wild goat, but much larger and less shaggy: its constant abode is on the mountains, which, on account of their height, are continually covered with snow. It generally sleeps on the ice, is much fleeter than the chamois, and the common people reckon the flesh very strengthening. When a person is deprived of the use of his limbs by cold, some drops of this creature's blood are administered in warm wine or broth, which, upon the patient being put to bed, throws him into a great sweat, after which he recovers. It is also used in pleuritic disorders, and in sudden frights: and as the fresh blood cannot always be had, they dry it, and reduce it to powder. It is said that these creatures defend themselves with their horns, which are two or three feet long, and thick in proportion; and that when closely pursued they will throw themselves down high precipices, and break their fall by the help of their horns, so as to receive no hurt.

Among the tame beasts are the tumar, which, Dr. Busching says, is of two sorts, one engendered by a bull and a mare, and the other by a bull and a sheass: the latter species, says he, is considerably smaller than the first, and is called the bif; the former, called baf, has the upper mandible shorter than the lower, and both almost resemble those of swine; yet the incisory teeth in the upper jaw are an inch or two more backward than in the lower, and are also much longer, like those of hares and rabbits. The head and tail of both resemble those of an ox; but the former, instead of horns, has only knobs; in all other respects they are shaped either

either like a horſe or an aſs. Though not ſo large as a mule, they are of ſurpriſing ſtrength, eat little, are very ſwift of foot, and are excellent beaſts for travelling.

These valleys have always belonged to Piedmont. The Waldenſes, or Vaudois, their inhabitants, have rendered themſelves famous in hiſtory for their diſſenting from the errors of the Romiſh church a long time before the birth of Luther and Calvin, and for the perſecutions they have ſuffered on that account: but ſince the year 1730, they have not been openly moleſted for their religion; but, in order to ſuppreſs them by degrees, a Popiſh church has been built in every pariſh. The number of people in theſe valleys ſcarce at preſent exceeds ſeven thouſand, of which one thouſand are catholics.

The chief river of Piedmont is the Po, which flows out of Mount Viſo. The river Seſia, the Doria, Baltea, the antient Druria, the Tenaro, and ſeveral others, run into it. The Var, antiently called the Varus, riſes in the county of Nice, and, after watering it, empties itſelf into the Mediterranean.

The Piedmonteſe are eſteemed lively, artful, and witty, the inhabitants of the mountain of Aoſta excepted, who are farther diſtinguiſhed by large wens, as are even their horſes, dogs, and other animals. If the Piedmonteſe were allowed to give full ſcope to their genius, which is ſhackled by the Romiſh religion and their manner of government, great literary advancements might be ſeen among them; but the introducing of any books that differ in the leaſt from the Romiſh tenets, is ſeverely prohibited. Turin has an univerſity, which is well founded and regulated after the Romiſh manner; but neither the Jeſuits nor any other regulars are allowed openly to keep ſchools. This was ordered by king Victor Amadeus II. who not only new-modelled the univerſity, but publiſhed a rule for the uniform education of youth throughout the country.

The language of the Piedmonteſe is a mixture of French and Italian. In this country are about fifty earldoms, fifteen marquiſates, a multitude of lordſhips, and twenty abbeys. Though the country be entirely popiſh, except ſome valleys inhabited by the Waldenſes, the king reſerves to himſelf the greateſt part of that power in church affairs, which in many other places is given up to the pope, and the *conſtitution unigenitus* is here univerſally oppoſed. In the valleys of Lucerne, Peyrouſe, and St. Martin bordering on Dauphine, as hath been already intimated, live the celebrated Waldenſes, a name which they derive from their living in the valleys, the Italians calling them Waldeſi, that is, people of the valleys.

The chief trade of this dutchy conſiſts in hemp and ſilk; and though moſt kinds of ſilk commodities are made at Turin, and as good as in other places, yet they are dear, the Piedmonteſe workmen being leſs quick and expert than thoſe of other places; and indeed this trade is of no great conſequence, both on account of the high duty and the land carriage on mules.

The principal city of Piedmont is Turin, or Turino, antiently Auguſta Taurinorum, the capital of all the king of Sardinia's dominions. It is ſeated in the forty-fourth degree fifty-ſix minutes north latitude, and in the ſeventh degree ſixteen minutes eaſt longitude, at the confluence of the Po and Doria, in a very pleaſant country, that affords a moſt delightful proſpect, the neighbouring hills being covered with villas, convents, and other buildings. The city is pretty large, the circle of the ramparts being about four miles and a half. The fortifications are remarkable for their ſtrength, and particularly the ſubterraneous works, which cannot be ſeen without permiſſion from the governor. The citadel is a regular pentagon, with a vaulted deep well in every baſtion, ſo that the garriſon cannot be deprived of water; and, conſidering the number and extent of the ſubterraneous works, the whole city may be almoſt ſaid to ſtand in the air. The ground on which it is erected being a little raiſed above the adjacent country, no water can be conveyed into the ditches, which is here of advantage, as the mines would in a great meaſure be rendered unſerviceable, could they be overflowed. Both the city and the citadel mutually add to each other's ſtrength.

From the city ſide you paſs over ſeveral bridges and ditches through an entrance, which leads to a kind of dungeon, or a large round tower, with a flat roof. This is a magazine for proviſions and part of the military ſtores. It is bomb-proof; the French, in the ſiege of 1706, having thrown ſeveral hundred bombs upon it, but to no effect. This tower has alſo its ſubterraneous paſſages, or galleries, towards the other baſtions; ſo that if the enemy ſhould become maſters of the latter, the dungeon alone would eaſily hold out fourteen days before it would be obliged to capitulate. Here is kept the main guard. On the left hand towards the area of the citadel is the commandant's houſe, and on the right that of the governor; both theſe form an elegant amphitheatre facing the area, on the left hand of which are the barracks, from which one is led by torch-light into the ſouterraines, which indeed are ſurpriſing. At the entrance are vaulted ſtables for fifty horſes: a hundred and thirty paces behind theſe, and forty or fifty more under the main ditch, you come under the counter-guard, where are other ſtables for fifty horſes more. Here the ſubterraneous paſſages extend in two branches, the one to the Po, the other to the diſtance of two or three Piedmonteſe miles, not ſo much for the ſake of an outlet, as to lead to the vaſt number of mines, which take up every part of the ground.

In one of theſe galleries is ſhewn the place where Micha, the brave pioneer, devoted his life for the good of his country. The French were, however, greatly miſtaken in thinking themſelves ſure of being maſters of the citadel by means of this large gallery, which is broad enough for a carriage to turn about in; for the ſmall gallery is over the larger, and has ſeveral trenches from whence they may fire upon the enemy; and, in caſe of neceſſity, iron portcullices may be let down, and granadoes, bombs, and other inſtruments of deſtruction thrown into it, through loop-holes provided for ſuch extremities. Beſides, this large gallery is fortified at the end of every thirty paces, and there are many mines underneath it.

Indeed there are properly four galleries over one another, the lowermoſt of which is at the depth of a hundred and ſeventeen feet under ground. Into theſe none but Germans are admitted, as being conſtant friends to the houſe of Savoy, and therefore the officer who attends foreigners here always enquires their country. The mines, counter-mines, and other ſubterraneous works, are very ſurpriſing. In the loweſt gallery there are ſpiracles to let in the air and keep it dry. From the ſubterraneous works of the one baſtion an idea may be formed of the other four. Beſides all theſe conveniences, every one is provided with an oven, a well, and a magazine for proviſions.

The walls and baſtions are all lined with free-ſtone, and take up an hour and a half in walking round the fortifications. The walks ſhaded with oaks on the ramparts appear very delightful at a diſtance, and thoſe who walk there have a moſt agreeable proſpect of beautiful villas and gardens, and on one ſide of the mountains, which, during the greateſt part of the year, are covered with ſnow. If Turin continues to increaſe in ſize and magnificence, as it has lately done, it will have the nobleſt ſtreets of any city in Europe, they being at preſent exceeded by none in Germany, Holland, France, or Italy. But this is true only with reſpect to the New City, in which are the royal palace, New-ſtreet, and Po-ſtreet, which are all remarkably fine. From the door of the king's palace is a view which extends ſeventeen hundred paces over the palace court, and St. Charles's-ſquare, along the New-ſtreet to the New Gate. The houſes in St. Charles's-ſquare are very magnificent, and have all arched piazzas, ſo that in the heavieſt rains one may walk dry under ſhelter. New-ſtreet is eighteen paces broad, the houſes four ſtories high, and every houſe exactly reſembles that oppoſite to it on the other ſide of the ſtreet, and is at leaſt a hundred paces in front. There are but three buildings on each ſide from the area before the palace, to the entrance into St. Charles's-ſquare, where the New-ſtreet begins, which extends a hundred and twenty-three paces in front. The inner court of the

palace is a hundred and forty-four paces long: the palace du Chateau is a hundred and ninety-ſeven: the ſtreet between this ſquare and that of St. Charles four hundred and twenty-three: the ſquare of St. Charles two hundred and eighty-four: the Farther-ſtreet four hundred and fifty-ſeven; and the open ſquare before the gate a hundred paces. Bernini, the celebrated architect, is ſaid to have preferred this ſtreet to any in Italy; yet the ſtreet of the Po ſeems ſuperior to it; that ſtreet is eleven hundred common paces in length, and the houſes only three ſtories high. The ſpacious and lofty piazzas of the Caſtle-ſquare are continued in a direct line on both ſides of the ſtreet, and the houſes within the gate form a fine amphitheatre.

The houſes are moſtly of brick, overlaid with plaiſter of Paris, which while new has a good effect; and, what is not commonly ſeen, they have a range of balconies to every ſtory: but the houſes are diſfigured by the great number of paper windows.

The ſtreets are kept clean by a very ingenious contrivance. Between the citadel and the Port de Suſa the water is brought in by a canal out of the Doria, and thence conveyed through an aqueduct over the town-ditch into the city, where it is diſtributed at pleaſure through all the ſtreets, and carries off all the filth and ſoil. This contrivance alſo ſerves to clear the ſtreets of the ſnow in the winter, unleſs it be ordered to leave it on the ground for the diverſion of the prince, who often rides upon the ſnow in a ſledge. The city is alſo lighted by lanthorns hung up in the ſtreets and croſs lanes.

The moſt ſplendid ſtructure is the front of the palace where the king reſides, which is built of free-ſtone, and ſuperbly decorated with columns and ſtatues, and has a magnificent ſtair-caſe, where ſtands a brazen ſtatue of Victor Amadeus on a horſe of white marble. The hall before the king's apartment, and the other chambers, are hung with tapeſtry repreſenting the life of Cyrus. Theſe hangings were a preſent from the emperor Charles V. to the houſe of Savoy; and both for their beauty, antiquity, and the number of pieces of which the whole ſet conſiſts, are extremely valuable. The king's apartment is very well furniſhed, and in his bed-chamber is an admirable piece of tapeſtry, repreſenting a battle in which the Lorrainers were entirely defeated.

On the left hand of the late queen's apartments, in which are ſome good pictures of the royal family, is a gallery in which are three hundred marble ſtatues, moſt of them antiques, placed on each ſide of the gallery. It was on this floor, but fronting the court, that the late king reſided. The cloſet where he conferred with his miniſters is near the audience-chamber. This apartment opens into a fine gallery of paintings, in which the largeſt and fineſt pieces are by Paul Veroneſe. The freſco painting on the wall, and particularly that on the cieling, is admirable, and done by the chevalier Daniel, a German.

Upon the left hand, on the ſecond floor of the wing of the palace which looks into the garden, is the chapel of the Holy Sudary, which, that it might be adapted to the tragical relic preſerved there, is built entirely of a dark grey marble. The ſheet, as the clergy here pretend, in which Chriſt was wrapped after his crucifixion, has imprinted on both ſides the bloody figure of a man, and is kept in the middle of the chapel in a tabernacle, within an incloſure of iron work. It is publicly ſhewn on great ſolemnities, as the marriage of the hereditary prince, &c. It ought not, however, to be omitted, that the pretended ſudary is alſo ſhewn at Liſbon, Mentz, and in above twelve Romiſh churches beſides.

The reſt of this palace is old and of brick, as is alſo another palace. The royal library is worth notice. Among other ſpacious buildings contiguous to the palace is the king's theatre, which is reckoned a maſter-piece in its kind; it having five galleries, one above another, finely decorated with ſculpture and gilding. Clapping, hiſſing, or other noiſy indications of applauſe or diſlike, are forbidden, when any of the royal family are preſent: a decorum that muſt be very agreeable to a curious ſpectator. The other buildings contiguous to the palace are the record-office; the new royal printing-houſe, which has twelve preſſes; and the arſenal, which is quite new, and a well contrived ſtructure.

In the old city the ſtreets are crooked and narrow, though here and there are ſome good houſes. The univerſity, which was founded in 1405, is a large quadrangle, and is eſteemed a fine building. In the inner court is a double row of piazzas over each other; and the univerſity library, beſides twenty thouſand printed volumes, has a very valuable collection of antient manuſcripts, which conſiſt of a hundred and ſixty-nine Hebrew, three hundred and ſixty-nine Greek, a thouſand and eighty-four Latin, two hundred and ten Italian, and a hundred and ſeventy-two French.

With regard to the eccleſiaſtical buildings in this city, they are very antient, and in the Gothic taſte. There are forty-eight churches and convents, and ſeventeen more may be ſeen in the neighbourhood from the ramparts. The chapel of St. Laurence near the palace is the fineſt in the city, and is celebrated for its ſeveral marble ſtatues and its lofty roof. The tabernacle on the great altar conſiſts of beautiful ſmall pillars of Oriental marble, and the pix in which the hoſt is kept is made of lapis lazuli.

The chapel of the Holy Trinity is ſmaller, but has many magnificent decorations: it has a lofty cupola, ſuperb altars, and curious works in marble of all colours. Here is alſo a rich foundation for pilgrims.

The Corpus Chriſti chapel in the green-market is remarkable for a miracle ſaid to have been wrought there. It is pretended that in 1453 the Savoyards having pillaged Exilles, a conſecrated hoſt was brought along with the booty to Turin, packed up with ſome other things upon an aſs; but when the beaſt came to this ſpot, he devoutly kneeled, and could not be made to ſtir a ſtep farther. Mean while the box with which it was loaded flew open, and the wafer ſhot up into the air, where it continued hovering in the ſight of the people till the biſhop arrived, into whoſe ſacred hand it gently deſcended, and was by him carried into this chapel.

One of the fineſt churches in Turin, named la Conſole, has a miraculous image of the Virgin Mary, which brings many pecuniary offerings; and the Franciſcan church in St. Charles's ſquare is beautified on the outſide with fine ſtatues and pyramids.

The Jeſuits church, though ſomewhat dark, is equalled by few churches in the city for fine paintings in freſco, and marble decorations. Adjacent to it is a college, which is ſo large as conveniently to lodge the fifty fathers of which that ſociety conſiſts.

Among the laudable foundations at Turin, the five hoſpitals for the poor, ſick, and diſabled, may be reckoned the moſt uſeful. The largeſt and fineſt of theſe hoſpitals is that of St. John, for lying-in women and their children, foundlings, and the ſick. Such ſingle women as are with child are admitted here, as are alſo thoſe who are married. This hoſpital contains about twenty ſuch patients, beſides four hundred foundlings and orphans, one hundred incurables, and two hundred patients who are judged curable. The children are employed in ſpinning of ſilk, and in other works, till they are fit to be taught ſome mechanic trade. The ground-floor is for the male patients, and the upper ſtory for the females; both are ſo lofty as to be equal in height to three ordinary ſtories. The beds are placed at a diſtance from each other, and in the center is an altar which may be ſeen by all the patients, who may hear maſs without getting out of their beds. The front is a hundred and eighty common paces in length, and appears ſo magnificent that it reſembles a royal palace. The annual revenue generally amounts to about thirty thouſand crowns.

Another laudable foundation in this city is ſtiled la Charité, or the hoſpital for the poor, which takes up a great part of the ſtreet of the Po, and has a conſiderable revenue ariſing from rents and the annual ſubſcriptions of the citizens. The king gives every year to this hoſpital three hundred ſacks of corn, three of which are computed to make a ſufficient quantity of bread to ſerve one perſon a whole year. This houſe generally contains two thouſand, and often three thouſand poor people, picked out of the ſtreets, and employed in ſeveral ſorts of manufactures. Here the young and old of both ſexes are

preſerved from idleneſs, and provided with meat, drink, cloaths, and attendance, when ſick, or grown decrepit with age. Forty ſoldiers in blue, with red bandeliers, are daily diſperſed about the city to take up all beggars and vagrants. Thoſe who are foreigners are baniſhed the city, and the natives brought to the hoſpital. The main building conſiſts of two quadrangles, with galleries round them, one for the men, and the other for the women. The church is worth ſeeing on account of its roof, on which the Aſcenſion of the Virgin Mary is admirably painted by the chevalier Daniel; and in the paſſages of the ground-floor are the buſts of the benefactors, with elegant Latin inſcriptions.

With reſpect to the government of the city, the king takes care to be exactly informed in what manner the laws are executed, and has been formerly known to go by himſelf muffled up in a cloak, that he might with his own eyes obſerve the ſtate and management of the city. In order to prevent the exactions of the peaſants in raiſing the price of wood during winter, there are four large ſtore-houſes of wood and coals; and when the peaſants endeavour to take advantage of the weather, fuel is ſold at this magazine at a reaſonable rate.

Turin, however, labours under ſeveral inconveniences. The thick fogs, which in autumn and winter continually riſe from the Po and other waters, render the air thick and moiſt, and conſequently unhealthy. Theſe exhalations are of great diſadvantage to the city, which is often involved in fogs and rain, while Rivoli, a town at no more than three leagues diſtance, enjoys the ſereneſt ſky and brighteſt ſun-ſhine.

Another of the moſt conſiderable diſadvantages that attend this city is the foul muddy water in moſt of the wells, which is chiefly owing to the negligence of the people in not keeping them ſweet and clean, dead dogs, cats, and other filth, being frequently thrown into them.

Beſides, the inns require great regulations, to prevent travellers being impoſed upon; for there is not a place in all Italy where the entertainment is ſo bad, conſidering the price. The country produces plenty of good wine, yet none of it can be obtained without paying extravagantly for it, that uſually ſold at the inns being the moſt execrable ſtuff imaginable. On meagre days the Papiſts fare extremely ill; for though the Po affords variety of fine fiſh, as pike, carp, perch, trout, and ſturgeon, from eighty to an hundred pounds weight; the avaritious landlords will not put themſelves to the expence of freſh fiſh, but their gueſts muſt take up either with ſalt-fiſh, or an amulette.

The manner of burying the dead is one of the moſt diſagreeable circumſtances that attends this city. The corpſe is carried in proceſſion to the grave, where it is put in the ground without any coffin. This is not only extremely ſhocking when the deceaſed happens to die of the ſmall-pox, meaſles, and ſuch contagious diſtempers; but may have a very unhappy effect on pregnant women, and other perſons liable to catch the infection. The maſked fraternities who frequently attend at funerals, and of whom nothing can be ſeen but the eyes, make indeed not only a dreadful but a ſhabby proceſſion. It is alſo extremely diſagreeable, that even when there is a contagious diſtemper in the city, three or four dead bodies are ſuffered to lie a whole day in the churches uncovered. Perſons of rank have family vaults in the churches and chapels; but people in inferior circumſtances are thruſt into a vault belonging to their pariſh-church, fifty or a hundred together, without any coffin. Indeed theſe receptacles are very deep, and have ſeveral doors, the paſſage leading to them being vaulted. But this cannot prevent the cadaverous ſmell and noxious effluvia from penetrating into the churches.

In the neighbourhood of Turin are the following palaces: the moſt frequented by the royal family is that called la Venerie, where the court generally continues from Spring to December. It ſtands about a league from Turin, the road leading to it is well paved, and the greateſt part of it planted on each ſide with trees, it running a little winding between fine meadows, fields, and vineyards.

Before the palace is a ſtreet of houſes built of ſtone two ſtories high, and in a direct line, belonging to private perſons. In two chambers contiguous to the king's apartment are the pictures of thirty of his majeſty's anceſtors, with Latin inſcriptions expreſſing their moſt famous achievements. Beyond theſe is a chamber of pictures of the emperors of Germany, another with thoſe of the kings of France, and a third of the kings of England, all as big as the life. The gallery is a hundred and twenty-five paces in length, twenty-two broad, and very lofty. At each door ſtands two large twiſted pillars of red and white marble, and the pavement conſiſts of ſquare pieces of green and white marble. This edifice, which is extremely admired, was deſigned by Filippo. The royal chapel was alſo deſigned by the ſame architect. The cupola is of a graceful height: within it are the ſtatues of St. Ambroſe, St. Chryſoſtom, St. Auguſtine, and St. Jerom, ſtanding on pedeſtals of red, green, and yellow marble. The ſtatues, which are of a gigantic ſize, are of white marble, and were brought hither from Rome. The high altar is extremely beautiful, and there is ſcarce any kind of marble which is not to be ſeen, either in the pillars or altars of this chapel. The ſtables are two hundred and thirty paces in length, and within them are above two hundred and twenty horſes. On entering them it is an eſtabliſhed cuſtom that a ſtranger muſt deliver up one of his gloves, which muſt be redeemed with a piece of money.

The road to the palace of Rivoli runs in a direct line through fields, meadows, and vineyards, and perhaps has not its equal. It was planted ſince the ſiege of Turin in 1712, the French, among other devaſtations, having rooted up every tree in the country. This walk affords a very beautiful proſpect; at one end of the viſta ſtands the palace of Rivoli upon an eminence, and at the other the city of Turin; and about two leagues beyond that in a ſtraight line the magnificent church of Superga. Rivoli, beſides having the beſt apartments, has the fineſt paintings, and the royal family are much better lodged there than at la Venerie or in Turin.

Near the city ſtands a villa of the princeſs of Piedmont, very agreeably ſituated upon an eminence. The building is not large, but regular, and the garden is in the form of an amphitheatre.

Montcallier is a ſpacious caſtle ſituated upon a hill on the other ſide of the Po, at about the diſtance of a league from Turin. This is a quadrangular building, with a large ſquare tower. The hill, as well as the neighbouring country towards Aleſſandria, is very delightfully variegated with vineyards, corn-fields, villas, and gardens; but is at preſent never honoured with the preſence of the royal family.

It will be proper here to take notice of the church of Superga, which was built by the late king in purſuance of a vow he made at the laſt ſiege of Turin. It ſtands upon the higheſt mountains in the neighbourhood of the city, at an hour and a half's ride on horſeback. At each end of the church ſtand two elegant towers; and the cupola is ſupported by eight large Corinthian columns of dark green marble. The baſes of theſe columns are between five and ſix feet high, ſtreaked with white, and their fronts ſo curiouſly inlaid with large pieces of white and red marble, that they reſemble agate. Within the dome is a gallery that has eight windows in the circumference, and is a hundred paces round. Within the dome are three galleries, one above another; the two loweſt have ſtone baluſtrades, and the upper iron work. The proſpect from this gallery is more beautiful than can be imagined: from thence may be ſeen Rivoli, with its long terrace planted with trees; the valley towards Suſa; its mountains covered with ſnow; the meanders of the Po, the Doria, and the Stura; with the fine plains along thoſe rivers, which extend as far as the eye can reach; the valleys and plains beyond Montcallier; as likewiſe the delightful eminences in the neighbourhood, covered with vineyards, gardens, and fine ſeats; and laſtly Turin itſelf. Contiguous to the church is a large ſquare building, for the occaſional devout retirement of any of the royal family, where his late majeſty has ſeveral times ſpent ſome weeks in Lent.

The

The other places worthy of notice in Piedmont are Fort Brunette, which has not its equal in the world, and is a very ſtrong fortreſs formed to guard againſt the French frontier fort of Briançon, a few miles diſtant. It conſiſts of eight baſtions, which, together with all the out-works, are hewn out of a rock. The baſtions and other works have a communication by ſubterraneous paſſages under the rocks, ſo large that carriages and heavy cannon, with ſeveral horſes, may conveniently go from one place to another. In the whole fortreſs not a ſingle building is to be ſeen, and of the garriſon only ſome centinels. Batteries and mines would here be of no effect, and two thouſand men, with ſufficient proviſions and ammunition, might eaſily hold out againſt a numerous army. This fortreſs commands two valleys.

Suſa, formerly Seguſium, a city on the Doria, and the capital of a marquiſate of the ſame name, is ſeated at a ſmall diſtance from the above fort, and is an inconſiderable place; but though it is only defended by a wall, it has always a ſtrong garriſon. Here is a marble triumphal arch erected by king Cottius, in honour of Auguſtus.

Nice, the capital of a county of the ſame name, which anciently belonged to Provence, is ſituated in the forty-third degree, forty minutes latitude, and in the ſeventh degree twenty-five minutes eaſt longitude, and is a ſea-port at the mouth of the river Paulon; but its harbour is only convenient for ſmall veſſels, though conſiderable ſums have been lately expended in improving it, and great encouragement given to traders by declaring it a free port. It has ſeveral remains of Roman antiquities. In 1691 it was taken by the French, and in 1696 reſtored to Savoy. In 1706 it was again taken by the French, who demoliſhed part of its fortifications, and in 1708 totally deſtroyed them. In this principality are ſeveral other diviſions beſides thoſe already mentioned, as the dutchy of Aoſta, the lordſhip of Vercelli, the marquiſates of Saluzza, Ivrea, Soligno and Cleva, and the county of Aſti.

SECT. IV.

Of the other Territories ſubject to the King of Sardinia, as the Dutchy of Montferrat, ſome other Diſtricts that formerly belonged to Milan, and the Iſland of Sardinia. The Situation, Extent, Face of the Country, and Produce of that Iſland: Its Hiſtory, the Manners and Cuſtoms of the Inhabitants, with a Deſcription of Cagliari, its principal City.

THE dutchy of Montferrat, ſtiled in Latin Mons Ferratus and Mons Ferranus, probably from the fertility of its ſoil, is bounded on the eaſt by Milan, on the ſouth by the republic of Genoa, and on the weſt and north by Piedmont; it is computed to be ſixty-two miles in length, and forty-eight in breadth.

This country, though very hilly, is pleaſant and fertile, and abounds in corn, a variety of fruit, and excellent muſcadine wine; it alſo affords a great quantity and variety of game, eſpecially of pheaſants and partridges: it contains about two hundred cities, towns, and caſtles.

In 967, the emperor Otho I. is ſaid to have raiſed this country to a marquiſate, in favour of Aldran prince of Saxony, and upon the death of the laſt male heir of this houſe in 1305, the marquiſate came to his ſiſter Violenda, the wife of the Greek emperor Andronicus Palæologus, whoſe family enjoyed it till the year 1532, when the ſovereignty was extinguiſhed. In 1536, the emperor Charles V. adjudged it to the duke of Modena, whoſe wife was of the Palæologan family; and in 1572, Maximilian II. raiſed it to a dutchy. In 1631, ſeventy-five places in the dutchy of Montferrat were transferred to the duke of Savoy, in lieu of a yearly income of fifteen thouſand crowns, due to him from the duke of Mantua; and in 1703, the emperor alſo gave to the duke of Savoy that part of Montferrat which the dukes of Mantua had held as a fief from the empire and emperor, to be held by him by the ſame tenure.

Caſſal, the capital of the dutchy, is pleaſantly ſituated on the Po, in a delightful plain, in the forty-fifth degree ſix minutes north latitude, and in the eighth degree thirty minutes eaſt longitude, forty-two miles to the eaſt of Turin. The town was once ſo well fortified, and its citadel ſo ſtrong, that it was reckoned one of the moſt defenſible places in all Italy. It was ſurrounded with very ſtrong ramparts, a large ditch, with baſtions, ravelins, and other works, to which the duke of Modena added a very noble citadel which had ſix baſtions. This city has a biſhop, who is ſuffragan to the archbiſhop of Milan, and is famous for its many ſieges.

Here are alſo Creſcentino, a fortified town and marquiſate, and alſo the marquiſate of Pomaro; with the towns of Trino, Verua, St. Salvitore, and ſome others.

The king of Sardinia poſſeſſes ſeveral diſtricts which formerly belonged to the dutchy of Milan; theſe are the territories of Aleſſandrino, Lomelina, Vigevenaces, the Novareſe, the Tortoneſe, Anghiera, St. Fedele, and Bobio.

One of the moſt conſiderable cities in theſe diſtricts, is Aleſſandria, in the territory of Aleſſandrino, which took its name from pope Alexander III. who built it in 1160, and is ſurnamed Della Paglia, from the inhabitants for want of wood uſing ſtubble to heat their ovens for baking bread. It is ſeated in a marſhy country on the river Tenaro, which divides it into two parts, that are joined by a wooden bridge 400 feet in length, covered over on the top. It is a ſtrong town with an excellent citadel; the houſes are of ſtone; but it is neither large nor handſome, though it is ſaid to have 12,000 inhabitants. It is the ſee of a biſhop, ſuffragan to the archbiſhop of Milan, and is endowed with ſome conſiderable privileges: the Jews, in particular, are permitted to live here, and carry on a ſmall trade. They have a ſeparate quarter allotted them, where they live among themſelves, and when they go abroad, both men and women are obliged to appear with ſome mark of diſtinction: the former wear grey hats and long beards; the married, a groteſque kind of head-dreſs, and the maids go bare-headed.

When the city and its territories were ceded to the duke of Savoy, in the late wars that prince ordered a fort to be built on the other ſide of the Tenaro, and another in the ſuburbs of the city; but the emperor taking offence at theſe innovations, it was alledged, by the court of Turin, that ſuch fortifications had been built in thoſe places many years before, and that no more was meant than to repair them. If Aleſſandria is not covered by them, the reſt of the ceded country is at leaſt, in ſome meaſure, ſecured. Indeed, the king of Sardinia's dominions are greatly expoſed on the Milaneſe ſide. In the cathedral of this city are ſome good ſculptures in marble, and paintings in freſco. Upon the pavement of a chapel is an humble epitaph, which informs us that "Philip Maria Reſta, the leaſt of biſhops, and the greateſt of ſinners, recommends himſelf to the prayers of the reader." In another chapel, a ſquare ſtone over the entrance of a vault has the following extraordinary inſcription: — "For the benefit of the pious worſhippers of the virgin mother of God, who expired while her ſon hung on the croſs, the governors of this chapel cauſed this vault to be dug in virgin ground, that the dead, as well as the living, may feel the influences of the mother of mercy."

We now come to that part of the king of Sardinia's dominions, from whence he obtains the titles of royalty.

Sardinia is ſituated in the Mediterranean; and, on the northward, is divided from the iſland of Corſica by the ſtreights of Boniſacio, it being ſituated between the thirty-eighth degree forty-five minutes and, the forty-firſt degree twenty minutes north latitude, and between the eighth degree thirty minutes, and the tenth degree twenty-five minutes eaſt longitude. This iſland, next to Sicily, is the largeſt and moſt fertile iſland in the Mediterranean; it extending a hundred and ſeventy miles in length from north to ſouth, a hundred in breadth from eaſt to weſt, and about ſeven hundred in circuit, comprehending the turnings and windings of the coaſt.

The moraſſes, and the high mountains on the north ſide of this iſland, obſtructing the wind, render the air very wholeſome, upon which account the ancient Romans made it a place of baniſhment. The country is, however, extremely fertile, it producing all ſorts of corn

and fruit. In ſome parts of it are woods of five or ſix miles in length of orange and citron trees; and as for olives, plums, pears, cherries, and cheſnuts, they grow in ſuch plenty, that they hardly yield any price. There are here alſo bred vaſt herds of large and ſmall cattle, ſo that this iſland furniſhes Italy with wool, hides, and a fine ſort of cheeſe. Few countries afford a greater quantity of game of all ſorts; the moſt profitable of which to the inhabitants is that of their buffaloes, wild-boars, and various kinds of deer, ſome of which are ſo finely marked, that their ſkins might be taken for thoſe of tigers. The ridges of the mountains on the northern ſide are no leſs rich within than barren without, they yielding great quantities of metals and minerals. Round the coaſt are many ſea-ports, ſpacious and deep enough to receive a conſiderable number of the largeſt ſhips, beſides many inferior ones for ſmaller veſſels.

This iſland has undergone many changes with reſpect to its government: it was once ſubject to the Carthaginians; the Romans held it next, and kept poſſeſſion of it till the decline of their empire, when, in the ninth century, it fell into the hands of the Saracens, who were afterwards expelled by the Genoeſe and Piſans; from which time the inhabitants were governed by petty princes of their own. It ſuffered greatly during the wars between the Piſans and Genoeſe, as well as afterwards during thoſe between the emperors of Germany and the popes. Boniface VIII. at laſt granted it, in the year 1298, to king James of Arragon, whoſe ſon, Alphonſus IV. after much oppoſition, made himſelf maſter of it in 1324. From this time it continued under the dominion of Spain, and was governed by a viceroy, till the year 1708, when the Engliſh making a conqueſt of it for king Charles III. afterwards emperor, by the title of Charles VI. it was confirmed to him by the treaty of Utrecht. In 1717 it was recovered by the Spaniards, and the next year the emperor exchanged it for Sicily with the duke of Savoy, who was put in poſſeſſion of it in the year 1720.

This kingdom is of more importance to the houſe of Savoy as a monarchy than on account of its revenues; for the charges of the army and civil officers being deducted, the remainder does not much exceed a hundred thouſand livres. It is governed by a viceroy.

The whole iſland is divided into two parts; Capo di Lugatori forms the north part of the iſland, and Capo Cagliari the ſouth. It has three archbiſhoprics, and four biſhoprics, which, as well as the ſeveral collegiate churches in the iſland, are immenſely rich; and both the clergy and monks have ſuch vaſt privileges and immunities, that every family ſtrives to have one or more of their children of that number: hence they ſwarm every where, to the no ſmall detriment and oppreſſion of the mercantile and working part of the inhabitants, who are forced to ſtarve themſelves to maintain the others in pride and luxury.

The inhabitants have been generally repreſented as bruiſh, ignorant, poor, proud, and lazy; ſo that, notwithſtanding the fertility of the country, and the many advantages the inhabitants enjoy from their ſituation and ports, their lands are in a great meaſure neglected, and the people indigent: but their ignorance, poverty, and indolence, are probably owing to the tyranny and oppreſſion of their governors and of their overgrown clergy and nobility, both which enjoy ſuch exorbitant privileges as muſt neceſſarily cramp the induſtry of the middling ſort of people. As for the nobility and gentry, they have always taken care to extort ſuch privileges from their new maſters, that they are not only exempt from the payment of taxes, but from being tried for any crime, even that of treaſon, by any but a council of ſeven of their peers, who uphold each other in all theſe caſes; ſo that the viceroys can ſeldom puniſh the moſt guilty of them, by having the majority of votes on his ſide, and even then it only ends in ſome fine, or at moſt in baniſhment. This makes every one that can afford the price purchaſe nobility from thoſe governors at any rate; by which means they are grown ſo numerous and arrogant, that the whole burthen of the public taxes, as hath already been intimated, fall on the people of the lower rank. Indeed it does not ſeem to have been the deſign either of the crown of Spain formerly, or of Savoy ſince, to remedy any of theſe evils, and put the iſland in ſuch a flouriſhing condition as it might ſoon be raiſed to, by the encouragement of agriculture and commerce.

Cagliari, the capital of the iſland, and the ſeat of the viceroy, of an archbiſhopric, and an univerſity, is ſeated on a large bay of the ſame name, on the ſouth part of the iſland, in latitude thirty-nine degrees twenty five minutes, and in nine degrees fifty-three minutes eaſt longitude. It has a ſecure harbour, capable of receiving a great number of ſhips of burthen, and, beſides other works, is defended by a caſtle. The city being ſituated on the declivity of a hill, is divided into high and low. On the higher appears the ſtately cathedral covered all over with marble, and adorned both without and within with the fineſt architecture, ſculpture, paintings, and every thing that is rich and beautiful. The whole upper town is ſurrounded with a good wall, and is handſome and well built; but the lower, which ſtands near the ſea-ſhore, being ſeated juſt under the other, and receiving all the filth which falls down upon it, is generally dirty and unwholeſome, eſpecially in winter, and is but poorly inhabited. There are in the whole but four pariſhes, including the cathedrals, twenty-two monaſteries, and three ſuburbs.

There are many ſmall iſlands round Sardinia, the largeſt of which are Aſinaria, Tavolara, Antioca, and Pietro. The moſt conſiderable of theſe iſlands is that of Aſinaria, which is about twenty-five miles diſtant from Cape Doria, and was ſtiled by the antients the great iſland of Hercules. It is about twenty-eight miles in compaſs, and is ſeated in the forty-firſt degree north latitude, and in the eighth degree forty-five minutes eaſt longitude.

Having now concluded our account of the dominions of the houſe of Sardinia, we ſhall proceed to thoſe of Auſtria in Upper Italy.

SECT. V.

Of the Dutchy of MILAN.

The Situation, Extent, and Produce of the Milaneſe; with the Trade, Revenues, Forces, Manners, and Cuſtoms of the Inhabitants. A particular Deſcription of the Lake called Lago Maggiore, with its two beautiful Iſlands Iſola Madre and Iſola Bella, and of the City of Milan.

THE Auſtrian dominions in Upper Italy at preſent conſiſt of the moſt conſiderable part of the dutchy of Milan, including Pavia, Cremona, &c. and the entire dutchy of Mantua.

The dutchy of Milan is bounded to the weſtward by Savoy, Piedmont, and Montferrat; on the north by Swiſſerland; on the eaſt by the territories of Venice, and the dutchies of Mantua, Parma, and Placentia; and on the ſouth by the dependencies of the republic of Genoa; extending from ſouth to north upwards of a hundred Engliſh miles, and in its greateſt length from eaſt to weſt above a hundred and eight.

There is ſcarce a country in Europe more fertile in a variety of excellent productions. It is every where watered either by rivulets or canals, and, after the harveſt of the uſual kinds of grain, the people ſow Turky wheat, chiefly on account of their poultry, which they have in great plenty, and exceeding good. The paſtures are very rich, eſpecially in the diſtrict of Lodi, which is famous for the breeding of cattle. The cheeſe made in the country, and improperly called Parmeſan, is uſed all over Italy in the beſt ſoups. Here are alſo excellent wines, and all manner of vegetables and fruits in perfection; together with a conſiderable number of mulberry-trees for breeding the ſilk-worms. The charms of this country are alſo heightened by three large and beautiful lakes: theſe are the Lago Maggiore, the Lago di Lugano, which is twenty Engliſh miles in length, and the Lago di Como, which extends from north to ſouth thirty-ſix Italian miles.

The trade of the Milaneſe is conſiderable; but the greateſt part of the commodities the country affords is

conſumed by the inhabitants, their exports generally coming far ſhort of their imports. They, however, manufacture great quantities of woollen and linen cloths; ſilk is alſo here in great plenty, but it is not ſo fine as the Piedmonteſe, and the ſtuffs made of it are chiefly for home conſumption; but the fine ſilk ſtockings, gloves, and handkerchiefs made here are uſually exported. Milan is alſo famous for its curious works in ſteel, cryſtal, agates, hyacinths, and other gems; and the country every where abounds with ingenious artificers.

From the extraordinary fertility and richneſs of this country, it may be ſuppoſed to produce a conſiderable revenue for its ſovereign. It is ſaid to have brought in to the kings of Spain above two millions of dollars per annum; and Keyſler ſays, that the Auſtrian general-governor has an annual income of two hundred thouſand florins.

The regular forces in the dutchy amount to eighteen thouſand men, the greateſt part of whoſe cloathing, arms, and other neceſſaries, come from Germany, to the no ſmall diſcontent of the Milaneſe, who think it hard that as the money for the payment of theſe troops is raiſed among them, it ſhould not be laid out and circulated in their country.

The political viciſſitudes of the ſtate, from this country devolving from the French to the Spaniards, and from theſe to the Germans, have occaſioned the reſort of troops into this dutchy compoſed of theſe different nations; and theſe have introduced a much more ſocial and free way of living than is found in the ſouth parts of Italy. To theſe the fertility of the country and the wealth of the nobility do not a little contribute. The ladies can hardly be under leſs reſtraint even in France than they are here; for, during the carnival, they give balls and maſquerades by turns at the public taverns, in order to avoid the inconveniencies with which ſuch entertainments would be attended at their own houſes; while their huſbands ſeem perfectly eaſy with regard to theſe feſtivals, either from puſillanimity or a confidence in the virtue and diſcretion of their ladies, and ſome are ſo paſſionately fond of them as to grudge them nothing that can contribute to their pleaſure. The women of the lower claſs imitate their ſuperiors as much as poſſible, and indulge themſelves in liberties which in other parts of Italy are denied them. Here, as in Paris, trade is moſtly managed by women, who amuſe themſelves with ſowing and embroidery, and the ſhops, though they are quite open while the ſeaſon permits, are places of rendezvous for a great deal of company. Even in convents the auſterities of the monaſtic live are ſo far relaxed, that a traveller may not only talk, rally, and laugh with the nuns at the grate, but join in a concert with them, and ſpend whole afternoons in theſe familiarities.

We have already mentioned the beautiful lakes in this dutchy, and it will be proper before we proceed to deſcribe the principal cities, to give a deſcription of the Lago Maggiore, or Lago di Locerno, which is the moſt extraordinary. It is ſixty-five Italian miles in length, in moſt places it is ſix broad, and its depth about the middle is eight fathoms. Towards Swiſſerland it terminates in a canal that is of vaſt advantage to commerce. The lake is every way environed with hills, covered with vineyards and ſummer-houſes, and above the vineyards are plantations of cheſnut trees, the fruit of which is conſumed in ſuch quantities, that when cheſnuts are in great plenty, the price of corn falls, eſpecially at Genoa. Along the banks of the lake are fine rows of trees, and walks arched with vine branches, eſpecially near the town of Aleſco. This beautiful proſpect is farther heightened by large natural caſcades falling from the mountains.

Two leagues from Seſti the lake begins to widen, and on entering the bay appears the two celebrated iſlands Iſola Madre and Iſola Bella; the former belonging to count Boromeo, and the latter to the emperor. Theſe two iſlands have been compared to two pyramids of ſweetmeats, adorned with green feſtoons and flowers. At one end of the garden of the Iſola Bella are ten terraces, the perpendicular height of which, taken together, ſays Mr. Keyſler, is ſixty ells above the height of the water, each ell conſiſting of three ſpans. Theſe terraces decreaſe proportionably in their circuit as they riſe towards the top of the hill, where an oblong area, paved with fine ſtone, and ſurrounded with a baluſtrade, affords a moſt delightful proſpect. It is in length from forty-five to fifty common paces, and on every ſide ſtands a range of marble ſtatues of a gigantic ſize. The rain-water runs into ciſterns underneath, to which alſo other water is conveyed in order to ſupply the water-works. Round every terrace is a pleaſant walk, and at the four angles are large ſtatues and pyramids placed alternately. The walls from the bottom to the top are covered with laurel hedges, and eſpaliers of orange, lemon, peach-trees, &c. The laurels ſtand in the open air during the whole winter; but the lemon and orange-trees are ſheltered over with a covering of boards, and in ſharp weather cheriſhed with heat, from fires provided for that purpoſe at a great expence. The annual charges of theſe Boromean paradiſes amount to forty thouſand Piedmonteſe livres. But to raiſe ſo noble a ſuperſtructure upon ſuch a foundation, and to bring theſe iſlands to their preſent incomparable beauty and magnificence, ſeems an undertaking beyond even the revenue of a prince to accompliſh. The Iſola Bella was no longer ago than the middle of the laſt century only a barren rock, to which every baſket of earth, and whatever is found there, muſt have been brought by water at a prodigious expence.

The garden of Iſola Bella has a ſouth aſpect, and at the two angles of its front are two round towers, in which are very lofty apartments, adorned with red and black marble. Here is alſo a covered gallery, ſupported by ſtone columns, and ſhaded with lemon-trees. On the other ſide, that is towards the eaſt, is a delightful walk of large orange-trees diſpoſed in four or five rows.

At a ſmall diſtance is a fine grove of olives, with narrow walks, and a caſcade that falls down above twenty ſteps. Here is alſo a plantation of large pomegranate-trees. The lake comes up ſo cloſe both to the palace and gardens, as ſcarcely to leave ſo much dry ground as to ſet one's foot upon, except a ſmall ſpace before the north front of the palace, which has a fine proſpect towards Iſella. On the eaſt and weſt ſides are large vaults, upon which the earth has been raiſed to the height above-mentioned; and the whole may be compared to the hanging gardens of antiquity. Theſe vaults are not only a foundation for the ſoil, but an ornament to the gardens, all of them reſembling ſo many grottos. Near the palace are kept in a ſhed built on purpoſe three fine gondolas for parties of pleaſure upon the water.

In the palace are a great number of fine paintings, vaſes, buſts, and other curioſities. Among the pictures, the flower-pieces, ſome of which are done upon marble, cannot be ſufficiently enough admired; ſeveral of the chambers are hung with portraits of the cardinals who were of the Boromean family. The vaults on which the palace ſtands are contiguous to the lake, and like grottos are adorned with marble and ſhell-work. The floor is a ſort of Moſaic formed of ſmall ſtones, placed ſo as to repreſent a variety of figures. Beſides this aſſemblage of the beauties of art and nature, the lake, with its undulating waves, continually waſhes the entrance into theſe grottos; ſo that a more delightful ſummer retreat can hardly be imagined.

On going from the houſe towards the garden, the ſmell is immediately refreſhed with the mingled odours of fruits and flowers. The firſt contre-eſpalier, after aſcending a few ſteps, conſiſts of bergamot, lemon, and citron-trees; next to this appears a high range of orange-trees, beyond which you come to a lofty grotto adorned with water-works and ſtatues. Over its center is an unicorn of enormous ſize, in a ſpringing attitude, with a Cupid on his back, and on both ſides is an aſcent by ſteps to the oblong area which terminates the ten terraces.

From Iſola Bella to Iſola Madre is about half an hour's ſailing, though their great height makes them appear much nearer. The latter has ſeven terraces, which are high but ſloping, and a conſiderable diſtance from each other, by which means it appears to be lower than Iſola Bella, though according to the original plan they are of an equal height. The greateſt part of the external foundation of Iſola Madre is a high perpendicular rock, projecting conſiderably over the water, ſo that it did not require

require ſo much maſonry as Iſola Bella. That part of the front of the palace is only completed which looks towards Seſti and the above iſland, and is adorned with fine paintings of flowers, portraits, and landſcapes.

The garden of this iſland alſo abounds with beauties, particularly a fine eſpalier of citron-trees, with a low contre-eſpalier of orange-trees, an arched walk of cedars, a ſmaller eſpalier of jeſſamine, an eſpalier of acacia, and another of roſemary not leſs than eight feet in height. Here are alſo ſeveral ſmall groves of laurel, with walks cut through them. Some of theſe trees are of an uncommon thickneſs; and one of theſe eſpaliers of laurels is above eighteen feet high: ſuch a hedge, by means of the mildneſs of the air, and its being fenced from the north wind by the neighbouring mountains, ſhoots up to this height in ſix or ſeven years.

The Iſola Madre is a ſecure place for keeping of pheaſants, which are eaſily confined here on account of the great breadth of the lake: for when any of them attempt to fly over it, they ſoon flag and drop into the water, from which they are immediately taken up by a waterman who puts off for that purpoſe, and brought back. This, however, ſeldom happens; for as this iſland is larger than Iſola Bella, and abounds with every thing proper for them, as well as places for ſhelter, they ſeldom attempt to make their eſcape. There is a little houſe built for the young pheaſants, and near it a beautiful grove of lofty cypreſs trees. This appears to be the fineſt part of the iſland, and recals to one's mind the fabulous deſcriptions that have been given of enchanted groves and iſlands. The walks through this cedar plantation lead by a deſcent to the ſummer-houſe near the lake. The ſhores of both iſlands are ſet round with painted flower-pots, and when any foreign prince comes in the night, or makes ſome ſtay here, both iſlands are illuminated with lights of all colours, which exhibit a very glorious ſpectacle.

But to return, the dutchy in general is divided into the Milaneſe, properly ſo called, the earldom of Anghiera, the diſtricts of Como and Lodigiano, with a part of the Paveſe and the Cremoneſe; the two laſt of which, with their capitals, will be deſcribed in a ſeparate article.

Milan, in Latin Medilanum, the capital of the dutchy, is ſituated in the forty-fifth degree twenty-three minutes north latitude, and in the ninth degree twenty minutes eaſt longitude, and is ten Italian miles round; but would not, perhaps, take up half the ſpace, were its many gardens excluded. Its chief defence is a lined rampart. The citadel ſtands at ſome diſtance from the city, yet, being in the form of a creſcent, environs a conſiderable part of it. This conſiſts of ſix baſtions, which, with the moraſs on the land ſide, ſecures it pretty well from being approached with trenches or mines. Towards the city are two turrets, the walls of which are twelve ells in thickneſs, and faced with ſquare blocks of marble. The city is provided with a foundery for guns, and an arſenal with arms for twenty thouſand men, and over the gate is an inſcription in honour of Philip II. king of Spain, which gives him the title of defender of the faith.

The city of Milan is not to be compared for beauty and convenience with Turin, moſt of the ſtreets being narrow and crooked. Paper windows are here alſo more common than either at Turin or Florence, and have a worſe appearance; as even in the houſes of noblemen, glaſs and paper are often ſeen in the ſame window, the latter being ſtuck on to ſupply the place of a broken pane. All the houſes are covered with pantiles, and in many of the croſs ſtreets, and at the ſtations where the public proceſſions ſtop, figures are erected, ſome of marble; but moſt of them of braſs. The inhabitants are computed at three hundred thouſand.

Here are twenty-two gates, two hundred and thirty churches, of which ninety-ſix are parochial, ninety convents, a hundred religious fraternities, and a hundred and twenty ſchools. The archbiſhop's cathedral, dedicated to St. Maria and Thecla, is four hundred and eighty feet in length, and is built in the Gothic taſte. It excels in the number of its ornaments and ſculptures, with which it is entirely covered both within and without; and, to form a true idea of this edifice, it is neceſſary to conceive a vaſt collection of roſes, trees animals, pyramids, groteſques, ſtatues, and a thouſand other varieties, mingled without taſte or regularity. The ſtatues are done by good hands, and ſome of them deſerve admiration, particularly one of St. Bartholomew juſt flayed, and his ſkin hanging over his ſhoulders; though ſome give the preference to thoſe of Adam and Eve over the main portal. The great number of pillars that ſupport the roof, many of which can ſcarce be fathomed by three men, are all of marble, of which every where, both without and within the church, there is a vaſt profuſion. Between the pillars are placed large paintings repreſenting the life of St. Charles Boromeo, and among other paſſages his ſelling the principality of Doria, and in one day diſtributing eighty thouſand dollars among the poor. Near theſe are ſilver votive offerings to the weight of ſome thouſands of ounces, repreſenting heads, ears, and other parts of the body, which had been hurt or diſeaſed, but ſuppoſed to have been reſtored to perfect ſoundneſs by the interceſſion of St. Boromeo. The ſilverſmiths expoſe to ſale ſuch votive pieces of different ſizes ready made, that a recovered patient may immediately pay his vow, leſt his gratitude ſhould be cooled by delay.

The church is paved with Moſaic work, formed of pieces of red, black, and white marble, inlaid ſo as to repreſent circles, foliage, feſtoons, flowers, &c. ſo that when it is viewed from the cupola, it reſembles a beautiful carpet.

The tabernacle in the choir, where the hoſt is kept, is ſupported by four angels of braſs of the ſize of a man, and at ſome diſtance on each ſide ſtands another angel. The ſtalls of the prebends are made of walnut-tree, on which all the remarkable actions of the emperor Theodoſius and St. Ambroſe are admirably executed in ſculpture, and every action repreſented on a diſtinct compartment. The canons are divided into three claſſes, thirty of which are nobles, and, like cardinals, wear a red veſtment. The ſecond claſs conſiſts of wealthy citizens, who are cloathed in green; and the reſt wear the common habit of the clergy.

The two chancels facing the entrance of the choir are encompaſſed with fine braſs ſtatues, and its outſide contains the hiſtory of the New Teſtament, admirably expreſſed in baſſo relievo upon white marble, by Andrea Biffi; but the beſt of them is that of the birth of Chriſt, which is accounted a maſter-piece.

The body of St. Charles Boromeo is placed on the altar of a ſubterraneous chapel, directly under the principal cupola; it is dreſſed in epiſcopal robes, and depoſited in a cryſtal ſhrine within a coffin made of wood. There is but one key to it, which is kept by the archbiſhop, without whoſe order this relic is not to be ſeen. The walls of the chapel are almoſt every where lined with ſilver; but the epitaph is on marble. Every fourth of November this body is expoſed with great ſolemnity and devotion. The treaſury is extremely rich, and contains a prodigious number of gold and ſilver veſſels, buſtos, ſtatues, oſtenſoria, rings, chalices, crucifixes, &c. of which the metal is the leaſt valuable part. Among theſe is a ſilver image of St. Boromeo, bigger than the life, with a diamond crucifix of immenſe value, hanging at his breaſt. The front of the mitre, which is always put upon the deceaſed archbiſhop's head when his body is carried in proceſſion, is entirely covered with pearls.

On the roof of the choir hangs one of the nails with which it is pretended Chriſt was faſtened to the croſs; it is caſed in cryſtal, and near it is a machine by which ſix perſons at once may be drawn up to it. On the third of May, the feſtival of the invention of the croſs, this relic is carried about in a grand proceſſion, the archbiſhop holding it under a magnificent canopy, the whole body of the clergy, the governor-general, and the principal perſons of the city aſſiſting at the ceremony. Among other curioſities ſhewn here, is a piece of Aaron's rod, which, however, the church of St. John de Lateran at Rome pretends to have quite entire; ſome pieces of it are alſo ſhewn in the palace church at Hanover among the relics which Henry, ſurnamed the Lion, brought from the Holy Land.

A marble

A marble ſtair-caſe carried round one of the main pillars, leads up to the firſt outward gallery. Here is a marble ſtatue of duke John Galeazzo Viſconti, on the top of a pyramid, with a flag in his hand. This duke in 1386 laid the foundation of this edifice. Many ſtatues of ſaints, dukes, and other eminent perſonages, ſtand round this gallery. The roof of this church will be entirely covered with marble, part of it being ſo already. The large ſquare blocks of marble uſed for this purpoſe are ſo cloſely cemented together with ſtucco, that no rain can penetrate through the joints. Hence it may be eaſily conceived that the pillars and arches muſt ſuſtain an immenſe weight. Upon one ſide of this gallery are marble ſtatues of all the architects who have conducted the building of this church.

On mounting ninety-one ſteps higher, you come to a gallery which leads round the inſide, and at the height of thirty or forty ſteps above this gallery, hang three large bells, one of which was conſecrated by St. Charles Boromeo; and here, through an aperture, is a view of the inſide of the principal cupola, which is divided into a great number of ſquare compartments, and adorned with ſeventy-ſix ſtatues. Four flights of ſteps, and other curious works enriched with ſtatues, bring you to the top of the cupola.

With reſpect to the outſide of this church, the eaſtern part, or that belonging to the choir, is completed; but the part moſt expoſed to view, particularly the front towards the great ſquare, is in a bad condition; probably that perſons of fortune and a liberal diſpoſition may be incited to contribute largely towards it. It is already four hundred and fifty years ſince the church was begun, and the whole ſquare behind it is filled with workmen employed in ſawing, cutting, and poliſhing the marble; and there is reaſon to believe that ſomething or other will always remain to be done, a yearly income of eighteen thouſand crowns being levied till the church ſhall be entirely completed. It is pretended that two thouſand ſtatues are ſtill wanting for the front, and that the other parts of the edifice require at leaſt five thouſand. The number of ſtatues about the church ſo long ago as the year 1714, amounted to four thouſand four hundred; and ſome affirm, that above ſix hundred of thoſe already ſet up, are worth a thouſand dollars each: but it is not improbable, that in theſe computations, the word ſtatue is a little overſtrained beyond its uſual import.

Oppoſite to the cathedral ſtands the archbiſhop's palace, a very ſpacious building that has two courts, in one of which are the ſtatues of St. Charles Boromeo, and St. Ambroſe; the latter with an iron rod in his hand, as an emblem of his heroic oppoſition to the emperor Theodoſius. This palace has a communication with the cathedral by a ſubterraneous paſſage.

With reſpect to marble ſculptures, paintings, gilding, and ſtucco-work, St. Alexander's church ſurpaſſes any in Milan, except the cathedral. The high altar of this church, the chancel, and two confeſſionals, are enriched with lapis lazuli, agate, jaſper, and other gems. The life of this ſaint is painted on canvas in ſeveral compartments.

The church of St. Ambroſe is divided between the Bernardines and the canons regular. The choir is common between them, and is, as well as the cupola, adorned with Moſaic-work. The tabernacle for the hoſt ſtands between four pillars of porphyry. Near the chancel is ſhewn upon a marble pillar, a brazen ſerpent, which the vulgar believe to be the ſame which Moſes ſet up in the wilderneſs, though others, more modeſt, judge it to be made only of ſome fragments of the former; while others again imagine it to be a ſymbolical image of the god Æſculapius. However, on Eaſter Tueſday, a great number of ſickly children are placed before it, from a ſuperſtitious expectation of their being reſtored to health.

The body of St. Ambroſe is depoſited near the high altar. The gates of the portal are by tradition ſaid to be the ſame which St. Ambroſe ſhut againſt the emperor Theodoſius, till he had done penance for his cruelly maſſacring the inhabitants of Theſſalonica on account of a ſedition. Pilgrims generally pick little ſplinters out of theſe gates, and carry them away as ſacred relics.

The Ambroſian college, which ſtands near the center of the city, is a foundation for teaching the ſeveral branches of literature, where youth are inſtructed gratis by ſixteen profeſſors. What is here principally worth a traveller's notice is the library, which, except in vacation time, is open every morning from ten to twelve, and alſo two hours in the afternoon. It contains forty-five thouſand printed volumes; but theſe, however, are far leſs valuable than its treaſure of manuſcripts, which are ſaid to amount to fifteen thouſand; but though this number is probably much exaggerated, it muſt be acknowledged to contain ſome good pieces. The moſt curious manuſcripts in the whole library are, a tranſlation of Joſephus's hiſtory of the Jews by Rufinus, it being reputed to be above one thouſand three hundred, or according to others, one thouſand one hundred years old, and written on the bark of a tree; and the works of Leonardo da Vinci. Mr. Addiſon obſerves, that in the Ambroſian library is ſhewn the Italian genius; for they have ſpent more money on pictures than on books; but among the heads of ſeveral learned men, there is no Engliſhman to be met with except biſhop Fiſher, whom Henry VIII. cauſed to be beheaded for not owning his ſupremacy. Books are indeed the leaſt part of the furniture which people uſually go to ſee in an Italian library; for theſe are generally ſet off, after the example of the old Greeks and Romans, with pictures, ſtatues, and other ornaments, where they can afford them.

In an apartment behind the library are ſeveral rarities often mentioned by travellers, as a head of Titian by his own hand, with the pictures of perſons eminent for their learning, among which are thoſe of Lucretia Cornara, and Iſabella de Roſales; the former of whom was miſtreſs of ſeven languages, and by her ſkill in philoſophy, gained the applauſe of the univerſity of Padua.

In the Ambroſian college is alſo an academy of painting, where, in the ſummer months, the artiſts both in painting and ſculpture frequently draw and make models from the life.

Some adjacent rooms ſerve for a muſeum, where, among other curioſities, is the ſkeleton of a woman of great beauty, who directed that her bones ſhould be diſpoſed of in this manner, that the living, by viewing the dead, might be better able to reſtore health to the ſick. There is here alſo an image which walks about the room, and performs many geſtures by clock-work.

The church of St. Angelo, beſides the ſtatues in the front, has abundance of fine paintings and marble ſculptures; as has alſo the church of St. Antonio del Fuoco, which, among other paintings, has a fine piece by Annibal Carracci, and is adorned with inlaid work in the Florentine taſte, conſiſting of pieces of oriental marble, mother of pearl, and gems, in the form of birds and flowers, and altar-pieces of the fineſt Florentine marble.

Before the main entrance of St. Celſo's church are two large ſtatues of Adam and Eve; the latter is particularly eſteemed a maſter-piece. In the front are four fine ſtatues of the Evangeliſts, alſo of white marble, with many other ſtatues, whoſe pedeſtals are of braſs. In the church are ſeveral fine pictures, as alſo the tomb of Annibal Fontana, the famous ſculptor, with a pompous inſcription, in which it is ſaid that nature ſtood amazed while he transformed marble into men.

The church of St. Francis is remarkable for the maſſacre of the innocents, painted in freſco over the great altar, and the picture of our Saviour's feeding five thouſand people.

The church of St. Giovanni da Caſarotti is ſmall, but adorned with decorations in marble: it has a vault for the interment of executed criminals, and belongs to the fraternity of Cavalieri, who wear a ſmall croſs upon one ſhoulder on their upper garment, and are of the beſt families in Milan. It is an indiſpenſible duty incumbent on this order, that when a malefactor is to be executed, ſome of the members viſit him the night before, in order to prepare him for the other world. At the place of execution, one of the moſt eminent among them aſcends a ladder up to the gallows, holding the crucifix before the criminal, who goes up backwards, and at parting pronounces the benediction; while the capu-

chins

chins, whoſe uſual office is here to attend criminals in their laſt hours, remain below. On this occaſion two ladders are placed againſt the gallows, one for the executioner and the criminal, and the other for the cavalier, who attends maſked, and when the criminal is dead, cuts him down. Others of the fraternity aſſiſt in taking up the dead body, and carrying it to the chapel in order to be interred. The fraternity have, however, few opportunities of performing theſe humble offices at Milan; for the ſoldiers are exempt from the civil juriſdiction, they being tried by martial law; and ſuch is the fertility of the ſoil, and the opulence of the people, that even the poor by begging find no difficulty in obtaining ſubſiſtence, without taking to dangerous courſes. Beſides, the privilege of ſanctuary granted to churches and monaſteries, ſhelters many criminals from the hands of juſtice.

The church of St. Paolo, belonging to the Bernardine nuns, is remarkable for its fine frontiſpiece, upon which is a ſtatue of the Madonna di Loretto, and the converſion of St. Paul, in baſſo relievo, on a ſingle piece of white marble, in which the efforts of the horſe to recover from his aſtoniſhment are moſt admirably expreſſed. Within the church the whole life of that apoſtle is repreſented in ſeveral beautiful pictures, by four brothers of the name of Campi, who are natives of Verona. The moſt remarkable of the other paintings are the decollation of John the Baptiſt, the Lord's ſupper, and Chriſt committing to St. Peter the power of the keys.

The church De la Paſſione is one of the fineſt eccleſiaſtical buildings in the city, particularly its front, which is crowded with excellent ſtatues, and ſcripture hiſtories in baſſo relievos. It belongs to the canons regular, who reſide in a very ſtately building adjacent to it. In their refectory the Lord's ſupper is excellently painted, according to ſome, by Chriſtopher Cibo; but others attribute it to Gaudentio. Their garden is very large, with pleaſure-walks arched over by vines, and a very fine gallery adorned on both ſides with ſtatues of black and white marble.

What appears very ſingular is, that both here and in other churches of the Milaneſe, the entrances are crowded with old women ſpinning, or buſy about ſome other employment. As they do not beg, they probably conceive it to be a work of merit to ſpend the whole day, as it were, in the houſe of God.

In moſt churches of Milan the Ambroſian ritual is uſed, which differs from the Romiſh only in ſome forms of prayer, and a few ceremonies; but the convents of regulars adhere to the Romiſh.

Among the charitable foundations, the principal is the great hoſpital, a noble building, founded by duke Franciſco Sforza. The middle court of this ſtructure is ſurrounded by a piazza, each ſide conſiſting of twenty arches, ſupported by marble pillars, and is two hundred and fifty feet ſquare, with three galleries running round the building. Beſides this large court, there are eight ſmaller, and twenty-four wards for the ſick and wounded, who are diſtributed according to their different diſeaſes. The conſumptive patients have their particular ward, another is appointed for fevers, a third for the ſmall pox, a fourth for the venereal diſeaſe, &c. There are ſometimes four hundred patients in the fever ward, which is very long, and in the form of a croſs, with an altar in the center; ſo that all the patients may ſee it from their beds. In the admiſſion of expoſed foundlings, or of the ſick and wounded, no difference is made with regard to country or religion. The proteſtants lie in the ſame wards with the other patients, but at the farther end; and while the hoſt is elevated or carried about, a curtain is drawn between them and the reſt. Thus, by a very commendable and humane indulgence, the adoration of the hoſt is diſpenſed with, and the conſcience freed from all compulſion; nor are ſtrangers obliged to kneel on meeting the hoſt, either in the churches or ſtreets.

The number of patients exceeds one thouſand five hundred, the females being diſtributed into nine particular wards, and the officers and ſervants of all ranks are ſaid to amount to five hundred.

At the expence of the hoſpital, but at another place, are maintained about three hundred idiots and lunatics, and alſo above five thouſand foundlings, ſome of whom are kept in the country. The boys are brought up to handicraft trades, and the girls are taught the uſe of the needle and houſhold buſineſs. It has been ſometimes known, that perſons in good circumſtances, having no legitimate children, or near relations, have taken a child out of this hoſpital, and adopted it as their own. Its annual income amounts to ninety or one hundred thouſand dollars. The inquiſition in this city chiefly exerciſes its ſeverities on the Jews, for none of that perſuaſion muſt come within the city, without firſt making his appearance before this tribunal, and at the Dominican convent in the ſuburbs of the Porta Vercellina. This court, beſides eccleſiaſtics, conſiſts of ſixty noblemen, and one hundred and fifty reputable merchants.

It is ſurprizing what a number of miſhapen dwarfs, and people afflicted with wens of a monſtrous ſize, are to be found in the ſtreets of Milan.

In moſt of the Milaneſe inns, a young traveller is generally aſked whether he would have a letto fornito, which means a female bedfellow, who never unmaſks till ſhe enters the bed-chamber. How dangerous is this to the morals of young travellers! and to what an extreme riſque is their health expoſed, while it depends on the choice of a mercenary landlord!

In the neighbourhood of the city are many beautiful ſeats, among which, that of the marquis Simonetti's villa, a few miles from Milan, is particularly remarkable for its ſurprizing echo, which towards the garden from two wings of the building, parallel to each other, and ſtanding at the diſtance of fifty-eight common paces, without windows or doors, diſtinctly repeats the ſound of a man's voice, but chiefly the laſt ſyllable forty times, and the report of a piſtol above ſixty.

SECT. VI.

A Deſcription of the City of Pavia, and of a celebrated Carthuſian Convent near that City; with an Account of the City of Cremona.

THE greateſt part of the Paveſe, as hath been already intimated, belongs to the king of Sardinia; and both this diſtrict and that of Cremona are included in the dutchy of Milan.

Pavia, or Ticinum, the capital of the Paveſe, is ſituated in the forty-fifth degree eighteen minutes north latitude, and in the ninth degree forty-four minutes eaſt longitude. It is a large, but old and deſolate city on the river Teſſino, with very indifferent fortifications, and a caſtle and citadel in the old taſte. The ſtreets are indeed broad and ſtraight; but the houſes are mean, and the city has no remains of its ancient ſplendor, when capital of the kingdom of Lombardy. It has nine churches, a like number of convents, and is a biſhop's ſee; but the cathedal is old and of brick, as are moſt of the public edifices. In the area before it ſtands a braſs equeſtrian ſtatue called Regiſola, by ſome thought to be Antoninus Pius, and by others Marcus Aurelius. The Auguſtine convent is only remarkable for the noble marble monument in which are ſaid to be depoſited the bones of St. Auguſtine. Its univerſity, founded by Charlemagne and re-eſtabliſhed by Charles IV. has ſeven colleges. Here is alſo another college founded by pope Pius V. whoſe ſtatue is erected before it; but a much finer of the ſame pope may be ſeen in the college.

Five miles from Pavia is a Carthuſian monument, celebrated for its magnificence. The church is remarkably ſuperb, the front being entirely of white marble, ornamented with ſculptures, and is covered with wires to ſecure it from being ſullied or damaged. Within the church is curious iron-work, a great part of which is gilt: it is ſaid to have coſt 60,000 dollars. Here are alſo twelve incomparable ſtatues of Carrara marble, four of which on the out-ſide repreſent the cardinal virtues; the other eight, which ſtand in the middle aile of the church, are the four evangeliſts, with St. Gregory, St. Auſtin, St. Ambroſe, and St. Jerom. Here are likewiſe two large baſons for holy water, of curious workmanſhip. Beſides the high altar, there are ſixteen others,

in as many chapels that ſtand oppoſite to each other, exactly alike, with regard to the marble columns and the architecture, and only differing in the paintings and ornaments before the altars. The colours and diſpoſition of the alabaſter, granates, and different kinds of marble, cannot be ſufficiently admired. Moſt of the altars are adorned in the new Florentine taſte, with exquiſite imitations of flowers, &c. formed of precious ſtones inlaid in marble. The great altar is richly adorned in this beautiful manner, and before it ſtand ſeveral bronze pyramids, and it is ornamented with a chandelier of the ſame taſte. Indeed this altar glitters with a profuſion of gems, and the tabernacle upon it is ſo curiouſly inlaid with onyx, lapis lazuli, agate, &c. that it is valued at eighty thouſand dollars. The roof of the church is blue, with ſtars of gold, in imitation of the ſky ſpangled with ſtars in a clear evening. In ſhort, the ſplendor of this ſuperb church is daily increaſing, ſome diſtinguiſhed artiſts being conſtantly retained for improving, and adding new ornaments.

The library of the convent is far from being anſwerable to its outward magnificence. The building on the right hand of the entrance into the great court has very fine apartments in the ſecond ſtory, in which the preſent empreſs was once entertained. In a little ſquare garden adjoining to the convent are water-works, with which the grave fathers take a great delight in putting tricks upon other monks of their order; and whenever the conductor intends a perſon the favour of a deluge of water, or a ſhower, there is no eſcaping it.

There is, beſides, in the area of the building a large garden of a quadrangular form, with a very beautiful walk covered over with an intertexture of vines, five hundred common paces in length, and adorned with marble ſtatues on each ſide. Oppoſite the wall of this ſpacious ſquare are the cells of the monks, built ſeparately, with a little private garden behind every cell. The number of monks in this convent amount to between fifty and ſixty.

We now come to the Cremoneſe, the laſt diſtrict we ſhall deſcribe in the duchy of Milan, which is exceeding fruitful, and, beſides delicious wine, produces great quantities of honey and flax.

Cremona is a walled city in the Cremoneſe, ſituated in the forty-fifth degree twenty minutes north latitude, and in the tenth degree thirty-ſix minutes eaſt longitude. It ſtands on the Po, which has a bridge over it guarded by a fort: it is alſo defended by a caſtle, and is five Italian miles in compaſs. Its ſquares are ſpacious, and its houſes handſome, with ſtraight and broad ſtreets. The cathedral is a magnificent ſtructure, beſides which there are ſixty-two churches, chapels, and convents.

The Dominican church is adorned with ſome good paintings, and a ſuperb altar of lapis lazuli, agate, and beautiful marble. On the cieling is ſeen the picture of the virgin Mary, who, in token of her peculiar protection, lays her mantle over three monks and as many nuns of the Dominican order. In the area before the church is a ſtatue of St. Dominic, holding a croſs in his right hand, and in his left a dog with a lighted torch in his mouth. St. Peter's church, which belongs to the canons regular, is a beautiful ſtructure, adorned with elegant paintings. The Auguſtines have a good library, and their church alſo exhibits ſeveral good pieces of painting. The univerſity in this city is now in little repute.

Cremona owes a part of its reputation to the attempt made on that city by prince Eugene in 1702. By means of a correſpondence carried on between the Imperialiſts and ſome of the citizens, and particularly with Caſoli, the curate of St. Maria Nuova, a church that ſtood near the ramparts, he got poſſeſſion of the Porta Santa and town-houſe, where marſhal Villeroy reſided, and on the firſt of February entered the city by a canal or aqueduct, through which the French had formerly ſurpriſed the place. But the troops which were to ſupport this bold enterprize, having loſt their way by the darkneſs of the night and a fog, came up too late, and gave the French time to recover from their panic, and put themſelves in a poſture of defence; ſo that the Imperialiſts were obliged to retreat, contenting themſelves with the honour of carrying off Villeroy priſoner from a garriſon of ſix thouſand men. The French, in the firſt tranſport of their rage againſt Caſoli, pulled down the church of St. Maria Nuova to the ground; ſo that nothing of it is now to be ſeen. But near the place where the church ſtood, is ſhewn the ſubterraneous paſſage through which the Germans entered the city, which is now ſecured with a ſtrong iron grate.

SECT. VII.

The Dutchy of MANTUA.

Its Situation, Extent, Produce, and beautiful Face of the Country: Its Hiſtory, and a Deſcription of the City of Mantua.

THE dutchy of Mantua, alſo called the Mantuan, is bounded on the eaſt by the dutchy of Ferrara and the Padovan, on the north by Breſciano and the Veroneſe, on the weſt by the Milaneſe, and on the ſouth by Modena and Mirandola, extending about fifty-ſix Engliſh miles in length, and forty in breadth.

Its principal river is the Po, beſides which it is alſo watered by the rivers Oglio, Menſo, Secchia, and ſome others, all which diſcharge themſelves into the Po.

The country abounds in corn, fruit, vegetables for the kitchen, with ſome wine, great quantities of flax, and a conſiderable number of good horſes. In winter, after great rains, the road between Cremona and Mantua, which are forty Italian miles diſtant, is almoſt impaſſable, from the ſoftneſs and depth of the ſoil: but this inconvenience is fully compenſated by the exuberant fertility of the whole country; and one cannot ſufficiently admire the verdure of the fields and meadows, which are divided by beautiful rows of trees, with abundance of vines twining round their trunks and ſpreading among their branches. The great number of nightingales that frequent this tract of land, by their plaintive warblings, render the charming ſcene ſtill more delightful. Indeed a perſon who makes any ſtay in Italy, is ſo accuſtomed to fine proſpects and enchanting landſcapes, that they in time grow familiar to his eye, and are leſs regarded than when they firſt preſented themſelves to his view.

With reſpect to the hiſtory of this country, Lewis Gonzaga, having extirpated the Bonacolſi family, made himſelf maſter of Mantua in their room: he was of German deſcent, and took upon him the title of imperial vicar of Mantua, for which he appears to have obtained permiſſion from the emperor Lewis of Bavaria, though the pope refuſed to acknowledge him as ſuch. He was ſucceeded by his iſſue both in the government of Mantua and the imperial vicarſhip. In 1432 John Francis obtained from the emperor Sigiſmond the title of marquis, and Frederic II. who was created a duke by the emperor Charles V. by marriage obtained Montferrat, which was afterwards alſo raiſed to a dukedom. At length, on the acceſſion of Philip duke of Anjou to the crown of Spain, the duke of Mantua, in conſideration of receiving ſixty thouſand piſtoles, and a monthly ſubſidy of thirty-ſix thouſand dollars for maintaining a French garriſon of four thouſand men, admitted the French troops into his capital. France alſo engaged to procure him the reſtitution of the poſſeſſions that formerly belonged to the houſe of Gonzaga in Italy, and to make good the damages he ſuffered by the approaching war. But this league with France proved his ruin; he was on that account put under the ban of the empire, and in 1703 the emperor transferred to the duke of Savoy that part of the dutchy of Montferrat which the dukes of Mantua enjoyed as a fief. Two years after the Imperialiſts over-ran the whole dutchy of Mantua, and in 1708 duke Charles IV. dying under the ban of the empire, the houſe of Auſtria has continued in poſſeſſion of this dutchy, which is now annexed to the government of the Milaneſe.

Mantua, the capital of the dutchy, is ſituated in the forty-fifth degree twelve minutes north latitude, and in the eleventh degree thirty-four minutes eaſt longitude, and ſtands on a lake, or moraſs, formed by the inundations of the Mincio, twenty Italian miles in circumference, and two broad. The ſeveral parts of this lake have different names, and the two chief bridges extending over it to the city are Ponte di Molini, defended by

two

two citadels, and Ponte di St. Giorgio, with fortifications at both ends. The city is divided by the water into two almoſt equal parts, that have a communication with each other by means of ſix bridges. In the heat of ſummer, when the lake is low and ſtagnates, the air becomes ſo noxious, that the wealthy part of the inhabitants leave the city. The greateſt part of the ſtreets are long, broad, and ſtraight; and the city abounds with handſome ſtone houſes, fine ſquares, and magnificent churches.

On the other ſide of the lake are three ſuburbs, namely, to the north Porto Fortezza, to the north-eaſt Il Borgo di St. Giorgio, and to the ſouth Il Thé. The walls, which in ſome places are fortified with baſtions, and in others plain, are computed to be about four miles in circuit. Here are in all four collegiate churches, twenty-one parochial, fourteen other churches and alms-houſes, eleven oratories, forty convents, and without the city three pariſh churches, two other churches, and ſeven convents. The Jews, of whom there are about four or five thouſand, live in a diſtinct quarter. The number of inhabitants, excluſive of the garriſon, was formerly computed at fifty thouſand: but in this century, ſince no court has been kept there, the number has ſo decreaſed, that the inhabitants ſcarce exceed ſixteen thouſand.

In the cathedral, which is the work of Julio Romano, and is a magnificent ſtructure, are ſeen paintings of the moſt celebrated maſters, as the calling of Peter and Andrew to the apoſtleſhip; the martyrdom of a female ſaint, whoſe breaſts are torn off with pincers: but the fineſt of all is a night-piece of St. Antonio del Fuoco, by Paul Veroneſe, and cannot be viewed without admiration. The cathedral is very ſpacious, and divided by rows of pillars into five ailes. The church of St. Anthony is more famous for relics than any other in Mantua, a conſiderable quantity, as it is pretended, of the blood of Chriſt being kept in a ſubterraneous chapel with ſixteen altars, and once every year ſhewn to the people. They alſo here pretend to have the blood of St. Longinus. The Franciſcan church has an elegant inſide, and ſuch as few of the Mendicant order can ſhew in Italy: it has alſo a good library.

The building that was antiently the ducal palace, is far from being a modern ſtructure, but is very large. The ducal gallery and muſeum, which was once famous, was in the year 1630 pillaged by the Imperialiſts under general Colalto, who took the city by ſtorm; and all the curioſities, which were worth ſome millions, fell into the hands of the ſoldiers, by whom they were partly deſtroyed and partly diſſipated, or ſold to perſons who knew little of their value. At that time a common ſoldier was ſo lucky as to get a booty of eighty ducats; but was ſo bad an œconomiſt as to game it all away in one night, for which Colalto cauſed him to be hanged the next day. However, ſome apartments in the palace are worth ſeeing, the cieling being painted by Julio Romano, and they contain ſeveral tables of Florentine work inlaid with very beautiful pieces of lapis-lazuli and agate; ſome marble ſtatues and buſts; a Moor's head on a pedeſtal of white marble, with a turban ſo curiouſly inlaid, as to imitate very exactly a kind of Indian ſtuff; two large pieces of painting by Palma, two others by Coſta, and a female ſaint in a chapel painted by Annibal Caracci. Here are alſo two galleries of portraits, and three ſaloons, which are ſomewhat dark, but well painted in freſco; however, but little care is taken to preſerve them. The beſt thing here is the academy, which indeed for the grotto-work, pillars, ſculpture, galleries, and height, has not its equal of the kind. However, a moſt valuable treaſure of gold and ſilver crowns, ſtatues, relics, and other altar-furniture, ſtill remain in the palace church, where are likewiſe ſeen two capital pictures of ineſtimable value, one of the baptiſm of Conſtantine the Great, and the other of the martyrdom of St. Andrew, both by Coſta.

The ſilk and other manufactures, and the general commerce of the city, were formerly extremely flouriſhing, but are now very inconſiderable.

At the diſtance of half a league from Mantua is the palace of Thé, ſo called from its being built in the form of a T. The Imperial ſoldiers are now quartered on the ground-floor, but more care is taken of the upper apartments, on account of the fine paintings in freſco. Julio Romano drew the plan and elevation of this palace; moſt of the pictures were painted from his deſigns, and not a few of them received the finiſhing ſtrokes from his pencil: the moſt admired are the fall of Phaeton, and Jupiter's victory over the giants.

At the diſtance of two Italian miles from Mantua is the duke's menagerie, called Virgiliana, from the grotto where Virgil is ſaid to have paſſed the ſtudious hours of youth; and near it is Pietola, antiently called Andes, which was the birth-place of Virgil.

SECT. VIII.

Of the Dutchies of PARMA, PLACENTIA, *and* GUASTALLA.

Their Situation, Extent, Produce, and Rivers. Their Hiſtory; with a Deſcription of the Cities of Parma and Placentia.

THE following countries, including Guaſtalla and Modena, were, by the treaty of Aix la Chapelle, ceded by the houſe of Auſtria and king of Sardinia to the infant Don Philip, and from him were to deſcend to his male heirs; but in caſe of his dying without male iſſue, or that any of his deſcendants ſhould be ſeated on the throne of the Two Sicilies, or Spain, theſe dominions were to revert to the former poſſeſſors; that is, to the houſe of Auſtria and the king of Sardinia.

The dutchies of Parma and Placentia have always been united. To the northward and weſtward they terminate on the Milaneſe; to the ſouthward on the territories of Genoa; and to the eaſtward on the dutchy of Milan; extending fifty-ſix miles from eaſt to weſt, and forty-four from north to ſouth.

The ſoil is extremely fertile, eſpecially in the production of olive-trees, large truffles, and cheſnuts. The paſtures and cattle are likewiſe very fine, particularly about Placentia, where the meadows may be laid under water from a ſmall river, which, from its ſlimy water, fertilizes the ground. However, the celebrated Parmeſan cheeſe is no longer made in this country, but at Lodi in the Milaneſe, at Trino, Bologna, and ſome other places. Petroleum, or rock-oil, is gathered in many places, and ſome without any mixture of water, as at Miano and Vizzole; but in other parts it is found floating on the ſurface of the water. There are here alſo found ſexangular-cryſtals, and in the Apennine mountains, which run along the ſouth frontiers of this country, are copper and iron mines.

The principal rivers are the Lenza, which partly divides the dutchy of Parma from Modena; the Taro, which riſes in the dominions of Genoa, and is larger than the Lenza; both theſe, with the Nura and Trebia, diſcharge themſelves into the Po.

The cities of Parma and Placentia were for a conſiderable time ſubject to the Roman empire; yet, like other Italian ſtates, ſtruggled for liberty, but have ſeveral times changed their maſters. They have been governed by France, and by the popes; and at length pope Paul III. in the year 1545, conferred them on his natural ſon Peter Alviſius Farneſe. Many diſputes have ſince ariſen in relation to theſe dutchies; but in the quadruple alliance of 1717 it was agreed, that on the demiſe of the duke of Tuſcany and Parma, Don Carlos, the infant of Spain, ſhould ſucceed to theſe countries; but Anthony, the laſt duke of the Farneſe line, dying in 1731, without male iſſue, the infant Don Carlos was inveſted with the poſſeſſion of thoſe dutchies; but in 1735, it was ſtipulated in the preliminary articles of peace, that Don Carlos ſhould be king of the Two Sicilies, and that the emperor ſhould poſſeſs the dutchies of Parma and Placentia. Thus they continued in the houſe of Auſtria till the peace of Aix la Chapelle in 1748, when they were ceded to the infant Don Philip.

The prince's annual revenue is computed at between five and ſix hundred thouſand ſcudi.

Parma

Parma is the capital of the duchy of the ſame name, and is a large and populous city, ſeated on the river Parma, which divides it into two parts, in the forty-fourth degree forty-five minutes north latitude, and in the eleventh degree eaſt longitude. The ſtreets are long and broad, and the houſes are in general tolerably elegant. It is of a circular form, and about three miles round. The fortifications are far from being conſiderable; but on the eaſt ſide ſtands a ſtrong citadel. The ducal palace is on the ſouth ſide of the river, and has a communication with the citadel by means of a bridge. It conſiſts of three parts, two of which are newly built; but the gallery, which was formerly remarkable for its ineſtimable collection of paintings, medals, antiquities, and other curioſities, together with the library, was ſtripped by Don Carlos, who carried away with him every thing of value to Naples: ſo that the chief thing remarkable in this city is, the large theatre built by duke Renatus I. in the year 1618, in the form of a Roman amphitheatre: the pit is ſixty-five common paces in length, and the ſtage ſixty-two. In the former are twelve rows of ſeats, riſing behind each other, and above them two galleries. There is alſo a ſmaller theatre in an adjoining hall.

Parma has ſeveral pompous churches, and its biſhop is ſuffragan to the archbiſhop of Bologna. The cathedral is a noble edifice, that has ſeveral rows of Corinthian columns on the outſide, and the cupola is beautifully painted by Correggio, and repreſents the aſſumption of the Virgin Mary. Near this ſtructure is the church called Il Battiſterio, the outſide of which is covered with marble. In this edifice, which is of great antiquity, all children born in the city, and within two miles round, muſt be baptized; and here, on Eaſter eve, the proviſion of holy water is prepared for the whole city.

Here is an univerſity, which was founded in 1599 by duke Renatus I. and alſo an academy inſtituted for the nobility in 1601, by the ſame patron of the ſciences. It is under the direction of the Jeſuits, and two hundred and fifty noblemen are admitted at once.

There are here manufactured great quantities of ſilk ſtockings, and indeed ſilk is the only commodity foreigners take from hence. This city and Placentia warmly diſpute the precedence. In 1734 the French and Sardinian forces fortified themſelves ſo well in the neighbourhood of this city, that being attacked by the imperial general count Merci, he loſt his life, and the troops he had commanded were obliged to retire.

There are only a few inconſiderable towns in this duchy, beſides the above capital.

The city of Placentia, called by the natives Piacenza, is pretty large, and deſervedly obtained its name, which ſignifies pleaſantneſs, from its ſituation in a moſt rich and delightful country, at a ſmall diſtance from the Po. It is ſeated in the forty-fifth degree north latitude, and in the tenth degree twenty-four minutes eaſt longitude. Its fortifications are inconſiderable, but the citadel is pretty ſtrong. The ſtreets are ſtraight, and the principal ſtreet, called Stradone, the place of reſort for taking the air, is twenty-five common paces broad, and three thouſand feet long, in a direct line, with ſix hundred ſtone poſts for ſeparating the foot from the carriage way, and on both ſides are eleven ſpacious convents. The other buildings of the city are not very remarkable, though it contains forty-five churches, twenty-eight convents, and two alms-houſes.

The cathedral is pretty much in the Gothic taſte; but the church of the Auguſtines is reckoned the moſt beautiful, and eſteemed worthy of its architect, the celebrated Vignoli. In its veſtry is a ſingular curioſity repreſenting the crucifixion, cut on a piece of wood by an unknown artiſt, who has taken pains to illuſtrate that great event with a multiplicity of figures, ſome on horſeback, others on foot, and all inimitably executed. St. Maria in Compagna is alſo a very fine church, and St. Sixtus's church has a moſt beautiful monument of black and white marble, with the ſtatue of Margaret of Auſtria, conſort of duke Octavius. The ducal palace, though large, makes no great appearance on the outſide; but within are ſome good apartments. In the area before the town-houſe, ſtand two admirable braſs ſtatues of Alexander and Renatus IV. both of the houſe of Farneſe, and dukes of Parma and Placentia.

The biſhop is ſuffragan to the archbiſhop of Milan. Here is alſo an univerſity. At this city begins the Via Æmilia, which extends as far as Rimini on the Adriatic.

This duchy has alſo no other town beſides its capital worthy of notice.

The duchy of Guaſtalla is about twelve miles in length, and five in breadth, and with the principalities of Sabionetta and Bozzolo, was formerly ſubject to the houſe of Mantua; but on the death of Joſeph Maria in 1746, Maria Thereſa, queen of Hungary and Bohemia, took poſſeſſion of the duchy; but in 1748, reſigned it by the treaty of Aix-la-Chapelle to the infant Don Philip.

The principal town of this duchy is Guaſtalla, which is a ſtrong place ſeated near the river Po, on the confines of the duchy of Modena, fifteen miles to the north of Reggio, and is remarkable for a battle fought near it between the French and Imperialiſts, in 1734, to the diſadvantage of the latter.

SECT. IX.

The Dutchy of MODENA.

Its Situation, Extent, and Produce; with a Deſcription of the City of Modena, and the other Places moſt worthy of Notice.

THE duchy of Modena is ſurrounded by the duchies of Parma and Mantua, the eccleſiaſtical ſtate, the duchy of Florence, and the republic of Lucca; extending fifty-ſix miles from north to ſouth, and between twenty-four and thirty-ſix from eaſt to weſt.

This country abounds in corn, garden-fruits, excellent wine, and other productions. Near St. Paolo is found an excellent alcaline earth, ſometimes as a powder, but more frequently as a moiſt oleaginous tophus, which being pulverized is bright, ſmooth, white, and quite inſipid: it is uſed as an excellent remedy againſt poiſon, fevers, dyſenteries, and hypochondriac diſorders. In the mountain Caſtello di Monte Baronzone, and at Fiunetto, are wells from forty to ſixty feet deep, and on the water floats a reddiſh petroleum, which abounds moſt in ſpring and autumn. Theſe wells are incloſed, and every fortnight the oil is ſkimmed off the ſurface. Caſtello di Monte Gibbio has wells of the ſame nature, which are not only perpetual, but yield a yellowiſh oil, eſteemed the beſt in the country, and is uſed for embalming, varniſhing, painting, and as an ingredient in ſome medicinal preparations. At Saſſo and Quercola amber is dug out of a ſoil impregnated with petroleum.

Two Italian miles from Saſſuolo is an aperture in the earth, which frequently, but moſt commonly in ſpring and autumn, emits ſmoke, flames, aſhes, and ſtones of a ſtrong ſulphureous ſmell, which it ſometimes throws ſixty or eighty feet high. Theſe eruptions are often attended with a very loud noiſe; the hill upon which is this aperture is quite barren, and during the time that the aſhes and ſtones are briſkly thrown out, the petroleous wells of Saſſo and Monte Gibbio are very turbid. This hill alſo affords ſeveral kinds of petrifactions.

The chief rivers of Modena are the Croſtolo, the Secchia, and the Panaro.

The duchy of Modena, properly ſo called, has its name from its capital, and, beſides that, and the places dependent on it, contains the province of Frignano, the valley of Cartagnana, the diſtrict of Soraggio, the dutchy of Reggio, the principalities of Corregio, Carpi Novellara, the earldom of Rivolo, and the dutchy of Mirandola; the principal places in which are the following:

Modena, in Latin Mutina, the capital of the whole country, and the uſual reſidence of the duke, is a pretty large and populous city; but the ſtreets are narrow, and the houſes without either beauty or ſymmetry. It is ſeated in a ſpacious plain between the rivers Panaro and Secchia, in the forty-fourth degree thirty minutes latitude, and in the eleventh degree twenty-ſeven minutes longitude, and is almoſt of a circular form. It appears moſt beautiful at a diſtance, from the great number of

its ſteeples and towers, eſpecially that of the cathedral, which is very high and large; but neither the ſtreets nor houſes are handſome, nor the fortifications in good repair. The citadel is, however, a good regular fortreſs, but is on a level with the town; and though the houſes in all parts have piazzas, they are both low and dark, and the churches in general are very little worthy of notice, though there are ſome fine ones. In a chamber under the tower of the cathedral is hung up by an iron chain the bucket of a well, with iron hoops; it was taken in a petty war from the inhabitants of Bologna, and is here preſerved as a monument of courage and victory. The handſomeſt churches are thoſe of the Jeſuits, of the Theatines, and of St. Dominic. The Jeſuits church, in particular, is extremely beautiful, and the roof painted from a deſign of father Boſſi. The altars are very elegant, and behind the high altar is the hiſtory of St. Bartholomew, painted in ſeveral capital pictures by Procaccini. The biſhop is a ſuffragan to the archbiſhop of Bologna. In the college founded by St. Boromeo ſeventy or eighty young noblemen are maintained and inſtructed. The ducal palace is indeed a noble and ſplendid ſtructure, and the gallery of pictures, including the lobby, conſiſts of ſix rooms, all filled with ſelect pieces of the moſt famous maſters: the moſt admired is Corregio's night-piece, repreſenting the birth of Chriſt, with the Virgin Mary and the ſhepherds: the refulgence from the child, who lies in his mother's lap, in a moſt beautiful manner ſhines on the faces of the virgin and the ſhepherds, and illuminates the whole piece. The houſe of Eſté has been in poſſeſſion of this duchy ever ſince the year 1288.

The city of Reggio, the capital of a duchy of the ſame name, was anciently called Regium Lepidi, and is ſituated in a very fertile plain, in the thirty-eighth degree twenty-eight minutes north latitude, and in the fifteenth degree fifty minutes eaſt longitude. It is a ſmall but very handſome and ſtrong city. The citadel is ſaid to have been built by Charles the Great, who is alſo ſuppoſed to have rebuilt the city, and to have ſurrounded it with a ſtrong wall, which is ſtill ſo firm that a cannon ball can make but little impreſſion upon it. In the heart of the city is a ſquare, adorned with the ſtatue of the famous Brennus, a Gauliſh chief, which is highly eſteemed by the connoiſſeurs, and the inſcriptions round the pedeſtal are no leſs curious.

Reggio is the ſee of a biſhop ſuffragan to the archbiſhop of Bologna, and its cathedral is a large building of the Gothic order, adorned on the inſide with a great variety of ſtatues and paintings by the beſt maſters.

The city of Mirandola is very large, ſtrong, and beautiful, and is ſaid to have been built by Conſtans the ſon of Conſtantine the Great. It is ſituated in the forty-fourth degree fifty minutes latitude, and in the eleventh degree forty-five minutes eaſt longitude, twenty-ſix miles to the ſouth-eaſt of Mantua. It is ſurrounded with ſtrong and high ramparts, with ſeven baſtions and other works, and is defended by a good citadel. It is the ſee of a biſhop, and, beſides its cathedral, has fifteen churches and convents. In 1702 it was ſtrongly fortified by the Imperialiſts, and in 1705 taken by the French; but in 1707 ſurrenpered again. In 1734 and the following year the Imperialiſts bravely defended it, and repulſed the enemy.

We ſhall next deſcribe the four independent republics, Venice, Genoa, Lucca, and St. Marino, and ſhall begin with the former, with the dominions belonging to each.

SECT. X.

Of the Republic of VENICE.

The Situation and Extent of its Territories on the Continent of Italy. A conciſe Hiſtory of that Republic. The Perſons, Dreſs, Manners, Cuſtoms, and Diverſions of the Venetians. The different Ranks of the Nobility; with the Manner of chooſing the Doge, his little Power, the Ceremony of marrying the Sea, and the different Offices of State. The Arms of the Republic; its Orders of Knighthood, Religion, Revenues, and Forces; with a particular Deſcription of the City of Venice.

THE dominions of the republic of Venice on the continent of Italy extend eaſt and weſt from the river Adda, which flows from the lake of Como, and reach in one continued line to the dutchy of Carniola, where the curve they form along the Adriatic ſea is ſomewhat interrupted by the Auſtrian dominions, after which they extend from north to ſouth along the coaſt of the ſame ſea, and terminate at the province of Iſtria. Thus the Venetian territories are bounded on the north by Trent, Tirol, and the country of the Griſons; on the eaſt by Carniola and the gulph of Venice; on the ſouth by the ſame gulph, Romania, and the dutchy of Mantua; and on the weſt by the dutchy of Milan; extending about a hundred and eighty miles in length, and in ſome parts an hundred in breadth.

This is a fine champaign country, with a fruitful ſoil, producing rich fruits, corn, wine, and oil; with plenty of ſilk, rich paſtures, and all ſorts of cattle. Their Paduan ſheep have very fine wool, and the fleſh of their hogs is much valued. But we ſhall give a more particular account of each of the countries included in theſe territories, in treating of them ſeparately, and ſhall begin with the republic, which is confined to the city of Venice, the capital of the whole.

With reſpect to the origin and advancement of this republic to the grandeur it formerly enjoyed, and its preſent ſtate, it muſt be obſerved, that on the invaſion of Italy in the fifth century by the Huns, under Attila their king, when they ſpread a general deſolation wherever they came, great numbers of the people who lived near the Adriatic fled to thoſe iſlands on which at preſent ſtands the celebrated city of Venice, which, about the year 421, had in ſome meaſure been built upon by the Paduans, for the advantage of commerce. Here having ſettled ſmall ſtates, they were at firſt governed by conſuls, afterwards by tribunes, and formed a kind of republic, the council of which conſiſted of thoſe magiſtrates. Theſe iſlands became better inhabited on the ſucceeding incurſions of the Goths and Longobardi into Italy, when multitudes from Rome and other large cities repairing thither, this ſtate ſoon became able to make ſome head againſt theſe bold invaders; till at length the chiefs of the iſlands coming to an agreement with the Longobardi, were ſuffered to remain unmoleſted. This was the commencement of the city and ſtate of Venice.

About the end of the ſeventh or the beginning of the eighth century the former government of theſe iſlands was aboliſhed, and an unlimited power conferred on Paulucio Anafeſto, who obtained the title of doge, or duke. Under this ſovereignty the ſtate greatly increaſed, till the people being oppreſſed, became weary of the evils of domeſtic deſpotiſm; and on their chooſing a new duke, in 1171, curtailed his power, by aſſigning him a council of two hundred and forty perſons, compoſed not only of nobles, but of commons. At length duke Ziani ſiding with pope Alexander III. againſt the emperor Frederic, obtained ſuch a ſignal victory over him at ſea, that the pope preſented him with a ring, which he was to drop into the Adriatic, as a ſign of his marriage with and perpetual ſovereignty over it.

The Venetians, who had already extended their dominions into Lombardy, Dalmatia, Iſtria, Syria, and other places, made a very conſiderable acquiſition in the beginning of the thirteenth century, by poſſeſſing themſelves of the principal iſlands in the Archipelago and Mediterranean, particularly that of Candia. From this time they obtained immenſe profit by trading in Eaſt India goods, which they imported from Alexandria in Egypt, to which they came by the way of the Red Sea. Under duke Marino Moroſini was introduced the preſent form of electing the doge, and at this juncture jealouſy and envy occaſioned the war with Genoa, which, after continuing a hundred and thirty years, was at laſt concluded by a treaty in 1381. During this war duke Peter Gradenigo, in 1396, ordained that none but the nobi-

lity ſhould be capable of having a ſeat in the grand council, and thus the government became ariſtocratical.

In the fourteenth and fifteenth centuries the Venetians extended their poſſeſſions in Lombardy, and, in 1473, the laſt king of Cyprus appointed the ſtate of Venice his heir. Towards the end of the fifteenth century the commerce and power of the Venetians began to decline, the Portugueſe having diſcovered a way by ſea to the Eaſt Indies, which at length opened the trade to all the maritime nations. In the ſixteenth century affairs went ſtill worſe, for the pope, the emperor, France, and Spain joining in a league againſt them, they were ſtripped of all their countries and towns in the eccleſiaſtical ſtate and the Milaneſe. They alſo received another ſevere blow from the Turks, who drove them out of the kingdom of Cyprus. In the ſeventeenth century a ſharp conteſt aroſe between the ſtate, the clergy, and the pope, in which, however, they had the advantage. They were alſo long engaged in troubleſome wars with the Turks, loſing Candia, and gaining part of Dalmatia and all the Morea; but even the latter, with other places and diſtricts, the Turks recovered in the wars of the preſent century.

Thus has the republic of Venice continued upwards of thirteen hundred years, amidſt many foreign wars and inteſtine commotions; its grandeur was chiefly owing to its trade, and ſince the decline of the former its ſtrength and power have ſuffered a conſiderable diminution.

With reſpect to the perſons of the Venetians, the men are handſome and well ſhaped, and their dreſs, eſpecially that of the nobles, is grave, and yet becoming. The women are very agreeable, but their high-heeled ſhoes are ſaid to make them hobble in their gait; but they ſeldom appear abroad, except during the carnival, at their fairs, and ſome other public occaſions, when they are allowed to go in diſguiſe, ſo that they cannot be known. At Venice is a kind of ſumptuary court, which regulates the dreſs of the men, women, and ſervants; and no Venetian, of what quality ſoever, is allowed to wear either embroidery, gold or ſilver lace, or fringe. The ſame regulations are made with reſpect to their gondolas; and as for coaches they have very few, or elſe they would be ſubject to the ſame law. Indeed thoſe who have been ambaſſadors have the privilege of wearing a ſtole of cloth of gold, and gold buckles in their girdles; but they are generally ſatisfied with wearing a little gold galloon on their black ſtoles.

A noble Venetian never appears in public but in his robes, which reach to his heels, and are of black cloth, lined with greyiſh cloth in the ſummer, and with ermine in winter; theſe robes are faſtened with a belt of the ſame cloth, three inches broad, and adorned with ſilver buckles and plates. Inſtead of a hat he wears a long black worſted cap, with a worſted fringe, which he generally carries in his hand, that he may not incommode his large peruke. The phyſicians, advocates, notaries, and all thoſe called cittadinis, wear the ſame habits as the nobles, and, like them, claim the title of excellency. The manner of ſaluting them is to kiſs their ſleeve, which, about the elbow, is as wide as a moderate ſack, and ſometimes ſerves, as do alſo their caps, to carry proviſions in from the market; for many of them are much reduced, and are brought to ſo low an ebb, as even to go about begging among the more opulent families. This is frequently the conſequence of gaming, by which many houſes that ſtill make a figure are greatly embarraſſed. The procurators of St. Mark, the conſiglieri, and others of the council, ſometimes wear long red or purple robes. They are never ſaluted in the ſtreets, except by thoſe who wear the ſame robe. The rank of nobility is not reſtrained to the eldeſt ſons, and they are not allowed to traffic, much leſs to marry with foreigners.

The converſation of the nobility is more deſirable out of than within the city, they being then no more than private perſons. The high conceit of themſelves which is but too uſual in the city, would there be ridiculous, and not borne with.

The women of quality do not even ſhew their faces in the churches; and the ordinary women wear over their heads a large ſcarf, which opens a little about their eyes.

The females are educated in convents till they are married, without being allowed to ſee their future huſbands; whence the men commonly remedy the defects of their wives by keeping miſtreſſes. Many who are of a more tender conſcience than others ſatisfy themſelves with living with women whom they deſign to marry; but the ceremony is frequently deferred till a few days, or hours, before the death of one of the parties. The moſt general method with thoſe who are unmarried, is to keep their miſtreſſes at a certain allowance as long as both parties agree; and this is ſo frequently practiſed, that thoſe who are unable to be at the expence of keeping one woman, join with two or three other men to have her between them, and without the leaſt jealouſy viſit her by turns. To prevent young noblemen and gentlemen marrying too ſoon, or falling into worſe diſaſters, their mothers make no ſcruple to bargain with a poor girl's father or mother to have her for the uſe of their ſon, at a certain rate to be paid monthly or yearly, as they can beſt agree.

The carnival commences here the ſecond holiday in Chriſtmas, when they begin to wear maſks, and open the theatres and gaming-houſes. The maſquerade dreſs at Venice conſiſts of only a night-gown or a cloak, with a maſk on the face. In the beginning they act with ſome moderation, but the nearer they come towards Shrove-Tueſday, the more their madneſs increaſes. Theſe extravagances are allowed by the ſenate of Venice, to divert the people from feeling the heavy burthen of their government, which without ſuch amuſements would be intolerable. Beſides, the vaſt number of ſtrangers who come to Venice from all parts, to ſee the diverſions of the carnival, brings great ſums of money to the city. "I was credibly informed, ſays Mr. Miſſon, that during "the laſt carnival there were no leſs than ſeven ſovereign "princes, and thirty thouſand other foreigners." The general uſe of maſks prevents a ſtranger from making any acquaintance at this ſeaſon, and likewiſe from ſeeing any curioſities; for no perſon is permitted to go into a church or convent in any diſguiſe.

Their eunuchs make a prepoſterous figure in their operas; for it appears very odd to ſee one of theſe mutilated fellows act the part of a bully, and another with his withered wrinkled face repreſenting a young lover; and in every opera a buffoon intermixes his fooleries with the moſt ſerious and tragical parts. Their comedies are ſo ridiculous, that in other places they would ſcarcely paſs for tolerable farces; for Harlequin is commonly the head actor; and to make the ſpectators laugh, his grimaces are backed with the coarſeſt and moſt vulgar obſcenity.

The aſſemblies where they play at baſſet are called Ridottos. Ten or twelve rooms may be ſeen with gaming tables in each, crowded with ladies of quality, gameſters, and courtezans. They have alſo certain rooms where liquors and ſweetmeats are ſold. Every perſon thus maſked, provided he be well dreſſed, has the liberty of talking to the ladies of the higheſt quality; nobody, not even the huſband himſelf, taking notice of what is ſaid to his wife, becauſe the maſk is ſacred; but this ſometimes gives occaſion to an intrigue, in a place where the ſcarcity of opportunities enables them to do more execution with the wink of an eye, than in other countries by a long courtſhip. The chief place of maſquerading is St. Mark's ſquare at Venice, where you may aſſume what diſguiſe you pleaſe, provided you ſupport the character. The Harlequins ridicule one another very handſomely, and thoſe who perſonate doctors hold learned diſputes; but ſuch as have no inclination to venture upon theſe engagements, may appear in the habit of a nobleman, or in ſome foreign dreſs, and be only ſpectators; but all the maſkers muſt be without ſwords.

They encourage here, likewiſe, during the carnivals and fairs, a ſet of ſtrolling gypſies, who have a little ſtage, to which they draw the gazers to them by their ſhews and a peculiar eloquence they diſplay in favour of their art in telling fortunes. They are furniſhed with a kind of tube made of tin about ten or twelve feet long, and

and thoſe who have a mind to conſult them, need but throw them a fifteen-penny piece, and clap their ear to one end of the tube, and immediately the gypſy at the other end whiſpers to them and reſolves their queſtions. To raiſe the higher idea of their abilities, theſe impoſtors place on their little ſtages ſome paltry globes, and other aſtronomical inſtruments.

It muſt not be omitted that the carnival is not the only time when maſks are in requeſt at Venice, there being no feaſt where they are not uſed more or leſs: as at the audiences of ambaſſadors; on Aſcenſion-day, &c. all which are very profitable to the watermen, who, knowing all the turns and bye-ways, keep a correſpondence with the waiting-women, and for a good reward will furniſh a ladder of cord for an intrigue; one of their main buſineſſes being pimping. The Venetian gondolas may be hired either from place to place, by the hour, or by the day; and one of the beſt of them may be had for five or ſix ſhillings a day. They are prettily contrived, and very light. They are generally thirty or thirty-two feet long, and four or five broad, and a perſon may ſit in them much at his eaſe, under a cover like that of a coach, with glaſſes on both ſides. The boatmen are very dexterous in their buſineſs, and manage their oars with ſurprizing facility, ſtanding with their faces towards the place to which they are going. All the gondolas muſt be black, and even the little room is generally covered with black cloth or ſerge; but foreigners are not confined to this rule. The gondolas, particularly of the ambaſſadors, are extremely magnificent.

Among the ſeveral ſhows that are annually exhibited, there is one performed on Holy Thurſday, which is peculiar to the Venetians. A ſet of artizans, by the help of ſeveral poles laid acroſs each other's ſhoulders, build themſelves up into a kind of pyramid, ſo that there is ſeen a pile of men in the air of four or five rows riſing one above another; and yet the weight is ſo equally diſtributed, that every man is able to bear his part of it. The ſtories, if they may be ſo called, growing leſs and leſs in proportion as they advance higher, till a little boy repreſents the point of the pyramid, who, after ſtanding thus a ſhort time, leaps with great dexterity into the arms of one who catches him at the bottom; and in the ſame manner the whole edifice falls to pieces. This trick was, however, practiſed by the Romans.

Mr. Keyſler obſerves, that if a traveller cannot contrive to be at Venice in carnival-time, he would adviſe him to be there about Holy Thurſday; or if one of the two muſt be omitted, he ſays it ſhould be the carnival: for the feſtival of the Aſcenſion affords all the diverſions of the carnival, as maſquerades, operas, &c. except the ridottos and the diſſolute revels about the cloſe of the latter. But to a perſon of any taſte the loſs of thoſe extravagant feſtivities is ſufficiently compenſated by the delightfulneſs of the ſeaſon, the annual fair, and the ſolemnity of the doge's marriage with the ſea. The annual fair begins on the Sunday before Aſcenſion-day, and laſts till Whitſunday. During this fair St. Mark's ſquare is taken up with booths ſo arranged as to form ſeveral ſtreets. On Aſcenſion-eve veſpers are performed with great pomp and ſplendor, and the pretended miraculous blood of Chriſt, with other remarkable relics kept in St. Mark's treaſury, are expoſed to public view in the great church dedicated to that ſaint.

In this republic the power is lodged in the hands of the nobility, who are ſaid to amount to near two thouſand, including thoſe whoſe public employments in the provinces oblige them to reſide out of Venice. On the birth of the ſon of a nobleman his name is entered in the golden book, otherwiſe he forfeits his nobility. Every noble is a member of the ſenate, on which account it is a received maxim, that they are all of equal dignity; yet there is a conſiderable difference between the intereſt and authority of families. To the firſt claſs belong the antient houſes whoſe anceſtors choſe the firſt duke, and from thence are called *le caſe eletterali:* theſe conſiſt of twelve families, and on them preferably to others are conferred the higher offices. There are four other families who pretend to an equality with theſe, they being very little inferior to them in point of antiquity. Next follow eight houſes nearly of the ſame antiquity. Duke Gradenigo having paſſed a law that the council ſhould for ever conſiſt of the families of which it was then compoſed, and ſome others which he ennobled; this produced a ſecond claſs of nobility, which conſiſts of upwards of eighty families, and with theſe are alſo included the deſcendants of thoſe who were raiſed to nobility after the Genoeſe war, on account of their large contributions towards carrying it on with vigour. The third and laſt claſs is compoſed of the citizens whoſe nobility has been purchaſed for a hundred thouſand Venetian ducats; a reſource which the republic has made uſe of in neceſſitous times for raiſing money. Crowned heads, with German and other princes, have thought it no degradation to be made nobles of Venice.

The nobility, as the counts and marquiſes in the territories of the republic, though ſome of them are of very antient families, are now under great reſtrictions, to prevent their attempting any thing to the detriment of the ſtate. They are excluded all offices, and at Venice muſt ſhew a due deference and proper reſpect for the meaneſt noblemen, as one of their ſovereigns.

In order as much as poſſible to prevent all intrigues in the election of a doge, the ceremony is conducted in the following manner: Upon the deceaſe of a doge the nobles above thirty years of age meet in the palace of St. Mark, where a number of balls equal to that of the perſons preſent, are put into an urn. Thirty of theſe are gilt, and the others ſilvered over. Every noble, according to his ſeniority, draws a ball; and they who have drawn the thirty gilt balls retire into a private room to continue the election; but in drawing the gilt balls, leſt more than one perſon of a family ſhould happen to be appointed electors, the relations of him who drew a gilt ball are obliged to withdraw, and the ſame number of white balls are taken out of the veſſel. After this the thirty electors who had drawn the gilt balls draw from another urn in which are twenty-one ſilvered and nine gilt balls: they who draw the gilded chooſe forty other electors, all of different families, but are allowed to name themſelves of the number; and each of the four who drew firſt has a right of nominating five electors; but the five others can name only four each. Theſe forty electors are again by lot reduced to twelve, who name twenty-five; the firſt nominating three, and each of the other two. Theſe twenty-five draw lots a ſecond time to be reduced to nine, and of theſe nine each chooſe five others; and from the total forty-five, eleven are again ſeparated by lot, who chooſe forty-one others, who are confirmed by the grand council, and being locked up in a particular apartment of the ducal palace, there remain till they have choſen a new doge. The reſult of their determination is generally known in ſix or eight hours, and all the foregoing ceremonies ſeldom take up more than two days.

In order to render the election of a doge due and legal, it is neceſſary that out of the forty-one he ſhould have twenty-five votes. His election is followed by a kind of coronation, the ducal cap being placed with great ceremony on his head, on the upper ſtep of the entrance into St. Mark's church.

The doge of Venice has little more than the ſhadow of greatneſs, and has been juſtly defined to be in habit and ſtate a king, in authority a counſellor, in the city a priſoner, and out of it a private perſon. He is not ſo much as to ſtir from the city without the council's permiſſion; it is not in his power to pardon a criminal; all his counſellors have a conſtant eye over his actions, and may viſit his cloſet every hour: he is as much ſubject to the laws as the meaneſt perſon, and when he dies there is no public mourning.

Were it not an evident truth that the human heart is apt to be fond of external ſplendor, it might be concluded that the dignity of a Venetian doge, under ſuch diſagreeable circumſtances, would be rather avoided than eagerly ſought after. The ſtate and revenue of the doge on all public occaſions is indeed very magnificent. He is the preſident of all councils; and in the great council has two votes. All the courts ſtand up in his preſence, and pay their obeiſance to him. On the other hand, he never riſes from his ſeat, nor takes off his cap, except at the elevation of the hoſt, before a prince of royal blood,

or

or a cardinal, to whom he alſo gives the right hand. His name is alſo ſtamped on the republic's money. All the credentials of the republic's miniſters to foreign courts are made out in his name, though they are neither ſigned nor ſealed by him. The letters of the republic's miniſters, and other inſtruments from foreign princes, are directed to him; yet he is not to open them, but in the preſence of ſome of the council. He has the diſpoſal of all preferments in St. Mark's church, of which he is inveſted with the entire juriſdiction; and the knights of St. Mark are created by him alone. He likewiſe fills up the lower offices belonging to the palace: and laſtly, his family is not ſubject to any ſumptuary laws. His annual income is twelve thouſand Venetian ducats: of this ſum he muſt ſpend one-half on the four grand entertainments he is obliged to give every year; and to live up to his dignity, he muſt alſo ſpend conſiderably of his own fortune.

Among the other reſtrictions are the following: During his life none of his children or brothers can hold any of the great honorary offices, nor be ſent on embaſſies. He is not to marry the ſiſter or relation of a prince, without the conſent of the great council; nor can he receive any preſent from a foreign prince. In ſtate affairs he cannot tranſact the leaſt matter without the council; nor can he reſign, though he may be depoſed. In general his authority is no greater than that of a private perſon, except he has ſuch abilities as to influence the whole council; then indeed his authority bears the ſway; but ſuch perſons are ſeldom choſen. On his death a formal enquiry is made whether he has abuſed his power; whether from a care of his own concerns, he has neglected thoſe of the public; whether he lived agreeably to his dignity, &c. If found guilty of the things laid to his charge, his heirs are fined in proportion to the nature of the crime. Notwithſtanding all this, the ducal dignity is ſolicited, and the perſon duly elected is not to decline it.

On Aſcenſion-day, the doge, or in caſe of his illneſs, the vice-doge, who is always one of the ſix conſiglieri, performs the annual ceremony of marrying the Adriatic Sea in a barge pompouſly gilt and carved. At about ten in the morning, the ſignal being given by the firing of great guns, and the ringing of bells, he goes on board the bucentaur, and accompanied by ſeveral thouſand barks and gondolas, a great number of gallies finely ornamented, and the ſplendid yachts of foreign ambaſſadors, is rowed out to ſea, about two hundred paces towards the iſlands of St. Lido and St. Eraſmo. The patriarch and dignified clergy come on board the bucentaur, and preſent the doge and ſignoria, as they paſs, with noſegays or artificial flowers, which, at their return, they make preſents of to their acquaintance. The doge at his putting off and return is ſaluted by the cannon of a fort on the Lido, and by thoſe on the iſland Eraſmo, and with the ſmall arms of the ſoldiers, who are drawn up along the Lido ſhore. Theſe iſlands lie about two Italian miles from the city; and an eminence on the iſland of Lido affords a diſtinct view of this pompous proceſſion, and of the vaſt number of boats, &c. which cover the ſurface of the water, and make a beautiful appearance. In the mean time ſeveral hymns are performed on board the bucentaur, by the band of muſic belonging to St. Mark's church, and ſeveral prayers appointed for the occaſion are read or ſung, till the doge has paſſed the two forts of Lodo and St. Eraſmo; and then he proceeds a little farther towards the Lodo ſhore, the ſtern of his barge being turned towards the main ſea.

Here the patriarch pours into the ſea ſome holy water, which is ſaid to have the virtue of preventing and allaying ſtorms. After this the doge, thro' an aperture near his ſeat, drops into the ſea a gold ring of a few dollars value, ſaying, in Latin, "We eſpouſe thee, O ſea, in token of our "real and perpetual dominion over thee." After this all return, and the doge with his company is ſet aſhore near the church of St. Nicholas, in the iſland of Lido, where the patriarch in perſon celebrates a ſolemn maſs. In the evening the principal members of the council, and all who waited upon the doge in the bucentaur, are entertained at the ducal palace.

The bucentaur is a kind of galleaſs, a hundred feet in length, and twenty broad. It has forty-two benches for the rowers, which are concealed under the two great cabins, and on every bench are four rowers. It is not manned with galley ſlaves, but with men belonging to the arſenal, who on this occaſion are allowed extraordinary pay. The bucentaur is never brought out of the arſenal but for theſe eſpouſals; it being there kept dry under cover, from whence it is launched about eight days before Aſcenſion-day, and remains on the water about eight days after the ceremony. The ſculpture on this veſſel repreſents the Pagan ſea-gods, water-nymphs, ſea-monſters, ſhells, &c. with the ſtatues of Juſtice, Truth, Fidelity, Vigilance, Peace, Plenty, Apollo, and the nine Muſes, the twelve months, and ſeveral other emblematical figures. The gilding coſt ten or twelve thouſand ſilver ducats. It is true, the bucentaur, ſays Mr. Keyſler, is very beautiful in its kind, yet it muſt be owned that the king of Great Britain's chief yacht makes a much more ſplendid and noble appearance, though it did not coſt near ſo much as the former.

In the grand council all nobles of twenty-five years of age may take their place. It uſually meets on Sundays and holidays in the large hall of the ducal palace.

The ſenate, or pregadi, are a committee of the grand council, by whom they are choſen, and have the management of the moſt ſecret and important affairs of ſtate, as the making of alliances, declaring war, concluding peace, coining money, impoſing taxes, &c. They conſiſt of ſixty ordinary, and as many extraordinary members; beſides the nine procurators of St. Mark, the *collegium*, the doge's ſix counſellors, the *il conſiglio di dieci*, the cenſors, the judges *della quarantia criminale*, and other inferior judges; ſo that the whole ſenate conſiſts of about three hundred perſons.

Mr. Addiſon obſerves, that among all the inſtances of their politics, there is none more admirable than the great ſecrecy that reigns in their public councils. "The "ſenate, ſays he, is generally as numerous as our houſe "of commons, if we only reckon the ſitting members, "and yet carries its reſolutions ſo privately, that they "are ſeldom known till they diſcover themſelves in the "execution. It is not many years ſince they had before "them a great debate concerning the puniſhment of one "of their admirals, which laſted a month together, and "concluded in his condemnation; yet was there none "of his friends, nor of thoſe who had engaged warmly "in his defence, that gave him the leaſt intimation of "what was paſſing againſt him, till he was actually "ſeized, and in the hands of juſtice."

The next council is the *collegium*, in which all public inſtruments directed to the ſtate and doge are read; audiences given to foreign miniſters, and other important affairs tranſacted. It conſiſts of the doge, his ſix counſellors, the three preſidents of the court of forty, the ſix chief officers of ſtate, &c.

Of theſe three great aſſemblies, the preſidentſhip is lodged in the *ſignoria*, or *il conſiglietto*, compoſed of the doge and his ſix counſellors, who conſult on all matters to be laid before the grand council; open all foreign letters directed to the doge and the republic; receive petitions; and, in concert with the doge, carry many particulars into execution. This council is annually changed, and when the doge is indiſpoſed, one of them is always vice-doge.

The procurators of St. Mark have not only the inſpection of the church of St. Mark, its library, and the records of the republic; but likewiſe manage all affairs relating to the poor; together with wills, guardianſhips, the redemption of the Chriſtian ſlaves, and bringing over rigid creditors to a reaſonable compoſition. Their number never exceeds nine; they hold their office during life, and out of them the doge is generally choſen. The titular procurators of St. Mark are more numerous, the republic in a ſcarcity of money ſelling theſe titles.

The *conſiglio di dieci* is a high penal court, which conſiſts of ten counſellors; the doge, who is preſident; and his ſix conglieri. Every quarter of a year three preſidents of it are choſen.—The judgment of this court is without appeal, and it is much dreaded for its ſeverity. It is the ſtrong cement which ſecures the whole ariſto-

cracy, it being chiefly inſtituted for the nobility, and its power extends even to the doge himſelf.

The ſtate-inquiſition conſiſts of three preſidents, who keep a very watchful eye over the ſafety of the republic; and their ſagacious and vigilant attention to every thing relating to the ſtate is ſo great, that to avoid the ſuſpicion of any evil deſign againſt the government, it is abſolutely neceſſary for every prudent perſon to be extremely circumſpect, and to obſerve an almoſt ſlaviſh caution in ſpeaking and acting. Theſe inquiſitors keep the keys of cheſts placed in ſeveral parts of the ducal palace, and ſhut up within the open jaws of lions heads carved in the walls; through which notes are conveyed into them by any one who pleaſes: and thus notice is ſecretly given to the republic of whatever may concern it to know. Such informations need not be ſigned, and are therefore generally anonymous; but if a reward is expected, the informer may at any time make himſelf known, by producing a piece of paper torn from the billet put into theſe *denuncie ſecrette*, as they are called, ſo as to tally with it. But what ſtreſs is to be laid on ſuch ſecret informations, which gives ſuch ſcope to malice and malevolence to ſpit their venom, belongs to the prudence of the inquiſitors to determine.

As the *conſiglio dieci* is peculiarly erected for the nobility; ſo the *quarantia criminale*, or the penal inferior court, takes cognizance of all other ſubjects of the ſtate.

The holy inquiſition, falſely ſo called, and which is ſo formidable in other Popiſh countries, is here confined by the republic within narrow bounds; but of this court we ſhall take farther notice, in treating of the religion of the Venetians.

There is a particular college, as hath been already intimated, to whoſe care the regulation of dreſs is committed by the republic. None are exempted from the juriſdiction of this college, but noblemen's wives for the firſt two years after their marriage, and ſtrangers. The former are however no farther indulged, than in wearing a pearl necklace, and a gold fringe at the bottom of their gowns, and in giving their gondoliers ribbons to wear in their caps. But here alſo, as in other countries, the women are, in this reſpect, connived at, particularly the courtezans, who readily find patrons, under whoſe protection they treſpaſs againſt this ſumptuary law with impunity; though there is ſometimes an inſtance of one or two being fined on that account. It is probably owing to the great number of perſons who offend againſt this law, that it is not ſtrictly put in execution.

The ſmaller arms of the republic are azure, a winged lion, or, with a book opened, argent, on which are theſe words, PAX TIBI, MARCE, EVANGELISTA MEUS, that is, "Peace to thee, Mark, my evangeliſt," St. Mark being the patron of Venice. The ſhield is ſurmounted by the ducal cap. The large and complete ſhield is compoſed of the arms of the ſeveral provinces and dependencies of the republic.

The principal order of knighthood is that of St. Mark; the badge of which is a large gold medal pendent on the breaſt. On one ſide is either the name of the reigning duke, or his image, with St. Mark delivering a ſtandard to him: on the other a winged lion, holding in one paw a naked ſword, and in the other a book with the above words.

The order of the Conſtantine knights have a croſs hanging from a gold chain. The reſidence of the grand maſter is at Briana near Venice.

With reſpect to the ſtate of religion, that eſtabliſhed by law is the Roman catholic; but Greeks, Armenians, and Jews are allowed the public exerciſe of their worſhip in the countries of the republic, and Proteſtants obſerving privacy remain unmoleſted. The pope, after a long oppoſition, has obtruded on the republic a court of ſpiritual inquiſition, the members of which are the pope's nuncio, the patriarch of Venice, an inquiſitor, and three lay-aſſiſtants; but the republic has ſo curtailed its power, that nothing can be tranſacted without the aſſiſtants, who lay before the republic every caſe of moment. Jews, Greeks, caſes of blaſphemy, ſuppoſed magic and ſorcery, uſury, and the cenſure of books, are not cognizable by this court, but by the civil magiſtrate; and the pope's bulls and briefs before they are made public undergo an examination, leſt they ſhould contain any thing contrary to the laws and liberties of the ſtate.

At the head of the church is the patriarch of Venice, who is always a noble Venetian, choſen by the ſenate, and though confirmed by the pope, is independent of the papal chair. He is primate of Dalmatia, and of ſome provinces of the continent; alſo metropolitan over the archbiſhops of Candia and Corfu, and the biſhops of Chiozza, Torcello, and Caorle: yet his power is very inconſiderable, he having only the diſpoſal of two benefices in the city of Venice, and being little regarded by the clergy out of it, who depend immediately on the ſenate.

The territories of the republic are under governors choſen out of the nobility, who are changed at the expiration of a certain term of years.

The annual revenue of the republic is computed at eight millions two hundred thouſand Venetian ducats. In war time both the nobles and the other ſubjects, even the doge himſelf, contribute in proportion to their incomes towards defraying the expences of the ſtate.

In the army the republic make little uſe of ſuch of their ſubjects as live under heavy oppreſſions: the flower of the infantry conſiſts of thirteen regiments of Dalmatians, men of great reſolution, but more expert in the exerciſe of the ſword than fire-arms. The Swiſs, on occaſion, furniſh ſix thouſand men, paid by the republic. If public accounts may be relied on, the whole army conſiſts of twenty-eight thouſand nine hundred ſeventy-ſeven men, over which is a field-marſhal, or commander in chief, who is always ſome foreign general of diſtinguiſhed reputation; but with him are joined two ſenators, without whoſe conſent he can do nothing.

The naval force of the republic is ſaid to conſiſt of fourteen men of war, twenty galleaſſes, and twenty-five gallies, commanded by a captain-general, who is always one of the prime nobility.

The dominions of Venice conſiſt of thoſe in Italy, of a conſiderable part of Dalmatia, of four towns in Greece, and of the iſlands of Corfu, Pachſu, Antipachſu, Santa Maura, Curzolari, Val di Compare, Cephalonia, and Zante.

The Venetian territories in Italy contain the dutchy of Venice, the Paduaneſe, the peninſula of Rovigo, the Veroneſe, the territories of Vicenza and Breſcia, the diſtricts of Bergamo, Cremaſco, and the Marca Trevigiana, with part of the country of Friuli. We ſhall begin with the dutchy of Venice, the principal place in which is the city of the ſame name.

Venice, in Italian Venezia, and in Latin Venetia, the capital and ſeat of the republic, is ſituated in latitude forty-five degrees forty-ſix minutes, and in thirteen degrees ten minutes eaſt longitude, and makes a very noble appearance at a diſtance, it ſeeming from its being built on a multitude of very ſmall iſlands, to float on the ſea, or rather, with its ſtately buildings and ſteeples, to riſe out of it. The number of theſe iſlands ſtill remains uncertain, ſome reckoning ſixty, others ſeventy-two, and others again maintaining that they amount to one hundred and thirty-eight; but the latter muſt comprehend in the calculation all thoſe places that have been gradually raiſed in the Laguna, by driving piles in the ground, and building on them.

The Laguna, or marſhy lake, which lies between the city and the continent, is five Italian miles in breadth, and too ſhallow for large ſhips: by the attention of the republic it is prevented from becoming a part of the continent, and from being ever frozen ſo as to bear an army; hence the city is inacceſſible on that ſide. Towards the ſea the acceſs is alſo difficult; but the ſafe and navigable parts are pointed out by piles, which at the approach of an enemy's fleet may be eaſily cut away. Beſides, as a conſiderable number of men of war and gallies may be expeditiouſly fitted out for ſea from the dock, which contains vaſt quantities of naval ſtores, the city is ſecure from any attack either by land or water, and is ſtrong enough without fortifications. The fiſh, which are caught at the very doors of the houſes, may be eſteemed a good preſervative againſt a famine, and the ſeveral canals lead-

ing to the city, between the ſand banks and marſhy ſhallows, are at a vaſt expence kept clear of the mud and ſlime brought with the flood. The return of the ſea is ſomething later here than every ſixth hour, and it generally riſes between four and five feet, keeping the water between the iſlands of the city in continual motion: but ſome of theſe canals being very narrow, the mud is not ſo effectually carried off as to prevent ill ſmells in hot weather.

The great canal, which winds in a ſerpentine form through the city, dividing it into two parts, is one thouſand three hundred paces long. The beſt way of going up and down the city is in gondolas, which glide ſwiftly on theſe canals: but Mr. Keyſler remarks, that as they are painted black, and lined with black cloth, or ſerge, they have a gloomy appearance; and the awning being ſo low that a perſon cannot ſtand upright in the gondola, when a ſtranger gets into one of them, it ſeems as if he was creeping into a hearſe or tomb hung with black. The left ſide is always in theſe vehicles accounted the moſt honourable and eminent, becauſe he who ſits on the right muſt face the rower, who intercepts the view, and ſometimes unavoidably ſplaſhes him.

Over the ſeveral canals are laid four hundred and fifty, and ſome ſay above five hundred bridges, great and ſmall, moſt of them of ſtone: the higheſt and longeſt is the Rialto, which in the midſt of the city croſſes the great canal at its narroweſt part, where it is but forty paces broad. This bridge conſiſts of only one ſingle arch, whoſe foundation takes up ninety feet, reſting on twelve thouſand elm piles. It is every where incruſted with marble, and is ſaid to have coſt the republic two hundred and fifty thouſand ducats. In the upper part it is thirty-ſeven common paces broad, with two rows of ſhops, forming, as it were, three ſtreets, of which that in the middle is the wideſt; and at each end is an aſcent of fifty-ſix ſteps. The city may indeed be every where traverſed on foot, but the ſtreets are very narrow, and the pavement of free-ſtone very ſlippery in wet weather; and, at the ſame time, the many ſmall bridges with their ſteps are not a little troubleſome and dangerous, very few of the bridges having any fence on either ſide.

The city of Venice is about ſix Italian miles in circumference, and contains ſeventy pariſh churches beſides others, fifty four convents of monks, twenty-ſix nunneries, ſeventeen rich hoſpitals, eighteen oratories, forty religious fraternities with their chapels, fifty-three ſquares, one hundred and ſixty-five marble, and twenty-three braſs ſtatues. The buildings are indeed all of ſtone, but the greater part make a very mean appearance; ſo that the city, in point of beauty and elegance, is inferior to many others. It is true St. Mark's ſquare is very fine, as are alſo the ſeveral ſtately marble palaces that border upon the great canal, though moſt of them are of Gothic architecture. In the churches and convents the paintings are moſt admirable; for in theſe Venice ſurpaſſes even Rome itſelf. Here are alſo two academies of painting. The number of inhabitants has been computed at two hundred thouſand. Theſe inhabitants are the nobility and the citizens, after whom may be reckoned the lawyers, notaries, phyſicians, wealthy merchants, glaſs-makers, and all handicraftſmen, whether dwelling in the city or the more diſtant iſlands, together with the ſeafaring people and the gondoliers.

This city, from the fertility of the country in its neighbourhood, and the facility of carriage, enjoys a conſtant plenty of all kinds of proviſions. The ſpring-water being very indifferent in moſt places, almoſt every houſe has a ciſtern, into which the rain water is conveyed from the roof, and clarified by being filtrated through ſand. Water is alſo brought from the river Brenta, and preſerved in the ciſterns.

From this general ſketch of the city, we ſhall now proceed to a particular deſcription. It is divided into ſix large parts, of which the three firſt lie on the eaſt and north ſide; and the three others to the weſt and ſouth of the great canal, which, as we have already obſerved, divides the city into two principal parts.

The firſt named Seſtiera St. Marco, particularly contains St. Mark's ſquare, with the adjacent buildings. This ſquare, which is the pride of the city, is on the ſhorteſt ſide two hundred and forty paces long, and ſeventy-five broad, from the ducal palace ſouthward of the canal Della Giudeca. The longeſt ſide runs in a direct line from eaſt to weſt between the churches of St. Mark and St. Geminiano, near 180 feet. In the upper part, or at the firſt church, it is one hundred and twenty-ſix paces broad on both ſides, excluſive of the piazzas; but in the lower part, or at the ſecond church, only eighty-nine. The ducal palace, towards the water-ſide, and St. Mark's palace, are entirely Gothic; but on the ſide of the ſmall canal and in the court, of tolerable good modern architecture, and is moſtly of marble. This ſtructure not only ſerves for the reſidence of the doge, but alſo for the meeting of the council. The fineſt ornaments in the council-chamber and other apartments, are the paintings of the great maſters; particularly in the middle of the ceiling of the council-chamber, the republic of Venice is repreſented above the clouds, and ſurrounded with a multitude of gods, while the tritons and nereids, at Mercury's command, bring ſhells, coral, pearls, &c. and preſent them to her, as the queen of the ſea. This is one of Tintoretto's beſt pieces; and in one of the apartments is another piece by the ſame maſter, in which Jupiter, with ſeveral other gods, conduct Venice, in order to lay the foundation of her power and grandeur in the Adriatic ſea; in which the artiſt has imitated the ancient pagans, in giving the god ſuch a glory round his head, as is uſually painted round that of our Saviour. But the fineſt piece among all the paintings in this palace, is the taking of the fortreſs of Zara.

In the palace is alſo a ſmall arſenal, where a conſiderable number of loaded muſkets are always kept in readineſs, that in caſe of an inſurrection of the people, the doge and the nobility may make uſe of them for their defence; for this purpoſe the council-chamber has a communication through a door with the armoury, and every three months theſe pieces are freſh loaded. Among other curioſities in this arſenal are two little ſtatues of Adam and Eve, cut with a knife in an uncommon kind of wood, by Albert Durer, during his confinement, for which he was rewarded with his liberty. Here is alſo a moſt curious lanthorn of rock cryſtal, for which a yearly penſion of four hundred ducats was ordered to the inventor, and his heirs to the fourth generation. On the ſteps in the court of the palace ſtand two marble ſtatues of Mars and Neptune. Towards St. Mark's church is alſo another of Francis Maria duke of Urbino, and at the church two others of Adam and Eve.

The lower gallery of the palace on the ſide oppoſite St. Mark's ſquare, together with the hall under the New Procuratie, is called the Broglio. Here at a certain hour of the day the nobility walk, and no Venetian of an inferior rank muſt be ſeen there; though a foreigner, being ſuppoſed to be unacquainted with the cuſtom, is not deſired to quit the place. That part of St. Mark's ſquare between the two buildings and the piazza receives an additional ornament from two pillars of oriental granate, on one of which ſtands St. Mark's lion in braſs, and on the other a marble ſtatue of St. Theodore. Between theſe is the place for the public execution of malefactors, through which no nobleman is ſeen to paſs. A galley compleatly rigged and armed lies cloſe to the Broglio, for the defence of the ducal palace, on any ſudden emergency.

Contiguous to the north part of the doge's palace is St. Mark's church, which is alſo ſtiled the doge's chapel. Its materials juſtly intitle it to be called magnificent, it being both on the out and inſide covered with fine marble: but the architecture is entirely Gothic. The beſt part of it are the Moſaic paintings, and the four horſes of braſs, which were formerly gilt, ſtanding over the great door, and ſaid to have been brought from Conſtantinople. Theſe are univerſally allowed to be maſterpieces. The treaſury of the church is very rich in gold and jewels, and here is a famous manuſcript of the Goſpel of St. Mark; but the dampneſs of the place has ſpoiled it to ſuch a degree, that it is ſo far from being legible, that it is not certain whether it be written in Latin or Greek. Before the church are two large maſts fixed on braſs pedeſtals, on which in feſtivals ſilken flags are hoiſted.

Oppoſite

Oppoſite the ducal palace is a fine new building, called the Procuratie Nouove, which takes up an entire ſide of St. Mark's ſquare. In it may be ſeen the public library and muſeum of antiquities. The former is only prized for the collection of Greek manuſcripts left to the republic by cardinal Beſſarion: but in the muſeum one cannot ſufficiently admire the multitude of Greek and Roman marble ſtatues, all highly finiſhed. Adjoining the Procuratie Nouove is the Procuratie Vecchie, which takes up the other ſide of St. Mark's ſquare as far as St. Geminiano's church. Theſe buildings are called procuraties, from the procurators of St. Mark's church reſiding in them. Facing the angle formed by the New Procuratie ſtands an inſulated ſquare tower three hundred and eighteen feet high, and the aſcent within is ſuch that one may ſafely ride both up and down. On the ſpire at the top ſtands an angel of wood ſixteen feet high, covered with gilt braſs.

The principal churches in this diviſion are thoſe of St. Moſes and St. Maria Zobenigo. Of the palaces by the great canal, one of the moſt ſtately is that of Peſaro. This quarter has a communication by a bridge with that of St. Pauolo over the Rialto, and near it is the German-houſe, in which are mercantile goods conſigned to or from Germany, and in it the Proteſtants perform divine ſervice.

The next diviſion, called Seſtiere de Caſtello, contains the magnificent churches of St. Zaccaria, St. Giovanni e Paolo, with the neighbouring Dominican convents, the Scuola di St. Marco, the hoſpital li Mandicanti with its church, St. Giuſtina, St. Franceſco della vigna, St. Pietro de Caſtello, called the patriarchate, and the ducal ſeminary. Here is alſo the celebrated arſenal, or dock, which is two Italian miles and a half in circuit, walled and moated, with twelve towers along its walls, and within the encloſure a great varity of buildings, in which every thing requiſite for a land or ſea armament is kept in readineſs. Theſe buildings conſiſt of an armoury, ſtore-houſes for iron-work, oars, cordage, bullets, tar, hemp, canvas, guns, &c. A rope-houſe, a ſalt-petre-houſe, ſmiths forges, a foundery, baſons, and ſlips for building of ſhips and gallies. Within it lie the men of war, frigates, gallies, galleaſſes, and galliots. The workmen commonly amount to upwards of a thouſand; they conſtantly live in the dock, and moſt of them were born there.

The third diviſion of the city is named the Seſtiere di Canale Regio, and has many churches, one of the fineſt of which is the Padri Gieſiti, or Jeſuits. This ſtructure has a ſuperb front, adorned with a profuſion of ſtatues and fine columns, and the ornaments within this edifice are anſwerable to its outward beauty and elegance. The walls between the pillars, the great altar, and the pulpit, are of white marble inlaid with green, and embelliſhed with flowers. The great altar has ſixteeen twiſted columns of white and green marble. The ſteps and the pavement before it are of yellow and green marble, and reſemble a beautiful carpet. The tabernacle is of lapis-lazuli. Among the multitude of other fine pictures with which this church is adorned, the moſt admired are the martyrdom of St. Lawrence, by Titian; the circumciſion and aſcenſion, by Tintoretto; the beheading of John the Baptiſt, by old Palma; and the Virgin Mary viſiting her couſin Elizabeth, by Andrea Schiavone. The veſtry is entirely painted by Palma.

In this diviſion is alſo the theatre, and in this quarter live the Jews, who amount to about fifteen hundred, and are diſtinguiſhed by their being obliged to wear a bit of red cloth on their hats.

The fourth diviſion of the city contains nothing remarkable.

The fifth, called the Seſtiere di St. Pauolo, contains the exchange, the bank, the Franciſcan church, the ſplendid chapel of St. Anthony, &c.

And the ſixth, named the Seſtiere di Dorſo duro, has many magnificent churches, adorned with the moſt beautiful ſculpture and paintings.

Round the city of Venice are a conſiderable number of ſmall iſlands, ſome of which have handſome gardens, walks, and beautiful churches. One of the principal of theſe is St. Murano, a populous iſland about a mile from Venice, and has its own magiſtrates, but, like the reſt, is under the juriſdiction of the city. In it are fifteen churches, of which St. Peter's, the principal, belongs to the Dominicans. In this iſland the famous large looking-glaſſes are made, and other curious glaſs-work performed.

We have already mentioned many of the diverſions of the city; and ſhall here add, that among the moſt rational and agreeable are the excellent concerts performed weekly in the churches of the hoſpitals degl 'Incurabili and della Pietà. In the former they are chiefly vocal, and in the latter inſtrumental; and, what is moſt extraordinary, the performers in both are poor maidens.

The trade of Venice in cloth, eſpecially ſcarlet, ſilk ſtuffs, and looking-glaſſes, is ſtill very conſiderable. Here are alſo manufactured gold and ſilver ſtuffs, for which they have a good vent in the Levant; and likewiſe brocatellas, a kind of ſtuff like brocade, made of coarſe ſilk, and much uſed for carpets.

Having given a very particular account of the republic, we ſhall proceed to give a deſcription of the ſeveral countries ſubject to it.

SECT. XI.

The PADUANO, *or* PADUAN.

Its Situation and Extent, with a particular Deſcription of the City of Padua, and a conciſe Account of Abano and Rovigo.

THE Paduan, or territory of Padua, is called by the Italians Paduano, and is a part of Lombardy: it is bounded on the north by Treviſano, on the eaſt by the Dogado, on the ſouth by the Poleſino, and on the weſt by the Veroneſe and Vicentino; it extending about forty miles in length, and thirty-five in breadth.

This is one of the moſt fertile ſpots in Italy; and the country is adorned with a great number of beautiful villas and gardens: but it is ſubject to ſtorms, particularly thoſe that come from the ſea, which are extremely violent.

Padua, in Latin Patavium, is an antient and large city on the Brenta, ſituated in the forty-fifth degree thirty-ſix minutes north latitude, and in the twelfth degree twenty minutes eaſt longitude. The inhabitants boaſt that the republic of Venice owes its origin and riſe to their city; but it is now ſome centuries ſince Padua has been brought under the Venetian yoke, which has occaſioned it greatly to decline from its former ſplendor; ſo that at preſent it ſcarcely contains forty thouſand inhabitants. The ſtreets are narrow, ill paved, and dirty; but almoſt all the houſes ſtand upon porticos, under which one may walk without being incommoded either by the ſun or rain: this, however, renders the lower part of the buildings dark. The city contains twenty-ſix pariſh-churches, twenty-three convents of monks, eighteen nunneries, four good hoſpitals, and is a biſhop's ſee.

The principal church is that of the Franciſcans, dedicated to St. Anthony, on account of the exceſſive veneration paid by the Paduans to this ſuppoſed ſaint. It is built upon the ruins of a temple of Juno, and is very ſpacious, full of gold, ſilver, precious ſtones, paintings, gildings, ſculpture, and every other kind of magnificence. The pavement is of marble of various colours; the choir is adorned with white and red marble, and the benches, which are very fine, are embelliſhed over head with baſs reliefs in eighteen braſs pannels, by Sanſovin, repreſenting ſeveral paſſages of the life of Chriſt, and are very much admired: but the richeſt part of this church is the chapel, which contains his body, and is entirely lined with white marble. "In the chapel of this ſaint, ſays Key-"ſler, I ſaw burning above fifty large ſilver lamps, and "one of gold; together with two very large ſilver candle-"ſticks ſtanding on pedeſtals of white marble. St. An-"thony's coffin is of ſerpentine, and lies under the altar, "which is adorned with ſeven angels of bronze, and "ſome exquiſite ſculpture; and, indeed, the chapel has "in every reſpect but few equals. On one ſide of it are "ſhewn two wax flambeaux, eight or nine inches in "diameter,

" diameter, and fixed in iron-work. Theſe are ſaid to " have been offered by a treacherous Turk, with a de- " ſign to blow up the chapel, by means of fire-works " concealed in them; but it ſeems St. Anthony prevent- " ed the calamity; for theſe flambeaux being lighted, " he cried out aloud three times from his coffin, that " they ſhould be put out, which occaſioned a farther " examination of the flambeaux, and thus the villainous " plot was diſcovered. St. Anthony's remains are ſaid " continually to emit a moſt fragrant perfume, which " is chiefly ſmelt at a crevice behind the altar; and it " is ſaid that this perfume is ſtronger in the morning " than in the evening, whence ſome have inferred that " the cleft is rubbed with perfumes every morning, be- " fore the people are permitted to approach it. The " ſaint's tongue is kept with great devotion in a glaſs " vaſe in the veſtry, and very fervent prayers are offered " up to it."

The church of St. Juſtina, deſigned by Palladio, belongs to the Benedictine convent, which is ſaid to be poſſeſſed of an annual income of a hundred thouſand ducats, and is remarkable for being a handſome, luminous, and diſencumbered building; and is eſteemed by many artiſts one of the fineſt works in Italy. The long nave conſiſts of a row of five cupolas, and the croſs one has on each ſide a ſingle cupola, deeper and broader than the others. The martyrdom of St. Juſtina, done by Paul Veroneſe, hangs over the altar. The chief relics of this church are the ſuppoſed bodies of St. Luke and St. Matthias.

The magnificence of the convent, which is built of large ſquare free-ſtone, is anſwerable to the beauty of the church: it is a vaſt fabric that has ſix cloiſters, ſeveral courts, and many gardens. The refectory is very fine, extremely neat, and adorned with an excellent picture of Jeſus at Emmaus, by Titian: they alſo highly value a ſtatue of the Virgin Mary here, which they ſay was at Conſtantinople when the Turks made themſelves maſters of that city; but was ſo frightened by thoſe barbarians, that ſhe flew directly to Padua.

What they call the library is a very magnificent building, but very ill furniſhed with books, the cellars being much better ſtocked with hogſheads of wine. The Benedictines of St. Juſtina boaſt of having diſcovered in their garden the coffin of Titus Livius, and that this convent is built upon the ruins of an old temple of Concord, ſome ſay of Jupiter.

The ſquare near it is the largeſt in Padua, and was antiently called the Field of Mars: its preſent name is Prato della Valle, and it ſerves for the quality to walk in. There is a ſmall ſpot in this ſquare named Campo Santo, or the Holy Field, from the great number of Chriſtians who formerly ſuffered martyrdom there. The cathedral is a very old ſtructure, and has a revenue of a hundred thouſand crowns for maintaining twenty-ſeven canons, who muſt be all of noble extraction, with ſome chaplains and other officers. There are here the tombs of many great men, and the church is adorned with a great number of excellent paintings by the great maſters. Other handſome churches are thoſe of the Carmelites, St. Franciſco di Paola, the Theatines, and St. Maria della Gratie.

The univerſity founded by the emperor Frederic II. was formerly in great repute; but has for many years been ſo decayed, that the ſtudents now ſcarce make five hundred. No difficulty is made of burying a Proteſtant traveller in a church or convent, if before his death care has been taken to have his name entered in the matricula of the univerſity. In this ſtructure are the ſtatues and arms of a great number of illuſtrious perſons who were members of it. The anatomical theatre being ſomewhat dark, the diſſections are generally performed by candle-light. The library is a handſome building, and the phyſic-garden, though not large, is ingeniouſly contrived, and was the firſt of the kind belonging to any univerſity in Europe.

The chief civil edifice is the town-houſe; but its large hall is kept in ſo dirty a condition, that were it not for ſome monuments it contains it would not be worth ſeeing: on the outſide of the four gates are the ſtatues of four celebrated Paduans, namely Titus Livius, Albertus Patavinus, Petrus Aponus, and Paulus Patavinus. In the large hall juſt mentioned is a ſtone, which has a Latin inſcription, by which it is termed the ſtone of ignominy and bankruptcy. For ſuch as became bankrupt, and were unable to pay their debts, by ſitting publicly three times with their bare poſteriors on this ſtone, and ſwearing that it was not in their power to diſcharge their debts, were cleared from any farther proſecution from their creditors: but this extraordinary ceremony has been diſcontinued for upwards of ſixty years.

The podeſta, or chief magiſtrate's palace, which joins to the town-houſe, contains a great number of buſtoes, ſtatues, and arms of former podeſtas; and in it is alſo the city library.

The pallazzo del Capitaneo ſtands in a beautiful area called Piazza de Nobili. It is an elegant building, and the ſecond ſtory is adorned with a gallery, ſupported by ſeventy-three columns of red marble. The tower is alſo a good piece of architecture, and has a clock which ſhews both the courſe of the ſun and moon.

The antient palace of the tyrant Acciolini is remarkable for its ſpacious vaults, and at preſent ſerves both for an arſenal and granary: it has two towers, on one of which is a Latin inſcription to the following purpoſe:

" Shed tears of compaſſion on this priſon, where the " blood of your anceſtors was abundantly ſhed; for thoſe " whom the inhuman Acciolini thruſt down alive, " without any diſtinction of age, ſex, rank, or con- " dition, into this dungeon, periſhed with hunger, grief, " and deſpair. After ſuch numbers of innocent victims, " who were buried alive in this dreadful ſepulchre, it was " at laſt the juſt fate of the execrable tyrant himſelf to " expire in it. Hence you ought to be ſenſible of your " preſent happineſs, in having a prince who, from being " objects of pity and compaſſion, has rendered you ſo " happy as to be envied for your proſperity. This in- " ſcription was placed over this dreadful dungeon by Se- " baſtiano Galvani, a native of Padua, commiſſary of " the proviſions and military-ſtores lodged in this caſtle, " in the year 1618."

Among the pleaſure-gardens in Padua that of d'Andola, a noble Venetian, is one of the beſt, it being adorned with great numbers of ſtatues; but the Papafava gardens exceed it for orange-trees, cypreſs, and other evergreens, which are diſpoſed into fine walks, labyrinths, and beautiful hedges. Of the latter ſome are of box-trees thirteen or fourteen feet high.

Though the air of Padua is eſteemed very healthy, yet few cities have ſo many apothecaries in proportion to the number of the inhabitants: but it muſt be obſerved, that moſt of theſe venders of medicines are alſo confectioners. Great quantities of vipers are collected here, ſome of which are kept alive for various uſes, and others dried and made into powder, which is ſuppoſed to be of great efficacy in medicine.

The Jews have their particular quarter allotted to them at Padua, out of which they are not permitted to ſtir.

The plain about Padua is a perfect paradiſe, and the neighbouring mountains yield excellent wine and oil. The paſſage from Padua to Venice is very convenient, and in fair weather the ſight of the many ſeats on both ſides the river renders it very pleaſant.

At the diſtance of about four Italian miles from Padua is the village of Abano, which is much frequented in ſummer on account of the warm baths, which are about half a mile from it. In theſe baths are three ſorts of water of very different qualities; ſome of theſe ſprings are impregnated with ſulphur, and have particular bathing-rooms, where, by means of ſteps, one may deſcend to any depth in the water: others are boiling hot, and the water ſprings up in ſuch quantities as to drive a mill at the diſtance of about twenty paces from the ſource. The wooden pipes through which the water is conveyed to theſe baths are often encruſted with a white ſtoney ſubſtance, not eaſily ſeparated from the wood; and the exact impreſſion of the veins and knots of the wood on this concretion make it perfectly reſemble petrified wood. A ſudatorium has alſo been built here, the effect of which is cauſed by the ſteam of the water. Some of the ſprings, which are tepid, are ſaid to be impregnated with lead,

and others, from their reddiſh ſediment, and other ſigns, appear to be chalybeate. In thoſe where ſulphur predominates, the pipes contract a cruſt of whitiſh ſalt. Here is alſo a mud-bath, where very obſtinate arthritic diſorders have been cured, by means of the warm mud.

The peninſula Rovigo, which is alſo ſubject to Venice, is very fertile, and environed by the rivers Adige, Po, Tattaro, and Caſtagnaro; and is interſected by ſeveral canals. It contains Rovigo, a pretty large city ſeated on the Adige, which runs through it. Its fortifications are antient, beſides which it has a caſtle, and is the reſidence of the biſhop of Adria. This diſtrict, beſides the above city, only contains Adria, which is now an inconſiderable place, and three other market-towns.

SECT. XII.

The VERONESE.

Its Situation, Extent, and Produce; with a particular Deſcription of the City of Verona.

THE Veroneſe, the next country ſubject to Venice, is bounded on the north by the country of Trent, on the eaſt by the Paduan and Vicentino, on the ſouth by the dutchy of Mantua, and on the weſt by Breſciano. Its utmoſt extent from north to ſouth is about forty miles, and its breadth from eaſt to weſt about thirty-two.

The Veroneſe is a delightful country, abounding in excellent peaches, melons, figs, ſtrawberries, truffles, very large artichokes, cheſnuts, apples, pears, plums, wine, oil, corn, and other vegetables. It has good marble, and petrifactions of ſeveral kinds. Among the mountains, that of Baldo is celebrated for its valuable plants. The lake of Garda, in Latin Benacus, Virgil repreſents as very ſtormy, comparing its waves to thoſe of the ocean: indeed it reſembles the ſea, and his deſcription is not very hyperbolical. It is upwards of twenty-eight Engliſh miles in length, and abounds in fiſh, particularly large fine trouts. The diſtrict of Verona annually brings in to the republic of Venice upwards of five hundred and ſixty thouſand ducats. The principal city of this diſtrict is the following:

Verona, the capital of the Veroneſe, is a very large city, ſituated in the forty-fifth degree twenty-ſix minutes north latitude, and in the eleventh degree fifteen minutes eaſt longitude. It is fortified in the antient manner, with three caſtles, two of which ſtand on a hill, and the other two in a plain, by the river Adige, which runs through the city, and over which are four ſtone bridges, one of them three hundred and forty-eight feet long.

This city makes a better appearance from its delightful outlets, than when one is within it; moſt of the ſtreets being narrow, crooked, and dirty, and the houſes but mean. The inhabitants are computed to amount to near fifty thouſand, but they were formerly much more numerous. The beſt ſtreet in the city is called Il Curſo, where the diverſions of the carnival conclude with foot-races, &c. Common proſtitutes were formerly permitted to enter the liſts, and to run for the prize; but this cuſtom has been aboliſhed, and altered to a horſe-race, which is exhibited on Shrove-Sunday, the laſt Sunday of the carnival. The prize is a piece of gold brocade, or ſome other rich ſtuff. The largeſt piazza in this city is La Piazza d'Armi, where the two annual fairs in ſpring and autumn are held, and in which ſtands a marble ſtatue repreſenting the republic of Venice in a female habit, with a crown on her head. In the town-houſe are the ſtatues of five celebrated perſons who were natives of Verona; theſe are Catullus, Æmilius Marcus, Cornelius Nepos, the elder Pliny, and Vitruvius; beſides which, on a high arch, ſtands the ſtatue of Gieronimo Fracaſtori, a learned phyſician, mathematician, and excellent poet, who flouriſhed in the ſixteenth century. The moſt valuable piece of antiquity here is the celebrated Roman amphitheatre, which is ſo perfect that the ſeats on which the people ſat are ſtill entire. Indeed but little of it appears antient, it having been carefully repaired from time to time at the city's expence. The learned count Maffei computed that it conveniently held twenty-two thouſand one hundred and eighty-four ſpectators, but the outer wall and the upper ſtory are wanting.

In the edifice where the learned Philarmonic Society hold their meetings is a very large hall, in which are the portraits of the *patres*, or preſidents of this academy, who are always four in number; and in an apartment on the left hand are kept the old muſical inſtruments with which the nobility of Verona uſed formerly to amuſe themſelves. An apartment on the right hand is appointed for the preſidents of the Philoti, who are inſtituted for the improvement of bodily exerciſes, as riding, fencing, vaulting, dancing, &c. There is alſo in this building a fine theatre for exhibiting operas and comedies, which has five galleries, and was built from a deſign of the famous Franceſco Bibiena, architect to the emperor. As the nobility aſſemble here ſeveral times in a week to divert themſelves with cards, &c. this theatre may be conſidered as a kind of exchange for the polite and the literati of Verona. In one room ſtands the ſtatue of a female of white marble. On the outſide of this edifice are to be ſeen a great number of inſcriptions and other remains of antiquity, many of which were dug up about Verona; and that they may not be expoſed to any future damage from the injuries of the weather, they are inſerted in a long wall facing the ſouth, the north wind being found very detrimental to ſtones. After theſe are ſeveral antient monuments in baſſo relievo, repreſenting the gods, ſacrifices, &c. In the proper arrangement of theſe pieces the marquis Scipio Maffei was at no ſmall expence, and ſpared no pains to increaſe their number; on which account the gentlemen belonging to this academy erected a marble ſtatue of him over the entrance of this building.

In Verona there are convents of Carmelite monks, both bare-footed and others. In the church of the former are three fine altars, the firſt of which is adorned with columns of verde-antico, the ſecond with pillars of a red and white veined marble, and the third with columns of a yellow marble. The high altar is alſo of beautiful marble finely executed, and adorned with a noble picture of the Annunciation.

In the church belonging to the other Carmelite monks is a beautiful altar of fine marble, and in the veſtry a fine piece of painting by one of the diſciples of the celebrated Raphael, repreſenting our Saviour when a child playing with John the Baptiſt, and the Virgin Mary looking with great complacency on their mutual fondneſs and ſportive innocence.

Among the other churches, one of the fineſt is that of St. George, belonging to the Benedictine monks. Over the door is the baptiſm of Chriſt painted by Tintoretto; on the high altar is a piece repreſenting the martyrdom of St. George, by Paul Veroneſe; and on one ſide near it our Saviour feeding five thouſand people, by Paul Taranati, who was ſeventy-nine years of age when he painted this piece; and on the other ſide a very fine repreſentation of the Iſraelites gathering manna. This piece is twenty-four feet in length, and twenty-three broad.

Between Verona and Vicenza are found all kinds of petrified fiſh, moſt of which are of the ſalt-water ſpecies, in a ſort of white loam. Theſe fiſhes are generally well preſerved, their bones being entire, and frequently even their ſcales; they chiefly conſiſt of pike, ſoles, thornbacks, flying-fiſh, perch, and gudgeons.

SECT. XIII.

The Territory of VICENZA, *or* VICENTINO.

Its Situation, Extent, and Produce; with a particular Deſcription of the City of Vicenza, and the Manners of the Inhabitants.

THE territory of Vicenza is alſo a part of Lombardy, and is bounded on the north by the territory of Trent, on the eaſt by the Treviſano, on the ſouth by the Paduan; and on the weſt by the Veroneſe, extending in length from north to ſouth, about forty miles, and in breadth about thirty-three.

The air is ſerene and healthful, and the inhabitants computed at a hundred and fifty or a hundred and ſixty thouſand ſouls. The country is indeed ſo fertile and de-

lightful, that it may be called both the garden and fleſh-market of Venice; it alſo produces good wine.

The principal city in this territory is Vicenza, or Vicentia, which is ſituated thirty Italian miles from Verona, in the forty-fifth degree thirty four minutes north latitude, and in the twelfth degree fifteen minutes eaſt longitude, and is watered by the rivers Bachiglioni and Rerone, which here unite their ſtreams, and contains many elegant and beautiful buildings, the tops of ſeveral of them ornamented with ſtatues, particularly the piazza before the council-houſe. This piazza makes a grand appearance, and before it ſtands two very lofty columns: on the top of one of them is St. Mark's winged lion, the arms of Venice, and on the other the image of our Saviour. There is in this city a literary ſociety ſtiled the Olympici, whoſe deſign is chiefly the improvement of the Italian language. The academicians hold their meetings in a theatre built by the celebrated Palladio, who was a native of this city. It is but ſeldom uſed as a theatre, yet the perſpective of the ſtage is admirable, and it is adorned with ſtatues of the Roman emperors and philoſophers. The pit is likewiſe adorned with ſeveral ſtatues, and the ſeats are diſpoſed after the manner of the antient amphitheatres. In the Campus Martius, without the city, is a triumphal arch built from one of Palladio's deſigns, in imitation of the antient ſtructures of that kind. The Monte della Pieta is alſo a ſtately fabric, and has a very fine library.

Of the churches, which are fifty-ſeven in number, fourteen are parochial, and twenty-nine conventual. Among theſe the great altar of the Dominican church is a ſuperb piece of Palladio's architecture.

The church della Madona di Monte, on a mountain without the city, is much frequented by pilgrims, and has a fine frontiſpiece, with a convent built cloſe by it. In the refectory of this convent is a picture painted by Paul Veroneſe, repreſenting pope Gregory the Great ſitting with ſeveral pilgrims at table, where our Saviour is alſo preſent. Though this piece be finely executed, the deſign is very abſurd. The pope ſits at the upper end, without his triple crown; and next to him Chriſt is repreſented without any particular mark of diſtinction: the next is a cardinal, and on the other ſide another cardinal, with a large pair of ſpectacles on his noſe; a page dreſſed in the Spaniſh manner waits at table, with a dog under his arm: under the table are repreſented a cat, a monkey, &c. The mountain on which this church and convent are built yields a very agreeable proſpect, which extends as far as Padua. For the convenience of the uſual proceſſions, and of pilgrims, a large aſcent by ſteps has been made up the acclivity of the mountain. In the valley at the beginning of the aſcent is a triumphal arch, and on the left hand of it is a ſtatue of the Virgin Mary.

The fineſt garden at Vicenza is that of count Valmarano, which for its ſituation, viſtas, arbours, and beautiful walks, may be eſteemed one of the nobleſt in all Italy. A covered walk of cedar and orange-trees, planted alternately, and above two hundred paces in length, is particularly admired. On one ſide of it is a broad canal, well ſtocked with large barbels and other fiſh, which at the ſound of a pipe immediately appear in great numbers on the ſurface, in order to be fed. Over the entrance into the garden is a Latin inſcription to the following purpoſe:

"If corroding cares have haply followed thee thus far, "though they be loth to leave thee, diſpel and baniſh "them, for this place is dedicated to genial mirth and "feſtivity. Whoever ſhall damage theſe cedars, or crop "a flower, let him be eſteemed ſacrilegious, and be pu-"niſhed, to appeaſe Vertumnus and Pomona, to whom "they are conſecrated.

"Native, friend, or ſtranger, who deſireſt to amuſe "thyſelf with the rural charms of this place, thou mayeſt "ſecurely enter theſe gardens deſigned for pleaſure and "recreation. Here is no fierce dog, no frightful dragon, "no deity with threatening weapon; but every thing "is here freely, and without danger, expoſed to thy "view. Such is the pleaſure of count Leonardo Val-"marano, the owner of theſe gardens, who relies on thy "modeſty and good breeding as ſufficient to guard the "place from outrages."

The inhabitants of Vicenza have the character of being more vindictive than the reſt of the Italians; and it is certain that travellers, eſpecially thoſe who are hot and quarrelſome, ſhould be very careful both here and in every part of Italy to avoid diſputes, eſpecially with the poſtillions and other perſons of the lower claſs; for the deſire of revenge is ſo predominant, that they have been known to follow a traveller ſix or eight ſtages to watch an opportunity of gratifying their malice. "Open violence, ſays "Mr. Keyſler, from whom we have borrowed theſe re-"marks, is little to be apprehended from them, on which "account the danger is the greater; for cowards are "always cruel. Murder is looked upon in Italy in a "very different light from what it is in other countries. "If a robbery is committed in the ſtreets, or market-"place, in any of the towns of this country, and the "people are called to ſtop the thief, there is always "aſſiſtance at hand to purſue the criminal; but upon "crying after a murderer, nobody offers to ſtir, and "the aſſaſſin ſaves himſelf by flying unmoleſted to a "church, convent, or other aſylum, where, to the "great honour of the clergy be it ſpoken, the villain re-"ceives all poſſible aſſiſtance, that he may eſcape the "hands of the civil power. I remember a poſtillion, the "above author adds, who once drove me, was treacher-"ouſly ſtabbed at the poſt-houſe of Piſtoia; and tho' "the fact was committed in the preſence of more than "ten perſons, not one of them ſtirred a foot to ſeize or "purſue the murderer."

The meaneſt citizens of Vicenza, in ſigning contracts or other deeds, add to their names the title of count of Vicenza; an empty piece of pride, which they are ſaid to derive from an anſwer given by Charles V. who when he was at Vicenza, to get rid of the importunate ſolicitations of ſeveral wealthy citizens to grant them the title of counts, ſaid in jeſt, *Todos contes*, "I make you all "counts."

SECT. XIV.

Of the Territories of Breſciano, or Breſcia, Bergamo, Cremaſco, Marca Trevigiana, Friuli, and Iſtria: with a Deſcription of the Cities of Breſcia, Bergamo, Crema, Treviſo, or Trevigio, and Udine.

THE territory of Breſcia is alſo a part of Lombardy ſubject to the Venetians, and, though mountainous, abounds in wine, oil, wheat, and other grain; alſo in ſilver, copper, iron, and marble of all colours. This territory is bounded on the eaſt by the Lago di Garda; on the weſtward by the Lago d'Iſeo, in Latin Sevinus; and on the ſouthward by the ſmall lake of Idro. The principal city in this diſtrict is the following:

Breſcia, in Latin Brixia, is a fortified city on the little river Garza, in the forty-fifth degree twenty-ſeven minutes north latitude, and in the tenth degree thirty-nine minutes eaſt longitude, and is defended by a caſtle ſeated on a hill. Beſides the cathedral it has nineteen pariſh-churches, forty-five convents, and ſome charitable foundations, with a general hoſpital. Its biſhop is a ſuffragan to the archbiſhop of Milan; he has large revenues, and bears the titles of duke, marquis, and count. The cathedral is a ſtately modern ſtructure; and the celebrated biſhop cardinal Quirini having greatly contributed towards the building of it, and made the city a preſent of a library, the magiſtracy, in 1750, erected two ſtatues of him, one in the church, and the other at the entrance of the library; and alſo cauſed a medal to be ſtruck to his honour. Among the relics of this church is an azure croſs, believed to be the ſame which Conſtantine ſaw in the air. The inhabitants are computed at near fifty thouſand, and the nobility live here in a very ſplendid and gay manner. The fire-arms, ſwords, and cutlery-ware of this city are much eſteemed, as are its linen-manufacture, which, with other commodities, render its trade very conſiderable.

In

In this territory are ſome other towns, and a conſiderable number of villages.

The diſtrict of Bergamo is alſo a part of Lombardy: towards the north it is mountainous and rocky, but about the capital very fruitful. Some valleys produce wine and oil, while others are barren, but abound in iron. The only conſiderable place in this diſtrict is

Bergamo, a well fortified city on ſeveral hills, at the bottom of which are ſome handſome ſuburbs. Between the city and a ſtrong caſtle which ſtands on the higheſt mountain, is a communication under ground. In the cathedral, which is a handſome ſtructure, are ſaid to be preſerved and venerated with great devotion the bodies of twenty-five ſaints. The biſhop is ſuffragan to the archbiſhop of Milan. This city is famed for its ſewing ſilk, and has a fair on St. Bartholomew's day, to which there is a great reſort of merchants and tradeſmen from Italy, Germany, and Sicily.

The diſtrict of Cremaſco, which is alſo a part of Lombardy, is very fruitful in corn, wine, and hemp, and contains

Crema, a pretty ſtrong city, ſeated in a very fruitful plain, on the river Serio, and defended by a caſtle. The biſhop is ſubordinate to the archbiſhop of Bologna. The houſes are elegantly built, and beſides the cathedral there are thirty churches, convents, hoſpitals, and charitable foundations.

The Marca Trevigiana is one of the richeſt and beſt ſpots in all Italy; particularly the country between Treviſo and Caſtel Franco is, as it were, one continued garden, every where planted with rows of wild mulberry trees, which ſerve as eſpaliers for vines; and in travelling from Treviſo to Maeſtre in the dutchy of Venice, each ſide is moſt charmingly variegated with the beautiful villas and gardens.

The principal place in this territory is Treviſo, or Trevigio, a very old fortified town, with a fort on the river Sile, into which, after dividing itſelf into three branches, and watering the town, the Piaveſella diſcharges itſelf. This place is of a middling ſize, with many neat houſes, and among its inhabitants are ſeveral noble families. In 1608, the academy Perſeveranti was erected here. It has alſo the academy of Solleciti. It is the reſidence of a biſhop, and became ſubject to the republic in 1388.

The fertile country of Friuli anciently belonged to the patriarch of Aquileia; but in the fifteenth century became ſubject to the republic of Venice. In the ſixteenth century a part of it devolved to the houſe of Auſtria.

The capital of the Venetian part is Udine, a city of middling ſize, ſeated on the river and canal of la Roia. The patriarch, who formerly reſided at Aquileia, ſome years ago took up his abode here. The conteſt between the houſe of Auſtria and the republic about the patriarchate, was compromiſed by the pope's ſuppreſſing the patriarchate, and erecting two archbiſhoprics out of it, one to be in the city, and the other in that of Gortz, which belongs to Auſtria. The archbiſhop of Udine is metropolitan of all the biſhops in the Venetian territories that were before under the patriarch. This city contains ſeveral churches, convents, and hoſpitals; a college for law, and an academy for martial exerciſes.

Iſtria is a kind of peninſula between two large bays of the gulph of Venice, namely that of Trieſte and that of Quarner, and is about ſixty miles in length, but not near ſo broad. It was a part of the ancient Illyricum; but being conquered by the Romans, between the firſt and ſecond Punic wars, was annexed to Italy. In the middle ages it belonged to the patriarchate of Aquileia, who was inveſted with it as a marquiſate by the emperor Henry IV. In 1190, moſt of the maritime part was conquered by the republic of Venice, which they have ever ſince enjoyed, though not without ſome interruption from the Auſtrians. It is fruitful, eſpecially in wine and oil, but is hilly, and the air unhealthy, on which account it is but thinly peopled.

Capo d'Iſtria, anciently Juſtinopolis, the capital of the territory, is a biſhop's ſee and a pretty ſtrong town, ſeated on a ſmall iſland, ſo near the continent that it is joined to it by a bridge. The cathedral is an old, but a ſtately building, and has three aiſles ſupported by eighteen marble pillars. The churches of the Servitæ and Dominicans are noble ſtructures, as is alſo that of the Franciſcans, who hold the tribunal of the inquiſition. The town-hall is a very ancient edifice, ſuppoſed to have been formerly a temple dedicated to Pallas; and it is even affirmed, that the ſtatue of Juſtice, which now ſtands in the front of the building, was that of the goddeſs.

In this diſtrict are ſeveral other towns; but they are moſt of them ſmall and inconſiderable.

With reſpect to the other parts of the dominions of Venice, we have already given an account of Venetian Dalmatia in page 136; and of the iſlands of Corfu, Santa Maura, Cephalonia and Zante, which belong to Venice, in treating of Turky in Europe, page 26, 27.

SECT. XV.

Of the Republic of GENOA.

The Situation, Extent, and Produce of Genoa. Its Manufactures, Trade, Hiſtory, and Form of Government. The Title and Arms of the Republic: Its Offices, Courts, Revenues, Military and Naval Force; with a particular Deſcription of the City of Genoa, and of the Manners of its Inhabitants.

THE independent republic of Genoa, beſides being poſſeſſed of a long tract which extends along the coaſt of an extenſive gulph of the Mediterranean, anciently called Mare Ligufticum, has alſo the ſovereignty of the iſland of Corſica. The above tract extends along the coaſt from eaſt to weſt, about one hundred and fifty-two miles; but from north to ſouth it is very narrow in ſome places, it being only eight, and in the wideſt not above twenty miles broad. It is bounded by the principality of Piedmont, the dutchies of Montferrat, Milan, Placentia, and Parma, the grand dutchy of Tuſcany, and the republic of Lucca.

The mountains take up a great part of the country; ſome of theſe are covered with woods; ſome are quite barren and rocky, and others yield good paſture. Though the Genoeſe, from their want of arable land, are obliged to furniſh themſelves with great quantities of corn from Lombardy, Sicily, Naples, and other countries, yet ſuch is their ſkill and induſtry in improving a mountainous, rocky, and ſterile ſoil, that all the year round Genoa is plentifully furniſhed with pulſe and vegetables for the kitchen in the higheſt perfection. The country alſo produces both common and muſcadel wine, with plenty of excellent fruit, particularly in the weſt part are lemons, oranges, pomegranates, figs and almonds; beſides many plantations of mulberry-trees, chiefly intended for ſilk-worms. The olives principally grow about Spatia-bay. It will not here be improper to obſerve, that the olive-tree very nearly reſembles a willow, and makes but a mean appearance. The beſt oil is the white and tranſparent; for the deep yellow is either made from over-ripe olives, or has been kept too long. The good oil has no ſmell nor any kind of viſcid fatneſs. Virgin oil, by the ancients called green oil, is preſſed both from ripe and unripe olives, and is the whiteſt, the moſt palatable, and in every reſpect the beſt. The inhabitants have alſo ſuch plenty of ſalt, that they can ſpare it for exportation, as they alſo can ſtone and marble. Theſe territories are watered by many rivers; but they are all of them ſmall and inconſiderable.

The inhabitants of Genoa are of the Romiſh religion, and the inquiſition, as in other parts of Italy, has been introduced here. However, a great number of Proteſtants live among them without moleſtation.

The Genoeſe manufactures are far from being ſo numerous as formerly, yet velvet, pluſh, and fuſtian, are ſtill made, together with damaſks, and other ſilk ſtuffs; for which conſiderable quantities of red ſilk are imported from Meſſina and other ports of Sicily; they alſo make gold and ſilver tiſſues, laces, and gloves; but theſe are inferior to thoſe of France and the Netherlands. The other Genoeſe merchandizes conſiſt of oil, fruit, Parmeſan cheeſe, anchovies and drugs, which laſt are brought

brought from the Levant. A briſk trade is carried on with theſe goods, eſpecially to Spain. Ships of moſt European nations, particularly Engliſh, Dutch, and French, are conſtantly ſeen at Genoa, which is alſo the great mart for the trade of Lombardy. Indeed the revenues principally ariſe from manufactures and trade; but the ſtate is far from making the figure it formerly did, which is chiefly owing to the improvement of manufactures in other countries, the dearneſs of the Genoeſe goods, and the danger of the harbour. Indeed Genoa was in 1751 declared a free port; but this freedom is under ſome reſtrictions not known at Leghorn. In the part properly called Porto Franco, any merchant may have a warehouſe, and both export and import goods free from duty; but ſuch as are diſpoſed of in the city or on the continent, pay very conſiderably. The city of Genoa is famous for having the richeſt bankers in Europe, and hence a very profitable article is its dealing in bills of exchange.

Genoa was the capital of ancient Liguria; it was deſtroyed by Mago the Carthaginian, but rebuilt by the Romans, and after them fell under the power of the Oſtrogoths, out of whoſe hands it was reſcued by the great Beliſarius, and rendered ſubject to the Eaſtern empire. In 670 it was ſacked by the Longobardi; but being afterwards rebuilt, continued under their dominion till they were expelled out of Italy by Charlemagne.

For ſome centuries Genoa was ſubject to the Roman emperors, but by degrees erected itſelf into an independent ſtate; and ſoon after its power became ſo increaſed by its flouriſhing trade, that in the year 806 it reduced the iſland of Corſica; and in the eleventh and twelfth centuries the inhabitants diſtinguiſhed themſelves in the croiſades. The Genoeſe in the twelfth century ſubdued half of Sardinia, and the city of Syracuſe in Sicily, and even made themſelves maſters of all the ports in the Black Sea, and ſettled themſelves in Crimea. In the thirteenth century they added to their conqueſts the towns of Albenga, Savona, Vintimiglia, and others in their neighbourhood, and engaged in a long and expenſive war with Venice, which laſted till the year 1381, and ſo weakened them, that they became unable to maintain the poſſeſſion of Crimea, from which they were entirely driven in 1471. At length this republic ſuffered many rude ſhocks from the inteſtine diſſenſions which aroſe about the form of government, by which the ſtate was ſo debilitated, that the people were obliged to put themſelves ſometimes under the protection of the duke of Milan, and ſometimes under that of the kings of France; but the latter treating them with intolerable rigour, they ſtruggled hard for liberty, but without ſucceſs, till that naval hero Andrew Doria, in 1528, reſcued his country out of the hands of the French, and eſtabliſhed its preſent form of government. Genoa has from that time generally ſided with Spain, which has frequently involved it in quarrels with France, and it has always had a dangerous neighbour in the duke of Savoy. In 1684, the capital was bombarded by the French, when the republic, to ſave it from total deſtruction, was obliged to ſubmit to very hard terms; two of which were, That the doge and four counſellors ſhould appear in perſon at Verſailles, and aſk pardon; and that the ſtate ſhould diſarm all their gallies, except ſix, and fit out no more without the French king's conſent.

In the year 1713, Charles VI. ſold the marquiſate of Final to the republic for a conſiderable ſum of money; and in 1730, the inhabitants of Corſica began their revolt, and will probably be never entirely reduced under the Genoeſe ſubjection. In 1743, the queen of Hungary having at the treaty of Worms, ceded to the king of Sardinia all her right to the town and marquiſate of Final, and he demanding that the Genoeſe ſhould deliver them up, they entered into an alliance with France, Spain, and Naples, and in 1745, declared war againſt the king of Sardinia; an unfortunate ſtep, for which they were ſeverely chaſtiſed in 1746, by Great Britain and the queen of Hungary. The king of Sardinia made himſelf maſter of all the Riviera di Ponente; ſeveral Genoeſe ports were bombarded by the Engliſh fleet, and the Imperialiſts even ſeized on the city of Genoa; but after a terrible ſlaughter on both ſides, were driven out by the inhabitants, and in 1747, failed in their attempt to recover it. However, the tranquility of this republic was reſtored by the treaty of Aix-la-Chapelle in 1748.

Before we deſcribe the form of government, it will be proper to give our readers ſome idea of the nobility, which are diſtinguiſhed into ancient and new. The ancient nobility conſiſts of twenty eight families, whom Andrew Doria, in the year 1528, declared alone capable of holding the dignity of doge, and the other chief offices; all the other inhabitants being reduced by him to the claſs of commoners. However, there are joined to theſe other eminent and wealthy families; but they are obliged inſtead of their former name to adopt one of the twenty-eight; for in ſubſequent times it was found neceſſary, for the preſervation of the public tranquility, to proceed to a new creation of nobles. The new nobility conſiſt of about five hundred families. The ancient nobility think themſelves much ſuperior to the modern, though both are now equally capable of public employments. However, in order to ſit in the great council, it is neceſſary to have been a nobleman four years, and ſix to ſit in the leſſer; but a procurator or ſenator muſt be a nobleman of ten years ſtanding, and to be doge requires fifteen. The great families of Doria and Spinola have given over commerce, but the other nobility make no ſcruple of being wholeſale merchants. They are alſo allowed to keep velvet, ſilk, and cloth manufactories; to farm the duties, and to have ſhares in merchant-ſhips; but all other buſineſs and handicraft employments are forbidden them. It may be ſaid in general, that the republic is poor, and the nobility rich, though not to ſuch a degree as is commonly ſuppoſed. Dr. Buſching ſays, he is credibly informed, that not above four or five houſes are poſſeſſed of three hundred thouſand liri per annum, (each liri is worth about eight-pence three-farthings ſterling) that there are many more from twenty to thirty thouſand; but the greateſt part of them have not above ten thouſand.

The form of government in this republic is ariſtocratical; the chief perſon is called the doge, or duke, to which dignity no perſon is promoted till he is fifty years of age. Every two years a new doge is choſen, and the former is incapable during five years of holding the ſame poſt again. However, he has a procurator's office aſſigned him, and a penſion of a hundred ſcudi for life, each worth four ſhillings and ſix-pence.

On the election-day, which is uſually on the third of January, the great council meet in the ducal palace, and by drawing gilt balls out of a box, where are alſo ſome ſilver ones, fifty perſons are choſen out of the leſſer council, who write down the names of ſuch as they think worthy of being promoted to the ducal office. From theſe ſo nominated, and alſo from the fifty who drew the gilt balls, the great council, by a majority of votes, ſelect fifteen; and of theſe again the leſſer ſix, of which each at leaſt muſt have three-fifths of the votes. It is out of theſe ſix that the great council, by a majority of ſuffrages, elect a doge.

On account of the kingdom of Corſica a crown is placed on the doge's head, and a ſceptre in his hand; and during the two firſt days after his election, he wears royal robes; but afterwards only the ſcarlet gown common to all the members of the council. He is ſtiled his ſerenity, but at the expiration of his government he is only ſtiled his excellence, like the reſt of the council. He and his family live in the palace, and have a body-guard of two hundred Germans. Without his conſent nothing can be propoſed, nor any reſolution of the council be of force. In all important affairs he makes the firſt motion, gives audience to ambaſſadors, and all orders are iſſued in his name.

The title of the republic is, the moſt ſerene republic of Genoa. Its arms are argent, a croſs gules; the helmet ſurmounted with a regal crown, to denote the ſovereignty of the republic over the iſland of Corſica. Its rank is immediately next to Venice, and it requires that its miniſters at foreign courts ſhould be treated as thoſe of crowned heads.

The chief authority, next to that of the doge, is lodged in the two colleges of the Governatori and Procura-

tori,

tori, who may alſo be conſidered as the council appointed by the doge. The former conſiſts of twelve, and the latter of eight, without including thoſe who having been doge, continue procurators all the remaining part of their lives. Theſe two offices are only biennial. Three governatori and two procuratori live in the palace with the duke; but are changed every three months. The governatori, together with the doge, conſtitute the ſignoria, or grand council of ſtate, who deliberate on the moſt ſecret affairs, and afterwards lay matters of importance before the great council, in order to their receiving a general approbation: they alſo, in conjunction with the procuratori, aſſiſt at any intereſting conſultations of the great council. Without the privity and advice of the procuratori no affair of importance can be determined, and it is to them that the direction of the treaſury and public revenues belong.

The great council is compoſed of four hundred, and the little council, which is as it were a committee of the former, of one hundred. None but nobles, and ſuch as reſide at Genoa, can be admitted into either. The members are annually changed by a new election, which is performed towards the end of December, by thirty perſons ſelected for that purpoſe by the leſſer council, out of one hundred perſons propoſed by it. Both colleges deliberate with the two higher colleges on the laws, cuſtoms, taxes, and contributions; but war, peace, and alliances, are only conſidered and determined in the leſſer council. The five ſupreme ſindicatori, who are generally choſen out of the leſſer council, examine the conduct of the doge, the governators, the procurators, and other officers at the expiration of their employments. The commiſſerios of peace, who are three in number, and thoſe of the laws two, are changed every two years. The former, who are citizens, inſpect into the matrimonial affairs of the citizens, adjuſt petty diſputes, or in caſe of obſtinacy lay them before the ſignoria. They likewiſe aſſiſt at the election of a doge, and of all other perſons in authority, eſpecially of the thirty directors for elections, with reſpect to whom they are to examine whether their proceedings be legal, and whether in every other reſpect due obedience be paid to the laws.

Proceſſes among the citizens are decided by the rota, a court conſiſting of five foreign doctors of civil and canon law, who live in the palace of the republic, and continue two years in office. Another college of ſeven native doctors of law, who are uſually changed every half year, appoint guardians, ſee that proceſſes are not protracted without cauſe, and that care is taken of the polity. There is alſo a particular penal-court called *rota criminalis*, and another that deſerves commendation, which manages the affairs of poor debtors, or others detained in priſon.

In ſhort, the five cenſors take cognizance of the manufactures and trade, the quality of proviſions, weights, and meaſures, and of the behaviour of the conſuls and wardens of companies. Beſides theſe there are ſeveral inferior offices, which the freemen are capable of exerciſing.

The ordinary revenue of the ſtate is computed to amount to about half a million of liri; it ariſes from the duties on imports and exports: the regalia at Sarzana, Gavi, Savona, Vintimiglia, and other places; the woods and foreſts; the monopoly of wine, with reſpect to vintners and others, who keep cellars, and have no wine of their own; and of corn ſold to bakers; together with fines, and the produce of all the revenues of Corſica: but theſe laſt, even when that iſland was quiet, ſcarce anſwered the charge of the troops, and the many civil officers kept there; which more particularly ſince the inſurrection in that iſland, muſt have been of great expence to the republic.

When the above revenues fall ſhort of anſwering the neceſſary expences, the ſtate borrows from the nobles and rich citizens large ſums, at a high intereſt on certain pledges, and even aſſignments on branches of the public revenue, which in 1407 gave riſe to the famous bank of St. George, ſo called from St. George's church, where the directors formerly held their meetings. The opulence and power of this bank are very extraordinary, whole towns, manors, and territories belonging to it; and even great part of the iſland of Corſica. Among other important privileges, it is inveſted with a particular juriſdiction, and is dependent only on the doge and ſtate. This company has not only advanced large ſums to the republic, but alſo to foreigners, as mortgages on lands or public revenues in other ſtates.

The republic, in time of peace, uſually keep on foot a body of above five thouſand regular troops; namely, four thouſand natives, the duke's life-guard of two hundred Germans, five hundred Swiſs, three hundred Italians, and one hundred bombardiers. Beſides theſe, there is alſo a militia, which, in caſe of neceſſity, is obliged to take the field. The cavalry raiſed in time of war only amount to about ſix hundred, who are but of little ſervice, on account of the badneſs of the horſes in this country. In the laſt war the republic had in pay eighteen thouſand men. The fleet of this republic, antiently ſo celebrated for its victories over the Saracens, Piſaneſe, Venetians, Spaniards, and Turks, and for continuing a conſiderable time maſters of Sardinia, Malta, Majorca, Minorca, Candia, Cyprus, and many other iſlands and places in the Mediterranean and Archipelago, and even of the Black-Sea, is now reduced to ſix gallies, which only ſerve, according to Addiſon and Keyſler, to import corn and wine, and in ſummer-time to give the principal ladies of Genoa an airing.

The territories of the republic on the continent are, Riviera di Levante, Riviera di Ponente, and the marquiſate of Finale.

The city of Genoa, which ſtands in the firſt of theſe diſtricts, is the capital and ſeat of this republic. It is ſituated in the forty-fourth deg. twenty-five minutes north latitude, and in the eighth deg. forty-one minutes eaſt longitude. Genoa is one of the moſt inconvenient, yet, at the ſame time, one of the moſt beautiful, cities in Italy, and is ſeen to the greateſt advantage at the diſtance of a quarter of a league at ſea, where its ſtately buildings, which have gained it the name of Superba, are ſeen to form a glorious amphitheatre, gradually riſing up the ſide of a hill. This declivity, and the narrowneſs of the ſtreets, exclude the uſe of coaches in Genoa, every body being ſatisfied with going on foot, except the principal ladies, who are carried in chairs and litters; but the loftineſs of the houſes and narrowneſs of the ſtreets abate the exceſſive heats of ſummer, by intercepting the ſun-beams, and thus tend to preſerve the healthfulneſs of the city. The ſtreets are exceedingly well paved, and in ſome parts with free-ſtone; beſides, the want of coaches and other carriages greatly conduce to their cleanlineſs. As the barrenneſs of the neighbouring ſoil requires great quantities of manure, the dung of horſes and mules is very carefully gathered up. This is chiefly obſerved in the ſuburbs of Pietro d'Arena, where the breadth of the ſtreets admits the uſe of all kinds of wheel-carriages.

Moſt of the houſes are flat-roofed, or at leaſt have a gallery at top. The roofs are moſtly covered with lavagna, a ſtone that very much reſembles ſlate, and in the ſhelving ſituation of the city theſe areas, which are planted with orange-trees, form a kind of penſile gardens, which, though they have nothing wonderful nor extraordinary, have a very agreeable effect.

On the rocks projecting into the ſea have been built ſeveral baſtions, which, in ſome places, ſtand two or three behind each other, and the length of theſe fortifications, with the lower town, is not leſs than three Italian miles. The number of guns mounted upon all the works for the defence of the city, is little ſhort of five hundred. Towards the land the city is ſurrounded with a double wall, and the outward, which is the neweſt, extends beyond the hill, beginning at the fanal, or light-houſe, and terminating at the river Biſagno. The city is ten miles in circumference, and ſuch is the inequality of the country, that it takes up three hours to ride round it; but this wall is of too great an extent to be of any conſiderable ſervice, unleſs, perhaps, in keeping out the banditti. The weſt ſide of the city is watered by the river Bonzevera, and on the oppoſite ſide runs the Biſagno.

The harbour of Genoa is large, but not very ſafe; however, no care or expence is omitted in improving it, and it has now a mole which extends upwards of ſeven hundred paces into the ſea. On the right hand, near

the light-houſe, is alſo a new mole, which projects ſeven hundred and ſeventy-four paces, and is defended by huge fragments of rocks. As the ſea is here very deep, thoſe works muſt have been very expenſive. In the middle of the harbour, at a place called the Royal Bridge, is a commodious watering-place for ſhips, the water being conveyed by pipes from the mountains. Within this harbour is the wet-dock for the republic's gallies, the largeſt of which carries only from ſixty to one hundred ſoldiers, and three hundred and twenty rowers, five or ſix on a bench.

The Darſena, or wet-dock, abounds with Turkiſh ſlaves, who are generally of a ſurly fierce aſpect, to which their long whiſkers do not a little contribute. They are dreſſed in a coarſe cloak, with a cowl to it like that of the Capuchins. In the Darſena they are at liberty; but in the city one meets them every where chained in couples, and crying cheeſe, cotton, cloth, &c. They alſo keep tippling-houſes, and petty ſhops in the Darſena, their officers giving them all poſſible encouragement, advancing them ſmall ſums, with which, in their trips to Marſeilles, Corſica, and other places, they buy all kinds of knick-knacks at a very cheap rate, and make a good market of them at Genoa, where every thing is extremely dear; but the officers come in for a ſhare of the profits. Some of theſe ſlaves are furniſhed with goods to trade with out of the republic's warehouſes, part for ready money, and part on credit at a ſtated price. At night none of them are to be abſent from the Darſena; for then they are muſtered and locked up.

The rowers on board the gallies generally conſiſt of three claſſes. The firſt, indigent people, who ſell themſelves for a certain term of years. The ſecond, criminals, who have been ſentenced to the oar for a limited time, or during life; and the third, Turkiſh or Barbary priſoners, who, though they ſhould become converts to Chriſtianity, do not recover their freedom; but their godfathers frequently put them in a better way of living, and, upon their good behaviour, give them their liberty.

The light-houſe is a tower which is aſcended by one hundred and ſixty-ſix ſteps, and ſtands on the weſt ſide of the harbour on a high rock, which is alſo fortified. Every night, except about the ſummer ſolſtice, a lanthorn with thirty-ſix lamps, is hung out at the top of it, towards the ſea; and when a number of ſhips, or any fleet, is known to be in theſe ſeas, an addition is made to the number of lamps, which, at a diſtance, reſemble a ſingle ſtar. Upon deſcrying a ſhip from the light-houſe top, a bullet is hung out, for two ſhips two bullets, and ſo on till five. The ſignal to give notice that a ſquadron is in ſight, is one bullet and a flag.

The only ſtraight and broad ſtreets are the New and the Balbi ſtreets. Theſe entirely conſiſt of magnificent palaces: in the former are thoſe of the families of Doria, Palavicini, Leſcari, and Correga, the ſecond ſtory of which opens into fine gardens and orangeries raiſed on brick-work. The Balbi ſtreet is greatly ornamented by the two palaces of the houſe of Balbi, the Jeſuits college, and the Durazzo palace, the beſt ſecular building in the whole city. The houſes of Genoa are, in general, well built, and painted on the out-ſide with different orders of architecture, and ſome of them with landſcapes. For the better enjoyment of the cool freſh air, perſons of rank frequently live in the third ſtory.

The palace in which the duke reſides is almoſt in the center of the city, and is an old large ſtone building, with two ſtatues of white marble in the court, erected in honour of Andrew and John Andrew Doria. From the court is an aſcent by a white marble ſtaircaſe, with very low ſteps, to the great hall, where the doge is elected, and foreign envoys have audiences, which is ſixty-ſix paces in length, and thirty broad. It is very lofty, but the floor is made of plaſter; however, the cornices and architraves are finely carved and gilt, and the ducal throne covered with crimſon velvet, enriched with gold fringes and taſſels. In this ſtately hall ſtand ſix white marble ſtatues of perſons by whoſe liberality the public has been eminently benefited, and on the wall at the two ends, and on the cieling, are painted ſix of the republic's principal atchievements.

This hall opens into the ſummer council-chamber, in which, among many other paintings, is a noble picture by Solimene, of the ſolemn reception of St. John the Baptiſt's aſhes at Genoa. Near the throne is alſo repreſented the diſcovery of America by Chriſtopher Columbus. Its private chapel is adorned with paintings in freſco of all the ſaints and celebrated natives of Genoa, among whom is alſo Chriſtopher Columbus, who was a native of that city.

From the audience hall a narrow paſſage leads to the arſenal, which is alſo in the palace, and is ſaid to contain arms for thirty-four thouſand men. Among the antient weapons is ſhown a ſhield, containing one hundred and twenty piſtol barrels, which a perſon named Julius Cæſar Vacche is ſaid to have made, in order to diſpatch, as it were, with one ſhot, both the doge and his counſellors, when aſſembled. But the moſt celebrated curioſity is thirty-three coats of mail belonging to ſo many Genoeſe heroines, who are ſaid to have performed a croiſade to the Holy Land, in the year 1301; but it is much queſtioned whether theſe coats of mail were ever uſed by women.

Prince Doria's palace and gardens near the harbour are very fine, and afford a moſt delightful proſpect.

In the whole city are reckoned thirty-ſeven pariſh churches, twenty collegiate, ſeventeen convents, and two large hoſpitals.

The principal curioſity to be ſeen in the cathedral, which is dedicated to St. Lawrence, is a diſh made of a ſingle emerald, ſaid to be one of the queen of Sheba's preſents to king Solomon, and the very ſame in which Chriſt ate of the Paſchal Lamb, at his laſt ſupper with his diſciples. On the left hand of the entrance of this cathedral is a chapel, where thirty ſilver lamps are continually burning, and in which they pretend to keep, with extraordinary veneration, the bones of John the Baptiſt. The altar is ſupported by four columns of porphyry, and over it is a picture by Vandyke, and it is adorned with a white marble ſtatue of John the Baptiſt.

St. Ambroſe's church belongs to the Jeſuits, and is a good ſtructure. Over the great altar is an excellent piece by Rubens, repreſenting the circumciſion of Chriſt, where the emotions of tenderneſs in a woman ſtanding by, are admirably expreſſed. The altar is adorned with four large columns of black marble, and the ſtatues of St. Peter and St. Paul of white marble, St. Ignatius performing a miracle by Rubens, on another altar, and the Aſſumption of the Virgin Mary, give ſenſible pleaſure to the connoiſſeurs in painting.

The Jeſuits college is a very fine building. At the foot of the ſtairs, next the entrance, are two large lions couchant, of white marble. The court is ſurrounded with two lofty galleries, both ſupported by columns of Carrara marble, of which there are an hundred in number.

Near the Jeſuits college is St. Ann's church, beautifully decorated with fine ſtucco, Florentine-work, and marble ſculpture, in all which, however, it is ſurpaſſed by the church of St. Cyr.

In the way from the piazza Sarſano to the magnificent church of St. Maria Carignan, which ſtands on an eminence, is a ſtone bridge, that joins together two hills ſeparated by a deep valley. This bridge conſiſts of one ſmall, and three large, arches, and is between eighty and ninety feet high, fifteen common paces broad, and between one hundred and ſixty and one hundred and ſeventy in length. Under it are dwelling-houſes from four to ſix ſtories high, and over them is ſtill an open ſpace of ten or twelve feet. The diameter of one of the arches in the ſtreet beneath is above thirty common paces; but the extent of the middle arch is ſtill wider. This bridge cannot be ſeen without aſtoniſhment.

In the church of St. Philippo Neri, belonging to the fathers of the Oratory, are ſome fine paintings and admirable ſculptures in marble, and in many places it is lined with a beautiful kind of marble, called Brocatello di Spagna. Every Sunday evening, during the winter, an oratorio, or religious opera, is performed in this church, founded on ſome ſcripture hiſtory, and is ſucceeded by a ſermon near half an hour long, and then the ſervice concludes with a piece of church muſic: but in the ſummer theſe fathers ſpend every Sunday in the afternoon at their garden without the city, in which is a beautiful edifice, where they have ſeveral kinds of games, as draughts, cheſs,

cheſs and billiards, but cards and dice are not allowed. It is true, they do not play for money; but for *Ave Maria's*, *Pater noſters*, and other prayers; and at the breaking up of a party, the loſers kneel before an image of the Virgin Mary, and there, according to their loſings, diſcharge them unto her, or unto God, by *Pater noſters*, &c. In the evening they leave off playing, and an oratorio is performed; next comes a ſpiritual exhortation, and this medley of levity and religion cloſes with a ſolemn piece of muſic.

St. Stephen's church is worth ſeeing, on account of its admirable altar-piece of the ſtoning of St. Stephen, by Julio Romano, in which the rancour and fury of his cruel perſecutors are incomparably expreſſed; and this is allowed to be one of the completeſt pieces that has appeared ſince the revival of painting.

In the year 1751, a new academy of painting, ſculpture, and civil architecture, was inſtituted here, under the protection of the council. The chief hoſpital for the poor of the city of Genoa, ſtands on an eminence, and at preſent above 2000 perſons, officers and ſervants included, are maintained in it. On this foundation, likewiſe, boys are brought up to handicraft trades, and when they have gained ſufficient experience in their buſineſs, are allowed to go into the world to ſeek their fortunes. They are employed in weaving, ſhoe-making, the woollen manufactory, and other trades required to ſupport ſuch an hoſpital.

Little of the beauty of the fair ſex is ſeen at Genoa, their blooming years being moſtly ſpent in the recluſeneſs of a nunnery. The married ladies are generally dreſſed in black ſilk or velvet, the liberty of chooſing what colours they pleaſe expiring with the firſt year of their marriage.

It ſeems but little to agree with the reſervedneſs and modeſty of that ſex, that moſt of the married ladies of diſtinction in this city are every where attended by a gentleman called a ciziſbeo, who walks before their chair in the ſtreets, and at coming into the church, holds the holy water to them, and, like a lover, does all the little arts of complaiſance. Some ladies, not ſatisfied with one ſuch obſequious dangler, admit ſeveral, who have their diſtinct offices; one attends the lady when ſhe goes abroad; another provides for the table; another has the management of diverſions and parties of pleaſure; a fourth is even conſulted about receipts and diſburſements of money. Indeed both the beauty and wit of the lady are commonly rated according to the number of theſe votaries. They all paſs under the denomination of Platonic lovers, and indeed, ſays Mr. Keyſler, one would almoſt imagine that the huſbands had nothing to fear from all theſe familiarities; for the Genoeſe being true Italians in point of jealouſy, cannot be ignorant how far theſe intimacies may be carried, as they, in their turn, are ciziſbei to other married ladies. Nor is this piece of gallantry confined to the young women only; for ladies advanced in years pique themſelves much on having their ciziſbeo. Strange as this cuſtom is, it is not peculiar to the Genoeſe: we have given an account of one very like it at Vienna, from the travels of the Lady Wortley Montague. However, this cuſtom is merely arbitrary at Genoa; cuſtom does not oblige them to obſerve it, and it now ſeems to be in ſome meaſure on the decline.

At the funerals of ſingle perſons a kind of garland, decked with all ſorts of white artificial flowers, is placed upon the coffin. When a perſon of diſtinction is buried, the religious fraternities walk in the proceſſion with their white hoods drawn over their faces, carrying flambeaux in their hands, which they hold horizontally, that poor boys may earn a few pence by catching the wax on paper as it drops off. This intention is doubtleſs humane, but the number of ragged boys thus mingling with the proceſſion, are no great ornament to the ſolemnity.

The inns of Genoa afford but an indifferent entertainment, and care ought always to be taken to agree for every thing before-hand. Their houſes are furniſhed with wine from the republic's vaults, in ſealed bottles, yet the wine is none of the beſt; and as all the landlord's profit ariſes from the empty bottles, he takes care to make it up in other articles. Beſides this monopoly of wine, which all who have none of their own growth muſt buy of the republic, it is the ſtate only that deals in corn, none being ſold in any market, but all bakers muſt apply for it to the public granaries.

SECT. XVI.

The Iſland of CORSICA.

Its Situation, Extent, Produce, Rivers, Hiſtory, and Inhabitants, with a conciſe Deſcription of the City of Baſtia.

CORSICA lies oppoſite to the Genoeſe coaſt, between the gulf of Genoa and the iſland of Sardinia; between the forty-firſt and forty-third degree of north latitude, and the eighth and tenth degree of eaſt longitude. According to Bellin, it extends eighty-eight Engliſh miles in length, and forty in breadth. The iſland being for the moſt part mountainous, has little arable land, ſo that the principal fruitful parts are the plains and valleys, which produce corn, wine, figs, and other fruit, with plenty of olive oil and honey, wax, and other neceſſaries; but the honey is ſaid to be bitteriſh, from the bees haunting the yew trees, great numbers of which are in the iſland. Here is alſo a conſiderable breed of cattle, and among the mountains very furious and untractable wild horſes. The county of Nebio has alum and iron. Some of the deep valleys between the ſummits of the mountain are continually covered with ſnow, and yet in them are found ſalt-works, ſulphureous hot baths, and beautiful cryſtals; and along the ſhore towards the Sardinian ſide, is a very fine coral fiſhery.

The chief rivers are the Guolo, or Gollo, the Tavignano, and the Talavo.

The unwholeſomeneſs of the air is an invincible obſtacle to the populouſneſs of the iſland, as appears from a calculation made in 1736, by Baron Theodore, according to which the inhabitants amounted to no more than 120,000. In the beginning of the preſent century, 600 Greeks flying out of the Morea, on account of the exactions and rapine of the Turks, the republic granted them all the country between the bay of Sagona and Ajaccio, where they built handſome villages, and during the diſturbances in this iſland, have given proofs of a firm attachment to the republic.

Corſica was anciently a ſmall kingdom inhabited by the Saracens, but in the year 806 was conquered by the Genoeſe, who drove them out of it. In the eleventh century the iſland was taken from them by the Piſaneſe, but was afterwards recovered. In 1453, the revenues and government of the iſland were aſſigned to the bank of St. George, the directors of which, in 1465, ceded it to the duke of Milan; but the Genoeſe being unwilling to acknowledge his ſovereignty, the iſland again fell to the bank of St. George. In 1553, the French ſeized upon the greateſt part of it, but five years after reſtored it to the republic.

In 1564 the Corſicans revolted from the republic of Genoa, and, though reduced to obedience in 1569, ſtill harboured in their breaſt an implacable reſentment and hatred againſt the Genoeſe, for their rigorous treatment, in diveſting their moſt eminent families of the privileges of nobility: excluding them from all eccleſiaſtical and military employments, prohibiting the natives in general all manner of trade, under-rating the beſt commodities, while they exacted an exorbitant price for any neceſſaries ſold them; in ſhort, oppreſſing them with heavy taxes; all theſe evils being aggravated by the haughtineſs and avarice of the republic's officers, the Genoeſe yoke became inſupportable. Some diſturbances which broke out in 1726, were ſoon quelled; but in 1729, a new tax being laid on the Corſicans, they abſolutely refuſed to pay, requiring the republic to permit them to make their own ſalt, inſtead of buying it at Genoa at an exorbitant price. Upon this, Pinello the governor not only rejected their petition, but had recourſe to violent meaſures for compelling them to pay the tax. This made them openly run to arms in their own defence, but in 1731 and 1732 tranquility was reſtored by means of a body of imperial auxiliaries, and the next year, by the emperor's mediation, the

republic made ſome abatement in their demands on the Corſicans. However, the imperial troops had ſcarce quitted the iſland, when the commotions broke out again. In 1735, the malcontents formed a plan for a new and independent form of government, and the next year proclaimed baron Theodore Van Neuhoff, a native of Weſtphalia, who had brought them ſome military ſtores, their king, and he eſtabliſhed certain fundamental laws for this new government.

The coronation of this monarch was performed with a laurel crown, on which occaſion he cauſed medals to be ſtruck, and on the ſixteenth of September inſtituted an order of knighthood, by the title of the order of Deliverance. On the fourteenth of November he left Corſica, in order to ſolicit foreign aſſiſtance, and in 1738, returned with three ſhips full of military ſtores; but ſoon went again to ſolicit more aſſiſtance. The ſame year a body of auxiliaries being ſent to the republic, in a great meaſure quieted the iſland: but on their leaving it in 1741, the animoſities againſt the Genoeſe began again to blaze out, and in 1743 were heightened by Theodore's ſecond return with aſſiſtance from England. His ſtay was then alſo but ſhort; he left Corſica, and never more returned. In this and the following year there ſeemed an appearance of peace; and though the Engliſh fleet bombarded Baſtia in 1745, and the malecontents got poſſeſſion of the city, yet they ſoon loſt it again, and have now to contend with a body of freſh ſuccours which the republic has obtained from France. As to Theodore their king, after coming to London to raiſe money and friends for ſupporting his claim, he was ſeveral years confined in the King's Bench priſon for debt, where he at length died, and a monument has been erected by ſome gentlemen to the memory of that unhappy nominal monarch.

In open ground the Corſicans are ſaid not to be a match for regular troops; but in the mountains, where they generally keep, they have the advantage, and from time to time make ſucceſsful ſallies.

The clergy are very numerous, and are ſaid to encourage a ſpirit of diſcontent among the people; a prieſt or monk having often been ſeen armed at the head of a body of Corſicans. It is computed that the Franciſcans, Capuchines, and Servites, have no leſs than ſeventy-five convents in the iſland.

Corſica is divided into two large parts, the country on this ſide the mountains, on the north-eaſt part, to which belong thirty pievi, or diſtricts; and the country beyond the mountains, or the ſouth-weſt part, which contains only eight diſtricts.

Baſtia is the capital of the whole iſland, and is ſeated in the diviſion on this ſide the mountains, in the forty-ſecond deg. twenty minutes north latitude, and in the ninth deg. forty minutes eaſt longitude. It is the ſee of a biſhop, and the reſidence of the Genoeſe governor. It lies on the ſea, and has a good harbour, defended by a caſtle. The malcontents of Corſica have made ſeveral attempts on this city, which is at preſent defended by a French garriſon. In this city is an academy of fine arts. In 1745, as has been already mentioned, it was bombarded by the Engliſh, and very much damaged, but after taking it, it was given to the Corſicans; yet they were again driven out of it, and, in 1748, it was beſieged by the Auſtrians and Piedmonteſe, but made ſuch a vigorous defence, that the beſiegers were obliged to decamp.

SECT. XVII.

The Republic of LUCCA.

Its Situation, Extent, Produce, and Government; with a particular Deſcription of the City of Lucca.

THE territories of this ſmall republic lie on that part of the Mediterranean called the Tuſcan Sea, and on the land ſide are chiefly bounded by the Tuſcan dominions, a part only terminating on the duchy of Modena. This little country, which is only about thirty Italian miles in circumference, is exceeding fruitful and well cultivated; for the fertility of the ſoil and the mildneſs of the government have been ſuch attractive inducements for ſettling there, that the inhabitants of the city, and the hundred and fifty villages belonging to it, are computed at upwards of one hundred and twenty thouſand, of whom between twenty and thirty thouſand are able, on occaſion, to bear arms.

Though this country is mountainous, it produces plenty of almoſt every thing but corn, of which they generally reap only as much as ſerves them half a year; and the reſt they have from abroad. They have a ſufficient quantity of rice, pulſe, beans, lupins, and fine cheſnuts, which the common people uſe inſtead of bread; with a variety of other fruits, and have plenty of wine: they likewiſe exceed all other countries in their olives, and the oil drawn from them. All corn is engroſſed and ſold by the ſtate, diſtributing it to the bakers, who ſell it to the public: in ſhort, the induſtry of the people in improving every ſpot of ground is equally ſurpriſing and commendable, and the inhabitants appear with an air of chearfulneſs and plenty, ſeldom to be found among thoſe of the neighbouring country. The vicinity of the grand duchy of Tuſcany keeps them conſtantly on their guard, in order to preſerve their freedom, on which account the protection of ſome foreign power is abſolutely neceſſary. In ſuch a ſituation an univerſal concord and harmony can alone enable them to tranſmit to poſterity the bleſſings of their darling LIBERTY, whoſe name they bear on their arms, and whoſe image is not only impreſſed on their coin, but alſo on the city gates, and all their public buildings.

The city of Lucca was anciently a Roman colony; afterwards it was comprized in the dominions of the kings of the Franks, and from them the emperors of Germany claimed its ſovereignty. At the long interregnum the inhabitants formed the project of independency, which they carried on privately till the reign of the emperor Charles IV. when they openly detached themſelves from the empire, and obtained the protection of Spain.

The principal perſon in the ſtate is the gonfaloniere, which ſignifies a ſtandard-bearer, and was formerly the title of the ſovereigns of Florence. He is dreſſed in a robe of crimſon velvet, with a bonnet and ſtole. His power reſembles that of the doge of Venice and Genoa, but he is ſtiled only his Excellency. With him are joined nine counſellors, called anziani, or elders. Theſe ten perſons, who bear the title of excellentiſſimi, while in the adminiſtration, live in the republic's palace, where their expences are defrayed at the charge of the ſtate; but when they go abroad on their own private concerns, it muſt be incognito, and in a cloſe ſedan, with the curtains drawn. Theſe are changed every two months, which, Mr. Addiſon obſerves, is the greateſt ſecurity to their liberty, and in a ſurpriſing manner contributes to the quick diſpatch of all public affairs; but in any remarkable exigence of ſtate, he adds, it certainly requires a much longer time to conduct any great deſign calculated for the good of the commonwealth, to its maturity and perfection. The gonfaloniere and the nine anziani are choſen out of the great council, which is compoſed of two hundred and forty nobles, one half of whom forms the ordinary council, and the other the extraordinary; but both, once in two years, are changed by a new election.

The title of the ſtate is the Moſt Serene Republic of Lucca. Its arms are azure, with the word LIBERTAS or, between two fretts of or. The ordinary revenue of the republic is about four hundred thouſand ſcudi, or about eighty thouſand pounds ſterling. It maintains a regular body of five hundred men, and ſeventy Swiſs as a guard for the gonfaloniere and the nine regent counſellors.

The city of Lucca, the reſidence of the government, is ſituated in the forty-third deg. fifty-two minutes north latitude, and in the eleventh deg. twenty-ſeven minutes eaſt longitude, in a moſt delightful plain of fifteen or twenty miles in extent, terminating in eminences, diverſified with villages, ſeats, ſummer-houſes, vineyards, meadows, and corn-fields. Every thing that can contribute to uſe and pleaſure is here in great plenty. The city is regularly fortified with eleven baſtions faced with brick, and is about three Italian miles in compaſs; the ramparts are very wide, where is a delightful walk for the citizens, under the trees planted on them. The inhabitants amount to ſomewhat more than forty thouſand,

among whom are great numbers of artizans and manufacturers, who carry on a conſiderable trade, particularly in ſilk goods. The houſes are handſome, the ſtreets broad and well paved, but moſt of them irregular.

The ſtate-palace is a large building, and includes the arſenal, which contains arms for twenty thouſand men. The cathedral is a Gothic ſtructure, which has ſome admirable paintings, and in the veſtry are eight large ſilver buſts, and a golden crucifix of moſt exquiſite workmanſhip, there being no leſs than twenty-four images upon it. This crucifix is ſaid to have been pledged by the Piſans for twenty-four thouſand ſcudi, for a limited term; but as they deferred redeeming it till the laſt day, and then came too late, the gates of Lucca were ſhut againſt them. The chief relic in this church is the volto ſanto, a wooden crucifix, which they believe was carved by the diſciple Nicodemus, and is very different from the others, the body being covered either with a robe of velvet or damaſk, embroidered with gold, and on the head, inſtead of a wreath of thorns, is a gold crown glittering with jewels. It has ſeveral ſilver lamps continually burning before it, and ſtands in a chapel adorned with columns of porphyry and marble, where it daily receives the moſt profound adoration of the people, and, as a farther mark of the city's veneration, the impreſſion of it is ſtruck on their coin.

The ſee of Lucca, like ſome others, is under the immediate juriſdiction of the pope, which intitles the biſhop to a pallium and croſs, like an archbiſhop, and on public ſolemnities, the canons are dreſſed like cardinals.

On the high altar of the church of St. Maria Corto Landini, is the aſſumption of the Virgin Mary by Guido Rheni; on each ſide are ſome other pieces by the ſame hand. Another altar exhibits the Virgin Mary in the clouds, and two perſons kneeling before her, with a Latin inſcription to this purpoſe, "May our ſins be covered by her ſnow-"like innocence." The roof of this church is covered with fine painting in freſco and gilding, and its altars are adorned with excellent pieces of ſculpture in marble.

In St. Auguſtine's church is an image of the Virgin Mary, with an infant Jeſus on her left-arm, under which is an inſcription in Latin to the following purport:

"This image of the Mother of God, which formerly "ſtood to be adored without the church of St. Auguſ-"tine, being ſtruck with a ſtone from the hand of an "impious gameſter, is famous for the wonderful effuſion "of blood which followed: ſhe received the blow her-"ſelf; and, to ſave her infant ſon, miraculouſly moved "him from the right to the left arm. It is likewiſe ter-"rible for having cauſed the earth to open, and through "the chaſm ſending this monſter of impiety quick into "hell. The moſt illuſtrious and reverend canons of "the Vatican, as a token of their veneration for this "three-fold miracle, cauſed a golden crown to be placed "on this image in the year 1690."

Without the church is ſhewn both the place where this fellow was at play, and where the image ſtood in the church wall; but it is now placed in a particular chapel, where is alſo ſeen the ſtone faſtened to an iron ring, and the opening of the earth, which the vulgar believe to be bottomleſs, and to terminate perpendicularly in hell, but is too narrow to receive a man of any bulk: however, it has an iron cover faſtened with two iron bolts, and near the image is this inſcription:

"To efface his crime the Virgin pours forth ſtreams "of blood; but the impious wretch dies ignorant of her "goodneſs and clemency."

In the center of one of the ſquares of this city, is a white marble ſtatue of the Virgin Mary upon a high pillar.

The ſkill and induſtry of the inhabitants in their ſilk and other manufactures have gained this city the honourable ſurname of the Induſtrious. Here are ſeen more young women in the ſtreets, ſhops, churches, and ſchools, than in any other part of Italy. The police is very commendable, and great attention is ſhewn to the ſuppreſſion of luxury, ſuperfluous magnificence, and ſuch diſſipations, as often prove deſtructive to families where no ſuch reſtraints take place. At entering the city, travellers muſt deliver up their fire-arms; but on informing the guard at what gate they intend to go out, when they leave the city, they are ſure to find them there: they are likewiſe allowed to wear their ſwords three days, but afterwards muſt have a particular licence, which is generally granted only to perſons of high rank, and to the knights of Malta and St. Stephen. No commoner, tho' he be one of the council, muſt appear with a ſword, and no ſoldier without one.

Travellers are always welcomed here with an evening ſerenade; but this is accompanied with an humble intimation that they would be pleaſed to make ſome return for the honour done them.

SECT. XVIII.

The Republic of St. MARINO.

Its Situation, Hiſtory, and Government.

THIS ſmall ſtate is incloſed by Romagna and Urbino, and conſiſts of a very high craggy mountain, with ſome eminences lying at its foot. The town, the ſeat of this republic, is ſeated on the ſummit of this lofty mountain, where it is generally hid among the clouds, and the ſtreets are ſometimes covered with ſnow, when it is clear and warm weather in all the country around. There is ſaid to be neither ſpring nor rivulet in the whole dominion; but the people are well provided with large ciſterns and reſervoirs of rain and ſnow water. The wine that grows on the ſides of their mountain is extremely good, and much better than any on the cold ſide of the Appenines, and their cellars have a natural advantage that renders them extremely cool in the hotteſt ſeaſons; for they have generally in the ſides of them deep holes that run into the hollows of the hill, whence there conſtantly iſſues a breathing kind of vapours, ſo very chilling in the ſummer time, that a man can ſcarce ſuffer his hand in the wind of them.

They have three caſtles, five churches, and three convents, and reckon about five thouſand perſons in their community. Both the inhabitants and the hiſtorians who mention this little republic, give the following account of its origin. St. Marino, by birth a Dalmatian, and by trade a maſon, was employed above one thouſand three hundred years ago, in the reparation of Rimini, and after he had finiſhed his work, retired to this ſolitary mountain, as finding it very proper for the life of a hermit, which he led in the greateſt rigours and auſterities of religion. He had not been here long before he wrought a reputed miracle, which, joined with his extraordinary ſanctity, gained him ſuch eſteem, that the princeſs of the country made him a preſent of the mountain, to diſpoſe of at his own diſcretion. His reputation quickly peopled it, and gave riſe to the republic which calls itſelf after his name; ſo that the commonwealth of St. Marino may boaſt at leaſt a nobler origin than that of Rome; the one having been at firſt an aſylum for robbers and murderers, and the other the reſort of perſons eminent for their piety. To this ſaint the beſt of their churches is dedicated, and there his aſhes are depoſited. His ſtatue ſtands over the high altar, holding in its hands a mountain crowned with three caſtles, which are alſo the arms of the commonwealth. To his protection they attribute the long duration of their ſtate, and conſider him as the greateſt ſaint next the bleſſed Virgin; and ſo high is their veneration for him, that, by a law in their ſtatute-book, ſuch as ſpeak diſreſpectfully of him are to be puniſhed in the ſame manner as thoſe who are convicted of blaſphemy.

This inconſiderable republic has laſted one thouſand three hundred years, in which time all the other ſtates of Italy have frequently changed their maſters and forms of government. Their whole hiſtory is compriſed in two purchaſes made of a neighbouring prince, and in a war, in which they aſſiſted the pope againſt the lord of Rimini. In the year 1100 they bought a caſtle in the neighbourhood, and another in the year 1170. The papers of the conditions are preſerved in their archives, and it is very remarkable that the name of the agent for the commonwealth, of the ſeller, of the notary and the witneſſes, are the ſame in both the inſtruments, though drawn up at ſeventy years diſtance from each other, which cannot proceed from a miſtake in the date, becauſe the names of

the popes and emperors, with the year of their reſpective reigns, are ſet down in both.

About two hundred and ninety years after this, they aſſiſted pope Pius II. againſt Malateſta lord of Rimini, and having helped to conquer him, received from the pope, as a reward for their aſſiſtance, four little caſtles. This they repreſent as the flouriſhing time of the commonwealth, when their dominions reached half-way up a neighbouring hill; however, they are now reduced to their antient limits: but were they to be attacked, they would probably ſell their liberty as dear as poſſible; for there is but one road to climb up to them, and they have a very ſevere law againſt any of their own people that enters the town by another path, leſt a new one ſhould be worn out on the ſides of their mountain; and all who are capable of bearing arms are exerciſed, and ready at a moment's call.

The government of this commonwealth was originally lodged in what they termed the arengo, a great council, in which every houſe had its repreſentative: but finding great confuſion ariſe from ſuch a multitude of ſtateſmen, they devolved their whole authority into the hands of the council of ſixty. The arengo, however, is ſtill called together in caſes of extraordinary importance, and if, after due ſummons, any member is abſent, he is to be fined to the value of about a penny Engliſh, which the ſtatute ſays he ſhall pay without any diminution or favour. In the ordinary courſe of government, the council of ſixty, which, notwithſtanding the name, conſiſts but of forty perſons, has the adminiſtration of affairs. They are made up half out of the noble families, and half out of the commoners, but are not admitted till they are twenty-five years of age. Theſe decide every thing by balloting, and chuſe the officers of the commonwealth. They thus far agree with the great council of Venice, but enjoy a much more extenſive power; for no ſentence can ſtand that is not confirmed by two-thirds of this council, into which no perſon can be admitted during the life of his father, nor two be in it of the ſame family, nor any one enter but by election.

The principal officers of the commonwealth are the two capitaneos, whoſe power reſembles that of the old Roman conſuls; but they are choſen every ſix months. Some have ſerved this office ſix or ſeven times, but the ſame perſon never enjoys it twice ſucceſſively.

The third officer is a commiſſary, who judges in all civil and criminal affairs; but as the many alliances, intermarriages, and friendſhips, and alſo perſonal feuds and animoſities, might, in ſo ſmall a ſtate, obſtruct the courſe of juſtice, if this office was in the hands of one of their own number, the commiſſary is always a foreigner, who is choſen for three years, and maintained out of the public ſtock. He muſt be a doctor of law, and a man of known integrity; he is joined in commiſſion with the capitaneos, and acts much in the ſame manner as the recorder of London under the lord mayor.

The fourth man in the ſtate is the phyſician, who muſt alſo be a ſtranger: he is maintained at the public expence, and is obliged to keep a horſe to viſit the ſick, and to inſpect all the drugs that are imported. He muſt be at leaſt thirty-five years of age, a doctor of the faculty, and eminent for his honeſty and piety, that the commonwealth may not be depopulated by his raſhneſs or ignorance; and that they may not ſuffer long under a bad choice, he is elected only for three years.

Another perſon, who makes no ordinary figure, is the ſchool-maſter, and there are ſcarce any perſons in the place who have not ſome tincture of learning.

The ſtatutes of the republic are printed in one volume in folio, and in the chapter on the public miniſters it is ſaid, that when an ambaſſador is diſpatched from the republic to any foreign ſtate, he ſhall be allowed, out of the treaſury, to the value of a ſhilling a day.

In ſhort, ſays Mr. Addiſon, who took a journey on purpoſe to viſit this little republic, and from whom we have borrowed this account, theſe people are eſteemed very honeſt and rigorous in the execution of juſtice, and ſeem to enjoy more content and happineſs among their rocks and ſnows, than the other Italians in the pleaſanteſt vallies in the world. Indeed nothing can be a greater inſtance of the natural love of mankind for liberty, and of their averſion to arbitrary government, than ſuch a ſavage mountain covered with people, while, in the ſame country, the Campania of Rome is almoſt deſtitute of inhabitants.

CHAP. XXIV.

Of the Middle Part of ITALY, containing the Grand Duchy of TUSCANY and the Dominions of the Pope.

SECT. I.

Of TUSCANY *in general.*

Its Situation, Extent, Produce, hot Springs, and Rivers. Its Hiſtory, the Arms of the Great Duke, his Forces and principal Officers, with the Diviſions of the Country.

IN the middle part of Italy is generally included the little republic of St. Marino, and ſome authors alſo include in it the republic of Lucca; but as we choſe to place all the four republics of Italy together, we have given theſe in the two concluding ſections of the laſt chapter, and ſhall now, in this middle part, conſider two grand diviſions, which will contain abundant matter to gratify the curioſity of the lover of antiquities and of the polite arts, the nobleſt productions of ſtatuary, painting, and architecture, both antient and modern. But all the wealth of theſe countries is depoſited in the palaces of princes, and in churches and convents; while the people are poor, ſome of the richeſt lands in the world uncultivated, and trade in many parts neglected, for want of the ſpecie neceſſary to give life to commerce.

The grand duchy of Tuſcany borders on the Mediterranean, which here receives its name from this duchy, and is called the Tuſcan Sea; it is alſo bounded by the Eccleſiaſtical State, the duchy of Modena, and the republic of Lucca. Some ſmall detached parts of this duchy alſo lie among the territories of Modena, Lucca, and Genoa. Theſe laſt excepted, it extends from north to ſouth one hundred and ſixteen miles, and from eaſt to weſt eighty.

The great variety of hills and vallies, riſing grounds and plains, render the country very pleaſant. The ſoil, which is extremely fertile, abounds in corn, oranges, lemons, and all the other ſorts of fruit known in Europe, beſides oil and excellent wine. The oil, however, bears little proportion to the multitude of olive-trees, which are ſubject to a diſtemper, that ſhews itſelf in knots and tubercles, occaſioned by worms. Of the wines a kind of white, called la Verdee, is particularly eſteemed, and the greateſt part is ſaid to be ſent to England. The paſtures here are alſo very rich.

The air of ſeveral places in this duchy is unhealthy, on account of the many fens and wild deſart places. The

ſalt

ſalt pits are in a thriving condition, veins of ſalt running under the ſtrata of alabaſter. Here are alſo found ſulphur and Chalcedony, amethyſts, fine jaſpers, beautiful marble, and cornelians, lapis-lazuli, borax, and black ſlate for tables, cryſtals, alum, ſtone, iron ore, quick-ſilver, and in Calabria manna is gathered from the aſh and elm. It oozes out on the taking off the rind, and conſequently is not a production of the air but of the tree. The bees carry off a great deal of it, the remainder is applied in Tuſcany to medicinal uſes, and in France to giving a gloſs to cloth.

At the foot of Mount St. Giuliano, on the borders of the territory of Lucca, are ſeveral hot ſprings, which have been mentioned by Pliny, and are ſtill in high vogue, great numbers having experienced their ſalubrious effects. They are not properly ſulphureous, and the taſte is pleaſant, like good ſpring-water. The degree of heat is not the ſame in all the ſprings; but at Acqua it is forty-nine degrees by Farenheit's thermometer. Cloſe by theſe ſprings are others quite cold. At Vicaſcio the bath is but juſt luke-warm; but that at Morba has a heat of one hundred and four degrees by Farenheit's thermometer. The Lagoni at Monte Cerboli have a vehement ebullition, attended with a great noiſe, and contain ſulphur, alum, vitriol, and ſalt: the heat much exceeds that of boiling water. Here is cryſtallized ſulphur, a new and uncommon ſpecies of cryſtal. Another ſpring in this part of the country has one hundred and ſixty degrees of heat, with a ſulphureous ſmell, and is uſed to bathe in. In the baths de la Galeria are both cold and warm ſulphureous ſprings, with petroleum floating on the ſurface. Beſides theſe there are ſeveral others.

The principal river in this country is the Arno, which riſes in the Appennine mountains in the territory of Florence, and after receiving the Sieva, Peſa, and Elſa, falls below Piſa into the ſea. The Ombrone has its ſource in the territories of Sienna, through which it runs into the ſea.

This country was called Etruria, or Tuſcia, from its ancient inhabitants the Etrurii or Tuſcani; though the preſent duchy does not comprehend all the ancient Etruria. In the ancient republic of Florence, the family of Medicis acquired by commercial arts the wealth and grandeur of princes, whence king Henry II. of France choſe his conſort the famous Catharine out of this family. The emperor Charles V. in 1531, created Alexander Medicis duke of Florence, and afterwards gave him Margaret his natural daughter in marriage. Coſmo I. the ſucceſſor of Alexander, was, in 1569, declared great duke of Florence, by pope Pius V. which was ratified by the emperor, on condition of his holding it as a fief of the empire; and in 1699 the emperor conferred on the great duke the title of royal highneſs.

John Gaſton, the laſt great duke, having no heirs, it was ſtipulated by the quadruple alliance in 1718, that the duchy ſhould for ever be acknowledged a fief of the Roman empire, and that with the conſent of the Germanic body, the emperor ſhould confer it on the king of Spain's eldeſt ſon by the ſecond marriage, from him to devolve to his male deſcendants; but that Leghorn was always to remain a free port. This was confirmed by ſeveral ſucceeding treaties; but a war breaking out in 1733, in which the emperor loſt the kingdoms of Naples and Sicily, Don Carlos, who had been brought up at the great duke's court, cauſed himſelf to be proclaimed king, and at the peace of 1736 retained the poſſeſſion of theſe kingdoms. On the other hand it was ſtipulated, that after the demiſe of the preſent poſſeſſor, Tuſcany was to devolve to the houſe of Lorrain in lieu of that duchy, which was to be reſigned to king Staniſlaus. This took place in 1737, and ſoon after the duke of Lorrain and the great duke of Tuſcany made an agreement with the princeſs dowager Palatine, ſiſter to the late great duke, concerning the moveable parts of the ſucceſſion, by virtue of which ſhe transferred to the duke the vaſt treaſure of jewels, ſtatues, paintings, and other curioſities, of which particular mention will be made in treating of Florence.

The arms of the great duke are, or, ſix globes gules, with the lilies of France in the uppermoſt. The ſhield is ſurmounted by a regal crown, in which is a full red lily. The helmet is alſo crowned, and the creſt is a bird holding in his right talons a ring, from which hangs a label, whereon the word SEMPER is written.

There is here an order of knighthood called the order of St. Stephen, inſtituted by Coſmo I. in 1554. Its privileges are very like thoſe of the order of Malta. The great duke is always grand maſter, and the chief reſidence of the knights is at Piſa, in treating of which city, we ſhall give a more particular account of that order.

The ordinary revenue of the grand duke is computed at about three millions of piaſtres per annum. In 1753 the military force of this duchy was ſettled at three regiments of foot, and one of dragoons of 500 men; but in 1755, another regiment of dragoons was raiſed, and the militia was formed into regiments. However, this duchy is ſaid to be able, in caſe of neceſſity, to bring into the field 30,000 men, and to fit out twenty ſhips of war, twelve gallies, and ſome galleaſſes.

The chief officer of this duchy is a governor appointed by the emperor as grand duke. He reſides at Florence, where is alſo a council of regency, the military board, and other ſtate offices.

The countries of which this great duchy is compoſed, are the following; the territories of Florence, Piſa, and Sienna, with the ſtates of Preſidii and Piombino.

SECT. II.

The FLORENTINO, *or Territory of* FLORENCE.

Its Situation, Produce, and the Manner in which its ancient Inhabitants loſt their Liberty; with a particular Deſcription of the City of Florence, and the Manners of the Inhabitants.

THIS is the moſt conſiderable part of the duchy of Tuſcany, both for extent and opulence. It is divided in the middle by the river Arno, and is bounded on the north by the Bologneſe and Romania, on the eaſt by the Eccleſiaſtical State, on the ſouth by the Sienneſe, and on the weſt by Piſa and the republic of Lucca.

The territory of Florence is well cultivated and populous, and juſtly eſteemed an excellent country. The environs of the city of Florence are particularly delightful, from the variety of the well cultivated hills and dales; and in the neighbourhood of that city is a kind of white marble, and a ſort of ſlate, which, when poliſhed, repreſents an infinite variety of brown and yellow figures, and by a little help of the imagination, ſeems to repreſent trees, landſcapes, the ruins of caſtles, and ſeveral other agreeable objects.

Anciently the city of Florence, with its diſtrict, formed a republic, for which the inhabitants obtained a licence from the emperor Rodolphus for ſixty thouſand guilders; but its ariſtocratical government was filled with apprehenſions and jealouſies from the increaſing grandeur of the family of Medicis. In the war between the emperor Charles V. and pope Clement VII. the government had the misfortune to offend the former, and upon the concluſion of the peace in 1530, the emperor marched his army into the city, and having aboliſhed the republican conſtitution, nominated Alexander de Medicis duke, preſcribing him a model of government, and pardoning the city, on condition that, for the future, it ſhould pay obedience to the emperor, and the ſovereigns appointed over it.

The principal city is Florence, in Italian Fiorenza, the capital of the grand duchy, delightfully ſituated between mountains covered with olive trees, vines, farms, ſeats, and villages, in the four hundred and thirty-ninth degree forty-two minutes north latitude, and in the eleventh degree forty-ſeven minutes eaſt longitude. It is divided into two unequal parts by the Arno, which, with its four ſtone bridges, adds to the beautiful appearance of the city. With reſpect to curioſities worthy the notice of a traveller, it is, next to Rome, the principal city in all Italy. The Florentines pride themſelves ſo much in its elegance, that they imagine nothing equals it. The ſtreets are indeed clean, and paved with very broad

broad ſtones, but moſt of them are narrow and crooked, and many of them have ſcarce room for a carriage to paſs. The number of houſes amount to about 9000, and among them are ſome magnificent ſtone buildings; but their palaces are not ſo numerous as to claim a ſuperiority over thoſe of Turin, Genoa, and Rome. The paper windows, which, after the Italian manner, are every where ſeen, are no ſmall diminution to the beauty of the city, which is generally reckoned to contain ſeventeen market places, ſeven fountains, ſix columns, two pyramids, 160 public ſtatues, forty-four pariſh churches, twelve priories, fifty-four convents, twenty-four eccleſiaſtical fraternities, and thirty-ſeven hoſpitals and charitable foundations. The number of inhabitants is computed at 70,000.

The pronunciation of the Italian here, differs much from that in other places, the *c* being changed by them into *h*; for inſtance, they ſay *hoſa*, inſtead of *coſa*; and their accent is ſo guttural, that they are called the Italian Swiſs. However, they write much better, having, for the improvement of the Tuſcan tongue, a celebrated ſociety of learned men, who ſtile themſelves *Academia Della Cruſca*. Since the year 1738, a riding academy was erected, and ſince 1753, an academy of agriculture, conſiſting of a hundred members. The greateſt trade of the city conſiſts in its woollen and ſilk ſtuffs, and even the nobility not only trade as merchants, but keep ſhops. A faint ſhadow of the ancient republic ſtill remains among the nobility, ſome of whom are are ſtiled ſenators, though they in reality conſtitute nothing more than a magiſtracy.

From this general view of the city, we now come to its curioſities, of which we ſhall treat in their proper order.

The great dukes formerly reſided at the Palazzo Vecchio, or the Old Palace, which faces a large market called la Piazza del Gran-Duca. At the entrance is a marble ſtatue of Hercules killing Cacus, both bigger than the life, by Baccio Bandinelli; oppoſite to which, by way of contraſt, is David triumphing over Goliah, by Michael Angelo. In the middle of the court is a porphyry fountain, with a boy graſping a fiſh, in bronze, and another ſtatue of Hercules killing Cacus. There is a hall in the palace one hundred and ſeventy-two feet long, and ſeventy-four broad; but it is too dark: however, on account of its ſpaciouſneſs, it is uſed for homage ceremonies, and for the dances on St. John's day, which are annually performed by a company of peaſants of both ſexes, when the ducal family are generally preſent, and the duke diſtributes the appointed prizes to the beſt dancers. On the cieling and walls of this room are painted in freſco, the moſt remarkable atchievements of the republic of Florence. A traveller ought not to omit obſerving the marble ſtatues of ſeveral dukes, and two popes, who were of the houſe of Medicis. Here is likewiſe a moſt admirable ſtatue of Victory, with a priſoner at her feet, by Michael Angelo. Here are alſo ſix excellent marble groups, by Vincenzio Roſſi, repreſenting ſix of the exploits of Hercules; his daſhing Anteus againſt a rock, his killing the Centaur, his throwing Diomedes to wild horſes, his carrying a terrible wild boar alive upon his ſhoulders, his helping Atlas to bear up the ſky, and his victory over the queen of the Amazons.

In the Old Palace is the duke's wardrobe, in which are ten or twelve large cloſets full of plate, great part of which is finely chaſed and ſet with jewels. Here are alſo abundance of Turkiſh arms and bridles profuſely enriched with jewels, and in a particular cloſet is ſhewn the crown with which pope Pius V. in 1569, crowned Coſmo I. as firſt great duke of Florence. It is made of gold, and adorned with a great number of jewels. But what is eſteemed moſt valuable, is the palliotto, or altar cloth, covered with pearls, rubies, and other ſtones; among the reſt, two gems called aqua marina, in ſize equal to a large walnut, are ſaid to be of ineſtimable value. On both ſides the arms of Auſtria and Florence are joined together, and in the middle of the palliotto Coſmo II. is repreſented in an emboſſed work of gems and enamel, and his robe is richly ſet with diamonds. On the altar or table before which he kneels, is a crown entirely covered with diamonds.

Near the Old Palace under the Loggia, commonly called de Lanzi, are three fine ſtatues, the firſt of Judith with Holofernes at her feet, of bronze; another, of the ſame metal, repreſenting Perſeus with Meduſa's head: the third piece, where admiration can never be ſatisfied, is a group repreſenting a young warlike Roman carrying off a Sabine virgin; he is tranſported with joy on account of his booty, while her father lies proſtrate on the ground, with looks full of the moſt paſſionate grief and rage. The rape of the Sabines is expreſſed in baſſo relievo on the pedeſtal, and the performance of this piece does great honour to Giovanni Bologna.

In the ſquare before the Palazzo Vecchio, is a very grand fountain, adorned with ſhells, cornucopias, tritons, and four other ſea-gods of braſs, of a very large ſize; and in the center is Neptune drawn in a large ſhell, reſembling a triumphal car, by four horſes, two of which are of braſs, and the other two of white marble.

In this ſquare is likewiſe the Fabrica degli Uffici, on the ground-floor of which the principal magiſtrates of the city live together, for the better maintenance of the public tranquility, and the more ſpeedy diſpatch of buſineſs. The firſt ſtory is filled with artiſts employed for the duke's wardrobe and gallery, particularly in Florentine works, where nature and painting are ſurpriſingly imitated by the proper arrangement of ſparks of gems, and bits of the fineſt marble inlaid. This place is diſtinguiſhed by the name of il Scrittorio, and though the artiſts chiefly work for the duke, yet the moſt induſtrious find time to make toys to diſpoſe of to foreigners, which are ſold at a great price.

The uppermoſt ſtory of this ſtructure contains the famous gallery, in which perhaps are the nobleſt collection of curioſities that are to be met with in any part of the world. In its form it reſembles the Greek Π; the cieling is covered with paintings repreſenting the arts and ſciences, the moſt eminent perſonages of the city of Florence, and hiſtorical pieces. The walls on each ſide are hung with portraits of the moſt illuſtrious perſons of the houſe of Medicis, and over theſe, on the entablature, are ſmall portraits of generals, miniſters of ſtate, and princes; and oppoſite to them the buſts of learned men, among which is that of the great Sir Iſaac Newton. The vaſt number of ſtatues is really amazing: among theſe is Narciſſus ſtooping to view himſelf in a well of Parian marble, an excellent performance; Bacchus, with a goblet in his left hand, leaning upon a Faunus, who is kneeling before him; and near this antique ſtands a Bacchus of Michael Angelo, being a copy of the former. Bacchus riding upon a tyger, both of bronze, is juſtly reckoned one of the moſt remarkable pieces here; but the feet are wanting. The pedeſtal on which it ſtands is the work of Guiberti, and on one ſide of it is repreſented, in baſſo relievo, the ſtory of Ariadne, and on another a ſacrifice to Bacchus. Morpheus is here repreſented in the ſhape of a ſleeping boy, in touchſtone; probably the blackneſs of this ſtone, which was always uſed for the ſtatues of ſleep, as Mr. Addiſon obſerves, alludes to the darkneſs of the night, the proper ſeaſon for reſt. Farther in the gallery are to be ſeen Mars and Venus, Cupid and Pyſche, ſeveral Ganymedes, Marſyas, a philoſopher, a Venus ſitting and drawing a thorn out of her foot; Venus Uriana; Venus perſuading Mars to ſtay with her, and Apollo with Faunus; Flora; a veſtal, with the holy fire burning before her, &c. Among the buſts or heads, the moſt curious are thoſe of Alexander the Great, three times bigger than the life, and Agrippa, Caligula, and Otho; the buſts of Antinous, Nerva, Ælius Verus, Caracalla, Pertinax, and ſeveral others, in fine alabaſter. Among theſe pieces is alſo a bronze head of Michael Angelo, done by himſelf.

Out of the gallery you enter ſeveral cabinets full of curioſities, which are well worth ſeeing. In the firſt are above an hundred and twenty portraits of celebrated painters, moſt of them done by the perſons they are deſigned for, and all in gilt frames, with the names over each of them; among theſe is Sir Godfrey Kneller. In the

the middle of the chamber ſtands the ſtatue of Cardinal Leopold de Medicis, of white marble. He was a great encourager of arts and ſciences, particularly of painting.

The next cabinet contains a noble collection of large porcelain vaſes, &c. There is alſo ſhewn in this apartment a large table, on which is repreſented birds, flowers, fruit, and feſtoons, in excellent Florentine work: twenty-five perſons were employed thirteen years in performing this curious piece. The artificial curioſities of ebony in another cabinet is the more extraordinary, on account of their variety of ſculpture, it being extremely difficult to carve it with any degree of nicety, on account of its ſplitting. The largeſt of theſe ebony works repreſents a palace with ſeveral gates. The chief Scripture hiſtories are exquiſitely painted on gems by Bruggel. In the next chamber is to be ſeen the anatomy of a human head in wax, and alſo the gradual petrifaction of the body, till at laſt it terminates in a bare ſkeleton. Theſe were performed by a Sicilian eccleſiaſtic, and Mr. Keyſler obſerves, that however diſagreeable ſuch a ſpectacle may be to timorous ſelf-love, the execution is ſo natural and delicate, that a perſon is never tired with viewing it. The ſame admirable artiſt has in the ſame manner exhibited the various ſtages and effects of the plague.

In another chamber is a large collection of mathematical inſtruments. Among the optical rarities are ſeveral heads and trophies of ſtandards, colours, ſpears, &c. painted on a table, which when viewed through a glaſs in a tube, exhibit the picture of the preſent duke's grandfather.

On entering the Tribuna, the eye is immediately ſtruck with ſix marble ſtatues ſtanding in the center, among which is the celebrated ſtatue called the Venus de Medicis, which has been unanimouſly eſteemed to ſurpaſs not only all the ſtatues in Florence, but any piece of ſculpture throughout the whole world. The inſcription on the baſe ſhews it to be the work of Cleomenes, an Athenian, the ſon of Apollodorus. This incomparable ſtatue ſtands between two others of the ſame goddeſs, which in any other place would paſs for admirable pieces; but here they ſerve rather as foils to the Venus of Medicis, only increaſing the admiration of it, while their own excellencies are quite unnoticed. That on her right hand is twice as big, holding the golden apple, and is termed Venus Victrix; the other, a noble ſtatue by Hercules Ferrata, diſtinguiſhed by the name of Venus Urania. On one ſide of this laſt ſtatue is a dancing Faunus, whoſe ſportiveneſs and agility are finely expreſſed. Michael Angelo is ſaid to have added the head and arms; but the piece is originally aſcribed to no leſs a perſon than Praxiteles. Next to this is Arretino, an old man reſting upon one knee, and whetting a broad knife upon a ſtone, with his head erect, and, as it were, liſtening with great attention; but very cautious of being obſerved. The head and hair of this piece are particularly admired. The ſixth piece is a group repreſenting two wreſtlers engaged, and one of them throwing his antagoniſt, who, in the ſtruggle, at the ſame time breaks his own arm. The heads in this group are alſo executed with admirable ſkill. It is ſaid that this piece was dug up at Rome.

The remarkable diamond that uſed to be ſhewn here, has been removed from the Tribuna to the duke's private cabinet; but an exact model, made of yellowiſh glaſs, now ſupplies the place of it. The original, according to Tavernier, weighs 140 carats and a half, and was the largeſt diamond in Europe, till Mr. Pitt brought from the Eaſt Indies a diamond that exceeded it, which was ſold to the Regent of France, and is the moſt coſtly and ſuperb jewel belonging to that crown: the great duke is ſaid to have bought his of a Jeſuit for 75,000 ſcudi, about 18,750*l.* but the father had a moſt exorbitant profit, having given only a ſingle paolo, or about ſevenpence ſterling for it on the Piazza di Navona, where it was offered to ſale as a bit of cryſtal.

In a particular cloſet in the Tribuna are kept ſeveral vaſes of lapis-lazuli, jaſper, cornelian, agate, &c. ſome ſet in gold, and enriched with jewels of a prodigious value. Here is alſo a moſt rich and admirable cabinet, with fourteen beautiful pillars, the ſhafts of which are of lapis-lazuli; but the pedeſtals and capitals of ſolid gold enriched with pearl and turquoiſe. The interſtices between the pillars are filled with baſſo relievos in gold. In the center of the upper part is a pearl that has but few equals, it being nearly of the ſize of a walnut; but the aqua marina in this piece is ſomething larger. It has alſo a topaz of a prodigious ſize. This magnificent cabinet ſerves for keeping intaglios and camei, or gems cut in relievo. The heads of the kings and heroes make forty-two pieces. Here are alſo forty intaglios repreſenting perſons in maſks, twenty-eight philoſophers and poets, and near an hundred pieces of pagan deities, all antiques. The hiſtorical and mythological intaglios amount to a thouſand. Beſides theſe, and many others, there are three hundred and twelve medallions, one thouſand ſix hundred gold medals, eight hundred ſilver, and about two thouſand two hundred of copper. The gold, ſilver, and copper medals, ſtruck in honour of cities and ſtates, amount to one thouſand five hundred pieces. In ſhort, the whole collection is compoſed of fourteen thouſand antique medals, and eight thouſand modern.

The palace where the great duke uſually reſides, is called the Pallazzo de Pitti, where the beſt front is next the gardens; the columns of the firſt ſtory being on that ſide, of the Doric order, thoſe of the middle Ionic, and the third Corinthian. The apartments are well furniſhed, eſpecially with fine pictures, and the cielings beautifully painted by the great maſters. From this palace is a covered gallery for the great duke to go to the Palazzo Vecchio, where, through little private apertures, he may hear and ſee what paſſes in the ſeveral courts of judicature. This gallery is ſix hundred paces in length, ſix paces in breadth, and eight in height, and on the walls on both ſides are fine hiſtorical paintings.

The garden of the laſt mentioned palace is three Italian miles in circumference, and the higheſt part of it affords a noble proſpect. The fine fountain which fronts the palace has a noble appearance; in the middle of the baſon is a Neptune, of marble, of a very large ſize, in a ſhell of Egyptian granate, thirty-ſix feet in circumference. Three other ſtatues of the Ganges, Nile, and Euphrates, are repreſented in a ſitting poſture, pouring water into the ſhell. In the grottos and fountains of this garden are to be ſeen, among ſeveral others, four ſtatues by Michael Angelo. Nothing can be more delightful than the alleys and covered walks of laurel and other ever-greens, and every part abounds with eſpaliers of orange, lemon, jaſmine, and pomegranate trees. On one ſide of the garden is the duke's menagerie, where are kept foreign fowls and wild beaſts.

The principal church is the cathedral, called St. Maria del Fiore, which is four hundred and ninety feet long, and three hundred and eighty Engliſh feet to the top of the croſs. The cupola is octangular, and the breadth of each ſide twenty-five feet; the paintings in the upper part repreſenting the manſions of bliſs, and below them the place of torments. Under the cupola is the choir, the pillars of which are intermixed with the ſtatues of the twelve apoſtles in white marble. On the great altar ſtand three marble ſtatues of a large ſize, one of the Supreme God and Father ſitting, the two others repreſenting the dead body of Chriſt, ſupported by an angel, done by Bandinelli.

Near the church is a ſquare tower built of red, white, and black marble, on which are erected a great number of fine ſtatues. Oppoſite to the cathedral is the church of St. John the Baptiſt, ſuppoſed to have been anciently the temple of Mars. It is of an octangular form, and has three braſs gates, formerly gilt, on which ſeveral hiſtories of the Old and New Teſtament are ſo admirably expreſſed in baſſo relievo, that Michael Angelo, in the extacy of his admiration, could not forbear ſaying they were worthy of being the gates of paradiſe. Over the chief entrance are three marble ſtatues repreſenting Chriſt's baptiſm, with three braſs ſtatues over the door of the decollation of John the Baptiſt. Over the third door are three ſtatues in bronze, of John the Baptiſt diſcourſing with a Phariſee and a Scribe. In the court before the middle gate, is a fine pillar of granate, which was a preſent from the Piſans to the city of Florence.

Near them ſtands another column, erected in memory of a pretended miracle wrought by the body of St. Zenobius, on its being removed from St. Laurence's to the cathedral church, when his bier accidentally touching the trunk of a dry elm, that lay upon the ground, they pretend that it immediately became ſound and cloathed with the livelieſt verdure. In the church are ſixteen large pillars of oriental granate. The whole cieling is of Moſaic work, repreſenting eminent perſons, and done by Apollonius, a Greek, Andrea Taffi, Gaddi, &c. The font is large, and adorned with ſeveral beautiful marble ſculptures, particularly a ſtatue of John the Baptiſt ſtanding before it. Here all the children born of chriſtian parents within the city of Florence, are baptized. The pavement of the church is inlaid, and on one ſide of it are repreſented the ſun, and the twelve ſigns of the zodiac, with the following inſcription, which is the more remarkable, as it may be read backwards as well as forwards:

En giro torte ſol ciclos, et rotor igne.

"Behold the ſun purſues his oblique way,
"And with his fiery vertex brings the day."

On midſummer day, at noon, the ſun is ſaid to be directly concentric to a ſolar diſk cut in a window oppoſite to this repreſentation of that luminary.

One of the principal relics of this church is the finger with which it is pretended John the Baptiſt pointed to Jeſus, when he ſaid, "Behold the lamb of God," and which the people worſhip with the moſt zealous adoration.

In the church of the Annunciation, the walls and cielings are hung with votive offerings, it being famed for a miraculous picture of the Virgin Mary, which indeed brings a great deal of money to the clergy. The ſtory is, That the Servites, to whom the church and adjacent convent belong, employed a painter to draw the Annunciation of the Virgin in freſco; but when only her face was wanting to finiſh the work, the artiſt was extremely perplexed how to give it a ſuitable perfection, and falling aſleep under this diſquietude of mind, when he awoke he had the pleaſure of ſeeing the cauſe of his anxiety removed, and the face completely finiſhed. It is not queſtioned that he received this aſſiſtance from the angels, and the Florentines, from the many miracles performed by it, wonder how any one can have the leaſt doubt of it. Among other things, it is ſaid, that they who look on this picture will never be troubled with ſore or weak eyes. Mr. Keyſler obſerves, that another artiſt probably played the ſleeping painter a trick, which he and the monks had the addreſs of turning to their advantage; or the whole might be a contrivance of the painter himſelf, in order to get a name by being on ſuch good terms with the angels. He adds, that this piece is far from being an angelic work; for though the perſon and attitude of the angel are proper and graceful, and the painting of Mary, at the ſight of the heavenly meſſenger, happily deſigned, yet the wonder-working face is not to be compared with ſome hundreds of pictures by hands merely human. This piece is covered with three curtains, and placed in a chapel with a multitude of ſilver votive pieces hanging about it. The chapel is curiouſly adorned with marble, the pavement is of Egyptian granate and porphyry, and it is illuminated with above forty ſilver lamps and branches. Before the altar are two ſilver candleſticks of the height of a man, and upon them are two large ſilver ſtatues, repreſenting two angels. Every part of the altar is covered with baſſo relievos, and the tabernacle is extremely rich.

In St. Laurence's church are two pulpits, ſupported by marble columns, and adorned with baſſo relievos by Donatello, and in the new veſtry are ſhewn the tombs of ſome princes of the houſe of Medicis, done by Michael Angelo. Behind the high altar is the entrance into the chapel deſigned for the burial-place of the great dukes of Florence; it has been begun ever ſince the year 1604, and is not near finiſhed, though the ducal family is extinct. It is of an octangular form, and the altar is richly adorned with lapis-lazuli, chalcedony, porphyry, and other valuable ſtones. Indeed the whole chapel is, in a manner, lined with theſe and other materials equally expenſive. The lower part of the walls are every where encruſted with fine Sicilian jaſper, with green and yellow veins, and above this is a red Florentine marble, variegated with white ſpots. The inſcriptions on the tombs are of chalcedony, inlaid with red porphyry, and the fineſt ivory is not whiter than theſe letters, every one of which coſt three Spaniſh piſtoles. The ſarcophagi on ſome of the monuments are of Egyptian granate, which is of a deep red, and others are of oriental granate. Upon the ſarcophagi are cuſhions of red jaſper, profuſely enriched with jewels; the expence of each cuſhion is ſaid to be ſixty thouſand ſcudi, about twelve thouſand five hundred pounds ſterling. At each end of theſe cuſhions lies a regal crown, glittering with pearls, diamonds, and other jewels of immenſe value. Laſtly, the bronze ſtatues of the great dukes, for whom the monuments are erected, ſtand in niches of touch-ſtone, and every ſtatue is ten feet high. The Mauſolea are ſeparated from each other with double rows of jaſper columns, with capitals and cornices of braſs gilt, and between theſe columns are placed large urns of Corſica jaſper, with green and white veins inlaid with Florentine work. The walls are ornamented with the arms of the principal cities in the duke's dominions, of the ſame work.

We have not room to deſcribe the multitude of ſtatues and pictures with which the other churches of this city are adorned. Notwithſtanding all this ſplendor, the appearance of the city ſuffers conſiderably from the great number of paper windows to be ſeen here. However, among its ornaments is a vaſt Doric column of one piece of granate, which ſtands before the church of St. Trinita, and ſerves for a pedeſtal to a porphyry ſtatue of Juſtice with her balance, and a royal mantle of bronze. This granate column is ſaid to have been found at Rome, in the emperor Antoninus's bath.

In the middle of one of the ſtreets is a fine ſtatue of Hercules killing Neſſus the centaur, cut out of a ſingle block of white marble, by Giovanni Bologna.

In the Old Market, where proviſions are ſold, the goddeſs of Plenty, done by Donatello, ſtands upon a granate pillar.

The New Market is properly the exchange of Florence, where, about noon, the principal merchants meet to do buſineſs, many of whom are of great families. Some of the nobility deal in a retail way; and a noble Florentine often condeſcends to meaſure out a yard of ſilk.

A particular part of the city, noted for houſes of ill fame, was aſſigned by Coſmo I. to the Jews; and an inſcription at the entrance of this ſtreet obſerves, That it was thought more adviſeable to permit the Jews to remain in the neighbourhood of Chriſtians, that, by their good example, they might be brought to ſubmit to the eaſy yoke of Chriſt, than totally to expel them.

The Florentines attribute the vivacity and penetration by which they boaſt that their countrymen have made ſuperior improvements in the polite arts, to the purity and ſalubrity of the air; and they never mention their countrymen Michael Angelo, Dante, Petrarch, and other great men, without tranſports of admiration. They are inimitable in making repartees, and telling ſtories with a good grace; but are ſo infatuated with theſe endowments, that the government of the tongue is but little known amongſt them: but happy would it be for them, if this vanity was all that could be laid to their charge; for they are, even to a proverb, addicted to that moſt unnatural vice which brought down the Divine vengeance on the cities of Sodom and Gomorrah.

At the diſtance of an Italian mile from the city is Poggio, or Villa Imperiale, a palace belonging to the duke, with a very delightful range of trees leading to it, and both ſides bordered with vineyards, convents, and villas. The apartments of the palace are very fine, and the garden belonging to it extremely delightful.

Six Italian miles from Florence towards Bologna ſtands Pratolino, another palace belonging to the great duke. The apartments and halls are very rich, and the paintings exquiſite. The garden abounds with beautiful allies, covered walks, mazes, grottos, and water-works.

The road from Florence to Vienna is paved, and ſtill exhibits

exhibits many remains of the ancient Via Caſſia. It extends over a chain of hills, and though the country is not ſo fine as that between Florence and Piſa, it affords very delightful proſpects, it being every where planted with vineyards and olive-yards.

SECT. III.

The PISANO, *or Territory of* PISA.

Its Situation, Produce, and Extent; its Hiſtory, with a particular Deſcription of the Cities of Piſa and Leghorn.

THE Piſano, a territory of Tuſcany, is bounded on the north by the territory of Florence and the republic of Lucca; on the eaſt by the Sienneſe; and on the weſt by the ſea; extending about forty-ſeven miles in length, and twenty-five in breadth, and abounds in corn, wine, all kinds of vegetables, fine cattle, and every thing requiſite for the comfortable ſubſiſtence of human life.

The road from the city of Piſa to that of Lucca, which are only twelve miles diſtant, is moſt delightful, eſpecially in dry weather, when, inſtead of croſſing over Mount St. Julian, one may keep along the plain. The country is divided into ſquare incloſures, and planted with rows of trees, with vines twining round them, which luxuriantly intermingle their branches at the top, and form beautiful feſtoons. In ſummer and autumn nothing can exceed this delightful tract of land, the mountain which runs all the way on the right being covered with olives and cypreſs-trees of an extraordinary height.

Piſa, formerly a republic of conſiderable figure, reduced the iſlands of Sardinia and Corſica, conquered Carthage, drove the Saracens out of the city of Palermo in Sicily, maintained with honour a long war with Genoa, and ſubdued the iſland of Majorca, though Almeric king of Jeruſalem ſent forty ſhips to its ſuccour. But in 1390 it was deprived of its liberty by John Galeazzo Viſconti, duke of Milan, and in 1405 by the Florentines; but, by the aſſiſtance of Charles VIII. king of France, it recovered its liberty in the year 1494; however, being again reduced by the Florentines, in 1509, it has ever ſince remained in a ſtate of ſubjection. The principal cities in this territory are Piſa and Leghorn; we ſhall begin with the former.

Piſa is a ſpacious city ſeated on the Arno, which divides it into two parts, in the forty-fifth degree thirty-ſeven minutes north latitude, and in the eleventh degree eighteen minutes eaſt longitude, twelve miles to the north of Leghorn. The ſtreets are ſtraight, broad, and well paved, and the greateſt part of the houſes make a tolerable appearance; but the life and ſpirit that formerly animated this city, namely, the multitude of its inhabitants, are ſo far exhauſted, that the graſs grows in ſeveral of the ſtreets. The moſt wealthy inhabitants, ſince the loſs of its freedom, have withdrawn themſelves, ſome of them to Genoa, and there is little appearance that this loſs will ever be repaired; for though Piſa enjoys a healthful air, good water, a convenient and delightful ſituation for trade, and is encompaſſed by a fertile country, the inhabitants now ſcarce amount to ſixteen or ſeventeen thouſand, though in the eleventh century it is ſaid they amounted to one hundred and fifty thouſand; but, in the year 1615, they were reduced to fifteen thouſand and ſixty, including even the Florentine court. The univerſity, which was founded in 1339, may be ſuppoſed to partake of the misfortunes of the city; though it wants neither colleges nor endowments, nor able profeſſors, who are of the great duke's nomination.

The exchange is a ſuperb ſtructure, built in 1605, but is now almoſt deſolate.

Some buſineſs, however, is ſtill carried on in the city, on account of its being the place where the duke's gallies are built; and the few gallies of which his naval force conſiſts, generally lie here.

Another circumſtance of ſome little benefit to the city, is its being the chief ſeat of the order of St. Stephen. Theſe knights are divided into Cavalieri della Giuſtitia, della Grazia, and de Commanderie. The laſt are thoſe who, for the honour of wearing the croſs of the order, found a commanderie, which upon their death reverts to the order. In the ſecond claſs are celebrated painters, and other eminent maſters in the polite arts, on whom the duke conſers this honour. Theſe two claſſes are not obliged to make any vows; but the firſt, who are the proper knights of St. Stephen, ſwear allegiance to the grand maſter, who is always the great duke, and to ſerve againſt infidels. The proofs of noble deſcent muſt be the ſame as thoſe required by the order of Malta. Their vow of chaſtity does not exclude marriage; but the unmarried knights have this advantage, that they live in the palace of the order, where they are elegantly lodged and provided with a ſplendid table gratis. The knights have the free diſpoſal of their fortunes and incomes, of which a fourth part only devolves to the order, on their deceaſe. On the feſtivals of the order, and other ſolemn occaſions, they wear on their breaſt an octangular croſs of crimſon ſattin, embroidered with gold; but on common days, when they appear in public, they have only a plain white croſs upon their cloak. The name of St. Stephen was choſen by Coſmo I. the founder of the order, from a ſignal victory he obtained, which entirely eſtabliſhed the government of the Medicis, on the feſtival of that ſaint; whence St. Stephen's day is kept as the chief feſtival of the order. Their church is then hung with ſeveral hundred flags, and other trophies, taken from the infidels. The high altar is made of fine porphyry, and over it is a marble ſtatue of pope Stephen.

The ſquare before the church conſiſts of ſtately houſes, with the palace of the order, round which are the buſts of the great dukes in white marble, and in the front a fine marble ſtatue of Coſmo the Great.

The ducal palace has nothing magnificent, or ſuitable to that title. The market is ornamented with a white marble ſtatue of the goddeſs of Plenty, ſtanding upon a pillar, which ſerves both for a whipping-poſt and a pillory.

The archbiſhop's palace is a mean old building, with nothing remarkable but a fountain in the inner court, in which is a white marble ſtatue of Moſes, placed there, as an inſcription ſays, on account of his riſing from the water, and his rod having miraculouſly forced copious ſtreams from a barren rock.

In the cathedral is a pair of large folding-gates of braſs, on which is repreſented in relievo the life of Chriſt; but both the workmanſhip and deſign are very indifferent. On the ſide of the church are three entrances, with braſs doors, on which are ſeveral hiſtorical pieces of the Old and New Teſtament in baſſo relievo, much ſuperior to that mentioned above. The door frames are adorned with very curious feſtoons, and figures of animals, with the arms of the houſe of Medicis interſperſed in ſeveral places. The middle portal is adorned with two columns of white marble, embelliſhed with admirable foliages, and ſaid to have belonged to Nero's baths. The frontiſpiece of the cathedral is a Gothic work, with innumerable pillars carved up to the very top. The number of pillars within the dome amounts to ſeventy-ſix, each of which is cut out of a ſingle block of white oriental granate. The pavement before the high altar is of Moſaic work, made of ſmall gems, repreſenting a variety of figures. On each ſide of this altar ſtands an angel of bronze, admirably executed by Bonanno Piſano. The ſtatues of Adam and Eve, on the altar of the Holy Sacrament, are greatly admired. The Baptiſtery is a large circular building with a high cupola; but it has no lanthern, or any opening at the top, and is built all of white marble. The Laſt Judgment, repreſented in baſſo relievo on the pulpit by Nicholas Piſano, cannot fail of pleaſing a curious eye. There are here eight pillars of oriental marble, each cut out of a ſingle block. The large marble font is divided by four partitions, which ſhews that formerly baptiſm was here performed by immerſion, and in the middle ſtands a bronze ſtatue of John the Baptiſt. The concavity of the cupola is diſpoſed in ſuch a manner, that any noiſe made below is followed by a very loud and long double echo, which even exceeds that of Simonetti near Milan; but the repetition is not ſo clear and diſtinct. Two perſons alſo, whiſpering, with their faces near the wall, oppoſite to each other, may converſe together, without being overheard by the company that ſtand between them.

In

In the cathedral church-yard, near the choir, ſtands the famous leaning tower, detached from any other building; it is round, and aſcended by three hundred and fifty-five ſteps to the top, which is encloſed with a breaſt-work, and in it hang ſeven bells. It is computed to be one hundred and eighty-eight feet high, and is divided into eight partitions, or ſtories, each ſurrounded with a colonade of thirty-eight pillars, which in all the rows are of the ſame thickneſs; but decreaſe in length in proportion as they riſe towards the top. The ground-floor is the only one without an opening between the pillars; but all the other ſtories form ſo many galleries round the tower. It is remarkable, that a plummet let down perpendicularly from the top, touches the ground at the diſtance of fifteen feet from the bottom of the tower. Its thus leaning has raiſed the admiration of travellers, ſome pretending that, by a peculiar art of the architect, it appears to lean on all ſides, though in reality it inclines only on one, which is occaſioned by nothing more than the ſinking of the foundation: this is evident from the pedeſtals of the loweſt row of pillars being ſunk much deeper in the earth on the ſide of the inclination than on the other.

The Campo Santo, or the city burial-place, is an oblong piece of ground, and as the earth was brought from the neighbourhood of Jeruſalem by fifty Piſan gallies, it is walled round with a building in the form of a cloyſter, with marble columns and porticos, covered with lead at the top, and is divided by low ſtone-walls into three equal parts. In the uppermoſt lie the nobility, the citizens in the middle, and the peaſants in the loweſt part. On the walls of the cloyſters are Scripture hiſtories, painted by ſeveral hands, among which that of Job, in eight pieces, by Giotto, deſerves particular notice. There is here likewiſe the life of the patriarch Joſeph, in four compartments, and a very large repreſentation of the Laſt Judgment, in the middle of which is ſeen king Solomon hanging down his head, with all the ſigns of a guilty conſcience. On our Saviour's left hand hell is repreſented, and on his right the manſions of bliſs, crowded with monks and nuns: however, an angel is ſeen to take the freedom of dragging away a monk by the hair, as not qualified to be in ſuch good company.

St. Matthew's church, which belongs to the Benedictine nuns, is a ſmall, but very elegant, ſtructure, remarkable for the perſpective paintings in freſco on the roof; but the beholder muſt ſtand on a particular ſtone near the middle of the pavement, for that is the point of view from whence all the figures, pillars, &c. of the picture are diſtinctly ſeen in their proper arrangement.

There belongs to this city a very large phyſic-garden, well ſtocked with all ſorts of curious plants and water-works, and near it is a muſeum of natural curioſities. The city is encompaſſed by a moat and walls; it is alſo defended by an old caſtle and large fort, but its citadel is a modern fortification. Between this city and Leghorn is a canal, ſixteen Italian miles in length, and of great ſervice for the convenience of trade and draining the moraſſes.

We now come to the city of Leghorn, by the Italians and other nations called Livorno, the antient Liburnus Portus, a handſome, but not very large, city, built in the modern taſte, and with ſuch regularity, that both gates are ſeen from the market-place. It is ſeated in latitude forty-three degrees thirty-three minutes north, and in ten degrees twenty-five minutes eaſt longitude. In the north part are the fineſt houſes, and from its being interſected with canals it is called New Venice. Leghorn was formerly a place belonging to the Genoeſe, and by them given to duke Coſmo I. in exchange for the town of Sarzana. It was then an inconſiderable place; but ſince that time it has put on a quite different aſpect. The canals cut in ſeveral parts without the town, have rendered the marſhes fit for culture, and in ſome meaſure diſſipated the noxious effluvia, though the air is not yet eſteemed perfectly healthful; and freſh water is ſo ſcarce, that they are obliged to bring it from Piſa.

The city is very well fortified, having two forts towards the ſea, beſides the citadel. The ramparts afford a very agreeable proſpect of the ſea, and of many villas on the land ſide; the number of guns in the ſeveral fortifications at preſent amount to about three hundred, moſt of them of braſs; and the garriſon conſiſts of ſix hundred men. The harbour is divided into the outward and inward, the laſt of which is called the Darſa, or Darſena, and is only appropriated to the great duke's gallies, which are about five or ſix in number, and are ſometimes ſent out upon a cruiſe againſt the Corſairs. The outward mole has a ſtrong barrier of ſtones, of a vaſt ſize, upon which is a ſtrong pavement, with a parapet wall running along the middle of it, where, on one ſide or the other, a perſon may be always ſheltered from the wind. The length of the mole is ſix hundred common paces; but the breadth is ſaid to be fifteen hundred. On this mole the wealthy inhabitants take the air in their coaches. One great defect in the harbour is, that in the middle it is too ſhallow for large ſhips, which on this account are moored to pillars and large iron rings on the ſide of the mole, by which means they are ſafer than in the harbour itſelf. The road, for an Italian mile or two towards the ſea, is very good, though there is no ſecurity againſt the winds or Corſairs. The light-houſe, where every night thirty burning lamps are contained in one lanthern, ſtands on a ſingle rock in the ſea; and not far from it, on the main land, is the Lazaretto, where quarantine is performed by perſons coming from places ſuſpected of infection.

On a building near the harbour, where the great dukes formerly reſided, is an inſcription to the following purport.

"Fly hither, ye merchants, with alacrity: this ſacred "place by its beauty, commodiouſneſs, freedom, and "plenty of all the neceſſaries of life, allures you: Coſ-"mo III. the ſixth great duke of Tuſcany, who reſides "in this houſe, courteouſly invites you; having en-"larged and fortified the city, he rebuilt this edifice, "firſt raiſed by his grand-father Frederic I. and made it "more ſuperb and magnificent in the year 1695."

In the ſquare before the Darſena is a ſtatue of duke Ferdinand, with four Turkiſh ſlaves, in bronze, of a gigantic ſize, in chains.

The number of inhabitants is computed at forty thouſand, among whom are twenty thouſand Jews, who live in a particular quarter of the city, have a handſome ſynagogue, and, though ſubject to very heavy impoſts, are in a thriving condition, the greateſt part of the commerce of this city going through their hands. The generality of the Greeks and Armenians ſettled here, acknowledge the pope's ſupremacy, and each have their peculiar church. The free Turks and the Turkiſh ſlaves have a moſque, but the proteſtants are not permitted the public exerciſe of their religion, the Engliſh excepted, who being of all foreign nations the beſt cuſtomers to Leghorn, are allowed to have a chaplain, while the other proteſtants make uſe of the chaplains of ſhips. None of the churches in Leghorn afford any thing worth the curioſity of a judicious traveller.

As particular quarters of the city are aſſigned to the Jews and Turks, ſo the public proſtitutes have theirs alſo, conſiſting of two or three ſtreets, which bounds theſe unhappy creatures are not to paſs, without previous leave from their commiſſary, and paying a trifling ſum.

The port is entirely free for commerce to all nations, and the duties on imported goods are ſo eaſy as not to cauſe the leaſt obſtruction to commerce; every bale, let the ſize be what it will, pays only two piaſters, or nine ſhillings ſterling; nor are the contents examined. Travellers are not troubled at Leghorn about ſearching their baggage; they are only obliged to deliver up their piſtols, and other fire arms, till they obtain an order from the governor to have them reſtored, which is alſo attended with very little difficulty.

Leghorn, after all, is far from being a cheap place to live at; for though ſtrangers pay little or no taxes, yet the proviſions and other neceſſaries, brought thither by land, are ſubject to very high duties; and the duke reſerves to himſelf the monopoly of ſeveral commodities, particularly brandy, tobacco, and ſalt; and Mr. Addiſon informs us, that in his time, the perſon who had the monopoly of ſelling ice at Leghorn, paid annually above one thouſand pounds ſterling for that privilege, and the tobacco-merchant ten thouſand pounds. All the com-

commodities that are ſent up into the country are clogged with impoſitions as ſoon as they leave Leghorn; and all the wines, oils, and ſilks brought from the fruitful valleys of Piſa, Florence, and other parts of Tuſcany, are obliged to pay ſeveral duties and taxes before they can reach the port.

The Turkiſh ſlaves and other galley-rowers are every night ſecured in a large place ſurrounded with a high wall, called the Bagni, in imitation of the Moors, who give this name to a priſon in which they keep the Chriſtian captives. In the day-time they are ſet at liberty, and may exerciſe their induſtry either in labour or trade; but they muſt take care to return in due time to the Bagni. They lie here ſingly in long barracs, the beds being in five or ſix rows over each other, with rope ladders to aſcend to them, and nothing is puniſhed with greater ſeverity than when two are found in one bed: for the better preventing all diſorders, lamps are kept burning, and a watch is continually walking about the barracs. The three claſſes of rowers are the volunteers, the criminals, and the Turkiſh ſlaves, who have each their reſpective wards; in other reſpects no diſtinction is made, and one ſick ward and diſpenſatory ſerves indiſcriminately for them all. The number of theſe galley-rowers is generally about two thouſand, and of theſe the Turks make eight or nine hundred.

SECT. IV.

The SIENNESE.

Its Situation, Extent, Produce, Government, and Hiſtory; with a Deſcription of Sienna, and the Cuſtoms and Manners of the Inhabitants. A conciſe Account of the States of Preſidii and Piombino.

THE Sienneſe is bounded on the north by the Florentino; on the ſouth by the Mediterranean ſea and the duchy of Caſtro; on the eaſt by the Perugino and Orvietano; and on the weſt by the Florentino and the Tuſcan ſea, it being about fifty-five miles in length, and as much in breadth.

The country is pretty fertile, eſpecially in mulberry trees, which feed a great number of ſilk-worms, and there are ſeveral medicinal ſprings.

The Sienneſe flatter themſelves with retaining a kind of liberty in the election of their ſenate, which conſiſts of nine perſons called *Eccelſi*, whoſe preſident is ſtiled captain of the people; but this is only an external ſhew, the ſenate being ſo far under the check of the great duke of Florence, that no meaſure of any conſequence muſt be taken without his knowledge and permiſſion.

Sienna was at the time of the long interregnum a free ſtate; but has ſince been thrown into frequent convulſions, by the ambition and inteſtine broils of the principal families, eſpecially the Malateſta and Petruzzi. In the year 1554, the emperor Charles V. reduced them entirely under his dominion, and at his reſignation in 1556, the ſovereignty devolved to his ſon Philip II. king of Spain. This prince afterwards, in conſideration of a large ſum of ready money, and a promiſe that they ſhould not take part with the French, ceded the country to Coſmo I. duke of Florence; but reſerved to himſelf ſome maritime towns, as Piombino, Orbitello, Telamone, Porto Hercole, Porto St. Stefano, Porto Longone, with the iſle of Elva, which conſtitute what is called Stato de Gli Preſidii, from the Spaniards keeping garriſons in thoſe towns.

The principal city in this territory is Sienna, which ſtands thirty-ſix miles to the ſouth of Florence, and fifty-nine to the ſouth-eaſt of Leghorn. It is pretty large, and pleaſantly ſituated on three hills, which render the ſtreets very uneven; but this is compenſated by the agreeableneſs of the proſpect, and the exceeding healthfulneſs of the air. The houſes are elegant, but thin of inhabitants, who ſcarce amount to ſeventeen thouſand. They are civil and of a chearful diſpoſition; the women have their ſhare of beauty, and have more freedom than in many other parts of Italy. Several of the nobility, who are divided into claſſes called *Monti*, chooſe it for their reſidence, and on this account Sienna is famous for the pureſt dialect of the Italian language. It is the ſee of an archbiſhop, and the cathedral is incruſted both on the outſide and within with marble. The pavement is admirably inlaid with marble and other coſtly ſtones, eſpecially under the grand cupola, and before the great altar, where many ſcripture hiſtories are repreſented in this manner with all the delicacy of painting; but this part is covered with boards in order to preſerve it, and a foreigner is only ſhewn ſome feet ſquare. In this church are the buſts of one hundred and ſeventy popes, in plaſter of Paris, ſix of whom were natives of Sienna, and the twelve apoſtles have marble ſtatues. The roof of the whole church is painted with azure, and, as it were, ſtrewed with golden ſtars.

Through an aperture in the pavement of the choir one may look down into St. John's church, which lies directly under the cathedral, and there is an entrance to it at the foot of the aſcent. This ſingularity is occaſioned by the uneven and hilly ſituation of this city. Near the cathedral is the archbiſhop's palace, and oppoſite to it a large and well endowed hoſpital, founded by a ſhoemaker, who lies buried in a church belonging to it, and, in return for his liberality, was canonized, and has a ſtatue erected to his memory.

The Jeſuits church is, as uſual, very fine, and adorned with a great many marble ſtatues. That of the Auguſtines is worth ſeeing for the admirable ſculpture on the high altar. On each ſide of the tabernacle ſtands an angel of white marble, holding a lighted taper in his hand.

The head of St. Catherine of Sienna, which one of her countrymen, upon her dying at Rome, out of a pious zeal, is ſaid to have ſevered from her body, and brought to Sienna, is kept in the church of the Dominicans with the greateſt veneration, and is exhibited to view only twice a year. On the high altar of this church are two admirable ſtatues of Mary Magdalen and Catherine of Sienna, the latter of whom has a fine chapel here, painted by Sodorno. The Dominicans here pretend to ſhew the ring given her by Chriſt at the ſolemnization of his eſpouſals with her, which are profanely ſaid to have been performed with celeſtial ſplendor, while king David graced the ſolemnity with the muſic of his harp. The houſe in which they ſay ſhe lived with her parents is now an oratory, and her private chamber is converted into a chapel, profuſely adorned with ſtucco-work, gilding, ſculpture, and painting.

Not far from the Dominican church is a remarkable bridge, extending from one hill to another acroſs a ſtreet; but the inconſiderable height of this bridge does not admit of any buildings under the arches like that of Genoa. This city has an univerſity, founded by Charles V. but it is in a declining condition. The German ſtudents enjoy particular privileges, which they derive from the ſame emperor; but in the Jeſuits College is a conſiderable number of ſcholars. In the fifteenth century the Academy of the Intronati was founded here.

The Senate-houſe is ſcarce worth ſeeing; before it indeed is a large ſquare called the Branda, reſembling a diſh, or rather ſhell, which it is pretended in caſe of fire, or for a mock ſea-fight, may be laid under water, by means of the city fountain. On one ſide of this ſquare ſtands a tower called the Mangiana, remarkable for its chimes, which, however, never play but on extraordinary occaſions; it derives its name from a ſtatuary, who made ſeveral ſtatues erected upon it. Before the Senate-houſe is a fine marble fountain by Giacomo della Quercia, a ſculptor of this city.

The arms of Sienna are Romulus and Remus ſucking a ſhe-wolf, and as ſuch they are to be ſeen in ſeveral parts of the city; particularly on a pillar of ophir fronting the Senate-houſe. Sienna, indeed, boaſts of being a colony founded by thoſe celebrated brothers, but cannot ſupport its claim by any ſatisfactory proof.

The Sienneſe alſo contains a number of ſmall towns; and in the Tuſcan ſea are the iſlands of Melora, Gorgona, Pianoſa, Le Formiche, Monte Chriſto, Giglio, and Gianuti; all of which belong to the duchy of Tuſcany.

We now come to the ſmall and inconſiderable ſtates of Preſidii and Piombino, with which we ſhall conclude this ſection.

The former of these states, which lies as it were scattered near the sea, formerly belonged to Sienna; but Philip II. king of Spain, as we have already intimated, on transferring the district of Sienna to Cosmo I. excepted this tract, which thus continued annexed to the crown of Spain, till in 1707, the greatest part of it, with the kingdom of Naples, was conquered by the Imperialists; but in the peace of 1736, this tract was yielded to Don Carlos, king of both Sicilies.

The state della Presidii, or of the garrisons, from its being garrisoned by the troops of the king of the Two Sicilies, contains the following places, Orbitello, Telamone, Argentaro, Porto Hercole, Monte Filippo, and Porto St. Stefano.

Orbitello, the capital, stands near the Tuscan shore, at the foot of Mount Argentaro, on a lake formed by an arm of the sea, which serves for a good harbour, having a narrow entrance between two capes. It is strong both by art and nature; being almost surrounded by the lake, which is eleven or twelve miles in compass, and having no communication with the continent, but by a narrow causeway that may be easily broken; and it is defended by some good forts.

The other towns, just mentioned, are only small fortified places.

The principality of Piombino is a small territory lying along the sea-coasts, between the Sienneſe on the east, and the Pisano on the west. It was formerly part of the republic of Pisa, from which it passed into the family of Appiani, who took the title of princes of Piombino; but the last male heir dying without male issue, the emperor conferred it as a fief on others.

The town of Piombino stands on a rock in the sea, and is defended by a citadel and castle; it was built out of the ruins of the ancient city of Populonia, but makes no great figure at present.

There are several other small towns in this district, some of which are fortified; and opposite to Piombino is the island of Elba, which is separated from the continent by a channel; it is small, and with all the turnings and windings of the shore, which is very uneven, is not above forty miles in compass. It is very mountainous, and affords iron, lead, and sulphur, with quarries of marble. It has two fortresses, namely, Porto Longone, garrisoned by the Spaniards, and Porto Ferrario, which belongs to the duke of Tuscany.

SECT. V.

Of the Ecclesiastical State.

Its Situation and Extent. The Reason of the Poverty and Want of Inhabitants in the Pope's Dominions; the Prerogatives claimed by the Pope; his Power not derived from St. Peter; the Rise of the Cardinals, and their Manner of chusing the Pope; the Offices of the Government and Courts of Justice, with the Revenues, Military and Naval Forces of the Pope.

The Ecclesiastical State, or the territories of the pope, is bounded on the north by the dominions of Venice; on the east by the Adriatic: on the south-east and south by the kingdom of Naples and the Mediterranean; and on the west by the grand duchy of Tuscany and the territories of Modena; extending from south to north two hundred and forty miles, and from the south-west to the north-east, in some parts, one hundred and twenty, but in others scarce twenty.

Mr. Addison, Dr. Busching, and other authors observe, that on considering that the pope's dominions generally consist of a very fertile and excellent soil; that his harbours, both on the Adriatic and the Mediterranean seas, are very advantageously situated for trade; that he receives considerable sums out of Spain, Germany, and other countries, that belong to foreign princes, which one would fancy might be no small ease to his subjects; that his country is visited by numbers of foreigners, who spend a great deal of money in it; and that on account of the supposed sacredness of his person and character, his government should seem most eligible and best calculated for the welfare of subjects: on considering all these particulars, and the long peace that has reigned in Italy, one would be apt to imagine that this country could not fail of being extremely flourishing; but upon the slightest inspection the very reverse is manifest.

The country is but ill cultivated, poor, and thin of inhabitants, the city of Bologna alone excepted. Trade and manufactures are entirely stagnated, and were it not for the bounty of Providence, which furnishes the inhabitants with dates, figs, almonds, olives, and other fruit, which grow spontaneously, and without culture, their sloth would absolutely starve them. Their little inclination and spirit for work is the less wonderful, as they are conscious that if they have much, much will be taken from them. The many holidays, which are an impediment to trade and business, and the great number of young sturdy beggars, strolling about, under the title of pilgrims, instead of increasing the common stock by their labour and industry, lie as a dead weight on their fellow-subjects, and consume the charity that ought to support the aged, the sick, and the decrepid.

The multitude of convents, which are like so many nests of drones, that hinder the increase of inhabitants; the many hospitals that confirm the people in idleness; the inconceivable wealth in the churches and convents, which lie dormant, without the least advantage to the public; and the inquisition, which will not permit the want of inhabitants to be supplied by those of another religion, are some of the great causes of the wretched condition of the papal dominions; though there are others attended with still more fatal consequences. No christian government equals the papal in rigour, the temporal sword being not only used, but, on several occasions, the spiritual. Nothing is so monstrous as the passion by which most popes, cardinals, and other great prelates, have been carried away for enriching and promoting their nephews and relations, and nothing is so vain as the ambition of gaining a great name by founding churches and convents. The regulars vie with each other in the number, splendor, and riches of their religious houses and churches; but it is from the bowels of the poor inhabitants that the money is generally extracted for the support of their frivolous rivalship. The legates, governors, and other inferior officers in the provinces, knowing that the time in which they can enjoy their posts is but short and uncertain, scruple no kind of rapaciousness. On considering these various causes, we shall no longer be surprized that in no part of Europe there is a more wretched people than the pope's temporal subjects.

According to the canon-law, the pope is the supreme, universal, and independent head of the church, and invested with sovereignty over all christian communities, and every individual member. He has a right to prescribe laws to the whole world. What he does is as if God himself had done it, he being god upon earth. All sovereigns must pay homage to him. He may depose both disobedient and ill-governing princes, and give their dominions to others. He has a right to examine any person promoted to a kingdom, and may require an oath of allegiance from him. On the vacancy of a throne the government devolves to him. He has the right in all states to use both the temporal and spiritual sword. If a prince be remiss in his government, he may appoint him a colleague, or substitute another in his stead. He can legitimate children born out of wedlock, and thereby make them capable of succeeding to a throne, &c. This is a short sketch of the extravagancies of the political system of the court of Rome, which, notwithstanding its impiety and absurdity, has been ambitiously obtruded on the world, and even was for some ages tyrannically put in practice. It is chiefly owing to the Reformation that these corrupt maxims are at present, by the rational part of Christendom, treated with contempt, and that the pope has lost a great part of the formidable power he has vainly and arrogantly assumed, which has reduced his power even among those princes who own his authority, and several of them seem to consider him less as a spiritual father than as a temporal prince. Hence many of the abuses with which the reformers justly charged the court of Rome, have been ei-

ther quite ſet aſide, or managed with more art and policy. Princes, inſtead of being treated with threats and anathemas, are addreſſed with great civility and ſubmiſſion: the clergy and monks are become more learned and moderate, and though they have have loſt none of their zeal for reducing proteſtants to their church, yet in general they do not uſe ſo much violence and cruelty as they formerly did, except in a few countries more bigotted than the reſt; nor do they treat thoſe who diſſent from them with ſuch uncharitable language and virulence. Proteſtants, of all ſorts, are uſed with more humanity in thoſe countries, and the learned of all religions hold an epiſtolary commerce with each other, with the utmoſt ſeeming friendſhip and candour.

Dr. Buſching obſerves, that the papal territories are far from being derived from the poor and diſintereſted apoſtle St. Peter, who, according to the groundleſs opinion of the church of Rome, is ſaid to have been the firſt biſhop of that city; but have been procured and annexed to that ſee much later. It is equally falſe, he adds, that the emperor Conſtantine the Great, in the year 324, made a grant to Sylveſter biſhop of Rome, of that city and St. Peter's patrimony, as it is called. This fable was firſt mentioned by Iſidorus Mercator, and is probably nothing better than his own invention. However, the pretended inſtrument of donation is alone ſufficient to place in a clear light the ignorance and audacioufneſs both of its forgers and partizans. Certain it is, that the biſhops of Rome gradually procured for themſelves ſeveral eſtates and lands, which, particularly in the year 755, received a very conſiderable increaſe; Pepin king of France giving the whole exarchate to the ſee of Rome, and his ſon Charles not only confirming that gift, but making three ſeveral additions to it. No mention was made, till ſome time after this, of the ſuppoſed gift of Conſtantine to Sylveſter. Rome was ſtill reputed ſubject to the emperor, the king of the Franks retaining the temporal ſovereignty of the places which had been granted to the popes. But under Charles's ſucceſſors the popes, finding opportunities of increaſing their power, at laſt arrogated to themſelves the diſpoſal of the empire. In the following ages they took all meaſures for raiſing their ſee to an aſtoniſhing and formidable greatneſs, which proved highly detrimental both to the welfare of Europe, and the cauſe of religion. How the ſeveral parts of the papal territories became annexed to the ſee of Rome, we ſhall hereafter ſhew in the deſcription of thoſe parts.

The pope is choſen from among the cardinals, and before we deſcribe the manner of his election, it will be proper to take ſome notice of them. The word cardinal was a name anciently common to the preſbyters and deacons of great churches in cities; but in the eleventh century the preſbyters and deacons of the church of Rome reſtrained the appellation to themſelves, and their power encreaſed with that of the pope. The firſt dawn of their grandeur appeared under pope Nicholas II. Innocent IV. at the council of Lyons in 1243, gave them the red hat, Boniface VIII. the red veſtments, and Urban VIII. the title of *Eminentiſſimi*, but before they were only ſtiled *Illuſtriſſimi*. Sixtus V. at the council of Baſil, fixed their number at ſeventy, which is ſeldom complete. They are divided into three claſſes: theſe are ſix cardinal biſhops; namely, the biſhop of Oſtia, dean of the ſacred college; the biſhop of Oporto, ſub-dean; and the biſhops of Sabina, Paliſtrati, Freſcati, and Albano. Theſe biſhoprics may be held with other biſhoprics or archbiſhoprics. The ſecond claſs conſiſts of fifty cardinal prieſts, and fourteen cardinal deacons; each of the cardinal prieſts and deacons bears the title of a church in the city of Rome. The cardinals inſiſt on precedency before the electors of the empire, and of being treated on the ſame footing as crowned heads. Indeed the title of cardinal has no revenue annexed to it; but embaſſies, the protection of Roman catholic nations, governments, archbiſhoprics, biſhoprics, prelacies, and other eccleſiaſtical benefices, enable them to live in ſtate, though not ſuitably to the rank they aſſume, eſpecially when, being of mean extraction, they have no fortune of their own.

The conclave is the theatre on which the cardinals principally endeavour to give proofs of their genius and addreſs. The deceaſe of the pope is made known to the people of Rome, by tolling the great bell of the capitol, firing the cannon of the caſtle of St Angelo, and opening the priſons; and ſoon after circular letters are ſent to foreign cardinals by the cardinal cammerlingo to invite them to the approaching conclave. Mean while the cammerlingo acts as regent, is attended by the pope's life-guard, and orders every thing neceſſary for opening the conclave, which is held in the galleries and ſome of the anti-chambers of the Vatican, and conſiſts of a number of ſmall rooms ſeparated by wooden partitions, and diſtributed by lot, both among the cardinals then in Rome, and thoſe that are abſent. Each has uſually two, one for himſelf, and one for two attendants called conclaviſts.

On the eleventh day after the pope's demiſe all the cardinals in the city meet in the morning at St. Peter's church, where the maſs *Sancti Spiritus* is celebrated; and after a ſermon on the duties to be obſerved in the election of a pope, they proceed two by two into the conclave, which is then ſhut up by the governor and marſhal of the conclave, none being let out, unleſs in caſe of illneſs, till a new pope is elected, and the perſon ſo let out is not allowed to return. The governor of the conclave is always previouſly choſen by the cardinals, and, together with the marſhal, reſides at the entrance of the Vatican, and without their expreſs licence no perſon is ſuffered to go in or out.

While the cardinals ſit in conclave, refreſhments are brought them in baſkets, or boxes, which are ſearched, though not with much ſtrictneſs. Each cardinal orders his conclaviſts to write down on a ſlip of paper, the name of the perſon to whom he gives his ſuffrage. This is thrown into a chalice on the altar of the chapel of the conclave, and two cardinals appointed for that purpoſe ſucceſſively read aloud the notes, marking the number of votes for every cardinal. He who has two-thirds is declared pope; otherwiſe the ſcrutiny is repeated till this number is complete. If this manner of election does not take place, recourſe is had to another, called *Acceſſus*, whereby the notes of the former ſcrutiny being ſet aſide, every cardinal muſt give in writing his vote to another, and if by this way two-thirds do not appear, there is ſtill another reſource called *Inſpiratio*, in virtue of which, thoſe of the cardinals who are unanimous, come out of their cells and call aloud to each other, "Such a one "ſhall be pope, ſuch a one ſhall be pope:" upon which, others, to avoid incurring the diſpleaſure of the new elected pope, frequently join in the cry, and thus the election is ſometimes carried; but if this alſo fails, the ſcrutiny begins again, and a conclave in this manner, ſometimes proves a long-winded buſineſs.

The emperor, with the kings of France and Spain, are allowed to exclude a perſon propoſed for the popedom; but this proteſt muſt be made before the complete declaration of the votes for ſuch a perſon. It is required that the pope be an Italian, and at leaſt fifty-five years of age, though the age moſtly inſiſted upon is between ſixty and ſeventy. When the election is over, and the pope elect has declared what name he will bear for the future, the chief of the cardinal deacons proclaims him to the people. His coronation with a triple crown is generally performed eight days after.

The governor and magiſtrates of the city of Rome are, during the conclave, inveſted with the interregnum.

Each pope may chooſe his arms. The papal court is numerous and ſplendid. The poſts of cammerlingo, prime miniſter, upper confeſſor, ſecretary of ſtate, datary, and vice-chancellor of the holy church, are filled by cardinals. Some officers are removed at the pope's deceaſe, as the ſecretary of ſtate, the upper confeſſor, &c. while others, as the cardinal cammerlingo, vice-chancellor, &c. continue in office.

The pope's high council is formed of the conſiſtory of cardinals, and its ordinary meeting is once a week in the papal palace; but the extraordinary meetings depend on his holineſs's pleaſure. Here are diſcuſſed all the temporal and ſpiritual affairs of the papal ſee, as the filling up of vacant archbiſhoprics, biſhoprics, prelacies, abbacies, &c. Every nation of the Romiſh religion has

a cardinal

a cardinal for its protector. The inferior colleges are called congregations; as the congregation of the ſacred office or inquiſition; the congregation *de propagandâ fide*, and thoſe of religious ceremonies and the candidates for eccleſiaſtical benefices. The cardinals preſide in theſe congregations. The *rota Romana* is a kind of ſupreme court of appeal, where alſo every popiſh nation has one or two aſſeſſors. The *dataria* is the chancery, and is ſo called from the uſual ſignature, *Datum Romæ apud Sanctum Petrum*, &c. when the pope lives in the Vatican: and *Apud Sanctam Mariam Majorem*, when he reſides at the Quirinal.

The revenues of the pope are very large, as thoſe of the countries of which he is ſovereign as a temporal prince are conſiderable. No perſon in Rome muſt ſell any wine or fruit till the pope and his nephews, with their dependants, have diſpoſed of what is conſigned to them from their domains and eſtates. The annates of the great conſiſtorial benefices, the pallia, and inveſtitures of archbiſhops and biſhops, the jubilee year, indulgences, diſpenſations, canonizations, promotions of cardinals, ſubſidies of the clergy, convent collections, &c. continually bring vaſt ſums into the papal treaſury, from all Roman catholic countries. The annual income of the pope is generally computed at eight millions ſeven hundred thouſand ſcudi. This revenue is under the management of the apoſtolic chamber, where the offices are ſo lucrative, that ſome of the principal are ſold for eighty or a hundred thouſand dollars; yet in the year 1741 the apoſtolic treaſury was indebted no leſs than fifty-ſix millions of ſcudi.

The pope's ſoldiers are by no means deſpicable; but they have ſeldom good officers. They are both well clothed and paid, and are augmented or reduced as circumſtances require. His body-guard conſiſts of forty Swiſs, ſeventy-five cuiraſſiers, and as many light-horſe; but his gallies, which lie at Civita Vecchia, are of ſmall conſequence.

In the papal territories are five legations or principal governments; theſe are Bologna, Urbino, Ravenna, Ferrara, and Avignon. At the laſt place the legate never reſides in perſon; but is repreſented by a vice-legate. The poſt of legate is only triennial. The other countries belonging to the pope are under eccleſiaſtical governors, and the adminiſtration is every where deſpotic, Bologna alone excepted.

We ſhall now proceed to deſcribe the ſeveral countries ſubject to the pope, with the principal places in each. Theſe countries are the dutchies of Bologna, Ferrara, Romagna, and Urbino, the marquiſate of Ancona, the territories of Perugia and Orvieto, the duchies of Spoleto and Caſtro, St. Peter's patrimony, and the Campagna di Roma, or territory of Rome.

SECT. VI.

The BOLOGNESE, *or Duchy of* BOLOGNA.

Its Situation and Produce, with a minute Account of the Bononian Stone: Its Hiſtory, and a particular Deſcription of the City of Bologna, and of the Trade, Manners, and Cuſtoms of the Inhabitants.

THE Bologneſe is bounded by the Ferrareſe on the north; by Romagna on the eaſt; by Tuſcany on the ſouth; and by Modena on the weſt; and is watered by a great number of ſmall rivers, which render the ſoil extremely rich and fertile; but it is far from being either populous or well cultivated. The country abounds in all kinds of fruit, eſpecially quinces, olives, and grapes. The quinces, in particular, are remarkably large, and of an exquiſite flavour. The whole territory is ſaid to contain three hundred and eight towns and villages, and three hundred and eight thouſand ſouls.

Among the natural curioſities of this country is the famous Bononian ſtone, found about the Appennine mountains, and in mount Paderno, four Italian miles from Bologna; alſo in ſeveral other parts of Italy. It is commonly of the ſize of a walnut, of a light-grey colour, the ſurface uneven, impregnated with ſulphureous particles, and not very compact, though heavier than one would imagine from its ſize, and in many parts of it ſparkling like talc. After a heavy rain has waſhed the earth down from the mountains, it is eaſily found. Before it is properly prepared it appears in the dark like another ſtone, but, by a particular calcination, it acquires the following property: that after lying in open day-light, it abſorbs ſo much luminous ſplendor as to ſhine in the dark, like a glowing coal, for eight, or even fifteen minutes, and when the ſtone is very good, its luſtre reſembles that of a flambeau. The moon-ſhine makes not the leaſt impreſſion on it, and the ſun-beams are too ſtrong for it by calcining it too much, ſo as to crumble it to powder. It retains alſo its luminous quality when laid in water; and in general it laſts three or four years, at the expiration of which, or at any other time, it may be calcined anew to recover its quality; but it never becomes ſo luminous afterwards.

This country formerly maintained its independency as a republic, under the protection of the emperor; but in the year 1278, ſubjected itſelf in ſome meaſure to pope Nicholas II. In ſucceeding times it underwent ſeveral revolutions, till pope Julius II. on occaſion of the Venetian war, annexed the city of Bologna, and all its dependencies, to the papal dominions in 1513. The city having freely ſubmitted to the Romiſh chair, its various privileges have been preſerved, and it ſtill enjoys thoſe of ſending an envoy to the court of Rome, of having an aſſeſſor in the Rota, that no citadel muſt be built at Bologna, and that the effects of the citizens ſhall not be taken from them, upon any pretence whatſoever. In memory of their former ſtate the word LIBERTAS is ſtamped on their coin.

The temporal government is under a cardinal, who has the title of legate a latere, and has a prelate, or vice-legate, under him. The legate himſelf is either changed or confirmed every three years.

The principal city in this territory is Bologna, in Latin Bolonia, antiently Felſina, which is, next to Rome, the beſt and richeſt city in all the Eccleſiaſtical State. It is ſituated in forty-four degrees thirty minutes north latitude, and in the eleventh degree forty minutes eaſt longitude, two hundred miles to the north-weſt of Rome, and is of conſiderable extent, it being five or ſix Italian miles in circumference, and ſo populous, that its inhabitants amount to upwards of eighty thouſand. It is ſeated at the foot of the Appennine mountains, in a fertile plain, and enjoys a wholeſome air. The river Savona runs by the walls, and the Reno through the city. Among the houſes are many fine buildings. In moſt of the principal ſtreets they have a kind of portico, which ſupports the ſecond ſtory. Theſe muſt be allowed to be very convenient in windy or rainy weather, and in ſhading the rooms from the ſun; but they deprive them of the ornaments they would receive from a fine front, and an elegant entrance. As the pillars of thoſe porticoes are very irregular before different houſes, ſome being high, others low, ſome ſquare or octangular, others round, ſome of ſtone and others of wood, they are of no great ornament. Theſe porticoes, or galleries, ſerve only for walking, and that part of the ſtreet where the carriages paſs, is conſiderably lower, and, in ſhort, they reſemble thoſe of Cheſter. The roofs of the houſes, though flat, are covered with tiles, with a kind of parapet towards the ſtreet.

The palace in which the vice-legate, the gonfaloniere, and other officers of ſtate have their apartments, and the ſeveral boards and courts of juſtice are held, ſtands in the great market-place, and the front is two hundred and eighteen common paces in length. Over the entrance is a braſs ſtatue of pope Gregory XIII. who was a native of Bologna; it weighs eleven thouſand three hundred pounds, and the workmanſhip does great honour to Minganti, the artiſt by whom it was made. On the left hand on entering the door is the ſtatue of pope Boniface VIII. Among the apartments ſhewn to ſtrangers is one called il Salone d'Ercole, where may be ſeen a noble ſtatue of Hercules, of an uncommon ſize: it is of terra cotta, by the ſkilful hand of Lombardi. In another ſaloon is repreſented, in freſco, the moſt conſiderable atchievements of the Bologneſe, inſcribed with Latin verſes. Above this apartment is the Sala Farneſe, ſo called from a marble

ſtatue of pope Paul III. who was of the family of Farneſe. The cieling and walls of this apartment were painted by the beſt maſters in Bologna, at the expence of cardinal Farneſe, among which is the public entry of Paul III. into Bologna.

The Aldrovandi muſeum is kept in this place with ſuch care, that it is never opened but in the preſence of a ſenator, and conſiſts, among other curioſities, of one hundred and eighty-ſeven folios, and above two hundred bags full of ſingle leaves, all written by the indefatigable hand of Aldrovandi. This collection has been enriched with the cabinet of the marquis Coſpi, which contains a great number of valuable medals. In this place are alſo kept the military ſtores and artillery, with arms for ſix thouſand men. The phyſic-garden in the court is very ſmall, and has nothing remarkable.

The area before the palace is three hundred and ſeventy feet long and three hundred broad, in which is a fountain that is much admired: the ſtatue of Neptune on the top is eleven feet high. Within the baſon are a great number of dolphins ejecting water, and four women with three ſtreams iſſuing out at each breaſt. The only exception to this ſuperb work is, that the jetteaus are in no proportion to the ſize of the figures.

A connoiſſeur in painting will meet with a great deal of entertainment in the palaces of the city: that which moſt gratifies a traveller's curioſity is the palace of Caprara, where he cannot but admire the double ſtair-caſe, the tapeſtry hangings, and the richneſs of the other furniture. Here are particularly many ſmall coffers of admirable Florentine work, one that has ſix large and as many ſmall pillars of rock cryſtal, ſeveral curious works of ivory and wood. In the gallery are ſome fine paintings, among which is the death of Bragadino, who was flayed by the Turks, painted on wood.

On the cieling of a ſaloon of the palazzo de Favi are the adventures, of Jaſon in eighteen pieces, by the two brothers Auguſtino and Annibal Caracci. In another apartment are painted on the frize twelve paſſages of the Æneid in freſco, by Luigi Caracci. The reſt of the adventures of Æneas are painted in ten pieces by Albani, under the direction of Luigi Caracci, and his other diſciples have finiſhed the remainder; but the latter are in a different apartment, and under every picture is a Latin verſe out of the Æneid, explaining the ſubject. Several other fine pieces of painting are likewiſe to be ſeen in this palace, and particularly ſome very delicate drawings with a pen.

The palazzo de Monti ſhews the genius of the Italian nobility for adorning their palaces with collections of paintings and other curioſities; who often abridge themſelves of many of the conveniencies of life, in order to be poſſeſſed of ſomething that attracts the admiration of other people, and eſpecially of foreigners. The firſt floor of this grand edifice, conſiſting of above thirty apartments, which are by far the beſt, is never, or at leaſt very ſeldom, inhabited, and then only for the reception of ſome perſon of diſtinction; their general uſe being only to diſplay an amazing collection of paintings and other curioſities. Beſides the many pieces by Albani and the Caracci's, here is a gallery painted by young Cignani, with a large piece of painting repreſenting the raiſing of the ſiege of Turin, by Antonio Caſa. In another apartment is to be ſeen a woman aſleep, with a wanton boy laughing, while he lets down a mouſe, hanging by a thread, upon her breaſt. In this piece the expreſſion is very ſtrong, and the mouſe is admirably done.

The palace of Ranucci is built in a grand taſte, with a noble ſtaircaſe, and ſpacious lofty rooms. Here is ſome beautiful tapeſtry, made at the Gobelins, and ſeveral cloſets full of Florentine work, ſilver vaſes, and other furniture, particularly a clock of raiſed inlaid work of gems, on a ground of lapis-lazuli. The height of the chapel takes up three ſtories of the houſe. Among the paintings in this palace are St. Jerome, and Joſeph flying from Potiphar's wife, by Guido; the fall of Haman, by Antonio Gionima, where the beautiful figure of Eſther is particularly admired; and the portraits of the great dukes of the family of Medicis.

We ſhall now take notice of ſome of the eccleſiaſtical buildings at Bologna, and ſhall begin with the cathedral, which is dedicated to St. Peter, and has a great number of monuments. On each ſide of the main entrance is a large lion couchant of red marble, on each of which is placed a baſon of holy water. On the center arch, near the Tribuna, is a marble ſtatue of pope Gregory XV. who was a native of Bologna. On the cieling of the chapter-room is a fine piece of painting by Luigi Caracci, repreſenting St. Peter on his knees before the Virgin Mary: here is alſo the Annunciation, by the ſame hand, which was the laſt piece he painted.

St. Agnes's church is finely gilt and painted, and among the pictures is the martyrdom of St. Agnes, over the high altar, which is one of Dominichino's pieces.

In St. Anthony's church, over the great altar, is an admirable piece by Luigi Caracci, repreſenting the preaching of the primitive hermits. On another altar is a picture of the Virgin Mary and her Divine Infant, with a group of angels hovering over her. In the oratory or ſmall chapel near this church is a moſt beautiful piece repreſenting the Annunciation, by Tiarini.

Before St. Bartholomew's church ſtands a marble ſtatue of St. Petronius, by Brunelli. This church is divided into three iſles, and that in the middle is of a remarkable height. All the three make a fine appearance, and are excellently painted, particularly that on the ſouth ſide. Angelo Michael Colonna, as is mentioned in an inſcription, from a motive of devotion, performed this grand piece, and ſome others, without any reward. The high altar is of beautiful marble, with ſome figures inlaid. The Annunciation by Albani is accounted an incomparable piece, and nothing can ſurpaſs the expreſſion of the Virgin's admiration. Two other pieces repreſenting the nativity, and the flight to Egypt, are alſo by the ſame maſter.

In the church of St. Petronius, the biggeſt in the whole city, is to be ſeen the celebrated meridian line of Caſſini, which conſiſts of pieces of red and white marble inlaid, of a hand's breadth; but thoſe pieces in which the ſigns of the Zodiac are cut, are a foot ſquare. This line is above half the length of the church, and at the beginning is a Latin inſcription, which ſays, that the whole length of this line, which is ſaid to be one hundred feet, is the ſix hundred thouſandth part of the circumference of the terraqueous globe. In the arched roof of the nave is a hole directly over the noon point of this line, through which a ray of the ſun entering, marks the ſolſtices and equinoxes upon the line. However, the ſame operation may without much difficulty be performed in any other convenient place; the whole myſtery conſiſting only in meaſuring the degrees on the line proportionably to the height of the hole through which the rays enter.

Madonna di St. Luca, on the Monte della Guardia, is a Dominican nunnery about four Italian miles from Bologna, and is much reſorted to on account of a picture of the Virgin Mary, pretended to have been painted by the hand of St. Luke: on which account it is every year brought into the city in a ſolemn proceſſion, with more than ordinary magnificence, attended by the firing of cannon, the ſeveral companies of artizans, the fraternities, monks, heads of the pariſhes, the magiſtrates, the gonfalonier, and the legate himſelf. The picture is always carried under a rich canopy, the people upon their knees ſaluting it as it paſſes by, with the moſt zealous ejaculations that can be conceived. For the greater convenience of the pilgrims, an arched colonnade has been built from the city to the top of the mountain, which on account of its great length may be juſtly eſteemed the moſt remarkable building of that kind in Italy. In the contribution of the neceſſary ſum for this colonnade, all the handicraft men, &c. ſeemed to vie with each other in the erection of a perpetual monument of their zeal for the Bleſſed Virgin; even the very lacquies of the city were at the expence of building fifteen of the arches. On each of the arches are the names and arms of the benefactors. One ſide of the arcade is walled, but in that towards the road, every arch reſts upon its reſpective pillars. Every arch is five common paces, or twelve feet wide, which is alſo the breadth of the walk. The height is about ſixteen feet. This arcade does not run in a ſtraight line; but its direction is now and then interrupted with ſmall

windings, yet in many parts there are very long viſtas, particularly at the grand portico near the city, from which one has a view of ninety-three arches in a direct line, which taken together are ſeven hundred and fifty common paces in length. There are thirty-three flights of ſteps to aſcend the acclivity of the mountain; theſe flights conſiſt of a few ſteps, and the ſpace between is level and paved with flat ſtones.

A continual emulation reigns between the Franciſcans and Dominicans, eſpecially at Bologna; each of theſe orders ſtriving to ſurpaſs the other in buildings and other external magnificence, in order to increaſe their revenue and authority. The Dominicans have the advantage in the ſplendor of their churches; but in wine cellars they have been hitherto exceeded by the Franciſcans. The church of the latter is adorned with many highly finiſhed pieces of painting, and on each ſide of the convent are fine arched cloiſters, one of which is one hundred and thirty-three, and the other two hundred common paces in length. In the ſtreet before the convent is a pillar, on the top of which is a braſs ſtatue of the Virgin Mary, ſtanding on a creſcent.

In the Dominican convent are about one hundred and forty monks. An anti-chamber, divided into three iſles, leads to the library, and on each ſide are ſtatues and paintings in honour of the Dominican order, and pope Pius V. The books are very numerous, and judiciouſly diſpoſed. In the lower cloiſter of the convent is a ſmall chapel, ſaid to have been the apartment in which St. Dominic, in the year 1221, departed this life. In one piece of painting in this chapel is an angel repreſented going up a ladder to heaven with St. Dominic on his back; but that the angel and St. Dominic may not have the ill manners of turning their poſteriors towards the people, they aſcend the ladder backwards. Another circumſtance no leſs abſurd, is our Saviour and the Virgin Mary ſtanding above, holding the ladder.

Here is an univerſity, in which are profeſſors for oratory, philoſophy, geometry, aſtronomy, anatomy, divinity, phyſic, the oriental languages, the civil and canon law, civil and eccleſiaſtical hiſtory, and all of them have handſome ſalaries. The foreign ſtudents amount to about four hundred. The public college is two hundred and thirteen paces in length. Near its entrance on the right hand is a grand ſtair-caſe, adorned with ſome good paintings in freſco, repreſenting the noble actions of St. Carlo Boromeo, and other pieces. The anatomical theatre is adorned with wooden ſtatues of the moſt celebrated anatomiſts, and the floor is boarded with cypreſs.

In the year 1712, Luigi Ferdinando de Marſigli inſtiſtituted at Bologna an academy of ſciences, for the improvement of natural hiſtory, mathematics, natural philoſophy, chemiſtry, anatomy, and phyſic. With this the Clementine academy, founded by pope Clement XI. for architecture and painting, was incorporated; and for the farther advancement of this inſtitution, the city purchaſed and gave the palazza Celeſi to the academy, that the library, the muſeum, the obſervatory, the ſchools, and the apartments of the profeſſors, might be under the ſame roof. In aſcending the tower you firſt come to the aſtronomical ſchool, where is to be ſeen a model of the Copernican ſyſtem. Here is alſo a perpendicular meridian line, cut through a wall a foot thick. On each ſide hang teleſcopes, quadrants, &c. ſo that, as the ſtars croſs the meridian, proper obſervations may be conveniently made, for which purpoſe all the ſhutters in the aperture may be removed at pleaſure.

Higher up the tower is the obſervatory, which on every ſide has ſhutters to be opened or ſhut as required, and a gallery on the outſide. This tower is aſcended by two hundred and ſeventy ſteps, and the top of it alſo ſerves for aſtronomical obſervations; and through an aperture juſt over the middle of the ſpiral ſtair-caſe, the ſtars may be ſeen in the day-time, from the vault under the tower. The library belonging to the college is in the ſecond ſtory, and chiefly conſiſts of the books of count Marſigli, who founded the academy, and contains ſeveral Turkiſh, Arabic, and other oriental manuſcripts. In another apartment is taught experimental philoſophy. The paintings with which this room is decorated repreſent volcanos, and other mountains of a ſingular quality; large iſlands of ice, frequent in the north ſeas; the cataracts of the Nile, and other great rivers. In a cloſet adjoining to this apartment are ſeveral loadſtones, among which is one ſcarce ſo large as a man's fiſt, that weighs only nine ounces without the cap, yet lifts up two hundred and thirty ounces. Another apartment exhibits a variety of ſhells and other marine productions. Adjoining to this is a cloſet containing a collection of ſemi-pellucid ſtones, as agate, jaſper, turquoiſe, chalcedony, onyx, and lapis-lazuli. The tranſparent ſtones are kept in another cloſet, with the name affixed to each piece. Here are alſo many hundred ſpecies of marble, and other ſtones, in ſeparate repoſitories, which being well poliſhed, and all ranged according to their different colours, make a beautiful appearance. In another room are kept ſeveral kinds of ſea-weeds, corals, ſponge, &c. In another, all kinds of exotic fruits, woods, leaves of plants, roots and barks of trees, gums, reſins, with the ſeeds of all kinds of vegetables. One large room contains a variety of all kinds of animals, and another all ſorts of warlike inſtruments.

The painting academy is on the ground-floor, and the cieling beautifully painted. In winter thoſe who are inſtructed in painting meet in a particular room, built in the form of an amphitheatre, and well illuminated with lamps, where above a hundred and fifty of them may conveniently ſit and draw from the life. In the academy of ſculpture are wooden models of the antient obeliſks at Rome, and in a place adjoining to it are ſtatues and copies of the moſt famous originals in plaſter. To this edifice is added a noble printing-houſe, furniſhed not only with Latin, Greek, and Hebrew, but alſo with Arabic and other oriental types.

The Bologneſe ladies dreſs entirely in the French faſhion. The women of the middle claſs generally appear in a black gown, with a black ſilk veil over their heads; and the female ſex in general enjoy a greater freedom here than in moſt cities of Italy. One meets with many perſons walking the ſtreets with ſpectacles on, who are ſo far from labouring under any weakneſs of ſight, that they caſt their eyes about on all ſides without once looking through the glaſſes. This faſhion is of Spaniſh original, and is ſuppoſed to give an air of gravity, which has recommended it to the generality of the monks and clergy.

The Bologneſe are famous for their vivacity and wit, and particularly for their ſatirical jeſts. However, a ſtranger no where meets with more civility than at Bologna; but their aſſiduous application to their ſeveral trades and manufactures, is a much more valuable quality.

The little river Reno, a branch of which runs through the city, turns many ſilk-mills. The Bologna damaſks, ſattins, taffeties, and velvets, are in great repute. This city alſo carries on a conſiderable trade in flax and hemp, and alſo ſupplies the neighbouring provinces with oil and wine.

The wine made about Bologna is ſo ſtrong, that on its firſt coming from the preſs it is generally diluted with a fourth part of water; except that appointed for the ſacrament, which is without mixture: the neat wine is to be purchaſed at the convents. Many ingenious works are here made of walnut-tree; for with theſe trees the country abounds, and the quinces are here large, and of an exquiſite flavour. Bologna is likewiſe celebrated for eſſences, aqua-vitæ, ſope, and ſnuff; but more particularly for its theriaca, which is prepared in the public elaboratory; and at Bologna rock cryſtal is wrought into ſnuff-boxes, luſtres, &c.

The nuns of the city are very ingenious in making moſt beautiful artificial flowers of ſilver, ſilk, muſlin, enamel, and iſinglaſs. Fruits of all kinds are alſo imitated in wax, ſo as ſcarcely to be diſtinguiſhed at firſt ſight from the products of nature. This country indeed abounds in honey and wax, great quantities of which are exported. All kinds of proviſions are here exceeding good, and in great plenty. Fowls of all kinds are in theſe parts very large, and of a fine flavour, eſpecially the

the pigeons. The Bologna cervellat, and other ſauſages, tongues, &c. are famous, not only throughout Europe, but in the Eaſt and Weſt Indies.

The other towns in the Bologneſe are very ſmall and inconſiderable.

SECT. VII.

The FERRARESE, *or Dutchy of* FERRARA.

Its Situation, the Manner in which it became ſubject to the Pope, its preſent wretched State, and a particular Deſcription of Ferrara, the Capital of the Country.

THE Ferrareſe is bounded on the north by the Poleſino di Rovigo, on the weſt by the dutchy of Mantua, on the ſouth by the Bologneſe and Romagna Proper, and on the eaſt by the gulph of Venice. It had formerly its own dukes, who held this country as a fief of the papal ſee, till 1597, when pope Clement VIII. annexed the country to the Eccleſiaſtical State; ſince that time it lies almoſt uncultivated, though it was one of the fineſt countries in Italy. The air is unwholeſome, on account of the marſhes, the inhabitants being too thinly ſcattered to drain them.

Ferrara is an antient, large, and beautiful city, notwithſtanding its being poor and ill peopled. It is ſeated on the Po, in the forty-fourth degree thirty-ſix minutes north latitude, and in the twelfth degree fourteen minutes eaſt longitude, thirty miles to the north-eaſt of Bologna. Its fortifications are of little value, except the citadel of five whole, and as many half baſtions, built by Clement VIII. Within the city is a large caſtle, or palace, ſurrounded with high walls, towers, and moats, at preſent the reſidence of the legate a latere over this dutchy. At the entrance are two braſs ſtatues of two former dukes, one of whom is on horſeback. The ſtreets are long, broad, clean, and regular, with many handſome houſes and palaces.

The architecture of the cathedral is in the Gothic taſte, and its outſide adorned with a multitude of marble pillars and baſs reliefs. Its large ſquare ſteeple is alſo entirely of marble. The grand gate is ſupported with three ranges of pillars, between which are ſeveral porticos, one above another, and juſt above the entrance is a large gilt ſtatue of the Virgin Mary. The chapels of this ſtructure are finely ornamented with ſculpture and painting.

Oppoſite the cathedral are two fine braſs ſtatues; the one is equeſtrian, repreſenting Nicholas d'Eſte, marquis of Ferrara, with an inſcription, intimating, that he thrice reſtored peace to Italy; the other is ſitting between two ſmall figures of braſs, upon a pillar about twenty feet high, and repreſents Borſo d'Eſte, the firſt duke of Ferrara, one of the moſt virtuous men in his age. This is ſaid to have been formerly an aſylum for criminals, which extended twenty paces round the ſtatue; tho' it has now loſt its protecting power. But near it is ſtill a ſanctuary; a very handſome pillar adorned with oak branches and leaves, which ſupports a gilt ſtature of pope Alexander VII. who is ſitting in a chair giving his bleſſing.

At a ſmall diſtance is another ſquare in which is the town-houſe, which is adorned on every ſide with marble galleries and baluſtrades, together with ſeveral other fine ſtructures. Theſe two ſquares, with the adjacent ſtreets, are the beſt peopled parts of the whole city.

The church of the Carmelites is a very ſpacious ſtructure, filled with fine paintings; the moſt valuable of which are, a converſion of St. Paul, to whom the church is dedicated; the martyrdom of that apoſtle; and the adoration of the eaſtern magi, all in the choir.

The Benedictine convent is very fine; and its cloiſters are compoſed of magnificent porticos. At the foot of the ſtair-caſe that leads to the dormitory, is the ſtatue of Otho III. its founder. Its church is large, and the tabernacle of the high altar much admired for the beauty of the workmanſhip. It is adorned with very fine fluted columns, and the figures of ſeveral ſaints of the Benedictine order. In this church is the tomb of the celebrated Arioſto, the author of Orlando Furioſo, and ſeveral other pieces highly eſteemed. This tomb is of red, white, and black marble, adorned with columns and ſtatues. His buſt is of white marble, and crowned with bays.

The church of the Theatines is large, and their convent very magnificent. Its library is eſteemed one of the beſt in Ferrara, both for printed books and manuſcripts.

The Chartreuſe is alſo worthy of notice, and is adorned with very fine porticos. Its church is a large ſuperb building, that contains many magnificent chapels, all adorned with excellent pictures. Thoſe over the high altar, which repreſent the aſcenſion and the laſt judgment, are by Baſtianino Philippi, a native of Ferrara; but the marriage of Cana in the refectory of the convent, by Bononi, who was born in the ſame city, is by far the beſt.

The univerſity of this city is gone to decay, and has only one college, which belongs to the Jeſuits.

It muſt not be omitted, that in 1735 pope Clement III. raiſed the biſhopric of Ferrara to an archbiſhopric, which at once put an end to the long diſputes about juriſdiction between this biſhopric and the archbiſhopric of Ravenna.

Ferrara was very rich, and poſſeſſed a great trade, while governed by its own princes, eſpecially its three laſt dukes, who fortified, embelliſhed, and enlarged it ſo much, that it contained upwards of a hundred thouſand inhabitants; but it is at preſent very deſolate, vaſt numbers of the houſes being uninhabited, and falling to ruin.

In this dutchy are alſo Comacchio, a biſhop's ſee, but a ſmall place, and two or three market-towns.

SECT. VIII.

Of ROMAGNA.

Its Situation, Produce, and Hiſtory; with a Deſcription of Ravenna, Imola, Faenza, Servia, and Rimini.

ROMAGNA, in Latin Romandiola, is bounded on the north by the Ferrareſe; on the ſouth by Tuſcany and the dutchy of Urbino; on the eaſt by the gulph of Venice; and on the weſt by the Bologneſe and a part of Tuſcany. The country produces corn, wine, oil, and fine fruits; and eſpecially ſalt, from which ariſes its principal revenue. It has alſo excellent paſtures, with ſome mines and mineral waters; but the country lies miſerably uncultivated, except near the principal towns.

This country was a part of the antient province of Flaminia, which in the fifth century became ſubject to the Oſtrogoths, whoſe king, named Theodoric, having taken the city of Ravenna in 493, made it his uſual place of reſidence. In the following century the Goths being driven out by Beliſarius and Narſes, generals of the emperors of the Eaſt, Ravenna became the reſidence of the emperor's exarch, till the Longobardi made themſelves maſters of it; but in 755 Pepin, king of the Franks, having compelled Iſtulphus, king of the Longobardi, to give up the whole exarchate, conferred it on the ſee of Rome. The moſt remarkable places in this country are the following:

Ravenna, the capital, was formerly a city of great ſplendor, but is now mean and inconſiderable. The houſes are old and ruinous, the ſtreets filthy, and all parts have a melancholy appearance; for the number of its inhabitants ſcarce amount to fifteen hundred. In the time of the Romans and Goths it ſtood on a bay formed by the Adriatic, and had a celebrated harbour; but at preſent it is three Italian miles from the ſea, which is owing to the great quantities of mud thrown up by the tide, and ſince formed into a tract of land which is cultivated. Without the city is ſtill to be ſeen a high brick tower, which formerly ſtood at the harbour, and one mile and a half farther a ruinous old light-houſe. The air is unwholeſome, but has been ſomewhat improved by conveying along the ſides of the city the rivers Montone and Ronco, which carry off the ſtinking water from the adjoining marſhes.

The large market-place of this city is adorned with two lofty pillars of granate, upon which ſtand at preſent the ſtatues of St. Victor and St. Apollinaris. In this

area is alſo erected a braſs ſtatue of pope Alexander VII. ſitting, which is the uſual attitude in public monuments erected to the vicars of Chriſt. Under an arcade in the market-place are eight ſmall iron gates, which are ſaid to be thoſe taken from the city of Pavia, and ſet up as trophies of the valour of the inhabitants of Ravenna; but the common people are perſuaded that theſe gates were brought from the Holy Land, and that they were thoſe which Sampſon carried away from Gaza.

On the area before the cathedral ſtands the ſtatue of the Virgin Mary, on the top of a pillar erected to her in 1659, becauſe, according to the inſcription, ſhe preſerved the city more than once from the plague. The great door of the church is made of rough boards, without any ornament; but what is moſt remarkable is, that theſe boards are ſawed out of vines, and ſome of them are twelve feet long and two ſpans in breadth. In the cathedral are fifty-two large marble pillars in four rows, and in the chapel of the Holy Sacrament is a repreſentation of the children of Iſrael gathering manna in the Wilderneſs, with ſome other paintings by Guido Rheni.

The church of St. Apollinaris is worthy the notice of a traveller. On each ſide of it are twelve marble pillars, and the cieling is an old, but beautiful Moſaic work, repreſenting the three Eaſtern kings worſhipping the infant Jeſus, and ſeveral ſaints with their names inſcribed over them. In the center is the head of the emperor Juſtinian. The ſculpture and marble of the high altar are exceeding beautiful. In St. Anthony's chapel are ſeveral fine marble ſtatues: the altar is ornamented with black marble pillars, and near the entrance are two pillars of quince-coloured alabaſter. The altar of the chapel della Reliquie is decorated with four beautiful pillars of red porphyry. All the other altars in this church are of marble, adorned with many excellent pieces of painting. Great devotion is paid to the body of St. Apollinaris, and on his coffin are three ſilver tablets, on which are engraven a long account of his life and martyrdom.

The pavement of St. Vitalis's church is very beautiful, and the Moſaic work in the choir is extremely curious. The cieling of the church is painted in freſco, and on the walls are painted the martyrdom of St. Vitalis. On the altar della Madonna ſtand three beautiful white marble ſtatues of the Virgin Mary, and two angels. Over another altar, which is likewiſe of white marble, is an excellent Pieta, between two angels.

The church called the Rotonda lies without the city, and at preſent reſembles a ruined cupola. Its diameter is about ſixteen common paces, and its pavement, except in the dry ſummer months, is always under water. It is ſuppoſed to have been built in the year 526 by Amalaſunta, daughter to Theodoric, king of the Oſtrogoths. The moſt remarkable part of it is the roof, which is in the form of an inverted diſh, and conſiſts of one ſingle ſtone, which many years after this church was built was ſplit by lightning: it is as hard as a flint, and, according to an account written on vellum, and kept on the altar of the chapel, was brought out of Egypt. The thickneſs of this ſtone is four geometrical feet, the circumference a hundred and fourteen, and the diameter thirty-one feet two inches. It is difficult to conceive, ſays Mr. Keyſler, in what manner, at a time when the modern machines were in a great meaſure unknown, this huge maſs, the weight of which cannot be leſs than a hundred tons, was raiſed to the top of this edifice. Round this ſtone formerly ſtood the ſtatues of the twelve apoſtles, as appears from their names ſtill to be ſeen on the pedeſtals, which project a little way from this ſtone roof, and in the center ſtood a coffin of porphyry, in which was the body of Theodoric, king of the Oſtrogoths.

On a fountain in the area before the pope's palace is an antient ſtatue of Hercules, bearing on his ſhoulder an hemiſphere that ſerves for a ſun-dial. The club on which he leans diſtinguiſhes him from Atlas, for whom he might otherwiſe eaſily be taken.

Good ſpring water is extremely ſcarce at Ravenna; and ſeems to have been more ſo in the time of the Romans; for Juvenal thus complains:

"By a Ravenna vintner once betray'd,
"So much for wine and water mix'd I pay'd;
"But when I thought the purchas'd liquor mine,
"The raſcal fobb'd me off with only wine."

After thus deſcribing the capital, we ſhall mention ſome other places worthy of notice.

Imola, the antient Forum Cornelii, is a pretty town on an iſland formed by the river Santerno, nine miles to the north-weſt of Faenza. It has a wall, moats, and towers, with a ſtrong old caſtle; it is the reſidence of a biſhop, ſuffragan to the archbiſhop of Ravenna, and contains fifty churches, convents, and hoſpitals.

Faenza, in Latin Faventia, a town thirty-four miles to the eaſt of Bologna, is ſeated on the river Amone, from which a canal runs through the city, and afterwards falls into the river below it. Over the Amone is a ſtone bridge, with towers leading to a ſuburb that has ſome fortifications, though, like thoſe of the city, they are of no conſequence. It is a biſhop's ſee under the archbiſhop of Ravenna, has a fine market-place, and is famous all over Italy for the goodneſs of its earthenware.

Servia, a ſmall new-built town near the ſea, with handſome broad ſtreets. It formerly ſtood about half an Italian mile farther from the ſhore; but was removed hither in the year 1703, on account of the unwholeſomeneſs of the air. Its biſhop is ſuffragan to the archbiſhop of Ravenna. Up the country is a low tract of ground about two Italian miles and an half in length, and in ſome parts nearly as broad, into which, during the ſummer, the ſea-water is conveyed through a large handſome canal. The heat of the ſun prepares the water in this ſpacious reſervoir for making ſalt, of which the apoſtolic chamber have the ſuperintendency, and ſupply the provinces of Urbino, Ferrara, Cona, Bologna, and Romagna.

Rimini, a city on the river Marecchia, which was formerly called Ariminum, twenty miles to the ſouth-eaſt of Ravenna. It was once ſituated by the ſea, as appears from the remaining mole of the old harbour near the city walls; but now it is thirteen hundred paces diſtant, the ſea having thrown up a large tract of land that has been improved for tillage and gardening, and the harbour is ſo choaked up with ſand, as ſcarce to admit of ſmall barks. Ravenna was antiently in a very flouriſhing condition; but, among other calamities, ſuffered extremely by an earthquake in the year 1671; but it is ſtill a biſhopric ſuffragan to Ravenna, and is venerable for many monuments of its antient ſplendor. A little without the town towards Peſaro is a triumphal arch, on each front of which are two beautiful columns, and two buſtos. This was erected to the emperor Auguſtus. Here are alſo the remains of an amphitheatre, and ſeveral antient inſcriptions. Among its churches, that of the Franciſcans is the fineſt. In the ſquare before the council-houſe is a beautiful fountain, on which ſtands a ſmall bronze ſtatue of St. Paul. In this city is alſo a large library, in a very elegant ſtructure, for the uſe of the public.

SECT. IX.

The Dutchy of URBINO.

Its Situation, Extent, Produce, and Hiſtory; with a Deſcription of the Cities of Urbino, Peſaro, and Fano.

THE dutchy of Urbino is bounded on the north by the gulph of Venice; on the ſouth by Perugino and Umbria; on the eaſt by the marquiſate of Ancona; and on the weſt by Tuſcany and Romagna; extending about fifty-five miles in length and forty-five in breadth. It contains fruit, great plenty of game, as well as fiſh; but the air is not very wholeſome, nor is the ſoil remarkable for its fertility.

This dutchy had formerly its own dukes, of whom the laſt, Francis Maria, of Rovere, dying in 1631, the papal treaſury took poſſeſſion of his territory, the ſame duke having before, by will, confirmed the pope's claims, and

and in effect made over the country to him. The principal places in this duchy are the following:

Urbino, the capital of the country, is ſeated on a mountain between the rivers Metro and Foglia, twenty miles to the ſouth of Rimini, and is a handſome place, where the dukes formerly reſided; and, though not large, is the reſidence of a legate and archbiſhop. The houſes are very well built, and great quantities of fine earthenware are made here. The palace of its former dukes is a fine building.

Peſaro, a ſea-port at the mouth of the Foglia, in a pleaſant country, is a handſome clean city, which has ſome fortifications, and is the ſee of a biſhop ſuffragan to Urbino. There is here a fountain of mineral water, which, though its jet d'eau is not extraordinary, is very convenient for the inhabitants, and is ornamented in a good taſte. In its upper baſon, which is in the form of a drinking-glaſs, are ſeveral ſea-goddeſſes and ſea-horſes, which ſpout water from about thirty different apertures. In the great market-place is a highly finiſhed marble ſtatue of pope Urban VIII. in a ſitting attitude. The city contains many fine churches, convents, and palaces; and the figs of this country are reckoned the beſt in Italy. Round Peſaro is a fine country, divided into ſquare incloſures by rows of trees, interwoven with vines.

Poggio Imperiale is an antient pleaſure-houſe of the dukes of Urbino, ſeated on a hill about a mile from Peſaro, and is adorned with ſome good paintings by Genga, and a fine orangery.

Fano, a ſea-port, pretty well fortified, with a harbour for ſmall veſſels, is ſeated about twenty miles to the eaſt of Urbino, and derives its name from a *fanum*, or temple of Fortune, which antiently ſtood here. In commemoration of this, the image of Fortune is not only erected on the fountain in the market-place, but has alſo a place in the arms of the city. This is a biſhop's ſee, which depends immediately on the pope, and has forty-four churches and convents. The greateſt curioſity here is a marble triumphal arch in honour of the emperor Auguſtus, which after having withſtood the injuries of time till the year 1458, was then much damaged by the cannon, during the ſiege of Fano. This arch had formerly three gates; but the ſmalleſt on the left hand, in coming from the town, has been pulled down to make room for St. Michael's church, and the other is ſtopped by a mean houſe; ſo that the middle gate is now the only one open. In the cathedral of Fano are ſome admirable paintings, repreſenting the annunciation, the Lord's ſupper, and the gathering of manna, by Quercini; and the aſſumption of the Virgin Mary, by Caraccioli. In the chapel of the Virgin Mary are the fifteen myſteries of the roſary, painted by Domenichino. St. Peter's church alſo deſerves notice for its cupola, ſculpture, and paintings. On the high altar are two angels of white Carrara marble, by an eminent hand; the picture of Chriſt delivering the keys to Peter, by Guido Rheni; with ſeveral other pieces. A nobleman, by the name of Torelli, has erected in the market-place at Fano a very elegant theatre for exhibiting comedies and operas, which is made uſe of in carnival time.

Here are alſo Sinigaglia, Poſſombrone, Borgo St. Sepulchro, St. Leo, Cagli, and Gubio, each of which is the ſee of a biſhop, with ſome other ſmall places.

SECT. X.

The Marquiſate of ANCONA.

Its Situation, Produce, and Rivers; with a remarkable Account of the Ballani, a Shell-fiſh incloſed in Stones, with other Kinds of Sea-fiſh in the Adriatic: a conciſe Hiſtory of the Country, with a particular Deſcription of the Cities of Ancona and Loretto, including an accurate Account of the Caſa Santa.

THE marquiſate of Ancona is bounded on the north and eaſt by the Adriatic ſea; on the weſt by the duchy of Urbino; on the ſouth by Umbria, or the duchy of Spoletto; and on the eaſt by the Farther Abruzzo, from which it is ſeparated by the river Tronto; extending from eaſt to weſt about eighty miles, and ſixty from north to ſouth.

The air is extremely temperate, and the ſoil ſo fruitful, that it has been formerly called the garden of Italy. It produces a great variety of excellent fruit, with flax and bees wax.

This country is watered by no leſs than twelve rivers; theſe are the Fiumeſino, the Aſpido, Maſone, Potentia, Laſino, Chiento, Tingo, or Tenna, Leta-Vino, Aſone, Toſino, Ragnola, and Tronto.

This would be ſtill an excellent ſpot, and its inhabitants very rich, had they not the misfortune to groan under the tyranny of prieſts. On this account it is a deſart, if compared to what it was formerly; for Pliny aſſures us, that after a long bloody war it ſubmitted at laſt to the Romans, with upwards of four hundred thouſand inhabitants.

The eaſtern part of Italy is much more pleaſant and fertile than moſt parts on the weſt ſide.

All along the coaſt of Ancona, on the Adriatic ſea, ſtands a range of towers, at the diſtance of half a mile from each other, defended by one or two pieces of cannon, in order to hinder the landing of pirates, or the corſairs of Barbary.

In the loamy ſhallows along this ſhore, and eſpecially near Monte Comero, or Conaro, ten miles from the city of Ancona, are found the ballani, a ſort of ſhell-fiſh, which, when alive, harbour in a kind of large ſpongy ſtone, and, being not unlike a date kernel, are called ſea-dates. Frequently twenty or thirty of theſe are found in one ſtone. Many of theſe ſtones have little orifices on their ſurface; but others have none at all, notwithſtanding which the fiſh live and grow up in them. At Ancona they are larger than at Conaro; but the largeſt do not much exceed a finger in length. When they fiſh for ballani, they pick up ſuch ſtones as have their ſurface full of little holes, theſe being a certain ſign that the fiſh have inſinuated themſelves into them: but ſometimes the aperture through which the ſpawn, or ſmall fry of the fiſh, have penetrated into the ſtone, happens to be afterwards ſtopped up ſo as not to be diſcernible, and yet they thrive very well. They have no more room than is juſt neceſſary to open their ſhell a little way, this having been gradually abraded by their motion, in order to make room for their growth. The only way of getting them out, is by breaking the ſtone; for the paſſage through which they entered is much too ſmall even for the young fry to come out at. If two or more of theſe ſhell-fiſh happen by their growth to come into contact with each other in the ſame ſtone, only one fiſh is found to be alive. The inſide of the ſhell is white, but the outſide of an aſh-colour. When taken out of the ſtone a gut reſembling a worm about the length of a man's finger, hangs to them. This is entirely white, and full of clear water, which it ſquirts out when pleaſed. Such as find a particular delicacy in the taſte of theſe fiſh, ſay, that they do not feed on the groſſer parts of the ſea-water, but as it were on the ſubtile dew which penetrates through the ſtone, and thus undergoes a kind of filtration. It is very remarkable, that both the fiſh and the juices got from them are ſo luminous in the dark, that one might read by them; and even the water into which this fiſh has been ſqueezed, when put in a glaſs, emits an effulgence that laſts between ten and twelve hours. Great quantities of theſe fiſh are ſent to Rome, where they are reckoned dainties.

At Ancona is alſo a kind of ſea craw-fiſh, called nocchia, that have ſome reſemblance to our lobſters, but have a more delicate flavour. Their claws are leſs than thoſe of a craw-fiſh, and the head and tail are of a very uncommon ſhape. The largeſt of theſe ſpecies is about four inches in length.

Among other remarkable ſea animals in the harbour of Ancona is a fiſh called the ſepi, which is probably a ſpecies of the cuttle-fiſh, and has a long whitiſh ſhell on its head.

In the neighbourhood of Ancona are dug out of the ground amber, ſulphur, and ſeveral mineral reſins. The ſea near Ancona is obſerved to ebb and flow about a foot, or a foot and a half; but this tide gradually abates as the Adriatic ſea approaches to its junction with the Mediterranean,

ranean, and increaſes in its northern part towards the city of Venice.

The inhabitants of Ancona, eſpecially the female ſex, ſo far excel thoſe of the other parts of Italy in ſhape and complexion, that they ſeem to be a different race of people. The ſame may be obſerved of the inhabitants as far as Rimini.

With reſpect to the hiſtory of this country, it will be ſufficient to obſerve, that over the city of Ancona and its diſtrict, antiently called Picenum, was formerly placed a governor, who had the title of margrave, whence is derived the appellation of the marche or marquiſate of Ancona; but afterwards recovering its freedom, it continued independent till the year 1532, at which time Lewis Gonzaga, general of pope Clement VII. rendered it ſubject to the pope. Under the plauſible pretence of defending it againſt the incurſions of the Turks and banditti, the biſhop of Carla and the above Lewis de Gonzaga prevailed on the inhabitants to permit them to build a citadel. As ſoon as this was done, Gonzaga having drawn out all the young men of the city, under the pretence of exerciſing them in arms, the perfidious biſhop ſallied out of the citadel with his garriſon, cauſed the gates to be ſhut, ſeized the magiſtrates, and obliged them, with the reſt of the inhabitants, to take an oath of obedience and ſubjection to the pope.

Ancona, the capital of the country, is ſituated in the forty-third degree twenty minutes north latitude, and in the fifteenth degree eaſt longitude; and ſtands on the ſea between two hills, on one of which is the citadel, and on the other the cathedral. It cannot be termed ſmall, and ſome parts are not unhandſome; but it is far from being ſo populous and wealthy as it might be, from the conveniency of its ſituation and the goodneſs of its harbour. This harbour was conſiderably improved by the emperor Trajan, and in commemoration thereof a triumphal arch of fine veined marble was erected to him on the mole, which ſtill makes a beautiful appearance, it having eight fluted columns, which are ſtill entire and very elegant. The extremity of this mole is fortified and planted with ten or twelve pieces of cannon, which contribute to ſecure the harbour. Over one of the gates of the city is a Latin inſcription to this purpoſe: "Fair Probity, which built this city, delights to "aſſociate with Peace on this happy ſpot."

The cathedral is incruſted with marble, and from its ſituation affords a delightful proſpect of the town and along the ſea-coaſt. In the portico before it are two remarkable pillars reſting on two marble lions. The churches, convents, and hoſpitals, are forty-five in number, and the biſhop depends immediately on the pope. The exchange within the city is a large elegant building, and perſons of all religions enjoy liberty of conſcience, though the Proteſtants are not allowed any place of public worſhip: the trade, however, is but inconſiderable, and for the greater part kept up by the Jews, who amount to about five thouſand, and live together in a particular quarter, where they have a ſynagogue, but are diſtinguiſhed from the Chriſtians by a bit of red cloth in their hats. The large lazaretto for performing quarantine ſtands partly on the ſhore and partly on the ſea.

Loretto is a ſmall town very pleaſantly ſituated on a hill, about fifteen miles to the ſouth of Ancona. It is two thouſand paces from the ſea, and with the moſt delightful proſpect on all ſides; is ſurrounded with deep moats and ſmall towers, which, however, would prove but a ſlender defence in caſe of an attack. The Santa Caſa, or Holy-houſe, which has rendered this place ſo famous throughout all the catholic part of Chriſtendom, is ſaid to be the very ſame in which the Virgin Mary lived with Joſeph at Nazareth. According to the hiſtory of the adventures of this building, it is pretended that in May 1291 it was tranſported by angels through the air from Galilee to Terſato, in Dalmatia, and three years and an half after into Italy; where, on the tenth of December, 1294, about midnight, it was firſt placed in a wood belonging to Recanati, a thouſand paces diſtant from the ſea. Eight months after it was again removed a thouſand paces nearer to Recanati; and at laſt, as it were with more mature deliberation, depoſited in its preſent place. Nothing can be more amazing than the credit given to ſuch an abſurd and ridiculous fable, by which all popiſh countries have been voluntarily drawn to make burthenſome contributions, it being notorious, that with reſpect to the received chronology of this miraculous tranſmigration, the ſacred houſe had been placed in Italy, and its fame much celebrated, even long before ſome popiſh writers, as St. Vincent and others, ſought for it in Nazareth, and maintained that they ſaw it there.

The ſacred houſe itſelf is built of bricks of unequal ſize. The length within is thirty-one feet nine inches, the breadth thirteen feet and near three inches, and the height eighteen feet nine inches at the ſides; but the center of the roof is five palms higher than the ſides.

On the top of the Caſa Santa is a little tower, which the Roman Catholics cannot deny to have been the work of Chriſtians; ſince it is contrary to all probability to imagine, that the Virgin Mary had ſuch a tower erected upon her mean habitation. In violent tempeſts of thunder and lightning they ring two little bells which are hung in this tower, not doubting but that their ſound will diſperſe any tempeſt, and prevent any ill effects from it.

One part of the Caſa Santa may be conſidered as the Holy of Holies, it being ſeparated from the other part by a ſilver baluſtrade, and a gate of the ſame metal. In the larger part are thirty-ſeven ſilver lamps, ſome weighing fifty, others eighty, others a hundred and four, and four of them weigh a hundred and twenty-eight pounds each. This part is alſo ſeparated from the other by an altar, which being without a back, affords a view of the celebrated image. In this larger part is the greateſt curioſity, that is, the window by which the angel Gabriel entered at the Annunciation; over which is a picture of the Crucifixion, pretended to be brought by the apoſtles into this houſe, and to have been done by St. Luke. The ſmaller part has the wall plated over with ſilver, and contains the hearth where the bleſſed Virgin uſed to dreſs her victuals, and over it ſtands her image, which is five feet high, and is ſaid to be made of cedar by the hand of St. Luke; the infant on her right arm is alſo of cedar; it is not quite two palms in height; and in her left hand ſhe has a globe. The faces of both images have been over-laid with a kind of ſilver lacker, which is now become quite black with the continual ſmoke of the lamps; ſo that the Virgin Mary wants only thick lips to make her a perfect Negro. The infant Jeſus is dreſſed in a flame-coloured habit, and the Virgin Mary in an azure robe; with which ſhe is ſo modeſtly covered, that no part of the ſtatue is to be ſeen, but its face and toes. The mantle hanging down her ſhoulders is of the ſame colour, powdered with golden ſtars: her hair hangs on her ſhoulders and part of her back. On her head is a triple crown of gold, enriched with pearls and diamonds, and another is on that of the child Jeſus; both the gift of Lewis XIII. king of France, and valued at ſeventy-five thouſand crowns. The gold chains, rings, and jewels, with which the image of the Virgin is loaded, are frequently changed, and her apparel is not always the ſame; for on the ſeven days of Paſſion-week ſhe is dreſſed in deep mourning, and has daily a freſh ſuit. The niche in which the image ſtands, is adorned with ſeventy-one large Bohemian topazes. On the right ſide of the image is an angel of caſt gold, profuſely enriched with diamonds and other gems, with one knee inclined, offering a golden heart embelliſhed with large diamonds, and terminating in a flame of rubies and pearls. This piece is ſaid to have coſt fifty thouſand ducats, and was offered by Maria Beatrix Eleanora, queen to James II. of England, that by the interceſſion of the Virgin, ſhe might conceive a ſon; and it is ſaid, that ſoon after ſhe had the ſon who has made ſuch noiſe under the name of the Pretender to the Britiſh crown. On the left ſide of the Virgin is a ſilver angel, in the ſame poſture of reverence, offering her a golden heart crowned, and glittering with pearls, emeralds, and diamonds, likewiſe terminating in a flame: this was preſented by the mother of the ſame princeſs. On the right hand of the Virgin

is

is a silver angel, weighing three hundred and fifty-one pounds, offering on a cushion of the same metal an infant of massy gold, weighing twenty-four pounds. This was presented by Lewis XIII. king of France, for the birth of the dauphin, afterwards Lewis XIV. Seven golden lamps are continually burning before the image; one of which, presented by the republic of Venice, weighs thirty-seven pounds and a half. Under this hangs another richly set with jewels. The lamp that stands next the Virgin's face, which is held by three angels, weighs nine pounds; and another, which Francis II. duke of Modena, offered to the Virgin, weighs eighteen pounds and a half. On both sides of the niche are cupboards filled with the antient ornaments of this statue; and in a little window in the wall are some earthen-dishes said to be used by the Holy Family. Some of these vessels have since been edged with gold.

The robe which this famous image had on when it was brought from Dalmatia into Italy, is of red camblet, and kept in a glass shrine. The dish out of which it is pretended the Virgin and her divine Infant used to eat, is shaped like a shallow bowl, and of earthen-ware; but its outside is now plated over with silver. This utensil is not only kissed, but rosaries, medals, *Agnus Dei's*, crucifixes, and paper caps painted with the image of the Madonna of Loretto are rubbed against it, from a firm persuasion that they thus become an infallible remedy against the head-ach, and other disorders. An ague is said to have been perfectly cured only by drinking a little cold water out of this dish: even the oil and wax of the lamps and candles burning before the image are not without their medicinal virtues.

Notwithstanding the mean appearance of the walls within, the outside of the Casa Santa is most elegantly adorned with the finest marble; but is so contrived, that the marble structure serves only as a case for it, leaving a small interval between it and the brick walls of the Casa Santa. This is partly to be attributed to the veneration entertained for those sacred materials, and partly from an apprehension that they would not have suffered the new and unhallowed marble to be in contact with them; but would have repelled it with such violence as to endanger the lives of the workmen. This, it is pretended, formerly happened to some builders, who, from an indiscreet zeal, were going to strengthen these sacred walls by some new additions.

The marble case was begun in the year 1514, and consecrated in 1538 by Paul III. The expence of it at that time, when labour was cheap, amounted to twenty-two thousand ducats, exclusive of twenty marble statues, and four brass doors of curious workmanship, that must have cost an immense sum. One of these is, however, a false door, there being but three entrances cut through the wall. The most celebrated sculptors of that age seemed to have emulated each other in this noble structure. It is about fifty feet in length, thirty broad, and about the same height; and the two longer sides are adorned with twelve Corinthian columns, while the two other sides have eight. The intervals between the columns are filled with basso relievos finely executed, representing the most remarkable incidents in the life of the blessed Virgin. There are also ten statues of the Prophets, and above them the ten Sibyls. Among the Prophets on the south side, David, with the head of Goliah at his feet, is greatly admired by all connoisseurs: and on the north-side, in a groupe representing the espousals of the Virgin Mary, a boy playing with a dog, whilst his mother, with a child in her arms, looks at him with a countenance full of maternal tenderness and complacency, cannot be viewed without pleasure.

The treasury infinitely surpasses the Holy-house in riches. It is a spacious hall wainscotted, and the arched roof is divided by gilt compartments, beautified with excellent pictures. They were formerly glad to keep a number of works in silver in large presses of folding doors, but that metal is now laid up in heaps in private places, and perhaps for private uses; and they are now filled with nothing but pure gold, an amazing quantity of the largest and richest jewels, and such vessels and ornaments as are supposed to exceed the value of gold and gems.

The large church in which the case of the Holy house stands, as it were under a tent, is built of Istrian stone; but the front is entirely of marble finely embellished with sculpture, and over the portal is a statue of the Holy Virgin by Lombardi. The three gates on this side of the church are of brass, with beautiful basso relievos representing different histories of the Old Testament by Lombardi. Here are about twenty altars and chapels, in which all the celebrated artists gave specimens of their skill. The great cupola is supported by eight large pilasters, and on the inside is the assumption and glorification of the Virgin Mary, by Christopher Roncalli.

The font, which stands in a separate chapel, is of bronze, embellished with beautiful basso relievos, and the bason is supported by four angels, over which is painted our Saviour's baptism.

Formerly the walls of the church of Loretto were covered with multitudes of pictures and votive pieces, some of wood, others of wax or brass: but besides the coarseness of the performance and meanness of many of them, they very much darkened the church, and therefore, in 1673, the greatest part of them were removed and the silver and gold tablets employed to better uses.

Near the Casa Santa in this church is the picture of a priest offering his entrails to the Virgin Mary, and under it is a most ridiculous inscription to the following purpose: that this priest, who was a Dalmatian, and lived in the beginning of the sixteenth century, being taken prisoner by the Turks, and strongly sollicited to abjure the Christian religion, so incensed them by his continually calling upon Christ and the Virgin, and promising a pilgrimage to Loretto, that they at last ripped open his breast, and putting his heart and entrails into his hands, sarcastically bid him go and perform his promise; on which he set out for Loretto, where having shewed his empty breast, and offered his heart and entrails to the image of the Virgin, he related the whole affair, and having received the sacrament died in an extacy of joy.

The number of pilgrims who annually visited this place formerly, amounted to two hundred thousand, but the Reformation has given a severe blow to indulgences, and the zeal for tiresome pilgrimages is greatly cooled; so that at present the number of pilgrims who annually repair thither, seldom exceeds forty or fifty thousand. Some come on foot, and others ride on horses or asses. The female pilgrims, who can afford the expence, generally travel to Loretto in a carriage; and as large companies often travel together, many droll incidents happen on the road. As soon as they enter the suburbs they set up a singing, which continues till they reach the church. If the company be too large, the ceremony of going round the Casa Santa on their knees is omitted, and they are obliged to express their devotion in some other manner. The poorer sort of pilgrims are received into an hospital, where they are provided with beds, and have bread and wine every morning and evening for three days.

Loretto is generally without a garrison, so that it seems somewhat strange the Turks have not made greater efforts for getting into their hands the precious booty kept there, than they have hitherto done. The Roman catholics indeed affirm, that in all the attempts which the Turks have hitherto made against Loretto, they have either been repelled by some extraordinary miracle, or miscarried by a supernatural panic. But all these pretended miracles have not produced such confidence in the inhabitants as to put the affair upon such an issue; the treasure being upon the least appearance of danger sent away to Ancona, or some other place of security. But the reason why the Turks make no formal attempt upon this place may probably be owing to the shallowness of the Adriatic, which in these parts has not a sufficient depth of water for large ships to approach the shore; besides, a Turkish garrison is no sooner known to be at sea, than a strong garrison is immediately sent hither.

In going out of the church on the right hand, is a statue of Sixtus V. seated on a pedestal decorated on every side with basso relievos all of bronze. In the great

area before the church is a beautiful marble fountain, made at the expence of Paul V. to whom the city owes the fine water it receives by means of an aqueduct from a neighbouring hill. In the palace which ſtands in this area, the clergy, the officers of the Holy-houſe, and the governor of the town, have apartments, beſides thoſe appointed for perſons of diſtinction who come hither upon pilgrimages. Here are alſo the wine vaults belonging to the Holy-houſe, which are one hundred and fifty-eight common paces in length; and in theſe vaults are generally kept one hundred and forty large caſks of wine. Over the wine cellar are the kitchen, offices, and diſpenſary. In the latter are three hundred and ſixty-eight gallipots, moſt of them very large and with covers, which are extremely valued on account of the paintings on them, ſaid to be the work of the great Raphael. The ſubject of theſe paintings is a medley of ſtories taken from the Scriptures, the Roman hiſtory, and Ovid's Metamorphoſes.

The arſenal is in one of the upper ſtories; it is pretty well furniſhed, and one cloſet is full of prohibited weapons which have been offered to the Virgin.

The trade carried on by the inhabitants of Loretto, beſides what they get by entertaining ſtrangers, conſiſts in making and ſelling medals, crucifixes, images of the Virgin Mary, roſaries, painted paper caps, ribbons, &c. which are bought by the credulous Papiſts as amulets.

The vaſt concourſe of foreigners occaſions a great conſumption of proviſions in this city, and the inn-keepers are for impoſing as much as they can upon ſtrangers; but the entertainment is generally very good, and the inhabitants behave with great civility. It is obſerved, that the lower claſs of people are much more reaſonable in their demands from thoſe travellers who return from Rome, than from ſuch as travel to that city; for they conclude that the latter are ſtrangers to the cuſtoms of the road, and think it allowable to take all advantages of the unexperienced.

The country about Loretto, as well as the town itſelf, ſwarms with beggars; with whom it is cuſtomary in ſpring to ſtrew flowers in the road, when ſtrangers approach, who cannot ſee ſuch an honour paid them, without giving a ſmall gratuity in return for it.

There are ſeveral other towns in the marquiſate of Ancona; but as they contain nothing very extraordinary, we ſhall omit giving an account of them.

SECT. XI.

Of the PERUGINO, ORVIETANO, *and* SPOLETTO.

Their Situation, Extent, and principal Cities.

THE Perugino, or territory of Peruſia, is bounded on the weſt by Tuſcany; on the north by the duchy of Urbino; on the eaſt by Spoletto; and on the ſouth by Orvietano; extending about twenty-eight miles from north to ſouth, and about thirty from eaſt to weſt.

The Tiber, which runs acroſs the country from the north-weſt towards the ſouth, is the principal river; beſides which there are ſeveral ſmaller. This territory contains a pretty large lake, anciently called Thraſimene, but at preſent the lake of Perugia, in which are three iſlands. Between this lake and a high mountain near Cortona, in the dominions of Florence, is a long valley with only one narrow entrance, where Hannibal defeated Flaminius the Roman general.

The air of this territory is very pure, and the ſoil fertile in corn and wine; beſides, the lake ſupplies the country with plenty of fiſh.

The principal city in this province is Perugia, which is very ancient; and like its citadel is going to decay. It is advantageouſly ſeated upon a hill ſeventy-five miles to the north of Rome. It is the ſee of a biſhop, and has an univerſity that has three conſiderable colleges; beſides which it has two academies, one of which was founded ſo lately as the year 1752. This city is famous for the reſidence of ſeveral perſons of quality, and for a very agreeable ſort of white wine, as clear as rock water, with ſomewhat of the flavour of muſcadine.

There are three or four ſmall towns in this territory, with ſome villages.

The territory of Orvieto is bounded on the north and eaſt by Spoletto, on the weſt by the Sienneſe, and on the ſouth by the remaining part of St. Peter's patrimony and Caſtro. In this canton is the lake Boſſena, formerly Volcini.

Orvieto, the capital of this territory, is built on a high and craggy rock near the confluence of the rivers Paglia and Chiuna, which fall into the river Tyber a little below it, twenty-ſix miles to the ſouth-eaſt of Perugia. It is an epiſcopal ſee, and has ſix churches and convents. Its walls are ſtrong, though ancient, and both the cathedral and the other churches, as well as the vice-legate's palace, are very noble edifices, enriched with great quantities of marble, porphyry, ſtately towers and ſteeples, and eſpecially paintings. The palace was built by pope Urban VIII. who alſo adorned ſeveral of the churches and public ſtructures. But what is moſt ſingular in this city, is a well cut into the rock by order of pope Clement VII. to ſupply it with freſh water. This well is two hundred and fifty cubits deep: one deſcends into it by a double ſtair-caſe of five hundred and fifty ſteps, enlightened by ſeventy windows cut through the rock. The mules which bring up the water upon their backs, go down one ſtair-caſe and up the other. The town neither has nor needs any other fortifications than thoſe ſolid rocks and precipices with which it is ſurrounded, and from which one can hardly look down without dread. The height of the city renders the air very ſerene and healthy, except in autumn, when they ſteep their hemp in the river Paglia, which cauſes a very offenſive ſtench.

Aqua Pendente, a pretty large city, but indifferently peopled, ſtands on an eminence about twelve miles between Orvieto on the eaſt, and Savona on the weſt, near the river Paglia, and was erected into a biſhopric by pope Innocent X. in the year 1650, or rather the ſee was removed thither from Caſtro, which city he cauſed to be razed for having murdered the biſhop.

There are no other places in this territory worthy of notice.

Spoletto is bounded on the north by the marquiſate of Ancona and the duchy of Urbino; on the eaſt by the Farther Abruzzo; on the ſouth by Sabina and the patrimony of St. Peter; and on the weſt by Orvietano and Perugino; extending about forty-five miles in length, and forty in breadth, and abounding in corn, wine, oil, almonds, and other fruit.

This duchy, which is part of the ancient Umbria, on the extinction of the Longobardian monarchy, became ſubject to the Franks, and was afterwards annexed to the papal territories.

The principal places in this duchy are the following:

Fuligno, or Foligno, a ſmall city ſurrounded by an old wall with port-holes, and almoſt of a circular form. It is ſituated fifteen miles to the north of Spoletto, in a pleaſant plain, encompaſſed at a diſtance with a chain of beautiful hills that extend farther than the eye can reach, and that form a vaſt amphitheatre, interſperſed with towns, villages, and country ſeats, that may be diſcerned through the trees, which are chiefly planted in ſtraight lines, and cover part of the plain, while the ſpaces between them are laid out in corn-fields and vineyards. It is the ſee of a biſhop appointed by the pope. The cathedral is dedicated to St. Felician, formerly biſhop of Fuligno, but has ſcarce any thing remarkable, except ſome good paintings in freſco, and ſome magnificent tombs.

In the church of the nuns of St. Francis is an altar-piece by Raphael Urbino, in which the Virgin Mary is repreſented in all her glory, and below St. John the Baptiſt, St. Francis, and Cardinal Conti, firſt ſecretary to pope Julius II. who ordered it to be painted. In the Franciſcan church are four bodies of ſaints in ſhrines of ſilver gilt, placed upon four different altars; but the moſt honoured of them is that of St. Angela, a lady of quality in the city of Fuligno, who made a vow of chaſtity,

chaſtity, after burying three huſbands and fifteen children.

Fuligno has ſome fine ſtreets, but neither the ſquare, the town-houſe, the governor's palace, nor that of the biſhop are worth notice. The moſt remarkable building in the whole town is the houſe of the marquis Juſti, which has a grand and regular front; the inſide is ſpacious, and the apartments well furniſhed.

Aſſiſa, or Aſſiſio, is ſeated on a hill about twelve miles to the eaſt of Perugia, and though it is but ſmall, is a biſhopric in the pope's nomination. Here St. Francis was born, and his remains are depoſited in a ſmall vault under the high altar of the Franciſcan church. The ſituation of this convent is very fine: it is ſaid to be built on the ruins of a temple dedicated to Jupiter Paganicus; and the popes have granted ſuch indulgences to this church, that thoſe who enter it on the feaſt of St. Francis are abſolved from all their ſins. A great number of ſilver lamps are continually burning round the place where his body is depoſited. The monks, among their other relics, pretend to have a piece of our Saviour's tomb, and of the pillar at which he was ſcourged, a thorn out of his crown, the point of one of the nails that faſtened him to the croſs; together with ſome hair, with a girdle and robe, of the Holy Virgin. The church of St. Clara is ſeated at the extremity of the city; but contains nothing remarkable, except an ancient picture of the croſs, which it is pretended ſpoke three times to St Francis.

The city of Spoletto or Spoleto, the capital of the duchy of the ſame name, is ſituated in the forty-ſecond degree forty-one minutes north latitude, and in the fifteenth degree forty-ſeven minutes eaſt longitude. It appears at a diſtance like an amphitheatre that terminates the beautiful plain of Fuligno, and is ſeated on the declivity of a hill that renders the ſtreets very uneven. It is ſurrounded only by a ſingle wall, with port-holes; and its caſtle is a Gothic ſtructure, that entirely commands the place. This city contains twenty-one pariſh churches and a like number of convents, ſeventeen hermitages, and thirteen religious fraternities. The ſquare of Spoletto is very ſmall, and the cathedral but a mean ſtructure, though the pavement, which is compoſed of ſmall pieces of marble, curiouſly arranged, is very beautiful. The biſhop's palace is alſo a mean building, and though the city is a biſhopric ſuffragan to the pope, and is the capital of a duchy, it makes but an indifferent appearance, and is very poorly peopled.

Among the remaining antiquities of this city the moſt conſiderable are, a triumphal arch very much decayed, an aqueduct, the ruins of a palace built by Theodoric, king of the Oſtrogoths, and thoſe of an amphitheatre. With reſpect to the aqueduct, it is ſtill entire, and conveys water into the city. It is ſaid indeed to be of Gothic work, but it is ſo magnificent that it would be no diſcredit to the ancient Romans, and has not perhaps its equal in Europe. It joins Monte Lugo to the hill on which Spoletto is ſeated, and conſiſts of ten free-ſtone arches between four and five hundred feet in height, from the bottom of the valley, and three hundred and fifty feet in length. What appears very ſingular, is their having cut a path beneath the water courſe on the crown of the arches, by which means they can walk from one mountain to another. At the extremity of the aqueduct is an antique head of a lion, of an extraordinary magnitude, which diſcharges through its mouth, with great violence, a prodigious quantity of water into a baſon, from whence it runs into two others much larger, and is thence conveyed to different parts of the city.

Monte Lugo is remarkably pleaſant, for it enjoys a perpetual verdure, and is plentifully ſtocked with fruit-trees, and ſprings of clear water, on which account there are ſaid to be here above fifty hermitages.

Narni, the ancient Narnia, is a poor town delightfully ſituated on a high rocky mountain, forty-ſix miles to the north of Rome. This was the native place of the emperor Nerva, and is at preſent the ſee of a biſhop, immediately ſubordinate to the pope. Here are ſome good ſprings, and a noble aqueduct, by which the water is conveyed to this place from the diſtance of fifteen Italian miles. Below the city is a valley, through which the river Nera paſſes, where are the remains of a grand ſtone bridge over the river, built by Auguſtus, and contrived in ſuch a manner as to join two oppoſite mountains on each ſide of the river.

The road from Narni to the city of Terni, extends through a delightful valley planted with rows of trees, round the trunks of which twine very thick and large vines. This country alſo abounds with fig-trees and olive yards. The turnips it produces, which thrive beſt in a gravelly ſoil, are ſo large as ſometimes to weigh between thirty and forty pounds. Melons, peaches, figs, and other fruit, are alſo larger here than in other parts.

The famous cataract, commonly called *Caſcata del Marmore*, from the mountain down which the Velcino falls, being almoſt wholly of marble, lies about three miles from Terni, and the road to it, part of which is cut in the rock in the ſide of the mountain, is without rails, very ſlippery, and conſequently very dangerous to men and horſes. The ſpectator is ſtruck with terror on viewing the precipices, which are of a frightful height; but the traveller is ſufficiently rewarded when, on reaching the top of the mountain, he views the ſtupendous cataract formed by the river Velino, ruſhing from the mountain.

The river, after running ſome miles with a gentle courſe, reaches the declivity of its channel, which is ſhaded with many thick trees, covered with perpetual verdure, as are the mountains by which this is ſurrounded. The water no ſooner reaches this declivity than it proceeds with ſo rapid a courſe, that every wave ſeems to preſs forward to overtake the former, till they ruſh at once with a furious noiſe down a ſteep rock, at leaſt three hundred feet high, falling on other rocks, againſt which they daſh and break, riſing in miſts, which, after hovering ſome time in the air, far above the level of the cataract, and the neighbouring fields, fall in a kind of perpetual rain into the adjacent valley. After this fall the waters ruſh into the cavities of the rocks, and then foaming, burſt thro' ſeveral openings; and after rolling for ſome time down other precipices, at laſt reach the bed of the river at the bottom.

Terni, an ancient city, has ſeveral remains of ſtructures built by the Romans, but they are chiefly in ruins. In the ſquare is a very fine fountain cut out of the rock, on which ſtands a pyramid; on the ſides are two ſtatues, repreſenting two Naiades, or river nymphs, with a large lion, which appears as if deſirous of coming out of the hollow of a rock. Terni is encompaſſed only with a ſingle wall, and is at preſent ſmaller than Spoletto, though better peopled. Moſt of the ſtreets are badly paved, and thoſe which run acroſs the town are not paved at all, which occaſions their being very dirty. It is the ſee of a biſhop ſuffragan to the pope. The cathedral is a modern ſtructure, and there are ſome convents, but they contain nothing remarkable.

The inhabitants carry on a pretty good trade in black taffeties and olive oil. Their wine is very good, and their pigeons excellent. Terni boaſts of having given birth to Cornelius Tacitus, the celebrated hiſtorian, and to the two emperors Tacitus and Florianus.

Between ſix and ſeven Italian miles to the north-weſt of Terni, is mount Eolo, remarkable for its cool breezes, which, eſpecially in ſummer, iſſue from the chaſms in the rocks of this mountain.

SECT. XII.

SABINA, CASTRO, *and* ST. PETER'S PATRIMONY.

Their Situation, Extent, Produce, and principal Places.

THE province of Sabina derives its name from the Sabines, whoſe country alſo included a part of the preſent duchy of Spoletto. It is bounded on the north by Umbria; on the eaſt by the Farther Abruzzo; on the ſouth by the Campania of Rome; and on the weſt by St. Peter's Patrimony. It is twenty-two miles in length, and almoſt as much in breadth. It abounds in oil and wine, and is watered by ſeveral ſmall rivers, which render it fertile.

In this province are no walled towns; its principal place is Magliano, which is ſeated on a mountain near the river Tiber, thirty miles to the ſouth-weſt of Spoletto. It is a ſmall place, but is pretty populous conſidering its extent.

The duchy of Caſtro is bounded on the north by Orvietano; on the eaſt by the river Marta; on the ſouth by the Mediterranean; and on the weſt by Tuſcany; and produces corn and fruit; but is ill-peopled, and worſe cultivated.

The duchy of Caſtro and the earldom of Ronciglione was conferred by pope Paul III. on his natural ſon Peter Aloyſius Farneſe, who afterwards became duke of Parma and Placentia. His deſcendants held this country as a fief of the papal chair, till Adoard mortgaged it to the Monte di Pieta at Rome; but paying neither principal nor intereſt, pope Urban VIII. ſequeſtered the land, and took upon himſelf the liquidation of the debt. Adoard, indeed, afterwards found means to make himſelf again maſter of the country; but it was taken from his ſon by pope Innocent XI. and the money lent not being repaid at the appointed time, this duchy was, in 1661, again annexed to the papal chamber. In 1664, Lewis XIV. king of France, prevailed on the pope to allow a farther term of eight years for the redemption of the land; but even when that was expired, nothing was effected. On the other hand, Don Carlos laying claim to it in 1732, offered to pay the loan; but the pope refuſed to agree to it, and it continues united to the papal dominions.

The principal places in this duchy are the following:

Caſtro, formerly a genteel city, and a biſhop's ſee; but the inhabitants having murdered the biſhop ſent them by pope Innocent X. his holineſs, in 1646, removed the biſhopric to Aquapendente, and ordered the town to be demoliſhed.

In this duchy are alſo Farneſe, Montalto, Valentano, and other ſmall places. To this duchy likewiſe belong the iſlands of Biſentina and Mantana, which lie in the lake of Boſtena. Each has a church; and in one of them it was that Amalaſunta, daughter to Theodoric king of the Oſtrogoths, was kept priſoner by her couſin Theodat, with whom ſhe had ſhared the government, and afterwards, by his orders, was murdered while ſhe was bathing.

St. Peter's Patrimony, formerly called Etruria Suburbicaria, was given to the ſee of Rome by the counteſs Matilda. This grant is ſaid to have been made in the year 1077, under Gregory VII. and in 1102, renewed to Paſchal II. But granting the truth of this account, it is evident ſuch alienations to the prejudice of the Roman emperor and empire were not founded in juſtice.

This country is bounded on the north by Orvietano; on the eaſt by Umbria and Sabina; on the ſouth by the Campania of Rome; and on the weſt by the ſea; it being about thirty-five miles in length, and thirty in breadth.

The principal places in this province are the following:

Bolſena, a ſmall town, moſt delightfully ſituated near the lake of the ſame name, which is thirty-five Italian miles in circuit. The mountains which environ it are covered with oaks, and afford the proſpect as it were of an auguſt amphitheatre. Here is ſaid to have been wrought by a hoſt the miracle which gave occaſion to the inſtitution of the feſtival of *Corpus Chriſti*. Near this place are ſeen, on an eminence, the ruined walls of the Etrurian city Volſinium.

Monte Fiaſcone is ſeated upon a mountain; but would be little known, were it not on account of its white muſcadel wine, which, however, ſeldom comes to perfection. Its biſhopric is incorporated with that of Corneto, and immediately ſubject to the pope. Near this city, in the church of St. Flavian, is a monument ſaid to be erected to the memory of a German, who unhappily was ſo delighted with the wine of this city, that he drank himſelf into a fever, which ſoon carried him off; but has the honour of being buried before the altar, he having left ſix hundred ſcudi, or a hundred and twenty-ſeven pounds ten ſhillings ſterling, to the church and the poor, the intereſt of which is annually diſtributed to the poor in bread and cheeſe.

Viterbo, the capital of the country, is ſituated in the forty-ſecond degree twenty minutes north latitude, and in the twelfth degree thirty-nine minutes eaſt longitude, and was given to the pope by the empreſs Matilda, in memory of which donation an inſcription on ſtone is fixed on the town-houſe. This city lies in a beautiful and fertile valley: it is large, the ſtreets for the greater part are broad and well paved, and the houſes are handſome. The inhabitants, however, ſcarce amount to fifteen thouſand, though there are ſixty-nine churches, convents, and hoſpitals. The biſhop is immediately under the pope. Among the ſeveral fountains in the city, that in St. Lucia's ſquare is juſtly admired as the moſt elegant for the workmanſhip, and affords the beſt water. In the cathedral are the monuments of four popes. The Franciſcan nuns pretend to ſhew the body of St. Roſa di Viterbo, which is uncorrupted, and dried up like a mummy. At the diſtance of an Italian mile from the city is a handſome church dedicated to the Virgin, with the ſurname *della Quercia*, reſorted to by a great number of pilgrims; and near it is a Dominican convent.

Here are two academies; one ſtiled *Gli Oſtinati*, or the Obſtinate, whoſe emblem is a pyramid beat on every ſide by the winds, and the motto FRUSTRA: the other, ſtiled *Gli Ardenti*, the Fiery, whoſe emblem is an ingot of gold in a crucible over a furnace, with the motto DONEC PURUM. The government of this place is commonly given to ſome favourite biſhop or cardinal, who is obliged to keep a noble houſe and equipage, and to entertain all the cardinals and men of a public character that come hither. The town is divided into ſixteen pariſhes. Some good hoſpitals are likewiſe here, eſpecially thoſe for orphans and foundlings.

At the diſtance of two or three miles to the north-eaſt of Viterbo, ſtands a moſt delightful villa belonging to the duke of Lanti, which has this peculiar advantage, that of the many dukes who have ſucceeded each other in this ſeat for ſome hundred years paſt, not one has neglected to improve it; and accordingly this palace abounds in fine pictures, antique ſtatues, and rich furniture; and nothing of the kind can exceed the fountains, grottos, canals, walks, arbours, and groves, in the gardens.

The adjacent country is naturally rich and fertile, and where it is well cultivated, produces great plenty of corn, oil, fruit, rice, and pulſe; notwithſtanding which, except where there are ſome villas, it is a perfect ſolitude, without houſes or inhabitants, and the very roads ſo unfrequented, that one may ride many miles without meeting any body.

Civita Vecchia, a fortified ſea-port, and the beſt in the papal dominions, is ſeated in the forty-ſecond degree ten minutes north latitude, and in the twelfth degree ten minutes eaſt longitude, and obtained its name in the following manner: in 854, pope Leo IV. built a new town, which, from its own name, he called Leopolis, and peopled it with the inhabitants of Centumcella, which the Moors had ſacked; after ſome time the inhabitants returning to their former place of abode, repaired it, and hence it was called Civita Vecchia, or the Old Town. The remains of Leopolis are ſtill to be ſeen at ſix miles diſtance. Pope Urban VIII. cauſed this city to be regularly fortified, and beſides, it has a ſtrong old caſtle, that ſtands by itſelf in the ſea. The port is not quite ſheltered from all winds, but has a ſpacious dock for ſhips, and an artificial mole, at the end of which is a ſtrong high tower, which at once defends the entrance into the port, and ſerves as a light-houſe. The place is in good condition, but thinly inhabited, the air being unwholeſome, and good water very ſcarce; but this laſt inconvenience has in ſome meaſure been remedied by means of a canal. Here are ſome good churches and other edifices, and here commonly lie the pope's gallies. This city would greatly leſſen the trade of Leghorn, was it declared a free port.

Civita Caſtellana is a ſmall town, of mean appearance, ſituated on a very high and ſteep rock, near the confluence of the Friglia and Tevere. This was the ancient Falerios, once the capital of the Faliſci. Its biſhopric is united

united to that of Orta. Pope Clement XI. cauſed a bridge of an uncommon height to be built here, by which the rock on which the city ſtands, has a communication with the oppoſite mountain; ſo that a perſon may croſs directly over, without going down into the valley, which is of a conſiderable depth.

There are ſeveral other towns in this diſtrict, none of which deſerve a particular deſcription.

The earldom of Ronciglione, which is entirely included in St. Peter's Patrimony, belongs to the duke of Parma. Ronciglione, the principal town, is but ſmall; and is ſeated at a ſmall diſtance from the Lago di Vico, anciently called the lake of Cyminus.

The palace of Caprorola, which belongs to the duke of Parma, ſtands at the diſtance of ten Italian miles from Viterbo, in the way to Rome, but out of the poſt road. It was built in the ſixteenth century, by cardinal Alexander Farneſe; its outward figure is a pentagon, reſembling a citadel; but the inward court, which has a gallery round it, is quite circular, and yet the apartments are ſquare and well contrived. The whole art of this ſingularity conſiſts in the different thickneſs of the walls. The top of this ſtructure affords a proſpect as far as the city of Rome, which may be perceived, though at twenty-eight or thirty miles diſtance. In this palace is a moſt ſuperb ſtair-caſe, and it is likewiſe famous for a whiſpering-hall, in which four perſons ſtanding cloſe to the wall, oppoſite to each other, may converſe without being heard by a fifth ſtanding in the center. A ſtamp with the foot on the floor of this hall, ſounds to thoſe who are without, like the report of a piſtol. Several apartments have their cielings and friezes painted by the two Zuccaros, who, particularly in the cardinal's bed-chamber, have ſhewed their admirable ſkill and judgment.

The gardens of Caprorola are alſo elegantly deſigned, and finely embelliſhed with proper ornaments.

SECT. XIII.

The CAMPAGNA DI ROMANA, *or* CAMPANIA *of* ROME.

Its Situation, Extent, and fertile, but deſolate ſoil, with a particular Deſcription of the City of Rome, and the Manners and Cuſtoms of the Inhabitants.

THE Campania, or territory of Rome, anciently called Latium, is bounded on the north by Sabina; on the eaſt by Abruzzo; on the ſouth by Terra di Lavoro; on the ſouth-weſt by the Mediterranean; and on the weſt by the Mediterranean and the Tyber; extending ſixty miles in length on the Mediterranean, to the frontiers of Naples.

It is divided into Campania Proper, which lies on the north ſide between the river Anio, and the ridge of the mountains of Segni, and is a very mountainous tract, and into the ſouthern or maritime ſide, called la Marina; which extends from eaſt to weſt, between thoſe mountains and the ſea-coaſt.

The waters of this territory are generally very good, eſpecially thoſe of the Tyber. Here are alſo two other rivers, the Numico and Aſtura, and ſeveral lakes.

This country is bleſſed with a very fertile ſoil, but for want of cultivation the inhabitants are wretchedly poor. It has delicious plains of conſiderable extent with ſcarce ſo much as a village, ſo that the few inhabitants are obliged, in order to get in their harveſt, to employ the peaſants of Viterbo, Perugia, and other hilly parts of St. Peter's Patrimony. It is, however, obſervable, that, in general, the plains are not the places choſen for building; but rather the hills, for the ſake of coolneſs. The air is here very unwholeſome, which is partly occaſioned by the fens and lakes, the indolence and ſloth of the inhabitants, who take no pains either to drain the marſhes or to cultivate the dry lands, which are in a manner deſerted, to which may be added, the many towns and villages that lie in heaps of rubbiſh, and harbour great quantities of ſtagnated water, which contributes to corrupt the air. After the wind has been a long time in the north, and ſuddenly ſhifts to the ſouth, or when a ſtrong ſouth wind blows, attended with cloudy weather, the ſeaſon is very ſickly at Rome; this is, however, an obſervation not peculiar to Rome, but to all Italy. That Rome itſelf is not remarkably unhealthful, may be concluded from the great number of its inhabitants, who live to a great age; and even one third of the cardinals are computed to arrive at their eightieth year.

Rome is a very ancient city, ſituated in the forty-firſt degree forty-ſeven minutes north latitude, and in the third degree five minutes eaſt longitude, ſeventeen miles from the Tuſcan ſea. It was formerly conſidered as the capital of the whole world, and revered as the reſidence of its mighty emperors. Indeed, it may ſtill be ſaid to be the moſt remarkable city upon earth for pomp, noble edifices, antiquities, curioſities, the conſtitution of its court, and the importance of its hiſtory. In ſhort, it is the center of all that is fine in ſculpture, painting, and architecture.

The origin of Rome is dated 753 years before Chriſt, at which time Romulus firſt built on mount Palatine. Its figure and ſituation have been ſeveral times changed, eſpecially ſince the ſeven principal ſieges it ſuſtained, in which it was ſacked by the Gauls, Vandals, Herulians, Oſtrogoths, the Viſigoths, and the German armies, particularly in 1527, under the command of Charles of Bourbon. At preſent the ſeven hills on which it was originally built are ſcarce diſtinguiſhable, it ſtanding rather on twelve, and being enlarged on one ſide, while other parts lie in ruins. Indeed modern Rome ſtands higher than the ancient, the preſent city ſtanding upon the ruins of the former; and the earth being waſhed from the hills, the very cauſe that has raiſed the low grounds, has contributed to ſink thoſe that were higher.

It is environed with a brick wall, which probably is not of a more ancient date than the time of Beliſarius, and is computed to be about ten Italian miles in compaſs; but not one half of this ſpace is built upon, the places which once boaſted the nobleſt ſtructures being now waſtes, gardens, fields, meadows, and vineyards. The greateſt part of the ruins of ancient Rome is ſeen behind the Capitol. In the year 1714 the number of inhabitants, according to a liſt taken by order of Clement XI. was found to be one hundred and forty-three thouſand.

In the beauty and magnificence of the religious buildings and palaces, modern Rome far ſurpaſſes the ancient. The pariſh churches alone amount to eighty. Moſt of the houſes are of brick; but thoſe of the better ſort have the doors, windows, and ſupporters of free-ſtone. Upwards of two-thirds of the houſes are the property of the churches, convents, and alms-houſes, to which new purchaſes are continually annexed. The ſtreets are well paved, and ſome of them with brick; but they are neither kept clean nor illuminated.

No place in the world is ſo well provided with fountains as this city, it having not only very good ſprings, but being ſupplied with water by means of ſome ſuperb and ſtupendous aqueducts, the principal of which at preſent are thoſe of Aqua Felice and Aqua Paulina; the former is conveyed thither from the diſtrict of Paleſtrina, at the diſtance of twenty-two Italian miles, and does honour to pope Sixtus V. its founder. It diſcharges itſelf at the Fontana di Termine, which was alſo built at the expence of Sixtus V. and conſiſts of three arches, ſupported by four Corinthian columns, and the water guſhes out at three apertures. Over the middle arch ſtands a beautiful ſtatue of Moſes ſtriking the rock with his rod; over another arch is a baſſo relievo of Aaron leading the people to a miraculous ſpring in the wilderneſs; and the third ſhews Gideon trying his ſoldiers by their drinking at a river. Round it are four lions, two of which are of marble, by Vacca; the other two of oriental granate, and are ſaid to be brought hither from a temple of Serapis; all the four lions eject water.

The Aqua Paulina, ſo called from its reſtorer pope Paul V. is conveyed the diſtance of thirty miles, and divides itſelf into two main channels, which ſupply different parts of the city.

These pure limpid ſtreams are of ſingular benefit to the city, as the water of the Tyber is generally ſo thick and muddy, that even horſes are not watered at it; but after two or three days ſtanding, it works itſelf clear, and becomes fit for drinking. The bed of this river being raiſed by the many ruins of houſes that have fallen into it, and its mouth much choaked up, it frequently overflows, eſpecially with a ſtrong ſouth wind.

The academies and learned ſocieties for the promotion of arts and ſciences are very numerous, and among them are the academies of geography, hiſtory in general, the Roman hiſtory, church hiſtory, Roman antiquities, liturgical or old eccleſiaſtical rites and councils, which four laſt were inſtituted, or rather revived, by the late pope Benedict XIV. alſo academies of painting, ſculpture, architecture, &c. ſome of which have whimſical titles, as, *li Fantaſtici*, *li Parthenici*, *li Lyncei*, *li Congregati*, *li Infecondi*, the Arcadians, &c.

It would be difficult to enumerate all the convents, chapels, oratories, hoſpitals, ſeminaries, &c. in Rome, we ſhall therefore only mention the principal.

St. Auguſtine's church is ſmall and dark, but adorned with ſome fine paintings, among which is a picture of the prophet Iſaiah, by Raphael, which is exceedingly admired. In the Pamphilii chapel is a ſtatue of St. Thomas of Villa Nova, in white marble, who is repreſented giving alms to a poor woman ſuckling an infant: the drapery is eſteemed inimitable, as is alſo the woman's face. The tabernacle on the high altar is made of amethyſts, agate, jaſper, and a variety of other gems, with fine pillars of alabaſter, beautifully variegated with red and white, reſembling flowers. On the high altar is a Madonna, ſaid to be done by St. Luke; but Mr. Keyſler obſerves, that he has ſeen ſo many of his pieces in different places, that it is difficult to conceive how that evangeliſt could find time for any thing elſe, and adds, that though people of a certain devotional taſte place an ineſtimable value on theſe ſpurious pieces, he never met with a connoiſſeur who did not greatly prefer thoſe of Raphael, Rubens, and Vandyke, to them. Even the famous painter Carlo Maratti, who was a ſound catholic, made no ſcruple of declaring, that had he lived in St. Luke's time, he could have given him ſome neceſſary inſtructions for mending his hand.

St. Agnes's church, within the city, on the Piazza Navona, though not very large, is ſuperbly embelliſhed; and the palaces on both ſides being alike in ſymmetry and architecture, add greatly to its outward appearance. It is of an oval figure, and within it are eight large Corinthian columns, of red and white marble, many baſs reliefs, of which thoſe over moſt of the altars are of one block of marble, though very large. That on the high altar is a repreſentation of the birth of John the Baptiſt, and contains a group of twenty figures, twelve of which are in alto-relievo. From this church you deſcend to the Loci Turpitudinis, as it is called, where St. Agnes was in danger of being raviſhed by two ſoldiers, when they were reſtrained by a ſudden effulgence of light, and the hair of her head grew to ſuch a length as to ſhrowd her whole body and conceal her nakedneſs; which is repreſented in a marble baſſo relievo, at an altar ſaid to be erected on the ſpot. In this piece the beauty of the martyr's face is much heightened by her fear and modeſty. The cupola of this church is finely painted; but is thought to be too much crowded with ſaints and angels.

The church of St. Andrea della Valle is famous for its freſco painting, eſpecially the cupola, by Lanfranco, which repreſents the felicity of the ſaints and the glory of heaven, and paſſes for the nobleſt piece of the kind in the whole world. The fineſt chapel in this church is on the right hand, juſt at the entrance. Beſide the rails of the altar of red and yellow marble, one ſees every where a profuſion of verde and nigro-antico, jaſper, agate, and lapis-lazuli. The baſſo relievos, and ſix marble ſtatues repreſenting ſo many virtues, are well worth ſeeing. Some of the other chapels are not inferior to this.

The front of St. Bibiana's church was deſigned by the chevalier Bernini, who alſo made the incomparable marble ſtatue of this ſaint, which ſtands upon the high altar, and is admired as the maſter-piece of that artiſt. Under this fine ſtatue lies the ſaint's body in a ſarcophagus, or coffin, of oriental alabaſter; and near the church-door is a red pillar of Egyptian marble, with a Latin inſcription, that to this pillar St. Bibiana was bound, when ſhe ſuffered martyrdom, being whipped to death with thongs charged with lead.

St. Conſtanza fuori di Porta Pia is of a round figure, and the roof is ſupported by twenty-four pillars of oriental granite ſtanding in pairs. The cieling is of antient Moſaic work, repreſenting birds, grapes, and the preſſing of them, from whence ſome conjecture that this was antiently a temple of Bacchus; while others maintain, that Conſtantine the Great erected this ſtructure in imitation of the Lateran Baptiſtery, for the ſolemnity of baptizing the two Conſtantias, his daughter and ſiſter. But what is moſt remarkable here, is a large coffin of a ſingle piece of porphyry, four feet in depth, eight feet and an half in length, and above five broad. On the ſides are carved wreaths, garlands, and boys with bunches of grapes, which is the more curious from the difficulty of working porphyry, on account of its hardneſs. The lid is alſo made of one piece, but damaged. Some think this to have been the tomb of Tulliola, Cicero's daughter; and others will have it to be that of Tullia, the wife of Tarquin the Proud.

The Jeſuits church is one of the fineſt in Rome; the front is of a kind of free-ſtone found near Tivoli, adorned with Ionic and Corinthian columns. It has ſeveral magnificent chapels, the moſt noble of which is that of St. Ignatius Loyola. The pavement about the altar is inlaid with feſtoons and flowers of the fineſt gems; the ſteps are of porphyry and other coſtly marble; and the place where the prieſt ſtands before the altar, is of inlaid work of poliſhed gems. Under the table of the altar lies the body of St. Ignatius, in a coffin of braſs gilt, and by means of a lamp burning behind it, the name of JESUS of inlaid cryſtal in the front emits a great luſtre. The front of the altar on feſtivals is covered with ſolid ſilver, but has an aperture through which the coffin and radiant name may be ſeen. A little above the table are two gilded angels, holding St. Ignatius's motto, *ad majorem Dei gloriam*, that is, "To the greater glory of "God," of lapis-lazuli. On the altar-piece are four fluted columns, which, excluſive of the pedeſtals and capitals, which are of braſs gilt, are twenty-eight feet in height, inlaid with lapis lazuli. Over the altar is a picture painted on wood, which may be lowered, and then exhibits a ſilver ſtatue of St. Ignatius Loyola, which ſtands behind it, the drapery of which is gilt and enriched with pearls and diamonds. On each ſide of the altar is a fine group of ſtatues in Carrara marble; one repreſents the Chriſtian-religion deſtroying idolatry, which is repreſented by a ſerpent blaſted with lightning, and near it is the king of Bungo in Japan, ſubmitting to the Chriſtian faith. In another group Religion is ſeen treading on a Fury and Hereſy, who has a ſnake in her hand, and near her lie three books marked with the following titles: Martin Luther, John Calvin, Hulderich Zwingel.

St. Peter's in the Vatican, both for ſize and beauty, may be called the metropolitan church not only of Rome and Italy, but of the whole world. Here may be ſeen to what an amazing pitch the Romiſh church, which is ſo fond of external pomp and ſplendor, has within two centuries carried its favourite ſcheme of captivating the ſenſes, and inſpiring the minds of the ignorant with awe and ſubmiſſion to the clergy. Fontana computes that in his time it had coſt above eighty millions of Roman ſcudi, about two millions ſterling.

Nothing can be imagined more grand and ſuperb than the area before the church. The oval colonnade round it has four rows of columns, forming three ſeparate walks. This colonnade conſiſts of three hundred and twenty columns made of Tivoli free-ſtone, ſo large that three men can ſcarce graſp them. On the roof, which is flat, ſtand eighty-ſix ſtatues of ſo many ſaints, twice as big as the life, all deſigned by Bernini. The area is adorned with two ſtately fountains, and in the center ſtands the vaſt granite obeliſk which formerly belonged to Nero's Circus, and in Caligula's time was

A View of St. Peters at Rome.

Rooker Sculp.

brought from Egypt to Rome, though it is ſaid to weigh nine hundred and ninety-two thouſand ſeven hundred and eighty-ſix pounds, and the height of it is eighty feet, excluſive of the baſe, which is thirty-ſeven. Four lions which ſupport the obeliſk are placed on the pedeſtal, and are of gilt bronze. The croſs on the top, which is ſeven feet high, and is of gilt braſs, is ſaid to have in it a piece of the croſs on which Chriſt ſuffered; and whoever, in paſſing by it, ſays a Pater Noſter, and Ave Maria, for the proſperity of the ſee of Rome, is entitled to an indulgence for ten years, and ten times forty days. The ſteps from the area up to the church have at the bottom on each ſide the ſtatues of St. Peter and St. Paul. At the top of theſe ſteps is a grand portico two hundred and ſixteen feet in length, and forty in breadth. Eight columns ſcarcely to be graſped by five men, together with ſeveral others of fine Tevertino ſtone, ſupport the architrave. On each ſide of the five entrances into the portico ſtand two Ionic columns of purple marble. The portico itſelf is paved with the fineſt marble, and the cieling is embelliſhed with ſtucco-work and gilding. On the right hand near the ſteps is an equeſtrian ſtatue of Conſtantine the Great, whoſe joy and ſurprize at the appearance of the effulgent croſs in the ſky is admirably expreſſed. Oppoſite to this on the other ſide is an equeſtrian ſtatue of Charlemagne cut out of a ſingle block of marble. From the portico four doors open into the church, of which the fartheſt on the right hand is walled up and opened only once in twenty-five years, that is at the jubilee, and then the ceremony is performed by the pope himſelf with a hammer.

This incomparable church is built in the form of a Latin croſs, and the proportion is ſo exactly obſerved in the length, height, and breadth, that the eye cannot perceive any thing extraordinary large in any of the three dimenſions, though the whole taken together be of an uncommon bulk and extent. The breadth of the middle iſle, which runs the whole length of the church, is eighty-ſix Engliſh feet; but the whole breadth of the church, excluſive of the thickneſs of the walls, is two hundred and ninety-one feet. Its length to the croſs iſle is four hundred and thirty-eight feet, and its breadth ſeventy three. The height of the church, from the pavement to the roof, is one hundred and forty-four feet. It is univerſally agreed, that the cupola is a work of aſtoniſhing art and grandeur. The height from the pavement of the church to the top of the croſs, is four hundred and thirty two feet. The outward circumference of the dome is ſix hundred and twenty feet, and the inward diameter a hundred and forty-three. This dome was built under the pontificate of Sixtus V. The honour of the undertaking and the deſign is owing to the great Michael Angelo, who hearing ſome perſons crying up the Rotunda as a work of antiquity never to be paralleled, ſaid he would not only build a dome equally large, but build it in the air. Gioſoppe d'Arpino drew the deſigns for the Moſaic ornaments of the cupola, among which the four Evangeliſts, in four large oval compartments, are particularly admired. This amazing ſtructure reſts on four pillars, each of which is adorned with a white marble ſtatue, over which is a gallery, from whence ſeveral times in the year the relics, which are kept in a particular chapel, are expoſed to public view.

To return to the entrance, at the two firſt pillars, which ſtand oppoſite each other, are two ſhells or baſons of yellow marble for holy water, held out by two angels of white marble. This work is large and beautiful. The high altar, at which the pope alone is to officiate, ſtands in the middle of the croſs iſle, and directly under the center of the cupola, and firſt attracts the eye. Over this altar is a canopy of gilt bronze, embelliſhed with four angels and a crucifix, and reſting on four large twiſted braſs pillars. There are a great number of chapels finely ornamented with ſculpture, painting, and the moſt beautiful Moſaic work.

The farther end of the church is taken up with the altar of St. Peter, where they pretend to have the wooden pulpit of that apoſtle incloſed in another of gilt bronze, and ſupported by the ſtatues of St. Chryſoſtom, St. Athanaſius, St. Auguſtin, and St. Ambroſe, all four very large and of gilt bronze, ſtanding on four ſtately marble pedeſtals. Over the pulpit is a glory of the ſame metal, and in the center the Holy Ghoſt in the form of a dove. Before this altar ſtands a large bronze lamp made by order of Clement XI. who granted to all the religious orders the privilege of having the image of their founders placed here. The ſtatue of St. Dominic is cut out of a ſingle block of marble, which, before it came into the ſculptor's hands, coſt two thouſand crowns. His countenance and attitude expreſs the vehemence and rigour which influence his diſciples in the proceedings of the inquiſition; and at his left ſide is a dog, with a flaming torch, which is the arms of that dreadful tribunal. Oppoſite to it is the ſtatue of St. Francis; but the other orders have not yet taken advantage of the pope's grant.

In ſhort, the altars of this church amount to twenty-nine. The pavement is entirely of marble, and there are in this church about a hundred and eighty large marble pillars; the ſquare pilaſters are incruſted with red marble, adorned with white medallions and buſts of the popes. Every thing is kept with ſuch neatneſs and order, that it looks like a new-built church, and upon the leaſt appearance of any duſt on the walls and cieling, people are drawn up in machines, who wipe it off with linen cloths.

Adjoining to St. Peter's church, on the north ſide, is the ſpacious palace of the Vatican, in which are ſaid to be twelve thouſand five hundred and twenty-four rooms. But this palace having been built and enlarged at different times, there is not the leaſt ſymmetry obſerved in its ſeveral parts, and, to avoid damaging the fine area of St. Peter's church, it has not ſo much as a portico in front. Over one of the doors is a Moſaic work of the Virgin Mary, with St. Peter and St. Paul. From hence, by aſcending a pair of ſtairs, which lead to the grand apartments of the palace, you have a view of three galleries over each other, in which Raphael immortalized his name by his amazing ſkill. The middle gallery leads into an apartment called Raphael's Bible, from the hiſtories of the Old and New Teſtament, painted by that great artiſt. This gallery is divided into ſeveral vaulted compartments, each filled with exquiſite painting in freſco. Among theſe pieces the portrait of Eve, by Raphael, is much admired. The Judgment of Solomon is a capital piece, as is alſo the Lord's Supper.

But the place where Raphael's ſkill ſhines in its greateſt glory, is the Camera della Signatura, and the three adjoining rooms. The firſt of theſe apartments has four large emblematical pieces. The firſt contains the chief articles of the Romiſh faith, the Trinity, Tranſubſtantiation, &c. the ſecond the Sciences, with the progreſs of the human mind in philoſophy, mathematics, and aſtronomy, on which account this piece is uſually termed *The School of Athens*: the third is of poetry; and the fourth of juſtice, prudence, and other moral virtues.

Over the door of the Sala Ducale is an angel holding the keys, and another the papal crown. In this apartment, which was deſigned by Bernini, the pope on Maunday Thurſday waſhes the feet of thirteen poor prieſts of different nations. The ſtucco curtain, which ſeems tied to the cieling, is ſo happily executed, that it has all the appearance of white ſilk, embroidered and fringed with gold. Here the pope alſo holds conſiſtories, and gives audience to the ambaſſadors of crowned heads.

The Sala Regia opens into the chapel of Sixtus IV. and is a ſpacious room, with a beautiful pavement of inlaid marble. The hangings are very fine, and the prophets, ſybils, and other paintings in freſco on the cieling, are by Michael Angelo; but the piece moſt admired is that of the laſt judgment by that admirable artiſt, who has introduced ſuch a multitude of figures, with their limbs and attitudes ſo accurately delineated, that one would imagine his chief intention was to diſplay his exact knowledge in anatomy. But on this ſolemn occaſion he has ridiculouſly introduced the heathen fables of Charon and Minos.

The ſummer apartments of the pope are uſually hung with crimſon ſilk damaſk, and thoſe for winter with velvet. In moſt of the rooms are to be ſeen ſeveral wooden chairs and benches painted green and varniſhed, which under all the revolutions of the ſtate remain unaltered, only on the acceſſion of a new pontiff to the papal chair the name and arms of the deceaſed pope are taken away to make room for thoſe of his ſucceſſor. The cardinals and ambaſſadors at an audience ſit on chairs, and princes

on the like occaſion ſit upon three cuſhions laid upon one another; whilſt perſons of an ordinary claſs kneel. In the audience-chamber on each ſide of the papal throne is a red ſtool for kings; but for theſe two laſt centuries crowned heads have not been ambitious of that honour: even the pretender to the Britiſh crown never had any other than private audiences of the pope, and then ſits in an arm-chair.

It is obſervable, that ſeveral of the ſtair-caſes of the Vatican, if they may be ſo called, are either without or with very low ſteps; ſo that wood, water, and other neceſſaries may be carried up and down by aſſes.

The Vatican library is extremely famous. It is not indeed very remarkable for printed books, the whole number ſcarce amounting to more than twenty thouſand volumes; but in excellent manuſcripts, of which it is ſaid to contain above twenty-five thouſand, it is eſteemed the moſt valuable in all Chriſtendom.

Directly under the library is the armoury, built by Urban VIII. and is ſaid to contain arms for forty thouſand men; but being chiefly ſuch as were uſed in antient times, they are now of little uſe.

In the middle of the palace is a ſpacious ſquare ſurrounded with orange trees and antique ſtatues, the moſt famous of which is that of Laocoon, which is ſaid to have been performed by thoſe excellent artiſts Ageſander, Polydorus, and Athenodorus, natives of Rhodes. In this group Laocoon is repreſented in the greateſt agony with his eyes lifted up to heaven: near him are his two ſons, with ſerpents twined about them, who are at ſome diſtance from their father, and expiring when he comes to their relief.

As the Vatican joins on one ſide to St. Peter's church, on the other a colonnade leads to the caſtle of St. Angelo. This caſtle was formerly the burial-place of the Roman emperors, and a large round tower in the center of the edifice was once adorned with a conſiderable number of marble columns and ſtatues; but moſt of them were broken by the Romans, who made uſe of them againſt the Goths, when they aſſaulted the city. When Rome was viſited with the peſtilence in the reign of Gregory the Great, in a general proceſſion, where the pictures of the Virgin Mary, painted by St. Luke, were carried, the pope, it is pretended, ſaw an angel directly over the caſtle; who, upon the pope's looking up, ſheathed his flaming ſword. This Gregory ſuppoſed to be a ſign of the ceſſation of the divine wrath, and therefore built a chapel in honour of the angel, ordering the place itſelf to be called Caſtellum St. Angeli, or the Caſtle of the Holy Angel. Rome being without a citadel, or any regular fortifications, this caſtle has been rendered a place of ſecurity, and fortified in the modern way, with five regular baſtions, ramparts, moats, &c. The governor is appointed by the pope, and is generally a prelate, who enjoys other conſiderable offices; the garriſon conſiſts of two hundred regulars, and ſome hundreds of citizens. In this caſtle is a handſome hall adorned with gildings, fine paintings, and Adrian's ſtatue. The apartment to which Clement VII. withdrew, amidſt the diſturbances which he had brought upon himſelf, by provoking the emperor Charles V. is at preſent a ſtate priſon for perſons of rank, who, through a ſmall window, may look into the chapel and hear maſs. On the top of this ſtructure ſtands an angel of white marble about twelve feet high.

The church of St. John de Lateran is ſo called from its chapel of St. John the Baptiſt, and the Roman martyr Plantius Lateranus, put to death by Nero, who had a garden in this place. It is of an octangular figure, and bears the title of the head and mother of all churches; and as it is one of the four churches enjoined to be viſited every jubilee year, it has a gate walled up, which at the commencement of that year is opened by the cardinal arch-prieſt. On the feaſt of St. John the Baptiſt here are plenary indulgences for twenty-nine thouſand years. The pavement of this church is of fine inlaid work, interſperſed with circular pieces of porphyry. Both here and at St. Peter's are confeſſionals for different nations; and, by proper inſcriptions over them, every one may know where to apply to a prieſt who underſtands his language. The roof is very richly gilt, and the cupola is adorned with eight pieces of painting, by Andrea Sacchi, and the painting in freſco in the church by Carlo Maratti, Gimignani, Camaſſei, and Magnoni. Along the middle iſle are twelve large ſtatues of the apoſtles, each cut out of a ſingle block of white marble, and done by the beſt maſters. There are two pillars of verde antico between every two of theſe ſtatues. Over them are baſſo relievos; and above theſe are the pictures of as many of the prophets.

Before this church is a beautiful fountain, and the largeſt obeliſk in Rome, it being, excluſive of the pedeſtal and the iron croſs on the top, a hundred and twelve feet in height, and two of the ſides ten feet and a half, and the other two eight feet in breadth near the baſe. At firſt it conſiſted of a ſingle piece of Egyptian granite, and ſtood in the Circus Maximus; but amidſt the ſubſequent wars and commotions it was broken into three pieces, and lay on the ground till the year 1588, when Sixtus V. gave directions to his architect Fontana, to remove it hither, and ſet it up again. The Egyptian hieroglyphics upon it have afforded the learned a large field for exerciſing their ſkill. The veſtry of the Lateran church leads to the cloiſters of the convent, which, on the ſide towards the inward court, have an elegant variety of ſmall white marble pillars. Both here and in the church are a multitude of fictitious relics not worth deſcribing.

On the other ſide of this piazza, or ſquare, is the Lateran hoſpital, a handſome and well contrived building, where ſome hundreds of patients of both ſexes are carefully attended, and commodiouſly lodged. In this ſquare is alſo to be ſeen the *Scala Santa*, or holy ſtairs, ſaid to be thoſe of Pilate's houſe, which Chriſt frequently aſcended, before he was led to be crucified, which nobody are permitted to aſcend but on their keees: however, there are ſtairs on each ſide, by which men are allowed to walk up to the Sanctum Sanctorum, or Holy of Holies, a ſmall chapel at the top, in which are abundance of reliques belonging to the Lateran palace. The moſt remarkable of theſe is a picture of Jeſus Chriſt, begun, as it is pretended, by St. Luke, and finiſhed by an angel. Any perſon ſcrupling to pay the required adoration to this picture, are not admitted to ſee it; nor are women ever admitted beyond the gate where it is kept.

The Pantheon, from its circular figure called the Rotunda, dedicated by Boniface IV. to the Virgin and all the martyrs, and by another pope to all the ſaints as well as the martyrs, is one of the moſt beautiful and entire pieces of antiquity in Italy, and ſeveral of the niches are ſtill remaining that antiently contained the ſtatues of the gods. The outſide of the building is of Tivoli freeſtone, and within it is incruſted with marble. The roof of the Pantheon is a round dome, without pillars, the diameter of which is a hundred and forty-four feet; and though it has no windows, but only a round aperture in the center of the dome, it is very light in every part. The pavement conſiſts of large ſquare ſtones and porphyry, ſloping round towards the center, where the rain-water falling down through the aperture on the top of the dome, is conveyed away by a proper drain, covered with a ſtone full of holes. Eight altars are placed round this church, among which the high altar is of porphyry. The colonnade in the front, which conſiſts of ſixteen columns of granite, thirty-ſeven feet high, excluſive of the pedeſtals and capitals, each cut out of a ſingle block, are of the Corinthian order, and cannot be viewed without aſtoniſhment. The entrance of the church is adorned with columns forty feet high, and the architrave is formed of a ſingle piece of granite. On the left hand, on entering the portico, is a large antique vaſe of Numidian marble; and in the area before the church is a fountain, with an antique baſon of porphyry.

The Campidoglio is a ſuperb ſtructure, built on the ſpot where the antient Capitol ſtood, by the great Michael Angelo. The ſteps that form the aſcent are low and of an extraordinary breadth, and at the bottom on each ſide is a ſphynx of Egyptian marble ejecting water. On the top of the aſcent are two large antique ſtatues of Caſtor and Pollux on horſeback, facing each other; theſe are antient trophies, generally thought to have been raiſed for Caius Marius, fixed on new pedeſtals. Farther

on is an antient mile ſtone, and oppoſite to it, for the ſake of regularity, is another antique pillar, with a globular urn on the top, in which Trajan's aſhes are ſaid to have been depoſited. In the middle of the area Paul III. erected an equeſtrian ſtatue of the Roman emperor Marcus Aurelius Antonius, which formerly ſtood in the church of St. John Lateran. The pedeſtal is very grand, it being the work of Michael Angelo. The owl on the horſe's head is an emblem of the emperor's wiſdom and vigilance, that bird being ſacred to Minerva. Theſe ſtatues, with the ſteps up the aſcent, all placed there by different popes, give this place a grand appearance.

In the place where the antient Capitol ſtood is a very magnificent palace, the roof of which is flat, and adorned with many ſtatues of illuſtrious perſons among the Romans. In the front of the building is a high tower, with the ſtatue of Religion erected on the top. The double flight of ſteps at the entrance of this palace is the work of Michael Angelo; who likewiſe added to the beauty of the front by a ſuperb fountain, adorned with two ſtatues, repreſenting the Nile and the Danube in a reclining poſture. In the center is a porphyry ſtatue of Rome, in the habit of Minerva, repreſented ſitting. This is a piece of great antiquity, and is univerſally admired by connoiſſeurs. In the rooms are great numbers of curious antiquities, with the nobleſt antique ſtatues, and paintings by the greateſt maſters. In the main building reſides the ſenator of Rome, who daily adminiſters juſtice there; and in the wings are the apartments of the conſervators of the city.

As the churches of Rome are remarkable for their architecture, painting, and ſculpture, theſe alſo diſtinguiſh the palaces of the princes and nobility of this city; for an Italian prince ſetting little value on equipages, liveries, entertainments, and the like, places his grandeur in adorning his palace with the moſt noble decorations.

The Barbarini palace is exceeded only by the Vatican, and contains four thouſand rooms, adorned with an amazing number of ſtatues and paintings, and among the former is a remarkable ſtatue of the conſul Brutus holding in his hand the head of his ſon, whom he had ſentenced to die. Severus Septimus in bronze is highly eſteemed, and a Narciſſus in marble is much admired.

At the palace Juſtiniani, the catalogue of the antiquities amount to eighteen hundred and ſixty-ſeven pieces, of which ſix hundred and thirty-eight are curious pictures: the moſt excellent of them are, Nero's head, Minerva, Venus coming out of a bath, and three little Cupids ſleeping, and leaning one upon another.

Cardinal Chigi's palace is ſcarce inferior to any in Rome. The gates are cruſted over with old green marble: the ſtatues of the two Venuſes, of Marſyas flayed, and the dying gladiator, are admirable pieces.

The Farneſian palace was begun by Antonio de St. Gallo, and brought to perfection by Michael Angelo. The front is a hundred and eighty feet in breadth, and ninety feet high; but all the principal ſtones of this beautiful ſtructure were the ſpoils taken from the Great Coliſeum, which admirable monument of antiquity has alſo furniſhed materials, not only to the palace of the chancery, and St. Laurence's church, but alſo to ſome part of the city walls. Thus Innocent VIII. deſtroyed the Gordian arch to build a church, and Alexander VI. that moſt beautiful pyramid of Scipio, to pave the ſtreets with the ſtones. The Hercules and bull in the Farneſian palace are celebrated throughout the world, and the gallery by Carachio, the hall by Sabriati, and the Venus and Adonis painted by Titian, are finely performed. But we have not room to mention the thouſandth part of the beauties of the many palaces of this city, and ſhall therefore proceed to its celebrated antiquities.

Three brick arches of extraordinary ſize are ſtill ſtanding of the temple of Peace, built by the emperor Veſpaſian, which before it was demoliſhed was eſteemed the largeſt and moſt beautiful in Rome. Here the emperor Titus depoſited the utenſils he had taken out of the temple of Jeruſalem after his conqueſt of that city.

The triumphal arch of white marble erected in honour of the ſame emperor, on account of his ſucceſs in the Jewiſh expedition, is indeed much damaged; but the inſcription on one ſide is ſtill entire, and on it are repreſented the golden candleſticks, with ſeven branches, two jubilee trumpets, the table of ſhew-bread, and other utenſils belonging to the temple of Jeruſalem.

The triumphal arch of the emperor Conſtantine the Great of white marble is the beſt preſerved of any from the injuries of time.

The columns of Trajan and Aurelius are magnificent monuments of antiquity, adorned with moſt excellent baſſo relievos, aſcending in a ſpiral line from the baſe to the capitals. Aurelius's column is a hundred and eighty feet high, and exhibits a great number of baſſo relievos, repreſenting the moſt remarkable actions and atchievements of Marcus Aurelius. Within this column a ſtair-caſe, conſiſting of a hundred and ninety-two ſteps, winding in a ſpiral line, leads to a ſquare gallery ſurrounded with an iron baluſtrade, from whence there is a moſt delightful proſpect. The light is admitted into this pillar through fifty-two ſmall windows. About fourteen feet higher than this gallery is a ſtatue of St. Paul of braſs gilt erected by Sixtus V. who cauſed the whole column to be repaired. The imagery in the upper part of the column is bigger than the lower; and this is almoſt the only inſtance of antiquity where the rules of perſpective, with which the antients were but little acquainted, have been attended to. This pillar indeed is falſely called the Antonine; for from the baſſo relievos, among which are intermixed ſome circumſtances of the Marcomanian war, it is evident that this monument was erected in honour of Marcus Aurelius, and not by him to his father Antoninus Pius. This error, however, paſſed current, till the genuine pillar erected to Antoninus Pius was found in 1704, half buried in rubbiſh. This laſt is of a red oriental granite, forty-four feet three inches high, and five feet eight inches in diameter. It is without ornaments; but the pedeſtal, which is of Parian marble, twelve feet long, and eleven broad, is an exquiſite piece of work. On one ſide is the inſcription, and on the other baſſo relievos repreſenting the apotheoſis of Antoninus and his empreſs Fauſtina, and likewiſe ſome horſe-races.

Trajan's pillar is not only of a much larger ſize, but is adorned with bolder reliefs than that of Aurelius, and makes a very ſuperb appearance. The grandeur of this column is ſtill heightened by a noble pedeſtal repreſenting a maſs of huge rocks embelliſhed with trophies of coats of mail, ſhields, &c. The baſſo relievos are carried round, and from the bottom to the top form twenty-three ſpiral circumvolutions. The ſubject is Trajan's expedition againſt Decebalus king of the Dacians, and they contain near two thouſand five hundred figures, but with ſo little regard to perſpective, that thoſe in the rear of a corps appear as large, and as full in view as thoſe in the front. The ſtair-caſe within conſiſts of one hundred and eighty-four ſteps, and is very light by means of forty-three apertures or windows properly diſpoſed. Anciently ſtood either Trajan's ſtatue, or an urn with his aſhes on the top; and "where, ſays Mr. Addiſon, could the aſhes of an emperor have been ſo nobly "lodged as in the midſt of his metropolis, and on the "top of ſo exalted a monument, with the greateſt of "his actions underneath them? or, as ſome will have "it, his ſtatue was on the top, his battles in the midſt, "and his urn at the foundation." However, whether it was his urn or his ſtatue which was on the top, it has been obliged to give place to a braſs gilt ſtatue of St. Peter. This pillar is of marble, and the whole, including the pedeſtal, conſiſts of thirty-four pieces.

The amphitheatre of Titus, notwithſtanding it has greatly ſuffered by the injuries of time, is not to be beheld without aſtoniſhment. The whole edifice is of Travertina ſtone, with four galleries over each other, adorned with columns of the Doric, Ionic, Corinthian, and Compoſite orders. This ſtructure was one thouſand ſix hundred and twelve geometrical feet in circumference, and its external figure circular; but the inſide was oval. A great quantity of ſtone has been taken from this ancient edifice, for building ſeveral palaces; but ſome ſay that only ſuch ſtones were carried away as had been thrown down by the weather or by earthquakes. However, not the leaſt care is now taken to preſerve this noble ſtructure,

ture, and the area within it is overgrown with graſs and weeds. According to the moſt exact computation, this amphitheatre was capable of containing thirty-four thouſand perſons, excluſive of thoſe in the upper gallery; and according to Dion Caſſius, nine thouſand wild beaſts were killed within its area at its dedication.

On one ſide of the Porta Oſtia is a pyramid deſigned for a monument of Caius Ceſtius, one of the ſeven Epulones, or officers whoſe buſineſs it was to furniſh banquets for Jupiter and the reſt of the gods. This ſtructure is built with brick, and encruſted with marble. It is one hundred and ten feet high: each ſide of the baſe is eighty one feet and an half ſquare, and it has ſeveral inſcriptions. At the entrance of this pyramid are two fine marble pillars, and within it an apartment with a Victory painted at each corner.

Of the temple of Concord, eight oriental granite pillars of the Ionic order are ſtill to be ſeen behind the Capitol towards Mount Palatine. It was erected as a memorial of the reconcilement of the people and nobility at Rome.

At a ſmall diſtance are to be ſeen three pillars, by ſome thought to be the remains of the temple of Jupiter Tonans, or the Thunderer, and by others that of Julius Cæſar.

The temple of Minerva ſtood in Nerva's Forum, where the front, embelliſhed with fine baſſo relievos, is ſtill remaining. In one baſs relief the goddeſs is herſelf repreſented.

Among the other noble remains of antiquity, we ought not to omit the temple of Peace, of which three detached parts that are roofed are ſtill remaining. The roof is divided into a great number of octangular apartments, formerly ſaid to have been plated with gold. This temple was rebuilt by Titus on the ſucceſsful concluſion of the Jewiſh war, and ſplendidly adorned with the ſpoils brought from Jeruſalem. Herodian gives an aſtoniſhing account of its riches, and when in Commodus's time this temple was burnt by lightning, the melted ſilver and gold is ſaid to have flowed out in a ſtream two hundred feet broad, and three hundred in length. At preſent a market for cattle being kept every Friday at this place, this famous temple is parted into ſeveral diviſions, and let out by the apoſtolic chamber to graziers, as an encloſure for their bullocks, &c.

The catacombs of Rome are not ſingle vaults, but rather whole ſubterraneous cities, with turnings and windings like ſtreets, extending under all the ſuburbs. They are dug out from among the rocks, each paſſage being commonly fifteen or eighteen feet wide, and between twelve and fifteen feet high. The hollow niches on both ſides of the walls are ſhaped like cheſts of various ſizes, placed in rows one above another without any coffins, and only covered with flat ſtones like tiles, cemented with mortar. Theſe were the burying-places for ſuch of the Romans as could not afford the expence of burning; and the primitive Chriſtians, who never burned their dead, made uſe of them for the ſame purpoſe.

It would make a volume larger than this is intended to be, were we to deſcribe the antiquities and modern buildings of this city. We ſhall therefore leave this ſubject, and only take notice of ſome noble foundations, one of the moſt ſingular of which is the Monte della Pieta, which is intended to prevent exceſſive uſury, money being lent on pledges at two-thirds of the value, and to the amount of thirty ſcudi without any intereſt; but larger ſums at the moderate intereſt of two per cent.

The hoſpital for poor children is ſo large, that the front towards the Tyber is an hundred paces long, and four ſtories high. This is a moſt admirable foundation for bringing up orphans, who are allowed to chooſe their trade; and when they are twenty years old, and able to maintain themſelves, they are diſmiſſed from the houſe, new cloathed from head to foot, with twenty crowns in their pockets. Very good tapeſtry is made here, and ſuch boys as have a remarkable genius, are inſtructed in drawing for two or three years, and ſpend about the ſame time to obtain a thorough knowledge in tapeſtry weaving. In this hoſpital are alſo admitted old diſabled ſervants, and other perſons who by age and infirmities are rendered incapable of earning their bread. Beſides theſe, there are many other charitable foundations.

The court of juſtice is one of the nobleſt buildings in Rome, and in the gallery of the firſt floor facing the court is a marble group of a man flaying one of his own ſpecies: whether this be Marſyas, ſays Mr. Keyſler, who was puniſhed for his preſumption by Apollo; or whether it be an emblematical repreſentation of the miſeries of a client in the hands of a rapacious lawyer and iniquitous judges, I ſhall not pretend to determine.

The two cuſtom houſes are alſo ſtately buildings: theſe moſt travellers are obliged to viſit much againſt their own inclination. The contraband goods for which the greateſt ſearch is made are tobacco, prohibited books, and new linen; but a piece of money and a readineſs to open one's baggage ſeldom fail to make matters eaſy.

The French academy was founded by Lewis XIV. for twelve young gentlemen natives of France, ſix to be inſtructed in painting, four in ſculpture, and two in architecture, who are maintained at the expence of the French king; and when they have completed themſelves in theſe noble arts, return to their native country. On Monday, Tueſday, Wedneſday, and Thurſday in Paſſion-week, a young fellow is faſtened naked to a croſs, who droops his head, as if he was juſt expiring, with ſeveral lamps placed round him, while the ſcholars and other artiſts are employed in copying from the life; ſome deſigning on paper, others working in plaſter, and expreſſing the attitude, muſcles, veins, &c. of the object before them: but when a ſtranger goes away, this fellow quickly leaps down from the croſs, and importunes him for a piece of money. In this academy one has an opportunity of viewing excellent copies of the beſt pieces, both of antient and modern artiſts. The ſtatues and pieces of ſculpture are moſtly of plaſter; and among theſe are the wild boar in the Florentine gallery, the wreſtler, and the Venus of Medicis, in the Tribuna of Florence; the hermaphrodite in the Villa Borgheſe; the Barbirini, Laocoon, Apollo, Antinous in the Belvedere; a faun, a centaur, buſts, &c. without number: with many fine pieces of painting.

Here is alſo an Italian academy of painting.

With reſpect to the manners and cuſtoms obſerved in this city, the people take great care to preſerve themſelves from the heats, which are uſually in ſummer very troubleſome; for which purpoſe perſons of quality have low apartments, ſhaded from the rays of the ſun, paved with marble, and furniſhed with fountains and water-ſpouts; and beſides, the doors and windows are ſo contrived, that they are never without a kind of cool breeze. The beds are encompaſſed at ſome diſtance with a curtain of gauze or tiffany, which is joined cloſe to the boards of the floor and cieling, to prevent their being troubled with gnats. It is alſo the cuſtom to ſleep two hours immediately after dinner; but they never lie down, for they have a ſort of folding chairs, which have backs that riſe and fall with a ſpring. The uſe of umbrellas is common every where: the evening dew in the Campagna di Roma is eſteemed mortal, during three or four months in the ſummer, and great care is taken to avoid it; for this purpoſe travellers double their pace, to arrive at Rome in time, or ſtay at the diſtance of eighteen or twenty miles from it.

The way of living at Rome was never ſo agreeable as at preſent, not a day paſſing without aſſemblies of both ſexes at the houſes of perſons of quality; but unmarried women have not the liberty of appearing in public, they generally being confined in a convent, till they are either married or grown old.

The carnival at Rome affords a more agreeable entertainment to perſons of an elegant taſte than that of Venice; and ſhould a proſtitute dare to appear upon the Corſo, her being diſcovered would expoſe her to very ſevere treatment. The Corſo is a fine ſtreet, which extends two thouſand ſeven hundred and twenty common paces in length. People appear there with or without a maſk, in a carriage or on foot, juſt as they pleaſe. The coaches follow each other two a-breaſt, and the principal nobility make their appearance in triumphal cars, which add great ſplendor to the ſpectacle. The ſbirri are poſt-

ed up and down to prevent diſturbances, and their captain rides about bare-headed, till orders are obtained for horſe-races, a diverſion ſeen no-where but in Italy and the Britiſh dominions. Moſt of the racers in Italy are brought from Barbary, whereas England glories in the ſpirit and vigour of thoſe of her own breed. In Italy, inſtead of being under the management of their riders, they are trained up to run alone: on the ſides and along the back they have leathern ſtraps, ſtuck on with pitch, and under theſe are iron bullets, ſet with ſtrong points like the rowels of a ſpur, which continually prick the horſes while they are in motion; and they have the cruelty to ſtick another of theſe ſpiked balls under the horſe's tail. The ſtarting-place is on the ſquare called Piazza del Popolo, where the horſes, being generally from five to eight in number, ſhew the utmoſt impatience for the ſignal, which is given by dropping a rope that runs a-croſs the courſe before them. Upon this they ſtart, and fly along the Corſo with incredible ſwiftneſs, the coaches being drawn up on each ſide of the ſtreet. The prize is generally a piece of brocade, of the value of ſeventy or eighty Roman crowns. The people are entertained with ſuch a race every day during the carnival.

Notwithſtanding the ſplendor of the buildings of this city, the people have the diſagreeable cuſtom of drying linen out of the windows, and on ropes hung a-croſs the ſtreets.

The ſummers at Rome are very tedious, every body keeping cloſe at home the whole day. Hence it is here a common ſaying, That none but dogs, idiots, and Frenchmen, walk the ſtreets in the day-time. The heat of the climate makes the Romans extremely fond of ſpring-water, iced and cooling liquors; ſo that great quantities are conſumed of ſnow and ice, which are fetched from the mountains, and preſerved in ice-houſes.

In autumn the vintage is a time of general feſtivity, when the common people give themſelves up to all manner of licentiouſneſs. The favourite winter diverſions at Rome are plays and operas, and, during the carnival, the latter are acted at three theatres. One of theſe, called Alberti, from the count of that name, its founder, has a pit which will contain nine hundred perſons, and is ſurrounded with ſeven galleries over each other.

With reſpect to the Roman cuſtoms in other reſpects, every prudent traveller ſhould be on his guard, and rather talk too little than too much; for there are ſeveral private channels of information for conveying to the government's ear every thing that is ſaid or done in the city. However, their conduct towards travellers is very prudent, from the conſideration of their annually ſpending great ſums of money in this city. At the meeting of the Hoſt, and other proceſſions, the Proteſtants need be in no fear of thoſe brutal inſults which they ſometimes meet with in other countries, from the bigotted perſecuting ſpirit of the vulgar. Beſides, in Lent, and on other faſt-days, the Proteſtants never fail of meeting with fleſh-meat at the inns and taverns, without being at the trouble of procuring a licence for eating it.

Though public proſtitutes are licenſed on paying a ſmall tax to the papal treaſury, here are ſeveral regulations calculated to reclaim them: they are excluded from communion, and if they die in that profeſſion they are denied Chriſtian burial. In ſome parts of Italy they are obliged ſeveral times in a year to aſſemble in a particular church, where their vicious lives are painted in the blackeſt colours in a ſermon preached before them; and they who are moved by the preacher's arguments, and in token of their repentance kiſs a crucifix which is handed about, are conducted to a convent founded for their reception.

The Pretender to the Britiſh crown is, by order of the pope, ſtiled King of England; but this is no more than an empty title, which the Italians themſelves make a jeſt of. Mr. Keyſler obſerves, he has an annual income of twelve thouſand ſcudi, or crowns, out of the pope's treaſury, which is only three thouſand pounds ſterling; and though the clandeſtine remittances of his adherents in England may amount to as much more, it falls very ſhort of what is required to keep up the ſtate required in a king. He generally appears abroad with three coaches, and his houſhold conſiſts of forty perſons: but at his coming into an aſſembly, no Engliſh Proteſtant riſes up, and even the Roman Catholics pay him their compliments in a very ſuperficial manner: for his puſillanimity, and the licentiouſneſs of his amours, have leſſened him in every body's eſteem. His lady ſeldom ſtirs abroad, except to viſit a convent; and ſhe allows her ſervants no gold or ſilver lace on their liveries.

SECT. XIV.

Of the other Places worthy of Notice in the Campania of Rome; with a particular Deſcription of the Villa Borgheſe, Freſcati, the Belvedere, and Tivoli.

THE country in the neighbourhood of Rome is pleaſant, but, like the reſt of the Eccleſiaſtical State, thin of inhabitants; for along the delicious plains between Rome and Tivoli, Freſcati, Veletri, &c. neither town or village is to be ſeen; ſo that, in harveſt time, the peaſants of Viterbo, Perugia, and the mountainous parts of St. Peter's Patrimony, reſort thither to help the few wretched inhabitants to get in their corn.

In deſcribing the principal places in the Campania, we ſhall begin with the Villa Borgheſe, which is ſeated in one of the fineſt ſpots in Italy, and may be ſaid to exceed all other country ſeats in the world. It ſtands at the diſtance of a quarter of a league from Rome, and was built by cardinal Scipio Borgheſe, nephew to Paul III. who has here aſſembled every elegant and ſplendid object of curioſity. In the gardens are at leaſt twenty beautiful walks, and all the viſtas are terminated by ſtatues, large heads, or dragons ſpouting water. Here are alſo ſeveral groves of oaks, limes, cypreſs trees, pines, and pomegranate trees. The eſpaliers conſiſt of myrtle, jaſmine, and orange trees, &c. In other parts of the garden are little parks for deer and hares, and a warren for rabbits. Here is alſo a large canal ſtocked with ſwans, and all kinds of water-fowl. In two large and lofty aviaries, with fountains playing in them, are to be ſeen all of the known feathered ſpecies, and the flower-garden exhibits the moſt beautiful flowers and remarkable vegetables. On the grand area before the palace are twenty-four ſtone pedeſtals, finely carved, for flower-pots, with ſix antient ſtatues.

The houſe conſiſts of a quadrangle, the four ſides of which are embelliſhed with ſtatues and baſſo relievos. The double flight of ſteps leading to the firſt floor is adorned with two cornucopias, and vaſes embelliſhed with baſſo relievos; and in the firſt court are a conſiderable number of antient marble ſtatues and buſtos, with ſeveral fine baſſo relievos. The firſt room one enters is adorned with twelve columns of porphyry, granite, and the moſt beautiful kinds of marble. On the walls on each ſide are fourteen marble buſts, which are thoſe of Scipio Africanus, Hannibal, and the twelve Cæſars. A ſtatue of Bacchus lying in the poſture of a river god, is a maſterly piece, as are the marble baſſo relievos over the ſix doors of the apartment, and the room is adorned with many excellent pictures. In the next room, among other fine pieces, is a celebrated antique ſtatue of Seneca expiring in the bath, of black marble. The expreſſion is exceeding natural, and the colour of the marble gives it a more melancholy appearance. The paintings both in this and in the other apartments are by the greateſt maſters, and it is impoſſible to deſcribe the aſtoniſhing number of fine ſtatues that are to be found in each of them.

The avenues about the houſe are adorned with the ſtatues of Auguſtus, Commodus, Lucius Verus, Galba, Claudius, Perſeus, Narciſſus, ſeveral gladiators, a great number of buſts, and ſeveral pyramids and obeliſks of granite, &c.

Freſcati ſtands on a mountain about twelve Italian miles from Rome. In the way thither are to be ſeen the ruins of the Claudian aqueduct belonging to the emperors Gallienus's country ſeat, and the tomb of Alexander Severus. Freſcati is ſituated on or near the ſpot where the ancient Tuſculum ſtood, and derives its name from the arbours or tabernacles built by the inhabitants of Tuſculum, when their city was demoliſhed in 1191. This charming retreat is at preſent the ſummer reſidence of ſe-

veral perſons of the firſt rank, who have here not only ſplendid palaces and gardens, but have taken the advantage of this favourable ſituation among hills for making very grand water-works. Indeed the ſeats of the Roman nobility at Freſcati have been ſpoken of by travellers with a contempt which they little deſerve.

The villa Aldobrandini, or the Belvedere, is remarkable for its fine water-works. They form a kind of theatre, and a braſs globe, ſupported on the ſhoulders of Atlas, ejects water on all ſides. Near this ſtatue are a tyger and a lion fighting, and the water iſſuing from the mouth and noſtrils of the former exactly imitates the ſnarling of that animal when enraged. The column of water in the center of the fountain riſes ſeventy-four palms high, and is attended with a noiſe like the whizzing of ſky-rockets. Among the ſtatues is a Faunus playing on one of the ancient paſtoral pipes, conſiſting of ſeveral unequal reeds, and a Centaur blowing a horn, which is ſaid to be heard four Italian miles. The water which ſupplies theſe curious works is brought hither from a ſpring at ſix miles diſtance. Here is a beautiful ſaloon paved with fine ſmall ſtones curiouſly arranged ſo as to repreſent flowers, foliages, and birds; and in the center of the pavement is a hole, over which a light globe or ball is kept in a perfect equilibrium, at the diſtance of a ſpan from the floor, only by the impetus of the air forced up by water through the hole. The caſcade conſiſts of ſixty-five ſteps, and on both ſides are tortoiſes, dolphins, and other aquatic animals cut in ſtone, and ſpouting water at each other. The cielings of the apartments in the houſe are painted in freſco by d'Arpino.

The gardens and palaces of ſeveral other noblemen at Freſcati are alſo extremely beautiful.

Tivoli is ſeated on a hill, about eighteen Italian miles from Rome; but the road to it is entirely level. This town, however, is a very mean place, except only the villa Eſtenze. In this palace is to be ſeen eight rooms on the ground-floor beautifully painted in freſco. Here is alſo a ſmall marble group of the Nile, and twelve boys ſporting about it. Formerly in the gardens were fountains adorned with the ſtatues of Leda, Æſculapius, Arethuſa, Pandora, Flora, Pomona, and Antinous, with the grotto of Venus, &c. but they are now in a ruinous condition. However, moſt of the water-works are kept up; for as they are eaſily ſupplied from the Anio, they cannot be very expenſive. The large baſon juſt before the palace, with a ſtatue of a horſe in the center, furniſhes a great quantity of water. Near this baſon is a long row of ſome hundreds of pyramids, vaſes, eagles, and other figures, cut in ſtone, and fixed on pedeſtals, with baſſo relievos of ſtories taken from Ovid's Metamorphoſes, and the water is ejected from all of them. This row of figures, being ſome hundred paces in length, is a very elegant ornament, and at the other end of it is a ſhip, with its maſts and rigging, as it were engaged, and vigorouſly defending itſelf by ejecting water from all parts. The Girondola, or Dragon fountain, throws up a vaſt column of water. The water-organ, over which is a beautiful ſtructure, adorned with ſtatues and baſſo relievos, is alſo a curious work, and the ſteep caſcade where the water precipitates itſelf from a conſiderable height without ſteps, is alſo in a good taſte.

In the market place of Tivoli ſtand two large Egyptian idols of Oriental granite, ſuppoſed to be images of Iſis, which the Tiburtines brought as a monument of their victory over the inhabitants of Norcia, though ſome maintain that they were brought hither from Adrian's villa within this town.

Near the fall of the Teverone, are the ruins of a temple of Veſta, or the Tiburtine Sybil, or according to others of Hercules; round which was formerly a colonnade of ſixteen columns; but now only ten are remaining. The baſe of the portico has been well preſerved, ſo that the feſtoons and foliages on the baſſo relievos ſtill make a very beautiful appearance. The columns are of marble; but the work within only of brick. In the niches are ſome paintings in freſco; but as the Virgin Mary is to be ſeen here, it is evident that this building has been converted by the Chriſtians into a church.

This hill affords a delightful proſpect not only of the cataract, but of the ſpots where the ſeats of Horace and Catullus are ſuppoſed to have ſtood. The violence of the fall of the Teverone down the precipice turns the water entirely to foam, and has conſiderably excavated the rocks beneath. Tivoli has in all ages been celebrated for the great ſalubrity of its air, as appears from ancient authors, and it alſo ſeems to have been a favourite retreat of Horace. This city is alſo famous for its containing the ruins of the villas of the ancient Romans, and for its quarries of ſtone, which have been frequently mentioned under the name of Travertina, or Tivoli ſtone.

Four Italian miles from Tivoli lies the lake of Solfatara, in which are ſixteen floating iſlands, the largeſt of which is not above fifty or ſixty feet in circumference; ſo that it is not difficult to puſh them from the ſhore with a pole. The water of this lake, and the little ſtream of Solfatara, is impregnated with chalk and ſulphur; ſo that the graſs and other vegetables growing on its banks are ſpeckled with white incruſtations, exactly reſembling, both in ſhape and colour, the comfits made of coriander, aniſeeds, &c. hence they are called Tivoli comfits. The water of the lake and rivulet has ſtill the reputation of curing the aſthma, and all cutaneous diſeaſes.

Piperno is a ſmall town, ſeated on an eminence, fifty miles to the ſouth-eaſt of Rome, and contains ſome palaces. Its neighbourhood abounds with the cork-tree, which is an ever-green; the leaves are ſtiff and hard, and not unlike thoſe of the plum or pear tree, and the fruit, which makes good maſt for hogs, reſembles ſmall acorns. When the tree is ſtripped, it recovers its coat in about two years.

Veletri, the antient Velletræ, is a ſmall city, pleaſantly ſituated on a hill, twenty-two miles to the ſouth-eaſt of Rome, in the great road to Naples. It is the ſee of a biſhop, and has twenty-four churches and convents. The only palace in this city belongs to prince Lancelotti, and is a magnificent ſtructure. The great ſtair-caſe is built with white marble, and is ſo magnificent and well contrived, that it paſſes for the fineſt in all Italy. In the apartments are a great number of fine ſtatues, buſtos, baſſo relievos, and paintings. The moſt remarkable among the firſt are, a Venus with a Cupid. The proſpect from the gardens is extremely beautiful, and they are ornamented with fine pieces of ſculpture.

In the market-place, near the palace, is a ſuperb bronze ſtatue of Urban VIII. who is repreſented in his pontifical habit pronouncing the benediction. It was deſigned by Bernini, and ſtands on a marble pedeſtal.

The laſt place we ſhall mention in the Campania is Albano, the antient Alba Longa, a well-built town, much celebrated for its antiquities, and ſerving as a ſummer receſs for the Roman nobility. It is one of the ſix biſhoprics conferred on the oldeſt cardinals. At the diſtance of a mile from it ſtands Caſtello Gandolfo, the favourite reſidence of pope Clement XI.

CHAP. XXV.

The Lower Part of ITALY, containing the Dominions of the King of the TWO SICILIES.

SECT. I.

Of the Kingdom of NAPLES.

Its Situation, Extent, Climate, and Produce; with a particular Deſcription of Mount Veſuvius, and of the moſt remarkable Animals of that Kingdom; among which is given a circumſtantial Account of the Tarantula.

THE kingdom of Naples is bounded on the north-eaſt by the Eccleſiaſtical State; but on all other parts by the Mediterranean and Adriatic. Its extent from the ſouth-eaſt to the north-weſt is two hundred and eighty miles, and from the north-eaſt to the ſouth-weſt from ninety-ſix to a hundred and twenty miles.

This country is extremely hot, which ſubjects foreigners, unleſs they take great care of themſelves, to a ſickly habit of body; and particularly they muſt forbear travelling in July, Auguſt, and September. In the lower part of the kingdom little of winter is felt, and in the plains it is very extraordinary to ſee ice or even ſnow. The ſnow that ſometimes falls in the mouhtains is gathered, and kept for cooling liquors in ſummer inſtead of ice. Even ſo early as April, the heat of the ſun is very great; but the nights are cold.

The fertility of the ſoil is very extraordinary, it producing an exuberance of all kinds of grain, the fineſt fruits and culinary vegetables, which may be raiſed any time of the year. Their oil, wines, rice, and flax, are equal to the fineſt of other countries.

Calabria affords great quantities of manna, and both there and in other parts of the kingdom ſaffron grows, and is eſteemed as good as that brought from the Eaſt. Here are alſo allum, vitriol, ſulphur, rock-cryſtal, quarries of marble, and a variety of minerals. The Neapolitan horſes are much eſteemed. The wool of the ſheep is fine and good, and great quantities of ſilk are exported.

Of the filaments, or a kind of hair or wool, of an olive green, growing on ſome ſhell-fiſh, are made waiſt-coats, caps, ſtockings, and gloves, much warmer than wool; and though not ſo fine and ſoft as ſilk, yet always retain a peculiar gloſs. Theſe ſhell-fiſh are alſo to be met with at Malta, Sardinia, Corſica, and in the gulph of Venice. Among the natural curioſities of this country the Phrygian ſtone may be claſſed. It has neither the hardneſs of ſtone, nor the properties of earth, but conſiſts of an indurated mixture of earth, rotten beech wood, and fibres of ſeveral plants. From this ſtone, laid in a ſhady and damp place, grow in a few days, according to its bigneſs, muſhrooms, each often weighing twenty pounds. The ſeed lies in the ſubſtance of the ſtone, and is diſtinguiſhable only by a good microſcope. The growth of the muſhrooms is greatly forwarded by pouring warm water on the ſtone. Some other natural ſingularities will be taken notice of in the deſcription of the ſeveral parts of this kingdom.

The Appennine mountains extend the whole length of the country, and terminate at the Streights of Sicily. Mount Veſuvius, ſo famous for its fiery eruptions, lies five Italian miles from the city of Naples, but ſeparate from the Appennine mountains.

The declivity towards the ſea is every where planted with vines and fruit-trees, and is equally fertile towards the bottom. The circumjacent plain affords a delightful proſpect, and the air is clear and wholeſome. The wine produced on this ſide and the lower part is of three ſorts, all very delicious. Two of them, which ſeem moſt in requeſt, are the Vino Greco, a yellow muſcadine, and a red wine impiouſly called *lachrymæ Chriſti*, or the tears of Chriſt. Of the latter, the little that is produced is reſerved for the cellars of the king, who makes preſents of it, though indeed a great deal of wine is diſpoſed of as the genuine lachrymæ.

The ſouth and weſt ſides of the mountain form a very different view, being, like the top, covered with black cinders and ſtones. Mount Veſuvius, or Veſuvio, as it is called by the Neapolitans, like Parnaſſus, conſiſts properly of two ſummits, though at preſent only that on the right hand as you come from Naples emits fire and ſmoke. The valley between theſe hills is about a mile long, and extremely fertile. The height of the burning ſummit is computed to be eleven hundred fathoms above the ſurface of the ſea. From Reſina, a village within three miles of the city of Naples, the acclivity of the mountain increaſes, yet one may ſtill ride on horſeback. Here are ſeveral large ſtones half calcined, ſcattered in different places, and left as memorials of former devaſtations; the greateſt part being uſed by the peaſants living on the mountains for incloſing their vineyards. It is aſtoniſhing to think of the impetuoſity by which huge maſſes of four or five hundred weight have been thrown to the diſtance of ſeveral Italian miles.

At laſt the ſteepneſs of the aſcent, eſpecially as it is all over covered with aſhes and cinders, will not admit of riding, when the horſes are left to be taken care of by the ſervants, and it is adviſeable for the traveller here to change his boots for ſhoes. Hereabouts, ſays Mr. Keyſler, (one of the lateſt authors who has given an account of this mountain, which he aſcended in 1730) a hermit has built a mean dwelling; and ſuch is his fortitude, that Veſuvius muſt rage with uncommon vehemence before he removes his quarters. As travellers are apt to be fatigued with climbing up this uncommon aſcent, he ſtands ready with ſome wine to refreſh them at their return; and as the rules of his order do not prohibit his touching money, he thankfully receives any little acknowledgment made for his ſeaſonable civility.

At this hermitage the attendance of the peaſants, who follow travellers from the neighbouring villages, become neceſſary; but as they are apt to quarrel with one another, and are even trained to rob and murder, a traveller ſhould always carry fire-arms with him. All they do is to go before with leathern belts round their waiſts, by which travellers hold, that they may climb with the greater eaſe; and if the two peaſants that go before every traveller are not ſufficient, others help by ſhoving him behind. Theſe men, who are at beſt very troubleſome by their exactions and their numbers, ſtile themſelves Ciceroni, the proper title of learned antiquarian, who ſhew and explain to foreigners the antiquities and curioſities of the country.

The aſhes giving way cauſes a man to ſlide ſeveral ſteps downwards; and in places free from the aſhes, the ruggedneſs of the melted matter puts you to no leſs trouble: for from this volcano too often iſſues a lava or mixed floods of melted ſulphur and metallic ore, to the inexpreſſible damage of the neighbouring country. The ſcoria of this ejected matter ſtill lies ſtratum upon ſtratum, with large ſtones projecting from them, which, in their courſe along the ſulphureous ſtream, were ſtopped by their inequalities, and fixed as the melted matter gradually hardened. By chemical experiments it appears, that the ſtones ejected by Veſuvius contain ſulphur, vitriol, allum, antimony, marcaſite, arſenic, and iron; ſmall quantities of gold, ſilver, copper, tin, lead, and other minerals, have alſo been extracted from them; whence the difference to be found in the colour and ſubſtance of the ſcoriæ are not at all ſurpriſing.

" Near the ſummit of the mountain, ſays Mr. Keyſler, " we met with ſtones at leaſt of a hundred weight

" glowing

" glowing hot, and, when broken, exactly reſembling " red hot iron; and, if our guides may be relied on, " they had been but juſt ejected from the abyſs. As " we ſtill advanced, our ears were frequently aſſaulted " with a horrid noiſe, like that of the exploſion of a whole " battery of cannon; and under our feet we had a con- " tinual noiſe, not unlike the boiling of a large cauldron. " Upon making a hole with a ſtick in the aſhes but a " few inches deep, a heat was immediately felt, which " in ſome places was hotter than our hands could bear, and " we perceived the ſmoke to iſſue out, as it were, in " ſeveral places through ſmall fiſſures.

" At length, after many weary ſteps, we came to the " place where formerly the largeſt mouth of the moun- " tain was; but this has undergone ſuch changes, by " the frequent eruptions, that at preſent it is not only " choaked up, but covered by a round hill of aſhes and " cinders. In Addiſon's and Miſſon's time there was a " plain of near three hundred paces to croſs before they " came to the ſkirts of this round hill, or new mountain; " but ſuch great eruptions have ſo enlarged the circum- " ference of the hill, that here is in moſt places no " more than a kind of trench ſeven or eight feet deep, " and about thirty paces wide. The lower, or old " mountain, is of ſuch a height, that at the foot of it " the trench is not perceived from the bottom. Here " we felt a very ſenſible increaſe of heat; and eſpecially " at every exploſion of the mountain, which made the " aſhes fly againſt our faces, ſo that ſome of the company " were obliged to cover their eyes. The ground alſo " was almoſt inſupportably hot under our feet; for the " embers, or ſlag, burnt the very ſoles of our ſhoes. " Here indeed we were not terrified with the horrid " noiſes we had heard below; but every diſcharge was at- " tended with a whizzing like that of a great number " of rockets flying up at once; the multitude of ſtones " and other matter ejected, together with the clouds of " ſmoak with which the ſky is totally obſcured, reſembling " the ſpringing of a mine. Moſt of the ſtones, eſpe- " cially the largeſt, returned perpendicularly into the abyſs " from whence they were thrown up. Great quanti- " ties, however, fall on the ſides of the hill, and the noiſe " they make in rolling down is indeed ſomewhat terri- " ble. As the wind generally drives the aſhes, ſmoke, " &c. one way, it gives the ſpectator an opportunity of " chooſing the moſt favourable ſtation; yet if the erup- " tions happen to be violent, there is danger of approach- " ing on any ſide. It being a bright day, we could " perceive no flame at the mouth of the hill; and the " great increaſe of the heat felt at every diſcharge, might " proceed from the melted matter and ignited ſtones " thrown into the air, which in the night appear like " red-hot bullets: but the phœnomena exhibited by " volcanos are not conſtantly alike.

" We had ſtill about eight hundred paces to aſcend " among hot ſtones and aſhes; but the eruptions fol- " lowed ſo thick upon one another, that before we could " have reached the ſummit, we muſt have ſtood at leaſt " eight ſhocks more; and as the danger every minute " became manifeſtly greater, and our faint-hearted guides " grew exceſſively out of humour, we all agreed to re- " turn."

Mr. Addiſon aſcended to the top when there were no eruptions, and thus deſcribes the inward cavity, as it then appeared. Having, with much difficulty, conquered the laſt hill, he and his companions ſaw in the midſt of it the mouth of Veſuvius, which went ſhelving down on all ſides, till it reached above a hundred yards deep; the mouth itſelf ſeeming perfectly round, and about three or four hundred yards in diameter. This vaſt hollow was generally filled with ſmoke, but having the advantage of the wind, they had a very diſtinct ſight of it. The ſides ſeemed all over ſtained with mixtures of red, green, yellow, and white, with ſeveral rocks projecting out of them, like pure brimſtone. The bottom was entirely covered, and, though they looked very narrowly, they could ſee nothing like a hole in it, the ſmoak in many places breaking through ſeveral imperceptible cracks. In the late eruptions, this gentleman informs us, this vaſt hollow was like a prodigious cauldron filled with melted and glowing matter, which, on its boiling over in any part, ran down the ſides of the mountain, forming five rivers of liquid fire; and adds, as the heat ſlackened, this matter muſt have ſubſided within the bowels of the mountain, and ſinking very leiſurely, had time to cake together, and form the bottom which covers the mouth of that dreadful vault that lies underneath it. The whole mountain, ſhaped like a ſugar-loaf, has been formed at ſeveral times with a prodigious quantity of earth and cinders, that have been thrown up out of the mouth that lies in the middle of it, and increaſes in bulk at every eruption, the aſhes falling down its ſides like the ſand in an hour-glaſs; ſo that in length of time it will cover the whole plain, and make one mountain with that on the top of which it is placed.

Though mount Veſuvius, ſays Mr. Keyſler, often fills the neighbouring country with terror, yet as few things in nature are ſo abſolutely noxious as not to produce ſome good; even this raging volcano, by its ſulphureous and nitrous manure, and the heat of its ſubterraneous fires, contributes not a little to the uncommon fertility of the country about it, and the profuſion of fruit, herbage, &c. with which it is every where covered. Thoſe are obſerved to be the moſt fertile ſpots which abound in ſulphur, ſalt-petre, &c. and if ſuch igneous and inflammable ſubſtances were pent up, their fermentation and ebullition would be productive of the moſt calamitous effects; whereas they find a vent through theſe volcanos. Experience ſhews, that earthquakes, after any continued eruptions of Veſuvius, are neither ſo frequent, nor produce ſuch fatal effects, as at other times. Hence the inhabitants are far from being alarmed at this mountain's vernal eruptions, when they are not violent; and the air is ſo far from being rendered unhealthful by them, that Barra, a village at the foot of Veſuvius, near the ſea, is remarkable for its healthfulneſs.

In the ſea near the foot of the mountain, is ſometimes found petroleum, a very fragrant oil, which is ſold at a very high price, and makes a rich perfume. During the time that it riſes, the ſurface of the ſea is for a little ſpace covered with its bubbles, which they ſkim off into their boats, and afterwards ſet a ſeparating in pots and jars; but its ſources are ſaid never to run but when the weather is warm and calm. Perhaps they may be hindered from diſcovering them by the agitations of the water.

Notwithſtanding the advantages ariſing from theſe vents given to the inflammable matter contained in the bowels of the earth, earthquakes have been of no ſmall detriment to this kingdom, and are chiefly felt in the lower parts, where are ſeen the ruins of many celebrated cities, of which now ſcarce the name is preſerved.

Another inconvenience, but common to all Italy, is the ſwarms of lizards, eſpecially of the green kind. In ſpring hundreds of theſe little animals are ſeen baſking on the flat roofs, and as they crawl up and down the walls, if a window or door be left open, they make their way into the houſes. The green lizards, which are very nimble, have very beautiful eyes, a fine gloſſy ſkin, and are quite harmleſs. About Fondi, Capua, and Gaeta, there is a noxious ſpecies of lizards, improperly called Tarantula, whoſe bite is attended with danger: theſe are brown, larger than the green ſort, and, when the tail is cut off, reſemble a toad.

The ſcorpion, which is a much greater nuiſance, not only harbours in old buildings, and under large ſtones, but infeſts the houſes in this country; ſo that it is not unuſual in ſome places to make the bedſteads of poliſhed iron, and to place them at ſome diſtance from the walls, to prevent their getting into the beds. It is true, they ſeldom hurt, unleſs they are firſt aſſaulted, or accidentally injured, which may be eaſily done by a man's turning himſelf, or moving a leg or an arm in a bed where theſe noxious animals harbour. The ſureſt remedy againſt the ſting of a ſcorpion is to bruiſe that animal, and bind it faſt on the wound. In the northern parts of Italy this creature has little or nothing of that rage and venom which appear in thoſe of hotter climates. Scorpions yield a ſalt and oil, which are a part of the materia medica. They are caught in great numbers among ruins, or in ſtoney places, and being taken hold of with a pair of pincers, are dropped in narrow-necked glaſs veſſels, which are too ſlippery for them to climb out.

Another plague almoſt peculiar to the kingdom of Naples, eſpecially the ſouthern parts, is the tarantula, a kind of ſpider, ſo called from the city of Tarento, in the neighbourhood of which they abound, and are the largeſt and moſt venomous. The perſons bit by this inſect are called by the Italians Tarantolati. Few of ſuch unhappy perſons can bear the ſight of black or blue; but ſeem delighted with red and green objects. They are alſo ſeized with an averſion to eating fruit or vegetables. A melancholy ſilence and a fixed eye are the firſt ſymptoms by which the bite of the tarantula diſcovers itſelf, and then muſic is immediately called in to rouſe the patient to a violent motion, and by that means to promote perſpiration, and a copious ſweat. But neither the ſame tunes nor the ſame inſtruments anſwer this end with regard to different patients; ſeveral trials are therefore made, and chiefly with the guitar, hautboy, trumpet, violin, and Sicilian kettle-drum.

In ſome parts of the kingdom of Naples, particularly in Apulia, the venom of the ſcorpions is ſo ſubtile, that their ſting produces the like effects as the bite of the tarantula; and though the ſame tunes have a proper effect on theſe patients alſo, yet they require ſofter inſtruments, as the flute, &c. accompanied by a briſk beat of the drum. The country people, who are more or leſs ſkilled in all theſe inſtruments, enforce the operation of their muſic with grimaces and odd geſticulations. The Tarantolati, on their ſide, vigorouſly exert themſelves, regulating their motions according to the muſic, till the venom is quite expelled; this exerciſe and cure ſometimes takes up five or ſix days; not that they are kept continually dancing all that time, but when nature ſeems to be exhauſted, the muſic is ſuſpended, and the patient put to bed well covered, and a ſudorific cordial given him to promote perſpiration. It is remarkable that the patient on his recovery remembers nothing of what paſſed during his diſorder, and that if the cure be not perfectly effected, and the poiſon entirely expelled, the ſame ſymptoms return the ſucceeding year, eſpecially during the ſummer heats; and ſome have laboured under this terrible diſorder, at intervals, for ten, twenty, or thirty years.

The bite of a tarantula at firſt occaſions only a ſmall red tumour, like that occaſioned by the ſting of a waſp, and there are above eight ſpecies of them differing in ſize, colour, and form, but producing the ſame miſchievous effects by their venom. The tarantula is moſt dangerous in the dog days, and during the violent heats, eſpecially on the plains, as if they were incited to greater rage by the ſun: for thoſe of Tuſcany never occaſion ſuch deplorable diſorders as the malignant kind found in Apulia; and even in theſe, when carried to the northern parts of the kingdom of Naples, or to Rome, the venom is rendered leſs noxious, ſo that their bite is attended only with a ſlight tranſitory pain.

The tarantula's chief haunts are holes in the earth, old walls, and hollow trees, and the cobweb it makes is ſtronger and coarſer than that of a common ſpider. The poiſon is contained in two ſmall veſicules within the gums, near two fangs, with which they are armed, beſides leſſer teeth.

SECT. II.

The Manners and Cuſtoms of the Neapolitans; their public Entertainments; the State of Religion; with an Account of the Proceſſion of the penitent Proſtitutes. The Form of Government and Hiſtory of the Country. Its Army; an Account of the Order of St. Januarius, and its Forces.

IT has been ſaid by ſome authors, that the worſt creatures in this delightful country are the inhabitants themſelves, who, beſides their unnatural luſts, are of a vindictive, treacherous, and bloody diſpoſition. National reflections, indeed, generally imply ignorance, narrowneſs of ſoul, and want of charity; but it muſt be confeſſed that the hiſtory of Naples abounds in inſtances which diſgrace human nature. Mr. Keyſler obſerves, that when he was there, Tophana, the noted female poiſoner, who firſt invented the *aqua Tophania*, was ſtill living in priſon, and that few foreigners left Naples without ſeeing that infernal monſter. She is a little old woman, ſays he, who had entered into a kind of religious ſiſterhood, and on this account, if not a worſe, her life has hitherto been ſpared. She is ſaid to have poiſoned ſome hundreds of people, and was remarkably liberal of her drops, which ſhe gave by way of alms to wives, who, from ſeveral intimations, ſhe knew would not be inconſolable for the death of their huſbands. Five or ſix drops of this liquid, it ſeems, anſwer the horrid purpoſe, and may be lowered or tempered ſo as to take effect in any determinate time. This water even ſtill continues to be privately made at Naples.

The inhabitants of this kingdom have always been remarkable for their voluptuouſneſs, and in no city in Europe are proſtitutes ſo numerous or ſo abandoned: theſe are ſaid to amount to eighteen thouſand in the city of Naples, and in one particular part of it, is a receptacle for two thouſand of them; and yet it is no uncommon thing for even eccleſiaſtics to lodge in thoſe infamous parts of the town. This has an unhappy effect, and the clergy being exempt from the civil juriſdiction, and connived at by their ſuperiors, ſet the worſt examples; and any complaints againſt them from laymen are conſidered as the height of inſolence.

Great numbers of the peaſants are ſo ſlothful, as to prefer begging and robbing to labour and induſtry; but in the city of Naples there are ſeveral flouriſhing manufactures, and ſomething of a ſpirit of induſtry.

Among their public entertainments one of the moſt extraordinary is the proceſſion with four triumphal cars, on the four Sundays immediately preceding Lent; the firſt with bread, the ſecond with fleſh, the third with vegetables, and the fourth with fiſh. Theſe proviſions are piled up very high, with muſicians placed at the top, and guarded by armed men, till they are given up to be pillaged by the populace. But that which draws the greateſt concourſe to Naples is the caſtle built according to the rules of fortification, and faced all over with pieces of beef, bacon, hams, geeſe, turkeys, and other proviſions. This welcome ſpectacle is exhibited once a year, and on each ſide of the caſtle is a fountain running with wine during the whole day. A party of ſoldiers is poſted to reſtrain the ardour of the populace till the viceroy appears in his balcony, which is the ſignal for the aſſault.

It is uſual for the Neapolitan nobility to ſpend ſome years in a parſimonious retirement on their eſtates in the country, that they may cut a figure for a while in the city, by living in profuſe magnificence; thus they are generally running into extremes: their fortunes, however, are not very conſiderable, which is a natural conſequence of there being a great diſproportion in their number to the ſmall extent of the country; for there are in this kingdom a hundred and nineteen princes, a hundred and fifty-ſix dukes, a hundred and ſeventy-three marquiſes, forty-two counts, and four hundred and forty-five barons, all vaſſals of the crown; and as many ſpots of land that are not worth above fifty dollars a year, give the owners the title of marquis, they are conſequently very poor.

Religion, as we have already hinted, is on a very bad footing; and the beſt that can be ſaid of the eccleſiaſtical conſtitution is, that the Neapolitans have always reſolutely oppoſed the introducing of the inquiſition. The number of monaſteries and convents is aſtoniſhing, and the clergy are as remarkable for their wealth as the laity for their poverty. Such is the power and opulence to which the clergy have arrived, that they have more than once been ready to ſeize the civil power, and to arrogate to themſelves a deciſive authority in matters quite foreign to their paſtoral care, nor can they bear the leaſt controul or cenſure on this account. Some who are well acquainted with the ſtate of the kingdom affirm, that the clergy are poſſeſſed of near two-thirds of its whole produce, without the people's having any hopes of recovering the leaſt part, all alienations being prohibited by expreſs laws. The laity have often, in the ſtrongeſt manner, petitioned their ſovereigns, that the clergy might be no longer allowed to purchaſe lands and houſes; but all endeavours were fruitleſs, till at length, in 1751, meaſures were concerted, with the pope's conſent, for leſſening the number of convents.

The devotion of the Roman catholics is not here, however, ſo outrageous as in ſeveral parts of Germany. At the elevation of the hoſt in the churches, or when it is carried along the ſtreets, no traveller is compelled to kneel; and ſo little difficulty is made about ſtrangers eating fiſh and fowls in Lent, that the inn-keepers readily provide for them whatever they pleaſe. Since the government came into the hands of the Auſtrian line of the houſe of Hapſburg, the ſtatue of St. Nepomuk has been erected on ſeveral bridges; but croſſes are not very numerous in the ſtreets; nor public proceſſions, even in the capital itſelf, ſo frequent as in moſt other popiſh cities.

The moſt common proceſſion, which is exhibited almoſt every day, is leſs intended to excite devotion than to raiſe a fund for penitent proſtitutes, who have quitted their abandoned way of life for a convent. In order the more effectually to move the ſpectators to charity, the youngeſt and moſt beautiful of theſe penitents are ſelected, who walk bare-footed through the city two abreaſt: at particular places they kneel down, acknowledge their paſt wickedneſs, and ſing penitential hymns, while an eccleſiaſtic and a lay-aſſiſtant receive the contributions of the people in a purſe faſtened to the end of a ſtick. Their habit on theſe occaſions is a violet coloured gown, tied round the waiſt with a cord of the ſame colour. Their heads are ſhaved, and they wear a blue veil; but it is ſo thin as to afford a ſight of the charms of youth and beauty, which are found to be powerful incentives to a liberal contribution.

The Neapolitans are far from being deficient in their intellects; but, notwithſtanding all their ſchools, univerſities, and academies, their religion is a perpetual bar to the improvement and increaſe of ſolid literature.

The ſilk, woollen, and other manufactures, together with the improvement of the arts, owe their firſt eſtabliſhment to Ferdinand of Arragon, who patronized them in a very liberal manner. Theſe manufactures, joined to the produce of the country, are the ſource of their trade.

In this kingdom are only two ſtates, conſiſting of nobles and commons, the clergy not making a diſtinct claſs, but being intermingled with the other two: but in the city of Naples there are ſeveral noble and illuſtrious families which make no part of either of the two ſtates, but are in ſome ſenſe conſidered as foreigners. The general aſſembly of the ſtates is ſummoned every two years to meet at the capital, where the ſeſſions are held in the Minorite convent near St. Laurence's church, where their chief buſineſs is to deliberate on the cuſtomary free gift to the king, which has often amounted to upwards of one million five hundred thouſand crowns.

The provinces of which the kingdom of Naples conſiſts were formerly a part of the dominions of the Roman republic, and afterwards of the emperors. In the fifth century they were over-run by the Viſigoths, Oſtrogoths, and Herulians. Beliſarius, the general of Juſtinian, emperor of the Eaſt, took Sicily and the provinces of the preſent kingdom of Naples; but theſe provinces were ſoon again diſmembered, one part ſtill remaining under the Grecian emperors, and the Longobardi ſeizing on the other. At laſt the Saracens took Sicily, and frequently committed great ravages in Italy. After ſeveral revolutions it was conquered by the Normans, Conſtantia, the wife of the emperor Henry VI. the laſt of the legitimate deſcendants of Roger, the firſt king of the Norman race, dying in 1198, the ſucceſſion devolved on her ſon Frederic II. emperor of Germany; and thus the kingdom fell to the houſe of Swabia. On the death of his ſon Conrad IV. his natural ſon, Manfred, having made himſelf maſter of the kingdom, pope Urban IV. and afterwards Clement IV. being ſtrenuouſly bent on the expulſion of the houſe of Swabia, offered the kingdoms of Naples and Sicily to Charles of Anjou; and, to give the greater ſanction to the enterprize, crowned him king. Manfred loſt his life in an unſucceſsful battle, and Charles's ſeverity ſo alienated his ſubjects, that Conradine of Swabia, the ſon of Conrad IV. the only lawful heir to the kingdom, was invited to aſſert his claim to the hereditary dominions of his father; but this young prince being ſo unfortunate as to be taken priſoner, was beheaded; and thus Charles was ſecured on the throne. In 1277 this prince became king of Jeruſalem, but loſt Sicily; for the inhabitants, exaſperated by the inſolence and tyranny of the French, having a nobleman called John de Procida at their head, on Eaſter-day, 1312, when the bells chimed for veſpers, roſe and maſſacred all the Frenchmen in the iſland. Upon which Peter of Arragon was choſen king, and his deſcendants reigned over Sicily till the beginning of the fifteenth century, when it was again united to Naples. At length Ferdinand the Catholic, king of Spain, and Lewis XII. king of France, ſeized the kingdom; but Ferdinand maintaining that the entire kingdom belonged to himſelf, and making good his claim by force of arms, Naples continued to be governed by Spaniſh viceroys till the beginning of the preſent century. During the long and bloody war for the ſucceſſion, count Daun, in 1707, conquered this kingdom for Charles III. afterwards emperor, by the title of Charles VI. who in 1720 alſo acquired Sicily. In 1734 the Spaniards made themſelves maſters of both kingdoms for the infant Don Carlos; and in 1736 the emperor, by a formal inſtrument, ceded the kingdoms of Naples and Sicily to him and his heirs, and in default of iſſue to his younger brothers and ſiſters; but Don Carlos, on the death of his father, being placed on the throne of Spain, was ſucceeded by Ferdinand IV. his third ſon.

The arms of the kingdom of Naples are a field azure, interſperſed with lilies or, with a tournament collar of five lapets gules.

There is here an order of knighthood, which is that of St. Januarius, inſtituted by Don Carlos, in the year 1738. Its badge is the image of this ſaint, appendant to a watered carnation ribbon, paſſing from the right ſhoulder to the left ſide, and on the left breaſt of the coat a ſilver croſs. The principal offices under the government are the council of ſtate, to which belong the ſecretaries of ſtate, the king's privy-council, the treaſury, the Sicily council, the treaſury of Palermo, the council of war, &c.

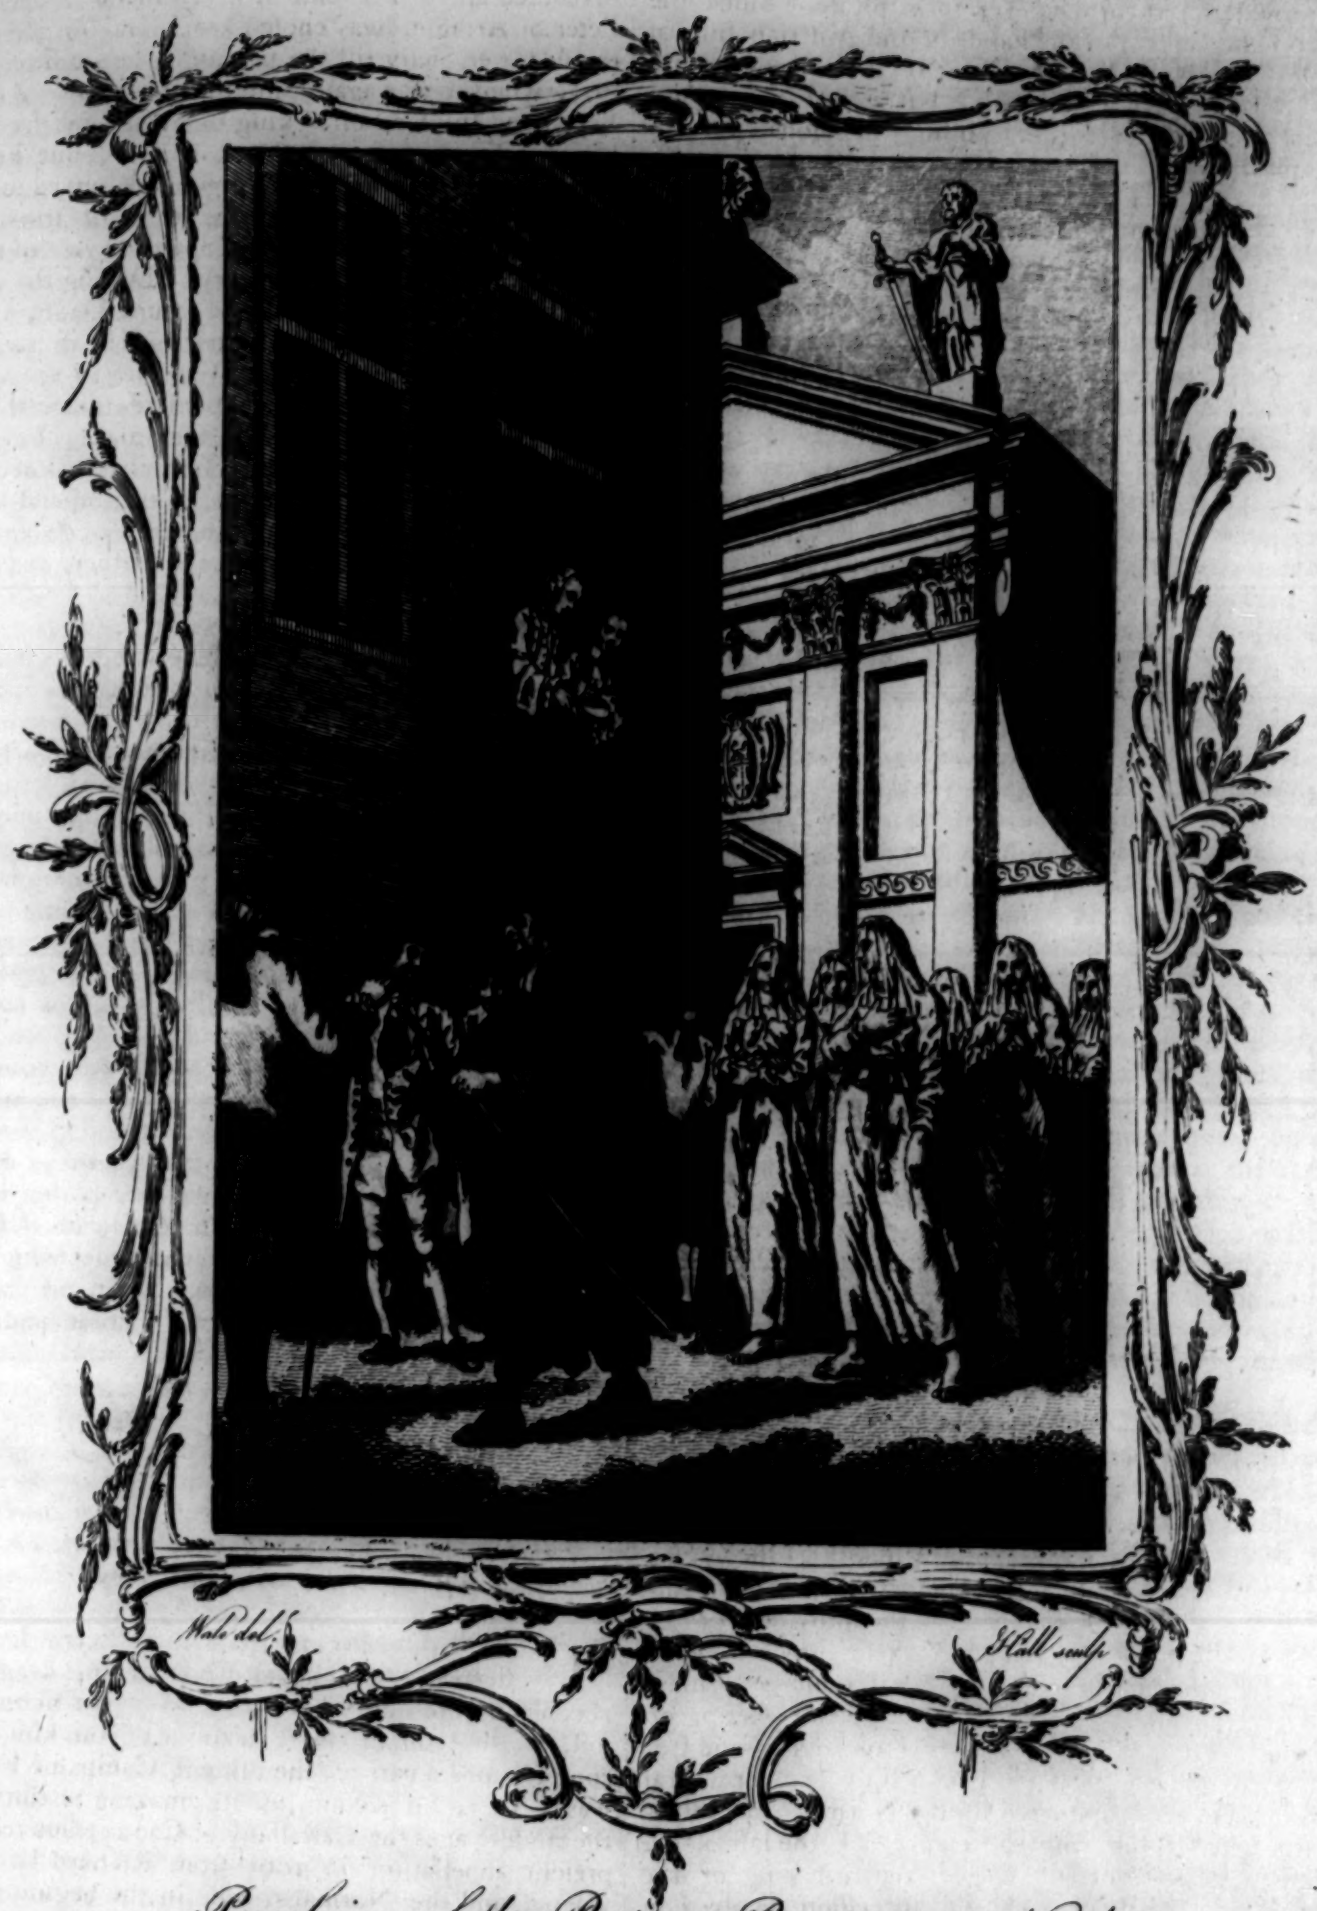
The ſtanding forces throughout the kingdom do not exceed thirty thouſand men, of which the Swiſs regiments are the beſt.

The kingdom of Naples is divided into twelve provinces: theſe are Terra di Lavora, the Hither Principality, the Farther Principality, the Baſilicate, Hither Calabria, Farther Calabria, and Apulia, under which laſt are included the territories of Otranto, Barri, the Capitinata, the Moliſe, and the provinces of Hither and Farther Abruzzo.

SECT. III.

Of the Province of Naples called Terra di Lavora, or the Territory of Lavora; its Situation, Extent, and Rivers; with a particular Deſcription of the City of Naples.

TERRA di Lavora, in Latin Terra Laboris, is eſteemed the principal diſtrict in this kingdom, on account of the number of its towns, the richneſs of its ſoil, and its containing the capital of the kingdom. It comprehends a part of the antient Campania Felix, and was ſo called on account of its amazing fertility, and in the middle ages the Caſtellany of Capua; but received its preſent appellation in 1091 from Richard II. prince of Capua, and the Normans, who in the beginning of the ſame year were driven by the Longobardian inhabitants out of the city of Capua, and inſtead of the principality of Capua uſed to term it Terra di Lavora, from the fitneſs of the ſoil for all manner of culture. Its coaſt extends along the Mediterranean about a hundred and twenty miles, including the windings and creeks, and it is about thirty-three in breadth, where broadeſt; but its greateſt length, from the Eccleſiaſtical State to the Hither Principality in a direct line, does not exceed ſeventy-four miles. It is bounded on the north by the Hither and Farther Abruzzo, on the eaſt by the county of Moliſe and the Farther Principality, on the ſouth by the Hither Principality and the gulph of Naples, and on the weſt by the Campania of Rome.



Procession of the Penitent Prostitutes at Naples.

The chief rivers which water this fine territory are the Cariglano, the antient Liris, the Saone, or Novigliano; the Voltorno, which receives the Sabato Calvi, and ſome others; the Clanio, or Patria, and the Sarno, or Scafati. The principal lakes are the Mare Morto, or Dead Sea, which is rather a gulph, the Averno, and the Collucia, the antient Acheruſius.

The city of Naples, in Italian Napoli, the antient Parthenope, afterwards Neapolis, the capital of the kingdom, is ſeated in the forty-firſt degree twenty one minutes north latitude, and in the fourteenth degree forty-five minutes eaſt longitude, ſtanding partly on a mountain, and partly towards the ſea. Its walls, which are moſtly faced with a hard black ſtone called piperno, are nine miles in circuit; but including the ſuburbs, the entire circumference cannot be leſs than eighteen or twenty Italian miles. Moſt of the ſtreets are admirably well paved wich free ſtone; but the fault is, they have no ſlope or gutters to carry off water. That of the greateſt length and breadth is called the Strada di Toledo, which is about twenty-three common paces broad; and, after running in a direct line fifteen hundred paces, it is continued ſome hundreds more in an eaſy curve. This ſtreet indeed has not one eminent palace; but though Naples has not ſuch magnificent ſtructures as are to be ſeen at Rome and Genoa, it has very few of thoſe mean buildings which in other cities diſgrace their fineſt ſtreets. The houſes in general are lofty and of ſtone, with paved flat roofs, ſurrounded with elegant baluſtrades: but the great number of ſtalls on which eatables are expoſed to ſale, and of balconies with lattice windows, are a great impediment to the ſtreets appearing to advantage; beſides, they are leſt deſtitute of the convenience and ornament of being illuminated at night, and few cities are more dangerous after it is dark.

The harbour is very ſpacious, and has a grand light-houſe, with a mole near five hundred paces in length, which ſeparates the main harbour from the baſon. The latter lies behind the Caſtello Nuovo, and has generally in it four gallies, the crews of which, both rowers and ſoldiers, are obliged every Lent to come to a formal confeſſion, and to receive the ſacrament. The devotions of the firſt galley are followed by a day of reſt, the ſecond by a like interval, and ſo on. In the evening, at the cloſe of the proceſſion uſual on ſuch ſolemnities, the hoſt is expoſed, and all the gallies give it a ſalute.

The great number of fountains are very elegant ornaments of the city, though in many of them the water is but indifferent. The fineſt of theſe fountains is that of Medina facing Caſtello Nuovo, or the New Caſtle: the upper baſon is ſupported by the three Graces, and on the top ſtands a ſuperb Neptune, attended by ſeveral other figures, all ejecting water, which make a very grand appearance. Several of the other fountains are of elegant architecture, adorned with good pieces of ſculpture. A very fine aqueduct ſupplies the city with a vaſt quantity of water from the foot of Mount Veſuvius, by means of which Alphonſus II. in 1442 made himſelf maſter of the city. The place where formerly was the greateſt reſervoir of theſe waters is at preſent known by the name of Seggio di Nido, or Nilo, where there is an antique ſtatue of the river Nile, repreſented under the figure of an old man ſitting on a crocodile, with boys playing about him.

The number of the inhabitants is at leaſt three hundred thouſand, and as the commerce of the city occaſions a great buſtle, Rome, in compariſon of this city, has by ſome travellers been looked upon as a kind of deſart. Here are ſwarms of princes, dukes, marquiſes, and other nobility, to whom are appointed five large ſquares, callled Capuana, Nido, Montagna, Porto, and Porta Nuovo. The commonalty have alſo their peculiar diſtrict. Each of theſe ſix diſtricts chooſes its deputies, who ſuperintend the police of the city, and hold a court for the examination of ſuch public concerns as fall under their cognizance. The nobility of the five piazzas, as they are called, alſo name their ſyndics, who, in the parliaments and other ſolemn aſſemblies, repreſent the city, and the whole kingdom.

Of all the palaces that of the king is the moſt auguſt, and of the neweſt architecture. It was the work of the famous Fontana. The great *perron*, which is divided into two flights of ſteps, is of white marble, eleven common paces in breadth, and has a magnificent appearance. At the foot of the ſteps on each ſide is the ſtatue of a river, that on the right repreſenting the Ebro, and that on the left the Tagus: but the eye of a connoiſſeur, on entering the palace on this ſide, muſt be offended at the diſproportionate narrowneſs of the court. In the audience-room are finely painted the moſt remarkable actions of the Spaniſh nation, among which is placed the expulſion of the Jews out of Spain. The Sala Regia, where the carnival entertainments are held, is hung with the pictures of all the viceroys at full length, and a particular gallery is taken up with the exploits of the duke of Alva. In another ſaloon is repreſented the war carried on by Charles V. with John Frederic, elector of Saxony. Indeed all the apartments abound in fine paintings and beautiful tapeſtry. In the palace chapel are ſurpriſing quantities of plate, and behind the altar ſtands a moſt admirable white marble ſtatue of the Virgin Mary.

The monaſteries and convents of both ſexes in this city are computed at a hundred and forty-nine; beſides which are thirty-four houſes for poor boys, girls, and women; eleven hoſpitals, five ſeminaries for eccleſiaſtics, four capital churches, thirty-two pariſh-churches, ſeventy other churches and chapels, and upwards of a hundred and thirty oratories or chapels of religious fraternities. Moſt of the churches are deficient in good paintings and a fine front, and their marble monuments are not of thoſe magnificent large dimenſions that ſtrike the eye with ſuch ſurprize, as the far greater part do in Rome; but every thing elſe, in beauty and richneſs, ſurpaſſes all of the kind in other Catholic countries, the value of the jewels and utenſils of the altars being alone eſtimated at ſeveral millions of dollars.

For the defence of the city, and at the ſame time to keep it in ſubjection, are five caſtles, which, according to the old method, conſiſt chiefly of very ſtrong walls. The Caſtello Nuovo has a communication by a covert-way with the king's palace, and one ſide is contiguous to the ſea. Its ſubterraneous works and mines are admirable. At its entrance ſtands a triumphal arch of very curious ſculpture. Near it is a braſs gate, decorated with fine baſſo relievos, repreſenting ſome of the atchievements of the kings of Arragon. The caſtle church is handſomely decorated with gilding and ſtucco-work, and a Pieta, in a room adjoining to it, is greatly admired. Facing the armoury, which it is ſaid can compleatly furniſh fifty thouſand men, ſtands a marble antique ſtatue of a young ſoldier, or, according to ſome, of the emperor Nero.

The Caſtello del Uovo, or Egg Caſtle, ſo called from its oval form, ſtands on a rock in the ſea, which is joined to the continent by a bridge two hundred and twenty paces in length: it is ſupplied with freſh water by means of a ſtone conduit, embelliſhed with a variety of marble figures of animals, and conveys the water from the city under the bridge to the caſtle, where are two reſervoirs.

The third check upon the city of Naples is the caſtle of St. Elmo, or St. Eramo, thus called from a church dedicated to that ſaint, which formerly ſtood on this ſpot. It is ſituated on an eminence towards the weſt, and is in the form of a ſtar with ſix rays. The ſubterraneous works are very ſpacious, and hewn out of the rock to ſuch a depth as to be bomb-proof, on which account a great quantity of military ſtores are kept here. This caſtle may be ſupplied with proviſions from Caſtello Nuovo, by means of a ſubterraneous communication. In the upper part of St. Elmo's caſtle are ſeven ciſterns for water, and under the vaults and mines is a reſervoir large enough for two galleys to ſail on. The water, which is always extremely cold, is drawn up by buckets. The two other caſtles are of little note.

The moſt remarkable houſes at Naples are thoſe of the prince di St. Agata, the dukes of Gravina and Mataloni, and a few others.

The moſt remarkable churches and convents in this city are the following:

The cathedral is dedicated to the Aſſumption of the Virgin Mary, and, though a Gothic ſtructure, is very fine. On the high altar is the Aſſumption of the Virgin Mary,

Mary, by Pietro Perugino, a painter, who was Raphael's maſter. Fronting the altar are two pillars of red jaſper, twelve feet high, without the pedeſtals, which are of verde antico. In the chapel under the high altar are ſome curious works in marble, as feſtoons, foliages, birds, children, and angels, which are by ſome attributed to Michael Angelo, who alſo cut the tranſparent alabaſter ſtatue of cardinal Oliverio Caraffa, the founder of this chapel, placed behind the altar. The pavement is inlaid with verde-antico, jaſper, gialło-antico, and porphyry. The remains of St. Januarius have been removed from the church dedicated to that ſaint, without the walls, to this ſubterraneous chapel. The late emperor offered at his ſhrine twelve ſilver eagles, in the heads of which are twelve lamps kept continually burning, and one hundred ſcudi a year are appointed for ſupplying them with oil.

The moſt remarkable chapel in this cathedral is that called il Teſoro, on the right hand on entering the church, the architecture of which is extremely beautiful. In it are the ſtatues of St. Peter and St. Paul finely executed by Finelli, and two pillars of black marble moſt beautifully ſpotted; the door is of braſs curiouſly wrought with feſtoons and foliages. The chapel is of a round figure, and contains ſeven altars of the fineſt marble, and forty-two pillars of broccatello. Twenty-one large bronze images of ſaints, each valued at four thouſand ſcudi, ſtand round the upper part of the wall, and under them are ſixty ſilver buſts of ſo many ſaints. The cupola was painted by Lanfranco, Domenichino, and Permegiano; but their work has ſuffered much by earthquakes that have damaged the cupola. Behind the high altar, which is detached from the wall, and entirely of red porphyry, is the ſhrine with ſilver doors, where they pretend to keep St. Januarius's head, with ſome of his blood, contained in two cryſtal phials, and ſaid to have been gathered by a woman at the time of his martyrdom. Beſides the three ſtated times in the year for expoſing theſe relics to the public view, the like is done with the deepeſt humiliations on account of famine, peſtilence, earthquakes, or any other public calamity, which is ſuppoſed to require the interpoſition of this ſaint. The pretended liquefaction of the coagulated blood in the phials, when placed near the head, is known to all the world. This farce is acted the firſt Sunday in May, and on the ſucceſs or failure of this miracle the proſperity or calamity of the ſucceeding year is ſuppoſed to depend. As the former occaſions great public rejoicings, ſo if the blood remains coagulated, recourſe is had to proceſſions, public flagellations, &c. to avert the impending danger.

That accurate naturaliſt and philoſopher Mr. Keyſler obſerves, that the ſubſtance in the phial is of a browniſh red, and looks like balſam of Peru, which may be very eaſily liquefied. On the day when this miracle is to be exhibited, the phial containing the ſuppoſed blood ſtands ſurrounded by a great number of lights: it is about three inches long, and is applied to the mouths and foreheads of an innumerable multitude of people who throng to partake of ſuch a bleſſing, the prieſt all the while turning it every way; ſo that by the continual agitation, the warmth of his hand, the heat from the lights, the effluvia from ſuch crowds, the ſultrineſs of the weather, &c. it is not unreaſonable to ſuppoſe a condenſed fluid may be gradually reſtored to its liquidity. At length the prieſt cries out, *Il miraculo è fatto*, "The miracle is per-"formed," which is immediately anſwered by a *Te Deum*, amidſt the acclamations of the people, and the diſcharge of cannon. This pretended miracle is not however peculiar to the blood of St. Januarius, for that of St. John the Baptiſt, St. Stephen, St. Pantaleon, St. Vitus, and St. Patricia, exhibit the like ſpectacle in other churches at Naples, where ſuch relics are kept, and generally on the days dedicated to thoſe ſaints.

In the area before the cathedral ſtands a fine marble obeliſk, on which is erected a braſs ſtatue of St. Januarius, with a Latin inſcription to the following purpoſe: "Erected by the city of Naples, out of gratitude to St. "Januarius, the ever propitious and powerful protector "of his native city and the whole kingdom." This obeliſk is annually illuminated on the nineteenth of September, with a ſplendor hardly to be conceived, while a numerous band of muſic play by it, and all the guns in the ſeveral forts are fired on the occaſion.

The church of the Holy Apoſtles is almoſt covered with gilding and painting; but it wants a beautiful front. Over the entrance is a piece of painting by Lanfranco, repreſenting the angel deſcending to ſtir the waters of Betheſda, and he alſo painted the roof. The cupola is likewiſe finely painted, and the tabernacle on the great altar is a moſt admirable piece, conſiſting of eight pillars, and other decorations of amethyſts, emeralds, lapis-lazuli, agates of ſeveral colours, a topaz of the ſize of a walnut, and other gems. On the altar piece is a fine painting of Chriſt's head, with a crown of thorns. The altar is of flowered marble, and the baluſtrade before it of red and white marble. The other chapels of this church are alſo exceeding beautiful.

In the convent belonging to this church are three galleries, one over another; but that on the ground-floor is by much the fineſt. The ſtair-caſe runs in a ſpiral line, and the ſteps are very low, for the convenience of aſſes carrying up corn to the granaries. The library is elegant, well furniſhed with books, and affords a delightful proſpect.

Near this convent is held a weekly meeting of the heads of a ſociety conſiſting of two hundred gentlemen of the law, to examine the private grievances of the poor; and in caſe any pauper is found to be oppreſſed, and can make good his complaint, a member of this ſociety is nominated to undertake his cauſe: but neither this member nor the ſociety are at any expence, the law charges being defrayed by the Theatine convent, which has large endowments for that particular purpoſe.

The Jeſuits college, as uſual, is one of the fineſt ſtructures in the city: the refectory, the library, the great ſtair-caſe, the diſpenſatory, and the church belonging to this college, will afford entertainment to a traveller of taſte. The cupola, which is admirably painted by Lanfranco, was damaged by an earthquake in 1688; ſo that the only remains of that eminent pencil are the Evangeliſts, the reſt being painted by Paolo de Mattheis, a Neapolitan. The altars are extremely rich, and in the treaſury, beſides ſeveral ſtatues and buſts, is St. Cyr, as big as the life, of ſilver, enriched with emeralds. The Jeſuits have alſo ſeveral other churches in this city.

St. Dominico Maggiore belongs to the Dominican monks, and contiguous to it is a convent, where there are generally a hundred and forty monks. This church was built by king Charles II. whoſe heart is kept here embalmed in a ſmall ivory urn. In the chapel of the Holy Crucifix is the crucifix, which, it is pretended, expreſſed its approbation of the writings of Thomas of Aquinas on the real preſence of the body and blood of Chriſt in the Sacrament, and on certain days this crucifix is annually expoſed to public view with great pomp; but at all other times it is not to be ſeen. In the Capella di Stigliano is an exquiſite image of the Virgin Mary, and in the chapel of St. Joſeph are two fine pictures by Guido. The veſtry is very lofty, and finely painted by Solimene. In the gallery are ſeven coffins, richly covered, in which are the remains of the kings and queens of Naples, and other great perſonages.

The church of St. Franciſco di Paola, which faces the viceroy's palace, is remarkable for a beautiful pavement, a roof finely carved and gilt, and ſeveral marble ornaments, eſpecially at the high altar. The tabernacle is embelliſhed with eight incomparable pillars, two of lapis-lazuli, and the other ſix of green jaſper. In the middle of this altar is an excellent piece of perſpective in enamel, and it is profuſely enriched with gems. The painting about the altar, and of the whole choir, is by Luca Giordeno. Among its relics are two ſmall phials, which they pretend are full of the Virgin Mary's milk, that reſembles white terræ ſigillatæ, but liquefies on the feſtivals of the Virgin. Among the ſilver ornaments in the chapel, contiguous to the diſpenſatory, is a ſtatue of St. Michael near three feet high, glittering with jewels, and valued at twelve thouſand ducats.

St. Maria Annunziata is one of the fineſt churches in Naples, for the eye every where meets with noble paintings, ſtatues, monuments, and baſſo relievos.

The

The hoſpital called la Caſa Santa, belonging to this church, was once the beſt endowed of any in the whole world, its annual income amounting, according to ſome, to a million of ſcudi, or about two hundred and fifty thouſand pounds ſterling. The children maintained here are generally about two thouſand five hundred in number. The boys are brought up to handicraft trades, and ſome even to the church. The girls, as they grow up, according to their capacities, or inclinations, do the work of the hoſpital, are employed in the inſtruction of the children, entered into a convent, or married, and had formerly a portion of one or two hundred ducats The young women married from this houſe, in caſe they are left widows in neceſſitous circumſtances, or forſaken by their huſbands; or if the marriage, without any fault of theirs, proves unfortunate, are entitled to be re-admitted, and have a particular apartment allowed them. The annual amount of the dowries to other women, with which this houſe is charged by ſeveral antient legacies and foundations, was at leaſt eighteen thouſand ducats; there being many noble families whoſe daughters at their marriage received two or three thouſand dollars from this hoſpital. The phyſicians, ſurgeons, apothecaries, ſervants, &c. ſtood the houſe annually in fourteen thouſand ducats.

To the Caſa Santa belong four other hoſpitals, one of which is at Puzzuolo, and another at Tritoli, where great numbers of patients are ſent every ſummer to the warm baths and ſudatories, and there provided with food, lodging, and neceſſary attendance.

This was the ſtate of the hoſpital at the beginning of the preſent century, when it proved bankrupt for above five million of ducats, on which account, till the debts are diſcharged, the revenue is aſſigned over to the creditors, allowing only forty-two thouſand ducats a year for the ſupport of the hoſpital, the church, and the convent. This has reduced the girls portions from two hundred ducats to fifty, and the other expences have ſuffered a proportional diminution.

In the church of St. Maria della Sanito, which belongs to the Dominicans, are thirteen ſmall cupolas over ſo many altars, all finely ornamented with paintings. The tabernacle on the high altar has eight pillars of rock cryſtal, each a foot high, cut out of a ſingle piece. It is alſo enriched with a great number of ſapphires, and other precious ſtones. The pulpit is an exquiſite inlaid work of marble and mother of pearl. In the veſtry are ſhewn a crucifix and ſeveral pyramids of cryſtal; fourteen ſilver candleſticks, each above ſix feet high; a very ſmall caſket in the form of an altar, on one ſide of which is the paſſion of Chriſt, of ſuch fine workmanſhip, that in the boſom of the Virgin Mary, which opens with two folding doors, the crucifixion of our Saviour is to be ſeen within the compaſs of a ſilver two-pence. In the caſket is alſo kept another repreſentation of the crucifixion, compoſed of emeralds and other gems. On the Oſtenſorium, where the conſecrated wafer lies, the ſun is finely repreſented, the radiancy of his beams being heightened by the blaze of diamonds, pearls, and rubies. The church and convent are built on an aſcent; ſo that a great part of the former, and even ſome pillars, are hewn out of the rock. The proſpect from thence towards the ſea and Mount Veſuvius is extremely beautiful, and before the refectory is an orangery in the open air, the trees of which are of an uncommon ſize.

The ſpacious convent of St. Martino is every where full of curious and magnificent pieces, and the church, though none of the largeſt, is a very fine one. The monks boaſt that under one priorate above five hundred thouſand ducats were beſtowed among them in ſilver plate, ſculptures, and pictures. The Nativity of Chriſt is a moſt exquiſite piece done by Guido: the four pictures of the Laſt Supper are by the hands of Eſpagnolet, Hannibal Caracci, Paul Veroneſe, and Maſſimo; beſides which, there are many other pieces of great value, and in particular the famous crucifix of Michael Angelo, done, as it is ſaid, to the life, after a peaſant, who for that purpoſe was murdered by the painter: it is of wood, and not above half a foot high. It is obſervable, that the head is upright, which does not look very like the poſture of an expiring perſon. The pavement of the cloyſter, which is a hundred paces ſquare, is of marble inlaid in boughs and ſuch like ornaments, and the four galleries are ſupported by ſixty pillars, each of one entire piece of the beſt white marble of Carrara. Every fryar has his own chamber, cloſet, library, and little garden; and the prior's lodgings are fit for the reception of a prince.

From this aſcent there is the moſt delightful proſpect that can be well conceived; for at one view may be ſeen the ſea and many iſlands, and particularly that of Caprea, and the famous ſeraglio of Tiberius; as likewiſe the whole city of Naples; with a great number of villages ſituated along the ſea-ſhore.

The univerſity of Naples was founded in 1224 by the emperor Frederic II. and the univerſity, or palace Degli Studii Publici, founded in the ſeventeenth century, by count Lemos, would, if it was finiſhed, be the fineſt ſcholaſtic ſtructure in Italy.

The ſuburb of Chiaia, or Spiaggia, lies along the ſea-ſhore, and is one of the pleaſanteſt parts in the city, and on that account ſome hundreds of coaches reſort thither in an evening.

We cannot take leave of Naples without mentioning the catacombs, which the vulgar imagine were the work of the primitive Chriſtians, and ſerved as retreats in time of perſecution; but this opinion is confuted by their being hewn out of the ſolid rock, and its being impoſſible to accompliſh them clandeſtinely and without immenſe charges, and conſequently they could never be the work of the Chriſtians while the Pagans had the ſuperiority. The galleries, or paſſages, are here loftier and wider than thoſe of Rome; they are generally arched, and ſo broad that ſix perſons may walk a-breaſt; and here is one particular vault of ſuch a height, that the roof cannot be diſcerned by the light of flambeaus carried into it. The catacombs muſt have been extremely loathſome if, as ſome have imagined, the dead bodies that lay in them were left to rot in open niches; but this was not the caſe. They were depoſited in cavities on both ſides of the vaults, four or five, one over another, and theſe cavities were cloſed up with a marble ſlab or tile cemented with mortar. St. Proculus's ſepulchre appears to have had a kind of Moſaic work on its covering, for at one end of it are ſeveral ſmall pieces of marble ranged together after that manner; and it is probable they were all adorned, according to the quality of the dead. It is indeed ſurprizing to find ſuch a multitude of niches unſtopped; but they were probably opened by thoſe who were in queſt of ſome ſuppoſed treaſure.

It is proper to mention among the curioſities of Naples, the manner of furniſhing that city with ſnow, which they there uſe inſtead of ice, becauſe they ſuppoſe it ſooner cools any liquor. There is a great quantity of it annually conſumed; for they drink very few liquors, and not even water without it: thus it is uſed by every body from the higheſt to the loweſt, ſo that a ſcarcity of ſnow would occaſion a mutiny, as much as a dearth of corn in any other country. To prevent this the king of Spain ſold the monopoly of it to certain perſons, who are obliged to furniſh the city with it all the year round at ſo much the pound. For this purpoſe they make uſe of an high mountain at about eighteen miles diſtance, in which they have ſeveral pits. There they employ many poor people at the proper ſeaſon of the year to roll in vaſt balls of ſnow, which they ram together and cover from the ſun-ſhine. Out of theſe reſervoirs of ſnow they cut ſeveral lumps, as they have occaſion for them, and ſend them on aſſes to the ſea-ſide, where they are carried off in boats, and diſtributed to ſeveral ſhops at a ſettled price, from which the whole city of Naples is ſupplied.

While the banditti continued their diſorders in this kingdom, they frequently put the ſnow-merchants under contribution, and threatened them, if they proved tardy in their payments, to deſtroy the magazines; which, it is ſaid, they might eaſily have done, by the infuſion of ſome barrels of oil.

SECT. III.

Of the natural and artificial Curioſities, and principal Places in the Terra di Lavora; particularly the Grotto of Pauſilipo, the Sudatories of St. Germano, the Grotto del Cani, the remarkable Valley of Solfatara, the Cities of Puzzuolo and Capua; with ſeveral remarkable Lakes, &c.

ON the road from the beautiful ſuburb of Chiaia is the grotto of Pauſilipo, which the common people of Naples believe to have been formed by magic, and that Virgil was the magician. To form a juſt idea of this place, ſays Addiſon, the reader muſt imagine a vaſt rock undermined, with a paſſage and highway through it, near as long and as broad as the mall in St. James's park. This ſubterraneous paſſage is much improved ſince Seneca gave ſo bad a character of it. The entrance at both ends is higher than the middle, and ſinks by degrees to throw in more light upon the reſt, each entrance being about eighty or a hundred feet high. Towards the middle are two large funnels, bored through the roof of the cavern, to let in light and freſh air. The bottom of it is paved with broad ſtones like the ſtreets of Naples, and is cleaned ſeveral times in a year, and then it is pretty free from duſt; but as it is a road extremely frequented, this convenience is of no long duration. As the breadth is between eighteen and twenty feet, there is ſufficient room for two carriages to avoid each other. Near the middle of it is an oratory hewn out of the rock, with a lamp continually burning in it. This is certainly a very antient work of art, yet there are no vaſt heaps of ſtones to be ſeen about the mountain, though the great quantities of them could not certainly be concealed, had they not been conſumed in the moles and buildings of Naples. This confirmed me, ſays Mr. Addiſon, in a conjecture which I made at the firſt ſight of this ſubterraneous paſſage, that it was originally not ſo much deſigned for a highway, as for a quarry of ſtone; but that the inhabitants finding a double advantage by it, hew'd it into the preſent form. The ſame deſign was perhaps the original of the Sybil's grotto, conſidering the prodigious multitude of palaces that ſtood in its neighbourhood. When I was at Chateaudun, in France, the ſame gentleman adds, I met with a very curious perſon, a member of one of the univerſities of Germany, who had ſtaid a day or two in the town longer than ordinary, to take the meaſures of ſeveral empty ſpaces cut in the ſides of a neighbouring mountain; ſome of them were ſupported with pillars formed out of the rock; ſome reſembled galleries; and ſome were not unlike amphitheatres. The gentleman had formed ſeveral ingenious hypotheſes relating to the uſe of theſe ſubterraneous apartments, and from thence made ſeveral obſervations on the magnificence and luxury of the antient Chateaudunois; but communicating his thoughts on this ſubject to one of the moſt learned perſons of the place, he was not a little ſurprized to hear, that theſe ſtupendous works were only ſo many quarries of free-ſtone wrought into different forms according as the veins of it directed the workmen.

On this mountain they ſhew a tomb of Virgil, though it is well known that this celebrated poet was buried on the other ſide of the city, towards Mount Pauſilipo, it being pleaſantly variegated with churches, convents, and vineyards that produce excellent wine.

On leaving the grotto of Pauſilipo, you turn off on the right hand into a very pleaſant road, which running between fine vineyards, leads to the lake of Agnano, which is almoſt a perfect circle about an Italian mile in circumference. At high water in ſome parts of it is ſeen a ſtrong ebullition. On approaching near it one is ſenſible of the motion of the water, which poſſibly proceeds from the aſcent of the effluvia. The tenches and eels in this lake have in winter a very good flavour; but in ſummer are not eatable, which is in ſome meaſure imputed to the great quantities of flax and hemp brought thither from all the neighbouring parts, and put in the water to be mellowed.

Near this lake ſtand the ſudatories of St. Germano, which conſiſt of ſeveral apartments built with ſtone, where the heat and ſulphureous vapours iſſuing from the earth ſoon cauſe a profuſe ſweat; in ſome places the wall is too hot for the hand to bear it, and yet the heat is ſupportable in the hotteſt room, eſpecially if you ſtoop towards the ground. The ſame obſervation is made on the baths of Tritoli. The patients are put into rooms of different degrees of heat, according to the nature of their complaint; and in the ſudatories of St. Germano, which are ſaid to be very efficacious in the gout, debilities, inward heats, &c. they never ſtay above a quarter of an hour at a time.

Within an hundred paces of theſe ſalubrious ſudatories, is a ſmall natural cavern known by the name of the Grotto del Cani, or the Dog's grotto, that animal being generally choſen to prove the ſurprizing effect of the vapour in this cavity. It is about twelve feet in length, five broad, and ſix high, and is famous for the poiſonous ſteams which riſe above its ſurface. The ſides of the grotto are marked with green as far as the vapour reaches. The common experiments are holding the dog with his noſe in the vapour, by which means he ſoon loſes all ſigns of life; but on his being carried into the open air, or thrown into a neighbouring lake, if he is not quite dead, he immediately recovers. A torch dipt into the vapour goes out in a moment, ſnuff and all; and within it a piſtol cannot take fire. Mr. Addiſon ſplit a reed and laid a train of gunpowder in the channel of it; then placing one end of the reed above the vapour, and the other at the bottom, found that the vapour could not intercept the train, nor hinder it from running to the very end; and, by repeating the experiment, ſo far diſſipated the vapour, that he could eaſily let off a piſtol in it. A viper being put in it bore the vapour nine minutes, and the ſecond time ten; but on its being brought out after the firſt trial, it took ſuch a vaſt quantity of air into its lungs, that it ſwelled nearly twice as big as before, and upon this extraordinary ſtock of air it perhaps lived a minute longer than before. Dr. Connor attributes the extinction of lights and the death of animals in this grotto to the great rarefaction of the air, cauſed by the heat and eruption of the ſteams. "The heat is, however, very "inconſiderable; but to ſatisfy myſelf, ſays Addiſon, I "placed a thin vial, well ſtopped with wax, within the "ſmoke of the vapour, which certainly would have "burſt in an air ſo rarefied as to kill a dog or quench "a torch; but nothing followed upon it. However, "to remove all farther doubt, I borrowed a weather-"glaſs, and fixed it in the grotto in ſuch a manner that "the ſtagnum was entirely covered with the vapour; "but after half an hour's ſtanding in it, I could not "perceive that the quick-ſilver ſunk. It is generally "ſuppoſed that this vapour is ſulphureous, but I could "ſee no reaſon for ſuch a ſuppoſition: upon my dipping "my hand into it, it left no ſmell upon it; and though "I put a whole bundle of lighted brimſtone matches "into the ſmoke, they all inſtantly went out, as if "immerſed in water. Whatever be the compoſition of "the vapour, let it have but one quality of being very "viſcous or gluey, and I believe it will mechanically "ſolve all theſe phænomena. Its unctuouſneſs will "render it heavy, and unfit for mounting, unleſs the "heat of the earth was much greater than it is, to ra-"rify and ſcatter it. It will be too thick and groſs to "keep the lungs in play for any time, ſo that animals "will die ſooner or later, in proportion as their blood "circulates ſlower or faſter. Fire is as ſoon extinguiſh-"ed in it as in water, from its wrapping itſelf in the "ſame manner about the flame, and hindering, by its "continuity, any quantity of air and nitre from ap-"proaching it; but as its ſparks are no leſs compact "than thoſe of liquors, they are not ſo tenacious as to "intercept the fire that has once caught a train of gun-"powder, on which account they may be quite broken "and diſperſed by repeating this experiment."

Solfatara is a little valley, which, together with the neighbouring mountains, is of a yellowiſh colour, with ſmoke iſſuing from ſeveral parts. Upon widening the holes from whence it proceeds, and digging to ſome depth, the

the heat ſoon becomes ſo exceſſive, that there is no approaching them. The ſtones that lie round ſuch openings are in a continual agitation, and upon throwing to the ground a handful of ſmall pieces of money, ſome are toſſed eight or ten feet high in the air. Even in ſome places the mere exhalations without ſmoke continually throw up the ſand, and keep it ſuſpended. Thus this valley may be deemed the miniature of Veſuvius; and though that mountain is upwards of eight miles diſtant, there appears to be a ſubterraneous communication between it and this valley, it being obſerved, the thicker the ſmoke is here, the more quiet Veſuvius is; and the more violent the eruptions of the latter, the leſs ſmoke is obſerved to proceed from Solfatara. The ground is almoſt every where hollow; for if a ſtone be thrown upon it, a long ſubterraneous echo enſues; but if a large ſtone be caſt into one of the holes that have been dug, the noiſe is almoſt as great as that of thunder. Here are prepared ſulphur, vitriol of a ſapphire colour, eſteemed better than that of Rome, and likewiſe alum to the greateſt perfection. The large leaden kettles uſed in this operation, are not heated by any fire of wood or coals, but only by the natural heat of holes in the ground over which they are placed. The people in general believe that theſe apertures are ſpiracles, if not of hell, at leaſt of purgatory; and it is pretended that ghoſts often appear in theſe parts, making dreadful lamentations; and theſe idle notions are very carefully promoted by the monks of a capuchin convent in the neighbourhood, to render the people more tractable.

The church of the above convent is built on the ſpot where St. Januarius is ſaid to have been beheaded; and there is always a great heat felt in the church, which is principally emitted from ſome holes near the high altar. A great quantity of ſalt-petre is to be ſeen on the walls of the veſtry. That the monks may be provided with cool and wholeſome water, their reſervoir ſtands upon a pillar incloſed with a wall, out of the reach of the warm and ſulphureous exhalations.

In the neighbourhood of this valley are a great number of ſubterranean paſſages that have a communication with each other, and ſeem to have been ſo many reſervoirs of water for the old city of Puteoli, which extended to this valley, as appears from an amphitheatre in this neighbourhood, that anciently ſtood in the midſt of that city.

Portici, a village near Veſuvius, and between ſeven and eight miles from Naples, where a royal palace was built by the preſent king of Spain, when king of the Two Sicilies, with a valuable muſeum of antiquities.

At a ſmall diſtance from Portici, anciently ſtood the city of Heraclia or Herculaneum, which in the reign of Nero was for the better part deſtroyed by an earthquake, and afterwards, in the firſt year of the reign of Titus, overwhelmed by a ſtream of the lava of Veſuvius. In the years 1689 and 1711, upon digging into theſe parts, ſomewhat of this unfortunate city was diſcovered; but ſince the year 1738, farther ſearches having been made at a conſiderable expence, ſtately buildings made their appearance, and from among the rubbiſh were taken a multiplicity of invaluable antiquities, as paintings, ſtatues, buſtoes, books, furniture, and various utenſils, and the ſearch is ſtill continued.

At the diſtance of eight miles from Naples is Puzzuolo, the ancient Puteoli, which in the time of the Romans was a conſiderable city, but at preſent is only a ſmall town on a bay, where the great quantity of beautiful ſtones and gems caſt up by the ſea, afford a ſufficient proof of its former ſplendor and magnificence. The greateſt part of theſe ſtones are of a blue or red caſt, and there are frequently found among them pieces of verde antico and porphyry, which ſeem to have been uſed in Moſaic work; likewiſe agate, cornelian, amethyſts, jaſper, onyx, beryl, and lapis-lazuli. The old city has been entirely deſtroyed by the ravages of war, inundations, and earthquakes.

The cathedral is built with large blocks of marble, and was converted from a pagan temple into a Chriſtian church, dedicated to St. Proculus and St. Januarius, whoſe ſtatues of marble ſtand in the middle of the church. At the entrance on the left hand is a beautiful altar of inlaid work, with a very coſtly tabernacle. On the high altar the beheading of St. Januarius is extremely well painted.

This city values itſelf on its having been honoured with the firſt Chriſtian community in Italy, St. Paul in his journey to Rome having found brethren there.

In the ſquare of Toledo is a fountain adorned with a fine ſtatue of St. Januarius, and an ancient Roman ſtatue of fine marble dug up without the city. The harbour of Puzzuolo is very commodious, and is formed by fourteen piers, or pilaſters, riſing above the ſurface of the water, which were anciently joined together by arches, and on the ſides of theſe pilaſters are vaſt ſtones with holes in them for faſtening ſhips, &c. Formerly there were twenty-five of theſe pilaſters; but ſome of them have been totally demoliſhed, and others do not riſe ſo high as the ſurface.

The ſea about this city abounds in fiſh, eſpecially of the teſtaceous kind. Here is a ſmall fiſh not quite an inch in length, called *cavallo marino*, or ſea-horſe, and is generally dried for keeping: the head very much reſembles that of a horſe. It is often bruiſed with vinegar and honey, and applied by way of plaſter to the part bitten by a mad dog, and the women eat them to procure a good breaſt of milk.

The Lucrine lake, famous among the Romans for its fine oyſters, and great abundance of other fiſh, lies near the ſhore, and at preſent is very ſmall, it having been for the moſt part dried up by a new mountain which roſe inſtantaneouſly in the night, between the nineteenth and twentieth of September 1538, during an earthquake which cauſed a terrible devaſtation in the neighbourhood. The ſubterraneous fire, after making a wide chaſm, ejected ſuch a quantity of ſtones, aſhes, ſulphur, and ſand, as within twenty-four hours formed this mountain; the perpendicular height of which is not leſs than four hundred rods, and the circumference three Italian miles.

The lake of Averno lies in a narrow valley, and is nearly of the ſame ſize as the lake of Agnano; but its water has not the quality aſcribed to it by Virgil, and other authors, who repreſent its poiſonous exhalations as almoſt inſtantaneouſly killing the birds that attempted to fly over it. At preſent fowls are obſerved not only to harbour about, but even to ſwim upon it; it is ſtocked with fiſh, and the land all round produces fine fruit and excellent wine: for Auguſtus having cauſed the woods about it to be cut down, the country became more healthy, and the lake was no longer formidable. This lake is in ſome places an hundred and eighty feet deep; and ſome old walls ſtanding near it, are ſuppoſed to be the remains of a temple of Apollo.

In the ſame valley is the entrance into the grotto of the ſibyl Cumana, which is hewn in the rock, and after one enters, ſtooping very low, is found to be about ten feet in breadth, twelve in height, and ſeveral hundred paces in length. The ſtory of a ſibyl's reſiding here is unqueſtionably fabulous.

The ſhore of the bay where anciently ſtood the city of Baia, was once covered with magnificent edifices, as appears from the ruins of the emperor Nero's palace at this place, and particularly by the remains of the warm baths at Tritoli, the reſervoirs of which are cut in a rock after a very ſurpriſing manner. The ſteam of the water is of ſuch intenſe heat, that no perſon can proceed beyond twenty paces into the paſſage leading to it. Theſe baths are at preſent uſed for the ſame diſorders as the ſudatory of St. Germano. At the foot of the hill are ſeveral other baths, and particularly one called St. George, in which the water is only luke-warm. On the ſhore are the remains of a palace of Julius Cæſar, and of the temples of Diana and Venus.

Caſerta is a ſmall town, the ſee of a biſhop, and the capital of a ſmall principality. Here is a royal palace which has been lately built, and is ſaid to have coſt an immenſe ſum.

Capua is now a ſmall town on the river Volturno, fifteen miles to the north eaſt of Naples; it has ſome inconſiderable fortifications, and ſeveral fine houſes and churches. The preſent town was built in the year 856, and in 869 was made the firſt archbiſhopric in the kingdom of Naples. The ancient celebrated city of Capua,

which

which vied in magnificence with Rome and Carthage, ſtood two Italian miles from the modern, and out of its ruins was built the market town of St. Maria, in the environs of which are ſtill ſeen the remains of palaces, temples, and other buildings, particularly a beautiful amphitheatre of free-ſtone. The neighbouring country produces great plenty of the fineſt fruits and wine.

There are ſeveral other ſmall cities and towns in the Terra di Lavora; but as they contain very little that is worthy the notice of the curious, we ſhall proceed to deſcribe ſome iſlands on the coaſt of that territory.

SECT. IV.

Of the Iſlands on the Coaſt of the Terra di Lavora, particularly Capræa, Niſida, Procita, and Iſchia.

IN deſcribing the iſlands on the coaſt of the country laſt deſcribed, we ſhall begin with Capri, the ancient Caprea, to which Auguſtus Cæſar often came for his health and recreation, and Tiberius made it a ſcene of the moſt infamous pleaſures. This iſland lies three Italian miles from that part of the main land that projects fartheſt into the ſea. It extends four miles in length from eaſt to weſt, and about one in breadth. The weſtern part is, for about two miles, a continued rock, vaſtly high and inacceſſible next the ſea; yet Ano Capri, the largeſt town of the iſland, is ſituated here; and in this part are ſeveral places covered with a very fruitful ſoil. The eaſtern end of the iſland alſo riſes up in precipices that are nearly as high, though not quite ſo long, as the weſtern. Between the rocky mountains at each end, is a ſlip of lower ground that runs acroſs the iſland, and is one of the pleaſanteſt ſpots imaginable; it is covered with myrtles, olives, almonds, oranges, figs, vineyards, and corn-fields, which look extremely freſh and beautiful, and afford a moſt delightful little landſcape, when viewed from the tops of the neighbouring mountains. Here is ſituated the town of Caprea, two or three convents, and the biſhop's palace. In the midſt of this fertile tract riſes a hill, which in the reign of Tiberius was probably covered with buildings, the remains of which are ſtill to be ſeen. But the moſt conſiderable ruins are thoſe at the very extremity of the eaſtern promontory, where there are ſtill ſome apartments that are very high and arched at the top: theſe appear to have been either bathing places, or reſervoirs of water. From this place there is a very noble proſpect; on one ſide of it the ſea extends farther than the eye can reach; juſt oppoſite is the green promontory of Sarentum, and on the other ſide the bay of Naples. What recommended this iſland to Tiberius was its wholeſome air, which is cool in ſummer and warm in winter, and its inacceſſible coaſts, which might be defended by a handful of men againſt a powerful army. The whole iſland was probably cut into ſeveral eaſy aſcents adorned with a variety of palaces, and planted with as great a number of groves and gardens as the ſituation of the place would allow; yet the works under ground were more extraordinary than thoſe on its ſurface; for the rocks are undermined with grottos, galleries, bagnios, and other ſubterraneous retirements, that ſuited the voluptuous life of the emperor.

It would appear ſurprizing that ſo few remains of thoſe many works of art are now to be ſeen, were we not informed, that after Tiberius's death, the Romans ſent thither an army of pioneers in order to deface the beauties of the iſland.

In ſailing round Caprea, ſays Mr. Addiſon, I was entertained with many rude proſpects of rocks and precipices, that in ſeveral places riſe half a mile in perpendicular height, and at the bottom are caves and grottos formed by the continual breaking of the waves upon them. In entering one, called by the inhabitants Grotto Oſcuro, after the light was a little worn off my eyes, I could diſtinctly ſee all the parts of it, by a glimmering reflection that played upon them from the ſurface of the water. The mouth is low and narrow, but after having entered pretty far in, the cavern opens on both ſides in an oval figure of a hundred yards from one extreme to the other. The roof is vaulted, and diſtils freſh water from every part, which fell as faſt as the firſt droppings of a ſhower. Thoſe of the inhabitants and Neapolitans who have heard of Tiberius's grottos, maintain that this was one of them; but many reaſons ſhew it to be natural, for beſides the little uſe of ſuch a dark cavern of ſalt waters, it has no marks of the chiſſel. The ſides are of a ſoft mouldering ſtone, and there are ſeen many of the like hollow ſpaces worn in the bottoms of the rocks, as they are more or leſs able to reſiſt the force of the water that beats againſt them.

The iſland of Niſida is ſeated at a ſmall diſtance from the main land, and is a kind of large garden laid out in beautiful ſlopes and terraces, adorned with a variety of plantations, riſing above each other. It is ſaid to bring its proprietor a yearly income of eight thouſand ducats. Towards the ſouth it has a ſmall harbour, called Porto Pavone, and on a neighbouring rock ſtands a lazaretto, where ſhips bound for Naples are obliged to perform quarantine.

The iſle of Procita, which belongs to the marquis of Vaſto, though not above ſix miles in circuit, has about four thouſand inhabitants, and produces abundance of good fruit and wine. A little town of the ſame name ſtands on its ſouth peak, and on the ſhore oppoſite the main land is a market town.

The iſland of Iſchia, which ſtands farther out into the ſea, at two miles diſtance from Procita, was by the ancient poets called Inarime. Theſe repreſent Typhœus as lying under it, on account of its fiery eruptions; but there have been none of theſe for near three hundred years: the laſt was very terrible, and deſtroyed a whole city; but at preſent there are ſcarce any marks of a ſubterraneous fire: there are indeed ſeveral cracks through which a ſmoke conſtantly iſſues; but it probably ariſes only from the warm ſprings that feed the many baths and dry ſudatories with which this iſland is plentifully ſtored; for about one of theſe breathing paſſages a number of myrtles flouriſh within the ſteam of the vapours, and have a continual moiſture hanging upon them. This iſland, including the projection of its ſmall promontories, is ten miles in circumference, and is very mountainous, but produces great ſtore of fruit, good wine, and game. The little town and caſtle of Iſchia, on the north end of the iſland, ſtands upon a very high rock, divided by the ſea from the iſland, but joined to it by a bridge. This iſland is the ſee of a biſhop.

SECT. V.

Of the other Provinces of Naples, called the Principato Citra and Ultra, or the Hither and Farther Principality, and the Baſilicata or Baſilicate; their Situation, Extent, and principal Cities.

THE province called the Principato Citra, or the Hither Principality, had its name from the following circumſtance: in the time of Arechis, duke of Benevento, this country, together with the Principato Ultra, formed only one principality; but Radalchis and Siconolf, having divided it between them, that part lying on this ſide the Appennine mountains received the name of the Hither Principality, and that on the other ſide the Farther Principality.

The Hither Principality is bounded on the north by the Farther Principality, and part of Campania Felix: on the ſouth and weſt by the Tuſcan ſea; and on the ſouth-eaſt by the Baſilicate; extending in its greateſt length from the north-weſt to the ſouth-eaſt about ſixty miles, and in its greateſt breadth from north to ſouth about thirty. The ſoil produces corn, wine, oil, and ſaffron, and they have a great deal of ſilk.

The principal towns in this province are the following.

Salerno, in Latin Salernum, the capital of the province, is ſituated near the ſea, in the fortieth degree forty-ſix minutes north latitude, and in the fifteenth degree twenty-ſix minutes longitude, and ſtands in a plain ſurrounded with fertile and delightful hills; it has a pretty good harbour, though it is little frequented, yet is fortified and defended by a caſtle. It became an archepiſcopal

copal ſee ſo early as the year 974. Its ſchool was formerly in great requeſt, on account of the Arabians or Saracens reſorting to it in great numbers, under the princes of the Longobardi, and from them the inhabitants learned philoſophy, and eſpecially the practice of phyſic, for which the Arabians were then highly celebrated. This ſchool was at laſt raiſed to an univerſity. Salerno has no buildings worth notice, except the cathedral, ſome convents, and the town-hall. The ſtreets, as in moſt ancient cities, are narrow and uneven; there are indeed but two principal ſtreets; theſe run parallel, and are croſſed on both ſides by all the others.

Scava, a ſmall but well inhabited city, is the ſee of a biſhop immediately ſubject to the pope, and is ſituated on the north-eaſt coaſt of the gulph of Salerno, about four miles from that city.

Amalfi is a ſmall city on the bay of Salerno, about twelve miles to the weſt of that city: it is an archiepiſcopal ſee, and is honoured with the title of a principality. It was built in the year 600, and was formerly a conſiderable and powerful place, it being the ſeat of a republic which maintained its freedom till the year 1075. It is pretended that the uſe of the mariner's compaſs was firſt diſcovered in this city by Flavius Blondus, about the year 1300.

There are a conſiderable number of ſmall towns in this diſtrict, moſt of which are the ſee of a biſhop, but are too inconſiderable to deſerve notice.

The Principato Ultra, or the Farther Principality, is ſeated in the middle of the Appennines, and is bounded on the north by the Moliſe and the Capitanata; on the eaſt by the Capitanata and the province of Barri; on the ſouth by the Hither Principality, and part of the Baſilicata; and on the weſt by the Terra di Lavora. Its extent from north to ſouth is about thirty miles, and from eaſt to weſt about forty-eight.

Benevento, the capital of the province, is a large and handſome city, and the ſee of an archbiſhop, ſituated in the forty-firſt degree fifteen minutes latitude, and in the fifteenth degree thirty minutes eaſt longitude; thirty-four miles to the north-eaſt of Naples, and fifteen from Capua. It has ſuffered greatly by earthquakes, particularly in 1688, when the archbiſhop, afterwards pope Benedict XIII. was dug out alive from among the ruins; but when he was advanced to the papal chair he rebuilt the city, which is at preſent ſubject to the pope, and is ſeated in a delightful and fertile valley near the confluence of the rivers Saboro and Calore.

There are in this principality a conſiderable number of ſmall cities, which have the honour of being the ſee of a biſhop, and many ſmall market towns.

The Baſilicata, or Baſilicate, is partly ſurrounded by the ridge of the Appennine mountains, which near Venoſa, in this province, is divided into two branches; both of which extend to the ſea. It formerly comprehended the largeſt and beſt part of the ancient Lucania, and though very mountainous, produces corn, wine, oil, ſaffron, cotton, honey, wax, and fruit. It is bounded on the north by the Capitanata; on the eaſt by the gulf of Tarento, and part of the territory of Barri; on the ſouth by Hither Calabria; and on the weſt by the two principalities juſt deſcribed.

The principal places in this province are,

Acerenza, the ancient Acherontia, a ſmall town with the title of a dukedom belonging to the houſe of Caraccioli, and was formerly an archiepiſcopal ſee, which was tranſlated to Matera, in the territory of Otranto. It is ſeated on the river Brandano, at the foot of the Appennines; but is a ſmall town poorly peopled, and daily running to decay, as are moſt of the cities in the Baſilicate.

SECT. VI.

Of the Provinces of Calabria, Citra and Ultra, or Hither and Farther Calabria: Their Situation, Produce, and principal Cities.

CALABRIA Citra, or Hither Calabria, was formerly called the Valley of Crate, and was eſteemed a part of Græcia Magna. Calabria in general received its name from the laſt Greek emperors, and is bounded on the north by the Baſilicate; on the eaſt by the gulph of Tarento, and the Ionian ſea; and on the ſouth and weſt by the Mediterranean.

This country produces abundance of fruit, corn, wine, oil, flax, hemp, ſugar, rice, ſaffron, honey, cotton, and ſilk.

As manna is chiefly produced in Calabria, it will be proper here to take notice of that excellent drug, which exſudes from a kind of aſh-tree very common in this country: for in the heat of ſummer it flows from it, in a white ſweetiſh juice or gum. There are three kinds of this Calabrian manna; one called *manna di corpo*, which is the fineſt, and is ſpontaneouſly diſcharged from the trunk and large branches of the tree, in the form of a cryſtalline liquor, which hardens into grains of different ſizes, and is carefully gathered the ſucceeding day. The ſecond ſpecies, called by the Italians *manna forzata*, or *forzatella*, is obtained by making inciſions in the bark in the month of Auguſt, after the natural diſcharges ceaſe. From theſe inciſions the manna flows copiouſly from noon till towards midnight, and is the next day expoſed to the ſun in order to be dried; but this ſort is leſs eſteemed, on account of its impurity and yellow colour. The third ſpecies, called *manna di Frondi*, iſſues ſpontaneouſly, like a kind of ſweat, from the leaves, on which the drops are indurated by the ſun into grains about the bigneſs of wheat; but this laſt ſort is not conſtantly gathered on account of the difficulty of ſeparating it from the leaves. That manna is reckoned beſt which is white and new, the dark coloured and brown being old and decayed.

This country is ſaid to have alſo mines of gold, ſilver, and iron; together with ſulphur, alabaſter, and rock cryſtal.

The principal cities of Hither Calabria are:

Conſenza, the antient Conſentia, the capital of the province, and the ſeat of the tribunals of juſtice. It is ſituated in the thirty-ninth degree twenty-five minutes latitude, and in the ſixteenth degree thirty-nine minutes longitude, on the river Grati, near the place where the Vaſento falls into it, and at the foot of a hill opening into a moſt delightful and ſpacious plain. It is the ſee of an archbiſhop, who has a conſiderable revenue, tho' he has only one ſuffragan, the biſhop of Martorano.

Roſſano, a ſmall city, with the title of a dukedom, a hundred and forty miles to the ſouth-eaſt of Naples, is ſituated on a hill almoſt entirely ſurrounded with high rocks, and upon a ſmall river that falls a little below it into the Salano: it is alſo the reſidence of an archbiſhop; but he has no biſhop under him.

Paola, or Paula, a well built little city at a ſmall diſtance from the ſea, ſtands thirty miles weſt by ſouth of Roſſano, and belongs to the houſe of Spinelli. The inhabitants boaſt of its being the birth-place of St. Francis, the founder of the order of Minims. Here are convents of Jeſuits, Auguſtines, Franciſcans, Capuchins, and Dominicans; but the convent of Minims of the order of St. Francis of Paola, is ſituated a mile from the city, and has a fine church. At a little diſtance from the town is the palace of prince Francavilla, ſituated between two hills. This province has alſo ſeveral other little cities and ſmall towns.

Calabria Ultra, or the Farther Calabria, antiently called Terra Jordana, is the fartheſt province of Italy, and is ſurrounded by the ſea, except where it joins to Hither Calabria. It has but few towns of any note; but the moſt conſiderable of them are the following:

Reggio, diſtinguiſhed by the appellation di Calabria, is a ſmall town ſituated oppoſite the iſland of Sicily. Tho' it is ſeated near the ſea, its port is only fit for very ſmall veſſels, which lie expoſed to all winds; and though it is an archiepiſcopal ſee, it is neither large, rich, nor well peopled. It has two convents, or colleges, one of Jeſuits and the other of Dominicans, and in both are taught humanity, philoſophy, and theology. The ſtreets are narrow, and the buildings mean and in the old taſte; but though the cathedral is ſmall, it is neat, and has a noble chapel, in which is a ſtately cupola, and is adorned with porphyry, different kinds of marble, ſculpture, and painting.

In this city is a ſingular kind of manufacture of what they call fiſh-wool. It is taken from a ſhell-fiſh that reſembles a large muſcle, but is hairy; and this hair, which is longer or ſhorter according to the largeneſs or age of the fiſh, being well ſoaked in freſh water and waſhed, is carded, ſpun, and knit into waiſtcoats, ſtockings, gloves, petticoats, caps, &c. and though lighter than cotton or ſilk, is ſo warm that the winds in the ſevereſt winters cannot penetrate through it. Such quantities of this work are fabricated here and in the neighbourhood, that it is bought very cheap; but when the traders carry it to the great cities of Italy, they raiſe the price to an extravagant degree.

Tropea, a city ſituated in a ſmall plain on the top of a high rock, that affords a fine proſpect of the fertile fields of Calabria, and on the other ſide of the ſea. It ſtands about thirty-nine miles to the north of Reggio, and the aſcent to the city is by a ſpacious ſtreet adorned with gardens before the houſes on each ſide, and being continued in the ſame line within the gates, divides the city into two parts. The reſt of the ſtreets are narrow, and the cathedral is a plain antient ſtructure; for the city has been an epiſcopal ſee under the archbiſhopric of Reggio, ever ſince the eighth century. At ſome diſtance without the city are ſeveral ſmall rocks, on which are built little forts.

SECT. VII.

Of that Diſtrict of Naples termed Apulia, including the three Provinces of the Capitanata, Barri, and Otranto: their Situation, Produce, and principal Cities; with a conciſe Account of the Iſlands ſituated on the Coaſt, and of the Provinces of Hither and Farther Abruzzo.

APUGLIA, or Apulia, includes the three territories of the Capitanata, Barri, and Otranto; but it is only in a more extended ſenſe that the firſt can be ſaid to belong to it. It is ſituated between the Appennine mountains, which bound it to the ſouth, and the Adriatic ſea, its northern boundary.

Apulia, eſpecially the two firſt territories included in it, being a level country, with few or no hills, is in ſuch want of ſprings and rivers, that the inhabitants have no other water for drinking than the rain ſaved in ciſterns, either in their houſes, or built at the public expence in the open market-places. The cattle drink alſo rain-water out of reſervoirs formed by nature among the rocks. The dew in this hot country, from the proximity of the ſea, is very copious, and ſerves to refreſh the corn-lands and vineyards inſtead of rain: but, during the exceſſive heats, the garden-grounds are watered day and night from the wells, which yield only a brackiſh fetid water. However, in the parts from Manfredonia, as far as Mount Gargano, are ſprings of fine ſweet water. The coaſt between the town of Manfredonia and Barletta is one continued heap of ſand, which has probably been for ſome centuries thrown up by the ſea, where it forms a kind of bay. In ſome places the ſand lies ſeveral fathoms high, and has nothing growing upon it but myrtle, ſhrubs, and herbs, with deep roots that ſhoot down towards the water: yet this place, though naturally ſo wild and deſart, produces ſeveral advantages. In the adjacent ſea, which is ſhallow, the fiſhermen, during the months of April and May, make conſiderable profit by catching a kind of cuttle-fiſh. For this purpoſe the fiſhermen throw into the ſea ſome bundles of myrtle, and the fiſh coming to them to ſpawn, are caught in nets.

The only fuel the fiſhermen have to boil their fiſh with is the dried dung of buffaloes, which they gather along the coaſt, no inhabited place being near at hand where they can provide themſelves with neceſſaries. To this coaſt herds of buffaloes reſort, and during the heat of the day lie in the water, the waves at flood beating over them. In this ſandy ſpot, particularly towards Barletta, are planted gardens and vineyards; the beds of the gardens are here covered with branches of myrtles, that the winds may not diſorder them by tearing up the ſand, and the plants receive their chief nouriſhment from the ſea-water imbibed by their roots; for the ſtocks of their vines are ſet ſo deep in the ſands, that the ſea penetrates to them; and the like is obſerved with reſpect to eſculent plants, as melons, pompions, and cucumbers. Hence the wine produced here has a ſaltiſh taſte, but the water-melons are incomparable, and are ſent even to Naples, being reputed a moſt delightful refreſhment in the hot ſummer months. On the bay of Tarentum are likewiſe broad, waſte, and uninhabited tracts, conſiſting entirely of ſand-hills, which only produce junipers with red berries, and a few other ſhrubs and plants.

The other part of the country is much more fertile, Apulia producing great quantities of corn; but the air being exceſſively hot, it is in ſome years all burnt up. The Jeſuits are the proprietors of half this province, and are ſaid to treat their tenants with the ſame rigour as the Neapolitan lords frequently exerciſe towards their farmers; ſo that Burnet ſays, they ſometimes die of hunger even in the moſt plentiful years, from the cruel cuſtom of exporting their corn.

We ſhall now give an account of the three provinces included under the name of Apulia.

The country of Otranto, which was a part of the antient Calabria, is bounded on the north by the territory of Barri, and by the gulph of Venice; on the eaſt by the ſame gulph; and on the ſouth and weſt by a great bay, which is between that province and the Baſilicata. Within land it is very mountainous, dry, ſandy, and in ſome parts barren; but in moſt places abounds in wine, olives, figs, and other fruit. But the country is frequently infeſted with locuſts, which at certain ſeaſons come in ſuch ſwarms, as threaten the deſtruction of all the produce of the earth; but Providence has remedied this evil by ſending at the ſame time birds which devour them. This province is alſo infeſted with tarantulas, eſpecially in the diſtrict of Tarento. It is likwiſe frequently viſited by Algerine pirates, who not only ravage the country, but carry all the people that fall into their hands into ſlavery. To prevent this they have built a great number of forts all along the coaſt, in which are garriſons.

Notwithſtanding theſe diſadvantages, the province of Otranto has a conſiderable number of cities and towns, four of which are archiepiſcopal; theſe are Otranto, Tarento, Brindiſi, and Matera; and ten epiſcopal.

Otranto, the capital of the province, is ſituated in the fortieth degree five minutes north latitude, and in the nineteenth degree twelve minutes eaſt longitude, on the mouth of the Adriatic, on the eaſtern coaſt of Italy. It is ſeated on a rocky iſland, joined by a bridge to another iſland, which alſo by a bridge has a communication with the continent. It has a good harbour and a conſiderable trade, and is defended by walls, baſtions, and a citadel.

Tarento, the antient Tarentum, is a ſmall city ſeated on a peninſula that projects into a bay of the ſame name, and had once a fine harbour; but it is now ſo ſhallow as to admit only fiſhing-boats. It has a pretty ſtrong fort, and the bay is famous for freſh water ſprings at the bottom. It has ſtill ſeveral monuments of its antient grandeur, as the ruins of a ſtately theatre and other public buildings; but though it was once the head of a republic, which even made war on that of Rome, it is now ſmall and chiefly inhabited by fiſhermen. This city gave name to the ſpiders called tarantulas, already deſcribed.

Brindiſi, the antient Brunduſium, is ſituated on the Adriatic coaſt, thirty-two miles to the eaſt of Tarento, and had once a convenient harbour, which has been ſpoiled by the Phoenicians; and ſince it has had this loſs it has much declined, and is now nothing near ſo large as it was formerly.

Gallipoli is ſeated on a high and craggy rock in the gulph of Tarento, and though ſmall is very ſtrong and well inhabited. It is ſurrounded by the ſea, having a communication with the continent by a bridge defended by a good fort, and has a pretty good trade.

Matera is an inland city on the weſtern ſide of the province, and is ſeated in a valley by the river Canapro, ninety-five miles to the north-weſt of Otranto. It is pretty large, and is computed to contain about three thouſand families.

The

The country of Barri, or Bari, is bounded on the north and eaſt by the Adriatic ſea; on the weſt by the Capitanata, from which it is divided by the river Offanta; and on the ſouth by the Baſilicate. It is eſteemed one of the moſt fertile and beſt cultivated provinces in the kingdom of Naples, eſpecially towards the Adriatic ſea, along which it has its greateſt extent. Its principal cities are the following:

Barri, or Bari, the capital of the country, ſtands on the Adriatic ſea, in the fortieth degree forty minutes north latitude, and in the ſeventeenth degree forty minutes eaſt longitude, and is the ſee of an archbiſhop. It is pretty large and well inhabited, and had formerly a good haven, till it was ſpoiled by the Venetians.

Trani, in Latin Tranium, is ſeated in a fruitful plain on the coaſt of the Adriatic, about twenty miles to the weſt of Barri. The inhabitants ſay it was built by Trajan, and from him was antiently called Trajanum. It has been erected into an archbiſhopric ever ſince the ninth or tenth century. The city is handſome, well built, and is defended by a caſtle; but is ſmall, though the courts of judicature for this province are held there.

The Capitanata, or Capitanate, the antient Apulia Daunia, is bounded on the north and eaſt by the Adriatic; on the north-weſt by the Moliſe; on the ſouth by the Farther Principate, the Baſilicate, and Barri. Its ſoil is naturally dry and ſandy, the graſs ſhort, but ſweet, and feeds a great number of cattle, which are driven thither from the Abruzzo.

There are hardly any woods in this country; but there are ſeveral lakes and ſome conſiderable rivers. The principal of the latter are the Offanta, Carapella, Cervaro, Candelare, Fortore, and the Tiferno. The only mountain of note in this province is called Gargano, or Monte Sant Angelo, and extends itſelf through a great part of the province. On the top of it is a convent, where particular devotion is paid to Michael the archangel. On the ſame mountain is ſituated a town called Monte Sant Angelo, which is the ſee of a biſhop.

Manfredonia, the capital of the province, was built out of the ruins of the antient Sipontum, and is ſituated at the foot of Monte St. Angelo, upon which it has a caſtle, and before it a port on the Adriatic. It had its name from Manfred, natural ſon to the emperor Frederic II. who rebuilt it in the year 1256; but has been in a very low condition ever ſince the year 1620, when it was ſurprized and taken by the Turks, who carried off all its cannon, bells, &c. and ſet it on fire. The city is ſmall and thinly inhabited, and the haven being choaked up, is only fit for ſmall veſſels. It is, however, an archiepiſcopal ſee.

Moſt of the other towns of this province are very inconſiderable, we ſhall therefore leave them to take notice of ſome iſlands, ſituated off the coaſt of this province in the Adriatic ſea. Theſe are the Tremiti, which conſiſts of St. Nicolo, or Tremiti, St. Domino, and la Capraria; the principal of which is St. Nicolo, which is inhabited by a ſet of monks, who have ſurrounded it with high walls flanked with towers, to which are added four ſtrong baſtions. Near the ſhore is likewiſe built a ſmall arſenal for the rigging of ſhips. The monaſtery, which is a ſpacious and magnificent edifice, has a large ciſtern in the center of the cloiſter, for the uſe of the monks, beſides ten or a dozen more for that of the other inhabitants. The church, which has a high roof, and three ſtately iſles, is a hundred and ſeventy feet long, and ſeventy broad. The choir and pavement are very beautiful, as is alſo a chapel enriched with offerings of immenſe value, in which they pretend to have a miraculous image of the Virgin, and a miraculous crucifix. The iſland is of an oblong irregular figure, and in the middle almoſt divided by a narrow iſthmus.

St. Domino is the next in bigneſs; it is about ten miles diſtant, and is very rocky and craggy, as are the other two iſlands, which may be rather termed huge rocks, and are not worth deſcribing.

Abrûzzo Ultra, or Abruzzo beyond the river Peſcara, is bounded on the north-eaſt by the Adriatic ſea; on the ſouth-eaſt by the Hither Abruzzo; on the ſouth-weſt by Sabina, and the Campania of Rome; and on the north-weſt by the marquiſate of Ancona. This country is cold and mountainous, it being croſſed by the Appennines; but is fertile, and produces corn, fruit, and ſaffron. It is healthy, pleaſant, and well inhabited; and the people, who are tolerably induſtrious, have ſome manufactures.

Aquila, the capital of the province, is ſituated on a little hill, at the foot of which runs the river Alterno, and has an antient caſtle. It was once a handſome city; but, on the ſecond of February, 1703, was almoſt deſtroyed by a dreadful earthquake. The firſt ſhock was ſo terrible, that the inhabitants abandoned the city; but returning to hear veſpers, it being Candlemas-day, the ſhock returned, and two thouſand four hundred people periſhed, eight hundred were deſtroyed in one ſingle church, and the greateſt part of the city, with its walls, were thrown down.

The other towns in this province are very inconſiderable.

Abruzzo Citra, ſo called from its being on this ſide the river Peſcara, is bounded on the north-eaſt by the Adriatic; on the ſouth and ſouth-eaſt by the territory of Moliſe; and on the ſouth-weſt by that of Lavora. It has not only the Appennines running through it, but ſome other conſiderable mountains, particularly the Majella and Cavallo, the former of which is covered with perpetual ſnow.

The country produces plenty of corn, rice, fruit, and ſaffron; here are alſo many large woods, which ſhelter a great number of wolves, bears, and other wild creatures, which render it neceſſary to go always in troops and well armed.

Chieti, the antient Theate, and the capital of the province, is ſituated in the forty-ſecond degree thirty two minutes north latitude, and in the fourteenth degree forty-eight minutes eaſt longitude, and ſtands on a hill near the river Peſcara, on the confines of the Farther Abruzzo. It is a pretty large, well built, and populous city, the ſee of an archbiſhop, who has only one ſuffragan, namely, the biſhop of Ortona; and here the courts of judicature for the province are held. This city gave name to the order of Theatines, which was inſtituted in 1524 by John Peter Caraffa, who, before his exaltation to the pontificate by the name of Paul IV. had been archbiſhop of this city.

Lanciano, the antient Anxanum, is ſituated ſeventeen miles to the eaſt of Chieti, and is the ſee of an archbiſhop, but without ſuffragans. A little river, to which it gives name, diſcharges itſelf into the Adriatic, and forms a kind of harbour. The city is well inhabited, and famous for its fairs, to which the merchants repair from both ſides of the Adriatic.

Sulmona, the antient Sulmo, is ſituated twenty-two miles to the ſouth-weſt of Chieti, and ſtands in a plain ſurrounded by mountains, between two rivulets that deſcend from the Appennines, beſides the Sora, which runs by it. It is pretty well built, and full of inhabitants. This city has the title of a principality belonging to the houſe of Borgheſe, and is the ſee of a biſhop. It is famous in hiſtory for being the birth-place of Ovid.

SECT. VIII.

Of the Iſland of SICILY.

Its Names, a conciſe Deſcription of the Streight of Meſſina, and of Scylla and Charybdis. The Situation and Extent of the Iſland; its Climate, Rivers, and Produce. A Deſcription of Mount Ætna, its Eruptions, and the dreadful Earthquakes that have laid waſte the Iſland. The Number of the Nobility, and the Government and Arms of the Iſland.

SICILY is by far the moſt conſiderable iſland in the Mediterranean, both with reſpect to its ſize and fertility. It was anciently called Trinacria and Triquetra, from its triangular form, and Sicania, from the Sicanii, its inhabitants; but the Siculi afterwards making themſelves maſters of the greateſt part of the iſland, gave it the name of Sicilia. In ſucceeding ages, ſome Grecian colonies ſettling here, ſpread over a great part of the country, and their language became the vernacular dialect, till the iſland at laſt fell under the dominion of the Romans. As to its modern hiſtory, it has been touched

touched upon in our account of the kingdom of Naples.

Both the ancients and moderns have maintained that Sicily was originally joined to the continent of Italy, but gradually ſeparated from it by the encroachments of the ſea and the ſhock of earthquakes, ſo as to become a perfect iſland.

The ſtreight between Sicily and Calabria, which is at moſt but three Italian miles broad, is called the Faro, or Pharo, of Meſſina, from its faro, or light-houſe, on the narroweſt part, and Meſſina, its capital, which is ſituated near it. Oppoſite the cape of Faro, on which the light-houſe ſtands, is the rocky promontory of Sciglio, the ancient Scylla, where the ebb and flood in this ſtreight are very irregular and ſtrong, and, where it is narroweſt, extremely impetuous; ſo that there is no ſtemming the tides, even in a ſtrong ſoutherly wind, on which account it is uſual to have the veſſel hauled up by oxen along the coaſt of Calabria.

The famous whirlpool Charybdis, in this ſtreight, lies on the outſide of the harbour of Meſſina, and was no leſs terrible than Scylla to the ancients. It is probable that this dangerous vortex is occaſioned by the currents of the ſea, which here run counter. The misfortunes for which this place was formerly rendered dreadful, are now ſeldom heard of; and in a calm, eſpecially when the ſouth wind does not blow, the place is ſo ſmooth that a ſmall boat may ſafely paſs over it.

Sicily extends from the thirty-ſixth degree thirty minutes to the thirty-eighth degree twenty minutes north latitude, and from the twelfth degree twenty minutes to the ſixteenth degree twenty-five minutes eaſt longitude. We have already obſerved that it is of a triangular form, and its utmoſt length from eaſt to weſt, that is from Cape Faro to that of Boco, is computed at ſomewhat more than two hundred and ten miles; its breadth from north to ſouth, from Cape Faro to that of Paſſaro, is a hundred and fifty miles, and its whole circuit about ſix hundred.

The climate of this iſland is ſo hot, that even in the beginning of January the ſhade is refreſhing, and chilling winds are only felt a few days in March, and then a ſmall fire is ſufficient to baniſh the cold. The only appearance of winter is found towards the ſummit of mount Ætna, where ſnow falls, and is preſerved by the inhabitants in the following manner. They dig pits in the open air, and in them lay the ſnow, with ſtraw or ſtubble, and ſalt, *ſtratum ſuper ſtratum*, and then cover the place with earth. In ſummer, when ſnow is wanted to cool their liquors, one of theſe pits is opened, and the quantity of ſnow required being taken out, the hole is immediately cloſed.

In this iſland are found gems and valuable ſtones, as agate, jaſper, porphyry, lapis-lazuli, marble, and alabaſter; and it is equally rich in metals and minerals, as gold, ſilver, and copper, tin, lead, iron, and alum: it has alſo a variety of hot baths of very ſalubrious qualities, beſides other medicinal waters.

The principal rivers of this country are Cantera, formerly the Taurominius; the Jerretta, the ancient Symethus; the Salſo, the Belicis, and the Termini.

Though the iſland appears as one entire rock, the ſoil is exceeding fertile; it was anciently ſtiled the granary of Rome, and at preſent has not only ſufficient plenty of corn for home conſumption, but exports great quantities to the kingdom of Naples, which would otherwiſe be diſtreſſed. It is however far from being ſo well cultivated as formerly, ſeveral tracts lying waſte, eſpecially in the weſtern part. Its wine is excellent, as are alſo moſt kinds of fruit, in which it abounds, together with oil, ſugar, honey, ſaffron, and ſalt; the ſugar is chiefly produced in the neighbourhood of mount Ætna.

The cattle are very fine, and all ſorts of game are in conſiderable plenty. All the coaſt affords good fiſheries, particularly for tunnies; and at Trapani is a conſiderable coral fiſhery. Great profits are made of ſilk, the cultivation of which was firſt introduced in the year 1130, by earl Roger, who returning from an expedition into the Holy Land, brought back with him ſome perſons well verſed in the management of ſilk; hence it ſoon ſpread into Naples, the Milaneſe, Spain, and the French provinces bordering on Italy. In ſhort, whatever ſeems requiſite in point of neceſſity, delight, or ornament, this country affords in ſuch profuſion, that the inhabitants, notwithſtanding the exactions with which they have always been burthened by their ſovereigns and his delegates, live at their eaſe, and grow rich.

As Ætna is the higheſt mountain in Sicily, it is the firſt diſcovered at a diſtance by ſailors, to whom it preſents the view of a prodigious chimney, or a very large rugged pillar. The inhabitants call it Monte Gibello, or Mongibello, that is, Mount of mounts. The aſcent to it from Catanea is thirty thouſand paces high; but on the ſide near Rondazzo, only twenty thouſand. It ſtands ſeparate from all other mountains; its figure is circular, and it terminates in a cone: its circumference at bottom is no leſs than a hundred thouſand paces. The lower parts of it are very fruitful in corn and ſugar-canes; the middle abounds with woods, olive-trees, and vines; and the upper part is, almoſt the whole year, covered with ſnow; yet within it is a continual fire, which, by its frequent and violent eruptions, has always rendered it very famous. Many of theſe dreadful eruptions are recorded in hiſtory; but we ſhall go no farther back than the year 1669, of which we find an account in the Philoſophical Tranſactions. It then broke out on the eleventh of March, two hours before night, on the ſouth-eaſt ſide of the mountain, about twenty miles from the old mouth, and ten from the city of Catanea. The noiſe of the eruption was heard an hundred miles, to which diſtance the aſhes were alſo carried. The matter thrown out was, like that of Veſuvius, a ſtream of metals and minerals, rendered liquid by the fierceneſs of the fire, which boiled up at its mouth, till it flowed over, and having run a little way, the extremity began to cruſt, and turning into large porous ſtones, reſembling large cakes of burning ſea-coal, came rolling and tumbling one over another, bearing down any common building by their weight, and burning whatever was combuſtible. The progreſs of the inundation was at firſt, for ſeveral days, at the rate of three miles in twenty-four hours; but afterwards it ſcarce advanced a furlong in a day, and thus continued for fifteen or twenty days together, running into the ſea cloſe by the walls of Catanea. At length it made its way over the walls into the city; but there did no conſiderable damage, except to a convent of Benedictines. In its courſe it overwhelmed fourteen towns and villages, containing three or four thouſand inhabitants; and it is remarkable, that during the whole time of this eruption, which laſted fifty-four days, neither ſun nor ſtars appeared.

But though Catanea then eſcaped the threatened deſtruction, it was almoſt totally ruined in 1693, by one of the moſt terrible earthquakes mentioned in hiſtory. It was not only felt all over Sicily, but at Naples and Malta; and the ſhock was ſo violent, that people could not ſtand upon their legs, and thoſe who lay upon the ground were toſſed from ſide to ſide, as if upon the rolling billows. The earth opened in ſeveral places, throwing up large quantities of water; and great numbers periſhed in their houſes by the fall of rocks that were looſened and rent from the mountains. The ſea was violently agitated, and roared dreadfully; mount Ætna threw up vaſt ſpires of flame, and the ſhocks were attended with a noiſe that exceeded the loudeſt claps of thunder.

Fifteen or ſixteen towns, and eighteen manors, with the inhabitants and cattle, were entirely ſwallowed up, ſeveral other towns and villages were laid in ruins, and ninety-three thouſand people loſt their lives, of whom eighteen thouſand were inhabitants of Catanea, very few eſcaping the general and ſudden deſtruction of that city. The number of churches and convents involved in this dreadful calamity was no leſs than nine hundred and ſeventy-two. Since that time there have been two remarkable eruptions of Mount Ætna, one in 1753, and the other in 1755, and at the laſt time it raged with exceſſive fury.

Though the country has not for a long time been ſufficiently inhabited, yet its nobility are very numerous, they being computed to amount to ſixty dukes, fifty-ſix marquiſſes, above an hundred earls, and a great number

of barons. The number of churches, convents, and religious foundations is alſo exceeding great; the buildings are handſome, and the revenues conſiderable.

Here is a ſovereign eccleſiaſtical tribunal, which judges in all diſputes and affairs in which the clergy are concerned. It was originally inſtituted by the papal court, and the preſident, who is called the judge of the kingdom of Sicily, claims the reſpect uſually paid to a legate à latere. The court of Rome has endeavoured to circumſcribe the power of this tribunal; but this the king has always ſtrenuouſly oppoſed, and forbid the clergy to appeal to Rome. Pope Urban II. having granted earl Roger and his ſucceſſors the title of his native legates in Sicily, the king conſiders himſelf as an independent ſovereign, not only in temporal, but in ſpiritual affairs. The kingdom is governed by a viceroy. Its arms are a ſaltire with ſix pales gules, and for ſupporters a crowned eagle ſable. The king's revenues ariſing from this fruitful iſland are very conſiderable.

SECT. IX.

Of the three Diviſions of Sicily, and the principal Places in each; with a more particular Deſcription of the Cities of Meſſina and Palermo.

THE kingdom of Sicily is divided into three provinces, which are called valleys. The firſt is Val di Demino, or Demona; the ſecond Val di Noto; and the third Val di Mazara.

Val di Demino, which is the neareſt to Italy, extends from Cape Faro to the river Termini. The principal places in this province are the following:

Meſſina, antiently Zancle, and afterwards Meſſana, is a pretty large and well built city, ſituated in the thirty-eighth degree eleven minutes north latitude, and in the ſixteenth degree fourteen minutes eaſt longitude, ſtanding partly in a plain near the ſea, and partly on ſome riſing grounds. Beſides an irregular fortification, it has a citadel, of five large and regular baſtions, and the neighbouring eminences, namely Caſtel Gonjaga, Caſtel Reale, Porta Reale, Conſagra, Mattagrifone, and Caſtel Lacio, are all defended by forts. The private houſes are handſome and well built, and the public edifices magnificent, eſpecially the palaces of the viceroy and archbiſhop. Its churches and convents are numerous, and generally elegant ſtructures, with conſiderable revenues, and the arſenal is well ſtored with all kinds of arms and ammunition.

The cathedral is a large ſpacious ſtructure, but very antient. It is richly ornamented on the inſide, particularly the high altar, by the ſide of which is the viceroy's throne, which is likewiſe very rich, and elevated on an aſcent of ten or twelve broad ſteps. It has alſo ſeveral magnificent chapels, particularly one dedicated to the Virgin Mary, enriched with every thing that can be termed magnificent and coſtly, and is much reſorted to by the inhabitants, who pretend that the Virgin ſent them a letter, which is here preſerved as a choice relic, and once a year carried about in proceſſion with great pomp. The Jeſuits have a college and three other houſes. The archbiſhop's palace is large and well built. The general hoſpital, called the Loggia, is one of the moſt beautiful public buildings in the city; beſides which there is a large and rich hoſpital for old people, foundlings, lunatics, the lame, blind, &c. which are here well kept in vaſt numbers; and near it is a ſpacious well built lombard-houſe, under good regulations.

The city extends itſelf on a riſing ground along the ſhore with ſome declivity. The chief ſtreets are large, one running parallel with the port, and Meſſina is well furniſhed with water by ſubterraneous aqueducts, and with all kinds of proviſions.

The port is of an oval form, and ſo deep that ſhips of eighty guns may come near enough to the quay, for people to go in and out by the help of a plank. Towards the Faro, or light-houſe, it is incloſed by a crooked neck of land, on the broadeſt part of which to the eaſt ſtands the citadel, and towards its weſt end a fort called St. Salvadore, which defends the narrow entrance to the harbour. Near this neck of land is the lazaretto, built on a rock projecting out of the ſea.

The trade of this city, though greatly declined, is ſtill conſiderable, eſpecially ſince the year 1728, when the harbour was declared a free port. An annual fair is held here in Auguſt, at which great quantities of foreign goods are expoſed to ſale. This city claims the prerogative of being ſtiled the capital of the kingdom; but Palermo diſputes this point of precedency.

Catanea, the antient Catana, ſtands by the ſea, near the foot of mount Ætna, and has been frequently almoſt deſtroyed by the eruptions of that mountain and by earthquakes. It is pleaſantly ſituated upon the river Indicello, eighty-four miles to the weſt of Meſſina, and was antiently one of the richeſt and moſt powerful cities in Sicily; and particularly famous for a magnificent temple dedicated to Ceres. The cathedral was a noble building, ſupported by columns of fine black marble; but in the dreadful earthquake before mentioned in 1693, eleven hundred people who had ſheltered themſelves in this ſtructure, where the relics of St. Agatha their great patroneſs were kept, were buried under its ruins, and the city in a manner deſtroyed: yet the fertility of the adjacent country has induced the people to return by degrees, who have ſince rebuilt a part of it. It is a biſhop's ſee, under the archbiſhop of Mont Real.

There are a conſiderable number of ſmall towns in this diſtrict.

Val di Noto extends from the river Jarreta to the ſouth coaſt of the iſland, and alſo reaches to the river Salſo. It contains ſeveral cities, and above forty towns. The principal places in this diſtrict are the following:

At the diſtance of ſeventy-two miles to the ſouth-by-weſt of Meſſina, is Syracuſe, antiently the capital of all Sicily, and a very flouriſhing republic, and was twenty-two miles in compaſs; but at preſent is extremely reduced by a ſeries of calamities, eſpecially by the earthquake in 1693; yet its inhabitants are now ſaid to amount to fourteen thouſand, and it ſtill continues one of the moſt conſiderable cities in the iſland, on account of its advantageous ſituation, the commodiouſneſs of its port, and the height and ſtrength of its walls, which are waſhed on every ſide by the ſea; for it now contains only one of the five parts into which it was antiently divided, and extends no farther than the diviſion formerly called the Inſula.

At the entrance of the port is a ſtrong but regular caſtle, which has a communication with the city by a wooden bridge. In this caſtle is the famous ſpring called by the antients the fountain of Arethuſa, which ſupplies it with plenty of water. The port is of a roundiſh figure, and though not every where of equal depth, has room ſufficient to receive the largeſt veſſels, or even a conſiderable fleet; its only fault is its not having ſafe anchoring ground, eſpecially when the wind blows hard from the eaſt and north-eaſt.

Caſtro Giovanni, the antient Enna, a city much celebrated by the poets, who repreſent Proſerpine as being carried off from the fields in its neighbourhood. It is ſituated near the heart of Sicily, forty-five miles to the ſouth-weſt of Catanea, upon a hill to the north-weſt of the lake of Pergus, and has a ſpacious plain adorned with flowers and rivulets, near which is a cavern, whence Pluto is ſaid to have come with his car, and to have carried off that goddeſs. This city is now ſmall, but well built, and defended by an old caſtle.

The province termed Val di Mazara lies on the weſtern ſide of the iſland, having Val di Demino on the eaſt, from which it is divided by the Fiume Gronde, or Great river, and the Val di Noto on the eaſt-ſouth-eaſt, from which it is parted by the river Saſo, and is on the other ſides encompaſſed by the ſea. It is very mountainous, but fertile and well watered, it having near a dozen conſiderable rivers, and many leſſer ones. The principal towns in this province are,

Palermo, the antient Panermus, the moſt conſiderable city in the province, and even the capital of the iſland. It is ſituated at the bottom of a gulph on the north coaſt, in a delightful and extenſive plain terminated by high and fertile hills, which almoſt ſurround it on the land ſide, in the thirty-eighth degree ten minutes latitude, and the

thirteenth degree forty-two minutes longitude. It has been already mentioned in treating of Meſſina, that Palermo diſputes with that city the honour of being the capital of the iſland; and indeed it has the houſes of a great number of the nobility and gentry, ſeveral fine public buildings, and the ſtreets are ſtraight, large, and regular, particularly a beautiful and ſpacious one called Caſſaro, that extends through the whole city, and has a viceroy's palace at one end, and the ſea-ſhore on the other, to which it deſcends by a gentle declivity.

The viceroy's palace is not only a magnificent ſtructure, adorned with fine ſculptures, paintings, and gardens, but alſo ſerves inſtead of a caſtle, it commanding the city by its ſituation, and being flanked by high towers and other works. The piazza before it is noble, and adorned with the ſtatue of Philip IV. of Spain, ſtanding on a pedeſtal enriched with trophies in baſſo relievo, and with the ſtatues of the four cardinal virtues on the four ſides.

On one ſide of the palace is the great hoſpital of the Holy Ghoſt, and on the other the cathedral, an antient ſtructure, with four large towers, and richly adorned within. This city is ſaid to contain upwards of a hundred and twenty thouſand inhabitants; it is an archiepiſcopal ſee, has an univerſity, fifty-two monaſteries, and twenty-two nunneries. It has ſeveral fine churches, particularly that of St. Matthew, commonly called de l'Anima, which is much admired for its architecture, beautiful marble, paintings, and ſtately portico. Among the other public buildings is the court of judicature, which is equally eſteemed for its largeneſs, the magnificence of its architecture, its paintings, and other ornaments. Before it is a ſuperb fountain, which is eſteemed the moſt beautiful in all Italy, both from the number and elegance of the baſons, which ſtand one over another, and from the great variety of figures which throw water into them. The city contains many other fine fountains and magnificent buildings, particularly the city gate, which is ſo wide and lofty that it reſembles a magnificent triumphal arch, adorned with a great number of marble figures and other ornaments: it ſtands at one end of the long and noble ſtreet of Caſſaro, as the viceroy's palace does at the other; ſo that from the palace through the whole length of the ſtreet you have a proſpect of the ſea, which through this ſtately gate reſembles a beautiful canal of a ſtupendous extent.

The quay, which runs the whole length of the city, from which it is divided by a ſtrong wall, is wide, beautiful, commodious, and one of the fineſt walks and places of reſort about the city. The greateſt part of the quay is planted with trees; ſo that one may walk under them ſheltered from the ſun and rain, with the port, the mole, the forts, and the open ſea full in view. The port is very convenient for ſhipping; the long mole extends about two hundred fathoms towards the ſouth, and about four hundred towards the weſt, in the form of a rectangle: at the end of it are two batteries of cannon, and a high tower or light-houſe. In the middle of the mole is a ſmall fort, and at the other end, next the land ſide, is a fortreſs, with four baſtions; with the arſenal for the gallies, the magazines, and other ſtore-houſes. The port is ſafe and commodious every where, except on the ſouth-weſt ſide, which is full of rocks, that riſe no higher than the ſurface of the water, on which account ſhips enter it, near the head of the mole juſt oppoſite the city, where they have from eighteen to twenty-two fathoms water.

Trapani, the antient Drepanum, ſtands on a peninſula on the weſt coaſt of the iſland of Sicily, about forty miles to the ſouth-weſt of Palermo, and is ſtill famous for its trade; for the number of nobles and gentry who live in the city and its neighbourhood; for the many trading veſſels that ſail to and from it; for its ſalt ſprings and works, and its having a good coral fiſhery. It is ſituated on a peninſula, forty-five miles to the ſouth-weſt of Palermo, and is defended by a ſquare caſtle. Its haven is large; but too much expoſed to the ſouth winds. At its entrance is the above caſtle ſeated on a rock, and which is ſurrounded with other works and batteries, and alſo by the ſea. The town is encompaſſed by a plain wall. The hill at the foot of which it ſtands was antiently called Eryx, and on the top was a temple of Venus and the tomb of Anchiſes.

Gergenti was antiently the greateſt and richeſt city in the whole iſland: it ſtands about four miles from the ſea, on the ſouth-weſt coaſt, ſixty-ſix miles to the ſouth of Palermo. It roſe out of the ruins of the antient Agrigentum, though it does not ſtand directly on the ſame ſpot. It is ſituated at the mouth of the river St. Blaſio, upon a hill, and is defended by a caſtle ſo ſtrong by nature, that there is no acceſs to it but at one place. It is the ſee of a biſhop, and is ſaid to have been antiently ten miles in compaſs, and is famous for its tyrant Phalaris, who uſed to torture thoſe who had diſpleaſed him in his brazen bull; but Perillus, the artiſt who had the cruelty to invent it, was, for his reward, condemned to have the firſt experiment tried upon himſelf. The adjacent territory is rich, and produces great quantities of corn, of which it carries on a conſiderable trade by means of the river and its port, which lies about five miles to the weſtward.

SECT. X.

Of the Iſlands round Sicily; with a particular Deſcription of Malta, and the Knights of that Iſland.

THE principal iſlands round Sicily are, firſt, the Liparean iſlands, called by the antients Æoliæ and Vulcaniæ; theſe lie towards the north of Sicily, and the neareſt is about forty miles diſtant. The volcanoes that were in ſome of them, and ſtill partly remain, have always contributed to the violent winds which continually reign in theſe parts; whence the antients ſaid, that Æolus, the god of the winds, reſided here, and accordingly called them by his name; and Vulcan being the tutelary god of ſuch volcanos, they were alſo called Vulcan's iſlands. The moſt remarkable are the following:

Lipari, or Lipara, the largeſt and moſt populous of them, is computed to be about eighteen miles in circuit, including its capes and the windings of the coaſt, for it is of a very irregular figure. The climate is healthful, the air ſerene, and the ſoil rich and fertile. Beſides corn, wine, and fruit, which grow in great plenty, the inhabitants ſend great quantities of figs and raiſins into moſt parts of Europe. It likewiſe produces abundance of ſulphur, allum, and naphthe; and has ſeveral warm baths, formerly much reſorted to. The coaſts yield great plenty and variety of fine fiſh. In this iſland were formerly pits emitting ſmoke and fire; but at preſent they have entirely ceaſed. In Lipari ſtands a town of the ſame name, built on a ſteep rock, with a caſtle, and is the ſee of a biſhop.

Volcano, in Latin Vulcania, antiently alſo Thermiſſa, Therafia, and Hiera, or the Holy, is parted from Lipari by a narrow channel, and though not ſo large, riſes much higher. On the north coaſt is a mountain whoſe top continually emits flames or ſmoke; but more furiouſly at ſome times than others.

Stromboli, antiently Strongyle, is of a round form, and ſituated on the north eaſt coaſt of Lipari, about thirty miles from that iſland. It is computed to be about twelve miles round, but is wholly uninhabited, being properly nothing more than a burning mountain of an extraordinary height, that continually caſts forth fire and ſmoke, which are ſeen at a great diſtance at ſea.

Another cluſter of ſmall iſlands, named the Ægates, or Ægades, lie on the weſt coaſt of Sicily; theſe are Levenzo, the antient Buccina, or Phorbantia; Favagnana, the antient Capraria, or Æguſa, which is extremely fruitful; and Maretamo, the antient Maritima. Theſe are very inconſiderable, we ſhall therefore proceed to one of much greater conſequence.

The iſland of Malta, the antient Melite, is ſituated in the thirty-ſixth degree of north latitude, and between the fourteenth and fifteenth of eaſt longitude, ſixty Engliſh miles to the ſouth of the iſland of Sicily, and is commonly treated of under Italy, on account of its greater proximity to it, than to the coaſt of Africa. It was here that St. Paul was bit by a viper, after being wrecked on the coaſt. This iſland is computed to be

twenty miles in length, twelve in breadth, and near ſixty in circumference. It was antiently little more than a barren rock, but ſuch quantities of ſoil have been brought from Sicily, that it is now become a fertile iſland, though it produces no more corn than is barely ſufficient to maintain the inhabitants ſix months in the year, and the reſt they purchaſe cheap in Sicily. The wine produced in this iſland is alſo not ſufficient for its conſumption, and it is likewiſe deficient in wood. But, on the other hand, it has plenty of figs, melons, and other fine fruit; with honey, a great deal of cotton, good paſtures, conſiderable fiſheries, ſea-ſalt, and a profitable coral-fiſhery; but the heat is exceſſive both day and night, and they have a great number of gnats, which are the plague of the country.

The annual revenues of this iſland are computed at ſeventy-ſix thouſand ſcudi, and the number of its inhabitants amounts to about ſixty thouſand. The common people ſpeak Arabic; but thoſe in genteel circumſtances the Italian.

The moſt antient inhabitants of Malta of whom we have any account, were the Phæacians, who were driven out by the Phœnicians, as they were by the Greeks. It ſeems afterwards to have been under the dominion of the Carthaginians, from whom it was taken by the Romans. Upon the declenſion of the Roman empire, it was firſt ſubdued by the Goths, then by the Saracens, from whom it was wreſted by the Normans in 1090, after which it had the ſame maſters as Sicily, till Charles V. gave it to the knights of St. John of Jeruſalem.

Theſe knights aroſe in the following manner: Several trading people of Amalfi, in the kingdom of Naples, had by their trade ſo ingratiated themſelves with the Saracen princes, that they were permitted to build a church at Jeruſalem, which was finiſhed in 1248, and called St. Maria della Latini. As there was a great reſort to the Holy Sepulchre, the above merchants built an hoſpital and oratory for the accommodation of pilgrims, which they dedicated to St. John the Baptiſt, and appointed certain monks to attend on the pilgrims, who from their office were ſtiled Hoſpitallers, and from the church of St. John, Johannites. At firſt they procured neceſſaries from Amalfi, but after the conqueſt of Paleſtine, the fruit of thoſe deſtructive croiſades which deſolated Europe, Godfrey of Bouillon endowed them with ſeveral lands; and his ſucceſſor Baldwin having put them in poſſeſſion of ſome caſtles and towns, they held a general chapter, and elected Raymund di Podio their maſter, who inſtituted an order out of the brotherhood, and made them take the vows of chaſtity, poverty, and obedience; gave them the octangular croſs, and a black cloak, as the badge and habit of their order, and divided them into three claſſes, knights, Capellans, and Servanti d'Armi. This happened towards the cloſe of the ſeventh century. The order was confirmed by the pope, and, notwithſtanding their vow of poverty, they obtained conſiderable wealth. They maintained their ground in Syria and the Holy Land, againſt the continual aſſaults of the Turks, for two hundred years, till loſing Acra, the laſt place they poſſeſſed, in 1191 they removed to the iſland of Cyprus, and in 1308 took the iſle of Rhodes and the neighbouring iſlands, which they held for the ſpace of two hundred and thirteen years, during which they were ſtiled knights of Rhodes; but Solyman II. having diſpoſſeſſed them in 1528, after they had made a long and brave reſiſtance, they firſt went to Candia, and afterwards ſeparating, ſome went to Venice, and others to Viterbo and other places in Italy, eſpecially to Nice in Savoy. But Charles V. apprehending that Solyman would on their account make a deſcent into Italy, ſent them to Syracuſe in Sicily; and, in 1529, conferred on them the iſlands of Malta and Gozo, and alſo committed to them the defence of Tripoli, which was then in his poſſeſſion. From this period they obtained the name of knights of Malta.

The order conſiſts of eight tongues, or nations, the principal of which are the French, Italian, Spaniſh, Engliſh, and German. In France are three tongues, namely, thoſe of Provence, Auvergne, and France peculiarly ſo called. Spain is divided into thoſe of Arragon and Caſtile, and with the German are united the priory of Denmark, Sweden, and Hungary. Each of theſe countries has contributed to the advancement of the order, eſpecially France, there being three hundred commanderies in that kingdom, which, if added to thoſe of other countries, the whole number of knights may be computed to amount to three thouſand: yet their loſſes by war, and more particularly by the Reformation, have been very conſiderable, the order being now deſtitute of the Engliſh, Daniſh, Swediſh, and Hungarian priories; and they have alſo ſuffered greatly in Germany and the Netherlands.

The knights muſt be all noblemen, and produce proofs of an illuſtrious anceſtry: ſuch as have done this are ſtiled *cavalieri di juſtizia*, in contradiſtinction to the *cavalieri di gratia*, who cannot ſufficiently aſcertain their deſcent, yet are made knights on account of their perſonal merits. According to the ſtatutes, no natural children, except thoſe of princes, nor perſons under eighteen years of age, are admitted into the order. They engage to be at continual war with the Mahometans and all corſairs of that religion; and, as they have adopted St. Auguſtine's rule, are as a religious order ſubject to the pope. The grand maſter is ſtiled by foreign princes Moſt Eminent Highneſs, and is under the juriſdiction of no temporal power; but in what relates to the order he is accountable to his council and chapter: though with reſpect to the iſland and inhabitants, he is entirely abſolute. His ſubjects ſtile him Moſt Serene Eminence; the knights and others only Eminence. When at home, he uſually wears a long black gown, made after a particular faſhion, with a large golden key of the Holy Sepulchre hanging by his ſide; but on a journey he dreſſes like a layman, and wears a ſword.

Priories of the order are eſtabliſhed throughout all the popiſh countries in Europe, of which the great priory of Germany, eſtabliſhed at Heiterſheim in Briſgaw, holds the firſt place. Its adminiſtrator has the dignity of a prince of the empire, with a ſeat and voice in the diet among the princely abbots; and he muſt annually remit to the grand maſter, whoſe vicar he is reputed to be, the neceſſary contributions for acting againſt the Mahometans, and the uſual aſſeſſment payable by every commandery.

But to return to the iſland: the principal city is that of Valetta, ſo called from John de Valetta, the grand maſter, who laid the firſt ſtone, in the year 1566, on a hill which extends into the ſea; and it has been ſince ſo ſtrongly fortified, that few places exceed it in ſtrength. Its walls are of large ſquare ſtones, ſome dug out of the rock, and planted with ſeveral batteries. On the point towards the ſea ſtands the caſtle of St. Elmo, which is fortified in the modern taſte, and defends both harbours; one of which, called Marſa Muſcietto, lies at the entrance from the ſea to the right of the town, and incloſes a ſmall iſland, on which ſtand both a fort and a lazaretto. The other harbour on the left ſide is ſimply called Marſa, or the Great Harbour, being the largeſt, ſafeſt, and moſt commodious in the iſland. Its entrance, beſides the caſtle of St. Elmo, is guarded by fort Ricaſoli. From the port there is an aſcent to the town, which is but ſmall, tho' very beautiful. It has but two gates, one of which leads to the port, and the other to the country.

There are here ſeveral churches, among which that of St. John the Baptiſt is the principal. On one ſide of it is a fine ſquare, with a fountain at each corner. It is a large building paved with beautiful marble, and within it are hung up a great number of flags taken from the Turks. They alſo pretend to have here many relics, and in particular St. John the Baptiſt's right-hand.

Among the ſeveral noble buildings in the city, is the palace of the grand maſter, in which is a magazine of arms for thirty-five or forty thouſand men, which are kept very clean and in great order. Before this palace is a large ſquare, in the midſt of which is a noble fountain, that throws up great quantities of water to a conſiderable height, and even ſupplies the whole town. The palaces of the conſervatory and treaſury are alſo fine buildings, as are alſo the inns. The hoſpital is likewiſe well built, and the hall for the ſick knights is hung with tapeſtry, where they are attended by knights, and ſerved in plate. They are all under a vow of celibacy; and yet they make

no

no ſcruple of taking Grecian women for miſtreſſes. Poor travellers find entertainment here, till they can get a paſſage to the place to which they are bound, and then they are furniſhed with proviſions, and their charges paid through their voyage.

The Jeſuits have a well built college; and there are alſo ſeveral convents and nunneries. Even the meaneſt houſes make a good ſhew, they being all flat-roofed, and built of large ſquare white ſtone, which retains its colour long, and ſeems always new. The ſtreets, however, are incommodious, from their being always up and down hill, but they are wide and ſtraight. The handſomeſt of theſe reaches from the caſtle of St. Elmo to the Royal Gate, which is almoſt a mile in length.

The adjacent country is full of gardens, and very agreeable places of pleaſure. About twelve miles from the city the grand maſter has a palace built in the form of a caſtle, the halls of which are adorned with excellent paintings. It has very neat gardens filled with orange, citron, and olive trees, with ſeveral beautiful fountains; and at a ſmall diſtance is a grove ſtocked with game for his diverſion.

Citta Vittorioſa, or il Borg, a fortified town, ſtands on a narrow neck of land to the left of Valetta: on each ſide a broad natural canal runs up into the land, and, ſurrounding the town, forms a fine harbour. On a high rock is the ſtrong caſtle of St. Angelo, which has a communication with the town by a bridge. The inhabitants amount to about three thouſand, and formerly the grand maſter reſided here. The palace of the inquiſition and the arſenal are reckoned among the principal buildings.

Malta, Medina, or Citta Vecchia, that is the Old Town, are different names for a fortified town that ſtands on a hill in the middle of the iſland, and was formerly above twice as large as it is at preſent. It is the reſidence of the biſhop of this iſland, and has ſeveral churches and convents.

Five miles from Malta is the iſland of Gozo, which is twelve miles in length, and ſix in breadth. It enjoys a very wholeſome air, and, though mountainous, is almoſt all cultivated; for the inhabitants delight more in tilling the land for corn, than in any other ſort of huſbandry; though it has many places well watered, and fit for gardening and paſture. It has ſome good harbours, defended by three forts, and the inhabitants amount to about three thouſand.

CHAP. XXVI.

Of the Kingdom of SPAIN.

SECT. I.

Its Names, Situation, Extent, Climate, and a particular Account of the Pyrenean and other Mountains; with the Minerals they contain. The Rivers, Vegetables, and Animals of the Country.

THIS country was formerly known by the name of Iberia and Heſperia, which, like that of Spain, is thought to be derived from three of its antient kings; but it has never yet been proved that theſe kings ever exiſted. It is not improbable, that the firſt people who came into this country ſeeing nothing beyond the ocean, which environed Spain on three ſides, imagined themſelves at the end of the world, and therefore aſſumed the name of Iberians, from a Phœnician word of that import; calling the country itſelf Iberia, and giving the name of Iberus to the largeſt river they met with. The Greeks called this country Heſperia, from its weſtern ſituation; and to diſtinguiſh it from Italy, which had the ſame name, called it the Farther Heſperia. It was uſually called by the Romans Hiſpania; but this is now altered by the inhabitants to Eſpana, which ſome derive from the Phoenician word Sepan, or Sepana, a rabbet, this country being formerly over-run with theſe animals. The French call this country Eſpagne, and we by contraction Spain.

This country, including Portugal, is the moſt weſtern part of all the continent of Europe, and is a large peninſula encompaſſed on every ſide by the ſea, except on that part which joins to France, from which it is ſeparated by a continued range of mountains called the Pyrenees; on the eaſt and ſouth it is bounded by the Mediterranean, the ſtreights of Gibraltar, and the Atlantic ocean; on the weſt by that ocean, and by Portugal, which extends along the coaſt a conſiderable diſtance; on the north by that part of the Atlantic ocean called the Bay of Biſcay, and alſo by the Pyrenean mountains; extending between the thirty-ſixth and forty-fourth degrees of north latitude, and between the tenth degree weſt and the third degree eaſt longitude, that is, thirteen degrees from eaſt to weſt, and eighteen from north to ſouth. The whole circuit of Spain, in a continued direction from town to town, and from port to port, excluſive of the windings of the creeks and bays, amounts to about ſix hundred leagues, or eighteen hundred miles, including Portugal, which was antiently a part of Spain.

In moſt of the provinces the air is pure and dry, but in June, July, and Auguſt, the days are extremely hot, eſpecially in the middle of the country, yet in the night a traveller ſhivers with cold. Towards the north, and in the mountainous parts, the air is, as uſual, cooler than in the ſouth, and near the ſea contracts a moiſture. It ſeldom rains, and the winter froſts are never ſo ſevere as to bind up the ground. The want of temperature in the heat, and the coolneſs of the night, is the reaſon that ſeed lies a long time in the ground before it ſhoots up; ſometimes indeed a cool breeze, by the Spaniards called a gallego, iſſues from the mountains of Galicia; and this, without great precaution, occaſions violent, and ſometimes fatal colds.

Among the many mountains in Spain, the Pyrenees are the moſt remarkable. Theſe ſeparate Spain from France, and extend from the Mediterranean to the Atlantic ocean, which is about two hundred and twelve miles, and in ſome places are above an hundred miles in breadth. They begin at Vendres, a ſea-port in the province of Rouſillon in France, and extend to Fuentarabia, but under different names. Near Rouſillon they diwide themſelves into two branches; that which ſeparates the country from Languedoc is called Antipyrenee; the other, between it and Catalonia, is termed Col de Pertuis: between Gaſcony and Amazon lie the mountains of Jaca and St. Chriſtine, and the famous Pic de Midi, which reſembles a ſugar-loaf ſtanding on a table, and is of a prodigious height. In Navarre, between Pampelona and St. Jean de Pie de Port, are the mountains of Adula and Roncevaux. Over theſe mountains there are only five paſſages out of Spain into France, and even theſe are narrow; one of them leads from St. Sebaſtian's in Guipuſcoa, to St. Jean de Luz; the ſecond from Maya in Navarre to Annoa; the third from Taraffa in Navarre to Pie de Port; the fourth through the county of Comminges in Arragon; and the fifth leads from Catalonia to Languedoc.

The very valleys between the mountains are covered with thick and lofty woods. The other mountains of Spain

Spain are Sierra d'Occa, or mount Idubeda, which is a chain extending from the Pyrenees to Tortoſa. At the beginning it forms an arm traverſing all Spain from eaſt to weſt, as far as Cape Finiſterre. To the ſouth, below mount Cayo, another branch, called Oroſpeda, riſes gradually, and near the ſource of the Tagus takes the name of Sierra Molina, which, farther ſouth, it changes for that of Sierra d'Alcaraz.

Here the chain turns off to the ſouth-weſt, ſeparating the kingdom of Granada, and extending to the Streights of Gibraltar.

According to ancient writers, the mountains of Spain are very rich in gold and ſilver; but the Spaniards chooſe rather to import theſe metals from America than to have the trouble of ſearching for them in their own country; but the iron mines are worked here with great ſkill. Spain has alſo other minerals, as lead, tin, cinnabar, quickſilver, alum, vitriol, copperas, lapis calaminaris, and likewiſe cryſtal, amethyſts, and other gems.

The great and ſmall rivers in Spain are ſaid to amount to an hundred and fifty; the principal of theſe are the Minho, which riſes in Gallicia; the Douro, which has its ſource in Old Caſtile, in a part of the mountains of Idubeda; the Tagus riſes in a mountain in New Caſtile; the Guadiana alſo iſſues from New Caſtile, deriving its ſource from ſome lakes, at a ſmall diſtance from which it takes its courſe between high mountains, and thus conceals itſelf for near three miles, till it ſhews itſelf again in ſome fens, but ſoon hides itſelf again amidſt reeds and rocks, which probably gave occaſion to the miſtake of loſing itſelf under-ground. The Guadalquiver, or Great River, receives its courſe in Andaluſia, where ſeveral ſmall ſtreams iſſuing from mount Segura unite in a lake, from whence this river flows. From Corduba to Seville, it is paſſable only by ſmall craft; but from the laſt city to its mouth it is navigable by ſhips of burthen, though dangerous on account of its many ſand-banks. The Ebro riſes in the mountains of Santillane, in Old Caſtile, from two ſprings, and receives upwards of thirty brooks in its courſe, becoming navigable near Tudela: its navigation, however, is dangerous, on account of its many rocks: at length it diſcharges itſelf with great rapidity into the Mediterranean, and its mouth forms the little iſland of Alfacqs:

The country in general labours under a great ſcarcity of corn, which is principally owing to the neglect of agriculture; for though the ſoil be in many places extremely dry, and the growth of vegetables obſtructed in the day-time by the exceſſive heats, and by the intenſe cold of the nights, yet it appears from hiſtory, that Spain formerly enjoyed great plenty of corn. It however abounds in the moſt delicious fruits, as figs, grapes, oranges, lemons, pomegranates, pears, peaches, almonds, cheſnuts, common nuts, &c. and alſo produces very good ſaffron. The Spaniſh wines, particularly ſack, are eagerly bought up by foreign nations; and the value of the wines and raiſins annually exported out of the country about Malaga alone, amounts to a million and an half of piaſtres, an imaginary coin of about three ſhillings and ſeven pence value.

Several parts of the country alſo produce ſugar canes. Spain likewiſe enjoys great plenty of exquiſite honey, and ſilk in abundance; but little flax and hemp. Salt is exported in conſiderable quantities, a great deal of ſea-ſalt being made in the maritime parts of Andaluſia, Catalonia, and Valencia, where the ſun ſerves inſtead of fire. A prodigious quantity of pot-aſh is alſo exported from Spain.

In this country are alſo innumerable flocks of fine ſheep, part of which, during winter, feed in the plains, and in ſummer are driven up into the mountains; and from theſe are produced the beſt wool: others are always kept in one place. The number of ſhepherds in Spain has been computed at forty thouſand. The beſt wool is that of Old Caſtile, though the Spaniſh wool is, in general, extremely fine and valuable. Andaluſia and Aſturia are particularly famous for their fine horſes. There are here alſo a great number of large and handſome mules, ſome of which are ſeventeen hands high, and carry very heavy burdens; but Spain has few horned cattle. In Andaluſia are caught the wild bulls for the bull-fights.

The maritime parts of the country, particularly thoſe of Gallicia and Andaluſia, abound in fiſh, and, among others, in ſturgeon, tunny, ſalmon, haddock, lampreys, &c. but for want of a proper improvement of the fiſhery, Spain, according to Uſtariz, annually purchaſes ſalt-fiſh from foreigners to the amount of above three millions of piaſtres.

SECT. II.

The Manners and Cuſtoms of the Spaniards, the Reaſon why Spain is thinly inhabited, and of their Poverty, notwithſtanding the immenſe Quantity of Gold and Silver ſent from America. Their Language, Religion, and the Inconveniences ſuffered by Travellers.

THE Spaniards are grave and ſolemn in their behaviour, and are not always dreſſed in a ſhort cloak and coat, nor do they always appear abroad with a long ſword, curled whiſkers, and a pair of ſpectacles on the noſe. They are remarkable for frugality, love of pomp, fidelity, valour, intrepidity, and abhorrence of drunkenneſs; they are very jealous of their honour, when once engaged; and the baron de Monteſquieu obſerves, in his Spirit of Laws, that "The Spaniards have been in all ages famous for their honeſty. Juſtinian mentions their fidelity in keeping whatever was entruſted to their care; they have frequently ſuffered death rather than reveal a ſecret. They have ſtill the ſame fidelity for which they were formerly diſtinguiſhed. All the nations who trade to Cadiz truſt their fortunes to the Spaniards, and have never yet repented it."

On the other hand, they are univerſally too much given to women, and their jealouſy, where either their wife, daughter, ſiſter, or even miſtreſs, is concerned, ſeldom fails to end in bloodſhed; for they think no means too cruel, baſe, or unjuſt, to wipe off any ſtain that is caſt upon their honour, or to gratify their revenge. Pride of birth is no where carried to a greater height; and the inſinuation that a man is deſcended from the Moors, is ſufficient to make him ſtab the ſlanderer, or procure his being privately aſſaſſinated. In ſhort, they have a mixture of the moſt amiable virtues and the moſt ſhocking vices; and while they affect a haughty air to thoſe with whom they are unacquainted, no people in the world are more courteous to thoſe with whom they are intimate.

As to their food, they are very moderate in their eating, and can make a meal of olives, a ſallad, a little garlic, or a few roots; but perſons of fortune have ſeveral expenſive diſhes. The men dine by themſelves, and their wives and children eat together.

The women are generally very lean, and very amorous; they have black eyes, flat boſoms, ſmall feet, and long garments. They ſit croſs-legged on carpets, a cuſtom which they derived from the Moors. They are much addicted to painting, though they are kept very much at home by the jealouſy of their huſbands.

The kingdom of Spain is ſaid to contain about ſeven millions and a half of inhabitants; but it would ſupport more than twice that number, was it properly cultivated. It is ſaid, in the times of the Goths and the Moors, it contained between twenty and thirty millions of people, and might yet be very powerful, if it had no poſſeſſions in America; but now it is thinly inhabited. The uſual reaſon aſſigned for this is, firſt, the expulſion of the Moors; for when Ferdinand the Pious took Seville from them, in 1248, the ſeveral diſtricts of this kingdom contained a hundred thouſand populous towns and villages; and when Ferdinand the Catholic reduced the kingdom of Granada, it conſiſted of fifty fortified towns, beſides an infinite number of ſmaller places, the greateſt part of which were afterwards demoliſhed. Another grand cauſe of the want of inhabitants is the decay of arts and manufactures which formerly flouriſhed here, and the heavy taxes by which the people are oppreſſed. But perhaps the greateſt enemy to the populouſneſs of the country are the convents, by which no leſs than two hundred thouſand perſons are reſtrained from propagating their

ſpecies: for if a family have more than one or two ſons, the eldeſt muſt at any rate be gentlemen, and the reſt monks. The way of living among the Spaniards, particularly in their eating and drinking, alſo contributes to render them unfruitful; for in the uſe of ſpices, particularly of pepper, they know no bounds. Their wines are alſo ſtrong and inflammatory; and yet, after a meal, they add to theſe a very fiery ſort of brandy. On the other hand, they are no leſs immoderate in the uſe of cooling foods and drinks, and the conflict of ſuch diſcordant qualities muſt neceſſarily produce great diſorders in the body. Leanneſs is here ſo general, that a fleſhy corpulent man is hardly to be met with; and there are few or no countries where loſs of ſight is ſo common.

Small as the number of inhabitants are, yet their poverty is remarkable, tho' they not only live in a country capable of ſupporting many millions more than they, in the greateſt plenty, and have prodigious ſums poured in from America. Savala computes that, from the year 1492, when America was diſcovered, to 1731, above ſix thouſand millions of pieces of eight in regiſtered gold and ſilver have been imported into Spain, excluſive of far greater ſums unregiſtered, beſides thoſe received by foreign merchants from the Spaniſh dominions in America. It even appears that, one year with another, Spain receives from her American colonies above twenty-ſix millions of pezos, or pieces of eight: yet Uſtariz computes, that all the coined and wrought gold and ſilver in Spain, including that belonging to churches and private perſons, ſcarcely amounts to one hundred millions of piaſtres.

The two principal cauſes of this poverty are the want of induſtry in the Spaniards in agriculture, handicrafts, and manufactures, which occaſion the country to be annually drained of many millions for corn and foreign goods. The ſecond is, the inſatiable avarice of the clergy, who practiſe a thouſand arts to obtain the poſſeſſion of the wealth of the country. To them not only belong moſt of the towns and eſtates, and theſe like their perſons are exempt from all public taxes, but they alſo turn both the living and the dead to their profit; while the laity of all ranks implicitly comply with all their ſordid views. The Mendicant friars, who have divided all families among themſelves, tax every one according to their condition; and when they knock at a door there is no refuſing them, though they ſcarce condeſcend to return thanks for what they receive. All wills are drawn up by them, and that commonly when the teſtator is near the laſt gaſp, by which means they often impoveriſh widows and children, by aſſigning in the will the rightful inheritance to what they unjuſtly call pious uſes. Few marriages are made without their negotiation; and as by this means they become father confeſſors, they are the deſpotic lords of the whole family; the caſh, the manner of living, the equipage, children, and ſervants, are all ſubject to their controul. Their commerce, which is free from all duties and payments, and carried on partly by privilege and partly clandeſtinely, is likewiſe a rich fund to them, eſpecially if conſidered with reſpect to their aſtoniſhing failures, without paying a ſhilling, and their ſelling the ſanction of their names to cover the merchandize of others; an abuſe which the government has in vain endeavoured to ſuppreſs.

The language uſed in moſt of the provinces is that which they call Caſtellano, and Eſpannol, or Spaniſh, which has the neareſt affinity to the Latin, both in the words and compoſition, of any language in Europe: but in Catalonia and Valentia the common people uſe a dialect of the old French, or rather Gaſcon; but ſo mixed and corrupt, that it is not underſtood by any other provinces.

The popiſh religion is practiſed in Spain with the greateſt ſcrupuloſity and pomp. In no country is there more praying and ceremony, and leſs real chriſtianity. The Virgin Mary is more reſpected and adored among the Spaniards than God himſelf, as appears even from their compliments: the expreſſion of God be with you, the uſual compliment at parting, does not convey the ſame mark of affection as that of the Virgin be with you, which they imagine expreſſes a much warmer cordiality. Thus ſwearing by the Supreme Being is eſteemed a triſle, but by the Virgin is conſidered as the height of impiety. The Spaniards are indeed mere ſlaves to the clergy, who ſo artfully hoodwink them that they do not perceive the chains of their ſlavery, or if they perceive them bear them willingly; and, when they gall them, dare not ſo much as vent a ſigh after freedom. Under any diſappointment, either of views of avarice or ambition, the clergy have their dreadful inquiſition at hand, which ſeizes both on honour and life; ſo that perſons of the moſt unſpotted innocence eſteem it a particular favour to come off only with the loſs of their fortunes. In order to be taken up for a Jew or Mahometan, and conſequently to be ſtripped not only of all one has, but to be burnt alive, it is ſufficient for a perſon not to love pork, and not to have worked on Friday or Saturday, though the informer be only ſome menial ſervant, moſt of whom are ſpies to the inquiſition, and betrayers of the families in which they live.

The court of inquiſition was firſt introduced in 1478, by king Ferdinand the Catholic, and queen Iſabella, at the ſuggeſtions of John de Torquemada, a Dominican, who was the firſt inquiſitor. At Madrid it conſiſts of an inquiſitor-general and ſix counſellors, one of whom is always a Dominican, two judges, one fiſcal, and ſeveral other officers and aſſiſtants. The number of the families who are diſperſed all over Spain, as ſpies and informers, are computed at about twenty thouſand. Under this ſupreme court are others in the principal cities in the kingdom, and even in the Canary iſlands, Mexico, Carthagena, and Lima. But the Rev. Mr. Clarke obſerves, that the power of this tribunal is now declining very viſibly, and ſeems haſtening to its fall; for the preſent king of Spain has taken a bolder ſtep to humble the inquiſition than any of the Philips or Charleſes who went before him. The inquiſitor-general having thought proper to publiſh a liturgy which the king had licenſed without conſulting his majeſty, the king, with a very proper ſpirit, put the inquiſitor under an arreſt, and immediately ſent him guarded with a file of grenadiers into exile in a convent at a great diſtance from Madrid. So determined and reſolute a meaſure as this alarmed the whole body of the clergy; they moved heaven and earth to obtain the inquiſitor's recall; but for ſome time the king remained inflexible. The common people were now taught by the prieſts to ſay that his catholic majeſty was no good catholic in his heart. At length, however, the king reſtored the inquiſitor to his liberty; but in ſuch a manner, as that prelate had no reaſon to triumph; for at the time of releaſing him his majeſty publiſhed a very ſpirited edict, which was dated on the twenty-ſeventh of November, 1761, by which he greatly limited their power.

Amidſt the great decreaſe of the inhabitants in Spain, the body of the clergy have ſuffered no diminution; but has rather been gradually increaſing, inſomuch that Uſtariz computes the number of eccleſiaſtics and their ſervants at two hundred and fifty thouſand. The king nominates all biſhops and archbiſhops, who are afterwards confirmed by the pope. In 1753 an agreement was entered into between the king and the pope, wherein the latter ceded to the former the nomination to all ſmall benefices; which has not only conſiderably ſtrengthened the king's power over the clergy, but alſo keeps thoſe vaſt ſums of money in the country, which uſed to be expended in journies to Rome, for the ſoliciting of benefices. The king can alſo tax the eccleſiaſtical poſſeſſions according to his pleaſure. However, the power of the pope and his nuncio is ſtill very extenſive here, though no bull can be publiſhed without a written permiſſion from the king.

One of the greateſt inconveniences a ſtranger finds in this country is, the miſerable accommodations to be met with on the public roads. The Rev. Mr. Clarke ſays, you muſt abſolutely carry your proviſions and bedding along with you, and even then, unleſs you can bear fatigue well, lie down in your cloaths, eat eggs, onions, and cheeſe; unleſs you can ſleep whilſt your mules reſt, riſe the moment you are called, and ſet out early in the morning before the heat comes on, you will fare ill as a traveller. It is a good method to carry dried tongues with you, hard eggs, ſome portable ſoup, tea, ſugar, and ſpirituous liquors, not forgetting even pepper and ſalt; and whenever

whenever you meet with good bread, meat, fowls, and wine, always to buy them whether you want them or not, becauſe you know not what to-morrow may produce. A knife, fork, and ſpoon, are abſolutely neceſſary, for you will find none; nor ſhould you omit a pair of ſnuffers, a candleſtic, and ſome wax candles; but great care muſt be taken to carry neither tobacco nor rum, for they are contraband, and may occaſion the detention, if not the ſeizure of your baggage. You ſhould alſo have as few books as poſſible, for the inquiſition will ſeize them.

SECT. III.

Of the Diverſions of the Spaniards; particularly of their Bull-Feaſts, Plays, and other Amuſements.

WE ſhall begin our account with the diverſions and paſtimes of the Spaniards, with a deſcription of the bull-feaſt exhibited in the Plaça Mayor at Madrid, upon occaſion of his catholic majeſty's public entry into his capital, on the fifteenth of July, 1760, which we ſhall give from the account publiſhed by the Rev. Mr. Clarke. The ſquare, which is large, was thronged with people, and all the balconies ornamented with different coloured ſilks, and crowded from the top to the bottom of the houſes; the avenues to the ſquare were built up into balconies, and a ſloping ſcaffold placed round for the common people, and raiſed about eight or nine feet from the ground.

Firſt came the coaches of the cavaliers, four in number, of a ſingular make, with glaſſes at the ends, and quite open at the ſides: the cavaliers were placed at the doors of their coaches, from whence they bowed to the people in the balconies as they paſſed round the ſquare, and were accompanied by their ſponſors, the dukes of Oſſuna, Banos, Arcos, and Medina Cæli. Before the royal family came a company of halberdiers, followed by ſeven or eight of the king's coaches, preceding his coach of ſtate, which was extremely rich, with red and gold ornaments, and beautiful painted pannels. Then came a coach with ſome of the great officers; and next came the king and queen in a very ſumptuous coach of blue, with all the ornaments of maſſive ſilver, and a crown at the top: the trappings of the horſes were likewiſe ſilver, with large white plumes. Theſe were followed by the coaches of the prince of Aſturias, the two infantas, and Don Lewis, with their attendants.

Their majeſties ſeated themſelves oppoſite to the balcony of the Engliſh ambaſſador, in which was our author, in a gilt balcony, with a canopy and curtains of ſcarlet and gold. On the right hand of the king's balcony were placed the reſt of the royal family, and on the left the gentlemen of the bed-chamber in a row; all dreſſed in a very fine uniform of blue and red, richly embroidered with gold. The halberdiers marched from the king's balcony, which was in the center of one ſide, and forming themſelves into two lines fronting different ways, cleared the ſquare of the crowd, who retired into the ſcaffolds erected for them; after which the halberdiers formed themſelves into a line before the ſcaffold under the king's balcony. Then two companies of boys, dreſſed in an uniform, with caps and red taffety jackets, came with buckets of water in their hands and watered the ſtage as they croſſed over it to the oppoſite ſide: the ſix chief alguazils of the city now came mounted on fine horſes, covered with trappings, and dreſſed in the old Spaniſh habit, black, with ſlaſhed ſleeves, great white flowing wigs, and hats with plumes of different coloured feathers, advanced towards the king's balcony, under which they were obliged to ſtay the whole time to receive his orders, except when they were frightened away by the bulls.

At length the troops belonging to the cavaliers aſcended the ſtage in four large companies dreſſed in ſilk Mooriſh liveries, richly and elegantly ornamented with lace and embroidery: theſe firſt bowed to the king's balcony, and then went in proceſſion round the ſquare; and from the elegant ſingularity and variety of their uniforms appeared extremely beautiful. After them came the four knights in the old Spaniſh dreſs, with plumes in their hats, mounted on fine horſes: each held in his hand a ſlender lance, and was attended by two men on foot dreſſed in light ſilk of the colour of his livery, with cloaks of the ſame; theſe never forſake his ſide, and are his principal defence. The cavaliers then diſpoſe themſelves for the encounter, the firſt placing himſelf oppoſite to the door of the place where the bulls are kept, and the other at ſome diſtance behind him.

At a ſignal given by the king the doors opened, and the bull appeared, to the ſound of martial muſic, and the loud acclamations of the people, when ſeeing one of the attendants of the firſt cavalier ſpreading his cloak before him, he aimed directly at him; but the man eaſily avoided him, and gave his maſter an opportunity of breaking his ſpear in the bull's neck. In the ſame manner the bull was tempted to engage the other cavaliers, and always with the ſame ſucceſs, till having received the wounds with their lances, he was encountered by the other men on foot, who, after playing with him with incredible agility as long as they thought proper, eaſily put an end to him by thruſting a ſword either into his neck or ſide, which brings him to the ground, and then they finiſh him at once, by ſtriking a dagger, or ſword, behind his horns into the ſpine, which is always immediate death. After this the bull is hurried off by mules finely adorned with trappings.

After the knights were ſufficiently tired with theſe exploits, the king gave them leave to retire; bulls were then let out, one at a time, from another door; theſe were of a more furious nature, and were encountered entirely by men on foot, who were ſo far from fearing their rage, that they ſtrove to increaſe it, by darting at their necks, and other parts, little barbed darts ornamented with bunches of paper, ſome of which were filled with gun-powder, and were no ſooner faſtened to the bull than they went off like a ſerpent. Nothing can be imagined more tormenting than theſe darts, but the amazing dexterity with which they are thrown, takes off the attention from its cruelty. They alſo dreſs up goats ſkins, blown up with wind, and increaſe the fury of the bull by placing them before him, which makes a very ridiculous part of the entertainment. Many of the bulls, however, would not attack them; and one of the moſt furious that did, ſhewed more fear than in encountering his moſt ſturdy antagoniſt. They alſo baited one bull with dogs, which ſhewed as much courage as any of the bull-dogs in England.

My apprehenſions, ſays our author, were at firſt principally excited for the men on foot; but the knights are in much more danger, their horſes being too full of fire to be exactly governed; they cannot therefore ſo well avoid the aim, and are liable to be every moment overthrown with their horſes, if their attendants by their ſide do not aſſiſt them. Two beautiful horſes were nevertheleſs gored; one of which was overthrown with his rider, but fortunately the man eſcaped any miſchief from his fall. The courage of theſe horſes is ſo great, that they have been often known to advance towards the bull, when their bowels were trailing on the ground.

This ſpectacle, he adds, is one of the fineſt in the world, whether it be conſidered merely with reſpect to the ſplendor of the ſight, or as an exertion of the amazing agility and dexterity of the performers. The Spaniards are ſo devoted to it, that even the women would pawn their laſt rag to ſee it. Nothing can be imagined more crowded than the houſes even to the tops of the tiles, and dearly enough do they pay for their pleaſure, pent together in the hotteſt ſun, and with the moſt ſuffocating heat that can be endured. This is certainly a remnant of Mooriſh, and perhaps Roman barbarity, and will not bear the ſpeculations of the cloſet, or the compaſſionate feelings of the tender heart; but, on the other hand, it has all the good effects of chivalry, in exciting in the minds of the ſpectators a diſpoſition to hardy actions, without the horror that prevailed in former times, of diſtinguiſhing bravery to the prejudice of our own ſpecies. It teaches to deſpiſe danger, and that the ſureſt way to overcome it is to look it calmly and ſtedfaſtly in the face, and to afford a faithful and generous aſſiſtance to thoſe engaged with us in enterprizes of difficulty.

The

The bull-feaſt in the Plaça Mayor is never exhibited but upon ſome extraordinary occaſion, as the acceſſion or marriage of their kings, and is attended with very great expence, both to his majeſty and the city. But there is a theatre built without the walls, where there are bull-feaſts every fortnight, which to connoiſſeurs are greatly preferable to the others, the bulls being more furious, and the danger greater to thoſe who fight them; but there is little difference in their manner of engaging them.

We ſhall now give ſome idea of the Spaniſh theatre, which our author viſited at the ſeaſon for acting the autos, or plays, in ſupport of the catholic faith. The theatre made a good appearance with reſpect to its ſize and ſhape; but was rather dirty and ill lighted, and, what was worſe, had an equal mixture of day-light and candles. The prompter's head appeared through a little trap-door, above the level of the ſtage; and he read the play loud enough to be heard by the people in the boxes. The pit made a motley appearance, many ſtanding in their night-caps and cloaks; while officers and ſoldiers were interſperſed among the dirtieſt mob. The ſide and front boxes were filled by perſons well dreſſed, and that which anſwered to our two ſhilling gallery was filled with women, all in the ſame uniform, a dark petticoat, and a white woollen veil. The actors were dreſſed in richer cloaths than thoſe in England, and theſe they are perpetually changing, in order to ſhew the expenſive variety of their wardrobe.

After ſome tedious and inſipid ſcenes, came on an interlude of humour. One of the comedians addreſſed a lady who ſung very prettily, and offered her a purſe of money: in the mean while a man brought in three barber's blocks which he placed upon the ſtage, which he firſt dreſſed in mens cloaths; but then undreſſing them, dreſſed them in womens apparel, after which came in three men who had a fancy to tempt theſe three ladies; but they were inflexibly coy, and it was not long before their gallants diſcovered their miſtake. At length, after ſome long tireſome unintereſting ſcenes full of fuſtian and bombaſt, an actor, dreſſed in a long purple robe, in the character of Chriſt, preached to the four quarters of the world in their proper dreſſes; Europe and America heard him gladly, but Aſia and Africa remained incorrigible. Our Saviour was ſoon after blind-folded, buffeted, ſpit upon, bound, ſcourged, crowned with thorns, and compelled to bear his croſs; when he kneeled down and cried, *Padre mi! Padre mi!* "Father, father, why haſt "thou forſaken me?" After this the fellow placed himſelf againſt the wall, with his hands extended, as if on the croſs, and there imitated the expiring agonies of the bleſſed Saviour; after which one of the actreſſes unbound him, took off his crown and ſcarlet robes, and he having put on his wig and coat, joined the reſt of the actors in a dance. After this one of the actreſſes, in a very long ſpeech, explained the nature, end, and deſign of the ſacraments; and the play was concluded by Chriſt appearing in a ſhip triumphant.

Soon after our author went to ſee a regular comedy, and there were two other Engliſh gentlemen in the ſame box with him. They underſtood very little of the deſign of the firſt act; they ſaw a king, a queen, an enchantreſs, and many other pretty delightful ſights; but the interlude with which it was concluded was extremely low. The ſcene was intended for the inſide of a Spaniſh inn, during the night: there were three feather-beds, and as many blankets brought upon the ſtage; the queen and her maids of honour perſonated the miſtreſs of the inn and her maids; and accordingly fell to making the beds. After this ſix men came in to lie there, and one of them being a miſer had rolled up his money in twenty or thirty pieces of paper. They then undreſſed before the ladies by pulling off ſix or ſeven pair of breeches, and as many coats and waiſtcoats, and got into bed two by two: when behold, the jeſt conſiſted in ſeeing them kick the cloaths off one another, and then fight, as the ſpectator is to ſuppoſe, in the dark. "The abſurdity of this "ſcene, and the incomprehenſible ridiculouſneſs of it, "made us, ſays our author, laugh immoderately. The "ſight of the feather-beds, the men kicking and ſprawl-"ing, the peals of applauſe that echoed through the "houſe, were truly inconceivable; though, I believe, "our neighbours in the next box thought we laughed "at the wit and humour of the author. It was a ſcene "that beggars all poſſible deſcription, and I defy any "theatre in Europe, but that of Madrid, to produce "ſuch another."

When this interlude was finiſhed, there ſucceeded ſome other ſcenes between the king, queen, enchantreſs, and the reſt of the actors. Five or ſix of them all at once drew their ſwords upon the enchantreſs, who parried them with her wand, and, to their great amazement, retired unhurt into her cell. At other times the enchantreſs killed with a look, and reſtored to life with a ſecond. In ſhort, after ſeveral ridiculous incidents, the enchantreſs renounces the devil and all his works, and in the concluſion embraces the catholic faith, and declares ſhe will adhere to that alone. But it can hardly be ſuppoſed, that theſe abſurd dramatic pieces are the beſt of the kind; and indeed they are ſaid to have ſome that are excellent, as thoſe of Lopez de Vega, which come neareſt to our Shakeſpeare.

The taſte for gallantry and dancing prevails in Spain univerſally, and they are the two ruling paſſions of the country. The latter is ſo much their favourite entertainment, that their greateſt matrons never think themſelves excluded by age from this diverſion; and you may ſee the grand-mother, mother, and daughter, all joining in the ſame dance. The two moſt favourite and univerſal Spaniſh dances are the *ſequedillas* and the *fandango*: the firſt is ſomething like our *hoy*; the ſecond is a very antient dance, and though originally Roman, yet the Spaniards have mixed ſomewhat of the Mooriſh along with it: they are exceſſively fond of it, and it is danced by the firſt nobility, as well as by the common people.

The military turn of the Spaniards appears in many of their diverſions, and even in the very terms and language they uſe at cards: *hombre* in Spaniſh ſignifies a man, and from thence we derive our game at ombre: the four principal cards are called *matadores*, or murderers, becauſe they win all others. *Spadillo* is the little ſword, or, as we call it, the ace of ſpades; for *ſpado*, in Spaniſh, ſignifies a ſword, and they are ſo painted on their cards.

It is uſual with the Spaniards both to breakfaſt and ſup in bed; their breakfaſt is uſually of chocolate, tea being ſeldom drank by them. Their dinner is generally a *pochero*, or beef, veal, mutton, pork, bacon and greens, &c. all boiled together. If it be a richer or more expenſive mixture of meats and delicacies, it is then termed an *olla podrida*, or what we call an *olio*. They are fond of garlic; and it is a proverb emong them, that olives, ſallad, and radiſhes, are food for gentlemen.

The Spaniards generally ſleep after dinner.

Though the men and women all wear the ſame dreſs in the ſtreet and at maſs, yet the ladies in their private viſits wear as great a variety of dreſs, and of a much richer ſort than thoſe in England. The ſpirit of jealouſy is ſo far worn out, that the married ladies of Madrid have each their profeſſed lover, juſt as the Italian ladies have their *ciciſbeo*.

Their evening's airing is to the laſt degree inſipid: you ſee nothing but a ſtring of coaches following one another, filled with people of faſhion; here a duke and his confeſſor; there a couple of ſmart young abbés; here a whole family grouped together, huſband, wife, and children. When they take their airing on gala, or court days, all their footmen are dreſſed in laced liveries, with plumes of feathers in their hats.

The number of ſervants kept by the grandees, and people of the firſt faſhion, is immoderate. Some of them have three or four hundred domeſtics, and the Engliſh ambaſſador, in compliance with the taſte of the country, keeps near a hundred. As their coaches are uſually drove with four mules, they have two poſtillions; with generally four and ſometimes ſix footmen behind their coaches. In the hot weather they take out the ſides and backs of their coaches, for the ſake of the air.

They ſeldom uſe ſedans; and when they do, they have always two footmen who go on each ſide the hindmoſt chairman, in order to hold him up, leſt he ſhould fall; there

there are two on each ſide of the ſedan, and two who follow behind with lanthorns, though it be in the middle of the day. Thus they have generally nine ſervants with a coach, and ten with a ſedan, beſides thoſe who go before.

SECT. IV.

Of the Capacities and Genius of the Spaniards; the Obſtructions to Learning, and their Skill in Divinity, Hiſtory, Phyſic, and Poetry. Their Deficiency in manual Arts. The State of their foreign Trade; with a particular Account of the Spaniſh Coin, Weights, and Meaſures.

THE Spaniards are far from being wanting in capacity for the ſciences, yet little progreſs can be expected from them while they are debarred the uſe of their natural talents. The clergy not being very learned themſelves, it is a point of policy with them to ſuppreſs all ſcientifical knowledge among the laity; and in order to keep them in ignorance and ſubjection, they brand all literary reſearches with the name of hereſy. Hence, tho' Spain has no leſs than twenty-two univerſities, and ſeveral academies, among which is one at Valladolid for geography; yet are they under ſuch reſtrictions, that thoſe who attend them can never make any figure in literature. The bookſellers in Spain ſcarcely dare to keep a valuable book in their ſhops, on any remarkable and intereſting ſubject; the inquiſition being extremely vigilant in ſuppreſſing them, and concealing from the public whatever may tend to open their eyes. They have pretences always ready for ſeizing foreign books, though they have not the leaſt relation to religion. Indeed, moſt of the books publiſhed in the Spaniſh language are printed out of Spain, few printing-houſes being to be ſeen there, and the far greateſt part of their paper is imported from Genoa.

With reſpect to the preſent ſtate of divinity, it conſiſts, much as it formerly did, in the ſtudy of the fathers, councils and decrees of the popes and their canons, and in ſyſtems of Thomaſtic and Auguſtine theology. The knowledge of the learned languages, and explication of the text of the ſacred writings, have little to do with it. In this tract of criticiſm they are almoſt utter ſtrangers, though they are well verſed in caſuiſtry, which makes a conſtant part of the ſtudies preparatory to the paſtoral office.

In hiſtory the Spaniards have had many valuable writers; but it is dangerous to deſcend too near to the preſent time; beſides, his preſent majeſty has abſolutely forbid any of his ſubjects to write the hiſtory of Charles V.

In phyſic and ſurgery, Mr. Clarke ſays, they are at leaſt two centuries behind the Engliſh; but where the people are perſuaded that ſaints, miracles, and charms can be procured to cure the moſt inveterate diſeaſes, there muſt be little inclination to have recourſe to art. However, they ſtill practiſe copious bleeding in moſt diſeaſes, and botany is much ſtudied.

In poetry they have many writers, beſides the celebrated Lopez de Vega, who wrote the *Jeruſalem Conquiſtada*, tragedies, comedies, &c. Their ſongs have a wonderful air of ſimplicity, and in ſome of them are much ſentiment as well as dignity: thoſe upon love are extremely chaſte; and ſome have a pleaſing air of romance; but moral, grave, majeſtic, penſive, like the people themſelves.

The moſt celebrated writers of humour in proſe are Cervantes and Guevara; the moſt famous work of the latter is the *El Diablo Coxuelo*, which la Sage modernized into a romance, known in Engliſh by the title of The Devil on two Sticks.

There is here a want even of the moſt neceſſary trades; and of the few they have, the greateſt part are in the hands of the French, who are very numerous in this country; for the natives, beſides their averſion to work, diſdain to ſtoop to laborious employments. They are not, however, entirely without manufactures, eſpecially of ſilk and wool; but theſe fall far ſhort of that flouriſhing condition to which they might be brought: and as tradeſmen and merchants are looked upon with contempt, they have no ſooner amaſſed a competent fortune, than they leave off trade, procure a title, and ſet up for perſons of quality. The great duties likewiſe on Spaniſh ſtuffs render them dearer than the foreign. Thus the Spaniards part with the products of their own country, and with the treaſures of America, to foreigners, who ſupply them with bread, and every thing that can contribute to convenience and ſplendor. It has indeed been ſaid, that of late the Spaniſh manufactures are in a thriving way, and that they make very fine cloths, beſides gold and ſilver; but this will not probably be laſting; at leaſt it will be a long time before they are able to ſupply the wants of their own country, ſo as to exclude foreign manufactures.

Spain is extremely well ſituated for trade and navigation: they might be their own carriers; but this advantage they neglect, and leave it to other maritime nations, who turn it to a very good account. The Spaniards indeed deny them all acceſs to their poſſeſſions in America, and are ſo jealous of having that trade confined only to themſelves, that no foreign ſhips muſt even approach their coaſt: yet of this commerce, which is carried on in their own ſhips, they have the leaſt profit, they being little more than factors for the French, Engliſh, Dutch, and Italians, who ſend their goods to America by them, and have the greateſt ſhare in their returns of gold, ſilver, and other commodities.

The trade to America was formerly carried on by the flota and galleons. The flota, or Plate fleet, conſiſts of a certain number of ſhips, ſome belonging to the king, and others to merchants: theſe uſed to ſet ſail from Cadiz to Mexico about Auguſt, unlading at Vera-Cruz, and returning to Spain in eighteen or nineteen months.

The galleons were two men of war, called Capitana and Almiranta, which ſerved as convoy for eight or twelve ſhips that put to ſea from Cadiz every March or April. Their firſt port was Carthagena; from thence, by way of the Havannah, they returned to Spain. But ſince the years 1735 and 1737, the flota and galleons have been diſcontinued, and the trade to America carried on in regiſter ſhips, which any merchants may ſend, on obtaining permiſſion from the council of the Indies. Theſe ſail from Cadiz directly to Lima, Buenos Ayres, Maracaibo, Carthagena, Honduras, Campeche, and Vera Cruz.

In 1728 an excluſive charter was granted to a company for trading to the Caraccas, a permiſſion to the inhabitants of the Canary iſlands only excepted, who were allowed to ſend thither annually one regiſter ſhip, whoſe cargo was entirely to conſiſt of the produce of theſe iſlands. In 1756 another company was erected for trading to Hiſpaniola and Porto Rica, and ſending annually ten regiſter ſhips to the bay of Honduras, and the ports of the province of Guatimala.

The Spaniards alſo carry on a very conſiderable trade to the coaſts on the South Sea, between the town of Manila, in the iſland of Luconia, and the harbour of Acapulco on the coaſt of Mexico; but of this trade we have given a particular account in treating of Manila, Vol. I. page 102, 103.

With reſpect to the Spaniſh money, it is not eaſily underſtood; for the Spaniards make up moſt of their accompts, and form their calculations chiefly in theſe two ſpecies, the real de vellon, and the maravedi. The latter is the loweſt of the denominations of their copper money, and in this the king's accompts are kept; conſequently the revenues of Spain, and the wealth brought from Peru and Mexico, are annually computed by an integer of copper that is three times leſs than our farthing.

The real de vellon is the ſmalleſt piece of their ſilver money, and equals our two-pence half-penny, and two thirds of a farthing. But though it be the moſt uſual way in Spain to compute by the maravedi and the real de vellon, yet there are ſeveral other methods of calculation ſtill in force. Thus, penſions from the court, payments of the army, navy, &c. are ſet down in the regiſter of the Spaniſh finances in eſcudos and ducados, or copper crowns and ducats. Some accompts of merchants and private perſons are likewiſe kept in this way; but few things are bought and ſold but by the former computation of maravedis and reals.

In the office of decimal rents, or tythes belonging to the archbiſhop of Toledo, accompts are kept in the obſolete denomination of dineros, ten of which make a maravedi. There are no leſs than fifty clerks in this office; and how voluminous muſt their accompts be for above thirty thouſand pounds a year, that are kept in a denomination, the value of which is above thirty times leſs than an Engliſh farthing!

The ſmall denominations by which the Spaniards love to compute, renders their accompts, like themſelves, ſlow, tedious, and elaborate; but then they have this advantage, that they make their accomptants moſt minutely exact.

But our Engliſh merchants traffic chiefly in pieces of eight, and compute uſually by the piaſtre, or old diſuſed piece of eight, conſiſting of fifteen reals and two maravedis: or if they reckon by piſtoles, they mean the piſtole of ſixty reals, which is the common piſtole, and not the gold one of ſeventy-five and ten maravedis, otherwiſe called the *doblon effective de oro*.

To give a more perfect idea of the Spaniſh coin, the following is reduced to the Engliſh weights and value:

	£.	s.	d.
The old Spaniſh piſtole, 4 pen. wt. 8 gr.	0	17	4
The new Seville piſtole, 4 pen. wt. 8 gr.	0	17	4
The old double doubloon, 17 pen. wt. 8 gr.	3	9	4
The old double piſtole, 8 pen. wt. 16 gr.	1	14	8
The new Seville double piſtole, 18 pen. wt. 16 gr.	1	14	8
The half and quarter of theſe in proportion.			
The piaſtre of Spain, or Seville pieces of eight	0	4	6
The new Seville piece of eight — —	0	3	7
The Mexico piece of eight — ——	0	4	5
The pillar piece of eight — — —	0	4	5
The rial, or bit — — —	0	0	7

The Spaniſh weights are the arrobe, which is exactly twenty-five pounds Engliſh weight, four of which make a quintal or hundred: but yet the arrobe is not the ſame throughout all Spain; for the pound of Cadiz and Seville, and conſequently the arrobe, are much larger than thoſe of Caſtile.

In Spain almoſt every thing, whether dry or liquid, is ſold by the averdupois pound of ſixteen ounces, and conſequently by the arrobe: thus wine, oil, wood, coals, corn, bread, ſalt, &c. are ſold by the pound, and in large quantities by the arrobe.

The gold and ſilver-ſmiths weights are,

The quilate, or carrat, is four grains.
A tomin, equal to three carrats, twelve grains.
A caſtillan, equal to eight tomins.
The ounce, equal to ſix caſtillans and two tomins.
The mark is equal to eight ounces.

The liquid meaſures are,

Dos açumbres, or a gallon.
An açumbre, two quarts.
Half an açumbre, one quart.
A quartillo, one pint.

SECT. V.

A conciſe Hiſtory of Spain; the Titles and Arms of the King; of the Nobility, and the Orders of Knighthood. Of the Inauguration of the King, his ſeveral Councils and Courts of Juſtice, his Revenues and Forces.

WITH reſpect to the hiſtory of Spain, it will be proper to obſerve, that the ſouthern coaſt was antiently frequented by the Phœnicians for the ſake of commerce: after them the Carthaginians came in a hoſtile manner and reduced the country; but were in their turn diſpoſſeſſed by the Romans. Towards the beginning of the fifth century it was over-run by the Swabians, Alans, and Vandals; but theſe were ſoon ſubdued by the Viſigoths, who entered Spain under the command of their king Atolphus, or Adolphus. Witiſa, one of their kings, dying in the year 711, the kingdom was divided into factions, and the public revenues greatly diminiſhed by the wealth which the biſhops and clergy had accumulated. Such was the ſtate of the nation when king Roderic aſcended the throne, and to him is generally attributed, ſays Buſching, the overthrow of the Gothic kingdom in Spain, though his rape on the lady, or daughter of count Julian, who is ſaid, out of reſentment, to have inſtigated the Moors to invade Spain, has never been ſufficiently proved. It is, however, certain, that Spain was delivered up to the Moors by the craft and treachery of count Julian, and Oppa, archbiſhop of Seville; who not only ſpirited up the people clandeſtinely to revolt, but at the bloody battle of Xeres even deſerted to the Moors, which turned the ſcale againſt the Viſigoths. Thus the Moors, who were alſo called Arabians and Saracens, became maſters of the kingdom. This revolution happened in the year 714.

Pelagius, a prince of the Viſigoths, with a great number of the Gothic nobility, his followers, withdrew into Galicia, Biſcay, and the mountains of Aſturia: other bodies of the ſame nation diſperſed themſelves into Navarre, Arragon, and the Pyrenean mountains: thus the Gothic empire became divided into a number of petty ſtates; for Pelagius having, in 716, obtained a victory over the Moors, the remaining Goths broke out into inconceivable animoſities, and ſeparately laid the foundations of the kingdoms of Leon, Navarre, Arragon, and Sobrarbien; and of the earldoms of Caſtile, Barcelona, &c. Theſe ſmall ſtates were not only continually at war with the Moors, but with each other. Hence their frequent quarrels and alliances render their hiſtory very intricate. The kingdom of Caſtile and Arragon at length became ſuperior to the reſt; but though they were thrice united by marriage, they ſoon ſeparated again; till, in 1472, a perpetual union took place, by means of the marriage of Ferdinand, hereditary prince of Arragon, to Iſabella, heireſs of Caſtile, who, in 1473, became king and queen of Caſtile; and, on the death of Ferdinand's father, in 1479, of Arragon alſo. To Caſtile at that time belonged not only both the Caſtiles and Eſtramadura, but Andaluſia, Murcia, Leon, and the Aſturias; Navarre, Biſcay, Guipuſcoa, Alava, Rioja, and Galicia; Arragon included Arragon, Catalonia, Rouſillon, Valencia, and the iſlands of Majorca, Minorca, and Yvica.

Ferdinand, on his firſt obtaining this great kingdom, immediately erected the court of inquiſition; and, in 1491, by the conqueſt of the city of Granada, put an end to the dominion of the Moors in Spain, on which account the pope gave him the title of the Moſt Catholic king.

By the articles of capitulation on which Granada ſurrendered, Boabdil, the Mooriſh king, with his ſubjects, ſubmitted to do homage to Ferdinand and Iſabella, on condition of retaining the poſſeſſion of their kingdom and their laws, with the free exerciſe of their religion. But this capitulation was ſoon violated, and it being reſolved to put all to death who refuſed to be baptized, ſeveral hundred thouſands of them fled to Africa; and their Jewiſh ſubjects, who were very numerous, were baniſhed to Portugal.

Iſabella, the conſort of Ferdinand, now enabled the juſtly celebrated Columbus to undertake the diſcovery of new countries beyond the Atlantic Ocean, and in 1492 he ſailed to the Weſt Indies.

In 1504 king Ferdinand acquired, by ſtratagem, the whole kingdom of Naples. In 1509, he conquered Oran on the coaſt of Africa, and in 1512 made himſelf maſter of the kingdom of Navarre: by which the ſeveral ſtates of Spain were united into one body. In 1496 a marriage was concluded between Philip of Auſtria and Johanna, daughter to Ferdinand, which ſoon after cauſed the Auſtrian dominions to be united to the Spaniſh; for Charles V. grand-ſon to Ferdinand, in 1520, became both king of Spain and emperor of Germany; but in 1556 reſigned the empire in favour of his brother Ferdinand.

His ſon and ſucceſſor to the throne of Spain was Philip II. who alſo poſſeſſed Milan, with the ſeventeen provinces of the Netherlands, and the county of Burgundy; and in 1581 ſubdued Portugal. But attempting to govern as arbitrarily in the Netherlands, as his father had done in Spain, and at the ſame time introducing a kind of inquiſition for the ſuppreſſion of the Proteſtants, who

who began to be very numerous, occaſioned an almoſt general inſurrection, and a civil war commenced, in which the duke of Alva, the king of Spain's general, exerciſed great cruelties. They were then aſſiſted by Elizabeth, queen of England, and by France. Upon which Philip fitted out the moſt formidable fleet that ever ſailed upon the ocean; this was his boaſted invincible armada, with which he attempted to invade England; but it was in a great meaſure deſtroyed by the ſtorms of heaven and the bravery of the Engliſh.

Philip III. weakened his country by expelling a million more of the Moors, and the new converts that remained behind were perpetually perſecuted and tortured by the inquiſition.

Under Philip IV. Portugal ſhook off the Spaniſh yoke, and ſeveral other countries revolted. In 1648 that prince was obliged to acknowledge the United Provinces a free independent ſtate; and in 1659 he loſt all the county of Rouſillon. Charles II. was diſpoſſeſſed of a great part of what he enjoyed in other parts of the Netherlands, as likewiſe of Franche Compté, and by his death in 1700 his family became extinct.

Philip, duke of Anjou, grand-ſon to Lewis XIV. of France, by Charles's will, aſcended the throne of Spain; but this occaſioned thirteen years war between France and the houſe of Auſtria, till, by the peace of Utrecht, Philip's poſſeſſion was confirmed by ceding Gibraltar and Minorca to England, and Sicily to the duke of Savoy; the emperor Charles VI. being only able to obtain the Netherlands and certain dominions in Italy.

In 1717 Philip took Sicily and Sardinia from the emperor; but in 1720 acceded to the quadruple alliance, and renounced all claim to France, the Spaniſh Netherlands, Italy, Sicily, and Sardinia, which was confirmed in 1725 by the peace of Vienna, in which Charles VI. relinquiſhed all pretenſions to the crown of Spain: but in 1733 he procured his ſon Don Carlos to be inveſted with Naples and Sicily.

In 1739 a war broke out between England and Spain, after which king Ferdinand VI. at the treaty of Aix la Chapelle, found means to procure for his half-brother, Don Philip, the three duchies of Parma, Placentia, and Guaſtalla. Ferdinand died in 1758, when his brother Don Carlos, king of the Two Sicilies, aſcended the throne.

The titles of the king of Spain run thus: Charles III. by the grace of God king of Caſtile, Leon, Arragon, the Two Sicilies, Jeruſalem, Navarre, Granada, Toledo, Valencia, Galicia, Majorca, Seville, Cerdena, Cordova, Corſica, Murcia, Jaen, the Algarves, of Algezira, Gibraltar, the Canary Iſlands, the Eaſt and Weſt Indies, the Iſlands and Continent of the Ocean; archduke of Auſtria; duke of Burgundy, Brabant, and Milan, of Hapſburg, Flanders, Tirol, and Barcelona; lord of Biſcay and Molina, &c. He alſo enjoys the title of Moſt Catholic king, and ſince the year 1308 the hereditary prince is ſtiled prince of the Aſturias. The other royal children are called infantas.

The arms of Spain are a ſhield divided into four quarters, of which the uppermoſt on the right hand and the loweſt on the left contain a caſtle or, with three towers for Caſtile; and in the uppermoſt on the left and the loweſt on the right are three lions gules, for Leon; with three lilies in the center for Anjou.

The inferior nobility ſtile themſelves *cavalleros* and *hidalgos*; but enjoy no privileges above the burghers. However, the higher nobility, including the dukes, marquiſſes, and counts, who are ſtiled the *titulos*, or *titulados*; and particularly the grandees, who take precedence next the king and the princes of the blood, enjoy great privileges. They are divided into three claſſes, but conſider themſelves as being all upon an equality: yet when the king nominates a grandee, if he be of the firſt claſs, he kiſſes the king's hand, and returns his majeſty thanks covered; if of the ſecond, he does not cover himſelf till after the compliment; and if of the third, he does not put on his hat till he has kiſſed his hand, and returned to his place among the grandees who are preſent.

The pre-eminence of a grandee does not ſolely conſiſt of his being covered in the king's preſence; this being common to others, as cardinals, nuncios, archbiſhops, and the ambaſſadors of crowned heads; for at an aſſembly of the ſtates, or the nomination of a king, they take place of all temporal lords, the conſtable and amirant of Caſtile excepted. They enjoy all the privileges of a duke, though no dukes by title. When the king takes the air on horſeback, they ride next to his perſon, the maſter of the horſe only excepted, who by virtue of his office rides by the king's ſide. The king in writing or ſpeaking ſtiles them prince or couſin-german. At an audience of the pope they are permitted to ſit, and he gives them the title of Sennoria. No grandee can be taken into cuſtody for any offence, unleſs by expreſs order of the king; and it muſt be high treaſon, or ſome other heinous crime againſt the ſtate, that can occaſion the obtaining of ſuch an order. They and their eldeſt ſons are ſtiled Excellency, and they even eſteem themſelves equal to the princes of the empire and of Italy.

The principal order of knighthood in Spain is that of the Golden Fleece, which received its origin from the Burgundian dominions, and at preſent belongs both to the kings of Spain and the houſe of Auſtria. The collar of the order conſiſts of an alternate range of golden flints and ſteels, with ſparks of fire on all ſides, and a golden fleece pendant from it, with this motto, AUTRE N'AURAI. Charles V. permitted the knights, inſtead of this collar, to wear only a ſcarlet ribbon.

The three orders properly Spaniſh, and which have a revenue annexed to them, are,

The order of St. Jago di Compoſtella, inſtituted in 1175, by Ferdinand II. king of Leon, and has for its badge a red uniform croſs, divided into twelve departments. This order has four convents who are brothers of the order, ſeven religious ones, one college, five hoſpitals, and ſix hermitages.

The order of Calatrava, inſtituted by Sancho III. of Caſtile, has for its badge a red croſs, divided into five departments. To this order belong one convent of religious, and one college.

The order of Alcantara, the badge of which is a lily placed croſs-wiſe, was inſtituted by Ferdinand II. king of Leon, and was at firſt called St. Julian de Peregro. This order is alſo divided into five departments, and to it belong three convents of religious, and one college.

The king is grand maſter of theſe orders.

Beſides theſe, the preſent king of Spain has now introduced the Neapolitan order of St. Januarius; and has ordered it to be worn in his court above the French order of the Holy Ghoſt, or that of the Golden Fleece.

Spain, from the Gothic times to that of Pelagius, was an elective kingdom; and for two centuries afterwards the throne was filled by the ſuffrages of the ſtates, who, however, in no inſtance departed from the royal family. At preſent the crown of courſe devolves, without any form or ceremony, to the neareſt in blood, and females are capable of inheriting; but it is only on the failure of the male line. If the next heir be incapable of government, eſpecially when on the deceaſe of the former king affairs are in confuſion, the ſtates are impowered to chooſe five perſons to take the adminiſtration upon them, among whom the queen-mother is to hold the chief place.

On the inauguration of a new monarch, he is proclaimed in the church of the Jeromites at Buen Retiro, and receives homage from the ſtates; but he is neither anointed nor crowned; for theſe ceremonies have been diſuſed for ſome centuries.

The ancient Spaniſh cortes reſembled our parliament, it conſiſting of the clergy, the ancient nobility, and the deputies of the towns; and the legiſlative authority was ſo blended in that of the king and the ſtates, that no laws could be made, repealed, or ſuſpended, nor any money raiſed upon the ſubjects, but with their common conſent. But now this cortes is laid aſide; Spain is no longer a mixed monarchy, but entirely abſolute; the whole government being in the hands of the king and his miniſters, and the councils, which are always at his devotion. This change from mixed to abſolute monarchy, was occaſioned by the timidity of the commons of Caſtile, who having, in their laſt ſtruggles for expiring freedom, ſupported for ſome time a war againſt the crown, on a ſingle defeat, in the moſt abject manner deſerted the noble cauſe of liberty. This war began in the year 1520, and laſted only two years; at which time

time Charles V. carried his point with a high hand, and told the cortes he would always have the ſupplies granted firſt, and then would paſs the bills they petitioned for, and not before, to which they timidly ſubmitted. Since the time of Philip III. in the beginning of the ſeventeenth century, the cortes have been diſcontinued, and there have been no other aſſembly than conventions of the deputies or agents of the towns, among whom are ſettled the neceſſary taxes.

The laws of Spain are chiefly compounded of the Roman civil law, the royal edicts, and probably certain provincial cuſtoms. Where they thought the Roman law was not ſufficiently extenſive, they have made large additions of their own; theſe are called the *Leyes de Partidas*, and at preſent form a ſyſtem of modern Spaniſh law, and have been publiſhed in ſix volumes octavo. The name *Partidas* comes from their being divided into chapters.

The moſt weighty affairs of ſtate are diſcuſſed in the council of ſtate, which conſiſts of a preſident, three other counſellors, a ſecretary of ſtate, and two other ſecretaries.

The ſupreme royal council, or royal council of Caſtile, is the higheſt court of judicature, and is divided into five inferior courts or chambers, viz. the firſt and ſecond halls of government, which are frequently aſſembled as one, to determine appeals made from the chanceries of Valladolid and Granada. The hall of the *Mil y Quinientos*, ſo called becauſe the parties muſt firſt depoſite fifteen hundred doblas, about two hundred and twenty-three pounds, before the appeal can be lodged: this is nothing more than a committee of the ſupreme council. The hall of Juſtice, which is a court for matters purely litigious; and the hall of the Province, which is a court for matters chiefly relating to the police; the provinces being diſtributed among the ſeven counſellors of the firſt hall of government.

The chamber of the alcaldes of the court and houſehold, which may alſo be claſſed with the great councils, conſiſts of a governor or preſident, twelve judges, and a fiſcal.

The ſupreme council of war is at preſent compoſed of four counſellors, one of whom is ſecretary, one fiſcal, and three aſſeſſors, who are members of the royal council of Caſtile. This council determines all cauſes relating to the army, except what belongs to the following council.

The ſupreme royal council of the Indies conſiſts of a governor, twenty-two counſellors, four ſecretaries, two for Peru and two for New Spain, one accomptant general, and other officers. This tribunal decides without appeal in affairs relating to the Spaniſh ſeas and poſſeſſions in America.

The council of the finances is divided into four chambers, or halls.

The great court of the civil law is divided into the two chambers of Valladolid and Granada, which include the whole kingdom: but though Arragon, Valentia, and Catalonia, loſt their old privileges, yet they ſtill retain a court of chancery among themſelves, in audiences held in the capital of each kingdom, whoſe determinations are only ſubject to the ſupreme council of Caſtile. If it be a caſe of property, the ſuit is commenced in that chancery to which the plaintiff belongs, and then the affair is referred to the ſupreme royal council, at which the king may order all the deputy councils to aſſiſt. All other cauſes go before the reſpective courts to which they belong.

The revenue of the king ariſes principally from the tenth of every thing ſold, to which may be added the tithes and fourths of a hundred; the exciſe on wine, oil, tallow, ſoap, paper, ſalt-fiſh, &c. the uſual aid of four hundred and forty-one thouſand one hundred and ſeventy-ſix crowns, paid by all under the rank of nobility; the wine gauge money; the ſtamp duties, and the half annates; the duties on proviſions, which is fourteen per cent. thoſe on ſalt, tobacco, the poſt-office, the regulations of the crown of Arragon, and the bull of the cruſado, by virtue of which the clergy and laity pay a contribution towards carrying on a war with the infidels, even whether there be any ſuch war or not; indulgences; licences for eating butter, cheeſe, milk, and eggs, in Lent; the ſubſidies and tithes of church and abbey-lands; the money paid by thoſe orders in lieu of the lances and galleys they were bound to furniſh; the taxes on downs, commons, and other paſtures; the Madrid exciſe; the thirds, tenths, and patrimonial rents of Catalonia, Arragon, Valencia, and Majorca; the eccleſiaſtical payments for the military hoſpitals; the quickſilver, and other American revenues; the Weſt-India trade; the coinage, &c. all which together amount at preſent to about three million three hundred ſeventy-three thouſand two hundred eighty-eight pounds ſterling.

The Spaniſh land forces conſiſt of ninety-ſix thouſand five hundred and ninety-ſeven men. The kingdom is alſo well defended on all ſides: towards France it has a ſecure fence in the Pyrenean mountains; and the ſea-coaſts are lined with redoubts, forts, and towers; and up the country the army of an enemy would be put to very great inconveniences, particularly the horſe, for want of forage.

The naval forces of Spain conſiſt at preſent of forty-ſeven ſhips of the line, twenty-one frigates, fourteen xebecs, four packet-boats, and ſeventeen bomb-veſſels; the complement of all which amount to forty-five thouſand nine hundred ſixty men.

The foreign poſſeſſions of the crown of Spain in Africa, are the towns of Ceuta, Oran, and Maſalquiver, on the coaſt of Barbary; in Aſia, the iſlands of St. Lazarus, the Philippines, and Ladrones; the greateſt part of the main land of South-America; and in North-America, Mexico, New Mexico, California, the iſland of Cuba, part of Hiſpaniola, Porto Rico, &c.

SECT. VI.

The Diviſions of Spain, with a Deſcription of the kingdom or Province of Catalonia, containing its Situation, Extent, Rivers, Produce, and principal Cities, particularly Tortoſa, Tarragona, Barcelona, Roſes, and Gerona.

THE kingdom of Spain conſiſts of main land and iſlands. The main land is divided into fourteen provinces, ſome of which are reckoned to belong to the crown of Caſtile, and others to Arragon: the former are Old and New Caſtile, Biſcay, Leon, Aſturia, Galicia, Eſtremadura, Andaluſia, Granada, Murcia, and Navarre; the latter includes only Arragon, Catalonia, and Valencia, with the iſlands in the Mediterranean.

We ſhall begin with Catalonia, which is bounded on the weſt by Arragon and Valencia; on the ſouth and eaſt by the Mediterranean; and on the north is ſeparated from France by the Pyrenean mountains. Its greateſt extent from eaſt to weſt is a hundred and twelve Engliſh miles, and from north to ſouth a hundred forty-eight. It was formerly larger than at preſent; but France has, at different times, curtailed it of the counties of Rouſillon and Conflans, a good part of Cerdagne, and long ſince of Foix.

This fine country is watered by ſeveral rivers, ſome of which intermix, while others diſcharge themſelves ſeparately into the ſea. Of the firſt ſort is the Segre, in Latin Sicoris, the largeſt of all the rivers of Catalonia. It has its ſource in Cerdagne, and receives in its paſſage the Noguera Pallareſa, the Noguera Ribagorzana, and the Cervera. It afterwards unites with the Cinca, and at laſt loſes itſelf in the Ebro. Of the ſecond kind, beſides the large river Ebro, which paſſes through only a ſmall part of Catalonia, is the Francoli, which falls into the ſea at Tarragona; the Llobregat, anciently called the Rubricatus, which receives its ſource in the mountain of Pendis, and diſcharges itſelf into the ſea below Barcelona; the Beſos, or Betulus, which alſo joins the ſea not far from Barcelona; the Ter, Thicis, or Thiceris, which iſſues between the mountains, and diſcharges itſelf into the ſea below Torcella; the river Fluvia, which falls into the ſea near Empurias; and another Llobregat, the mouth of which is near Roſes.

Though Catalonia does not produce ſugar-canes, like the reſt of the provinces of Spain, yet it enjoys a very good

good ſoil, with a pure and wholeſome air. The winters in the northern parts, contiguous to the Pyrenees, are attended with ſome froſt and ſnow; but in the ſouthern, particularly along the ſea coaſt, that ſeaſon is very mild. It is almoſt entirely mountainous, a few places excepted, which extend themſelves into moſt delightful plains; but theſe mountains are ſo far from being barren, that they are covered with wood and fruit trees. The country yields plenty of wine, corn, oil, pulſe, and fruits, and alſo produces a great quantity of flax and hemp. The fleſh meat of this country, and in general all proviſions, are excellent.

With reſpect to minerals, marble, cryſtal, alabaſter, jaſper, amethyſts, &c. are found here; likewiſe gold, ſilver, tin, lead, iron, alum, vitriol, and ſalt, and the coaſt has ſeveral coral fiſheries. In ſhort, this province is one of the moſt populous in all Spain, and contains an archbiſhoprick, ſeven biſhopricks, twenty-eight large abbies, one principality, two duchies, five marquiſates, ſeventeen earldoms, fourteen viſcounts, and a multitude of baronies.

Some geographers divide this principality into Old and New Catalonia, including in the former the country extending eaſtward from the Pyrenean mountains along the river Llobregat to the Mediterranean; and, in the latter, they comprehend that tract to the weſt, which extends from the Llobregat to the confines of Valencia and Arragon. This country is uſually divided into fifteen juriſdictions, ſix of which lie along the coaſt; theſe are thoſe of Tortoſa, Monblane, Tarragona, Villa Franca, de Panades, Barcelona, and Gerona. Along the Pyrenean mountains are the two juriſdictions of Campredon and Puicerda, with the earldom of Cerdagne. The two juriſdictions of Belaguer and Lerida join to the frontiers of Arragon; and within the country are thoſe of Agramont, Tarrega, Cevera, Manreſa, and Vique: but as it is impoſſible to diſtinguiſh with any certainty the places belonging to each juriſdiction, we ſhall inſert the moſt remarkable, without ſtrictly attending to theſe minute diviſions.

Tortoſa is an antient, large, and fortified city, on the Ebro, over which it has a bridge of boats. It lies partly on a level, and partly on a hill, eighty miles to the weſt-by-ſouth of Barcelona, and a hundred and eighty-five to the eaſt of Madrid. It is divided into the Old and New Town, of which the former is the largeſt. The avenue to it is defended by two baſtions and other out-works, and the antient ſtrong caſtle, which is built in the form of a citadel, ſtands on an eminence between the two towns. Here are five gates, ſeventy-eight ſtreets, with a ſpacious ſquare or market-place, and many churches and convents; the biſhop, who is ſuffragan to the archbiſhop of Saragoſſa, has an annual revenue of fifteen thouſand ducats. Its univerſity is inconſiderable; but the adjacent conutry abounds in corn and fruit, oil and ſilk, and with quarries and mines; for there are thoſe of ſilver and iron, alabaſter, very fine jaſper of various colours, and ſtones with veins of gold. They alſo make here fine potters-ware, which reſemble porcelain.

Tarragona, an antient and ſtrong city, is ſituated on an eminence near the mouth of the little river Francoli, forty-five miles to the north-eaſt of Tortoſa, and about the ſame diſtance to the weſt of Barcelona. It is neither ſo large nor ſo populous as it was formerly; for though there is room for two thouſand houſes within the walls, there are not above five hundred, which are all built of large ſquare ſtones; but it is ſtill the ſee of an archbiſhop, who enjoys a revenue of twenty thouſand ducats a year. It has an univerſity founded in the year 1532. Its harbour, on account of its many rocks, will not admit of ſhips of burthen; but it has a pretty good trade. The neighbouring country produces corn, oil, flax, and very good wine; and both within and without the city are to be ſeen the ruins of magnificent buildings, and other ornaments of antiquity.

In this city are a multitude of Roman inſcriptions, and not far from thence, in the road to Barcelona, you paſs under a very handſome triumphal arch, erected by the family of the Licinii, adorned with fluted Corinthian columns, and a pediment with dentiles, like the Ionic order. A little way on one ſide the road, ſomewhat farther on, is the tomb of the Scipios; it being the baſe of an obeliſk, or pyramid, erected to their memory, with a figure on each ſide in the Roman habit; theſe are by ſome thought to be deſigned for the two Scipios, but others ſuppoſe them to repreſent weeping ſlaves.

Barcelona, or Barcino, the capital of Catalonia, is a large and well fortified ſea-port, ſeated at the foot of Montjoui, in the forty-firſt degree twenty minutes latitude, and in the ſecond degree five minutes eaſt longitude. It opens to the ſea in a beautiful ſemicircle, between the rivers Llobregat and Beſes. It is a large and well fortified place, divided into the Old and New Town, which are ſeparated from each other by a wall and ditch. Moſt of the ſtreets are broad, well paved, and clean. It has many beautiful ſtructures, a large and ſuperb cathedral, with ſome other beautiful churches and convents, and ſeveral handſome ſquares. At the church of Capiuleſmona, or the Alms-taker, cloſe by the cathedral, three hundred poor people are daily fed. The number of houſes in Barcelona is computed at about fifteen thouſand. Its biſhop is ſuffragan to the metropolitan of Tarragona, and his annual revenue is computed at ten thouſand ducats. Here is alſo an univerſity, an academy of the fine arts erected in 1752, a court of inquiſition, and a royal audience of Catalonia, in which, next to the governor and captain-general, ſits the regent. The other members here are ten counſellors, five criminal, or juſticiary, officers, and two fiſcals. On the coaſt of Barcelona is a ſafe road. The city carries on a good trade, and has a large, deep, and ſecure harbour, defended on one ſide by a large mole, at the extremtiy of which is a light-houſe, with a little fort, and a garriſon for the defence of ſmall veſſels, thoſe of larger burthens lying out in the road. On the the other ſide the caſtle of Montjoui covers the harbour, between which and the city is a line of communication, and upon this is a fort, whereby the entrance of the harbour is flanked and commanded.

Barcelona had its own counts till the year 1162, when it was united to Arragon. In 1640 the inhabitants revolted, and put themſelves into the hands of the French; but in 1652 the city was reduced by the Spaniards. In 1691 and 1697 it was beſieged and taken by the French, under the duke of Vendoſme; but the ſame year was reſtored to the Spaniards by the treaty of Ryſwic. The French poſſeſſing themſelves of this city and the reſt of the Spaniſh monarchy in 1700, king Charles III. afterwards emperor of Germany, by the title of Charles VI. took it on the fourth of October, 1705, ſword in hand, after a ſiege of only three weeks, with a handful of men, not much more numerous than the garriſon which defended the place. In April 1706, Philip, duke of Anjou, and marſhal Teſſe, inveſted it with a large train of braſs artillery, and a numerous army; but the city, animated by the preſence of king Charles, held out thirty-five days, till relieved by lord Peterborough and Sir John Leake, who coming up with the Engliſh fleet, the French and Spaniards raiſed the ſiege with great precipitation, leaving behind them all their cannon, ammunition, tents, baggage, and wounded men. The city remained in the poſſeſſion of Charles III. till the year 1712, when his brother Joſeph dying, he became emperor; and the citizens erecting themſelves into a ſort of commonwealth, ſet up for an independent ſtate; but in 1714, after holding out a long ſiege againſt the duke of Berwick, the inhabitants were obliged to ſubmit to Philip V. and ſtill continue in ſubjection to the crown of Spain.

The neighbouring country abounds with wheat and other grain, oil, rich wines, fruit of all ſorts, wood, cattle, fowl, plenty of wild game, and honey. It is well watered, and thick ſet with villages. They have ſilk and woollen manufactures, and excel in iron and ſteel works.

Roſas, or Roſes, a town of Catalonia, conſiderable for its ſtrength, trade, and commodious harbour, is ſituated on a bay of the ſame name on the Mediterranean, about ſixty-two miles to the north-eaſt of Barcelona. It was in a declining condition till Charles V. rebuilt, fortified, and peopled it; ſince which time it has flouriſhed very much, eſpecially under the French, who, from its vicinity to them, have often made themſelves maſters of it; but have always been obliged to give it up at the

 concluſion

conclusion of a peace. This was the only place in all Catalonia that held out for king Philip V. during queen Anne's wars, while all the reſt of the province had ſubmitted to Charles III.

Gerona, antiently Gerunda, is an old fortified city, ſtanding on an acclivity adjoining to the Onhar, which at a ſmall diſtance falls into the Ter. It is an earldom, and a place of conſiderable trade; yet the revenue of its biſhop, who is ſuffragan to the archbiſhop of Tarragona, is only three thouſand ducats a year, and its univerſity makes no great figure. The large juriſdiction, of which this is the capital, is reckoned the moſt fertile tract in all Catalonia. In 1694 this city was taken by the French; in 1697 by the Spaniards; in 1705 by the forces of Charles III. and in the year 1711 was again taken by the French.

SECT. VII.

Of the Kingdom or Province of Arragon; its Situation, Extent, Rivers, Produce, Hiſtory, and principal Cities; with a more particular Deſcription of Saragoſſa.

THE kingdom of Arragon is bounded on the north by the Pyrenean mountains; on the eaſt by Catalonia; on the ſouth by Valencia; and on the weſt by Navarre and Caſtile. Its extent from north to ſouth is upwards of a hundred and ſixty miles, and from eaſt to weſt above a hundred and four. The river Ebro croſſes the country from the north-weſt to the ſouth-eaſt, dividing it into two almoſt equal parts. Into it the following rivers diſcharge themſelves: on the north ſide the rapid Cinga, or Cinca, which riſes in the mountains of Bielſa; the Callego, the antient Gallicus, which iſſues from Mount Gavas; the Iſuela; and ſeveral other ſmaller ſtreams. From the ſouth it receives the Xalon, or Salo, which comes from New Caſtile, and the ſtill ſmaller ſtreams of Guadalaviar and Alhambra, all of them having plenty of good fiſh. The Torio, or Turio, fertilizes a great part of the country by its ſlow and gentle courſe, which gives the huſbandmen and gardeners an opportunity of cutting channels from it to water their grounds, which are much admired for their continual verdure and fertility. In ſhort, Arragon, both on theſe accounts and the ſerenity of its air, has been compared to Egypt; but this account of its fertility, given by ſome authors, ſeems exaggerated, for it is only true of particular ſpots; and Dr. Buſching obſerves, that, with all theſe rivers, the greateſt part of Arragon is dry and barren, and ſome places even uninhabited: the ſoil is for the moſt part ſandy, mountainous, and ſtony; ſo that where the rivers do not come, or where water is not conveyed by art, it produces nothing. In thoſe parts, however, which are watered are corn, wine, oil, flax, fruit, and in ſome places alſo ſaffron, which make up the whole riches of the country.

Arragon had formerly its own laws and privileges, ſome of which were ſo conſiderable, that they had even a ſupreme magiſtrate called the juſtica, or mayor of Arragon, whoſe office was to check the power of the ſovereign in behalf of the ſubjects; ſo that appeals lay to him from the other courts, and even from the king himſelf. Ennicus, ſurnamed Ariſta, from his love of fighting, who had been elected king of Navarre by the vote of the people, was the firſt choſen into this office. They had beſides by a ſpecial contract made with their firſt king, and ſworn to by all his ſucceſſors, this farther privilege, that if any of thoſe monarchs ſhould infringe their liberties, they might lawfully take up arms againſt them. Peter, one of the kings of Arragon, was the firſt who prevailed on their cortes, or parliaments, to aboliſh this privilege, and accept of ſome others. At length Philip II. of Spain, the ſon of the emperor Charles V. being enraged at the Arragonians for defending Anthony Perez, his ſecretary, ſent an army againſt them; and having defeated and deprived them of all their privileges and liberties, reduced them to the level of the meaneſt province. Dr. Buſching, however, gives a different account of that affair, and ſays, that the inhabitants of Arragon having, in the year 1605, eſpouſed the party of the archduke Charles III. Philip V. annulled all their privileges, and rendered them ſubject to the laws of Caſtile, by which the revenues of the crown from that kingdom were conſiderably encreaſed.

The natives of Arragon are generally courteous, well-bred, ingenious, generous, well verſed in military affairs, courageous, ſtrict obſervers of their laws; but bigotted in religion, and poſitive in their opinions.

Arragon is divided into ſeven dioceſes, namely, an archbiſhopric and ſix epiſcopal ſees. It has ten cities, two famous univerſities, ſeveral conſiderable abbies, beſides monaſteries, nunneries, hoſpitals, &c.

Saragoza, or Saragoſſa, the capital of this country, ſtands in a very fertile plain on the Ebro, by whoſe windings the neighbouring country is rendered ſo fertile, that it produces a variety of fruits in great abundance. It is ſurrounded with walls, which, though antique, are ſtrong and beautiful, being adorned with ſeveral ſtately towers, and four noble gates facing the four cardinal points. It is ſaid to have been built by the famous king Juba, and afterwards beautified by Auguſtus, while he was carrying on the war againſt the Cantabrians. It is of an oblong figure, and has two ſtrong and ſtately bridges over the Ebro. The city is large and handſome, the ſtreets long and broad, but ill paved and very dirty. The handſomeſt and broadeſt is the Calle Santa, or Calle de Coſſo, which is the uſual airing-place of the quality. It has a multitude of magnificent buildings, as churches, palaces, ſquares, market-places, and hoſpitals.

The number of inhabitants amounts to fifteen thouſand families, many of them of quality, included within fourteen large pariſhes, and three others that are ſmaller. Here are alſo twenty-three monaſteries, ſome of them large and magnificent, thirteen nunneries, and a noble hoſpital endowed with a revenue ſufficient to maintain eight hundred ſick perſons, beſides two others for orphans, ſome ſmaller for decayed people, and a very noble one at a ſmall diſtance from the city. Here is alſo an univerſity, which was founded in 1474.

The cathedral is a rich and ſtately edifice, in which are twelve dignitaries, twenty four canons, thirty-nine minor canons, and ſeventy beneficed prieſts. The annual revenue of the archbiſhop is about forty-five thouſand ducats. The tabernacle, or repoſitory of the pix over the high altar, is a magnificent piece of architecture, all of maſſy ſilver finely wrought, and weighing ſix hundred and twelve pounds.

The collegiate church of Our Lady of the Pillar, ſo called from a pretended miraculous image of the Virgin, is likewiſe a fine ſtructure. This image is very ſmall; but its crown and robes are almoſt entirely covered with rich ornaments, and holds a little Jeſus in its arms. It ſtands very high on a pillar of the fineſt jaſper. Whoever attentively views the image, finds his eyes dazzled with the multitude of ſilver lamps and wax lights continually burning in the chapel, mingled on all ſides with the reflection of the gildings, jewels, and golden chandeliers. To this image a vaſt number of pilgrims annually reſort, in order to pay their devotions to the Virgin.

Among the civil buildings is the palace, where the cortes meet, and the exchange, two very magnificent ſtructures; the latter built in the year 1551, and the former much earlier; but greatly beautified ſince. The royal palace ſtood at a ſmall diſtance from the city, and has been given to the fathers of the inquiſition.

The city carries on a conſiderable commerce, and a great number of trades and manufactures both within and without the walls; for it has handſome ſuburbs, and many fine buildings without the gates, as well as gardens, orchards, and beautiful walks.

Teruel, or Tervela, about eight miles to the ſouth of Saragoſſa, ſituated on the banks of the Turio on a pleaſant eminence, encompaſſed with ſpacious meadows incloſed and ſheltered by high and fertile mountains, covered with variety of ſtately trees, odoriferous plants, and fragrant flowers, which, with a multitude of gardens, orchards, and corn-fields, afford a moſt delightful proſpect. The city is walled, and inhabited by thirteen hundred

dred families, who are divided into eight pariſhes; beſides which there are four monaſteries, one nunnery, and a wealthy hoſpital. It is the ſee of a biſhop, whoſe revenue amounts to twelve thouſand ducats; the cathedral has ſix dignitaries, and fourteen canons, beſides inferior prieſts.

About forty-five miles to the ſouth-weſt of Saragoſſa is Catayud, which is ſituated at the foot of a pleaſant high hill on the banks of the Xalon. Its ſoil, ſituation, and air, are inferior to none in Spain in their fertility, pleaſantneſs, and ſalubrity. The walls are ſtrong, and adorned with many ſtately towers, and the city populous, it having about three thouſand families, divided into thirteen pariſhes, with eleven monaſteries, and four nunneries. The Romans, who gave it the name of Bilbilis, adorned it with ſeveral magnificent buildings, and endowed it with many privileges. It was particularly celebrated for being the birth-place of Martial the famed Epigrammatiſt.

SECT. VIII.

Of the Kingdom or Province of Valencia; its Situation, Extent, Produce, and Rivers; with a particular Deſcription of the Cities of Valencia and Alicant.

VALENCIA is bounded on the weſt by Murcia and New Caſtile; on the north by Arragon and Catalonia, already deſcribed; and on the eaſt and ſouth by the Mediterranean ſea; extending about a hundred and ſixty-two miles in length, and ſixty-two in breadth; and is the moſt populous and pleaſant country in Spain; for here they enjoy an almoſt perpetual ſpring. The country, beſides its extraordinary fertility in wine and fruits, produces alſo rice, flax, hemp, ſilk, honey, and ſugar; and if the ſurface of its mountains is leſs fruitful, this is well compenſated by the minerals within.

All its rivers run to the eaſt or ſouth-eaſt into the Mediterranean: theſe are the Segura; the Xucar; the Guadalaviar, which receives its ſource in the confines of Arragon and New Caſtile; its banks are delightfully bordered with woods and flowers, and it loſes itſelf in the ſea below Valencia: the others are the Morviedro and the Millares.

Valencia, the capital of the province, ſtands on the ſhady banks of the river Guadalaviar, over which it has five ſtately bridges, in the forty-firſt degree thirty-ſix minutes latitude, and nearly under the meridian of London. It ſeems to have been originally built by the Romans; but was deſtroyed by Pompey, and a little after rebuilt by Cæſar, and called Colonia Julia Valencia. It ſtands oppoſite to the place where the famous city of Saguntum formerly ſtood, on the other ſide of the river. Its preſent form is almoſt circular; it is about ſix thouſand four hundred and forty paces in circuit, and is ſurrounded by a ſtrong wall, which has many lofty towers, and thirteen gates. Grao, its ſea-port, which ſtands on the Mediterranean, furniſhes it with every thing either for convenience or delight, particularly with a great variety of ſea-fiſh, and its neighbouring lake of Albuſera with great abundance of water-fowl and freſh-water-fiſh; as does the fertile country round it with corn, wine, oil, fruit, herbs, and other proviſions. Mulberry-trees are planted in rows in all the fields, and ſo induſtrious are the inhabitants in its neighbourhood, that the ground never lies fallow. The city is ſaid to contain fifteen thouſand families, fourteen pariſh-churches, forty-eight monaſteries and nunneries, beſides other foundations of the military order, ſix chapels, ſix hoſpitals, and twenty fraternities, which every year give portions to a hundred and thirty poor maidens on their marriage. Here is alſo an univerſity, with five colleges.

Valencia is the ſee of an archbiſhop, whoſe revenue amounts to forty thouſand ducats a year. The cathedral has ſeven dignitaries, twenty-four canons, beſides minor canons, and other inferior prieſts. Among other valuable treaſures in this ſtructure is a chalice of a rich kind of agate, which they ridiculouſly pretend to be the ſame our Saviour uſed at his laſt ſupper. They alſo give out, that they have two of the thirty pieces which Judas received from the Sanhedrim as the reward for betraying his Divine Maſter; they are of ſilver, and weigh about fifteenpence of our money. Nothing can be more magnificent than their grand proceſſion on Corpus Chriſti day, when theſe are carried with the utmoſt pomp and devotion.

Here is alſo a ſovereign court of judicature, a court of inquiſition, and an exchange. The city is plentifully ſupplied with water, not only from the river, but from a vaſt number of deep wells dug almoſt in every houſe, and ſome compute that thoſe within and without the walls amount to thirty thouſand. There is here alſo an extraordinary common ſewer, ſaid to be a Roman work, by which the ſoil of every houſe is carried off under ground. Upon theſe accounts it is reckoned one of the healthieſt and moſt pleaſant places in Europe.

The city is enriched by the vaſt number of quality and gentry who reſide in it, and its great commerce; there is a variety of manufactures carried on here, eſpecially the woollen, the cloth made in this city being reputed the fineſt in all Spain. The ſilk manufactures likewiſe flouriſh here: the inhabitants alſo export large quantities of wine, oil, and fruit. In the markets of Valencia, and all over Spain, they cut their poultry into pieces, and ſell them by quarters. Here they make large veſſels of goats ſkins, for putting their oil and wine into.

The government of the city is by ſix jurats, or conſuls; there is alſo a judge for criminal cauſes, with an advocate to aſſiſt him, and a lieutenant-criminal; a muſtafa, who has the care of all proviſions, corn, weights, meaſures, &c. and a judge for civil cauſes.

In the year 1705, when all Catalonia had ſubmitted to Charles of Auſtria, the nominal king of Spain, this city likewiſe opened her gates to the earl of Peterborough and the Engliſh forces. Though after the unfortunate battle of Almanza, in 1707, the duke of Orleans, who commanded the Spaniſh troops for Philip of Anjou, recovered it; after which the inhabitants were ſeverely puniſhed by that prince for their forwardneſs in revolting, and ſtripped of the greateſt part of their antient privileges, which they had preſerved with the utmoſt bravery.

Alicant is ſituated ſixty miles to the ſouth of Valencia, and at the ſame diſtance north of Carthagena, in the thirty-eighth degree thirty-ſeven minutes north latitude, and in about five minutes weſt longitude: this is a celebrated city and ſea-port on the Mediterranean, delightfully ſeated between two hills. It is well walled and defended by a caſtle built on a high rock. On the neighbouring ſhore ſtand ſeveral watch-towers, from which the veſſels of the Sallee rovers are obſerved. It is a place of conſiderable trade, on account of its commodious harbour, and is well known to the Engliſh, eſpecially for its wines and fruit, which they uſed to bring from thence; as well as from their landing ſome of their forces here in the reign of queen Anne, when the ſucceſſion to the crown of Spain was conteſted between Charles of Auſtria and Philip of Anjou. The city then contained about ſeventeen hundred families, two pariſh-churches, one of which is collegiate, with ſix monaſteries, two nunneries, and three handſome market-places; beſides hoſpitals, chapels, &c. The Engliſh made themſelves maſters both of the city and caſtle in the year 1705, and held them till the peace of Utrecht in 1713, when they returned to Philip of Bourbon, ſtiled Philip V. of Spain.

About half a league from the city is a famous convent of nuns, to which there is a great reſort of pilgrims, in order to pay their devotions to the impreſſion of the holy face, ſaid to have been imprinted thrice on a napkin with which Veronica wiped the face of our Saviour, when he was going to his crucifixion. Among theſe votaries are many ſeamen, who on their leaving Alicant frequently make a vow of performing their devotions here upon their ſafe return, which they do bare-footed. This picture of our Saviour's face, ſaid to be repreſented in ſo miraculous a manner on a piece of white linen, we are told is a wretched piece of dawbing.

SECT. IX.

Of the Kingdoms or Provinces of Murcia and Granada; their Situation, Extent, Rivers, Produce, and principal Cities.

THE kingdom or province of Murcia is bounded on the north by New Caſtile, on the eaſt by the kingdom of Valencia, on the weſt by Andaluſia and Granada, and on the ſouth by the Mediterranean ſea, extending about ſixty-two miles in length, and fifty-eight in breadth.

The principal river is the Segura, which receives its ſource in New Caſtile, and running from weſt to eaſt traverſes this country and that of Valencia.

The air of this province is pure and healthy, and the country produces corn and wine, which are both good; but as the country is very mountainous, and the ſoil dry, from its having but little rain, its products are but in ſmall quantities. It, however, abounds in fine fruits, as oranges and lemons, and alſo with ſugar, honey, and ſilk. The principal places in this province are,

Murcia, the capital of the kingdom, which is ſeated in a pleaſant plain on the river Segura, in the thirty-eighth degree twelve minutes north latitude, and in one degree fourteen minutes weſt longitude, and is pretty large and populous, with large handſome ſtreets. It is walled round, and has twelve gates. It contains ſix pariſh-churches, and a ſuperb cathedral, which has a ſteeple ſo contrived that a man may ride up to the top, either on horſeback or in a coach. It is the ſee of a biſhop, who has a revenue of twenty thouſand ducats. Round the city are fine gardens, which abound with excellent fruit.

Carthagena, or Little Carthage, is a pretty good city, ſtanding on the ſide of a hill, by a fine bay of the Mediterranean, at the mouth of the river Guadalantin, in the thirty-ſeventh degree forty minutes north latitude, and in one degree five minutes weſt longitude. It has one of the beſt harbours in the kingdom: the ſmall iſland Eſcombrada ſo ſhelters it from ſtorms, that veſſels moor here in the utmoſt ſafety: it has plenty of freſh-water, and abounds with mackarel. The air is here ſo temperate in ſummer, and mild in winter, that the trees have leaves, bloſſoms, and fruit at the ſame time; and even roſes blow here at Chriſtmas. The adjacent country produces a great deal of ſedge, and in the bowels of the earth are found amethyſts, garnets, agates, and other gems. This city is the ſee of a biſhop, who enjoys a revenue of twenty-four thouſand ducats, and is ſuffragan to the archbiſhop of Toledo. It contains about twelve hundred inhabitants, and has four monaſteries and a nunnery: it lies twenty-ſix miles to the ſouth of the city of Murcia.

The kingdom of Granada, ſometimes called Upper Andaluſia, is bounded on the eaſt by the kingdom of Murcia, on the ſouth by the Mediterranean ſea, and on the north and and weſt by Andaluſia. It is about a hundred and ſeventy-five miles in length, and ſeventy-five in breadth.

The principal rivers are the Xenil, which riſes near the city of Granada, and paſſing through Andaluſia, falls into the Guadalquiver; and the Guadalantin, which alſo riſes in this province, and, after traverſing Murcia, runs into the Mediterranean. There are alſo a great number of ſmaller rivers.

The country is very mountainous, particularly towards the ſea; but is interſperſed with delightful valleys. The Las Alpuxarras are mountains of a prodigious height, inhabited by a Mooriſh race who have embraced the Romiſh religion; but ſtill retain their national cuſtoms and manner of living, and their language is a mixture of Arabic and Spaniſh. They are divided into eleven diſtricts.

The air in this country is temperate and healthy, and in general it is very fruitful, and produces corn, wine, oil, ſugar, flax, hemp, and fine fruit, as pomegranates, citrons, oranges, lemons, olives, figs, grapes, and almonds. There are prepared here two kinds of raiſins, thoſe dried by the ſun on the branches of the vines, and others which are dipped in the lye made of the aſhes of the burnt branches, and afterwards dried in the ſun. Here is alſo great plenty of honey and wax. Several places in the mountains near Antequera make ſalt, which the ſun prepares from water conveyed into pans. The cultivation of ſilk is here alſo very conſiderable. The country likewiſe produces plenty of dates, of which great advantage is made, and even of the very acorns, which are ſaid to exceed the fineſt nuts: and of the galls, which are found in this country in vaſt quantities, a dye is made for leather. Great quantities of ſumach, for preparing goat and chamois ſkins, are likewiſe exported from hence. Beſides good ſtone for building, the earth affords hyacinths, garnets, and other gems.

In the time of the Moors, Granada was the moſt populous and beſt cultivated province in Spain; but through the contempt which the Spaniards entertain for agriculture, things are much altered; however, Spain has not any tract of land ſo well inhabited as the mountains of Las Alpuxarras, which, beſides the many towns and villages interſperſed among them, are wonderfully improved by the induſtry of the inhabitants, who turn their vineyards and plantations to a very good account. The ſea-coaſt, for its protection againſt the African corſairs, is lined with high towers, which command an extenſive proſpect over the ſea, from the ſtreight of Gibraltar to the Rio Freyo, or the Cold River.

This province became a diſtinct kingdom in the thirteenth century, when the Mooriſh king Abenhud, who reſided at Cordova, loſing his life and crown in a battle againſt the Chriſtians in 1236, his ſubjects and followers betook themſelves to Granada, and choſe a new king, who made the city of that name his capital and place of reſidence. This kingdom, which was the laſt of the Mooriſh, then contained thirty-two large towns and ninety-ſeven ſmaller, and continued from the year 1236 to 1492, when Ferdinand the Catholic reduced it, and annexed it to the crown of Caſtile.

The city of Granada, the capital of the province, ſtands at the foot of a moſt noble ridge of barren mountains and rocks, which ſtretch round on each ſide in ſuch a manner as to embrace a lovely plain, varied with plantations, gardens, and villages. It is ſeated by the river Xenil, into which the Darro falls after watering a part of the city, in thirty-ſeven degrees twenty-eight minutes north latitude, and in three degrees fifty-one minutes weſt longitude. It is fortified with walls and towers, and is the ſee of an archbiſhop, who has forty thouſand ducats a year. The city is divided into four wards, the principal of which, called Granada, lies in the plain, and in the valleys between two mountains; and here the nobility, clergy, merchants, and moſt wealthy citizens reſide. Its public and private buildings are very handſome. In the cathedral lie buried ſeveral kings, as Ferdinand the Catholic, and Philip I. with their queens. The king's tribunal is held in a large and ſtately edifice, and oppoſite to it is the Alcaxeria, a vaſt building, in which the merchants have their ware-houſes. In the great ſquare are held the bull-fights. The univerſity here was founded in 1531, and the city has alſo a court of inquiſition.

The Mooriſh palace, called Al-Hambra, is built on a high hill that over-looks the city and the valley, and contains many grand apartments, all in the Mooriſh ſtile, with alcoves, domes, fountains, Arabic inſcriptions, &c. beſides which there is a part built by Charles V. but not finiſhed. The front is handſome, and the apartments built round a very beautiful circular court, with thirty-two fine marble pillars below, and as many in a gallery above. Not far from it is a delicious garden of the Mooriſh kings, with all kinds of trees flouriſhing upon a ſteep hanging rock, and as much water as ſupplies a number of jette d'eaus and fountains.

When Ferdinand the Catholic made himſelf maſter of this city, the ſhort method taken by cardinal Ximenes, for the converſion of the Moors, was, that they ſhould either be baptized, or be put to death. The preſent inhabitants conſiſt of the deſcendants of the antient Moors, and of old Spaniſh Chriſtians as they are termed.

Malaga

Malaga is an antient fortified ſea-port, in thirty-ſix degrees fifty-one minutes north latitude, and in four degrees fifty-ſix minutes weſt longitude, two hundred and ſixty miles to the ſouth of Madrid, and ſeventy-five to the ſouth-weſt of Granada. It ſtands at the foot of a ſteep mountain, and has one of the beſt roads on all the coaſt, with a fine moat running into it five hundred and thirty paces long, and twenty broad, with ſtairs for taking water, and ſeveral pillars of jaſper to faſten ſhips to, as alſo a chapel upon it for ſea-faring people. The city is handſomely built and populous, it being defended by two caſtles, one on the top, and the other at the foot of the mountain. It is large, and of a circular form, ſurrounded with a double wall, ſtrengthened by ſtately towers, and has nine gates. On one ſide the ſea waſhes its walls, and on the other runs the little river Guadalquivirejo, over which there is a handſome bridge. It is the ſee of a biſhop, whoſe revenue amounts to twenty thouſand ducats a year. The grounds all round being covered with vines and the greateſt variety of fruit, it yields a very beautiful proſpect both from the land and ſea. Their wines, raiſins, oranges, lemons, almonds, figs, and other fruit are well known, from the large quantities imported to England, beſides thoſe ſent into other parts of Europe; ſo that the duties paid to the king are computed to yield annually eight hundred thouſand ducats.

This place was in the poſſeſſion of the Moors ſeven hundred and ſeventy-three years, when king Ferdinand took it from them in 1487, after a bloody and obſtinate ſiege of three months. Off Cape Malaga, near this city, the Engliſh and Dutch, under Sir George Rooke, obtained a ſignal victory over the French fleet, commanded by the count de Thouloufe, in Auguſt, 1704. This defeat would have been more complete, had not the Engliſh juſt before exhauſted moſt of their ammunition in the taking of Gibraltar, and the Dutch ſent part of their ſquadron to convoy their merchantmen home.

SECT. X.

Of the Kingdom or Province of New Caſtile; its Situation, Extent, Produce, and principal Rivers; with a particular Deſcription of Madrid, and the Eſcurial.

CASTILE is the principal and moſt opulent kingdom in Spain, and is generally divided into the Old and New; the former being recovered from the Moors ſome time before the latter. New Caſtile, of which in regard to the order of ſituation we ſhall firſt treat, is by ſome called alſo the kingdom of Toledo, it being the center of the monarchy, and the reſidence of the king. It is divided on the north by a chain of mountains from Old Caſtile, and a like chain alſo divides it to the eaſtward from Arragon and Valencia, and this ſide alſo borders upon Murcia; to the ſouth it is likewiſe ſeparated by a chain of mountains from Andaluſia; and to the weſtward is bounded by Eſtremadura. Its greateſt extent from eaſt to weſt is a hundred and eighty-four miles, and from north to ſouth two hundred.

This province has a good air, and is very fertile. The rivers Tagus, Guadiana, and Guadalquiver have their ſources in this province. The other moſt conſiderable rivers are the Xucar, which runs through Valencia into the Mediterranean; the Xarama, which riſes in the mountains of Atiença, and, after receiving the Henares and Tajuna, unites with the Tagus. The Guadarama has its ſpring head in the mountains of Toledo, and running from north to ſouth through the country falls into the Tagus a little below Toledo. The principal places in this province are the following:

Madrid, the metropolis of all Spain, and the reſidence of the king, is ſituated in forty degrees thirty minutes latitude, and in four degrees fifteen minutes weſt longitude, and ſtands upon a chain of little hills that are in the center of a large plain, terminated on all ſides by lofty mountains, whoſe ſummits are always covered with ſnow. Weſt of the city, where it has neither walls nor moats, it is watered by the Manzanares, which ſwells in winter by the melting of the ſnow; but for the greateſt part of the year, particularly in ſummer, is naturally ſhallow. King Philip II. however, erected over it a ſtately ſtone bridge eleven hundred paces in length, and to the extent of ſeven hundred it is twenty-two broad. On the ſouth ſide of the city is a much finer bridge over this little river built by Philip V. called the bridge of Toledo.

The city is large, and contains fifteen thouſand inhabitants. It has four hundred ſtreets, a few of them wide and ſtraight, but the reſt long, narrow, and ſo exceſſive dirty, that, according to ſome authors, the ſtench may be ſmelt at above the diſtance of a mile. The houſes are moſt of them lofty, regular, and ſpacious, but partake in ſome degree of the nauſeouſneſs of the ſtreets; they are built of brick, and the beſt of them with lattice windows, moſtly of canvas, or ſome ſlight oil-cloth. The rich indeed have them glazed; but take the ſaſhes down during the heat of ſummer, and put up others in their ſtead, covered with gauze, or other thin ſtuff, to let in the air. They in general, however, look more like priſons than the habitations of people at liberty; the windows beſides having a balcony, which takes off much of their beauty, being grated with iron bars, particularly the lower range, and ſometimes all the reſt. A houſe is generally inhabited by many ſeparate families, who are, notwithſtanding, for the moſt part, ſtrangers to each other.

The city has fourteen ſquares, among which the large market-place, called the Place Mayor, would be a very fine one were it kept clean, it being four hundred and thirty-ſix feet one way, and three hundred and thirty-one the other; but it is commonly filled with ſmall ſtalls and proviſions. As public ſhews are exhibited here on extraordinary occaſions, the houſes that ſurround it, which are exactly uniform, and five ſtories high, have balconies and galleries to each ſtory, for the convenience of the ſpectators; and, as they amount to the number of a hundred and thirty-ſix, are capable of containing fifty thouſand people with eaſe, they being throughout ſupported by an arched cloiſter like that of Covent-Garden, with open walks underneath for ſheltering the people from the ſun and rain. The houſes of the nobility have no courts before them, but ſtand even with the ſtreet; theſe, with thoſe of the gentry, amount to twelve thouſand, all of them ſpacious and beautiful; thoſe of the grandees are generally built with ſtone, and adorned within with expenſive furniture.

The other principal ſquares in Madrid are the Sun-market, della Sabada, and that of St. Domingo. The king's palace ſtands on an eminence on the weſt ſide of the city, commanding a delightful proſpect of the river Manzanares and the country beyond it; it was burnt down in 1734, but has been ſince rebuilt with greater magnificence.

Among the other buildings the imperial college of Jeſuits is a very noble ſtructure. Some of the convents are fine, particularly that of Atoche, or Our Lady of the Buſh; in the church belonging to which they ſing Te Deum upon victories and other public occaſions. The convent of the Saleſas is likewiſe a new and noble ſtructure.

In this city are the colleges in which are managed the affairs of the government, and alſo the courts of juſtice. There are here likewiſe three academies, one inſtituted for the improvement of eloquence and the Spaniſh tongue, another for hiſtory, and a third for phyſic.

Proviſions of all kinds are here both excellent and reaſonable, and the reſidence of the court in this city cauſes a briſk trade and circulation of money: yet foreigners are very much diſtreſſed for lodging at Madrid, there being only one tolerable inn, which is the Golden Fountain; and the Spaniards are not fond of taking any ſtrangers into their houſes, eſpecially if they are not Catholics. There is no ſuch thing as either a tavern or coffee-houſe in the whole city, and they have only one news paper, which is the Madrid Gazette. Their places of diverſion are the amphitheatre, built for the exhibition of the bull-feaſt, as it is called by the Spaniards, which has been already deſcribed, and the two theatres of *la Cruz* and *del Principe*. The noiſe by the itinerant bodies of pſalm-ſingers in the evening is very diſagreeable; the frequent proceſſions, particularly thoſe of the hoſt, are troubleſome; eſpecially

at Eaſter, when the ſight of thoſe bloody diſciplinants, the Flagellentes, is extremely ſhocking. In ſhort, there is no paſſing the ſtreets of Madrid commodiouſly without a vehicle; for as they practiſe, ſays Mr. Clarke, the Edinburgh cuſtom of manuring the ſtreets by night, they would be too offenſive to your feet, as well as your noſe, without a chariot by day.

Madrid is governed by a principal officer called the corregidor, who is ſomething like our lord mayor, tho' he is not choſen by the city, but by the king, and is not a merchant or tradeſman, but a gentleman well verſed in the law. He acts as a ſuperior judge, and has under him forty-one regidors, not unlike our aldermen, who compoſe his council, acting as inferior magiſtrates under him.

At the end of the city is a famous place for airing and recreation, called the Prado or Pardo de St. Hieronymo, a delightful plain ſhaded by rows of poplar-trees, and adorned with twenty-three fountains, from which it is ſprinkled every evening when the nobility and gentry repair thither in their coaches, or on horſeback.

At the extremity of the Prado is the palace called Buen Retiro, or the Good Retreat. This, Mr. Clarke obſerves, is a very indifferent quadrangle, and is not ſo good a royal manſion as St. James's. It was deſigned as a place of retreat for the king, from the hurry of the court and town. It, however, contains a great number of ſtately rooms and noble apartments, adorned with the moſt coſtly furniture and paintings, executed by the greateſt maſters; but it is only built of brick. The gardens are ſaid to be a perfect paradiſe, and abound with the moſt delightful ſhady walks, water-works, and the moſt curious productions of art and nature; among the former is an equeſtrian ſtatue of king Philip IV. very finely executed in bronze, ſtanding on a marble pedeſtal. On the canals are pleaſure-boats, and ſome ſummer-houſes, in which the muſicians play, while the king amuſes himſelf on the water. At the entrance of the outer-court are the king's ſtables, in which are a great number of horſes and mules. Contiguous to theſe is the armoury, a ſpacious handſome room filled with curious ſuits of armour formerly worn by the kings of Spain. The outer-court of the palace juſt mentioned is a large ſquare, with cloiſters on both ſides, the ſtables and armoury fronting the palace.

Caſa del Campo is a royal ſeat ſtanding on the other ſide of the river, to the weſt of the city, directly facing the king's town-palace, and was a very delightful place with a fine park, but is now much neglected. Florida is another royal pleaſure-houſe, ſeated near the former in an enchanting ſituation.

The palace of Aranjuez, about thirty miles from Madrid, has a fine front, and is agreeably ſituated in a pleaſant vale at the confluence of two rivers, the Xarama and the Tagus. Though the gardens are only a dead flat, and the walks plantations of trees in ſtraight rows; yet there is ſomething chearful and refreſhing in this cool and ſhady ſpot.

St. Ildephonſo is a palace about ſixty miles from Madrid, in a delightful lonely country; part of it is alſo a convent. The building is not grand, nor in a good taſte; but the gardens are very fine, and the fountains the nobleſt in Europe. The gardens are ſaid to have coſt five millions ſterling. Here king Philip V. retired on his reſignation of the crown in the year 1724, and cauſed the relics of ſome ſaints, which were highly revered, to be brought from the Eſcurial into this chapel.

We now come to the palace, or convent, of the Eſcurial, ſo called from the village in which it ſtands, which is ſituated ſeven leagues to the north of Madrid. Philip II. the founder of this palace and the convent belonging to it, made a vow at the battle of St. Quintin againſt the French, on the frontiers of Picardy, to build a convent at the Eſcurial for monks of the order of St. Jerom, which he preferred from his being obliged to canonnade a convent of Jeromites during the ſiege of St. Quintin. The battle being gained on St. Laurence's day, he called the convent after the name of that ſaint; and as he was burnt upon the gridiron, this prince immortalized the very manner of his martyrdom; for he not only ſtuck gridirons, either of paint, wood, metal, or ſtone all over the convent, but built the very convent itſelf in the form of a gridiron. That part of the building which forms the palace is the handle of this gridiron, and the reſt being divided into a great number of ſquare courts, the buildings are ſo ranged as to form the ſides and bars. But in building this ſtructure he gave great diſguſt to the Spaniſh cortes: for Philip having aſſembled them to aſk ſupplies for carrying on the war againſt France, the ſtates very freely voted a large ſubſidy of ſome millions; which the artful monarch, as ſoon as he had once ſecured in his own coffers, applied to the building of this convent. This miſapplication of the public revenues gave ſuch vexation to the cortes, that they afterwards aſſembled with more reluctance, being unwilling to be cajoled out of their money by the tricks of deſigning princes.

This royal monaſtery of St. Laurence is built on the declivity of a mountain, part of the Segovian chain, which ſeparates the two Caſtiles. It is of a beautiful white ſtone, veined with blue and brown, of a very fine poliſh, and is ſurrounded with the moſt delightful proſpects. The length of the front from eaſt to weſt is five hundred and eighty feet, and at each extremity are two ranges of buildings that extend backward four hundred and thirty feet, and then are again joined by another front of the ſame dimenſions as the former; ſo that it conſiſts of four fronts, and at each angle is a tower. The principal front has three gates, of which that in the middle is ſupported by four Doric columns of ſpeckled marble on each ſide, and over them are others of the Ionic order. Above the portal is a beautiful ſtatue of St. Laurence, of white marble, fifteen feet high, dreſſed in the habit of a deacon, with a book in his left hand, and a large gridiron of bronze in his right. The number of windows in this front is two hundred and forty-ſeven.

After paſſing the principal gate you enter a portico that extends from the college to the convent; over it is the library; and in the front are three noble arches leading into a grand court, where the eye is ſtruck with the magnificent frontiſpiece of St. Laurence's church, on each ſide of which is a lofty tower, and in the centre a dome. It has five grand arches that form the entrance into the veſtibule, and on the lower part of the portal are ſix large ſtatues, placed on pedeſtals, of David, Solomon, Hezekiah, Joſiah, Manaſſah, and Jehoſaphat, with crowns of gilt bronze on their heads, and ſceptres in their hands.

The whole ſtructure is ſupported by four ſtrong ſquare pillars round the centre of the church, forming four grand arches. Every pillar has two altars, and two niches over them; and in the niches of the pilaſters along the walls, on both ſides, are altars anſwerable to the others. Beſides theſe, the whole circuit of the church is ſurrounded with very elegant chapels, and over theſe are galleries with braſs baluſtrades extending quite round. The cupola is encompaſſed by two galleries, and crowned with a lantern, that has eight windows divided by pilaſters gradually diminiſhing to the top, where there is another ſmall dome on the crown of the lantern; and over this a fluted ſtone obeliſk, on the top of which is a globe of gilt braſs, with a croſs and vane. The doors are nine in number, and over the arches of the principal of theſe, and on the great altar, are twelve croſſes, of a very beautiful red jaſper. The altars amount to forty, all of which are richly adorned with carved work, and innumerable paintings, many of them by the greateſt maſters.

You next view the great chapel, the aſcent to which from the church is by twelve ſteps of red jaſper. The pavement of this chapel conſiſts of Moſaic work of jaſper and marble of various colours, ranged in the moſt beautiful compartments. The altar-piece is adorned with all the orders of architecture, except the Tuſcan. You firſt ſee ſix Doric columns, in the middle of which the tabernacle is placed, and in the compartments of the other columns are ſeveral paintings of ſacred hiſtory. Their baſes and capitals, with thoſe of all the other columns and pilaſters behind them, are of braſs gilt, and the ſhafts are of jaſper fluted and beautifully poliſhed. At the two extremes are niches, containing the ſtatues of four doctors of the church in gilt braſs, which has a fine effect, the jaſper of the niches being green. In the ſpaces on each ſide of the tabernacle are two pieces of painting, the

the one of the Nativity, and the other of the Eaſtern Magi worſhipping the Infant Jeſus.

The ſecond range of columns is of the Ionic order, inlaid with green in the compartments; and in the extreme intercolumniations are niches of green jaſper, containing the ſtatues of the four Evangeliſts, of the ſame materials and beauty with the former. The principal picture over the tabernacle repreſents the martyrdom of St. Laurence, by Peregrino; and in the ſide compartments are our Saviour bound to the pillar, and his carrying the croſs, by Zuccaro.

The third range conſiſts of only four columns of the Corinthian order, the extremes of the lower rank being ſupplied by two pyramids of green jaſper, between which are fine braſs ſtatues of St. James, the patron of Spain, and St. Andrew, both larger than the life. The hiſtory in the middle repreſents the Aſſumption of the Virgin, thoſe on the ſides are the reſurrection, and the deſcent of the Holy Ghoſt.

Two columns of the Compoſite order ſupport the frontiſpiece, which terminates in the principal arch of the chapel. The compartment is green jaſper, in which is a crucifix of braſs gilt, with the ſtatues of the Virgin Mary and St. John ſtanding on the ſides, and thoſe of St. Peter and St. Paul on the extreme pedeſtals. The whole height from the pedeſtal of the Doric order to the centre of the grand arch is ninety-three feet, and the breadth forty-nine. The above tabernacle ſtands on a pedeſtal of jaſper, within an arched portal, whoſe pilaſters are of red and green jaſper. The form is globular, and the order Corinthian. The materials are all gems, and gilt braſs. The firſt pedeſtal is of jaſper finely inlaid. It ſupports eight jaſper columns of a deep red veined with white. In the intercolumniations are four niches, with as many ſtatues of Apoſtles. Over the cornice is another baſe, with eight pedeſtals ſupporting the like number of ſtatues in gilt braſs: it alſo ſuſtains the cupola, which is divided into four compartments inlaid with jaſper. Above is a ſmall lantern crowned with another cupola, and over all is an image of our Saviour of the ſame metal as thoſe of the Apoſtles. In the lower part are two doors of rock-cryſtal leading into the ſanctuary, the jambs and lintels of which are of a beautiful green jaſper; the other parts conſiſt of jaſper of ſeveral colours and poliſhed braſs. In ſhort, this whole chapel is adorned with the richeſt Moſaic work, and a great variety of ſtatues and paintings.

The other chapels and all the different parts of this ſuperb church are adorned in the moſt beautiful manner, columns of jaſper, the richeſt kinds of marble, and moſt beautiful paintings and ſtatues are every where to be ſeen.

The convent conſiſts of five beautiful cloiſters, and may be entered from the church. The principal cloiſter is as large as the other four; it extending two hundred and ſeven feet from eaſt to weſt, and two hundred and ten feet from north to ſouth. The grand ſtair-caſe is forty feet broad; the ſteps are of the moſt beautiful ſtone, each of one piece, and the baluſtrades of exquiſite workmanſhip. The arcade above is adorned with painting, exhibiting the founder's motives for erecting this edifice, and the whole ſtructure is adorned with the works of the moſt celebrated Spaniſh and Italian painters.

In the gallery of the royal apartments are excellent paintings by Baſan; and along the wall are repreſented two curtains hanging down from the hooks ſo naturally, that the ſpectators often endeavour to lift them up. On theſe curtains are painted the battle fought by Don John II. againſt the Moors of Granada, in the plains of Higuernala, and the battle of St. Quintin; and at the two extremities are two naval victories gained off the iſle of Tercera.

In the ſouth ſaloon are two doors of inlaid work brought from Germany, extremely beautiful, and the inſide is adorned with a number of exquiſite paintings. The next is the apartment in which king Philip II. reſided, and where he died: here the furniture, cielings, and walls are plain. It is, however, adorned with ſmall ſtatues of ſaints, ſome very beautiful pictures of the Virgin Mary, and other religious pieces. From this apartment is a paſſage to the queen's, which is of the ſame conſtruction. The monks here have a higher opinion of Philip II. the founder, than even of St. Laurence and St. Jerom: this indeed is only a decent part of gratitude; for as he thought that, by raiſing this ſuperb fabric he ſhould atone for all his ſins, ſo he ſpared no expence to render it complete. It coſt during his reign twenty-eight millions of ducats, which is about three millions three hundred and ſixty thouſand pounds ſterling. He lived here chiefly during the laſt fifteen years of his life; and when he died, ordered himſelf to be brought out in his bed to the foot of the high altar, that he might die in ſight of it; and thus he expired. The place where his bed was placed is ſince railed off, as ſacred. However, ſome are ſo ſuperſtitious, ſays Mr. Clarke. as to believe that his unquiet and perturbed ſpirit ſtill nightly viſits his favourite manſion, and ſtalks horrid round the long arcades and corridores of the Eſcurial. "For a certain princeſs, to my knowledge, "he adds, gave orders laſt October, that the guard ſhould "patrole in the night round the cloiſters, to ſee if Philip "II's ghoſt really walked there or not."

There are two libraries in the Eſcurial, one upon the firſt floor, and the other upon the ſecond: that upon the firſt floor is a fine arched room a hundred and ninety-five feet long, thirty-two broad, and thirty-ſix in height; and the pavement is of black and white marble in beautiful knots. The concave part of the cieling is finely painted by Pelligrino, exhibiting Divinity, Philoſophy, Grammar, Logic, and all the other ſciences, ſurrounded with proper groups of figures. This library contains all the printed books, except ſome firſt editions which are kept above. The library above ſtairs is ſuppoſed to be one of the nobleſt collections of manuſcripts in the world, there being eighteen hundred and twenty-four volumes of Arabic manuſcripts only; Greek manuſcripts in profuſion, in folio and quarto, of very great antiquity, yet fair and legible. But all this wealth is depoſited in the hands of a few illiterate Jeromites, who are as jealous of theſe treaſures as if they underſtood their true value.

The laſt part we ſhall mention of this ſuperb ſtructure is the Pantheon chapel, the ſepulchre of the princes of Spain. The portal is one of the fineſt pieces, in the compoſite order, in the world. The principal members are of black marble, regularly veined and ſpotted with white. In the leſſer parts gems, gold, ſilver, and bronze, unite their luſtre. On the ſides are two pillars in relievo, with their baſes and capitals, beſides the jambs and lintels, formed out of one block of marble. Over this is the frize, and figures to the number of ten, ſupporting the crown. The pedeſtals, capitals, &c. are of braſs gilt; and before the door is a baluſtrade of gilt braſs, of moſt beautiful workmanſhip.

From this portal you deſcend a ſtair-caſe compoſed of the fineſt Tortoſa jaſpers and Toledo marble, beautifully variegated, finely poliſhed, and joined with ſuch art as to appear only one ſingle piece, ſixty-four feet in length, conſiſting of thirty-four ſteps, divided into three flights, by the like number of landing-places. The baluſtrades are of beautiful jaſper marquetry, with marble mouldings. In the middle hangs a gilt luſtre with ſix cornucopias. At the third landing-place is the Pantheon door, adorned with four pilaſters, two of jaſper, and two of bronze. The pavement between the pilaſters is of poliſhed jaſper, and the ceiling repreſents Jacob's ladder.

Upon entering this auguſt cemetry, you are ſtruck with the beauty of its ſeveral parts. The order of its architecture is the compoſite. Its circumference is one hundred and thirteen feet, and the diameter from wall to wall is ſomething more than thirty-ſix feet; the height from the pavement to the central ſtone at the top is thirty-eight feet, and its figure is perfectly circular. The pavement repreſents the figure of a ſtar, the rays of which are formed of innumerable gems, jaſpers and different kinds of marble, with a fleuron in the center, glittering with gems. The whole is ſurrounded with a beautiful pedeſtal or baſe, on which ſtands ſixteen fluted Corinthian pilaſters of jaſper, the baſes and capitals of gilt bronze. The ſarcophagi or coffins are placed in niches

all

all round the Pantheon; and the marble of which they are made, is remarkable for the fineneſs of the grain, the beauty of the colour, and the ornaments beſtowed on them.

The ring in the cieling, in the middle of which is the key-ſtone, forms a ſplendid fleuron, eighteen feet in circumference, and is of braſs gilt, and the deſign and workmanſhip very fine. From this fleuron hangs a large iron-rod, to which is faſtened a large gilt luſtre of beautiful workmanſhip. At the lower end are the four evangeliſts in demi-relievo; over theſe are twenty-four cornucopias, along the edges of which are cherubins; and above theſe eight angels holding flambeaus; and the other eight are fixed to the heads of as many ſeraphs. It is every where embelliſhed with feſtoons, &c. and ſurmounted by a ſplendid crown. When the tapers in theſe cornucopias, the flambeaus held by the angels, and the candles on the altar are lighted, no words can expreſs its grandeur.

On the right-hand, going out of the Pantheon, a door opens into a vault which may be called the ſecondary Pantheon, where thoſe of the royal family who are not entitled to a place in the principal ſtructure are interred. On every ſide are three rows of niches, to the number of fifty-one, for the coffins; and on the wall next the door is an altar-piece, in which is a good copy of Chriſt on the croſs, from Titian. Leaving this monaſtery, we proceed to

Toledo, an ancient fortified city, ſituated in the fifty-ninth degree forty-ſix minutes north latitude, and in the fourth degree twenty minutes weſt longitude, and ſtands on a ſteep and craggy rock, encompaſſed by the Tagus, in the form of a horſe-ſhoe, over which it has two ſtately bridges. The land-ſide is fortified by a double wall, in which are one hundred and fifty towers, and five large gates, beſides poſterns. It was formerly eſteemed a place of ſtrength; but in the laſt wars about the ſucceſſion, it always ſubmitted to thoſe who were maſters of the field. The plain around the city is ſpacious, fertile, pleaſant, and ſo well watered by the Tagus, that it produces corn, wine, oil, fruit, and in ſhort every thing that can contribute to the convenience and delight of man. The air is particularly ſerene aud healthy, and there is plenty of proviſions, which are very cheap. Here reſide many noble families, beſides gentry, learned and religious perſons, merchants, trades-people, and artificers, eſpecially in the ſilk and woollen manufactures, which two branches alone are ſaid to have employed ten thouſand hands; but at preſent they are much declined.

The city is divided into twenty-three wards, and has twenty-ſeven pariſhes, about twenty chapels, thirty-eight monaſteries and nunneries, four grand houſes of retirement for women, two large colleges, and twenty-five hoſpitals, one of them for lunatics.

The ſtreets are narrow and ſteep; but there are no leſs than ſeven ſquares or market-places. There is here a magnificent and ſpacious old palace taken from the Moors, the ſtables of which can hold at leaſt five hundred horſes.

The cathedral is a large Gothic ſtructure, rich in carving, but the building is neither light, nor in a good taſte. It is three hundred and eighty-four feet long, one hundred and ninety-one broad, and one hundred and ſeven high, all of white ſtone. The roof is ſupported by eighty-eight lofty pillars, which divide it into five leſſer, the middlemoſt of which is very handſome, it being divided into two choirs neatly carved and inlaid. One of them is called the chapel of the Bleſſed Sacrament, and is the burying-place of many of the Spaniſh monarchs. It is encloſed with coſtly iron grates on baſes of jaſper; and on each ſide ſtands a braſs pulpit on pillars of the ſame metal. The other choir belongs to the canons, cloſed in after the ſame manner, and beautified with carvings in wood and jaſper. All the outſide of the two choirs is adorned with ſtatues in niches, and other ſculpture repreſenting the hiſtory of the Old and New Teſtament. There are in this ſtructure thirty-four chapels, and the entrance into it is by eight large braſs gates, with magnificent porticos; and above is a lofty tower with a ring of bells of a prodigious ſize. The treaſury is of an ineſtimable value; the veſtments for the prieſts, and the utenſils, are of the richeſt materials and fineſt workmanſhip. The image of the Virgin Mary here has a garment covered with pearls; and the paintings in this ſtructure are anſwerable to the reſt. The cieling of the veſtry is painted by Luca Giordano, and is indeed fine and well preſerved. The cuſtodia, jewels, and precious ſtones, are inconceivable, as well as ineſtimable: altars, with ſteps to them of maſſive ſilver, gilt; the figures of the four quarters of the world, each adorned with the precious ſtones peculiar to its own quarter, and ſitting on globes of two feet diameter, the globe reſting on a pedeſtal, and that on a baſe; the figure, globe, pedeſtal and baſe, being all together ten feet, and ſaid to be all of maſſive ſilver, were the gift of Charles II's queen. In ſhort this is one of the richeſt cathedrals in the univerſe, and the archbiſhopric, both in power and revenue, the greateſt next to that of Rome; ſo that the late queen of Spain obtained it from the pope for one of her ſons, though a minor. The lands for the repairs of the church are ſaid to bring in annually thirty thouſand ducats, and for the dignatories and canons two hundred thouſand more. The whole number of perſons belonging to the cathedral, is ſaid to amount to ſix hundred.

The remains of the alcaſſar, or palace built by Charles V. or according to others, by the archduke Charles, appear very noble; but it was burnt by the allies and Auſtrian party in the partition or ſucceſſion war, leſt it ſhould fall into the hands of Philip V.

There is alſo a very great curioſity at Toledo, which is an original Hebrew temple, and is a fine piece of antiquity; but the piety of the Spaniards in converting this temple from Judaiſm to Popery, has taken away much matter of entertainment to the antiquarians. The ancient diviſions have been all taken down; the holy of holies, and even the tabernacle itſelf, have been literally done away. The walls, it has ſince been found, were covered with the Pſalms in Hebrew characters; but the Spaniards had zealouſly plaſtered them over; but a gentleman of parts and learning, who is canon and treaſurer of the church, has lately cauſed the plaſter to be carefully removed. There are alſo the remains of a Roman circus and amphitheatre.

The Caſtilian language is ſpoken here in its utmoſt purity. One of the greateſt inconveniences of this city is, the inhabitants having no water but what is brought from the Tagus, or ſaved from the eves of their houſes, when it rains. There is here a remarkable common ſewer, which is ſaid to run under every houſe, to carry off all the ſoil into the river. Beſides the above ſtructures, there is here an univerſity founded in the year 1475, and a court of inquiſition. The city is populous, and carries on a great trade in fine ſword-blades, wool, ſilk, and ſtuffs.

SECT. XI.

Of the Kingdom or Province of Old Caſtile; its Situation, Extent, Rivers, and Produce; with a Deſcription of Avila, Segovia, Valladolid, and Burgos.

OLD Caſtile is bounded on the north by the Aſturias and Biſcay; on the eaſt by Navarre and Arragon; on the ſouth by New Caſtile; and on the weſt by Leon. Its figure is very irregular, and conſequently its dimenſions extremely different; however, its greateſt length from Valladolid to Tarraçona, is about one hundred and twelve Engliſh miles, and its greateſt breadth about one hundred and eighty.

Its principal rivers are the Duoro and Ebro, the firſt of which is joined by the Atayada, the Andaja, the Arebarillo, and the Piſuerga, which alſo receives the Arlança and Arlançon. The ſources of all theſe rivers are in this province, which is mountainous and leſs fertile than New Caſtile. The moſt fruitful part is a tract called la Tierro de Campos, which lies to the north, near Medina de Prio Seco. The wine produced here is excellent; the plains are covered with cattle, particularly with ſheep, which yield the beſt wool in all Spain. It was formerly only a country ſubject to the kings of Leon;

but in 1016 was erected into a kingdom. The moſt remarkable places in this province are the following:

Avila, or Avila del Rey, forty miles to the eaſt of Salamanca, is an ancient city, ſeated on a fine plain environed with mountains, and producing excellent grapes and other fine fruits; it is ſurrounded with a wall, on which are eighty-ſix towers, and ten gates. It has nine pariſh churches, as many monaſteries, ſeven nunneries, eighteen chapels, two colleges, nine hoſpitals, and an annual charitable donation of ten thouſand ducats given by the city, for maintaining poor orphans and other needy perſons. The royal caſtle ſtands on a rock, and is provided with a garriſon and artillery.

The city of Segovia is of great antiquity, and ſtill a conſiderable place. It ſtands high between two hills, and is large, populous, and handſome. It has excellent manufactures of cloth and paper, and alſo exports a very fine ſort of wool. The number of families in this city, amount to at leaſt four thouſand. It has twenty-ſeven pariſh churches, thirteen monaſteries, eight nunneries, five hoſpitals, three chapels, ſeven ſquares, and forty-three ſtreets of the firſt rank, beſide a great number of lanes.

The cathedral is a noble ſtructure, in the Gothic ſtyle of architecture, and has two choirs, as it were ſurrounded by a moſt ample baſilica, which is lined on the wall-ſide with a vaſt variety of fine altars, and rich ſhrines. The painted glaſs is good, and gives a dim religious light. The ſacriſty is a fine room, and contains ſome paintings. There is an old cloyſter adjoining to the cathedral, in which are hung up ſome hundreds of veſtments, the badges of ſo many unhappy Jews, who had the misfortune to be burnt, becauſe they did not believe all that the inquiſitor did. The inquiſition, or the holy office, as it is called, was then at Segovia, but has been ſince removed. In this cathedral is a grant of queen Urraca, which mentions the Alcazar, or royal palace; and, according to the Rev. Mr. Clarke, is concluded in the following impious manner: "Whoſoever ſhall violate this "grant, let them be ever baniſhed from God's threſ-"hold, and be eternally tormented with Dathan and "Abiram, whom the earth ſwallowed; be damned with "the traitor Judas, and pay a thouſand pounds of un-"alloyed gold to the biſhop."

There are ſeveral fine churches beſides the cathedral; that of St. Milan is very old. The arches of this church are all round and large; and the pillars, which are lofty, have carved capitals, containing many figures both of men and animals; ſome with beautiful foliage: the ſhafts are round and plain, placed upon ſquare baſes extremely large. At the entrance is a ſort of alcade, with beautiful ſmall columns of black marble, and the pillars joined to one another by a ſort of ſpiral line.

The church of St. John the Baptiſt is ſaid to be the oldeſt in the city, it being built in 923. It conſiſts of three naves, all round arches of the old Gothic, and here the archives of the city are kept in a handſome cheſt. The cornice is compoſed of the heads of animals, the capitals of the pillars carved with animals and human figures, and the windows are ſmall, long, and narrow.

The Alcazar, or royal palace, is ſuppoſed by Mr. Clarke to have been built in the eighth century. The front is about fifty feet long: there are two conic turrets at each wing; and the façade is adorned with ſeveral diminutive turrets in the ſame ſtyle; above the ſkilling or ſpan-roof of the firſt front, there riſes another ſkilling-roof adorned with turrets in the ſame ſtyle; and between the wings in the middle riſes a lofty ſquare brick tower, ſurrounded with ſmall circular turrets ending in a conſole. Along the front of the firſt building runs a neat, ſmall, open gallery, juſt under the cornice. The whole of the fabric appears to be in the old Mooriſh ſtyle, and is extremely pretty and light. You go to it through a ſort of a court, over a ſmall bridge; it being on one part encompaſſed by a deep foſs, and on the other ſides by ſteep precipices, it ſtanding on a rock. Having paſſed the bridge, you enter a cloyſter, where there is a court within and a fountain, and having paſſed through a large hall, enter into a ſtate-room, with a rich cieling, carving of ſtucco upon the walls, and Dutch tiling round the room at the bottom. This brings you to a ſecond apartment in much the ſame taſte, but a much richer cieling; then you enter a magnificent room, called the Hall of the Kings, it containing the wooden or waxen images of nineteen kings of Caſtile, ſix of Leon, two of the Aſturias, and ſixteen of Oviedo, all placed over your head, about the middle of the wall, round the room, with their queens, and four counts, or dukes, placed under them. Round all the rooms are inſcriptions containing prayers and pious ſentences, in old Gothic characters.

This is the famous tower or caſtle of Segovia, ſo celebrated in Gil Blas and other romances, the ancient receptacle of ſtate priſoners. There is another large priſon in the middle of the city; but that is only for common felons.

The Placa Mayor is a very tolerable irregular ſquare, but the buildings are in the old Spaniſh ſtyle; and tho' wood is ſcarce, and cracks with the ſun, the fronts of moſt of them are of deal, and moſt miſerable buildings.

This city has a famous univerſity: it is the ſee of a biſhop, who has an annual revenue of twenty-four thouſand ducats.

The town-houſe is a good modern ſtructure; but the city, upon the whole, has a ſtrange appearance: the buildings look wild and odd, ſometimes being raiſed upon the uneven and craggy parts of the rock, and conſiſting of all the ſtyles of architecture, Roman, Gothic, Mooriſh, Saxon, and Spaniſh.

But what is moſt worthy of notice among the buildings of this city, is the Segovian aqueduct, which extends to a ſmall river, called Rio Frio, which riſes in the ſkirts of a paſs in the mountains, and takes from it as much water as would fill a duct that would contain a human body. It is received into an arch of ſtone, five hundred paces from the city; and from thence begins to run in the channel of the aqueduct, which does not require more elevation than ſeventeen feet. By little and little, the height increaſes as it comes to deeper ground, but without requiring more than one range of arches, till the water has paſſed over ſixty-five arches, where the arches have a height of thirty-nine feet, cloſe to a Franciſcan convent. There they begin to wind from eaſt to weſt, requiring two ranges of arches, one arch being put upon the other; that being the loweſt part of the valley, which is the little ſquare, now called Azoguejo. In that part the aqueduct is one hundred and two feet high; the channel entering by the battlements of the walls, with an extreme elevation from the ground to the top of the arch. The aqueduct goes through the middle of the city, from eaſt to weſt, with an arched duct ſo large, that a man may walk in it: and from thence dividing, it extends to the public fountains, and the ciſterns of convents and private houſes. This ſtructure conſiſts of one hundred and ſixty-one arches, of hewn ſtones of a bluiſh granite, placed one upon another. This was doubtleſs built by the ancient Romans, and ſome attribute it to Trajan. In two niches on the higheſt part was formerly ſtatues of Hercules, which are now changed for thoſe of our Lady of St. Sebaſtian.

In this city is fixed the principal mint of all Spain, which, when at work, can coin thirty thouſand ducats in a day. Here they make good paper; but the woollen manufacture of this city is the beſt and moſt conſiderable in all Spain; the blankets of Segovia are, perhaps, the fineſt in the world; for they have a vaſt quantity of the fineſt wool, produced from the numberleſs flocks bred in the neighbouring plains. Here are alſo ſeveral other manufactures, particularly of linen, which is carried on with great ſucceſs.

Valladolid, anciently called Pindia, is a large, beautiful, and populous city, eighty-ſix miles to the north-weſt of Madrid. It is ſituated in a ſpacious and delightful plain, watered by the Piſuerga, over which it has a ſtately bridge: beſides which, it has about nineteen ſmall ones over the Eſquera, a ſmall river that runs thro' ſeveral of the ſtreets, and thence through a delightful landſcape of gardens, orchards, meadows, and fields, which it waters in its courſe. The city is walled round; but is a place of no great ſtrength, and has ſix gates. It has long broad ſtreets, with large and lofty houſes, ſplendid palaces, ſpacious and elegant ſquares, and fountains; ſeventy convents, among which the Dominican convent

of St. Paul has a magnificent church, and the college of St. Gregory, and that of the Jeſuits are particularly worthy of notice.

The great ſquare, or piazza, is built after the model of that at Madrid, and conſiſts of five hundred arches with gilt balconies, three thouſand windows all in view, and three hundred and thirty gates or doors. It is in circuit ſeven hundred paces, and is capable of containing thirty thouſand perſons. Near one ſide of this ſquare is a large well-built ſtreet, chiefly inhabited by gold and ſilverſmiths.

Here is a royal palace, near the Dominican convent; an univerſity, founded in 1346; a geographical academy, lately erected; a court of inquiſition; and a tribunal of juſtice, compoſed of one preſident, fifteen counſellors, four criminal judges, one ſupreme judge for Biſcay, four judges of nobility, two fiſcals, and an alguazil mayor; yet the revenue of its biſhop, who is ſuffragan to the archbiſhop of Toledo, does not exceed twelve thouſand ducats per annum.

The inhabitants of Valladolid are as polite and well-bred as any people in Spain. They not only carry on a conſiderable trade abroad, but cultivate ſeveral manufactures at home, in which they are very expert and ingenious.

Burgos, the capital of Old Caſtile, ſtands on a hill between the rivers Alanzo and Arlanza, and is encompaſſed with mountains. It is ſituated in forty-two degrees thirty minutes latitude, and in four degrees five minutes weſt longitude, one hundred and ten miles to the north of Madrid. It has old but ſtrong walls, ſeven gates, and has a good bridge over the Arlanza, and on the north-ſide is a caſtle ſeated on a ſteep rock. The air is here ſo diſagreeable, that the Spaniards have a proverb, that Burgos has nine months of winter, and the other three of hell; the former meaning rainy and cold weather, and the latter exceſſive heat. This city is large, but irregular, and moſt of its ſtreets are narrow and crooked. It has, however, many fine ſquares, public buildings, and noblemen's houſes. This city has fifteen pariſh churches, with five hoſpitals, ſix chapels, a college, ten monaſteries, and nine nunneries, one of which is the royal foundation of Huelgas, of the order of St. Bernard; its lady abbeſs is a woman of the firſt quality, and next in rank to the royal family; ſhe having ſeventeen monaſteries, ſixteen towns, and fifty villages ſubject to her. In this abbey are one hundred and fifty nuns, all gentlewomen; and its revenue amounts to eighty thouſand ducats a year. The convent of St. Auguſtine has what they term a miraculous crucifix, which they pretend was made by Nicodemus.

The cathedral, which is one of the nobleſt and richeſt in Spain, has five large choral chapels, with an organ in each, yet ſo incloſed and remote, as not to diſturb each other. The archbiſhop has a revenue of forty thouſand ducats a year. Bega, one of its ſuburbs, exceeds it in convents and hoſpitals. The inhabitants of both ſexes are here more induſtrious, and carry on a greater number of trades and manufactures, than is common in the large cities of Spain.

SECT. XII.

Of the Kingdoms, or Provinces of Navarre and Biſcay; their Situation, Extent, Produce, and Rivers; their Hiſtory, and Principal Cities.

NAVARRE, which to diſtinguiſh it from the country of the ſame name belonging to the French, is called Upper Navarre, is bounded on the weſt by Old Caſtile and Biſcay; on the ſouth by Arragon; and on the eaſt by Arragon and the Pyrenean mountains, which divide it from French Navarre; and alſo by the ſame mountains towards the north. It is an hundred miles in length, and about ſixty in breadth; it is mountainous and colder than the reſt of Spain; and as the greateſt part of the province lies among the Pyrenean mountains, its chief wealth conſiſts in cattle. Hence it produces very little corn, wine, or fruit; but has abundance of excellent timber, and ſome iron-mines. The mountains alſo abound in game of all kinds, as bears, ſtags, roe-bucks, wild-fowl, &c. It is watered by three rivers, all of which fall into the Ebro; theſe are the Arga, the Ega, and the Arragon, which iſſues from the kingdom of the ſame name.

The king of Spain receives no revenue from this country, all the impoſts and duties being by compact to be employed in the public ſervices. Navarre, from the year 718 to 1512, had its peculiar kings of different families; but in the laſt mentioned year, was reduced by king Ferdinand the Catholic, under the idle pretence that John D'Albert, its king, by being an ally of Lewis XII. of France, with whom pope Julius II. was at variance, had been declared an enemy to the church, and excommunicated by the pope.

Pampeluna, anciently Pompeiopolis or Pompelo, from its being built by Pompey the Great, is the capital of Navarre; and is ſeated on a plain near the Pyrenees, by the river Arga, one hundred and ſixty-ſeven miles to the north-eaſt of Madrid. It is a place of tolerable extent, and has two caſtles, one within the city, and the other without, on a rock. Its ſquares are handſome, and adorned with ſhops full of rich merchandize. Its biſhop is ſubject to the archbiſhop of Burgos, and has an annual revenue of twenty-five thouſand ducats. It has alſo an univerſity, founded in the year 1608, and is the reſidence of the viceroy of Navarre.

The province of Biſcay is bounded to the weſt by the Aſturias; to the northward by the ſea, which is here called the Bay of Biſcay; to the eaſt by Navarre; and to the ſouth by Old Caſtile. Its extent from north to ſouth, is between eighteen and ſeventy-five miles, and from eaſt to weſt one hundred and eight.

The air here is mild and temperate; but the ſoil is ſtony and uneven, ſo that in ſome places hardly any thing grows; but in others they have a little wine, called chacolino, which is pleaſant, and drank as ſmall-beer. They have corn ſufficient for the uſe of the inhabitants, and have apples in great plenty, of which they make excellent cyder, which in ſome meaſure ſupplies the want of wine. The coaſt alſo abounds with oranges and lemons, which they ſell very cheap, and in the foreſts is excellent timber fit for ſhip-building. The mountains yield mines of iron and lead; while the valleys produce ſome flax.

Its commodious ſituation on the ſea, in the neighbourhood of France, renders the trade very flouriſhing: they particularly export great quantities of iron-work, with all ſorts of powder and fire-arms, which are very neatly finiſhed, and a great deal of tar. Here they ſhip off large quantities of wool, which is moſtly brought from Old Caſtile: but their own produce in this laſt article, being neither ſo fine, nor produced in ſuch quantities, they manufacture wholly at home. The ſea alſo furniſhes this province with all kinds of excellent fiſh.

The natives of Biſcay are of Celtic extraction, and like their progenitors, generous, brave, hardy, choleric, active, and of few words. They are alſo reckoned the beſt ſoldiers and ſailors in Spain, and enjoy many privileges, of which they are extremely jealous. They have a particular language of their own, called the Baſque, or Biſcayan, that has no affinity with the other European tongues, and there are few who do not ſpeak it readily; having preſerved this, with their genius, ancient laws, government, and manners, without innovation.

Till the year 859 the Biſcayans were governed by counts, or governors, ſent them by the kings of Ovieda and Leon; but under the latter they revolted, and choſe themſelves a chief, which they retained till they were ſubdued by Peter the Cruel, who, under the title of a lordſhip, united Biſcay to Caſtile.

This province contains the three following ſubdiviſions, Biſcay Proper, Guipuſcoa, and Alaba; the principal places in which are the following:

Bilboa is a corruption of Bello Bado, and ſignifies a fine ford, one lying near it. It is the capital of the province, and is ſeated in a plain environed by high mountains, ſix miles from the ſea, in latitude forty-three degrees thirty minutes, and in three degrees ten minutes weſt longitude. The tide which flows up here into the river Ybaiçabal, the antient Nervius, forms a ſecure harbour, which is very much reſorted to; ſmall veſſels

coming up to the mole, while thoſe that are larger lie farther out in the road. The greateſt export of this place conſiſts of fine wool and excellent iron, moſt of the latter in bars, though great quantities of it are wrought into ſwords, fire-arms, and other military implements; they alſo export ſaffron and cheſnuts. This city is large and populous; it has a bridge over the river, and contains twelve hundred houſes, five pariſh-churches, the like number of monaſteries, and ſeven nunneries. It has a good air, and is ſurrounded by a fruitful country, whence proviſions are plentiful and cheap.

There is alſo in this province Ordunna, a ſea-port city, ſeated in a pleaſant valley formed by high mountains, twenty-five miles to the ſouth-weſt of Bilboa, and two other ſmall towns.

Guipuſcoa, the ſecond ſubdiviſion of Biſcay, runs along the coaſt of the north bay, and is bounded to the weſtward by Biſcay Proper, and part of Alaba; to the ſouthward by Navarre; and to the eaſtward by Navarre and France. It abounds in moſt things, except wheat. The principal places it contains are the following:

St. Sebaſtian, a city of conſiderable ſize, ſituated in forty-three degrees thirty-ſeven minutes latitude, and in one degree fifty-ſix minutes weſt longitude, has a ſecure harbour at the mouth of the little river Gummea, and is ſeated at the foot of a mountain, which ſerves as a defence to it againſt the tempeſtuous ſea. The harbour is ſecured by two moles, between which only one ſhip can paſs at a time. Near its entrance is alſo a fort defended by a garriſon. The town is ſurrounded by walls defended with baſtions and half-moons, and on the mountain under which it lies, is a citadel. The ſtreets are long, broad, ſtraight, and clean; they being paved with white flag ſtones. The houſes are pretty handſome, the churches very neat, and the environs extremely pleaſant; one ſide affording a proſpect of the ſea, and the other a diſtant view of the Pyrenean mountains.

A conſiderable trade is carried on here in iron and ſteel, which ſome take to be the beſt in Europe, and alſo in wool. This town was taken by the French in the year 1719. In time of war with the Engliſh there are many privateers here, and the prizes are generally brought into this harbour.

Fontarabia, or Fuentarabia, is a little neat town, ſeated on a peninſula on the ſea-ſhore, twenty-two miles to the ſouth-weſt of Bayonne. It is fortified both by nature and art, and has a pretty good harbour, though it is dry at low water. This town is built in the form of an amphitheatre, on the declivity of a hill, and on the land-ſide is ſurrounded by the lofty Pyrenean mountains. It is a very important place, it being accounted the key of Spain on that ſide.

The young gentlewomen of this city have ſomething particular in their dreſs; for their braided hair falls on their ſhoulders, and on their heads they wear a ſmall muſlin veil, which flutters about their necks, round which they have necklaces of coral: their garment is a waiſt-coat with looſe ſleeves, and they are very alert and active: but this is chiefly to be underſtood of thoſe who inhabit the adjacent villages.

In 1638 this place held out a ſiege againſt the French, for which it was honoured by the king with the title of a city; but in 1719 was taken by them. Near the city runs the river Bidaſſoa, or Vidoſſo, which is here very broad, and is the boundary between Spain and France.

Pheaſant iſland, which is formed by the river Bidaſſoa, and ſeparates France from Spain, is worthy of notice, both on account of the peace of the Pyrenees, which was concluded in 1659, and for the treaty of marriage tranſacted there between Lewis XIV. and Mary Thereſa, the infanta of Spain. In 1722 were exchanged at this place the infanta Maria Anna Victoria, and Mademoiſelle de Montpenſier, daughter to the duke of Orleans, regent of France. It is called by the French *l'Iſle de la Conference*, and *Iſle de Paix*.

Toloſa, the capital of Guipuſcoa, is ſeated between two mountains in a delightful valley, at the confluence of the Araxas and Oria, over which there are two handſome bridges, and at a ſmall diſtance ſeveral fine natural caſcades. It is not large, but inhabited by a great number of perſons employed in making ſword-blades.

The province of Alaba, the laſt of the three diviſions of Biſcay, is bounded on the north by Guipuſcoa and Biſcay Proper, on the eaſt by Navarre, on the ſouth by Old Caſtile, and on the weſt by Biſcay Proper and Old Caſtile. It is pretty fertile in rye, barley, and ſeveral kinds of fruit, and has alſo tolerable wine. It has likewiſe very rich mines of iron.

The capital of this little diſtrict is the city of Vittoria, which lies about thirty miles to the ſouth of Bilboa, is ſeated on an eminence, at the end of a pleaſant valley, and is environed with double walls. In the principal ſquare are the town-houſe, two convents, ſeveral well built houſes, and in the middle is a fine fountain. The large ſtreets are bordered with trees, which are a good defence againſt the heat of the ſun. The monaſteries are magnificent, and the convent of St. Francis is in particular very large. There are here ſome rich merchants, who carry on a great trade in iron and ſteel, ſword-blades, wool, and wine.

SECT. XIII.

Of the Principality of the Aſturias; its Situation, Extent, Produce, Hiſtory, and principal Cities.

THE principality of the Aſturias is bounded on the north by the bay of Biſcay, on the eaſt by the province of Biſcay, on the ſouth by Old Caſtile and Leon, and on the weſt by Galicia; and takes its name from the Aſturians, a Celtic nation, who came hither from Gaul, and whoſe valour rendered all attempts by other nations abortive. Its greateſt extent is about forty-eight miles from ſouth to north, and about a hundred from eaſt to weſt. The air is tolerable; but the country uneven, rugged, and thinly peopled; yet the ſoil produces a pretty deal of grain, fruit, and wine. Its horſes were antiently very famous, and much ſought after on account of their ſpirit and goodneſs.

The nobility of this province value themſelves on being deſcended from the Goths, and on their blood not being adulterated by a mixture with that of the Jews and Moors. For after the unfortunate battle which the Goths, commanded by king Roderic, fought with the Moors near Xeres, Pelagius, the Gothic prince, retreated with a conſiderable number of the nobility into the mountains of the Aſturias, where he aſſembled a ſmall army; but being unable to face the enemy in the field, retired with a thouſand brave Goths to a large cave in the mountain of Auſena, and upon the approach of the Moors ſallied out and entirely defeated them. The bold ſtand made by the Goths is ſtill ſo celebrated in Spain, that all the inhabitants of this mountain enjoy particular privileges; and though they are but peaſants, and go in great numbers from this mountain to ſeek for work in the other provinces of Spain, both great and ſmall give themſelves the appellation of illuſtrious Goths, or illuſtrious mountaineers; and, amidſt their poverty, think it a diſgrace for them to marry with the great and rich families of any other race. Indeed they are ſo highly eſteemed, that other families frequently give conſiderable ſums to marry among them. This diſtrict belongs to the hereditary prince of Spain, who takes his title from it. It is divided into two unequal parts, and hence ariſes the name of the Aſturias in the plural number.

Theſe diviſions are called Aſturia d'Oviedo and Aſturia Santellana: the former lies to the weſtward, and is the largeſt diviſion; and the latter to the eaſtward.

Oviedo, the antient Brigetum, the capital of all Aſturia, and the only place that bears the name of a city, is ſeated on a plain, in a kind of elevation between the little rivers Ove and Deva, fifty miles to the north-weſt of Leon. The biſhop of this place, who enjoys an annual revenue of twelve thouſand ducats, is immediately ſubject to the pope. The cathedral boaſts of poſſeſſing a vaſt number of relics that were brought hither from all parts of Spain, in order to ſecure them from being taken by the Moors; and here is an univerſity, erected in 1580.

Villa

Villa Vicioſa, a town ſeated twenty-two miles to the north-eaſt of Oviedo, and has a good harbour on the bay of Biſcay, into which the river Aſta diſcharges itſelf.

Santellana, in Latin Fanum Sanctæ Julianæ, the capital of the other diviſion, lies ninety-four miles to the weſt of Bilboa. It is ſmall, has a harbour on the bay of Biſcay, with a collegiate church, and gives the title of marquis to the duke of Infantado.

There are ſeveral other towns in this province; but they are all of them very inconſiderable places.

SECT. XIV.

Of the Kingdom or Province of Leon; its Situation, Extent, Produce, Rivers, and principal Cities.

THE kingdom of Leon is bounded on the eaſt by Old Caſtile, on the ſouth by Eſtremadura, on the weſt by Galicia and Portugal, and on the north by the Aſturias. Its extent from north to ſouth is about a hundred and ſixty-five miles, and from eaſt to weſt between ſixty-ſeven and ninety-three. The ſoil in ſome places produces all the neceſſaries of life, and particularly very good wine: In this province are likewiſe mines of turquoiſe; but a great part of the country is a naked, dreadful, barren rock, except where it is covered with a few pitiful firs or ſhrubs. "I turned round, ſays Mr. "Clarke, to take a view of Leon from one of the higheſt "mountains, and was almoſt frightened at the ſight; "a brown horror, as Mr. Pope expreſſes it, was ſpread "over the whole; ſands, rocks, and craggy precipices "formed as ſavage a proſpect as can be imagined."

The principal rivers of Leon are the Piſuerga and the Carrion, which riſe in Old Caſtile; the Eſla and Orbego, both which have their ſources near the city of Leon; the Torto and Tera, which run into the Orbego; and Formes, or Rio de Salamanca, which, on the frontiers of Portugal, falls into the Douro.

The moſt remarkable places in this province are the following:

Leon, the capital of the province, was built by the Romans in the reign of the emperor Galba, and called Legio Septima Germanica, from whence it derived the name of Leon. It is ſeated in the forty-third degree ten minutes north latitude, and in the ſixth degree twenty minutes weſt longitude, between both the ſprings of the river Eſla, and at the end of a large plain bounded by the mountains of the Aſturias, fifty miles to the ſouth-eaſt of Oviedo. The biſhop, whoſe annual revenue is twelve thouſand ducats, is immediately ſubject to the pope. The cathedral is famous not only for its beauty, but for its being the burial place of ſeveral ſaints, thirty-ſeven kings of Spain, and one emperor. This city was formerly both larger, richer, and more populous than at preſent. It was indeed the firſt city of any conſideration that was retaken from the Moors; Pelagius making himſelf maſter of it in the year 722, when he fortified it, and it continued a royal ſeat till 1029. It contains thirteen pariſhes, ſix monaſteries, five nunneries, fifteen chapels, and four hoſpitals.

The city of Aſtorga, in Latin Aſturica Auguſta, is ſituated in a wide plain on the river Aſtura, or Torto, in the forty-ſecond degree north latitude, and in the ſixth degree twenty minutes weſt longitude, and is well fortified both by nature and art; but neither large nor populous. Its biſhop is ſuffragan to the archbiſhop of St. Jago, and has an annual revenue of ten thouſand ducats. The cathedral is a noble Gothic building, and has a baſilica, conſiſting of ſix pointed arches, ſupported by tall, light, neat pillars in a good taſte. There are here ſeven or eight fine altars, and the high altar is exceeding magnificent: it conſiſts of twenty compartments of marble ſculpture in alto relievo, the figures as large as the life; the ſubject is the hiſtory of our Saviour; and on the ſummit is God the Father crowning the Virgin Mary. The glory is well expreſſed; for being cut through the frame, and a light placed behind it, the light ſhews the rays. "We happened, ſays Mr. Clarke, to attend at "the veſpers; the muſic of the organ was fine; the "number of the tapers, the richneſs of the altars, and, "in ſhort, the whole ſcene was ſtriking." This city was formerly the capital of the Aſturias; but it at preſent only gives the title of marquis to the family of Oſorio.

The city of Salamanca is ſituated in forty-one degrees five minutes latitude, and in ſix degrees ſixteen minutes weſt longitude: it is of a circular form, built on three hills and two valleys, and on every ſide ſurrounded with proſpects of fine houſes, noble ſeats, gardens, orchards, fields, and diſtant villages; and is antient, large, rich, and populous. Its walls are ſix thouſand three hundred and ſixty paces in circuit, and adorned with thirteen handſome gates and ſtately towers. Within the city are a hundred and ſixty-two ſtreets, five thouſand houſes, many of which are magnificent buildings, ſeventeen ſquares, twenty-five pariſh-churches, twenty monaſteries, eleven nunneries, two houſes of retirement for young women to lead a penitent life, ſixteen chapels, ſix hoſpitals, and twenty-five colleges. The river Tormes, which runs by it, fertilizes the neighbouring country. The univerſity, which in 1239 was removed hither from Palencia, is the moſt famous in all Spain. The univerſity-college is a very ſpacious ſtructure, and near its ſtately entrance is an infirmary for ſick poor ſcholars: it contains twenty-four other colleges, in each of which live thirty ſtudents; and among theſe the four moſt conſiderable are termed the great colleges, and appropriated to perſons of rank. Moſt of the colleges are noble ſtructures and well endowed, and the great public ſchools, and other buildings, are extraordinary magnificent. The Spaniards term this city the mother of virtues, ſciences, and arts.

Roderigo, an epiſcopal city, which, after its being ruined by the Goths, was, in 1102, rebuilt by Don Roderigo Gonzales Giron, and from him received its name. It was afterwards deſtroyed in the wars, and rebuilt by Ferdinand II. in order to be a check upon Portugal; it being only about twelve miles from the frontiers of that kingdom. It ſtands on the little river Agneda, or Agujar, twelve miles from the frontiers of Portugal, and has good ſtrong walls, nine gates, three ſquares, fifty-four ſtreets, two thouſand houſes, eight pariſhes, two monaſteries, two nunneries, ten chapels, and three hoſpitals. The biſhop is ſuffragan to the archbiſhop of St. Jago, and has an annual revenue of ten thouſand ducats. This city is one of the three places of rendezvous for the Spaniards, when they are at war with Portugal.

The city of Zamora is ſituated on the Douro, over which it has a fine bridge, and ſtands in a fertile country, thirty-four miles to the north of Salamanca. The Moors gave it the name of Zamora, or Medinato Zamorati, which ſignifies the Town of Turquoiſes, moſt of the rocks in its neighbourhood containing that kind of gems. The biſhop of this place has an annual income of twenty thouſand ducats, and is ſuffragan to the archbiſhop of Toledo. In this city is kept the body of St. Ildefonſo, formerly biſhop of Toledo.

SECT. XV.

Of the Province of Galicia; its Situation, Extent, Rivers, Produce, and principal Cities.

THE province of Galicia is bounded on the eaſt by Aſturia and Leon, on the north and weſt by the ſea, and on the ſouth by Portugal. It receives its name from the antient Gallazi, the moſt powerful and numerous of the ſeveral nations who inhabited it. Its extent from north to ſouth is about a hundred and twenty-ſeven miles, and from weſt to eaſt about a hundred and twelve.

This is the moſt maritime of all the Spaniſh provinces, and accordingly enjoys the greateſt number of ſea-ports; among which Corunna and Ferrol are the moſt conſiderable. Cape Finiſterre, one of its promontories, is ſeated on the weſt, and is well known to all navigators.

The coaſts enjoy a temperate air; but in the inland parts, it is ſomewhat colder, and very damp. This country is ſo mountainous, as to admit of few plains, and the ſea-coaſt excepted, is but thinly inhabited; it has

no

no leſs than ſeventy rivers, and ſmaller ſtreams, the principal of which are, the Minho, the Ulla, the Tambra, and the Mandes.

This province produces little corn; but has plenty of wine, lemons, and flax; it has alſo very fine paſtures. Its foreſts afford timber fit for ſhip-building, and the ſea abounds in excellent fiſh. But the univerſal poverty of the inhabitants induces many of them to ſeek a living in the neighbouring provinces, where they perform the moſt ſervile and laborious employments. Yet for this humble induſtry, they are deſpiſed by the other Spaniards.

This province contains ſixty-four cities and towns, but few of the latter are any way conſiderable.

Bayona, a ſmall town on a bay, which forms a convenient harbour. The ſea in this place abounds with fiſh, and the diſtrict of land belonging to the town with fine fruit. At the entrance of the bay lies certain iſlands, formerly called the Iſlands of the Gods.

The city of Corunna, commonly called the Groyne, ſtands on a ſmall bay and peninſula, in the forty-third degree twenty-eight minutes latitude, and in the ninth degree twenty minutes weſt longitude, ſixteen miles to the ſouth-weſt of Ferrol. The harbour preſents you with a fine proſpect as you ſail into it; on your right are the tower of Hercules, the fort and the town; before you the ſhipping, terminated by an agreeable view of the country: on your left, you ſee cape Prior, the entrance of Ferrol, and a ridge of barren mountains, with a large river running between them. The city is divided into the Upper and Lower Town; the former is defended by the caſtle of St. Diego, the latter ſtands on a neck of land, ſurrounded with water on three ſides. Thus the city is in form of a half-moon, with a caſtle at each point. This city is the ſeat of the royal audience of Galicia, and here the Engliſh packet-boats uſually come. It has a collegiate church, and in its neighbourhood is a quarry of jaſper. In ſhort, Corunna is well built and populous; but, like moſt other Spaniſh towns, has an offenſive ſmell. Their method of keeping the tiles faſt on the roof of houſes, is by laying looſe ſtones upon them.

The poorer ſort, both of men and women at Corunna, wear neither ſhoes nor ſtockings; but thoſe in better circumſtances have a great flapped hat, a cloak reaching down to their feet, and generally carry a ſword under their arm; the women wear a ſhort jacket of one colour, a petticoat of another, and either a white or black woollen veil.

Vigo, a town ſeated on a ſmall bay, one hundred and five miles to the north-weſt of Madrid, is ſurrounded by a wall that has ſome baſtions, and defended by an old caſtle and a fort which ſtands on an eminence, but is incapable of making a long reſiſtance. This harbour is rendered famous by a ſea-fight in 1702, between Sir George Rooke, commander of the Engliſh and Dutch fleet, and a ſquadron of French men of war, with thirteen Spaniſh galleons under their convoy; when, after admiral Hopſon had broke through the boom laid acroſs the mouth of the harbour, the Engliſh took four galleons and five men of war, and the Dutch five galleons and one large man of war. Four galleons and fourteen men of war were deſtroyed, with a great quantity of plate and other rich effects. However, a great deal of ſilver was taken, though a conſiderable quantity was carried on ſhore before the engagement. While this was doing, the duke of Ormond, with a large body of land-forces, drove the Spaniards from the caſtles which defended the harbour. In the year 1719, the Engliſh again got poſſeſſion of this place, but relinquiſhed it after raiſing contributions.

St. Jago de Compoſtella, the capital of the whole province; ſituated in forty-two degrees fifty minutes north latitude, and in eight degrees twenty minutes weſt longitude, between the rivers Tambra and Ulla, in a moſt fertile plain, ſurrounded with hills of a moderate height, which ſhelter it from the nipping winds which blow from the mountains. The public ſquares and the churches are very magnificent; it has alſo a great number of monaſteries for both ſexes, and about two thouſand houſes. The cathedral is particularly worthy of notice, and in it is kept the pretended body of the apoſtle James the younger, the titular ſaint and patron of all Spain; which towards the cloſe of the ninth century, they ſay, was diſcovered by a divine revelation. This draws a great number of pilgrims thither, who walk in proceſſion to the church to adore his wooden image, which ſtands in the great altar and is illuminated with forty or fifty wax candles. They kiſs it three times with a very reſpectful devotion, and then put their hats on its head. In the church are thirty ſilver lamps always burning, and ſix chandeliers of ſilver five feet high. Thoſe pilgrims who are poor, are admitted into an hoſpital that ſtands near the church, and has galleries of free-ſtone, ſupported by large pillars. The archbiſhop is one of the richeſt prelates in Spain, his annual revenue amounting to ſixty thouſand ducats, and that of the cathedral to no leſs; but out of this ſum he pays the king eighteen thouſand ducats a year. The order of St. Jago takes its name from this city, which alſo maintains a certain number of knights. The univerſity was erected in 1532, and there is here alſo a tribunal of the inquiſition.

Orenſe, a city ſeated forty-ſeven miles to the ſouth-eaſt of St. Jago de Compoſtella, in a delightful country on the banks of the Minho, and abounding in excellent wine and fine fruit. One part of it ſtands at the foot of a mountain, in which is felt a ſharp cold that is of long continuance; while the other part of the city, which lies on the ſide of the plain, enjoys all the pleaſures of ſpring and the fruits of autumn. This is ſaid to be in ſome meaſure owing to the ſprings, which warm the air with their exhalations. Some of theſe are ſo moderately warm, that a perſon may bathe in them; while the water of others, on the contrary, is ſo hot that eggs may be dreſſed in them; but they are both ſalutary in ſeveral diſtempers. Its biſhop, who has an annual revenue of ten thouſand ducats, is ſuffragan to the archbiſhop of St. Jago.

SECT. XVI.

Of the Province of Eſtremadura; its Situation, Extent, Climate, Produce, Rivers, and Principal Cities.

ESTREMADURA is bounded on the north by Leon; on the eaſt by New Caſtile; on the ſouth by Andaluſia; and on the weſt by Portugal. Its extent from north to ſouth is pretty nearly one hundred and twelve miles, and from eaſt to weſt between ſixty and one hundred.

The inhabitants are inured to the air; but the ſummer heats are intolerable to the foreigners who travel there. Thoſe who live at the foot of the mountains have good water; but the inhabitants in the plains are obliged to put up with what is taken out of pits dug in the ground. The ſoil abounds with corn, wine, and fruit; and its paſtures are ſo good, that great numbers of cattle are brought hither from other provinces to fatten. The rivers Tagus and Guadiana run quite through the country of Portugal, and in many places are joined by ſeveral ſtreams.

The diſtrict of Vera de Plazencia, or the Orchard of Plazencia, conſiſting of alternate mountains and valleys, is extremely delightful, and, next to Andaluſia, the moſt fertile in all Spain. The fineſt and moſt delicious fruits and vegetables, with wholeſome and odoriferous plants, grow here in the greateſt abundance. Here is alſo excellent wine, fine ſprings, and pleaſant brooks that abound with trout. In ſhort, every thing in this diſtrict wears a ſmiling aſpect.

The city of Plazencia, or Placentia, from which the diſtrict takes its name, is a beautiful well-built city, ſixty-ſeven miles to the ſouth-weſt of Madrid: it is ſeated on an eminence between mountains, on the little river Xerte, and is defended by a good caſtle. Its biſhop, who has a revenue of fifty thouſand ducats per annum, is ſubject to the biſhop of St. Jago, and under its juriſdiction are two ſmall towns.

Alcantara, a fortified town a hundred and ſeventy-two miles to the north-weſt-by-weſt of Seville, is ſeated on the Tagus in a fruitful country, near the frontiers of Portugal, and takes its name, which ſignifies a ſtone bridge, from an antient ſtately one, built on this river in the

reign of the emperor Trajan, it being two hundred feet high, ſix hundred and ſeventy long, and twenty-eight broad. It was taken by the earl of Galway in 1706, and retaken by the French the ſame year.

Badajoz, the capital of Eſtremadura, and a frontier town againſt Portugal, ſtands upon an eminence on the ſouth ſide of the Guadiana, and is divided into the Upper and Lower Town. It is not a large place, but has good houſes, pretty broad ſtreets, fine churches, ſome convents, and a jeſuits college. The biſhop, who has an annual revenue of ſixteen thouſand ducats, is ſuffragan to the archbiſhop of St. Jago. Its fortifications are antique, but it has ſome wooden out-works, particularly a caſtle fortified in the modern taſte, called St. Michael's; and on the farther ſide of the river the caſtle of St. Chriſtoval, which covers an old Roman bridge of ſtone that extends over the river, and is ſeven hundred paces long and fourteen broad. On this bridge the Portugueſe were defeated by Don John of Auſtria in 1661, and in 1705, the city was beſieged by the allies, but not taken. The neighbouring country is extremely fruitful, and its flocks of ſheep produce very fine wool.

SECT. XVII.

Of the Province of Andaluſia; including the antient Kingdoms of Seville, Cordova, and Jean Its Situation, Extent, Rivers, Produce, and principal Cities; with a more particular Deſcription of Seville, Cadiz, and Gibraltar.

THE name of Andaluſia, which this province owes to the Vandals, is divided from Vandalenhaus, or the habitation of the Vandals, and formerly extended alſo over the kingdom of Granada, then called Upper Andaluſia. This country is bounded on the north by Eſtremadura and New Caſtile, from which it is divided by a range of mountains, called the Sierra Morena; on the eaſt by Granada and Murcia; on the ſouth partly by the Mediterranean, and partly by the ſtreights of Gibraltar; and on the weſt by the Portugueſe diſtricts of Alentejo and Algarve, extending from eaſt to weſt about two hundred and twenty-five miles; but its breadth is very different, and where largeſt, not above one hundred and twelve.

The river Guadalquiver, by the antients called Bœtis and Tarteſſus, traverſes the whole country, and the Guadiana ſeparates it to the weſt from the Portugueſe Algarve. Of the other ſmall rivers ſome run into the ſea, as the Odier, or Odiel; the Tinto, or Azeche, the water of which cannot be drank, it being noxious even to herbs and the roots of trees, and having neither fiſh or any living creature in it; and the Guadalate, or river of Oblivion. Others fall into the Guadalquiver, as the Xenil, and the Guadiamar.

Andaluſia is eſteemed the beſt province in all Spain, it abounding in exquiſite fruit of all kinds, honey, excellent wine, grain, ſilk, ſugar, fine oil, numerous herds of cattle, particularly horſes, with metals, cinnabar, and a certain ſpecies of quickſilver. The heat in ſummer is indeed very great; but the inhabitants generally ſleep by day, travelling and following their other employments in the night. The air is, however, in other reſpects good, and is ſometimes refreſhed with cooling breezes.

This province is properly compoſed of three antient kingdoms, which, in the king's titles, inſtead of the common names, are expreſſed by that of Andaluſia. Theſe are the kingdoms of Seville, Cordova, and Jean.

Seville, the antient Hiſpalis, the capital of the kingdom of the ſame name, is ſeated in the thirty-ſeventh degree fifteen minutes north latitude, and in the ſixth degree five minutes weſt longitude, two hundred miles to the ſouth-weſt of Madrid, in a large plain on the banks of the Guadalquiver. It is almoſt round and of conſiderable extent, but not proportionable to the number of its inhabitants: the ſtreets are narrow, but the houſes fine, though in the Mooriſh taſte: they are clean built round a ſquare court, with green lattices, and ſhaded from the ſun by a canvas extending from the top of the houſes acroſs the court.

The cathedral is a fine Gothic ſtructure, raiſed on noble pointed arches, and adorned with good painted glaſs windows. It conſiſts of five naves; but the whole is ſpoiled by the ſkreen of the choir, which intercepts the view of a magnificent altar, and a pretended miraculous virgin at the eaſt end. Before that altar is a ſarcophagus of ſilver, within which lies the body of Fernando Santo. There is much plate belonging to this church; particularly one whole altar and frontiſpiece of plate, and a moſt beautiful ſilver cuſtodia. The tower of the cathedral, which is about forty-four feet ſquare, and upwards of a hundred and thirty feet high, was built by the Moors in the year 1000, with turrets, and a cupola has been added by the Chriſtians, which makes it about three hundred feet to the top of the image upon the dome. The aſcent of the tower is ſo eaſy, that a horſe may aſcend to the top, there being no ſteps. The chapter-houſe is a fine oval room, and in this ſtructure are many fine chapels.

In this city are reckoned twenty-nine churches, forty-four convents for monks, and thirty nunneries, all which are rich and well-built, twenty-four hoſpitals, and as many ſquares. Of the convents, the moſt remarkable and magnificent are thoſe of the Franciſcans, Nueſtra Signora de la Merred, and the Dominicans. Its univerſity was founded in 1504. The great college ſtands near the king's palace. St. Thomas's college was built in the fifteenth century, and the Jeſuit's college is alſo worth ſeeing.

The royal palace, called Alcaçar, ſtands near the cathedral, and is very ſpacious: it was built by the Moors, and has been conſiderably enlarged by the kings of Spain, but the new works are inferior to the old. Some parts of this vaſt ſtructure are very grand, but want the conveniencies of modern architecture.

The exchange, which ſtands behind the cathedral, is a large building. To the ſuburbs of Triana is a paſſage over the river, by a ſtrong bridge of boats. The circuit of the city, including the ſuburbs, is computed at near fourteen miles; but that of the walls is only eight. They are pretty ſtrong, and have fifteen gates, and a hundred and ſixty-ſix towers. Quite along the river are commodious quays, where veſſels of a large burthen may lie with ſafety; and near the water-ſide is a ſtately tower, which commands the whole river, city, and ſuburbs. The archbiſhop of Seville has a yearly revenue of a hundred thouſand ducats. Here are ſeveral publiic offices and a court of inquiſition.

This city was once famous for its flouriſhing manufactures; but theſe have ſo dwindled, that from a thouſand artificers in wool and ſilk, ſcarce four hundred remains at preſent. The adjacent country abounds in wine, corn, and fruit; great quantities of oil are particularly made here. Without the city is a long Mooriſh aqueduct, worthy the notice of the curious traveller.

Puerto de Santa Maria, or Port St. Mary's, the capital of an earldom belonging to the duke of Medina Celi, is ſeated at the mouth of the river Guadalete, directly oppoſite to Cadiz, and exceeds that city in bigneſs: the ſtreets are alſo broader and better paved, and the houſes handſome, though it contains ſcarce eight thouſand inhabitants. It is only walled round, and has a little caſtle of ſmall force. Here are great numbers of French, Engliſh, Dutch, Genoeſe, and other merchants, who carry on a flouriſhing trade; and here alſo are made vaſt quantities of ſalt. In the year 1702 the Engliſh and Dutch made themſelves maſters of this place without oppoſition.

Cadiz, by the Romans called Gades, a celebrated trading city, ſtands on an iſland in the thirty-ſixth degree thirty minutes latitude, and in the ſixth degree forty minutes weſt longitude, on the north-weſt end of a long neck of land, that extends from the ſouth-eaſt to the north-weſt, and is alſo joined to the continent, from which it is divided by a narrow ſtreight, by means of the bridge of Suaco, both ends of which are defended with redoubts, and ſome other raiſed works of earth. This iſland from Fort St. Catalina to the iſland of St. Pedro, is about eighteen miles long, and from the ſouth point

near

near the iſland of St. Pedro to the northern one near the bridge of Suaco about ſeven in breadth. It produces little grain, but ſome of the beſt wine in Spain is made there. It has alſo ſome paſtures, and on the ſide next the harbour is made large quantities of ſalt. It has alſo a conſiderable fiſhery, particularly of tunnies, which are here commonly between ſix and eight, and ſometimes ten feet in length.

The city of Cadiz is of pretty large circumference, yet the whole neck of land which extends from the iſland is not built upon; the weſt ſide, which is very delightful, being almoſt uninhabited, the only buildings upon it are a ſpacious hoſpital and two chapels, it being leſs commodious for ſhipping than the eaſt ſide. Moſt of the ſtreets are narrow, crooked, ill paved, and dirty; but a few of them are broad, ſtraight, and well paved. The houſes are generally three or four ſtories high, and many of them are handſome buildings; but houſe-rent and proviſions are dear, and good freſh water very ſcarce. It contains about thirteen convents, among which the college of the Jeſuits is the fineſt in all Andaluſia; but has only one pariſh church, which is the cathedral, tho' the ſettled inhabitants are computed at forty thouſand. The biſhop of this city is ſuffragan to the archbiſhop of Seville, aad has an annual revenue of twelve thouſand ducats. Here is eſtabliſhed the Weſt India company, which in 1717 was removed hither from Seville. Indeed at the earneſt requeſt of the laſt-mentioned city, it was reſtored to it again in 1725; but in 1726 was a ſecond time brought back to Cadiz. Both before and after the arrival of the Spaniſh American fleet, this city is ſaid to be crowded with ſtrangers to the number of fifty thouſand, who reſort hither on account of trade, which cauſes an extraordinary circulation of money. Cadiz is the center of the whole American trade, to which the Engliſh, French, Dutch, and Italian merchants ſend their goods, which are ſhipped off here in Spaniſh bottoms to America, by Spaniſh factors in their own names. Beſides theſe nations, all others who carry on any traffic here by ſea, have alſo their agents, correſpondents, and factors, in this city; and the conſuls of thoſe nations make a great figure.

Both the harbour and bay of Cadiz are ſpacious and ſecure, the entrance being defended by Fort Matagorda, which covers the harbour and bay of Cadiz, and by Fort Puntal, which ſtands oppoſite to it, on a point of that neck of land on which Cadiz is built. The Spaniards commonly call both theſe Los Puntales. The entrance into the harbour, between theſe points, is ſaid to be five hundred fathoms wide. During the time of ebb a good part of the harbour, which is ten miles in circumference, is dry. Cadiz is fortified with walls and irregular baſtions, and on the ſouth ſide there is no approaching it, on account of the high and ſteep ſhore; on the north ſide the acceſs is dangerous from the many ſand-banks and rocks that lie under the water. The ſouth-weſt ſide will indeed admit of landing; but is defended by Fort St. Catalina. On the ſouth-ſouth-weſt point is a ridge of rocks, part of which at full ſea is covered with water; the outermoſt of theſe forms a ſmall iſland, on which is a guard and light-houſe, with two chapels, and Fort St. Sebaſtian.

No people are happier than the merchants of Cadiz; for they ſeldom riſk any thing upon their own account, and enrich themſelves at the coſt of thoſe who ſend them goods; ſo that let things go as they will, they are no loſers. But it muſt be ſaid to their honour, that they are diſtinguiſhed in a remarkable manner, by the ſtrict honeſty and integrity of their dealings; whence foreigners, with the utmoſt confidence, truſt their effects and fortunes in their hands.

In 1596 this city was plundered and burnt by the Engliſh; but was again rebuilt by the Spaniards. In 1702 the Engliſh made another attempt upon it, but without ſucceſs.

Algeziras is at preſent a poor old town in the Streights, and has a decayed harbour, with only a few ſhattered houſes. The word Algezira, in Arabic, ſignifies an iſland, and the harbour being formed by two iſlands, it has been called in the plural number Algeziras. Here the Moors firſt landed, and held the place almoſt ſeven hundred years.

Between the mountain and promontory, near Algeziras, and the mountain on which Gibraltar ſtands, is a bay. The laſt-mentioned mountain is a high and ſteep rock, joined to the continent by a low neck of land about four hundred yards broad, bounded to the weſt by the above bay, and to the eaſt by the Mediterranean, where this rock is of an uncommon height, and almoſt perpendicular; yet towards the bay, or on the weſt ſide, the aſcent is not ſo difficult. It divides itſelf into ſeveral parts, between which the ſea flows, and its capes are defended by walls, bulwarks, and towers. This rock abounds with very wholeſome herbs, among which is the ranunculus. The mountain formerly known by the name of Celpe, according to Buſching, lies directly oppoſite to Cauta, in Africa, and is alſo called Sierra Ximiera and Sierra de las Mona, or the Apes Hill; but was formerly named Abyla. Theſe two mountains are generally allowed to be the celebrated pillars of Hercules.

To the weſtward, at the foot of the firſt mountain towards the bay, lies Gibraltar, called by the Moors Gibel-Tarif, or Taric, that is Mount Tarif, or Taric, from the name of a Mooriſh general, who, at the beginning of the eighth century, bringing the auxilliaries of three Mooriſh princes to Spain, landed at the foot of this mountain, to which he gave his name, and the town afterwards built upon it was ſo called from him; Gibraltar being evidently an abbreviation of Gibel-Tarif, or Taric. It is not ſo conſiderable either for its extent or beauty, as for its ſtrength and ſituation, which renders it one of the keys to Spain; and, what is ſtill of more conſequence, the key to the Mediterranean and Levant. It is accordingly provided with all the artillery, ſtores, and forces neceſſary for its defence. Excluſive of Europeans of moſt nations, here are Jews, Turks, and Moors, who are all permitted to enjoy a free trade. The harbour is formed by a mole, which is well fortified and planted with guns. It is acceſſible only on the land ſide by a narrow paſſage between the rocks and the ſea, but that walled and fortified both by art and nature, being there ſo incloſed by high ſteep hills, as to be almoſt inacceſſible that way. It has but two gates on that ſide, and as many towards the ſea. Acroſs this iſthmus the Spaniards have drawn a fortified line, chiefly with a view to hinder the garriſon of Gibraltar from having any intercourſe with the country behind them. Thoſe who have the courage to climb to the top of the rock will find it a plain, that affords a proſpect of the ſea on each ſide the ſtreight, and of the kingdoms of Barbary, Fez, and Morocco; beſides the cities of Seville and Granada, in Spain: for the ſtreight is here only fifteen miles in breadth; and twenty-four in length. There is always a ſtrong current running through it from the ocean into the Mediterranean. The garriſon of Gibraltar is, however, confined within very narrow limits; and as the ground produces hardly any thing, all their proviſions are brought them either from England or from Ceuta on the coaſt of Barbary.

This city was taken in 1704 in two days by a combined fleet of Engliſh and Dutch ſhips under the command of Sir George Rooke: but the ſame year the Spaniards attempted its recovery, at which time it ſtood out a memorable ſiege, in which between four and five hundred of the enemy having crept up the rock that covers the town, were the next morning driven down headlong: after which it was ceded to the Engliſh by the treaty of Utrecht, in 1713. The Spaniards again made an attempt, in the year 1727, with a powerful army; but were at laſt obliged to raiſe the ſiege, after lying before it ſeveral months, and even endeavouring to blow up the rock, which they found to be impracticable; it therefore ſtill belongs to the crown of Great Britain. Since the above ſiege this fortreſs has been more ſtrongly fortified, new works and improvements being daily added: it is rendered impregnable by any other means than treachery or ſurprize, for it cannot be ſtarved while our fleet can bring ſupplies.

We

We now come to Cordova, the next kingdom included in the province of Andaluſia, which, though much ſmaller than that of Seville, is equal to it in fertility.

The city of Cordova, antiently called Corduba and Colonia Patricia, is large, beautiful, and finely ſituated in a wide plain, on the banks of the Guadalquiver, at the foot of a ridge of mountains that are a branch of the Sierra Morena, in thirty-ſeven degrees fifty minutes north latitude, and in four degrees fifty-three minutes weſt longitude. Within its circuit it contains ſeveral gardens and vineyards; but its ſtreets are narrow, and it is not very populous in proportion to its extent. Its fine ſuburbs have the appearance of ſo many towns. The biſhop, who is ſuffragan to the archbiſhop of Toledo, has an annual revenue of forty thouſand ducats. The cathedral is a large antique and magnificent ſquare building, its roof being ſupported by three hundred and ſixty-five ſtately pillars of alabaſter, jaſper, and black marble; and was built by the Moors for a moſque. It has nineteen naves running from north to ſouth, ſeparated by ſmall beautiful pillars, ſome with fine Corinthian capitals taken out of the old temple of Janus Auguſtus, as appears by an inſcription on a pillar of green marble, which in Mariana's time ſtood in the Franciſcan convent in this city. Theſe pillars would have a beautiful effect, were not the view of them interrupted with croſs walls, altars, the choir, and the preſbytery, which is built in the middle. The epiſcopal palace is a large ſtructure. The inquiſition ſtands by the river ſide, and the king's palace, which is at the weſt end of the city, is very ſpacious. In 1586 Cordova ſuffered very much by an earthquake.

The adjacent mountains are covered with delightful gardens and plantations of olives, oranges, lemons, and figs. They are alſo interſperſed with pleaſant valleys, refreſhed by ſprings of good water. When the above-mentioned trees are in bloſſom, they diffuſe a fragrancy all over the country. Beſides the excellence of the wine, and the plenty of fruits and vegetables, this country breeds the fineſt Spaniſh horſes.

Andujar, or Anduxar, an antient and pretty large city, thirty-two miles to the eaſt of Cordova, is ſituated on the river Guadalquiver, over which it has a ſtately bridge, and is defended by a ſtrong caſtle. It contains three thouſand families, has five pariſhes, ſix monaſteries, three nunneries, and two hoſpitals; beſides other ſtately and handſome buildings. It vends great quantities of ſilk. The neighbouring country abounds in corn, wine, oil, honey, and all ſorts of fruit; and likewiſe yields excellent game.

The kingdom of Jean is the ſmalleſt of the three comprehended in the province of Andaluſia.

The principal city it contains is Jaen, which ſtands at the foot of a mountain, and is defended by a caſtle. It is populous, and has ſome fine churches and monaſteries; but the greateſt devotion is paid here to St. Veronica. Its biſhop, who is under the archbiſhop of Toledo, has a yearly income of twenty thouſand ducats. It was once the capital of a Mooriſh kingdom; and the country, beſides producing great plenty of corn, wine, oil, and fruit, particularly abounds in ſilk.

SECT. XVIII.

Of the Balearic Iſlands, Majorca, Minorca, Ivica, and Formentera. Their Hiſtory, Situation, Extent, Produce, Inhabitants, and principal Towns.

THE four iſlands of Majorca, Minorca, Ivica, and Formentera, formerly compoſed the kingdom of Majorca. Theſe iſlands are ſituated to the weſt of Spain; yet it is not known by whom they were originally inhabited: but Strabo mentions a colony of Greeks, who ſettled there from the iſle of Rhodes. Afterwards the Carthaginians became maſters of them, but were ſubdued by the Romans. In the fifth century the Vandals poſſeſſed themſelves of theſe ſeveral iſlands, and towards the end of the eighth and beginning of the ninth century theſe were diſlodged by the Moors, who, after a much ſhorter poſſeſſion were expelled by the emperor Charlemagne; but the Moors ſoon recovered them again, and had their particular king over them. Numerous wars were carried on between them and the Catalonians with various ſucceſs, till towards the concluſion of the year 1229, James I. king of Arragon, diſpoſſeſſed them of all the iſland of Majorca: in 1232 he alſo reduced Minorca, and in 1234 Ivica; and thus the whole kingdom of Majorca became annexed to the crown of Arragon.

Theſe four iſlands, with the ſmaller ones lying near them, were by the antients divided into the Balearic and Pithyuſæ. The former are Majorca and Minorca, which, with ſome ſmaller iſlands, were termed by the Latins Baleares, and by the Greeks Balearides, which ſignify the iſlands of Slingers, the inhabitants excelling in the dexterous uſe of the ſling, as the Minorcans do to this day.

Mallorca, or, as it is pronounced by foreigners, Majorca, is ſituated about eighty miles ſouth of the Spaniſh coaſt, and is the largeſt of theſe iſlands, it being about ſixty miles in length, and forty-five in breadth. It has four chief capes which lie to the four cardinal points; theſe are Pedra on the eaſt, Palermo on the weſt, Salinas on the ſouth, and Formentella, or St. Vincent, on the north. This iſland is divided into two parts, that towards the north and weſt is mountainous, but not barren; and the other, which lies to the ſouth and eaſt, is level and laid out in corn-fields, vineyards, orchards, and paſtures. The air is temperate and wholeſome; but the exceſſive heat and drought frequently occaſions a ſcarcity, though the iſland in general is well ſupplied with water, and naturally abounds in corn, wine, oil, honey, ſaffron, large and ſmall cattle, wool, cheeſe, rabbets, partridges, deer, wild fowl, fiſh, and horſes, without any ravenous wild beaſts. The whole iſland is encompaſſed with ſtrong towers, from which an enemy may be obſerved at a diſtance, and it has ſeveral good harbours and anchoring-places.

The inhabitants in their manners and cuſtoms reſemble the Spaniards, and particularly the Catalonians. People of faſhion ſpeak the Spaniſh tongue, but the language of the commonalty is a medley of Spaniſh, Latin, and Limoſin, which is a corrupt kind of French, Greek, and Arabic. The iſland maintains twenty companies of foot, five troops of horſe, and two companies of matroſſes, for the defence of the capital; beſides four regiments ſtationed in other parts of the iſland.

Majorca, the antient Palma, is the capital, and is ſeated on a bay between two capes, in thirty-nine degrees forty minutes latitude, and in two degrees thirty-ſix minutes eaſt longitude, on the weſt ſide of the iſland. It is fortified in the modern taſte; is large, and has broad ſtreets, ſpacious ſquares, ſtately ſtone houſes, and twenty-two churches, beſides chapels and oratories. The largeſt ſquare is that of Born, which is encompaſſed on every ſide with grand buildings, from whence the principal inhabitants view the bull-fights and other ſhows. The cathedral is a large and magnificent ſtructure, and the biſhop is ſuffragan to the archbiſhop of Valencia. In the city are ſix hoſpitals, and three other foundations for women. It has a royal audience, in which the governor preſides, an univerſity, and a court of inquiſition. The inhabitants are computed at about ten thouſand. This city was taken by the Engliſh in 1706, and retaken in 1715.

There are ſeveral ſmall towns in the iſland beſides the capital, and round it are a conſiderable number of ſmall iſlands, the principal of which are,

Cabrera, which is ſo called from the multitude of goats found there. It is all over mountainous, and uninhabited, except its ſpacious and ſecure harbour, the entrance into which fronts Majorca, and is defended by a caſtle, in which is always kept a ſmall garriſon. This iſland is a place for exiles.

Las Bledes is of ſome conſideration; it was formerly very populous, and is ſtill diſtinguiſhed by having a good quarry of marble.

Dragonera is about a thouſand paces in length, nine hundred broad, and twelve hundred from Majorca. It is uninhabited, and only produces an edible bird of prey called a Spaniard. It has, however, a fortreſs on a hill called Mount Popia.

We

We now come to Minorca, a conſiderable iſland fifty miles to the north-eaſt of the iſland of Majorca. It is about thirty miles in length, twelve in breadth, and is chiefly valued for its excellent harbour of Port Mahon. The ſouth ſhore of the iſland is ſmooth, but towards the north very rugged; and may in general be conſidered as a mountainous country, with ſome fruitful vallleys. The ſea has ſo withdrawn from this iſland, that near the harbour are ſeveral new flats, which are turned into garden-grounds. The air is moiſt; the heat in Farenheit's thermometer placed in the ſun riſes only to a hundred and two degrees, and is conſequently not very intenſe: nor is the quickſilver known to ſink very often under forty-one, which is ſhort of the freezing point. The ſoil cannot be extolled for its fertility; beſides, the water being hard, nephritic diſorders are common here. The hedgehog is in this iſland eſteemed a venomous animal, it being ſuppoſed to corrupt the water, particularly in rutting-time in the ſpring. One of the moſt profitable commodities of the country is ſalt, which the ſun prepares in cavities between the rocks. Some of the wine is excellent, and the inhabitants are ſaid to ſell to the Engliſh as much of it as amounts annually to twenty-ſeven thouſand pounds ſterling. Here is great plenty of fiſh, particularly of wilks, which are of great ſervice to the commonalty in Lent. Rabbets are to be met with here in great plenty; here are alſo wool, honey, wax, and capers, which grow upon the walls; but theſe, as well as olives and cotton, are alſo cultivated in plantations. The palm-trees here bear no fruit. The opuntia is very common, and plentifully eaten, as are alſo the acorns; and the myrtles, which abound here, are of great advantage to tanners. The inhabitants, however, are obliged to have their chief neceſſaries, as corn, beef, brandy, tobacco, linen, ſtuffs, books, relics, Agnus Deis, from abroad; and all theſe together are ſaid to ſtand them in no leſs every year than ſeventy-one thouſand two hundred pounds ſterling.

The natives live moſtly on vegetables, love dancing, and have ſuch a turn for poetry, that the very peaſants challenge each other to trials of their poetic genius. They are very dexterous with their ſlings, and with them command their cattle; but as they are far from being induſtrious, they neglect many advantages they might enjoy by huſbandry and trade. The houſes on the iſland are computed at about three thouſand and eighty-nine, though the inhabitants are ſaid to amount to twenty-ſeven thouſand.

The Engliſh took this iſland from the Spaniards in 1708, after which it was confirmed to them by the treaty of Utrecht; but it was invaded by the French in 1756, when, after a very brave reſiſtance under general Blakeney, the garriſon was obliged to ſurrender, the French having inveſted Fort St. Philip with an army of fifteen thouſand men, well provided with all military ſtores; but it was again reſtored to the Engliſh by the late treaty of peace. The principal places in the iſland are the following:

Port Mahon is defended by the caſtle of St. Philip, and works of great ſtrength cut in the rock, on account of its being eſteemed one of the moſt commodious harbours in Europe. Its entrance is indeed ſomewhat difficult, from the ſeveral rocks within it; but on the inſide it is land-locked, and perfectly ſecure from tempeſts. Near it lies the little trading town of Mahon, from whence it takes its name.

Citadella, the capital of the whole iſland, and the ſeat of the governor, is fortified, and conſiſts of about ſix hundred houſes.

The iſland of Ivica, or Yvica, the antient Ebuſus, lies fifty-ſix miles to the ſouth-weſt of the iſland of Majorca, and is about five miles in length and four broad. The ſoil is not unfruitful; but is little cultivated, moſt of the inhabitants being taken up with the ſalt-trade, as being moſt profitable. It is very mountainous, yet, beſides pines, produces fruit-trees of various kinds. Ivica, the capital, is fortified in the modern manner; but is much dwindled from what it was in the times of the Carthaginians and Romans. It is the reſidence of the governor, from whom there lies an appeal to the royal audience at Majorca.

Formentera, the antient Ophiuſa and Collubaria, or the Adder Iſland, was formerly well inhabited, but at preſent is forſaken and deſart, which is owing to the African corſairs, who are continually ſwarming about it. The iſland contains ſome harbours, and good anchoring-places; but all that is to be ſeen there is a kind of wild aſs.

CHAP. XXVII.

Of the Kingdom of PORTUGAL.

SECT. I.

Its Name, Situation, Extent, Climate, Soil, Produce, and Rivers.

THIS country was formerly called Luſitania; but its boundaries were then different from thoſe it has at preſent. The name of Portugal is by ſome thought to ariſe from Portus Gallus, or Portus Gallorum, from the multitude of French which came to the city of Porto, on the river Douro, in order to aſſiſt the Chriſtians againſt the Moors. But the more general opinion is, that it is derived from a town on the river Douro, by the antients called Cale; but by the moderns changed to Gaya: oppoſite to this place a new town, with a harbour, was built by the inhabitants, who gave it the name of Portucale, or the Port of Cale, which, by its uninterrupted proſperity, proved the origin of the preſent flouriſhing city of Porto; and the whole country from hence received the name of Portugal.

This kingdom, which is the moſt weſtern in Europe, is bounded on the north by the Spaniſh province of Galicia; on the eaſt by the provinces of Leon, Eſtremadura, and Andaluſia; and on the ſouth and weſt by the Atlantic ocean; extending from the thirty-ſixth degree fifty minutes to the forty-ſecond degree three minutes north latitude, and beween the ſeventh and tenth degree of weſt longitude from London. Its length from Valença, the moſt northern town in it, to Sagres, the moſt ſouthern, near Cape St. Vincent, is about three hundred and ten miles; and its greateſt breadth, from Peniche, a ſea-port in Eſtremadura, to Salvaterra, on the frontiers of Spain, is a hundred and twelve.

The climate is much more temperate than in Spain, though it is a little different in the ſeveral provinces. The northern parts feel a kind of painful cold in winter, though this is chiefly owing to the rains which fall at that ſeaſon, and in the ſouthern the ſummer heats are very great. However, both winter and ſummer are very ſupportable; for cooling ſea-breezes, during the latter, refreſh the country, and the ſeaſon of ſpring is extremely delightful.

The country is in many parts mountainous, and theſe mountains contain the ores of ſilver, copper, tin, and iron: but the Portugueſe being ſupplied with metals from their poſſeſſions in other parts of the globe, and particularly with abundance of gold from America, no mines are worked in their own country. Gems of all kinds, as

turquois and hyacinths, are alſo found in the mountains; and particularly a beautiful variegated marble, with many other curious foſſils of the lapidary kind, of which ſeveral ſorts of work are made: here are alſo very good mill-ſtones, and on the hill of Alcantara, not far from Liſbon, is a remarkable mine of ſalt-petre.

Though the ſoil is very fruitful, agriculture is ſo much neglected, that above half the country lies waſte, and the inhabitants are ſupplied with a great part of their corn by the Engliſh and Dutch, and have Indian corn from Africa. Portugal, however, abounds in excellent wine and oil; the greateſt part of the latter is made in the province of Alentejo, for the olive-trees thrive better here, near the ſea, than up in the country. Here are alſo abundance of oranges, lemons, figs, pomegranates, raiſins, almonds, cheſnuts, and other fruit. It produces great plenty of fine honey, and conſequently of wax. The beſt honey found in the fields is almoſt of a white colour, and of a moſt agreeable flavour; and the wood-honey is more agreeable to the taſte than in other countries.

As Portugal has ſome excellent paſtures, particularly in the country about Monteſtrella and near Ourique, the grazing is in ſome places very conſiderable, and there are ſeen an uncommon number of horned cattle and ſheep; but in moſt places it is at ſo low an ebb, that the greateſt part of their oxen come from Spain. The horſes are not large, but very fleet; and they have fine mules, which ſell for a great price. The Portugueſe breed more aſſes than horſes, the latter being clandeſtinely imported from Spain.

From the mountains iſſue ſeveral ſtreams and ſmall rivers, which fertilize the valleys and fields, and either join the great rivers in their courſe, or diſcharge themſelves ſeparately into the ſea: but all the great rivers of Portugal have their ſources in Spain. The principal of theſe are the Minho, the Lima, or Lethe, the Douro, the Tajo, or Tagus, the largeſt river in the kingdom, and the Guadiana, with the Cavado; which laſt riſes in the mountains of Trazos, and diſcharges itſelf into the ſea below Barcelos.

All theſe rivers abound in fiſh; and the three principal, namely the Douro, the Tagus, and Guadiana, divide the kingdom into three parts.

SECT. II.

The Manners, Cuſtoms, Perſons, Dreſs, Houſes, Furniture, Method of Travelling, Religion, &c.

EMANUEL de Farca, a Portugueſe writer, deſcribing his conntrymen, ſays, "The nobility think "themſelves gods, and require a ſort of adoration; the "gentry aſpire to equal them; and the common people "diſdain to be thought inferior to either." This pride is the characteriſtic both of the Spaniards and Portugueſe; and here the grandees and their ladies carry their haughty ſpirit to ſuch an extravagant height, that they ſtand upon the niceſt punctilios with reſpect to rank and titles. The ladies of quality are ſerved by their maids and ſlaves on the knee; and indeed the women of quality will ſcarce be ſpoken to by mean people in any other poſture: a degree of haughtineſs practiſed in no other Chriſtian country, and which they probably received from the Moors. But this is far from being the worſt part of their character; for it is become a proverb, that a Spaniard ſtript of all his good qualities, makes a perfect Portugueſe. Indeed they are generally characterized, as being cruel, treacherous, malicious, and revengeful, both to one another and to ſtrangers; crafty in their dealings, and the meaner ſort addicted to thieving. But to this general character there are many noble exceptions.

The Portugueſe ladies are ſmall of ſtature, with their complexion pretty much upon the olive; their features delicate; but their viſage thin: their hair is black and ſhining, and their eyes ſparkling; nor do they want a good ſhare of wit. In ſhort, they are for the moſt part generous, charitable, and modeſt. They wear hoops, and ſeveral gowns, one over another, of rich ſtuffs trimmed with gold and ſilver lace; but the uppermoſt is ſaid to be of coarſe black ſtuff, and ſo long that it trails upon the ground. Their ſhoes are of black Spaniſh leather, ſtraight as a glove, and without heels; whence within doors they ſeem to ſlide along rather than to walk. When they go abroad they have pattens, which are a kind of ſilk ſandals faſtened to rings or plates, that raiſe them half a foot from the ground, and make them walk very aukwardly; but in the houſe they neither wear hoops nor pattens. The ſtays, in which they have but little bone, are high before, but ſcarce reach half way up their backs behind, and conſequently would expoſe the tawny complexion of their ſkins, if their ſhoulders were not covered with paint. Their hands and feet are ſmall and well proportioned, and their wide ſleeves, with broad ruffles, buttoned at the wriſts, make their hands appear leſs than they are. The people of quality wear very fine linen, and as this is ſcarce and dear, the meaner ſort have none; for rather than wear coarſe linen, they will go without. The ladies wear about their necks a broad laced tucker, and inſtead of a girdle tie a ſtring of medals or relics, or perhaps the cord of ſome religious order, about their waiſt, the ends of which reach down to the ground. Acroſs the top of their ſtays they have a kind of breaſt-plate of diamonds, from whence there hangs a chain of pearls, or ten or twelve little knots of diamonds. They have likewiſe bracelets, rings, and pendants in abundance; but no necklaces. In their hair they wear a variety of precious ſtones, ſometimes in the form of artificial butter-flies, or other inſects; ſometimes they adorn their hair with ribbons and feathers of various colours. When they go abroad they throw a veil over all, and women who are advanced in years wear a fine coif over their hair; but many of the young ladies have none.

The Portugueſe gentlemen commonly wear black, and thoſe of the court frequently follow the French faſhions.

With reſpect to their houſes and furniture, they have uſually a great many rooms on a floor. The floors and ceilings are formed of a plain white plaſter, that looks like poliſhed marble. They change their furniture and apartments according to the ſeaſon of the year; and upon the lower floors of their ſummer apartments they uſually throw water every morning, which ſoon dries up, and leaves a refreſhing coolneſs. Upon theſe floors they ſpread fine mats, and cover the walls with them chair-high; above theſe are hung pictures and looking-glaſſes, and all round the rooms of the ladies apartments cuſhions of ſilk or velvet are laid upon the mats, which they ſit upon croſs-legged, as hath been already obſerved with reſpect to the Spaniſh ladies. Between theſe cuſhions are fine tables and cabinets, and, at certain diſtances, vaſes of ſilver, in which are orange or jeſſamine trees, and in their windows they have frames of ſtraw-work, to keep out the ſcorching beams of the ſun.

In the upper apartments the hangings, cabinets, looking-glaſſes, paintings, and plate, are extremely rich, and the floors are frequently covered with Turky carpets. In winter their beds and hangings are of velvet, trimmed with gold or ſilver lace; but in ſummer they uſe no curtains, except very thin ones, made of gauze, or ſome other ſlight ſtuff to keep out the gnats.

Veſſels of copper, tin, or pewter, are ſaid to be never ſeen in the houſes of perſons of quality, where they only uſe ſilver, or earthen-ware, and have many dozens of ſilver plates, and a great number of diſhes of the ſame metal, with other utenſils in proportion. But amidſt all this wealth, the bad œconomy of the grandees is ſcarce credible, and reduces them to a neceſſitous condition, even while they make this glittering appearance. Moſt of them paſs their lives in or near the capital, without ever viſiting their eſtates, unleſs they happen to be diſgraced at court: they leave every thing to their ſteward, and are above inſpecting his accounts. Their tradeſmen deliver their goods upon truſt, and ſet down their own prices, being pretty well aſſured their bills will not undergo a ſtrict examination. It is beneath a perſon of quality to endeavour to beat down the price of a piece of ſilk, or other goods, or even to take change of a ſhopkeeper out of a piece of gold; and as the tradeſman frequently gives ſeven or eight years credit, he is obliged to ſet down double the price the goods might be bought for with ready money. They ſeldom, however, loſe their debts, for

the Spaniſh and Portugueſe quality are men of ſuch honour, that they readily aſſign a part of their rents for the payment of their debts, when preſſed for money by their tradeſmen.

The houſes of the nobility are crowded with domeſtics; but their wages are very low, they having only eight-pence or ten-pence per day to purchaſe diet, cloaths, and every thing elſe; and a gentleman belonging to a grandee has only about fifteen crowns a month, though he is obliged to dreſs in velvet in winter, and ſilk in ſummer. Indeed the ſervants lay out the greateſt part of their ſalaries in cloaths, living upon onions, peaſe, beans, and other pulſe. One reaſon of the Portugueſe nobility having ſuch a number of ſervants is a cuſtom which prevails among them of keeping all in their pay who have ſerved their anceſtors; ſo that ſome of the grandees have four or five hundred of both ſexes, the greateſt part of whom are merely for ſhow, and ſeldom appear but on days of ceremony.

The quality, beſides their ordinary ſervants, retain abundance of dwarfs of both ſexes, who are dreſſed as fine as poſſible; they have alſo a pretty many ſlaves who are Moors, and are valued at four or five hundred crowns a piece. Over theſe they had formerly the power of life and death; but at preſent the government will not permit their killing them. Where two ſlaves marry, their children are ſlaves; but if a freeman marries a ſlave, the children are free. Theſe ſlaves are their beſt ſervants, for the others will ſometimes pride themſelves on having as good blood as their maſters. The very beggars rather demand than ſupplicate an alms, alledging their being deſcended from old Chriſtians; and if you give them no money, muſt be diſmiſſed with a compliment, upon which they go away contented.

The food of the Portugueſe is nearly the ſame with that of the Spaniards, and they are equally ſober and abſtemious. The men mix water with their wine, and the women generally drink only water. It is cuſtomary with the Portugueſe to betake themſelves to ſleep about noon, on account of the heat, and to tranſact moſt of their buſineſs in the morning and evening, or even at night.

The method of travelling here is much the ſame as in Spain, except their having fewer coaches, and travelling more by water than the Spaniards, from their country lying along the ſea-coaſt, and its being croſſed by many great rivers that riſe in Spain. The mule or the litter are generally uſed on a journey; their horſes, which are ſprightly and well made, ſerve indeed for ſhort viſits, to prance at a proceſſion, or before the windows of their miſtreſſes; but the mules being ſtronger and ſurer-footed, are fitteſt to climb their mountains; but have only a ſlow pace.

Their language is a compound of the Spaniſh, Latin, Mooriſh, and French.

With reſpect to the religion of the Portugueſe, they are the moſt bigotted Papiſts; but though the exerciſe of the Jewiſh religion be prohibited by the fundamental laws of the kingdom, yet all authors agree, that great numbers of ſecret Jews ſtill remain among the Portugueſe, and theſe too among the nobility, biſhops, prebends, monks, nuns, and the very inquiſitors themſelves; and when unable to conceal themſelves, eſcape to England or Holland, and there openly profeſs Judaiſm. The inquiſition, which was introduced by king John III. and has ſince been ſet up in all the Portugueſe dominions, except Brazil, is very active in detecting them, and thoſe they call heretics, and no leſs rigorous in puniſhing them. Impious, cruel, and inhuman as this tribunal is, yet its feſtivals or ſolemn burnings, called *auto da fe*, or the act of faith, afford the higheſt delight to the infernal bigots, who, while their fellow-creatures, the ſuppoſed heretics, are burning in the flames, cry aloud, "Oh, what great "goodneſs! Praiſed be the holy office." King John IV. in ſome meaſure, however, curtailed the power of the inquiſition, commanding that all its ſentences ſhould be laid before the parliament, and that the accuſed ſhould be allowed council for making their defence; and enacted, that only blaſphemy, ſodomy, hereſy, ſorcery, pagan cuſtoms, and the converſion of the Jews, ſhould come under their cognizance.

The being an antient Chriſtian, or in other words of an antient Chriſtian race, is eſteemed in Portugal a very high degree of pre-eminence, and far ſuperior to what they call a new converted Chriſtian, or a half new converted Chriſtian; by which laſt they mean thoſe whoſe new converted anceſtors have married the antient Chriſtians.

The number of convents in Portugal is ſaid to amount to nine hnndred, and moſt of them are very rich; but the Jeſuits, who in multitude and opulence ſurpaſſed all the other orders, have lately been baniſhed.

With reſpect to the eccleſiaſtics, there is a patriarch of Liſbon, who muſt always be a cardinal, and of the royal family. Next to him are three archbiſhops, who rank with marquiſſes, and the firſt of them the archbiſhop of Braga, who is primate of the kingdom, and lord ſpiritual and temporal of his city and the neighbouring country. The biſhops hold the rank of counts. Beſides thoſe in Europe, the Portugueſe have archbiſhoprics and biſhoprics in the other three parts of the world.

The king of Portugal, beſides the nomination of all biſhops, receives a fourth of their revenue. The pope confirms the biſhops, publiſhes his bulls in the kingdom without the king's previous conſent, and, by his legate, governs the clergy, who with reſpect to taxes and contributions depend on him. He has alſo the gift of many ſmall prebends. The pope's nuncios have here ſo lucrative a poſt, that they never fail of raiſing vaſt fortunes before they return to Rome.

SECT. III.

The State of Learning and Arts; with the Commerce, Meaſures, Weights, and Coin of Portugal.

WITH reſpect to the ſtate of learning in Portugal, it is at as low an ebb as poſſible. Indeed there are univerſities at Coimbra and Evora. At Liſbon is a royal academy for the Portugueſe hiſtory; at Santarene is an academy of hiſtory, antiquities, and languages; and at St. Thomas an academy of ſciences, on the ſame footing as that of Paris: but while bigotry continues here at its preſent enormous height, it is impoſſible for ſcience to flouriſh. An Italian Capuchin, in 1746, publiſhed a work in the Portugueſe tongue on the true method of ſtudy, in four volumes quarto, which he dedicated to the king of Portugal, and there aſſerts, that the ſchools of this country are places of retreat for thoſe errors which by Newton and Des Cartes were driven out of the other parts of Europe; and according to him Galilæo, Des Cartes, Newton, and Gaſſendi are conſidered in Portugal as atheiſts and heretics, not to be mentioned but with ſome marks of execration. D'Oliveira, a Portugueſe, ſays, in the preface to the firſt volume of Memoirs, "In "our country we live in ignorance, without knowing it; "but on leaving Portugal our eyes ſeem ſuddenly to open, "and we immediately ſee that ignorance in which we "were involved. Foreigners allow us underſtanding, "docility, morals, diſcernment, and a genius for com-"prehending what is commendable and good; but our "conceit, our gravity, our confined manner of life, "which deprive us of all freedom of thought, expoſe us "to juſt cenſures, and give riſe to thoſe hateful opinions "other nations entertain of us. The main ſource of our "ignorance, and the miſerable cauſe of offence to all "nations, is the cuſtom in Portugal of publiſhing ſuch "a multitude of books, &c."

The Portugueſe not only neglect agriculture, but all arts and manufactures, though the country has the fineſt materials; the greateſt part of theſe are diſpoſed of unwrought to foreigners, and when worked up are purchaſed again at a high price. The Portugueſe indeed make a little linen, a variety of ſtraw-work, and candy ſeveral kinds of fruit, particularly oranges. They have likewiſe ſome coarſe ſilk and woollen manufactures; but theſe are trifling articles that ſupport only a very ſmall part of the nation.

The Portugueſe, however, carry on a very extenſive trade; but from this they reap little profit, being obliged to

turquois and hyacinths, are alſo found in the mountains; and particularly a beautiful variegated marble, with many other curious foſſils of the lapidary kind, of which ſeveral ſorts of work are made: here are alſo very good mill-ſtones, and on the hill of Alcantara, not far from Liſbon, is a remarkable mine of ſalt-petre.

Though the ſoil is very fruitful, agriculture is ſo much neglected, that above half the country lies waſte, and the inhabitants are ſupplied with a great part of their corn by the Engliſh and Dutch, and have Indian corn from Africa. Portugal, however, abounds in excellent wine and oil; the greateſt part of the latter is made in the province of Alentejo, for the olive-trees thrive better here, near the ſea, than up in the country. Here are alſo abundance of oranges, lemons, figs, pomegranates, raiſins, almonds, cheſnuts, and other fruit. It produces great plenty of fine honey, and conſequently of wax. The beſt honey found in the fields is almoſt of a white colour, and of a moſt agreeable flavour; and the wood-honey is more agreeable to the taſte than in other countries.

As Portugal has ſome excellent paſtures, particularly in the country about Monteſtrella and near Ourique, the grazing is in ſome places very conſiderable, and there are ſeen an uncommon number of horned cattle and ſheep; but in moſt places it is at ſo low an ebb, that the greateſt part of their oxen come from Spain. The horſes are not large, but very fleet; and they have fine mules, which ſell for a great price. The Portugueſe breed more aſſes than horſes, the latter being clandeſtinely imported from Spain.

From the mountains iſſue ſeveral ſtreams and ſmall rivers, which fertilize the valleys and fields, and either join the great rivers in their courſe, or diſcharge themſelves ſeparately into the ſea: but all the great rivers of Portugal have their ſources in Spain. The principal of theſe are the Minho, the Lima, or Lethe, the Douro, the Tajo, or Tagus, the largeſt river in the kingdom, and the Guadiana, with the Cavado; which laſt riſes in the mountains of Trazos, and diſcharges itſelf into the ſea below Barcelos.

All theſe rivers abound in fiſh; and the three principal, namely the Douro, the Tagus, and Guadiana, divide the kingdom into three parts.

SECT. II.

The Manners, Cuſtoms, Perſons, Dreſs, Houſes, Furniture, Method of Travelling, Religion, &c.

EMANUEL de Farca, a Portugueſe writer, deſcribing his conntrymen, ſays, "The nobility think "themſelves gods, and require a ſort of adoration; the "gentry aſpire to equal them; and the common people "diſdain to be thought inferior to either." This pride is the characteriſtic both of the Spaniards and Portugueſe; and here the grandees and their ladies carry their haughty ſpirit to ſuch an extravagant height, that they ſtand upon the niceſt punctilios with reſpect to rank and titles. The ladies of quality are ſerved by their maids and ſlaves on the knee; and indeed the women of quality will ſcarce be ſpoken to by mean people in any other poſture: a degree of haughtineſs practiſed in no other Chriſtian country, and which they probably received from the Moors. But this is far from being the worſt part of their character; for it is become a proverb, that a Spaniard ſtript of all his good qualities, makes a perfect Portugueſe. Indeed they are generally characterized, as being cruel, treacherous, malicious, and revengeful, both to one another and to ſtrangers; crafty in their dealings, and the meaner ſort addicted to thieving. But to this general character there are many noble exceptions.

The Portugueſe ladies are ſmall of ſtature, with their complexion pretty much upon the olive; their features delicate; but their viſage thin: their hair is black and ſhining, and their eyes ſparkling; nor do they want a good ſhare of wit. In ſhort, they are for the moſt part generous, charitable, and modeſt. They wear hoops, and ſeveral gowns, one over another, of rich ſtuffs trimmed with gold and ſilver lace; but the uppermoſt is ſaid to be of coarſe black ſtuff, and ſo long that it trails upon the ground. Their ſhoes are of black Spaniſh leather, ſtraight as a glove, and without heels; whence within doors they ſeem to ſlide along rather than to walk. When they go abroad they have pattens, which are a kind of ſilk ſandals faſtened to rings or plates, that raiſe them half a foot from the ground, and make them walk very aukwardly; but in the houſe they neither wear hoops nor pattens. The ſtays, in which they have but little bone, are high before, but ſcarce reach half way up their backs behind, and conſequently would expoſe the tawny complexion of their ſkins, if their ſhoulders were not covered with paint. Their hands and feet are ſmall and well proportioned, and their wide ſleeves, with broad ruffles, buttoned at the wriſts, make their hands appear leſs than they are. The people of quality wear very fine linen, and as this is ſcarce and dear, the meaner ſort have none; for rather than wear coarſe linen, they will go without. The ladies wear about their necks a broad laced tucker, and inſtead of a girdle tie a ſtring of medals or relics, or perhaps the cord of ſome religious order, about their waiſt, the ends of which reach down to the ground. Acroſs the top of their ſtays they have a kind of breaſt-plate of diamonds, from whence there hangs a chain of pearls, or ten or twelve little knots of diamonds. They have likewiſe bracelets, rings, and pendants in abundance; but no necklaces. In their hair they wear a variety of precious ſtones, ſometimes in the form of artificial butter-flies, or other inſects; ſometimes they adorn their hair with ribbons and feathers of various colours. When they go abroad they throw a veil over all, and women who are advanced in years wear a fine coif over their hair; but many of the young ladies have none.

The Portugueſe gentlemen commonly wear black, and thoſe of the court frequently follow the French faſhions.

With reſpect to their houſes and furniture, they have uſually a great many rooms on a floor. The floors and ceilings are formed of a plain white plaſter, that looks like poliſhed marble. They change their furniture and apartments according to the ſeaſon of the year; and upon the lower floors of their ſummer apartments they uſually throw water every morning, which ſoon dries up, and leaves a refreſhing coolneſs. Upon theſe floors they ſpread fine mats, and cover the walls with them chair-high; above theſe are hung pictures and looking-glaſſes, and all round the rooms of the ladies apartments cuſhions of ſilk or velvet are laid upon the mats, which they ſit upon croſs-legged, as hath been already obſerved with reſpect to the Spaniſh ladies. Between theſe cuſhions are fine tables and cabinets, and, at certain diſtances, vaſes of ſilver, in which are orange or jeſſamine trees, and in their windows they have frames of ſtraw-work, to keep out the ſcorching beams of the ſun.

In the upper apartments the hangings, cabinets, looking-glaſſes, paintings, and plate, are extremely rich, and the floors are frequently covered with Turky carpets. In winter their beds and hangings are of velvet, trimmed with gold or ſilver lace; but in ſummer they uſe no curtains, except very thin ones, made of gauze, or ſome other ſlight ſtuff to keep out the gnats.

Veſſels of copper, tin, or pewter, are ſaid to be never ſeen in the houſes of perſons of quality, where they only uſe ſilver, or earthen-ware, and have many dozens of ſilver plates, and a great number of diſhes of the ſame metal, with other utenſils in proportion. But amidſt all this wealth, the bad œconomy of the grandees is ſcarce credible, and reduces them to a neceſſitous condition, even while they make this glittering appearance. Moſt of them paſs their lives in or near the capital, without ever viſiting their eſtates, unleſs they happen to be diſgraced at court: they leave every thing to their ſteward, and are above inſpecting his accounts. Their tradeſmen deliver their goods upon truſt, and ſet down their own prices, being pretty well aſſured their bills will not undergo a ſtrict examination. It is beneath a perſon of quality to endeavour to beat down the price of a piece of ſilk, or other goods, or even to take change of a ſhopkeeper out of a piece of gold; and as the tradeſman frequently gives ſeven or eight years credit, he is obliged to ſet down double the price the goods might be bought for with ready money. They ſeldom, however, loſe their debts, for

the Spaniſh and Portugueſe quality are men of ſuch honour, that they readily aſſign a part of their rents for the payment of their debts, when preſſed for money by their tradeſmen.

The houſes of the nobility are crowded with domeſtics; but their wages are very low, they having only eight-pence or ten-pence per day to purchaſe diet, cloaths, and every thing elſe; and a gentleman belonging to a grandee has only about fifteen crowns a month, though he is obliged to dreſs in velvet in winter, and ſilk in ſummer. Indeed the ſervants lay out the greateſt part of their ſalaries in cloaths, living upon onions, peaſe, beans, and other pulſe. One reaſon of the Portugueſe nobility having ſuch a number of ſervants is a cuſtom which prevails among them of keeping all in their pay who have ſerved their anceſtors; ſo that ſome of the grandees have four or five hundred of both ſexes, the greateſt part of whom are merely for ſhow, and ſeldom appear but on days of ceremony.

The quality, beſides their ordinary ſervants, retain abundance of dwarfs of both ſexes, who are dreſſed as fine as poſſible; they have alſo a pretty many ſlaves who are Moors, and are valued at four or five hundred crowns a piece. Over theſe they had formerly the power of life and death; but at preſent the government will not permit their killing them. Where two ſlaves marry, their children are ſlaves; but if a freeman marries a ſlave, the children are free. Theſe ſlaves are their beſt ſervants, for the others will ſometimes pride themſelves on having as good blood as their maſters. The very beggars rather demand than ſupplicate an alms, alledging their being deſcended from old Chriſtians; and if you give them no money, muſt be diſmiſſed with a compliment, upon which they go away contented.

The food of the Portugueſe is nearly the ſame with that of the Spaniards, and they are equally ſober and abſtemious. The men mix water with their wine, and the women generally drink only water. It is cuſtomary with the Portugueſe to betake themſelves to ſleep about noon, on account of the heat, and to tranſact moſt of their buſineſs in the morning and evening, or even at night.

The method of travelling here is much the ſame as in Spain, except their having fewer coaches, and travelling more by water than the Spaniards, from their country lying along the ſea-coaſt, and its being croſſed by many great rivers that riſe in Spain. The mule or the litter are generally uſed on a journey; their horſes, which are ſprightly and well made, ſerve indeed for ſhort viſits, to prance at a proceſſion, or before the windows of their miſtreſſes; but the mules being ſtronger and ſurer-footed, are fitteſt to climb their mountains; but have only a ſlow pace.

Their language is a compound of the Spaniſh, Latin, Mooriſh, and French.

With reſpect to the religion of the Portugueſe, they are the moſt bigotted Papiſts; but though the exerciſe of the Jewiſh religion be prohibited by the fundamental laws of the kingdom, yet all authors agree, that great numbers of ſecret Jews ſtill remain among the Portugueſe, and theſe too among the nobility, biſhops, prebends, monks, nuns, and the very inquiſitors themſelves; and when unable to conceal themſelves, eſcape to England or Holland, and there openly profeſs Judaiſm. The inquiſition, which was introduced by king John III. and has ſince been ſet up in all the Portugueſe dominions, except Brazil, is very active in detecting them, and thoſe they call heretics, and no leſs rigorous in puniſhing them. Impious, cruel, and inhuman as this tribunal is, yet its feſtivals or ſolemn burnings, called *auto da fe*, or the act of faith, afford the higheſt delight to the infernal bigots, who, while their fellow-creatures, the ſuppoſed heretics, are burning in the flames, cry aloud, "Oh, what great "goodneſs! Praiſed be the holy office." King John IV. in ſome meaſure, however, curtailed the power of the inquiſition, commanding that all its ſentences ſhould be laid before the parliament, and that the accuſed ſhould be allowed council for making their defence; and enacted, that only blaſphemy, ſodomy, hereſy, ſorcery, pagan cuſtoms, and the converſion of the Jews, ſhould come under their cognizance.

The being an antient Chriſtian, or in other words of an antient Chriſtian race, is eſteemed in Portugal a very high degree of pre-eminence, and far ſuperior to what they call a new converted Chriſtian, or a half new converted Chriſtian; by which laſt they mean thoſe whoſe new converted anceſtors have married the antient Chriſtians.

The number of convents in Portugal is ſaid to amount to nine hnndred, and moſt of them are very rich; but the Jeſuits, who in multitude and opulence ſurpaſſed all the other orders, have lately been baniſhed.

With reſpect to the eccleſiaſtics, there is a patriarch of Liſbon, who muſt always be a cardinal, and of the royal family. Next to him are three archbiſhops, who rank with marquiſſes, and the firſt of them the archbiſhop of Braga, who is primate of the kingdom, and lord ſpiritual and temporal of his city and the neighbouring country. The biſhops hold the rank of counts. Beſides thoſe in Europe, the Portugueſe have archbiſhoprics and biſhoprics in the other three parts of the world.

The king of Portugal, beſides the nomination of all biſhops, receives a fourth of their revenue. The pope confirms the biſhops, publiſhes his bulls in the kingdom without the king's previous conſent, and, by his legate, governs the clergy, who with reſpect to taxes and contributions depend on him. He has alſo the gift of many ſmall prebends. The pope's nuncios have here ſo lucrative a poſt, that they never fail of raiſing vaſt fortunes before they return to Rome.

SECT. III.

The State of Learning and Arts; with the Commerce, Meaſures, Weights, and Coin of Portugal.

WITH reſpect to the ſtate of learning in Portugal, it is at as low an ebb as poſſible. Indeed there are univerſities at Coimbra and Evora. At Liſbon is a royal academy for the Portugueſe hiſtory; at Santarene is an academy of hiſtory, antiquities, and languages; and at St. Thomas an academy of ſciences, on the ſame footing as that of Paris: but while bigotry continues here at its preſent enormous height, it is impoſſible for ſcience to flouriſh. An Italian Capuchin, in 1746, publiſhed a work in the Portugueſe tongue on the true method of ſtudy, in four volumes quarto, which he dedicated to the king of Portugal, and there aſſerts, that the ſchools of this country are places of retreat for thoſe errors which by Newton and Des Cartes were driven out of the other parts of Europe; and according to him Galilæo, Des Cartes, Newton, and Gaſſendi are conſidered in Portugal as atheiſts and heretics, not to be mentioned but with ſome marks of execration. D'Oliveira, a Portugueſe, ſays, in the preface to the firſt volume of Memoirs, "In "our country we live in ignorance, without knowing it; "but on leaving Portugal our eyes ſeem ſuddenly to open, "and we immediately ſee that ignorance in which we "were involved. Foreigners allow us underſtanding, "docility, morals, diſcernment, and a genius for com- "prehending what is commendable and good; but our "conceit, our gravity, our confined manner of life, "which deprive us of all freedom of thought, expoſe us "to juſt cenſures, and give riſe to thoſe hateful opinions "other nations entertain of us. The main ſource of our "ignorance, and the miſerable cauſe of offence to all "nations, is the cuſtom in Portugal of publiſhing ſuch "a multitude of books, &c."

The Portugueſe not only neglect agriculture, but all arts and manufactures, though the country has the fineſt materials; the greateſt part of theſe are diſpoſed of unwrought to foreigners, and when worked up are purchaſed again at a high price. The Portugueſe indeed make a little linen, a variety of ſtraw-work, and candy ſeveral kinds of fruit, particularly oranges. They have likewiſe ſome coarſe ſilk and woollen manufactures; but theſe are trifling articles that ſupport only a very ſmall part of the nation.

The Portugueſe, however, carry on a very extenſive trade; but from this they reap little profit, being obliged to

to vend not only their own produce, but all the merchandize and riches brought from their ſettlements in other parts of the globe; and eſpecially from America to the Europeans; particularly the Engliſh, in exchange for corn and manufactured goods of all kinds, with which they ſupply both Portugal and its poſſeſſions abroad. The chief commodities of the Portugueſe conſiſt of imports from their own colonies, particularly from Brazil, as tobacco, cacao-nuts, ſugars, ſpices, drugs, ivory, ebony, brazil-wood, hides, gold, pearls, diamonds, and other valuable gems. In 1755 a new trading company to Groſpan and Maragnan was eſtabliſhed here, and foreign merchants admitted to ſhares.

The Portugueſe ſhips ſeldom frequent the other countries of Europe or the Levant, their voyages rather lying to the coaſts of Africa, particularly the Gold Coaſt, whence they carry negroes to Brazil, and alſo purchaſe ſome gold and ivory. They likewiſe trade to their Eaſt India colonies of Goa, Diu, and Macao; but this traffic, though once very important, is now greatly declined. Brazil, however, is ſtill a plentiful treaſury to Portugal, and foreigners are entirely excluded from all commerce with that country. However, the Portugueſe carry on a conſiderable clandeſtine traffic with the Spaniards, which chiefly conſiſts in the exchange of gold and ſilver. From Brazil the Portugueſe bring not only ſugar and tobacco, but a great quantity of gold and diamonds. The fleet which annually ſails to Brazil goes and returns in ſeven or eight months, and when homeward bound is convoyed by ſome men of war which are ſent to meet it. Their ſhips from Africa or the Eaſt Indies alſo return home in company.

The long meaſure uſed by the Portugueſe conſiſts of barros and cavidos; a hundred barros make one hundred and ſixy-four cavidos, or one hundred ninety-five and a half Hamburgh ells; but an hundred cavidos are only equal to ſixty-one barros, or about one hundred and nineteen Hamburgh ells.

Of the Portugueſe weights, we ſhall only mention the arrobas and quintals. In Portugal, an arroba is thirty-two pounds, and a quintal is four arrobas.

All ſums of money are reckoned in Portugal by reis and cruſadoes, which are not real, but only imaginary coins. The gold coins of Portugal are the double moedas of one pound ſeven ſhillings value, the quarter of which is called a millrei, or a thouſand reis, and has therefore the number one thouſand marked upon it; and the Johns, worth three pound twelve ſhillings, which are ſubdivided into halfs, quarters, eights, and ſixteenths. The ſilver coins are the vintain of twenty reis; the half teeſton of fifty; and the whole teeſton of one hundred.

SECT. IV.

Of the Number of the Cities, Towns, and Inhabitants; with a conciſe hiſtory of Portugal, the preſent Nobility, the Titles of the King, the Orders of Knighthood, the Government, public Offices, Courts of Juſtice, Revenue and Forces.

WITHIN the kingdom of Portugal are nineteen cities, and five hundred and twenty-ſeven villages, or ſmaller towns. The number of the inhabitants may be pretty nearly computed, as liſts of all the pariſhes in the towns and villages throughout the whole kingdom, and of the ſouls in every pariſh, have been made; and according to one of theſe liſts in the year 1732, there is in the whole kingdom, three thouſand three hundred and forty-four pariſhes, and one million ſeven hundred and forty-two thouſand two hundred and thirty ſouls. But this liſt is ſaid not to include the eccleſiaſtics, monks, and nuns, who amount to about three hundred thouſand; ſo that in all Portugal, there were above two millions of people. The foreign merchants and colonies greatly diminiſh the number of inhabitants, and the multitude of convents muſt hinder their increaſe.

Portugal paſſed from the Phœnicians and Carthaginians into the hands of the Romans, and by the emperor Auguſtus was made a Roman province. Towards the beginning of the fifth century the Alans, and afterwards the Swabians and the Viſigoths, ſucceſſively made themſelves maſters of this country. In the eighth century it was over-run by the Moors and Saracens, but gradually wreſted from them by the Chriſtians. Henry duke of Burgundy diſtinguiſhing himſelf by his eminent ſervices againſt the Moors, Alphonſo VI. king of Caſtile, gave him his daughter Thereſa in marriage; created him earl of Portugal, and in 1110, left him that kingdom. Alphonſo Henriques, his ſon and ſucceſſor, obtaining a ſignal victory in 1139 over the Moors, was created king by the people; and in 1181, at an aſſembly of the ſtate, the ſucceſſion of the crown was ſettled. Alphonſo III. added Algarve to the crown of Portugal. In 1383, the legitimate male line of this family becoming extinct in the perſon of Ferdinand. John I. his natural ſon was two years after admitted to the crown, and in his reign the Portugueſe made ſettlements in Africa, and diſcovered the Iſlands of Azores. In 1482, his great grandſon John II. received the Jews who had been expelled from Spain, and gave great encouragement to navigation and diſcoveries. Afterwards, in the reign of king Emanuel, Vaſco de Gama diſcovered the way to the Eaſt Indies, by doubling the Cape of Good Hope. In 1500, Brazil was diſcovered by Don Pedro Alvarez, and the Spaniards made numerous diſcoveries in the Eaſt Indies, where they ſoon erected forts, ſubdued the neighbouring inhabitants, and carried on a bloody war in Africa. The power of Portugal was then at its height; but in 1580, on the deceaſe of Henry the Cardinal, the male line of the royal family became extinct, and the ſucceeding year the kingdom became united to Spain. The Portugueſe now loſt moſt of the advantages they had obtained under their own monarchs; their poſſeſſions in the Eaſt Indies, in Brazil, and the coaſt of Africa, were neglected, and many of them wreſted from them by the Dutch, who were at war with Spain, and by the other maritime powers, while at home the Portugueſe were much oppreſſed; but in 1640, they ſhook off the Spaniſh yoke, by electing John duke of Braganza for their king. This prince, who aſſumed the title of John IV. drove the Dutch out of Brazil, and from him all the ſucceeding kings of Portugal have been deſcended. Alphonſo VI. was dethroned by his brother Peter, who in 1668, concluded a treaty with Spain, by which Portugal was declared an independent kingdom. Don Joſeph, the preſent king, aſcended the throne in 1750; but his reign has been filled with a variety of calamities, which have deeply affected the kingdom in general, and particularly Liſbon: an earthquake, a fire, famine, an aſſaſſination plot againſt the ſovereign, executions upon executions, the ſcaffolds and wheels for torture reeking with the nobleſt blood; impriſonment after impriſonment of the greateſt and moſt diſtinguiſhed perſonages, which produced the expulſion of the Jeſuits, who are ſaid to have been concerned in the horrid ſcheme of murdering their king. The invaſion of the kingdom by a ſtronger and more powerful nation; the numerous troops of the enemy laying waſte the country with fire and ſword, and rolling like diſtant thunder towards the capital. "The "Spaniſh miniſtry, ſays Mr. Clarke, had already decreed "the doom of Portugal, and nothing was to be heard "at the Eſcurial, but Carthage is fallen. Carthaginian, "perhaps, or Jewiſh ſtory, may poſſibly afford a ſcene "ſomething like this, but for the ſhortneſs of the pe-"riod, not ſo big with events, tho' in their final de-"ſtruction ſuperior. From that, indeed, under the "hand of Providence, the national humanity and genero-"ſity of Great Britain has preſerved the Portugueſe: and "it remains now to be ſeen, in future treaties, how that "people will expreſs their gratitude."

The nobility are extremely numerous; many of them are of the royal blood, and deſcended from the natural ſons of the royal family. The nobility are divided into the high and low: the higher, ſtiled titled nobility, conſiſt of dukes, marquiſſes, counts, viſcounts, and barons. Thoſe who are grandees, and ſtiled dons, are, like thoſe of Spain, divided into three claſſes, and receive from the royal treaſury a penſion ſufficient to ſupport their reſpective dignities. The ſons of a duke are alſo grandees, and his daughters hold the rank of marchioneſſes. The inferior nobility, or gentry, are termed fidalgos, and

are incapable of bearing the title of don, unleſs they obtain the king's permiſſion.

The king's titles run thus, Joſeph by the grace of God, king of Portugal, and of the Algarves on this and the other ſide of the ſea of Africa; lord of Guinea, of the conqueſt, trade, and navigation in Æthiopia, Arabia, Perſia, India, &c. and in 1749, Pope Benedict XIV. conferred on him the title of Moſt Faithful Majeſty.

The arms of Portugal are a ſhield argent, with five ſmall ſhields azure, placed croſſwiſe, on each of which are five ſilver pieces in the form of a St. Andrew's croſs. On the border of the ſhield are the arms of Algarve, which conſiſts of ſeven ancient caſtles.

The principal order of knighthood is that of Chriſt, inſtituted by king Dennis, ſoon after the abolition of the knights Templars. They have four hundred and fifty commanderies, and wear for a badge of the order, a red croſs within a white one.

The order of St. James, has forty-ſeven ſmall towns, with one hundred and fifty commanderies, beſides the ſplendid convent of Santos o Novo, a little to the weſt of Liſbon. The badge of this order is a red ſword, in the ſhape of a croſs, the hilts reſembling thoſe of ancient ſwords.

The order of Aviez has forty-nine commanderies, and the badge belonging to it, is a green croſs in the form of a lily. Theſe three orders are all religious; but the knights have leave to marry, and the kings of Portugal are perpetual grand maſters. The knights of Malta have alſo twenty-three commanderies here.

With reſpect to the government of Portugal, the king is in many reſpects an unlimited monarch; but on the impoſition of new taxes, the ſettlement of the ſucceſſion, and other important concerns, the conſent of the cortes, or ſtates, which conſiſt of the clergy, the high nobility, and the commons, is neceſſary. The clergy are here repreſented by the archbiſhops and biſhops, the high nobility are, as hath been already ſaid, the dukes, marquiſſes, counts, viſcounts and barons, and the repreſentatives of the commons are choſen by the cities and towns. Among them are alſo reckoned the lower nobility, and the maſterſhips of the order of knighthood. This aſſembly never meets but by the king's proclamation, and though the crown is hereditary, yet the conſent of the ſeveral ſtates is neceſſary to the ſucceſſion of a brother's children. The crown too devolves to the female line; but this right is forfeited, if they marry out of the kingdom.

The higheſt office is the council of ſtate, in which all the great affairs of the kingdom are tranſacted, with the diſpoſal of all eccleſiaſtical and temporal offices, as the nomination of all archbiſhops and biſhops, viceroys, captain-generals, governors of the provinces, with every thing relating to peace and war, embaſſies, alliances, &c. In the year 1732, this council conſiſted of five eccleſiaſtics, and an equal number of officers, with the ſecretary of ſtate.

The council of war regulates all military affairs, and every thing relating to them.

The council of the palace is the higheſt tribunal, to which cauſes may be brought from inferior courts by appeal; it nominates to all offices belonging to the law, beſides diſputes of juriſdiction, between the lay and ſpiritual courts; examines the briefs of the Pope's nuncios; and, beſides a variety of other buſineſs; draws up all laws, orders, edicts, privileges, and grants. This court conſiſts of a preſident and ſeveral counſellors, whoſe number is not limited; five ſecretaries, each of whom has his particular department. And under this tribunal is the chancery, which conſiſts of a chancellor, a treaſurer, and other officers.

The *Caſa da Supplicaçao*, is the firſt and higheſt tribunal of juſtice, and without appeal in civil and criminal caſes. To its ordinary juriſdiction belong the provinces of Eſtremadura, Alentejo, and Algarve; and to it lie final appeals from the following court.

The ſecond high court of appeal, has its ſeat at Porto, and to its ordinary juriſdiction belong the provinces of Entre Duro e Minho, Trazos Montes and Beria. All proceſſes not exceeding twenty-five thouſand reis in moveables, and three hundred thouſand in immoveables are finally determined in this court, which conſiſts of twenty-three officers.

The treaſury court is divided into three offices, one of which ſuperintends the finances of the kingdom; the other thoſe of Africa; and the third, thoſe of the Indies, the magazines, and armaments.

For the inferior adminiſtration of juſtice, each of the ſix provinces of the kingdom have inferior courts.

The king's revenue ariſes firſt, from the hereditary eſtates of the royal houſe of Braganza, to which belong fifty villas. Secondly, from the royal domains. Thirdly, from the cuſtoms, of which thoſe of Liſbon are moſt conſiderable. Fourthly, from the taxes. Fifthly, from the exciſe, which is very high, and paid even by the clergy. Sixthly, from the monopoly of Brazil ſnuff, which, in 1755, was farmed for three millions of cruſadoes. Seventhly, from the coinage. Eighthly, from the ſale of indulgencies, which the Pope renews to the king every three years by a ſpecial bull. Ninthly, from the grand maſterſhips of the order of knighthood, which the king holds in his own hands. Tenthly, from the eccleſiaſtical tithes in foreign countries. Eleventhly, from the duty of the fifth part of all gold brought from Brazil, which annually amounts to three hundred thouſand pounds ſterling; and laſtly, from the farm of the Brazil diamonds.

The military forces in time of peace, when complete, amount, according to Dr. Buſching, to no more than fourteen thouſand men, and the ſame author obſerves, that the Portugueſe navy in 1754, conſiſted only of twelve ſhips of war, and theſe but weakly manned.

The Portugueſe foreign dominions, which were formerly extremely conſiderable, are now greatly diminiſhed.—They at preſent poſſeſs in the Atlantic ocean, the Cape de Verd iſlands, St. Thome, &c. In Africa, fort Magazan on the coaſt of Morocco, Cacheo on the Negro coaſt; ſeveral forts in the kingdom of Congo, Loango, Angola, and Monomotapa; a fort in Monoemugi; the town of Moſambique in the kingdom of that name, and the town of Sofala. In Aſia, the towns of Diu, Goa, Onor, Macao, &c. In America, Brazil, part of Guiana, and Paraguay.

The provinces of Portugal beginning at the ſouth eaſt, are the following, Eſtremadura, Beira, Algarve, Alentejo, Eſtremadura, Beira, Trazos Montes, and Entre Duro e Minho. We ſhall begin with the former, and treat of them in this order.

SECT. V.

Of the Province of Algarve, or Algarva: Its Situation, Extent, Produce, and principal Towns.

THE kingdom of Algarve, or Algarva, is the moſt ſouthern province of Portugal, and is bounded on the north by the province of Alentejo, from which it is ſeparated by the mountains called Caldeirao and Monachique. On the eaſt it borders on the Spaniſh province of Andaluſia; and on the ſouth and weſt on the ſea. Its length from north to ſouth is computed at about eighty-four miles, and from eaſt to weſt at about twenty-four.

As palm-trees abound in Algarve, the poor people employ themſelves in working up the leaves into a variety of forms. But this province, notwithſtanding its maritime ſituation, commodious harbours, and inland fertility, ſeems to have been treated by the kings of Portugal rather as a conquered country, than a province of the kingdom.

Algarve anciently comprehended a much larger tract than it does at preſent; for it extended, not only beyond the whole coaſt of Cape St. Vincent, as far as the town of Almeria, in the kingdom of Granada, but along the oppoſite coaſt of Africa; hence the kings of Portugal ſtile themſelves kings of Algarve, both on this and the other ſide of the ſea, in Africa; they having formerly made themſelves maſters of Tangiers, Ceuta, and ſeveral other parts of the African coaſt in the Mediterranean.

The face of the country is generally mountainous; but affords plenty of wine, figs, raiſins, oil, and almonds, which are however inferior to thoſe of Spain; and it likewiſe abounds in dates; but they have not always corn ſufficient for their own uſe.

It contains four cities, twelve towns, and ſixty villages, ſome of which are very populous; with ſixty-ſeven pariſhes, and ſixty thouſand ſix hundred and eighty-eight inhabitants. This province is divided into three juriſdictions, the principal places in which are

Lagos, a city in a fine bay, navigable for the largeſt ſhips, it is ſeated in latitude thirty-ſix degrees fifty-one minutes, and in nine degrees thirty-ſix minutes weſt longitude, about five leagues to the eaſtward of Cape St. Vincent. Its ſituation will not admit of a regular fortification; but the city is walled, and the harbour well ſecured by two forts. The inhabitants amount to about two thouſand ſix hundred; it contains two pariſhes, and four convents, ſome chapels, an houſe of mercy, and is the reſidence of the governor and captain-general of Algarve, of a corregidor, and other officers. Here the Engliſh fleets, bound to the Streights, uſually take in freſh water.

Tavira is a city pleaſantly ſeated on a bay, which has a harbour defended by two forts, and lies twenty-five miles to the eaſt of Faro. The little river Sequa, which runs into the bay, divides it into the eaſt and weſt-town. Beſides its walls, and the above ports, the town is defended by a caſtle, and contains above four thouſand ſeven hundred inhabitants, two pariſh churches, one houſe of mercy, one hoſpital, and five convents.

Faro is a conſiderable port, ſtrongly ſituated on the ocean, in a level country, in the thirty-ſixth degree forty-eight minutes north latitude, and in the ninth degree twelve minutes weſt longitude, twenty-four miles to the eaſt of Lagos, and is defended by a good modern fortification, with a caſtle and other works. It contains four thouſand five hundred inhabitants, and is the ſee of a biſhop; but has only a cathedral, one church, a houſe of mercy, an hoſpital, and four convents. The town is ſubject to the queens of Portugal. The ſea in its neighbourhood produces abundance of good fiſh, and moſt of the inhabitants are employed in the fiſhery.

SECT. VI.

Of the Province of Alentejo; its Situation, Extent, Produce, and principal Cities.

THE province of Alentejo, which is one of the largeſt in the kingdom, is bounded on the north by Eſtremadura and Beira, on the eaſt by Andaluſia and Spaniſh Eſtremadura, on the ſouth by Algarve, and on the weſt by the Atlantic ocean; extending from north to ſouth about a hundred and twenty-ſeven miles, and nearly as much in breadth. It is called Alentejo, from its being ſituated beyond the Tejo, or Tagus.

Its principal rivers are the Tagus and Guadiana; and though it contains ſome mountains, it is for the moſt part level and very proper for tillage. Its principal products are wheat and barley; it alſo produces excellent wine and admirable fruit; the beſt ſweet or China oranges come from hence, and they have abundance of game and fiſh. Their mutton and beef are good, and they make better cheeſe than in any other province. Here are alſo ſeveral kinds of marble, and in ſome parts are found various gems. The fertility of this province has frequently rendered it the theatre of war; and on this account the king of Portugal has here ſeveral good fortifications. The whole province contains four cities, eighty-eight towns, three hundred and fifty-ſix pariſhes, and about two hundred and ſixty-eight thouſand and eighty ſouls; and is divided into eight diſtricts, the principal places in which are the following:

Evora, a city ſixty-eight miles to the ſouth-eaſt of Liſbon, is ſeated on a hill, which is at ſome diſtance almoſt ſurrounded with mountains: on the north and eaſt ſtands Mount Oſſa; to the ſouth, the mountains of Portal and Viana; and to the weſt, Montemaro. The inhabitants amount to about twelve thouſand: it has five pariſh-churches, including the cathedral, one houſe of mercy, one royal and ſeveral other hoſpitals, and within its circuit and neighbourhood are twenty-one convents and colleges. It has been lately fortified with twelve whole and demi-baſtions, and on the north ſide is defended by a quadrangular fort, with four baſtions, and a like number of ravelins. It was antiently only a biſhop's ſee; but in in 1540 was raiſed to an archbiſhopric, under which are the biſhops of Elvas and Faro. It is the capital of the province, and has an univerſity.

Eſtremos is a city which ſtands ſix or ſeven leagues to the north-weſt of Evora, on a hill which it entirely covers, and is divided into the Higher and Lower Town. The houſes of people of condition make a handſome appearance, being built with white marble, which they find near the city. It contains three pariſh-churches, one houſe of mercy, one hoſpital, and ſix convents, with above ſix thouſand five hundred inhabitants. Without the town is ſo large a ſpring, that it turns ſeveral mills near its ſource. It was ſtrongly fortified when Portugal ſhook off the Spaniſh yoke, it being not far from the frontiers of Andaluſia. They make here a very fine red earthen-ware, great quantities of which were formerly exported to England and other parts of Europe.

Villa Vicioſa, or the Delightful Town, ſtands in a moſt fertile pleaſant country between Elvas and Eſtremos, and is alſo defended by a caſtle which commands the place. It is particularly remarkable for having a large and beautiful palace, with an adjoining park three leagues in circumference. The city contains only two pariſhes, ſix monaſteries, three nunneries, a houſe of mercy, and an hoſpital, with about three thouſand ſeven hundred inhabitants. In the ſuburbs is an old temple formerly dedicated to Proſerpine, and now to St. James. Many inſcriptions have been found here in honour of that pagan deity.

The city of Elvas ſtands about twenty-four miles to the eaſtward of Eſtremos, and ſix from the frontiers of Spaniſh Eſtremadura; it is ſeated on a hill, defended by a caſtle, and ſtrongly fortified; the works being of hewn-ſtone. It contains three pariſh-churches, beſides the cathedral, one houſe of mercy, one hoſpital, and ſeven convents. The inhabitants of this place and its diſtrict, which conſiſts of ten pariſhes, amount to about twelve thouſand four hundred perſons. One of its principal curioſities is a very large reſervoir, or ciſtern, ſo ſpacious, that it is ſaid to hold water enough for the inhabitants for ſix months. The water is conveyed into it through an aqueduct about four miles in length, ſupported in ſome places by three arches one over the other.

Olivenza is ſeated in a large plain on the eaſt ſide of the river Guadiana, fifteen miles to the ſouth of Elvas; and as the Spaniſh Eſtremadura lies near it, it is fortified after the modern way, having nine baſtions, eight ravelins, with a caſtle, and other works; it has alſo two pariſh-churches, one houſe of mercy, a monaſtery, two nunneries, and an hoſpital; and, including its diſtrict, in which are four pariſhes, contains about five thouſand three hundred ſouls.

Campo Mayor is a modern fortification, in which are four whole and five demi-baſtions, which lie about the diſtance of a muſket-ſhot from the town. It is ſeated in a wide plain, ten miles to the north of Elvas; and though it contains only one pariſh-church, two convents, one houſe of mercy, and an hoſpital, has no leſs than five thouſand three hundred inhabitants.

Portalegre is a fine city, ſituated at the foot of a lofty mountain in an agreeable country, ninety miles to the eaſtward of Liſbon, and near the frontiers of Spain. It is fortified after the antique taſte, with walls and towers, and contains about five thouſand ſix hundred inhabitants. It has a cathedral, four pariſh-churches, five convents, a houſe of mercy, and an hoſpital. In the year 1550 it was erected into the ſee of a biſhop, in whoſe dioceſe are forty-one pariſhes.

Beja ſtands on an eminence in the midſt of a fertile plain, ninety miles to the ſouth-eaſt of Liſbon, and nine to the weſtward of the Guadiana. It was formerly called Pax Julia, and alſo Pax Auguſta. It is of a round form,

form, and defended by an antique wall and towers. It was antiently a Roman colony, and three of the preſent gates are ſaid to be of Roman architecture. This city contains ſix thouſand two hundred inhabitants, and is divided into four pariſhes, ſeven convents, one houſe of mercy, and an hoſpital,

Serpa is ſituated on a rocky and uneven eminence, eighty-three miles to the ſouth-eaſt of Liſbon, and about a league to the eaſtward of the Guadiana; it contains two pariſhes, a monaſtery, and a houſe of mercy, with about four thouſand inhabitants. The adjacent fields are extremely agreeable, being planted with groves of olive and fig-trees.

SECT. VII.

Of the Province of Eſtremadura; its Situation, Extent, Produce, and principal Cities; with a particular Deſcription of the City of Liſbon.

ESTREMADURA, or Extremadura, is bounded on the north by the river Mondego, which ſeparates this province from Beira; on the eaſt by the ſame province of Beira, and that of Alentejo; on the ſouth by another part of Alentejo; and by the ocean on the weſt; extending about an hundred Engliſh miles in length, and forty-five from eaſt to weſt.

It obtained its name from a cuſtom obſerved by the kings of Leon, during the dominion of the Moors in Spain, of nominating their conqueſts, of which the preſent kingdom of Portugal was a part, by their ſituation with reſpect to the Douro, all the countries beyond that river being called Eſtrema Durii.

The ſoil is eſteemed the moſt fruitful in Portugal, it producing collectively what is found only ſeparately in the other provinces; particularly corn, wine, oil, millet, pulſe, and fruit of all kinds. The country that lies between Liſbon and Abrantes is a moſt delightful plain, thick ſet with olives and other fruit-trees. This province alſo produces and exports great quantities of ſea-ſalt. Through it runs the large river Tagus, which, after forming a ſpacious and ſecure harbour at Liſbon, loſes itſelf in the ſea.

Eſtremadura at preſent contains three cities, an hundred and eleven towns, and three hundred and fifteen pariſhes, which in 1732 were computed to contain two hundred and ninety-three thouſand five hundred and ninety-eight ſouls, excluſive of the inhabitants of the pariſhes of the eaſt part of Liſbon, which are not brought into the account; and the province is divided into eight juriſdictions, the principal places in which are the following:

Liſbon, the metropolis of the kingdom, is ſituated in the thirty-eighth degree forty minutes twenty-five ſeconds north latitude, and in the fifth degree thirty-ſeven minutes fifteen ſeconds weſt longitude. It extends from eaſt to weſt along the north ſide of the river Tagus, and reſembles an amphitheatre, containing within its circuit ſeven ſteep hills. The length of the whole city is near two miles; but its breadth is inconſiderable. The valleys of theſe hills form ſtreets above a mile in length; but moſt of them are very narrow, ill paved, and dirty. Thoſe ſtreets that have a deſcent, and are waſhed clean by the rain, are much the ſweeteſt; for the reſt are ſo full of all manner of filth thrown out of the houſes, that it is not eaſy to paſs them. The houſes of the citizens are generally old ill-contrived buildings, with lattice windows, which are no great ornament; but thoſe of the nobility are very handſome ſtructures, built with hewn-ſtone, and have both yards and gardens that take up a great deal of ground; but few of them have courts before them. This city contained, before the late earthquake, forty pariſh-churches, beſides the cathedral, and about as many monaſteries of both ſexes. The fineſt ſquare is that before the royal palace, which forms one ſide of it, another ſide runs along the river, and on the oppoſite ſide is a range of fine buildings. This ſquare, before the period juſt mentioned, was extremely delightful; for here were the moſt elegant buildings in the city: here they celebrate their bull-fights; and here they more barbarouſly burn thoſe unhappy people who have the misfortune to be condemned by the inquiſition. Near this is another ſquare on the bank of the river, where the principal market is held; but the largeſt is that called the Rucio, where the ſeveral hills about it form a kind of amphitheatre, and it is adorned with ſeveral magnificent houſes of the nobility.

The king's palace is the moſt remarkable building, and makes a very ſplendid appearance. The apartments are grand, very commodious, and richly furniſhed in winter; but in ſummer they take down the hangings and curtains, and there only remain the bare walls, which are, however, adorned with pictures. In it are two galleries about a hundred paces in length, in the firſt and ſecond ſtories, with balconies in the windows. In the third ſtory is the royal library, which contains a great number of valuable books in preſſes. Within the palace are alſo ſeveral large rooms where the cortes, or ſtates, the council of war, and the courts of juſtice aſſemble. The king's chapel is an elegant building, richly adorned, and ſhining with gold and azure, the very ſilver alone being valued at about a million ſterling. Adjoining to the palace is a ſquare court ſurrounded with a piazza, where the merchants meet, and expoſe their goods to ſale.

Since the erection of the royal chapel into a patriarchate, the city, with reſpect to its eccleſiaſtical juriſdiction, is divided into two dioceſes: Eaſt Liſbon, which is ſubject to the archbiſhop, and contains ſixteen pariſhes; and Weſt Liſbon, under the patriarch, contains twenty-one pariſhes. The pomp aſſumed by the patriarch on feſtivals is ſaid to ſurpaſs even that of the pope.

The churches of Liſbon are very fine, but the cathedral is a very heavy building, though it is handſome and richly ornamented within; as indeed are moſt of their churches, with a profuſion of paintings, images, croſſes, pixes, &c. coſtly veſtments for the prieſts, and dreſſes for the ſaints; many of them enriched with diamonds, and other precious ſtones; with a vaſt quantity of ſilver candleſticks and other ornaments. The convents and colleges amount to thirty-two for the monks, and eighteen for nuns; ſome of theſe have moſt magnificent churches, particularly that of the Dominicans, in which are three chapels ſhining with gold from the pavement to the roof; this ſtructure is very large, and on the day of an Auto da fé is the rendezvous of the proceſſion; and in it the ſentence of the unhappy ſufferers is publicly read. In the church of the Auguſtines, called Our Lady of Grace, is a croſs of gold adorned with precious ſtones, which is valued at a hundred thouſand crowns, and carried in proceſſion at their grand feſtivals. The moſt remarkable of the other convents are, that of St. Bento, belonging to the Benedictines; St. Domingo Graça, where the Auguſtine hermits reſide, which, beſides a delightful proſpect, reſembles a ſtately palace.

Among the many noble hoſpitals in this city is the celebrated houſe of mercy, which is under the direction of a ſociety compoſed of perſons of the higheſt rank in the kingdom, the king and princes of the blood being frequently members of it. They not only breed up ſixty boys, and give portions to a hundred and fourteen maidens, but diſtribute an incredible number of other charities, as relieving priſoners for debt, maintaining decayed perſons that cannot beg, and aſſiſting families that are aſhamed to let their wants be publicly known.

The great hoſpital is obliged to receive all perſons of whatever nation or religion; nor is this charity confined to the ſick, or to ſuch as meet with caſual misfortunes, as broken limbs, blindeſs, &c. but extends to ideots, lunatics, and foundlings.

The inhabitants of the city do not at moſt exceed a hundred and fifty thouſand. The government of Liſbon is lodged in a council, which conſiſts of a preſident, who is always a perſon of the firſt rank, ſix counſellors, and ſeveral other inferior officers.

The trade of this place, and the navigation to and from it, is ſo very conſiderable, that the cuſtom-houſe, which lies on the Tagus, is the principal ſource of the king's European revenues; and this is the grand magazine of all the goods which the Portugueſe fetch from their foreign colonies. The harbour is very large, deep, ſecure, and convenient; and has two entrances, that on

the north, called the Corredor, lies between the ſand-bank, the rock of Cachopos, and Fort St. Julian: the ſouthern entrance, which is much broader and very convenient, is between Cachopos and the fort of St. Laurence. The city is walled round, having ſeventy-ſeven towers on the walls, and thirty-ſix gates. It has ſo increaſed by degrees, particularly toward the weſt, that the old walls now divide the two dioceſes. In the center of the city, on one of the hills, ſtands a citadel that commands the whole place, and has caverns in it, in which four regiments of foot are conſtantly quartered. Cloſe by the ſea, at the diſtance of about ten miles from the city, both the entrances to the harbour are defended by two forts; that on the north ſtands on a rock in the ſea, and is called St. Julian; the other to the ſouth is built on piles on a ſand-bank, and is named St. Laurence, but is more commonly called Bogio. Two Portugueſe miles from St. Julian, and one from Liſbon, ſtands the fort of Belem, which commands the entrance into the city, where the maſters of all ſhips coming up the Tagus muſt bring to, and give an account of themſelves; and directly oppoſite to it on the ſouth ſide is the fort of St. Sebaſtian, commonly called the Old Fort, which ſtands on the angle of a mountain, along which a little way on the other ſide of the city the paſſage is defended from the beginning of the harbour by a chain of twelve forts.

If we take a view of Liſbon from the river, or from the oppoſite ſhore, it affords an admirable proſpect; for the city being built in the form of a creſcent, and the palace, churches, convents, and other buildings riſing gradually from the river one above another, we command the whole city at once. On the other hand, the view of the Tagus, from thoſe windows of the town which command it, is remarkabably pleaſing: the ſmall boats which ſail with any wind or tide, and are continually paſſing; the river crowded with ſhips of all nations; the coming in of a Bahia or Brazil fleet; the opening of the river towards the bar, with the caſtle of Belem on the right, the king's palace, and the caſtle of St. Julian's on the left; all together form a fine and agreeable view.

In order to convey as diſtinct an idea as poſſible of the preſent condition of this city, and what it has ſuffered by the late dreadful earthquake, which happened on the firſt of November, 1755, we ſhall give the obſervations of the Rev. Mr. Clarke, who was there in the latter end of the year 1761. "After landing, ſays he, "we paſſed through ſome ſtreets, near a mile in length, "where the houſes were all fallen on each ſide, and lay "in that undiſtinguiſhed heap of ruin, into which they "ſunk at the firſt convulſive ſhocks. Not that the reader is to imagine, that the greateſt part of that fine "city fell on that fatal morning; ſo far from it, that, I "believe, not above one-fourth part of it was deſtroyed: for it prevailed more in one particular quarter than "the reſt; and there the deſolation was almoſt univerſal, "ſcarce an houſe or building that was not thrown down. "In the other parts of the city, ſome ſingle ill-conditioned, or ruinous buildings fell, but the reſt ſtood. "And there is ſcarce a ſtreet but you will ſee ſhores, and "props fixed to the buildings on each ſide, to prevent "their falling even now; they having ſuffered ſo much "from the ſhocks they had received. Conſidering how "much time has elapſed ſince the earthquake, little has "been rebuilt in proportion.—They have built a cuſtom-houſe, an arſenal, a theatre, and ſome few other "buildings. All agree, that the fire occaſioned infinitely more havock than the earthquake. Thouſands of "the inhabitants, unhappily, in the firſt confuſion of "their fear, taking the ill-judged ſtep of thronging into the churches; the doors of which being ſometimes "ſhut by the violence of the crowd, and ſometimes "locked by miſtake, when the fire ſeized the roofs of "thoſe buildings, theſe unhappy ſufferers were moſt of "them deſtroyed; ſome by ſheets of lead, that poured "like a molten deluge upon their heads; others maſhed by the fall of the roofs, and the reſt burnt alive. "One's imagination can ſcarce form a ſcene of confuſion, horror, and death, more dreadful than this. "After the ſhocks were over, the fire continued burning "for many weeks; and it is thought, was one principal "cauſe of their eſcaping the plague, as the putrefaction "of the bodies was by that means much leſs.

"The calculation of the number that periſhed, as "they kept no regiſters, muſt be in great meaſure conjectural; but that thouſands and ten thouſands were "deſtroyed, there is no doubt. The morning on which "it happened was moſt remarkably ſerene and pleaſant, "particularly about ten o'clock, and in one quarter "more, all was involved in this dreadful ſcene of terror "and deſtruction. As this event produced many changes, "thoſe among the commercial parts of the city were "not the leaſt remarkable. One, who yeſterday was "at the eve of bankruptcy, found himſelf to day with "his books cleared; and hundreds, who lived in eaſe "and affluence, as ſoon as they had recovered from their "firſt panic and diſmay, ſaw want and poverty ſtare "them in the face."

The ſame author obſerves, that ſome of their churches, the arſenal, the theatre, which is an elegant building, and above all the aqueduct of Liſbon, deſerve the attention of every traveller; the center arch for its height being one of the nobleſt perhaps in Europe. One thing, he obſerves, is remarkable, that during the earthquake this building ſtood, though many of the key-ſtones fell ſeveral inches, and hang, only becauſe a ſmall part of the key-ſtone was catched by the centers cloſing again.

Belem, about a mile from Liſbon, is a ſmall town, where ſtands a port already mentioned, and a monaſtery belonging to the monks of St. Jerom, founded by king Emanuel. Its large and magnificent church, which was dedicated to our lady of Judah, whence the palace obtained the name of Belem, or Bethlehem, was lined with jaſper and the fineſt marbles from top to bottom, and here were interred ſeveral kings and queens of Portugal; but in the year 1756, this ſtructure ſuddenly ſunk into the earth.

Mafra, a ſmall town, containing about one thouſand and forty inhabitants, near which king John V. erected a building of extraordinary magnificence, in a ſandy, barren ſpot. This was done in purſuance of a vow made in a dangerous fit of illneſs, when he promiſed to found a convent for the pooreſt friary in the kingdom. Upon enquiry, the pooreſt convent appeared to be at Mafra, where twelve Franciſcans lived together in a hut. To accompliſh this vow, the king procured from Rome the draught of a building that was greatly to exceed the Eſcurial. This he erected: in the center ſtands a temple built entirely of marble, and behind the choir is a houſe endowed with a large revenue for two hundred Capuchins, who officiate in this pompous church as chaplains. To the right of this building is a ſuperb and ſpacious palace for the king, the royal family, and the chief officers of the court. On the left is another palace, equal in grandeur to the former, for the patriarch and twenty-four canons, who have the privilege of wearing mitres. Twelve thouſand people were employed in raiſing theſe ſtructures, and, by certain computation it coſt three fourths of the royal treaſure, and of the gold of the Brazil fleets. At the diſtance of a mile from the church ſtands an elegant houſe, with a ſmall wood, which has a beautiful effect in this ſandy waſte. The palace at Mafra looks towards the ſea, and ſerves for a landmark.

Torres Vedras is ſeated in a low place among the mountains, and in its neighbourhood are all kinds of fruit. It is one of the moſt ancient towns in the kingdom: to the north it is waſhed by the little river Sigandro; it contains about two thouſand two hundred and fifty inhabitants, four churches, three convents, and a caſtle, with one houſe of mercy, and an hoſpital.

The mountain of Cintra conſiſts of large rocks of flint, ſome of which are ten feet in diameter, and lie on one another without any connection. It is alſo very rich in ore, and produces a great number of remarkable plants, and alſo a vein of loadſtone. Near the ſummit are the ruins of an old Mooriſh town and fortreſs, with a reſervoir which contains very fine water, to the depth of ten feet. Among the waſtes and rocks between the mountain of Cintra, and the top of Cabo da Roca, is a tract ten miles in length, which abounds in wolves and a ſpecies of wild goats. At the foot of the mountain

of

of Cintra, is a town of the ſame name, which contains about one thouſand nine hundred inhabitants, with four churches, and is defended by an old caſtle built in the Mooriſh taſte. The air here is thought to be the beſt in all Portugal, it enjoying a pleaſing coolneſs, while the heat of Liſbon is extremely ſultry.

Thomar, a town ſeated in a pleaſant plain near the ruins of the old city of Nabancia, from which it is ſeparated to the north by the river Nabao. The inhabitants are about three thouſand ſix hundred, and beſides its two churches, one of which is collegiate, it contains one houſe of mercy, one hoſpital, and four convents, among which is that of the religious order of Chriſt, ſituated on a hill to the weſt of the town. This is the principal place belonging to the order, and the ſuperior of the convent bears the title of prior and general of the order of Chriſt. In 1752, the king founded an academy of ſciences here on the ſame footing as that of Paris, and not only aſſigned a liberal income for its ſupport, but declared himſelf preſident. This place formerly belonged to the knights templars, and on their ſuppreſſion, the order of Chriſt ſucceeded to their poſſeſſions, and to the government of Thomar.

Santarem, a town on the Tagus, about twelve or thirteen miles to the north eaſt of Liſbon, is ſeated on a delightful plain, environed with mountains beautifully interſected with valleys. In its form it reſembles an half moon, and is defended by a citadel erected in the modern taſte. It contains thirteen churches, eleven monaſteries, and two nunneries. One of its churches is collegiate, and belongs to the order of Aviz; it has alſo an academy of hiſtory, antiquities, and languages, founded in 1747; one houſe of mercy, one royal hoſpital, and two others.

Setubal, by the Dutch and Engliſh called St. Ubes, is a ſtrong town, ſeated about twenty-two miles to the ſouth of Liſbon, on a ſmall bay, into which the river Sandao diſcharges itſelf; and has a harbour capable of receiving ſhips of any burthen. Beſides its old walls and towns, it is ſtrengthened with eleven whole, and two demi-baſtions, with ſeveral other out-works. It has likewiſe a ſtrong citadel called St. Philip's, in which is a ſpring of excellent water; with the fort of Outao near the harbour, which alſo ſerves for a light-houſe; and two ſmaller forts. In it are four churches, one houſe of mercy, one hoſpital, ten convents, and an academia problematica founded by John V. The town is under the juriſdiction of the order of St. James.

SECT. VIII.

Of the Province of Beira; its Situation, and Extent; with a particular Account of the Mountain of Eſtrella, the Produce of the Country, and its principal Towns.

BEIRA is one of the largeſt provinces of Portugal, it being bounded on the north by the provinces of Entre Douro e Minho and Trazos Montes; on the eaſt by Eſtremadura and Alentejo; and on the weſt by the ſea. Its extent from eaſt to weſt is about one hundred and two miles, and about the ſame from north to ſouth. It is divided into Upper and Lower Beira, the former being the northern part, and lying on the ſea-coaſt, and the latter towards Spain and Eſtremadura.

The mountain of Eſtrella, the Mons Herminius of the Romans, is very remarkable. The aſcent from Villa St. Romæo at its foot, up to the ſummit, takes up two hours and a half. In ſeveral places it is found to be hollow, and the noiſe of a rapid ſtream running through it is diſtinctly heard. It has alſo a fine quarry of alabaſter, and on the top the traveller is agreeably ſurpriſed to find verdant paſtures and rivulets of a very clear and pleaſant water; but what is moſt worthy of attention, is a lake environed with high rocks, the water of which iſſues out of the ground, and is very clear and tepid, with a kind of tremulous motion in the middle; and from the ſtrong attraction towards one certain place, it is conjectured that it has an aperture through which it runs off again, and is the ſpring of another lake a little lower; and from theſe is formed a river that takes its courſe to the foot of the mountain. The ſnow of a deep valley in one part of it furniſhes Liſbon the whole ſummer, though it is at the diſtance of above ſixty leagues.

This province produces wheat, rye, and millet; and in ſeveral parts excellent wine and oil, in ſuch plenty, that conſiderable quantities of each are exported.

This province contains four cities, two hundred and thirty-four towns, a thouſand and ninety-four pariſhes, and in 1732 it had five hundred and fifty-one thouſand ſix hundred and eighty-ſix inhabitants. John V. erected it into a principality in honour of his grandſon, the eldeſt ſon of the prince of Brazil. The principal places in this province are the following:

Coimbra, a city on the river Mondego, formerly called Colimbria, or Conimbriga, contains eleven thouſand nine hundred inhabitants, a cathedral, nine pariſh-churches, eight convents, eighteen colleges, among which the Jeſuits college was extremely large, and eſteemed the fineſt edifice in the place. There are alſo one houſe of mercy, and an hoſpital. The cathedral and the reſt of the churches and monaſteries are handſome buildings, well adorned and beautified; but the ſtreets and private houſes have no great elegancy in them, and, as the city ſtands on the ſide of a hill, they are generally uneven. Among the other public buildings is the bridge, which is a fine ſtructure built with ſtone, and conſiſts of two rows of arches, one above the other, forming a covered way, through which people paſs without being expoſed to the weather. The aqueduct which brings water to the city, is alſo admired.

The biſhop is ſuffragan to the archbiſhop of Braga; but has under him no leſs than three hundred and forty-three pariſhes. Here is an univerſity, which is a magnificent ſtructure, and has a rector, a governor, a chancellor, who is always prior of the convent of Santa Cruz in this city, with other profeſſors and officers. The number of ſtudents is ſaid to be two thouſand. Here is alſo a court of inquiſition.

The country about this city is extremely pleaſant, and well planted with olives and vines.

The city of Lemego is ſituated near the river Douro, in a low country ſurrounded with mountains, and contains about four thouſand four hundred inhabitants, two pariſh-churches, including the cathedral, four convents, one houſe of mercy, and an hoſpital. Its biſhop is ſuffragan to the patriarch of Liſbon.

Aveiro is ſeated on a ſmall bay into which the Vouga diſcharges itſelf, ſeven leagues to the ſouth of Oporto, and nine to the northward of Coimbra. It has a harbour fit for ſhips of burthen, and is ſeparated from the ſea by ſand-banks, with ſeveral little iſlands in which ſalt is made. The town conſiſts of five wards, the fourth of which is the moſt antient, as well as the principal, and is walled in. The inhabitants amount to about four thouſand four hundred, and the town contains four pariſh-churches, ſix convents, a houſe of mercy, and an hoſpital.

SECT. IX.

Of the Province of Trazos Montes; its Situation, Name, Extent, Produce, Rivers, and principal Cities.

THE province of Trazos Montes is bounded on the north by Galicia, and on the eaſt by Leon in Spain; on the ſouthward alſo by Leon, and the province of Beira laſt deſcribed; and on the weſtward partly by the province of Entre Douro e Minho, and partly by Beira. It obtained its name from its ſituation with reſpect to the province of Entre Douro e Minho, it lying on the other ſide of the mountain of Marao. Its extent from north to ſouth is about ninety miles, and from eaſt to weſt about ſixty. It is for the moſt part mountainous, wild, barren, and thinly inhabited; but has fertile and delightful valleys, that produce wheat, rice, fruit, and wine.

Beſides the Douro, which divides the north eaſt part from Leon, and then turning to the weſtward divides it almoſt into two equal parts, it has the rivers Tamega, Corgo, Tuela, and Sobor; all which run into the Douro.

It contains two cities, fifty-ſeven towns, five hundred and forty-nine pariſhes, in which were computed, in

1732, a hundred and thirty-five thouſand eight hundred and four perſons; and is divided into twenty-four juriſdictions, the principal places in which are,

Miranda de Douro, thus called from its ſtanding on that river, to diſtinguiſh it from Miranda in Caſtile: it is ſtrongly ſituated on a rock, in a barren mountainous country, at the confluence of the Douro and the little river Freſno, and, beſides its works, is defended by a caſtle and fort; it being a place of importance, as it opens a paſſage into the province of Leon, which lies expoſed to incurſions on this ſide. It is a city and biſhop's ſee, though the only church in the city is the cathedral, and it contains no more than about ſeven hundred inhabitants, a houſe of mercy, an hoſpital, and one ſeminary. To the diſtrict of this city belong twenty-two pariſhes.

Braganza, the antient Brigantium, is ſeated thirty-two miles to the north-weſt of Miranda, in a ſpacious plain near the river Trervença. It is divided into the city and the town; the former is ſurrounded with walls and towers, and has within it a good caſtle; the latter is alſo fortified, and has a fort on an eminence which covers them both. The whole conſiſts of two pariſhes, two monaſteries, as many nunneries, a houſe of mercy, and an hoſpital. Braganza is the capital of a celebrated dutchy belonging to the preſent king of Portugal, whoſe anceſtors were dukes of Braganza, the moſt illuſtrious houſe among the nobility, they being deſcended from their antient kings. This place has a variety of ſilk manufactures, and is one of the moſt antient cities in the kingdom. The diſtrict of this city includes no leſs than a hundred and twenty-three pariſhes.

Chavez, or Chaves, a pretty good fortified town on the river Tamega, twenty-ſeven miles to the weſt of Braganza, is ſuppoſed to have been built by the emperor Veſpaſian, who gave it the name of Aquæ Flaviæ, and it has ſtill ſome traces of its antient extent and grandeur. It is ſituated two leagues from the frontiers of Galicia, and is defended by a double wall and two forts, one of which has the appearance of a citadel, and contains a convent within it. Between the town and the ſuburb called Magdalena is a Roman bridge of ſtone over the river Tamega, above ninety-two geometrical paces in length; but not much above three in breadth. The town has one collegiate church, which is alſo the pariſh-church, two convents, and two hoſpitals.

Villa Real, the beſt and largeſt town of the province, is ſeated fifteen miles to the north-eaſt of Lamego, between two ſmall rivers which diſcharge themſelves into the Douro. The greateſt part of the houſes ſtand without the walls, and the few within them are called the Old Town. It has two pariſh-churches, three convents, and an hoſpital.

SECT. X.

Of the Province of Entre Douro e Minho; its Situation, Extent, Produce, and principal Towns; with a particular Deſcription of the Cities of Porto and Braga.

THIS province receives its name from its being ſituated between the Douro and Minho; it being ſeparated by the river Minho from the Spaniſh province of Galicia on the north, and by the river Douro from the province of Beira on the ſouth; the province of Trazos Montes bounds it on the eaſt; as does the Atlantic ocean to the weſt. Its extent from north to ſouth is about ſixty-ſeven miles, and from eaſt to weſt about forty-five.

This province is naturally well defended, it being ſeparated from Spain on the north and eaſt by rivers and almoſt inacceſſible mountains, and on the weſt waſhed by the ocean. The inhabitants enjoy a ſweet ſerene air, and an almoſt perpetual ſpring; but they have little grain, and that chiefly rye and millet: however, the country abounds in wine and fruit; and its rivers, which diſcharge themſelves into the ſea, with its good harbours, particularly thoſe of Porto and Viana, are ſo convenient for trade, that in proportion to its extent it is the moſt populous province in the whole kingdom. The principal places it contains are the following:

Guimaraens, a town which owes its origin to a convent of Benedictines, built there in the year 927. Its walls are eighteen hundred and fifty paces in circuit, and it contains four pariſhes, two of which are in the ſuburbs, ſix convents, beſides another a little way out of the town, three hoſpitals, one houſe of mercy, and five thouſand inhabitants.

Viana is ſituated near the mouth of the river Lima, fifteen miles to the weſt of Braga, and is a large, well-built, and ſtrong city, defended by the caſtle of St. Jago. It contains ſeven thouſand inhabitants, two pariſh-churches, ſeven convents, one houſe of mercy, and an hoſpital; but its harbour is only fit for ſmall veſſels.

Porto, Oporto, or Port a Port, is ſituated in forty degrees fifty-three minutes latitude, and eight degrees thirty-five minutes weſt longitude, eight miles to the ſouth of Braga, on the ſide of a rugged mountain, the foot of which is waſhed by the Douro, and is about a league diſtant from the mouth of that river, which here forms a good harbour; but it has a very difficult entrance, from the rocks and ſands, which form a bar, that can only be got over at high water, with the aſſiſtance of a coaſting pilot. The harbour is ſafe againſt all winds; but when the floods or freſhes in the river come down, no anchor can hold, at which times the ſhips are faſtened to each other along the walls, in order to avoid the impetuoſity of the torrent. The ſtreets are well paved; but the inequality of the ground on which the city ſtands, renders it not very pleaſant to walk in them. A fine quay runs along the banks of the river, cloſe to which the ſhipping lie, ſo that a merchant may ſee his veſſels unloaded from his own windows. It is fortified with an old wall and towers, and defended by a caſtle. In opulence, populouſneſs, beauty, and commerce, it is the next city in the kingdom to Liſbon, and has an arſenal, docks, and yards, for building and fitting out men of war. It has four ſuburbs and ſeven pariſh-churches, including the cathedral, it being the ſee of a biſhop, twelve convents, beſides four others without the walls, ſome hoſpitals, one houſe of mercy, and above twenty thouſand ſeven hundred inhabitants. The moſt elegant building in the city is the convent of the Auguſtines, in which is a beautiful gallery of a vaſt extent: the church belonging to it is of a circular form, and very richly adorned. Here is alſo one of the ſovereign councils or courts of the kingdom.

On the ſouth ſide of the river oppoſite to Porto is Villa Nova do Porto, a ſmall town near the place where the old town of Gaya formerly ſtood, in reſpect to which it is called Villa Nova. It contains only one pariſh-church, one houſe of mercy, one hoſpital, and one convent, with two others near the town, and about two thouſand nine hundred inhabitants.

Braga is an antient archiepiſcopal city ſeated, according to F. Capaſſi, in forty-one degrees thirty-three minutes north latitude, and in eight degrees forty-four minutes weſt longitude, thirty-two miles to the north-weſt of Porto, in a pleaſant plain between the rivers Cavado and Deſte, and received its name from that of a kind of garment worn by its antient inhabitants. It is ſaid to have been built by the Greeks; but afterwards fell under the power of the Carthaginians, Romans, Swabians, Goths, Moors, and the kings of Leon. The Romans gave it the title of Auguſta, and the Swabian kings honoured it with their reſidence. The city contains four pariſh-churches, beſides its antient large cathedral, eight convents, a ſeminary, a houſe of mercy for perſons of both ſexes well-born who are come to decay, and are ſettled in it for life, or provided for with wonderful privacy, and an hoſpital. Its inhabitants amount to about twelve thouſand three hundred. The houſes are generally old ſubſtantial ſtone buildings, but have no great elegance, any more than the archbiſhop's palace and the cathedral, which are more admired for their antiquity and extent, than for their beauty. The archbiſhop is both ſpiritual and temporal lord of the place, on which account he has a ſword, as well as a croſs, carried before him. His revenue is forty thouſand ducats per annum, and he is primate of the kingdom. In this city are ſome ſtately remains of antique buildings, particularly of an amphitheatre and an aqueduct. The country about Braga produces corn, wine, and fruit; and here is a great deal of paſture, on which they feed large flocks of ſheep.

SECT. XI.

Of the AZORES, *or* TERCEIRAS.

Their Names, Situation, Number, Climate, Produce, with a Deſcription of each.

AS the Azore Iſlands are ſituated in the Atlantic ocean oppoſite to Portugal, to which they belong, and are never included under the American iſlands, we can no where more properly place them than here.

The Azores, Terceiras, or Flemiſh Iſles, derived their firſt name from the great number of hawks and falcons found there by the Portugueſe at their firſt diſcovery; the ſecond from Terceira, the name of the principal iſland; and the third from the Flemings, who diſcovered them much about the ſame time as the Portugueſe.

Theſe iſlands are ſituated to the weſt of Liſbon, between the thirty-ſixth and fortieth degree of north latitude, and between the twenty-fifth and thirty-third degree of weſt longitude from London. They are nine in number, and are named Santa Maria, St. Miguel, Terceira, St. George, Gracioſa, Fayal, Pico, Flores, and Corvo.

All theſe iſlands enjoy a very clear and ſerene ſky, with a ſalubrious air; but are expoſed to violent earthquakes, from which they have frequently ſuffered; as they have alſo by the violent agitations of the waves by which they are ſurrounded. They are, however, extremely fertile in corn, wine, and a variety of fruit; and likewiſe breed large quantities of cattle.

Santa Maria is diſtant about two hundred and fifty Portugueſe miles, or rather leagues, from Cape St. Vincent in Algarve, and was diſcovered in 1342 by Gonzalo Velho Cabral, and is about four miles long and three broad, with a harbour to the ſouth-weſt defended by ſome redoubts. The principal place in the iſland is a ſmall town named Porto, beſides which there are a few villages.

St. Miguel is the firſt of the Azore iſlands in the paſſage from Liſbon, and lies about two hundred and twelve Portugueſe miles from Cabo de Eſpichel. It was diſcovered in 1444, on the feſtival of the appearance of St. Michael, which occaſioned its being called by this name. It is eighteen miles in length, and two in breadth. Its two principal harbours, named Ponta Delgada and Villa Franca, lie on the ſouth ſide. This is the beſt peopled of all the Azore Iſlands, the inhabitants being ſaid to amount to above fifty-one thouſand five hundred, beſides about thirteen hundred and ninety eccleſiaſtics, monks, and nuns; and though it has not long been entirely cultivated, it is the moſt fruitful, particularly in corn and wine; ſo that one year with another the wheat amounts to twelve thouſand buſhels, the millet to near as much more, and its wine to about five thouſand pipes. This iſland contains one city, five towns, and twenty-two villages.

Ponta Delgada, the capital, is ſeated in a level country, on an open harbour defended by a fort, and contains about eighteen hundred and eighty hearths, three pariſh-churches, and ſeven convents, the palace of the governor, the cuſtom-houſe, and poor-houſe.

Villa Franca, the moſt antient town in the whole iſland, is ſo called from its being at firſt a free port. An iſland about a mile in circumference lies before the harbour, and towards the ſea the town is defended by a fort and ſome other works. It has eighteen hundred and thirteen hearths, two pariſh-churches, and two convents; with nine villages belonging to its juriſdiction.

In the year 1720 a little iſland appeared between St. Miguel and Terceira, which has ſince gradually vaniſhed.

Terceira is the third iſland that was diſcovered, and is thirteen miles long, and ſix broad. The harbour of Angra, its capital, is two hundred and forty-five Portugueſe miles diſtant from Liſbon; and the iſland is divided into two captainſhips, which contain one city, two towns, and ſeveral villages.

The city of Angra is ſituated on the ſouth-eaſt coaſt of the iſland. Its harbour is formed by a bay ſituated between two capes, the one lying weſt, and the other eaſt, about a quarter of a mile from each other, and both about twice that diſtance from the town. On the weſt cape ſtands Fort St. Sebaſtian, and on a high mountain, called the Mount of Brazil, Fort St. John the Baptiſt. The harbour is ſpacious, and has good anchorage; but is expoſed to the ſouth-eaſt winds. It is a populous city, in which are broad, ſtraight, clean, and well paved ſtreets, a cathedral, five other churches, and one poor-houſe, an hoſpital, and eight convents. The biſhop of this place has all the nine iſlands of the Azores under him, and is himſelf ſuffragan to the patriarch of Liſbon. This city has the privilege of ſending a repreſentative to the cortes or aſſembly of the ſtates.

St. George is ſituated about eight Portugueſe miles or leagues from Terceira. To the north it is little more than a high rock, but in other parts the eminences and plains ſucceed each other. It is eleven miles long, and one and a half broad, excluſive of its two capes. On the ſouth it has a harbour for ſmall veſſels. It is ſaid to have been diſcovered on St. George's day, 1450. The ſouth ſide of the iſland is well cultivated and inhabited, and has three towns and four villages. The principal town, named Vela de Velas, is but ſmall, and has only one church, one convent, and the above harbour.

Gracioſa lies directly eaſt and weſt, and is about ten miles in length and ſeven in breadth, and contains two towns; the principal of theſe is Santa Cruz, which is ſeated on a bay that forms a harbour named Calheta, defended by a fort, and contains one church, one houſe of mercy, and a convent. This iſland is ſaid to have received its name from its remarkable fertility.

Fayal is nine Portugueſe miles in length, and three in its greateſt breadth. The chief place in the iſland is Villa de Horta, ſituated on its weſtern coaſt, which has an harbour land-locked on all ſides, except to the eaſt and north-eaſt; and is defended by ſeveral forts. The town contains one pariſh-church, and five convents; and the iſland contains ten other pariſhes.

Pico is ſixteen Portugueſe miles in length, and five in breadth. This iſland is viſible at a great diſtance on account of the height of its mountain, to which it owes its name, and which is ſaid to riſe three miles above the ſurface of the ſea. This iſland is on the north ſeparated from that of St. George, by a channel in ſome places ſix, and in others twelve miles over; and to the weſt from Fayal by another channel. Its principal harbour is at Villa Das Lagens; the ſecond, which is called Magdalene, is only for ſmall veſſels. This iſland carries on a great trade in its excellent wines, and in wood, with which it alſo abounds, particularly in cedar, and in a firm red wood that is highly eſteemed.

Flores, the next iſland, is about thirty miles long, and nine broad; but has only two towns, and a number of villages. The principal place is Santa Cruz, which is ſmall, and contains only one church and a convent.

Corvo lies to the northward, oppoſite to the iſland of Flores, from which it is divided by a ſtreight about three miles in breadth. The whole circuit of this iſland is but about ten miles, and the whole coaſt conſiſts of a chain of rocks. It has two ſmall harbours, one church, and an inſignificant place called Noſſa Senhora do Roſario, which is ſubordinate to the church of Santa Cruz, on the iſland of Flores.

CHAP.

CHAP. XXVIII.

Of the Kingdom of FRANCE.

SECT. I.

Its Name, Situation, Extent, Climate, Mountains, Minerals, Foſſils, Rivers, Fruits, Vegetables, and Animals.

FRANCE obtained its preſent name from the Franks, who in the fifth century paſſed out of Germany into Gaul, and made themſelves maſters of the whole country, from the Rhine to the mouth of the Loire. This kingdom is bounded by the Britiſh channel, and the Netherlands, towards the north; on the eaſt by Germany, Swiſſerland, and Italy; on the ſouth by the Mediterranean ſea, and Spain, from which it is ſeparated by the Pyrenean mountains; and on the weſt by the Atlantic ocean; extending from the forty-third to the fifty-firſt degree of north latitude, and from the fourth degree weſt to the ſeventh degree eaſt longitude. Did not the province of Bretagne extend itſelf above an hundred miles farther into the ocean, than any other part of the kingdom, it would be nearly of a ſquare form, and the breadth and length almoſt equal, that is, about five hundred and forty miles; but allowing for the hills and valleys, with the winding of the roads, it would in a traveller's account be above ſix hundred miles over either way.

The air is mild and wholeſome, particularly the interior parts of the kingdom. The winters, however, in the northern provinces are cold, and laſt four or five months. Indeed the cold is in that ſeaſon generally much ſeverer there than in England; for we being ſurrounded by the ſea are leſs ſubject to continued froſts, and are beſides better provided againſt the cold from our being much better ſupplied with firing. They have, however, the advantage of clear ſettled weather, and are but little troubled with fogs, which are ſo diſagreeable in Great Britain and other countries. The ſummers in France are hotter than with us.

France, with reſpect to its ſituation, has the advantage of every kingdom in Europe, the ſeas which border upon it affording the inhabitants an eaſy communication with the reſt of the world; the northern ſhores being waſhed by the Britiſh channel, the weſtern coaſt by the Atlantic ocean, and the ſouth by the Mediterranean. Hence no country can be better ſituated for the advancement of trade and navigation.

The chief mountains of France are the Alps towards Italy, the Pyrenees, which border on Spain, and thoſe of the Cevennes and Auvergne.

With reſpect to minerals, Languedoc is ſaid to have veins of gold and ſilver. In Alſace theſe metals have been found in the ſand of the Rhine; and the mountain of Waſgau, in that province, yields a ſilver ore, which is worked, and farther diſcoveries are making after it. Plenty of iron ore is found in various parts of the kingdom, and in Alſace are mines of lead. Pit-coal is principally found in Hennegau, and all parts of the kingdom make ſalt-petre. Here is alſo no want of marble; for ſince Colbert's time, quarries, particularly in Languedoc, Provence, and Bourbonnois, are kept continually open. France, however, produces few gems; but has in Languedoc a mine of excellent turquoiſes.

The country is extremely well watered with navigable rivers, the chief of which are the Loire, the Rhone, the Garonne, and the Seine. Of theſe the Loire is the largeſt. It riſes in the mountains of the Cevennes, and taking its courſe north and north-weſt, runs to Orleans; and from thence directly weſt by Tours, Angers, and Nantes, falling into the Weſtern ocean forty miles below the laſt city; having received in its courſe the Allier, Cher, Indra, Creuſe, Vienna, and the Maine; and has a communication with the Seine, by means of the canals of Briare and Orleans. Its whole courſe, with all its windings, is computed to be about five hundred miles.

The Rhone riſes in the mountain of La Fourche, in the province of Uri in Swiſſerland, and running weſtward through the country of the Valais, paſſes through the lake of Geneva; and having viſited that city, flows ſouth-weſt to Lyons, where it joins the Soan, and then runs ſouth till it falls by three ſeveral channels into the Mediterranean.

The Garonne receives its courſe in the mountains of Aure, in the county of Comenges. It becomes navigable at Muret, and, after being joined by ſeveral rivers, changes its name into the Gironde; and at length diſcharges itſelf by two outlets into the Atlantic ocean. This river has a celebrated canal, by which the Weſtern ocean is joined to the Mediterranean.

The Seine riſes near Dijon, in Burgundy, and running to the north-weſt viſits Troyes, Paris, and Rouen in its way, and at length falls into the Britiſh channel near Havre de Grace.

The country of France is in general fertile, yet has many barren tracts and mountains. In ſome parts it produces plenty, and in all of them a ſufficiency of the neceſſaries of life. In plentiful years it yields more corn than is neceſſary for the ſubſiſtence of the inhabitants; but a bad harveſt is generally ſucceeded by a ſcarcity, and in war-time there has been often a great dearth of grain, which is the more felt in this country as bread is the principal food of the inhabitants.

Their roots differ much from ours; for here are no round turnips; theirs are long and ſmall but well taſted, and being not ſo ſtrong as ours, are more proper for their ſoups. They have few potatoes; but plenty of Jeruſalem artichoaks. They abound in vaſt quantities of large red onions and garlic; and alſo in ſhallots, rockambole, and leeks. Theſe laſt are ſmaller than ours; but three times as long in the white part. Lettuces are the great and univerſal ſallad. In April and May the markets are ſerved with vaſt quantities of white beets. Aſparagus is here very plentiful; and they are ſo fond of ſorrel, that large fields are planted with it. They are alſo particularly fond of muſhrooms, of which they have ſeveral different kinds.

This kingdom enjoys great plenty of wine, which is produced in all its provinces. Among the ſeveral French wines that of Champagne is reckoned the beſt, it being a good ſtomachic, racy, and in taſte and flavour exquiſite, with an agreeable tartneſs. That of Burgundy, the beſt of which is produced about Beaume, has a fine colour, and a pleaſant taſte. The wines of Angers and Orleans are alſo delicate, but a little heady. In Poictou is produced a white wine that reſembles Kheniſh. The neighbourhood of Bourdeaux and the lower parts of Gaſcony produce excellent wines. Pontac grows in Guienne. Muſcadel and Frontiniac are the delicious products of Languedoc. Between Valence and St. Valliere, along the banks of the Rhone, is produced a very agreeable, but roughiſh red wine that has a taſte not unlike that of bilberries; it is named hermitage, and is eſteemed for its wholeſomeneſs.

The territories for oil of olives are Provence and Languedoc. Theſe and other provinces produce ſaffron, and the northern parts in particular have large orchards, and make great quantities of cyder, which is there the common drink of the inhabitants. Bourdeaux exports great quantities of prunes, and capers are principally produced in the country about Toulon. Flax and hemp thrive in ſeveral parts of the kingdom; but linſeed is produced only in the north. Moſt of the provinces abound in wool, and ſilk is cultivated with great induſtry, eſpecially in Languedoc, Provence, Lionnois, and Dauphine;

and, during all the time in which the inhabitants attend on the silk-worms, public prayers are offered up for the prosperity of those useful insects.

France also produces horned cattle, sheep, and hogs; but they are neither so numerous, nor in general so fat and fleshy as those of Great Britain. Good horses are also produced here, as well as asses, and a great number of mules. Game and wild-fowl are in the greatest plenty, and extremely good. The people on the sea-coast employ themselves in fishing. The Pyrenean mountains furnish timber for ship-building, great quantities of which are also purchased out of Alsace, Burgundy, and Lorraine; but in the other provinces the scarcity of timber and wood for fuel begins to be more and more felt. This kingdom also produces plenty of sea and spring-salt.

SECT. II.

The Persons, Dress, Food, Manners, and Customs of the French. Their Religion, Arts, Manufactures, Commerce, and Coin.

THE French are generally slender, nimble, active, and well-proportioned; their hair and eyes are for the most part black, their complexions brown, and the ladies fond of giving a high colour to their cheeks. The people in general are merry, sprightly, and seldom lay any thing to heart; they are familiar, and acquainted with a stranger at first sight; but many are extremely vain, and most of them remarkably talkative. The common people are in general extremely extravagant in their dress, though they live as meanly as possible with respect to provisions.

The French are far from eating the same quantity of flesh that we do, nor do they often dress it in the same manner, fricassees, ragouts, hashes and soups disguised with onions, herbs, and spices, are preferred before joints boiled or roasted; and what they do boil or roast has scarce a drop of gravy left. They keep their meat before they dress it till it is very tender: for as their meat is leaner, drier, and more stringy than ours, their keeping it longer not only makes it less tough, but improves the taste; especially as the dryness of the air preserves it from that disagreeable mustiness which stale meat acquires by the dampness of our moister climate. But as the French eat much less meat than we, and are excessively fond of soup, they usually eat twice the quantity of bread, which is generally exceeding light and good. As they are strangers to the fine fat sirloin and rump of beef, and other large joints which in Great Britain grace the tables of people even in middling circumstances, they are unacquainted with the many English dishes called by the general name of puddings. The wealthy, however, supply this deficiency with sweetmeats, and a number of little delicacies; but the poor mechanics, and all the labouring part of the nation, live almost entirely on soups and vegetables. In Lent the common people feed much on white kidney-beans, that is the seed boiled, and on white lentils, a sort of pulse not known in England; and a variety of sallads, some of which grow wild in almost every field.

The French are so far from being addicted to jealousy, that it is good manners to commend the beauty of a woman, and to extol her charms even before her husband's face. The women in general behave without reserve. The French are much commended for their obedience to their governors, and pride themselves on their profound veneration for their prince; but while the people had any thing to contend for, rebellions and civil wars were as frequent in France as in any other country. They had once the privilege of making their own laws; but their privileges are swallowed up by the prerogatives of the crown, and their parliaments are of little use with respect to their legislative capacity, except to register the edicts of the sovereign, which they may indeed remonstrate against, and present their petitions to have them rendered more favourable to the people; but if the king continues obstinate, they are at last obliged to submit. Their lands are so highly taxed, that small estates will scarce afford the proprietors a subsistence, who have not a place; and indeed there is scarce a considerable family in the kingdom that has not some preferment in the church, the army, or the court.

The nobility and gentry of France never apply themselves to trade; they seem indeed naturally designed for the court or the army; and if they happen to be of a melancholy disposition, here are always convents, and numerous preferments to be met with in the church. As to their military virtues, it must be acknowledged that they do not want bravery, and have brought the art of war to great perfection, there being no people upon earth who attack or defend a place better than they, or are better skilled in fortification. As to their exercises, there are few French gentlemen who do not learn to dance, to fence, and to ride the great horse. The usual diversions of the French are gaming, of which they are very fond, walking, or taking the air in coaches, and attending plays and operas.

The French tongue is formed out of that of the Gauls, Romans, and Franks, with the additions and refinements made in it from time to time by persons of genius, till it arrived at its present perfection.

The established religion in France, since the repeal of the edict of Nantes in 1685, is the Roman Catholic; yet in Dauphiné, Languedoc, and other provinces, there are such a number of secret Protestants, that they have been computed to amount to no less than three millions; but those, on account of their religious assemblies, at which sometimes great numbers have been present, have been cruelly harrassed and persecuted; and in 1745 some Protestant preachers were hanged, laymen were sent to the galleys, women to the convents, and children forced away from the arms of their parents. The French Protestants now perform their public worship with as much secrecy as if it were a crime to hear the Gospel read, and to offer up their devotions to their Maker; for this purpose they meet in private cellars and caverns remote from public view. The clergy are frequently very active in persecuting them; but outward compulsion is lodged in the hands of the temporal magistrates alone, who are seldom backward in lending their assistance when it is required by a priest. In Alsace, however, the Protestants are openly tolerated by virtue of a treaty, and in many places even the Jews.

The privileges of the Gallican church, or the church of France, are pretty considerable. The principal of these are the following:

I. In temporal affairs, and such as relate to government, neither the sovereign, nor his officers, or magistrates, are subject to any church-discipline, inflicted either by the bishops or even by the pope himself.

II. The pope has no other jurisdiction in France than what the king is pleased to grant him; his nuncios and legates à latere are only considered as envoys from the court of Rome to that of France, and cannot in virtue of any papal mandate interfere in affairs of justice, unless such mandate has previously received the king's sanction, and has been formally registered in parliament.

III. The calling and holding all ecclesiastical assemblies, with the confirmation of their decrees, depends on the civil power, without requiring the knowledge and consent of the pope.

IV. The king is impowered to enact laws that merely concern the ecclesiastical constitution, and to limit the exercise of the power of the clergy; and without the king's permission and ratification, no law of the church, either by the bishops or the pope, can subject any one to outward penalties or punishment, or even to church-discipline.

V. The pope can levy no money in France, on any pretence whatever, except the fees and imports allowed him by the *concordat*; though the king can tax the clergy without standing in need of a papal mandate, a privilege which other princes must purchase by paying a quota of such tax to the see of Rome. It is but lately since the king enjoined the clergy to pay the twentieth penny, and for that purpose to deliver in an inventory of their estates and incomes. This indeed occasioned a great ferment, till in 1753 the clergy consented to pay the king the annual sum of twelve millions of livres, under the

name of a free gift, without being exempted from the uſual free gift which they bring to the throne every five years.

VI. No eccleſiaſtical foundations, nor any new order of monks and nuns, are to be introduced without warrant from the king; and the rules of ſuch order are ſubject to the cognizance and amendment of the civil power.

VII. The king nominates all archbiſhops and biſhops, abbots and priors, except with reſpect to the latter, where the convent is indulged with the choice of its ſuperior.

VIII. The eccleſiaſtical juriſdiction is ſo far ſubordinate to the civil power, that appeals from the ſentences of the eccleſiaſtical courts are received by the parliament.

In the whole kingdom are eighteen archbiſhops, a hundred and thirteen biſhops, twenty-two thouſand two hundred and ninety-one prieſts, ſeven hundred and ſeven abbies for men, three hundred and ſeventeen abbies and priories for women, beſides a great number of other convents, together with two hundred and fifty commanderies of the order of Malta, among which are ſix grand priories, and four principal commanderies. The annual revenues of the archbiſhops and biſhops amount in the whole to four millions three hundred and thirty-ſeven thouſand livres. The number of monks and nuns is computed in the whole at above a hundred and ninety thouſand, whoſe income is ſaid greatly to exceed a hundred millions of livres. The eccleſiaſtical ſtate is compoſed of eighteen provinces, each of which conſiſts of an archbiſhopric, and the biſhops ſubordinate to it.

The French have always diſtinguiſhed themſelves by their ſkill in the arts and ſciences. Painting was firſt brought to great perfection among them under Francis I. when Roux and Franciſco Bologneſe introduced all the beauty of that art into France; and ſince that time this kingdom has produced ſeveral eminent maſters. In 1648 was inſtituted at Paris the royal academy of painting and ſculpture; but it is ſaid that the ingenious art of painting is now on the decline in France, and is ſupported by a frivolous taſte, which is far from tending to the improvement of the liberal arts. Engraving has been brought to a perfection yet unequalled in any other part of Europe. France has alſo made great advances in ſtatuary. It has alſo been famous for its architects; and the great Colbert, in 1671, founded a royal academy of architecture, who now hold their meetings in the Louvre. The French learned the art of ſhip-building from the Engliſh. Their reputation in military architecture is well known, and they alſo excel moſt nations in gunnery and fire-works. At Paris, beſides the antient univerſity and royal college, are four academies, namely the French academy, the academy of inſcriptions and belles lettres, that of ſurgery, and the academy of ſciences, with three others for the education of young noblemen. Beſides theſe there are eighteen other univerſities in France, and ſeveral academies for the ſciences and the polite arts.

The French manufactures and productions are ſupported and improved with the greateſt diligence. By the advice of the above-mentioned Colbert, that wiſe encourager of manufactures and the liberal arts, Lewis XIV. erected the manufacture of the Gobelins at Paris, which is ſo called from two brothers, Giles and John Gobelin, who under Francis I. found out the method of dying a moſt beautiful ſcarlet, which was afterwards called by their name. The houſe of the Gobelins at Paris is full of the works of the moſt excellent maſters in tapeſtry, fillegree, and ſculpture; and in the article of tapeſtry alone no leſs than two hundred perſons are conſtantly employed. There are alſo conſiderable manufactures of tapeſtry in ſeveral other parts of the kingdom. The French hiſtorians inform us, that ſilk manufactures were firſt ſet up in France in the reign of Lewis XI. yet in the time of Henry II. ſilk was ſo ſcarce, that the king was the firſt who had ever been ſeen with a pair of ſilk ſtockings on, which were a part of his dreſs at the marriage of his ſiſter. The ſucceeding kings made good regulations with reſpect to the culture of ſilk, and the planting of white mulberry-trees; but it was not till the time of Lewis XIV. that this was brought to any conſiderable degree of proſperity; and under his government the quantity of raw ſilk produced in the province of Dauphiné, Languedoc, and Provence alone, annually amounted to one million eight hundred thouſand pounds weight. However, the revocation of the edict of Nantes has been of the greateſt detriment to this trade, by compelling the manufacturers to fly from France, to ſeek that protection, and to enjoy that religious liberty, which they were not allowed to poſſeſs at home. Hence the art of weaving ſilk is become almoſt univerſally known, and England has been enabled to ſurpaſs in the elegance and beauty of their patterns the French themſelves. Within theſe laſt hundred years the French have conſiderably improved their woollen manufactures, in which they have been aſſiſted by the clandeſtine exportation of wool from Great Britain and Ireland. Hence the cloths and other woollen ſtuffs made at Abbeville, are little inferior either in fineneſs or goodneſs to the Engliſh. Several provinces abound in manufactures of linen, thread, and ſail-cloth; and at Cambray is made the fine and beautiful linen called Cambray linen, or cambrick; and St. Quintin excels in its lawns. The glaſs manufacture is alſo of great advantage to France. In 1688 one Abraham Thevert contrived a method for caſting better and larger plates of looking-glaſs than had been before known. Vincennes has alſo a manufactory of very handſome porcelain.

The trade of France is very conſiderable, though it is nothing near ſo great as it was formerly: it conſiſts of gold and ſilver brocades, gold and ſilver embroideries, ſilk ſtuffs, ſattins, ſewing ſilks, crapes, cambric, lawn, fine linen, laces, toys, and millinery-ware, tapeſtries of various kinds, fine cloths, pluſh, woollen ſtuffs, ſail-cloth, looking-glaſſes, drinking-glaſſes, paper, parchment, ſope, knives, and other hard-ware; wines of many ſorts, vinegar, brandy, corn, hemp, flax, walnut-tree wood, pot-aſh, pitch, turpentine, oil of turpentine, linſeed oil, and oil of olives, almonds, raiſins, cheſnuts, figs, prunes, capers, nuts, honey, ſaffron, ſalt, mules, &c.

The navigable rivers are of great advantage to the inland trade, and theſe have been joined at a vaſt expence by canals, the moſt famous of which is the royal canal in Languedoc. The coaſt trade is very conſiderable; for by this the maritime provinces reciprocally ſupply each other with their own produce. The land trade is carried on with Swiſſerland, by the way of Lyons; to Germany, through Metz and Straſburg; to Holland, by the way of Liſle; and to Spain, by the way of Perpignan and Bayonne. The French ports on the Channel and the Weſtern ocean are frequented by all the trading nations of Europe. The trade with England, the United Provinces, and Italy, is of great advantage to France. However, but few French ſhips are ſeen in the ports of the northern nations. Their trade on the Mediterranean with Aſia and Africa has for ſome years been very conſiderable, and the far greateſt part of it is carried on by the city of Marſeilles alone. They alſo carry on a conſiderable traffic to Guinea for gold, ivory, and ſlaves for their American colonies. The Eaſt India trade is in the hands of a company at Port L'Orient, in Brittany.

Accounts are kept in France in livres, ſous, and deniers. One livre contains twenty ſous, and one ſou twelve deniers. The French livre is nearly of the value of ten-pence, one ſou is worth a half-penny, and conſequently the denier is the ſixth part of a farthing. Three deniers make a liard, which is alſo a ſmall piece of copper.

The French ſilver coin is the ecu, or crown, equal to three livres; ſixty ſols, or ſeven hundred and twenty deniers, equal to our half-crown. One louis blanc is five ſhillings.

The gold coin are the louis d'or, of one pound value; there are alſo double and half louis; and a piſtole is eight ſhillings and four-pence.

SECT. III.

A conciſe Hiſtory of France. The Titles of the King; his Succeſſion to the Throne: His Arms, Coronation, Enſigns of Royalty; the different Orders of the Nobility, and of Knighthood; the Parliaments; the great Officers of the Crown

Murther of the Duke of Burgundy.

Crown and of the Houſhold; the great Councils of State, and Courts of Juſtice; the Laws, Taxes, Land Forces, and Navy of France.

FRANCE was antiently inhabited by the Celtæ, on whom the Romans firſt conferred the name of Gauls, and Julius Cæſar reduced the country into a Roman province. In the fifth century the Burgundians, Viſigoths, and Bretons, ſettled in ſeveral parts of Gaul. Theſe were followed by the Franks from Germany, who under Merovie and Childeric conquered a part of Gaul, and under Clovis extended their dominion from the Rhine to the mouth of the Loire: for king Clovis, who was baptized in 496, quelled the Burgundians, Viſigoths, and inhabitants of Brittany.

At this time the kingdom of the Franks was divided into Auſtraſia, or the eaſt part, and Neuſtria, or the weſt; and on the deceaſe of Clovis, his four ſons divided their father's kingdom among them.

The lands of Gaul were on their being conquered by the Franks diſtributed among their officers, and theſe with the clergy formed the firſt great councils or parliaments. Thus the government appears to have been a mixed monarchy, in which nothing of moment was tranſacted without the grand council of the nation, conſiſting of the principal officers, who held their lands by military tenures: while the conquered Gauls were reduced to a ſtate of ſervitude, and manured the lands for the Franks.

This was the conſtitution of the government, till Charles Martel in 732, uſurped the ſovereignty. This nobleman was marſhal of France, or mayor of the palace, and had long exerciſed the ſovereign power in the name of Childeric, a weak and indolent prince. The Saracens, who had made themſelves maſters of the ſouth of France, penetrating into the heart of the kingdom, he entirely defeated them, and driving them out, was conſidered as the deliverer of Chriſtendom: he there became ſo popular, that with the conſent of the people, and even of the pope, he aſſumed the dominion of France; and having a victorious army at his command, not only depoſed the king, but rendered himſelf an abſolute prince, by depriving the nobility and clergy of their ſhare in the government.

His ſon Pepin ſucceeded him in the throne, but reſtored the privileges of the nobility and clergy, on their agreeing to exclude the former race of kings. He alſo divided the provinces among his principal nobility, allowing them to exerciſe ſovereign authority in their reſpective governments; till at length aſſuming a kind of independency, they only acknowledged the king as their head: and this gave riſe to the numerous principalities, and their ſeveral parliaments, every province retaining the ſame form of government that had been exerciſed in the whole; and no laws were made, or taxes raiſed, without the concurrence of the nobility and clergy.

Charlemagne, or Charles the Great, the ſon of Pepin, conquered Italy, Germany, and part of Spain, and was crowned emperor of the Romans, by pope Leo, in the year 800, and from him was deſcended the race of kings, called the Carlovingian line. About eighty years after the death of Charlemagne, the empire was divided from France, and that country ſuffered much from the invaſion of the Normans.

The Carlovingian race of kings continued ſovereigns of France till the reign of Lewis V. when in 987, Hugh Capet, a popular nobleman, aſſumed the throne, and began the Capetine line of monarchs. Cruſadoes, or expeditions to the Holy Land, for the recovery of Jeruſalem from the Saracens, being preached up by order of the pope, the princes of every kingdom in Europe engaged in theſe falſely called Holy wars, in which Chriſtianity was to be propagated by fire and ſword; and in which ſeveral hundred thouſand Chriſtians periſhed: but though they at length took Antioch, Jeruſalem, and ſeveral other ſtrong places, they loſt them all again within two hundred years. Lewis IX. with moſt of the nobility, was taken priſoners in Egypt, in one of theſe expeditions, and their ranſoms coſt an immenſe ſum.

In 1285, the kingdom of Navarre was added to the crown of France, by the marriage of Philip IV. with Jane queen of Navarre. During this reign the conſtitution of the government received a conſiderable alteration; for the nobility and clergy refuſing to grant the king the ſupplies he demanded, he ſummoned the deputies or repreſentatives of the commons to parliament, and on their granting him what he wanted, conſtituted them a third ſtate.

In 1344, Hubert count dauphin of Vienne transferred his dominions to the crown of France, on condition that the king's eldeſt ſon ſhould ever after be ſtiled dauphin.

Edward III. king of England, laying claim to the crown of France, on account of his being deſcended in a direct line from Philip IV. invaded that kingdom; and in 1346, obtained a complete victory at Creſſy in Picardy, and the next year took Calais. In 1356, the French were again defeated at Poictiers, by Edward the Black prince, the eldeſt ſon of Edward III. and king John and his ſon Philip brought priſoners to England.

At length the French king Charles VI. being ſeized with a kind of phrenſy, and becoming unfit to govern, the dukes of Burgundy and Orleans contended for the adminiſtration, and the quarrel grew to that height, that the duke of Burgundy cauſed the duke of Orleans to be aſſaſſinated in the ſtreets of Paris, which laid the foundation for a civil war. About the ſame time Henry V. king of England, invading France, obtained a victory at Agincourt in 1415. The French now propoſed a reconciliation between the duke of Burgundy and the family of Orleans; and a conference was held between the young duke of Orleans and the duke of Burgundy, to accommodate matters; but at a ſecond conference, the dauphin and the duke of Orleans cauſed the duke of Burgundy to be murdered. Upon this the queen and the young duke of Burgundy joined the Engliſh, with whoſe aſſiſtance king Henry made an almoſt entire conqueſt of France; and a parliament being held at Paris, the king of England was made regent of France, during the life of the French king Charles VI. declared ſucceſſor to that crown; and at the ſame time married the princeſs Catharine, the French king's daughter. King Henry dying, and leaving an infant ſon, that infant was crowned king of France at Paris, in 1431; but Charles the dauphin alſo cauſing himſelf to be proclaimed king, recovered all the countries that had been taken by the Engliſh.

In the year 1498, died Charles VIII. the laſt of the firſt line of the houſe of Valois, on which the crown deſcended to Lewis XII. duke of Orleans. Three of his ſons ſucceeded him in order. Under the firſt, namely Francis II. the religious diſputes began to break out in France, the Proteſtants were perſecuted, and under Charles IX. theſe diſputes occaſioned two civil wars; after the concluſion of which, on the 18th of Auguſt 1572, was perpetrated the barbarous maſſacre of Paris, which left an indelible ſtain on the hiſtory of France. Afterwards king Henry III. being thought to favour the Proteſtants, was aſſaſſinated by one Clements, a monk. His legal ſucceſſor was Henry IV. king of Navarre, the firſt of the houſe of Bourbon, that ſat on the throne of France: but he being a Proteſtant, was obſtinately oppoſed by the popiſh party; and though he changed his religion in order to pleaſe his ſubjects, yet having paſſed the edict of Nantes, for the toleration of the Proteſtants, he was aſſaſſinated in 1610, by one Ravilliac, a monk, in the ſtreets of Paris.

Lewis XIII. a minor of nine years of age, ſucceeding to the throne, Mary of Medicis, his mother, was declared regent. She continued to invade the liberties of the ſubjects, and revived the perſecution againſt the Proteſtants, which occaſioned another civil war. Cardinal Richlieu, being about this time introduced into the miniſtry, entirely ſubdued the parliament of Paris, and put a final period to the liberties of the people.

On the death of Lewis XIII. and that of cardinal Richlieu, which happened about the ſame time, his ſon Lewis XIV. ſucceeded to the throne, and in his long reign carried the power of France to its greateſt height. To his kingdom he added the provinces of Alſace and Rouſillon, with a conſiderable part of the Netherlands, Franche Comté, or the earldom of Burgundy, and the principal city of Orange. He alſo enlarged his dominions in America and Aſia, and placed his grandſon Philip of

Anjou on the throne of Spain, while navigation and manufactures were improved throughout the kingdom. But the bravery and ſkill of the great duke of Marlborough ſet bounds to his conqueſts, which had been carried on with the utmoſt cruelty; and in particular on his invading the Palatinate of the Rhine in 1689, he burnt and deſtroyed all the fine towns in that country. He alſo repealed the edict of Nantes, and began a ſevere perſecution againſt the Proteſtants, who fled into England and other countries, where they ſet up ſilk manufactures.

Lewis XIV. was ſucceeded by his great grandſon Lewis XV. the preſent king, on the firſt of September 1715, and was crowned at Rheims on the 25th of October 1722. But we ſhall not here recapitulate the accounts of his reign, which are freſh in every one's memory.

The title of the king is Lewis XV. by the grace of God king of France and Navarre. The title of ſire or lord, is given him by his ſubjects, as a mark of his unlimited power; and foreigners ſtyle him the moſt Chriſtian king, or his moſt Chriſtian majeſty; but the king's ſubjects are not to make uſe of it. Since the year 1349, when Hubert count dauphin of Viennois, as hath been already intimated, united his country to the crown of France, the king's eldeſt ſon, and preſumptive heir to the crown, has been ſtyled dauphin.

According to French writers their king never dies, but as ſoon as his eyes are cloſed, the next prince of the blood ſucceeds to the throne, and is inſtantly inveſted with the ſupreme authority; but where the king is a minor, that is, before he has entered the fourteenth year of his age, the adminiſtration of the government is entruſted to a regent, uſually the queen-mother, or a prince of the blood, according to the determination of the parliament at Paris, in which the reſt of the kingdom generally acquieſce. But if the deceaſed king has appointed a regent by his will, that is ſeldom diſputed.

When a new king enters into his fourteenth year, he goes in great ſtate to the parliament of Paris, attended by the princes of the blood, the peers, and general officers of ſtate. This aſſembly is generally called his bed of juſtice, and here he is declared to be of age; yet the regent frequently procures himſelf to be conſtituted prime miniſter, and under that title ſtill continues to govern the kingdom till his majeſty thinks fit to take the reins of government into his own hands.

The arms of France are three fleurs de lys or, in a field azure, ſupported by two angels in the habit of Levites, each holding in his hand a banner with the ſame arms: the creſt is an open crown: the whole under a grand azure pavilion ſtrewed with fleurs de lys, or, and ermine, and over it a cloſe ground with a double fleur de lys or, on the ſides of which are flying ſtreamers, on which are written the words uſed in battle, MON JOIE S. DENNIS, and above them on the royal banner or oriflame, LILIA NON LABORANT NEQVE NENT; that is, the lily neither labours nor ſpins; which is ſuppoſed to be an alluſion to the Salique law that excludes females from the ſupreme command.

The coronation of the king is performed whenever the court thinks fit. He is uſually crowned at Rheims, by the archbiſhop of that city, aſſiſted by five other eccleſiaſtical peers, and ſix noblemen, who repreſent the ſix ancient lay peers of France. The oil with which the king is anointed, according to a ridiculous tradition, was brought from heaven by a dove, and is kept in a phial called the Holy Bottle. The crown of Charlemagne is firſt placed upon the king's head; but being very heavy, it is exchanged for another. The other enſigns of royalty are the ſceptre, which he wields in his right hand, and the hand of juſtice, which he holds in the left; the latter is a ſtaff about two feet long, at the end of which is an ivory hand: this is chiefly uſed at the coronation, and the ſceptre alone on other days of ceremony.

The nobility of France are divided into four claſſes: the firſt includes only the princes of the blood, conſiſting of the houſe of Orleans, and the two branches of the family of Bourbon, thoſe of Condé and Conti. Next to theſe immediately follow the king's natural children who have been legitimated, and theſe precede all the nobility of the kingdom. To the ſecond claſs belong the high nobility, as the dukes and peers of the realm, of which there are forty-five in all, including the ſix princes of the blood, who are peers by birth. The principal duties and privileges of the peers are, the giving their aſſiſtance at the anointing of the king, their attending when he holds a bed of juſtice, and their enjoying a ſeat in the parliament of Paris, which is from hence called the court of peers. To this claſs alſo belong the other dukes, counts, and marquiſes, the principal officers of the court and other departments; the knights of the Holy Ghoſt, the governors of provinces, lieutenant-generals, bailiffs, &c. The third claſs is compoſed of the common ancient nobility, who in ſome provinces, particularly in Languedoc, are ſtiled nobles; but in moſt of the others ecuyers. Theſe are divided into the nobleſſe de race, and the nobleſſe de naiſſance; the firſt are thoſe whoſe anceſtors have been for a hundred years at leaſt in poſſeſſion of employments which confer nobility; and the ſecond are thoſe nobles whoſe anceſtors were created ſuch, and from whoſe patent it appears that they were commoners. In the fourth claſs are the new nobility, whom the king has either raiſed by patent, or ennobled by their employments: thus the officers of the crown, the king's ſecretaries, the counſellors of the parliament of Paris, and of other high tribunals in that city, are claſſed under this rank. The etchevins, or chief magiſtrates of the ſeveral cities are alſo ennobled. The military nobility are alſo of this claſs. The nobles enjoy particular privileges, they being exempted from paying the poll-tax, from the quartering of ſoldiers, the duties of franc-fief, with other privileges of leſs importance.

The higheſt order of knighthood is that of the Holy Ghoſt, founded in 1578 by king Henry III. the enſigns of which are a gold croſs, with a white dove enamelled on one ſide in the middle, and on the other the image of St. Michael, appendant to a blue ribbon, paſſing from the right ſide to the left. The knights alſo wear on the left breaſt of their coats a ſilver croſs, with a dove embroidered argent. The temporal knights are alſo knights of the order of St. Michael, and the greateſt part of them likewiſe of that of St. Lewis.

The order of St. Lewis was inſtituted in 1693 by Lewis XIV. Its enſign is a gold croſs enamelled argent, and adorned with golden lilies. On one ſide of it is a coat of mail with this inſcription, LUD. M. INSTIT. 1693. On the other is a drawn ſword, with a wreath of laurel at its point, and the motto BELL. VIRTUTIS PRÆM. Thoſe called the *grands croix*, or great croſſes, wear it on a broad flame-coloured ribbon over the ſhoulder, having alſo a gold embroidered croſs on their coat. The commanders wear it in the ſame manner, but without the embroidered croſs. The other knights wear the croſs appendant to a narrow flame-coloured ribbon, faſtened to a button-hole. Thoſe knights of the Holy Ghoſt who are at the ſame time knights of the order of St. Lewis, wear the croſs of the latter, with a narrow red ribbon near the croſs of the Holy Ghoſt. Of the ten *grands croix*, each has a penſion of ſix thouſand livres per annum. Each of the ten commanders has four thouſand; of nineteen others each three thouſand, thirty knights have each two thouſand, thirty-two others have each fifteen hundred, ſixty-five others have each a thouſand, and fifty-four others have each eight hundred.

The order of St. Michael was inſtituted in 1469 by Lewis XI. and revived in 1665 by Lewis XIV. The knights wear a gold chain of double ſcalloped ſhells, with a medal repreſenting a rock, on which is repreſented St. Michael encountering the dragon.

The religious order of St. Lazarus owes its origin to the Holy Land, after the reduction of which by the Saracens the knights returned to France, where Lewis VII. in 1137, beſtowed ſettlements on them at Boigni, Orleans, and St. Lazarus at Paris, which grant was confirmed in 1265, by St. Lewis. This order is divided into two grand maſterſhips, one of which reſides in France, and the other in Savoy. The knights wear a temporal habit, and are allowed to marry. In 1607 Henry IV. inſtituted the order of Our Lady of Mount Carmel, and united it with the order of St. Lazarus, which union was confirmed by Lewis XIV. The ſovereign himſelf is grand maſter of the three firſt orders; but he nominates one for the fourth.

Formerly nothing of conſequence in relation to the ſtate was decreed or enacted without the conſent of the three ſtates of the kingdom, conſiſting of the repreſentatives of the clergy, the nobility, and the repreſentatives of the citizens; but theſe aſſemblies are entirely aboliſhed, and have never been convened ſince the year 1614. The courts in which juſtice is now uſually adminiſtered, are firſt the parliaments, which are the laſt reſort when the court does not interpoſe. Theſe are at preſent twelve, namely, thoſe of Paris, Toulouſe, Rouen, Grenoble, Bourdeaux, Dijon, Aix, Rennes, Pau, Metz, Beſançon, and Douay. They principally conſiſt of a certain number of preſidents and inferior judges, who purchaſe their places either of the crown, or of thoſe who are in poſſeſſion of them: for all magiſtrates and officers of juſtice in France openly purchaſe their places, and the government makes a conſiderable revenue by theſe ſales. They enjoy their poſts for life, except they have been guilty of ſome crime in the exerciſe of their offices. The parliament of Paris is the moſt conſiderable in the kingdom, for hither the king frequently comes in perſon, and here the royal edicts are recorded and promulged; till when they have not the force of laws. It is compoſed of the princes of the blood, dukes, and peers of France, beſides the ordinary judges, and takes cognizance of all offences committed by peers, where the court does not interfere.

This parliament conſiſts of ten chief preſidents, ſome honorary counſellors, or judges, four maſters of the requeſts of the houſhold, twenty-one preſidents *a mortier*, ſo called from the form of their caps, and of two hundred and thirty-two other counſellors or judges; an attorney-general, advocates, ſollicitors general, regiſters, notaries, ſecretaries, &c. Theſe members are diſtributed into the grand chamber, five chambers of enqueſts, and two of requeſts. Beſides theſe eight chambers there is another called the *tournelle*, which takes cognizance of criminal matters, in which the nobility are not concerned; for they are tried in the grand chamber. In the chambers of enqueſts depoſitions of witneſſes are taken, and the proceedings are by way of bill and anſwer, as in the court of chancery in England; and the chamber of requeſts takes cognizance of cauſes relating to privileged perſons. On days of ceremony the preſidents of parliament wear a ſcarlet robe with a mantle lined with ermine, and a black velvet cap in the form of a mortar, bordered with gold lace; that of the chief preſidents being diſtinguiſhed by a double gold lace. The honorary counſellors, the maſters of requeſts, the preſidents of enqueſts and requeſts, the attorneys, and ſollicitors-general have ſcarlet robes, and caps bordered with ermines. The chief regiſter for civil cauſes has a ſcarlet robe and mantle lined with ermines. The chief regiſter for criminal cauſes, the four notaries, and the clerks or ſecretaries of parliament have alſo ſcarlet robes, and caps lined with ermines. The advocates have black gowns and caps, and all the reſt of the officers have only black gowns.

The great officers of the crown are the chancellor, who preſides in all courts and councils of ſtate in the king's abſence; the keeper of the ſeals, four ſecretaries of ſtate, the marſhals of France, the colonel-general of the horſe, the great maſter of the artillery, the admiral of France, two vice-admirals, the general of the galleys, the four great officers of the order of the Holy Ghoſt, namely the chancellor, the maſter of the ceremonies, the great treaſurer, and the ſecretary; the chief preſidents of the ſeveral parliaments, with the governors and lieutenant-generals of the provinces.

The principal officers of the houſhold are, the great maſter of the houſhold, the great maſter of the horſe, the great almoner, the great chamberlain, the gentlemen of the bed-chamber, the great butler, the great huntſman, the four captains of the guard du corps, and the great porter.

The great councils by which all affairs of ſtate are governed are ſeven in number.

I. The ſupreme council of ſtate, in which, beſides the king and prime-miniſter, when there is one, it is compoſed of the three ſecretaries of ſtate, and the comptroller-general of the finances.

II. The ſecretary of ſtate's office, in which, beſides the king, the dauphin, and prime-miniſter, ſit the chancellor, the preſident of the council of finances, the four ſecretaries of ſtate, and the comptroller-general of the finances. Here all affairs of the provinces are tranſacted; commiſſions, letters, and orders ſent to the governors and other officers of the ſeveral provinces and cities. The ſecretaries of ſtate make the motion, and every one expedites the reſolutions taken on the articles of his department; the foreign and domeſtic affairs of ſtate being divided among the members.

III. The council of finances, beſides the king and chancellor, conſiſts of a preſident, one of the ſix intendants of the finances, a member of the council of ſtate, and the comptroller-general of the finances. This council has the direction of the royal revenues.

IV. The privy-council is convened by the chancellor on ſuch days as he pleaſes. In the king's abſence there is always a chair ſet for him. This council at preſent conſiſts of the chancellor, or keeper of the great ſeal, twenty-one ordinary counſellors of ſtate, the ſecretaries of ſtate, the comptroller-general of the finances, the intendants of the finances, who are all ordinary members, and twelve ſtate counſellors, who officiate only half yearly. The ordinary ſtate-counſellors have each a ſalary of five thouſand five hundred livres, the half yearly three thouſand three hundred. In this council alſo aſſiſt twenty-two maſters of requeſts, who belong alſo to the parliament, and lay before it any affairs committed by them.

V. The grand council, which has the deciſion of all cauſes relating to archbiſhoprics, biſhoprics, and abbies; and has alſo the power of determining all diſputes of the other ſovereign tribunals, in matters of juriſdiction and other conteſts. The preſident is the chancellor of France, aſſiſted by ſeveral preſidents, counſellors, and other officers.

VI. The high court of chancery conſiſts of the keeper of the great ſeal, who is frequently the ſame with the chancellor of France; of four grand audienciers, who peruſe papers ſent from the ſecretary of ſtate's office to be ſealed, and make report to the chancellor; of four comptrollers-general of the audience, who give the papers allowed to be ſealed to an officer called chauff-cire, or chaff-wax, and receive them back from him; and four keepers of the rolls of the offices of France, who keep the regiſters of all the officers that require the great ſeal, with ſeveral clerks and other officers.

VII. The council of commerce, the members of which, beſides the king and prime-miniſter, are the chancellor, two ſecretaries of ſtate, and the comptroller-general of the finances.

Juſtice is adminiſtered in the kingdom by inferior, middle, and ſuperior courts: to the inferior courts belong the prevotes, mayors, judicatures, chatellanies, and other juriſdictions dependent on the crown, or particular lordſhips. From theſe appeals lie to the bailiwics, or precinct courts, and from theſe again to the provincial courts. The middle tribunals pronounce definitively in certain ſmall caſes both civil and criminal; but the more important caſes are cognizable only by the parliament, which decides cauſes in the laſt reſort.

With reſpect to the laws by which juſtice is adminiſtered, the civil law prevails in many of the provinces; while others have their own cuſtomary laws. Thoſe of principal note among the latter are about ſixty; but, including the juridical cuſtoms of ſingle places, they make about two hundred and eighty-five. Beſides theſe, there are ordinances, edicts, and declarations, which are of univerſal force. In 1666, under Lewis XIV. the civil and criminal proceſſes were amended, and reduced to a general uniformity.

A ſtrict diſtinction is made in France between the canonical and papal eccleſiaſtical law; and by the obligatory canons, or church ordinances, are only underſtood thoſe canons of the firſt ages of Chriſtianity, and the œcumenical councils, that have been confirmed by the conſent of the churches bound by them, which could not be tranſacted without the approbation of the civil power. Thus the interpolated decretals of the ſee of Rome are

abſolutely excluded. The king's ordinances iſſued for the protection of the liberties of the Gallican church, conſtitute the moſt conſiderable part of the eccleſiaſtical law.

The revenues of the king are both ordinary and extraordinary. The ordinary revenues comprehend the domains, which conſiſt in lands, lordſhips, and foreſts: the aids or duty on wines, which are the twentieth part of the wine ſold by wholeſale, and the eighth or tenth of that retailed: the gabelle, or ſalt-duty, which is here extremely high. The province of great ſalt-duty contains the departments of Alençon, Amiens, Angers, Bourges, Caen, Chalons, Langres, Laval, Mans, Moulins, Orleans, Paris, Rouen, St. Quentin, Soiſſons, and Tours; in all which ſalt is ſold at a high rate. The province of the ſmall ſalt-duty includes the departments of Lyonnois, Dauphiné, Provence, Languedoc, Rouſſillon, Rouergue, and Auvergne, in which ſalt pays a much lower duty. The provinces where the ſalt-duty does not take place are Poitou, Limouſin, Guienne, Gaſcony, and Brittany. In the three biſhoprics of Metz, Toul, and Verdun, and in French Compté, the price of ſalt is different. The other duties are the taille, or land-tax, the capitation, or poll-tax; the cuſtoms of all kinds, the duty on ſtamped paper, &c.

With reſpect to the cuſtoms, wine-licenſe, ſalt and ſtamp-duty, tobacco, poſts, &c. they are farmed out to the farmers-general, who have their under farmers and receivers. The great officer for levying the taxes is the comptroller-general, who keeps a duplicate of all receipts and diſcharges relative to the royal revenue.

The extraordinary impoſitions are of what number and kind the king pleaſes. Among theſe is the augmentation of the tax for the ſupport of the army, the taillon, the tenth or twentieth part of the revenue of the whole kingdom in lands, houſes, offices, &c. and the erection and ſale of new offices.

The ambition and extenſive views of France, with its various wars, have neceſſarily burthened the ſubjects with enormous taxes and impoſitions; and theſe being aggravated by the rapacity of the financiers and farmers, the people have often been reduced to the laſt extremity of wretchedneſs, from which, without the many reſources nature and induſtry have put into their hands, they could never have recovered.

The number of people in France in the reign of Lewis XIV. were computed at twenty millions; but the perſecution and expulſion of the Proteſtants, with the many wars in which the French have been engaged, have probably reduced the number to fifteen millions; for the celibacy of the prieſts, and the numerous convents, muſt ever prevent their increaſe, ſo as to ſupply the deficiencies made by the ravages of war.

The ordinary revenues of the crown, ariſing from the above taxes, amount to about ten millions ſterling. An amazing ſum, conſidering the lands belonging to the church, and what is payed to ſupport the clergy; and the many thouſand drones who, ſhut up in convents, are ſupported by the labour of others.

The land forces of France amount in time of peace to about two hundred thouſand men, among which are a great number of Swiſs, Germans, and other foreigners; and in time of war they are frequently augmented to four hundred thouſand. The number of fortreſſes belonging to the kingdom is very great, and exact plans of them, as alſo of the foreign fortreſſes, to the number of a hundred and eighty, may be ſeen in the gallery of the Louvre, where there is a royal academy for training up young gentlemen in the ſeveral branches of the art of war. Beſides the magnificent building of the invalids in the capital, where diſabled ſeamen are admitted, there are in the whole kingdom above ſeventy other military hoſpitals.

The navy of France is alſo very conſiderable. Claſſes are inſtituted throughout all the maritime provinces, where the ſea-officers and ſailors, and others belonging to the navy, reſide. Each claſs ſerves three or four years alternately, and thoſe who are not in actual ſervice on board the king's ſhips, may enter on board thoſe of the merchants. In the beginning of the late war, France had a hundred and eleven men of war. Beſides the ſailors, there are three companies of marine guards ſtationed at Toulon, Breſt, and Rochfort, conſiſting entirely of perſons verſed in navigation, and the art of war. Another company has been erected under the title of guards of the admiral's flag, who always attend the admirals, and ſerve only on board flag ſhips. Theſe are choſen out of the marine guards juſt mentioned. The king alſo maintains one hundred independent companies for the ſea, each conſiſting of forty-five men, under the command of a lieutenant of a man of war.

France is now divided into thirty-ſix generalities, or general governments, in deſcribing which we ſhall begin at the ſouth-eaſt of this extenſive country.

SECT. IV.

Of the Situation, Extent, Climate, Produce, and Rivers of Provence; with a Deſcription of its principal Cities, particularly Aix, Arles, Marſeilles, Toulon, the Iſlands of Hieres, and the little State of Avignon ſubject to the Pope.

PROVENCE, which derives its name from the Latin Provincia, is bounded on the north by Dauphiné; on the eaſt by the Alps and the river Var, which divide it from the territories belonging to the king of Sardinia; on the ſouth by the Mediterranean; and on the weſt is ſeparated from Languedoc by the Rhone. Its utmoſt length is about a hundred and forty miles, and its breadth from the iſles of Hieres to the village of Sauze about ninety.

Upper Provence enjoys a pretty temperate air, and has a great deal of meadow ground, well ſtocked with cattle. It alſo produces corn, apples, and pears, though but little wine. On the contrary, Lower Provence is extremely hot, and near the ſea-coaſt would be much more ſo, were not the air refreſhed by a breeze, which uſually laſts from nine or ten in the morning till evening. The north-weſt wind alſo cools the country, and ſometimes, particularly after rains, blows freſh. Lower Provence does not produce half corn enough for the ſubſiſtence of its inhabitants; but the ſoil being dry and ſandy, oranges, lemons, pomegranates, and olives; with maſtich, cypreſs, palm, and the African acacia-trees, thrive extremely; as do alſo ſhrubs of all kinds, ſuch as bruc, which reſembles box, only the leaves are longer and more pointed, bearing a red fruit, which continues on all the year round, and by a peculiar ſingularity proceeds out of the middle of the leaf. The ſea-cherry-tree has a leaf like the alkermes, and its fruit reſembles a cherry. The wine in Lower Provence is thick, luſcious, and heady; but the ſort moſt admired is muſcadel.

In this part of France is the beccafigo, a ſmall delicious bird, that feeds only on grapes and figs; and among the ſea-fiſh here is a remarkable kind called the date, which is ſo named from the reſemblance of its ſhape to that fruit, and is found within hollow ſtones in the road and harbour of Toulon. In order to get them out, the ſtone muſt be broke; they alſo abound along the coaſt of the marquiſate of Ancona, on the Adriatic. In this province are ſome quarries of black agate.

The rivers here are inconſiderable; theſe are the Durance, the Sourge, the Largens, and the Var, which divides France from Italy. Along the coaſt of the Mediterranean are ſeveral capes, bays, and harbours; the principal of which is Toulon.

Authors have variouſly divided this province; ſome French geographers divide it into two parts, ſome into three, and others into ſixteen; we ſhall take that which is the moſt natural and leaſt liable to perplex the reader, by dividing it into Upper and Lower Provence, and ſhall begin with the latter, the principal places in which are the following:

Aix, in Latin Aquæ Sextiæ, called Aquæ from its baths, and Sextiæ from its being enlarged and beautified by Sextus Calvinus. This city, which is the capital of Provence, ſtands in a valley of conſiderable extent planted chiefly with olives, in the latitude of forty-five degrees fifty four minutes, and in ſix degrees ten minutes eaſt longitude, twenty miles to the northward of Marſeilles, and thirty-five to the ſouth-eaſt of Avignon. It is rather populous than large; the ſtreets are well paved, and the houſes

houſes handſome, and moſt of them built of free-ſtone: there is a beautiful ſpacious walk within the city called Orbitelle, conſiſting of three rows of trees a mile long, interſperſed with fountains, and on each ſide are elegant uniform buildings: this is the uſual walk of the citizens. This city is the ſee of an archbiſhop, who enjoys a revenue of thirty-two thouſand livres, out of which he pays to the court of Rome two thouſand five hundred florins. In the cathedral is a conſecrated roſe of gold, the preſent of pope Innocent IV. to count Raymond Berenger. In this city are alſo two colleges, with an univerſity founded in 1409, an academy of the polite arts erected in 1668, a public library in the town-houſe, eighteen convents, a palace formerly the reſidence of the counts of Provence, and now of the high bailiff. Here is alſo a mint, and this city is the ſeat of a parliament, of a chamber of accounts, a court of taxes, and many other public offices. The nobility of Provence reſide here, eſpecially in winter, ſo that this city is ſaid to have the moſt agreeable company, next to Paris, of any place in the whole kingdom. In its ſuburbs the warm mineral ſpring, once ſo celebrated, was found a ſecond time in 1704, but its antient virtues are much decayed. The country in its neighbourhood produces excellent wine; but its principal trade conſiſts in its fine oil; ſome ſtuffs are alſo made here.

Arles, the antient Arellas, Arelata, and Arelatum, is a large and well built city, ſeated on the eaſt bank of the Rhone, in the forty-third degree thirty-two minutes north latitude, and in the fourth degree forty-five minutes eaſt longitude, upon very uneven ground, and almoſt ſurrounded by a moraſs, which renders the air thick and unhealthful. Over the Rhone is a wooden bridge, to preſerve the communication with Languedoc. The cathedral is a vaſt Gothic ſtructure, charged with an infinite number of figures, and the high altar is adorned with a tabernacle of ſilver, an admirable piece repreſenting the martyrdom of St. Stephen, to whom the church is dedicated. The archbiſhop ſtyles himſelf prince of Montdragon, has a province of fifty-one pariſhes, and an annual revenue of thirty-three thouſand livres, out of which his taxation to the court of Rome is two thouſand and eight florins. Beſides the cathedral, it contains one collegiate, and ſeven pariſh-churches, with an abbey, fourteen convents, an hoſpital, and a royal academy of ſciences founded in 1688. The town-houſe is an elegant regular ſtructure, finely ſituated. It is of a ſquare form, adorned with three orders of architecture, one above another; the portico is magnificent, and embelliſhed with the buſts of the counts of Provence, and the roof ſupported by twenty double columns.

Arles was antiently the capital of the kingdom of Burgundy, which was alſo called the kingdom of Arles, and the diſtrict belonging to this city is ſtill very extenſive. Several councils have been held here, the moſt antient and diſtinguiſhed of which was in 1314.

Among the numerous Roman antiquities to be found at Arles is a large obeliſk of porphyry, which was dug up here in the year 1675, and in 1676 ſet up again and dedicated to Lewis XIV. It is of one entire ſtone, fifty-two feet high, and ſeven feet in diameter at the baſe. On the top is placed an azure globe, ſtrewed with golden lilies, and a ſun, which was that prince's device; but its new plain pedeſtal of ſand-ſtone ill agrees with the valuable monument above.

There are alſo the ruins of an amphitheatre, ſuppoſed to have been built by Julius Cæſar; it is of an oval form, and a hundred and ninety-four fathoms in circumference, the longeſt diameter of the area ſeventy one fathoms, and the ſhorteſt fifty-two. The porticos are three ſtories high, built of free-ſtone of a prodigious ſize; each ſtory contains ſixty arches, which ſtill remain, and the walls are of a ſurpriſing thickneſs, but very much decayed. However, this fine monument of antiquity is almoſt entirely concealed by the private houſes built about it. There is here alſo the fragment of a circus, conſiſting of a door, with two columns of marble of the Corinthian order; the remains of a Roman capitol erected here, and a large collection of Roman ſepulchral monuments, urns, and the like, kept in the archbiſhop's palace; among which is an urn of very extraordinary dimenſions, it containing above twenty gallons.

Near the city is what they call the Elyſian Fields, and there the Romans uſed to bury the aſhes of their dead. Accordingly there are here ſeen an incredible number of ſtone and marble ſarcophagi, ſome ſtanding half, and ſome entirely out of the ground. Theſe fields afterwards became a Chriſtian cemetery. The ſpot on which they ſtand may be called a mine of antiquities.

Near the city the Rhone divides itſelf into two large branches, forming the iſland of Camargue, called in Latin Camaria, which is one of the beſt and moſt fruitful tracts in this country, it being interſected with ſeveral canals.

Marſeilles, in Latin Maſſalia, and Maſſilia, the ſecond city of Provence, but the firſt in point of trade, is large, rich, and the moſt ancient place in all this province, and is ſaid to have been a town five hundred years before the birth of Chriſt. It is ſeated at the foot of a rocky mountain near the ſea, in forty-three degrees eighteen minutes north latitude, and in five degrees twenty-ſeven minutes longitude, twenty miles to the ſouth of Aix, and thirty to the north-weſt of Toulon. It is divided into the Old and New Town: the former ſtands on an eminence, and conſiſts of narrow crooked ſtreets, with mean houſes; but in the latter the ſtreets are ſtraight and broad, and adorned with handſome edifices. The Walk is a very fine ſtreet, with beautiful houſes on each ſide, and in the middle two rows of lofty trees, which form a fine viſta; and there are here a number of benches for reſting places. This city is the reſidence of a high bailiff, and has a biſhop, ſuffragan to the archbiſhop of Arles, who has a dioceſe containing thirty-ſix pariſhes, with an annual revenue of thirty thouſand livres, and his taxation at Rome is ſeven hundred florins. This city has alſo a mint, with four pariſh churches, including the cathedral, which is ſaid to have been a temple of Diana, and the moſt ancient in France, and two collegiate ones, with two abbies, an academy of the polite arts, and an obſervatory. This city alſo contains a large arſenal, well ſtored with materials for fitting out the king's gallies. The large armoury, which conſiſts of four walks croſswiſe, and is eſteemed the fineſt in the whole kingdom, contains arms for forty thouſand men. In the arſenal is a dock for building the galleys, which is roofed over, and has a communication with the harbour, which is in the form of a parallelogram, and has public and private buildings on the two long ſides, and on one of the ſhorter. The other, which opens into the Mediterranean, is defended on each point by a fine ſtrong fort. The entrance into the harbour, on account of a rocky cape near it, is difficult, and has not a depth of water ſufficient for men of war.

On the land-ſide is one of the moſt beautiful plains in the world, in which there are ſaid to be no leſs than eight hundred country-ſeats of the citizens with their gardens and vineyards, whither they retire from the noiſe of the town, which is very diſagreeable from the multitude of ſlaves in the ſtreets rattling their chains, ſome of whom ſerve as porters, and others have little ſhops and huts, where they are allowed to work at their trades.

Gold and ſilver ſtuffs are made here, and almoſt all the trade of France with Spain and Italy is carried on by Marſeilles, which is alſo the center of the commerce of the Levant. To Italy the inhabitants export cloths, ſerges, honey, figs, prunes, olives, capers, freſh eels, a ſpecies of ſmall ſardines, oil, ſail-cloth, aqua vitæ, cotton waiſtcoats, ſtockings, &c. and the returns are made in ſilk, hemp, ſulphur, manna, aniſe, corn, and rice. To Spain they export all kinds of linen, ſilk, wool, gold and ſilver ſtuffs, gold, ſilver, and thread lace, with ſeveral home and Levant commodities; and their trade in ſilk to Conſtantinople, Smyrna, Athens, Candia, the Archipelago, Tripoli, and Alexandria, is very conſiderable. In the year 1720, this city was viſited by a moſt dreadful peſtilence, which raged till 1722.

Toulon, a pretty large city, ſeated in a bottom, almoſt encompaſſed with hills on the land-ſide, and on a bay of the Mediterranean, which forms a ſecure and commo-

dious harbour, in the latitude of forty-three degrees five minutes, and in the ſixth degree two minutes eaſt longitude; near four hundred miles ſouth-eaſt of Paris. It is defended by very ſtrong fortifications towards the land-ſide, and the new part of the town is very handſome. The biſhop of this city is ſubject to the archbiſhop of Arles, under whom he has a dioceſe of twenty-five pariſhes, with an annual revenue of fifteen thouſand livres, out of which his taxation at the court of Rome is four hundred florins. Beſides the cathedral, it has nine convents, a ſeminary, and a college, under the direction of the fathers of the Oratory, and the Jeſuits had here a very fine houſe. The old and new harbour lie contiguous, and by means of a canal you paſs from one to the other, both having an outlet into the ſpacious outer harbour, which is ſurrounded with hills, and formed by nature almoſt circular. Its circuit is of very great extent, and at the entrance on both ſides is defended by a fort with ſtrong batteries. The new harbour, which was made by order of Lewis XIV. is alſo well defended by batteries, and round it ſtands the arſenal, where every man of war has its own particular ſtore-houſe; but the guns and cordage are laid up ſeparate. In it are alſo ſpacious work-houſes for blackſmiths, joyners, carpenters, lock-ſmiths, carvers, &c. The rope-houſe, which is built entirely of free-ſtone, is ſix hundred and forty yards in length, with three arched walks, in which as many parties of rope-makers may work at the ſame time. The general magazine, which ſupplies whatever may be wanting in the particular ſtorehouſes for ſingle ſhips, contains an immenſe quantity of all kinds of ſtores, diſpoſed in the greateſt order. The cannon foundery is alſo worth viewing.

In the year 1707, the duke of Savoy laid ſiege to this city, but without ſucceſs; and in 1721, it ſuffered greatly by the plague. The inhabitants make a kind of coarſe woollen cloth, and its neighbourhood abounds in capers.

Hieres, the ancient Areæ, a ſmall town, formerly much more conſiderable than at preſent; it having once an harbour where pilgrims uſed to embark for the Holy Land. This town has a diſtrict court, and ſeveral public offices; it alſo contains one collegiate, with two other pariſh churches, and five monaſteries and nunneries. The ſoil is excellent, and being laid out in orchards, produces the fineſt fruit in France. A great deal of ſalt is made here, both from ſea-water and a large ſalt lake; but the air was unwholeſome, till this inconvenience was remedied by forming a canal, which extends from the lake to the ſea.

This town gives name to the iſlands of Hieres, which lie in the neighbouring ſea; and in conjunction with the continent, form a fine road. Theſe iſlands are three in number. The principal, which lies neareſt the town is Porqueroles, ſo called from the great number of wild hogs, which ſwim over hither from the continent, for the ſake of the acorns, abundance of oaks growing here. It is four French leagues in length, one in breadth, and is defended by an old caſtle. The ſecond is Portecroz, that being the name of the harbour where a fort is built. The third is called Titan, or Levant, from its ſituation to the eaſtward of the former; but though it is four French leagues in length and one broad, it is uninhabited. On theſe iſlands are ſaid to be found the moſt curious medicinal plants of all the ſpecies that grow in Italy, Spain, Greece, and Egypt.

Frejus, the ancient Forum Julii, is a fortified city ſeated on the river Argent, at the diſtance of a mile and a half from the ſea, and thirty-ſix miles to the north-eaſt of Toulon. It has a court of admiralty, and is the ſee of a biſhop, ſuffragan to the archbiſhop of Aix, and has within his dioceſe eighty-eight pariſhes, with a yearly revenue of twenty-eight thouſand livres, out of which he is taxed one thouſand florins at the court of Rome. This city contains four convents. Among the remains of Roman antiquities, there are here an aqueduct of conſiderable length, and an amphitheatre.

The principal place in Upper Provence is Siſteron, a city that has a ſmall citadel, ſeated at the foot of a rock on the Durance, thirty miles to the ſouth-weſt of Embrun, and is the ſee of a biſhop, ſuffragan to the archbiſhop of Aix, who has ſixty-four pariſhes, and a revenue of fifteen thouſand livres per annum, and his taxation at the court of Rome is eight hundred florins. Here is a cathedral and five convents, and on the other ſide of the river is a pretty large ſuburb called La Baune, which contains one pariſh church, and one convent.

Though the ſtate of Avignon belongs to the pope, yet the greateſt part is ſurrounded by Provence; and as the natives of Avignon enjoy the privileges of natives of France, it is proper to give that country in this place. The country we are now to deſcribe is very delightful, and particularly abounds in corn, wine, and ſaffron. It is ſubject to few taxes, and pays only the tenth of its produce; ſo that the annual expence of the vice-legate, and the militia, exceed the income ariſing from it to the court of Rome. The French farmers-general have, by means of a ſum of money, obtained the monopoly of ſalt and tobacco in this country, though that trade is ſtill carried on in the pope's name.

Avignon, in Latin Avenis, is ſituated on the river Rhone, about twenty miles to the north of Arles, and is ſurrounded with a wall of fine free-ſtone; but has little trade, eſpecially ſince the manufacture of printed linen, which afforded a comfortable ſubſiſtence to great numbers of the inhabitants, was ſuppreſſed in favour of the French Eaſt-India company, who purchaſed this prohibition of the pope by paying him a conſiderable ſum. The vice-legate, as governor, uſually reſides in the papal palace, which is a large ſtructure of free-ſtone, encompaſſed with moats; but is far from being a regular edifice. The arſenal is a long lofty building, but without any other fire arms than what are juſt neceſſary to be diſcharged on public rejoicings. The upper court of the vice-legate is called the Rota, and has a right of appeal to Rome. The cathedral, which ſtands on the ſame eminence with the palace, is not very large. In two chapels are to be ſeen the monuments of pope Benedict XII. and John XXII. and alſo the chair or throne of the ancient popes, during their reſidence here. In the church of the Celeſtines, are fine paintings of the pretended miracles performed by cardinal Peter of Luxemburg, to whom the church is dedicated. In this church is alſo a ſplendid chapel, and a monument in it erected in honour of ſome ſhepherds, who are ſaid to have built the ſtone-bridge here over the Rhone. In the church of the Franciſcans, is the tomb of the beautiful and learned Laura, immortaliſed by the poetry and paſſion of the celebrated Petrarch. In this town are two ſocieties of Jeſuits, to one of which belongs a fine college, with an univerſity founded in 1303. The popes reſided here from the year 1305 to 1377. In this city the Jews enjoy the free exerciſe of their religion.

SECT. V.

Of the Province of Dauphiné; its Situation, Extent, Produce, and Singularities; its Medicinal Springs, Rivers, and Principal Cities, particularly Grenoble, Ambrun, Vienne, and Valence.

THE province of Dauphiné is bounded on the north by the country of Breſſe and the river Rhone; on the eaſt it is ſeparated from Piedmont by the Alps and Savoy; on the ſouth it borders on Provence; and on the weſt on the Rhone. It is nearly of a triangular form, and each ſide of the triangle is about an hundred Engliſh miles in length.

Lower Dauphiné produces corn, wine, olives, ſilk, hemp, ſalt, wood, vitriol, cryſtal, iron, copper, and lead; but Upper Dauphiné, and indeed above two thirds of the whole province, being very mountainous, are ſo barren, that great numbers of the natives ſeek for ſubſiſtence in other parts; yet theſe mountains have ſome uſeful products, and contain many curioſities. In thoſe of Ambrun and Die, are found marcaſites. The golden mountain, as it is called, yields a ſpecies of cryſtal. Several mountains are covered with larch-trees, on the rind of which is gathered manna, benjamin of a delightful fragrance

fragrance, and agaric, which is uſed in phyſic and ſcarlet dyes. Theſe mountains abound in beaſts that are not found in any other part of France, particularly the chamois, bear, and marmot, which have been already deſcribed, pheaſants, hawks, eagles, &c.

Ancient hiſtorians and modern geographers give very pompous deſcriptions of the wonders of Dauphiné, which ſome repreſent as ſeven and others more. The firſt is the burning ſpring, on a hill nine miles from Grenoble. It is a little brook, which iſſues from a ſoil emitting ſmoke, and even ſmall flames have been ſometimes perceived in it, which communicated heat to the water; but for theſe two centuries paſt, this rivulet has altered its courſe to the diſtance of twelve feet from that igneous ſoil, and is now as cold as common water. The ſecond is the tower without venom, about a league from Grenoble, it being pretended that no venomous creature will ſtay in it; but this is a notorious miſtake, it being known to ſwarm with adders and ſpiders. The third is the inacceſſible mountain, which is a ſteep craggy rock, ſituated on a very high mountain, about two leagues from Die. But though it is extremely difficult to climb up to the top of it, this has been frequently done. The fourth is the caves of Saſſanage, which are two excavated ſtones, that lie in a grotto above a village of that name. The country-people relate, that annually on the ſixth of January they become full of water, and that the quantity of it in one of theſe ſtones, foretels whether they ſhall have a good or bad winter, and the other prognoſticates whether they ſhall have a good or bad harveſt of corn. For ſeveral centuries paſt this ſtory has been kept up by the artifices of ſome of the inhabitants, who themſelves take care to fill the ſtones with water.

There are ſeveral other ſuppoſed wonders in this province, among which is a water fall in a grotto near the above caves, and the floating meadow in the lake of Pelhotiers; but this ſuppoſed meadow conſiſts merely of graſs and ruſhes cemented, as it were, together, by the ſlime of the water.

The waters of La Mothe in this province, are highly eſteemed, as a certain remedy againſt all diſorders of the ſtomach, fluxes, and even lameneſs, they being much better than the water at Aix, in Savoy. La Mothe is a valley about five leagues from Grenoble, that runs between two high mountains, and enjoys no other proſpect but that of bare and ſteep rocks. The only dwellings here are wretched huts of ſtraw, ſo that the country is in every reſpect diſagreeable. The Drac, a very rapid river, proceeding from the high part of the diſtrict of Gap, is, as it were, ſqueezed in at La Mothe between two high rocks. On its ſhore, at the foot of a very ſteep rock, is the mineral ſpring, which if the river riſes but half a foot, is covered with its turbid water. To come at the ſpring, a perſon muſt clamber half a French league over ſteep rocks and dreadful precipices, which ſeem to threaten the paſſenger with immediate deſtruction; and therefore it is no wonder that theſe excellent waters are but little frequented. There are ſeveral other mineral ſprings in this province.

The principal rivers are the Rhone, the Durance, the Iſere, and the Drome. In this province are two archbiſhopricks, and five biſhoprics. The civil law takes place here; the inhabitants have alſo particular cuſtoms of their own, and likewiſe a parliament, which is alſo a court of taxes, with one provincial court of juſtice, ſeven prefecturates, three bailiwics, four royal juriſdictions, and as many private lordſhips. The governor and lieutenant-general of the province ſit in the parliament, and take place above the chief preſident. The principal places in this province are the following:

Grenoble, in Latin Gratianapolis, the capital of the province, is pleaſantly ſeated at the foot of a mountain on the river Iſere, near the place where the river Drac diſcharges itſelf into it. Here the parliament meets. This city has alſo an intendency, a chamber of accompts, a court of taxes, a mint, and a court of the lord-treaſurer of France. It is a pleaſant populous city, and beſides other fortifications, is defended by a citadel, called the Baſtile. The biſhop of this place is ſuffragan to the archbiſhop of Vienne, and has a revenue of twenty-eight thouſand livres, out of which he pays one thouſand florins to the court of Rome. The river Iſere divides the city into two unequal parts, the ſmalleſt of which is called La Perriere, and contains one pariſh church, and one convent. The name of the largeſt is Bonne; this is the moſt beautiful, it being built with ſtraight handſome ſtreets, and contains ſeveral magnificent public buildings, as the biſhop's palace, the palace in which are held the courts of juſtice, the cathedral, the arſenal, and a general hoſpital.

The grand chartreuſe, the moſt celebrated of all the convents belonging to the order of Carthuſians, is ſeated on the Alps, at the diſtance of three leagues from Grenoble. There are two ways leading to it, but both are carried over ſteep rocks and precipices of a dreadful height, the terror of which is increaſed by the roaring of the river Guyer la Mort, during its precipitate courſe among them. The convent, which ſtands on an eminence reſembling a meadow, is environed with rocks and mountains covered with wood, that riſe to a much greater height. This convent forms a ſpacious oblong ſquare walled in, and without it are a few inns and ſtables. In the large hall of this convent is annually held the general chapter of the order of the Carthuſians, where the German priors take the precedence of all others; and at their arrival may ride into the court of the convent, which none of the reſt are permitted to do; but, like ſtrangers, muſt alight at the gate. In the hall are fine paintings, repreſenting the life of St. Bruno, and likewiſe the pictures of the generals of the order. The former are copies of the admirable paintings in the Chartreuſe at Paris. In a large gallery may be ſeen views of all the Carthuſian convents in Chriſtendom, moſtly executed by eminent hands. The church is not large, but very magnificent; and among other relics it is ſaid to contain the arm of St. Bruno, his body being interred in Calabria. The firſt ſettlement of Bruno and his diſciples was half a league from this place, and it having no particular name, was ſo called from Carthreuſe, a village ſituated near it in a valley, and which is ſtill in being. From the kitchen of this monaſtery above a hundred perſons are daily fed, and among them thirty monks and forty lay-brothers; and all ſtrangers are entertained here gratis. The wine-cellar conſiſts of two lanes lined with caſks of an extraordinary ſize, and which being immoveable, are filled through the roof by means of leather pipes. This convent is the head of the order, and chooſes the general, who is obliged to reſide here during life.

Briançon, the capital of a territory called Brianconois, is ſeated forty-five miles to the ſouth-eaſt of Grenoble, on the ſide of a ſteep rock, on the top of which ſtands a caſtle; near the town the two little rivers of Dure and Ance unite their ſtreams, and thus form the river Durance.

Ambrun, or Embrun, the capital of the territory of Ambrunois, is ſituated on a ſteep rock, at the foot of which runs the river Durance, and is about twenty miles to the ſouth of Briançon. It is a ſtrong place both by art and nature, and is the ſee of an archbiſhop, who ſtyles himſelf prince and count of Ambrun, and baron of Guilleſtre and Beaufort, who has alſo one-half of the lordſhip and juriſdiction of the city. His annual revenue amounts to twenty-two thouſand livres, and his taxation at the court of Rome is two thouſand four hundred florins. The epiſcopal palace is the fineſt building in the city, which, beſides the cathedral, contains five pariſh-churches, with a Capuchin convent, and had lately a college of Jeſuits.

Vienne, in Latin Vienna Allobrogum, the capital of a diſtrict in Lower Dauphiné called Viennois, is a very antient city ſeated on the Rhone, ſeventeen miles to the ſouth of Lyons. It is of pretty large extent; but the ſtreets are narrow and ill paved. The cathedral is a beautiful ſtructure, and in it are three chapters. Here is alſo a priory, nine convents, one ſeminary, and there was till lately a college of Jeſuits. The church of Notre Dame de la Vie is ſaid to have been a Roman prætorium. The archbiſhop of this place enjoys the title of upper primate of Gaul, and his annual revenue amounts to twenty-two thouſand livres, out of which he is taxed eighteen hundred and fifty-four florins at the court of Rome. In this city are made anchors and ſword-blades, with other manufactures in iron and ſteel, and alſo paper-mills.

Valence, in Latin Valentia, the capital of a diſtrict

called Valentinois, is ſeated on the Rhone, forty-eight miles to the ſouth of Lyons, and is pretty well built: it is large, and one of the moſt antient cities in France, having been formerly a Roman colony. The biſhop is ſubject to the archbiſhop of Vienne, and has an annual revenue of ſixteen thouſand livres, out of which his taxation to the court of Rome is two thouſand three hundred and eighty-nine florins. The epiſcopal palace is a fine building: beſides the cathedral, it contains one chapter, and three abbies; with ſix convents, and an univerſity.

SECT. VI.

Of the Situation, Extent, Produce, and principal Rivers of Franche Comté; with a Deſcription of Beſançon, Salines, Dole, and Gray.

THE earldom of Burgundy, or Franche Comté, is bounded on the north by Lorrain; on the eaſt by the earldom of Mumpelgard and Swiſſerland; and on the ſouth and weſt by the government of Burgundy and Champagne. Its extent from ſouth to north is about ninety miles, and from the ſouth-eaſt to the north-weſt ſixty. Almoſt one-half of it is a level country abounding in corn, wine, paſtures, hemp, &c. and the other half is mountainous, but produces a good breed of cattle, and ſome corn and wine.

This country contains mines of copper, iron, lead, and ſilver. Near the village of Touillon is a ſpring that runs and ceaſes at ſtated times, and the town of Salines has profitable ſalt-ſprings and marſhes. In this diſtrict are likewiſe quarries of alabaſter and marble; and alſo near the river Doux is a large grotto in which nature has formed pillars, and a ſurpriſing variety of figures; and near Leugne is a natural cavern of ice, which freezes in ſummer and thaws in winter.

The principal rivers of this province are the Saone, the Ougnon, the Doux, the Louve, and the Dain.

Franche Comté has a parliament of its own; it is ſubject to a governor, lieutenant-general, and ſub-governor; and is divided into four large diſtricts, the principal places in which are the following:

Breſançon, in Latin Veſontio, and Beſontium, the capital of the country, is a hundred and ſixty miles to the ſouth-eaſt of Paris, and is the ſeat of an archbiſhopric, a parliament, an intendency, a bailiwic, a country and a mint-court, &c. It is divided by the river Doux into the Upper or Old Town, and the Lower or New Town, and is ſurrounded by a wall and other fortifications: it is alſo defended by a citadel that ſtands on a ſteep rock, and is an oblong ſquare, flanked with four irregular baſtions, the ground being too uneven to admit of regular works. Till the peace of Weſtphalia it was an imperial city, but at that time was transferred to Spain: it was afterwards taken by France, and its fortifications were greatly ſtrengthened by Lewis XIV. The cathedral, which is dedicated to St. John, ſtands at the foot of Mount St. Stephen; and the archbiſhop, who ſtyles himſelf a prince of the empire, has three ſuffragans under him, with a revenue of thirty-ſix thouſand livres, out of which he pays a thouſand and twenty-three florins to the court of Rome. The city alſo contains two chapters, eight pariſh-churches, two abbies of monks, and two of nuns, twelve convents, one univerſity, three hoſpitals, and had a college of Jeſuits. The town-houſe, the governor's palace, and that of Granville, are the moſt remarkable buildings in the place; the laſt of which is furniſhed with a great variety of excellent ſtatues and pictures, and a library containing a great number of valuable books and manuſcripts. In the neighbourhood of Beſançon are the ruins of an amphitheatre, a hundred and twenty feet in diameter, and of ſome pagan temples, with a triumphal arch dedicated to the emperor Aurelian.

Salines, in Latin Salinæ, ſo called from an excellent ſalt-ſpring which yields the crown a great revenue, is pleaſantly ſituated on a rivulet in a valley between two mountains, twenty miles to the ſouth of Beſançon, and two hundred to the ſouth-eaſt of Paris. It is a long town, chiefly conſiſting of one ſtreet, and has four chapters, four pariſh-churches, ten convents, one college, and one hoſpital. The hall, in which they have their magazine of ſalt, and where their courts of juſtice are held, is a magnificent building. The town is defended by a wall, and near it ſtands Fort Belin, which is ſeated on a hill, and on another is Fort Brecon, and a caſtle. It contains five or ſix thouſand inhabitants, and in its neighbourhood are quarries of jaſper, beautiful alabaſter, and black marble.

Dole, a town ſeated on the river Doux, eighteen miles to the ſouth-weſt of Beſançon, in a diſtrict of the ſame name, which, from its beauty and fertility, is ſtyled Val d'Amours, or the Vale of Love, was formerly, while Beſançon continued a free imperial city, the capital of the country, the ſeat of a parliament, of a chamber of accounts, and of an univerſity. On its being taken by Lewis XIV. in 1668, he cauſed the fortifications to be demoliſhed; it was afterwards taken by the Spaniards, who fortified it again; but the French retaking it in 1674, it was a ſecond time diſmantled, and the parliament and univerſity afterwards removed to Beſançon; but the chamber of accompts ſtill remains here. It is ſtill a pretty town, the ſtreets are ſpacious, and the houſes tolerably well built. The publick edifices moſt worthy of notice are the church of Our Lady, the Jeſuits college, and the palace where their parliament was held. It has alſo one chapter, eleven convents of both ſexes, and an hoſpital. The inhabitants are ſaid to amount to between four and five thouſand. Here are ſtill the remains of ſeveral Roman antiquities, particularly of two aqueducts.

Gray, in Latin Gradicum, is a pretty trading town ſeated on the Saone, about ten miles to the north-weſt of Beſançon, and was well fortified, till taken by Lewis XIV. in 1668, who demoliſhed the works. It contains but one pariſh-church, a collegiate church, five convents, and had a college of Jeſuits. The inhabitants are computed to amount to about four thouſand. Here they embark great quantities of corn, iron, and other merchandize, which they tranſport to Lyons.

SECT. VII.

The Situation, Extent, Produce, and Mountains of Alſace. The Inundations of the Rhine; with the Gold Duſt and beautiful Pebbles found in that River. Of the other Rivers of Alſace. The Number of its Inhabitants; the Manner in which that Country became ſubject to France; with a Deſcription of Straſburg, and the other principal Cities of Alſace.

ALSACE terminates to the ſouthward on Swiſſerland and the Franche Comté, to the eaſtward on Ortenau and Briſgau, to the northward on the Palatinate, and to the weſtward on Lorrain, extending from north to ſouth about eighty-five miles. The country in general is very pleaſant, and abounds in all kinds of grain, fruit, eſculent vegetables, flax, tobacco, and wood: its wine is very palatable, and its paſtures are alſo rich. The country between the rivers Ill, the Haardt, and the Rhine, is narrow and but indifferently fertile; but has ſome vineyards and a few paſtures: here rye, barley, and oats, are the only grain; but that partwhich lies between the mountains, the Ill, and the plain of Soults, in Upper Alſace, to the diſtahce of ſix miles beyond Hagenau, yields an exuberance of grain, wine, and paſtures. The mountains abound in wood, and, though they produce but little corn, they feed large herds of cattle. The country from Mount Saverne, and the levels about Straſburg to the Rhine, is incomparably fertile and delightful, it being rich in all kinds of grain, tobacco, culinary vegetables, ſaffron, and hemp.

The chief chain of mountains in this country is the Waſgau, in French the Voſge. This chain begins in the neighbourhood of Langres, and extending at firſt from weſt to eaſt ſeparates the country of Burgundy from Lorrain. After this, winding towards the north, it ſeparates Lorrain from Alſace, and forms another curve towards the electorate of Triers. The ſummits and valleys of this chain, as well as the plains of Alſace, according to Buſching, produce a hundred and fifty kinds of trees and ſhrubs, and fifteen hundred and fifty ſpecies of herbs, which all grow wild. This chain has alſo ſome excellent paſtures, and the eminences, where the ſoil is favoured

with a ſunny expoſure, produce very agreeable red and white wine, of which a great deal of brandy, vinegar, and tartar is made. This chain of mountains has alſo for theſe ſeveral centuries been famous for its mines of ſilver, copper, and lead; ſeveral parts alſo abound in iron, antimony, cobalt, ſulphur, and other minerals. It is alſo obſervable, that theſe mountains are thick ſet with an uncommon number of churches, convents, and chapels.

The Rhine, which ſerves as a ſecurity to this country, frequently cauſes terrible devaſtations, not only in winter, but in the midſt of ſummer, when the ſnow melts on the Alps. Its inundations then ruin the fields, by covering them with ſand. The violent torrents of the Rhine, which generally happen every year, frequently alter the ſituation of the iſlands within it. One ſingularity of this river is, that in its ſand are found particles of gold, which the torrents in their fall waſh from the Alps, and bring into the Rhine. Accordingly it is only below Baſil that the ſand contains this precious mixture, which in autumn and winter, when the river is at the loweſt, is drawn out with the ſand, and, after paſſing through ſeveral waters, the gold is extracted. The particles of this metal are ſeldom ſo large as a grain of millet; the gold is indeed very fine and beautiful; but is ſo ſcarce, that the city of Straſburg, which has the privilege of gathering gold for the length of four thouſand paces, ſcarce collects five ounces in a year. The Rhine alſo contains many cryſtals, and particularly pebbles that receive a beautiful poliſh, and are much uſed in France under the name of Rhine pebbles.

The following rivers iſſue from the above chain, and run into the Lower Alſace, the Leber, the Cher, the Andlau, the Ergers, and the Breuſch; theſe three laſt run into the Ill. The Serr, the Motter, the Seltzbach, the Lauter, and the Queich, which run into the Rhine. In Upper Alſace the Berre and the Ill, which alſo run into the Rhine.

The number of inhabitants in Alſace is computed at about half a million. In Upper Alſace and Sundgau are thirty-two large and ſmall towns, in Lower Alſace thirty-nine, and in both are upwards of a thouſand ſmall towns and villages. The common language of the inhabitants is the German, and they are partly Lutherans and partly Roman catholics.

Alſace has been ſubject to ſeveral German families, and particularly to the houſe of Auſtria; but at the peace of Munſter the emperor ceded to the crown of France all right to the town of Briſac, the landgravate of Upper and Lower Alſace, Sundgau, and the diſtrict of the ten united imperial cities in Alſace, with the whole ſovereignty belonging to them. On the other hand, France engaged that the inhabitants ſhould continue unmoleſted in the enjoyment of their freedom; and promiſed to be ſatisfied with the power which the houſe of Auſtria had enjoyed over them, and had transferred to France by that treaty. In the ſucceeding wars France took the ten imperial cities in Alſace, and as by the peace of Nimeguen no expreſs ſtipulation was made for their reſtitution, the king treated them as a part of his acquiſitions, and directed a chamber of appeals at Briſac, to which not only thoſe cities, but the nobility of the empire, and all others holding imperial lands in Alſace, were to bring their proceſſes, and not to the imperial chamber of the empire. At the peace of Ryſwic, in 1697, the emperor and the empire ceded to France the perpetual ſovereignty of the city of Straſburg, and of all its dependencies on the left ſide of the Rhine.

The principal place in Upper Alſace is Straſburg, in Latin Argentoratum, the capital of the whole country. It is a royal, free, imperial city, and the ſeat of a mint-court. It ſtands in forty-eight degrees thirty-ſix minutes north latitude, and in ſeven degrees forty-one minutes eaſt longitude, near two miles diſtant from the Rhine, and is ſurrounded by the rivers Ill and Breuſch, which alſo run through it; beſides which an arm of the Rhine is conveyed to the city. It is not very well fortified, but by means of a ſluice in the city may be laid under water. The ramparts are extremely pleaſant and planted round with trees, and towards the Rhine it has a regular citadel.

The city is large and populous, it containing about thirty-two thouſand houſes, four thouſand three hundred families, and thirty thouſand inhabitants. The ſtreets are in general narrow, two only excepted, and are adorned with few handſome houſes. The public buildings are the town-houſe, the epiſcopal palace, that of the intendant, the arſenal, and the play-houſe. In the city hoſpital is kept corn of a great age, and they are ſaid to have wine that is ſome hundred years old. The French hoſpital is a fine building, it being erected by Lewis XIV. for the reception of his ſoldiers.

The cathedral is a very antient ſtructure, it being finiſhed in the year 1449, and conſequently the Proteſtants are not chargeable with the ſatyrical ſculptures which a few years ago were to be ſeen on the cornices and pedeſtals, repreſenting monkies, aſſes, hogs, and other animals, in monkiſh habits; and among the reſt a monk in an indecent poſture with a nun. It is ſuppoſed that theſe were done by order of the ſecular clergy, to be revenged on the monks for the ill offices they were always doing them. The ſteeple of the cathedral is juſtly reckoned one of the higheſt in Europe, it being five hundred and ſeventy-four feet in height. The clock of this ſtructure has been greatly admired; for it not only ſhews the hours of the day, but the motion of the ſun, moon, and ſtars: among other things there is an angel which turns an hour-glaſs every hour, and the twelve apoſtles proclaim noon by each of them ſtriking a blow with a hammer on a bell: there is likewiſe a cock which ſteps out and crows every hour. Among the curioſities within this church are the furniture and ornaments which Lewis XIV. preſented to it, and are extremely rich and magnificent; fifty perſons it is ſaid were employed on them during eleven years, and they coſt that prince ſix hundred thouſand dollars; the principal of theſe is a ſplendid altar-cloth. There are here alſo a triple ſet of miſſal veſtments and altar furniture, ſix large ſilver chandeliers, each ſo heavy that it requires a ſtrong man to carry it, and a crucifix of double the weight. Theſe ſeven pieces of plate put together weigh a thouſand and ſixty-ſix pounds eight ounces.

There are here alſo three collegiate churches, two of which are parochial, together with four others belonging to the Romiſh community; but the Lutherans are in poſſeſſion of St. Thomas's church, in which the illuſtrious count Maurice of Saxony was interred in the year 1751; yet the Proteſtants perform their public worſhip at Wolniſheim, and not in the city. The univerſity and gymnaſium here are Lutherans; and here are alſo an anatomical theatre, a phyſic garden, a royal ſociety founded in 1752, and particularly inſtituted for the natural hiſtory of Alſace: there are alſo ſix convents, and till lately a college of Jeſuits.

The city council is half Lutheran and half Roman catholics; but moſt of the burghers are Lutherans: the college of magiſtrates conſiſts of three chambers; to the firſt belong thirteen perſons, who preſide over matters of juſtice; the ſecond is compoſed of fifteen perſons, under whoſe care are the rights and privileges of the city, the hoſpitals, police, and finances; the other chamber is compoſed of twenty-one, in whom is lodged the ordinary government of the city. Over theſe is the grand council, which conſiſts of thirty members, ten of whom are noblemen, and twenty burghers. It has alſo an inferior council, for the determination of affairs of leſs importance. The ſupreme magiſtrate here, ſince the city has become ſubject to France, is the royal prætor, who takes care of the king's rights, and that nothing be done in the college of magiſtrates, contrary to his majeſty's pleaſure. The inhabitants, however, pay nothing to the king; but all the impoſts levied here are expended in the ſupport of the city.

To this city belong five diſtricts, or lordſhips. The biſhopric of Straſburg alſo comprehends a conſiderable tract of territory, ſubject to the biſhop, as a temporal lord. It lies ſcattered in Upper and Lower Alſace, and on the other ſide of the Rhine, where he has two diſtricts. He ſtyles himſelf prince of the empire, and landgrave of Alſace; and though at preſent ſubject to France, yet, by virtue of the diſtricts on the other ſide of the Rhine,

Rhine, is actually a ſtate of the empire, and has a ſeat and voice in the diet: he has alſo many vaſſals under him, and among them almoſt all the nobility in Lower Alſace, together with a great part of thoſe in the Upper. His revenue is ſaid to amount annually to two hundred and fifty thouſand livres, and it was formerly much more conſiderable. As a biſhop he is ſubordinate to the archbiſhop of Mentz.

Fort Louis is a very ſtrong and handſome fortification, upon an iſland in the Rhine, twenty miles to the north-eaſt of Straſburg. It was erected in the year 1686, and conſiſts of a ſpacious and regular quadrangle, with four large baſtions, and the ſame number of half-moons. Near it is a ſmall town, formed of ſtraight ſtreets, and the whole iſland is fortified round.

Zabern, a ſmall town ſeated on the river Sor, fifteen miles to the north-weſt of Straſburg. It was the uſual reſidence of the biſhop of Straſburg, till this place embraced the Lutheran religion; and his palace and gardens here are delightful. Here is a collegiate church, one hoſpital, and two convents; but what is particularly remarkable, is the beaten broad road, carried, behind the city, to the top of a high mountain, the aſcent to which is rendered ſo eaſy by ſuch a number of windings, that a perſon may either aſcend or deſcend without the leaſt difficulty.

Colmar, the capital of Upper Alſace, is ſituated near the river Ill, thirty-five miles ſouth-by-weſt of Straſburg, and had ſtrong walls, which Lewis XIV. cauſed to be demoliſhed in the year 1673; but after the treaty of Ryſwic he encompaſſed it with new walls. The inhabitants are ſaid to enjoy all their privileges, and, tho' moſt of them are Lutherans, have liberty of conſcience. It contains about eight hundred houſes, and ſeven thouſand one hundred and forty inhabitants.

SECT. VIII.

Of the Dutchies of Lorrain and Bar; their Situation, Extent, Produce, and Rivers; the Manners and Language of the Inhabitants. The Manner in which they became ſubject to the preſent Duke of Lorrain; his Titles, and a Deſcription of the principal Cities in thoſe Dutchies.

THE dutchy of Lorrain derives its name from Lotharius II. grandſon to the emperor Lewis I. and was formerly of much greater extent. It is at preſent bounded on the eaſt by the Lower Palatinate and Alſace, from the latter of which it is ſeparated by the Vogean mountains, on the ſouth by Franche Comté, on the weſt by Champagne, and on the north by Metz. Its greateſt breadth from north to ſouth is about a hundred miles, and it is nearly as much from eaſt to weſt.

It enjoys a very temperate climate, and has a fruitful ſoil, which particularly abounds in grain, though it has many woods and mountains; but in theſe are good game, and alſo excellent paſture. The country has alſo ſalt ſprings, with ſome mines of iron, copper, tin, and ſilver. In the mountains of Waſgau are found agates, chalcedonies, and other gems. Its lakes too abound in fiſh, particularly the lake of Lindre, the profits of which are ſaid to amount to ſixteen thouſand livres per annum.

The principal rivers in this dutchy are the Maeſe, the Moſel, and the Saar. Here are alſo the ſmall rivers of Voloy, Mortaire, and Meurte.

The inhabitants have always been reputed brave ſoldiers, and their modern dukes have conſtantly kept on foot a particular army, which have performed ſignal ſervice. But the French have frequently had the policy to turn the power of Lorrain to their own advantage, and to the prejudice of the duke. The Lorrainers are alſo laborious; but have little trade with ſtrangers, they having no navigable rivers, and all neceſſaries within themſelves; but what little trade they have conſiſts of corn and linen.

The language ſpoken here is French, except in the German diſtricts, where that language is ſpoken. The Romiſh religion prevails all over the country.

Lotharius, the younger ſon of the emperor of the ſame name, may be conſidered as the firſt founder of the ſtate of Lorrain, its name being derived from him. The country, after his deceaſe, was divided among his relations, and was afterwards ſometimes poſſeſſed by the Germans, and ſometimes by the French, and continual diſputes aroſe between the emperors of Germany and the kings of France. At length, in 1733, France took poſſeſſion of this dutchy; and in the preliminaries of peace in 1735 it was concluded, that not only the duchy of Bar, but likewiſe that of Lorrain, the earldom of Falkenſtein excepted, ſhould be ceded to Staniſlaus, king of Poland, and father-in-law to Lewis XV. and after his deceaſe both duchies, together with the abſolute ſovereignty of them, ſhould for ever belong to the crown of France. On the other hand, the emperor Charles VI. engaged in return to cede the great dutchy of Tuſcany to his ſon in-law Francis Stepnen, the late emperor, to atone for his loſing Lorrain. This was ſettled in 1736, and the following year Staniſlaus took actual poſſeſſion of the dutchies of Lorrain and Bar, and the duke of Lorrain became poſſeſſed of Tuſcany.

The dukes of Lorrain bear the following titles: S. by the grace of God duke of Lorrain and Mercœur; king of Jeruſalem and Marchis; duke of Calabria, Bar, and Guelders; margrave of Pont à Mouſſon and Nomeny; and count of Provence, Vaudemont, Blamont, Zutphen, Saarwerden, and Salem. From hence may be ſeen not only the countries the duke actually poſſeſſes, but likewiſe their pretenſions. The eldeſt ſon, during the life-time of his father, is ſtyled count of Vaudemont, and alſo writes himſelf, while unmarried, margrave of Pont à Mouſſon; but after his marriage he aſſumes the title of duke of Bar. The antient houſe of Lorrain, by virtue of a treaty concluded in 1736, retains all the titles, arms, and privileges, with the rank and quality of ſovereign princes, which it formerly enjoyed, yet without any claim to the ceded countries.

The principal places in the dutchy of Lorrain are the following:

Nancy, the capital of the dutchy, and the antient reſidence of the dukes, is ſeated in a delightful plain near the river Meurte, ſeventy-five miles to the weſt of Straſburg, and is divided into the Old and New Town. The former is both the ſmalleſt, and makes the meaneſt appearance, it being built with narrow ſtreets; but in it ſtands the palace, which was begun by duke Leopold Joſeph; yet only the main body is finiſhed. The ſpacious long ſquare, or wide ſtreet before it, has a fine appearance. In the palace are eighteen very exquiſite pieces of tapeſtry, repreſenting the atchievements of Charles IV. duke of Lorrain. Here are alſo ſhewn the ſabres of two Burgundians, who were killed with Charles the Bold; and likewiſe that duke's helmet, lined with red velvet, and a yellow creſt on the top. This helmet uſed to be carried every year in proceſſion by the captain of the Swiſs, while two other Swiſs carryed the ſabres. Near the palace is a beautiful garden upon one of the baſtions, from which there is a very fine proſpect. Adjacent to this garden ſtands the opera-houſe, which was built by Bibiena, an Italian architect, who alſo built the theatre at Vienna. This houſe is not remarkable for its largeneſs, but is extremely well contrived, and on each ſide of it is a good tribuna, which is a great ornament to it.

The New Town is larger, and contains broad and ſtraight ſtreets, with ſeveral beautiful houſes; but, according to the faſhion of this country, they are generally low. In this city are three pariſh and three collegiate churches, with two abbies, ſeventeen convents, one college, one hoſpital, an academy of ſciences, and one commandery of the knights of Malta. Among the collegiate churches is the new ſtately cathedral, which is immediately ſubject to the pope. This is a magnificent building, it being adorned with two towers and a cupola after the Italian taſte. The chapter conſiſts of a primate and ſixteen canons. The duke nominates the primate without conſulting the canons. In the collegiate church of St. George ſtands not only the monument of Charles the Bold, duke of Burgundy, who was ſlain in 1476, but alſo the tombs of the antient dukes of Lorrain. The latter dukes are interred in the church of the Capuchins. The city was

formerly fortified, but by the peace of Ryſwic was diſmantled, only the works of the Old Town ſtill remaining.

Luneville, in Latin Lunaris Villa, a ſmall, very antient, and once fortified town on the river Veſouze, ſtands in a low marſhy country, twelve miles to the ſouth-eaſt of Nancy. It is at preſent the capital of a provoſtſhip, and has a fine palace, in which not only the two laſt dukes of Lorrain chiefly reſided, but was the reſidence of king Staniſlaus, till in the year 1755, when the right wing of the palace was entirely burnt down. In this town is alſo an abbey, with a commandery of the knights of Malta, and three convents. The gymnaſtic academy in this place is altered to a foundation for cadets, one-half Lorrainers, and the other Poles.

It is remarkable that at a few miles diſtance from Luneville is Beaupré, an abbey of Proteſtant Benedictines, but they follow the Ciſtercian rule of St. Benedict. It is ſeated in a delightful country, and has an abbot, nine prieſts, nineteen religious and twenty-three lay-brothers, with a yearly revenue of eighty thouſand Lorrain livres.

The duchy of Bar, or Barrois, was antiently an earldom, ſo called from the caſtle of Bar, erected in the year 964 by Frederic I. whom the emperor Otho created earl of Bar. The principal place in this diſtrict is

Bar le Duc, the capital of the country, ſeated on a riſing ground on the banks of the river Ornain, about forty miles to the weſt of Nancy, and is a handſome well-built city, with two chapters, one pariſh-church, one priory, ſeven convents, and an hoſpital. Here alſo is a ducal palace.

SECT. IX.

Of the Meſſin, or Government of Metz, and the Counties of Verdun and Toulois: their Situation, Produce, Rivers, and principal Cities.

THE government of Metz conſiſts of the countries of Meſſin, French Barrois La Saare, and French Luxemburg. Its principal rivers are the Maeſe; the Moſelle, which riſes in one of the Waſgau mountains, and is conſtantly navigable from Metz, diſcharging itſelf into the Rhine; the Meurte, which alſo riſes in the Waſgau chain, and runs into the Moſelle; the Orney, or Ornain; the Saare, which runs into the Moſelle; and the Saone, which falls into the Rhone.

The Meſſin, or the country round the city of Metz, is but indifferently fertile, and produces little wheat. It was antiently a part of the kingdom of Auſtraſia, of which Metz was for a long time the capital, and the uſual reſidence of the king. When the children of Charles the Great and Lewis the Pious divided the dominions of that crown, the kingdom of Lorrain roſe out of the remains of that of Auſtraſia; and towards the end of the ſecond royal line of France, Metz, Toul, and Verdun, three principal cities, ſhook off the yoke, and, to ſecure their freedom, put themſelves under the protection of the emperor. The power was divided between the biſhop and the magiſtrates; but the latter, by the aſſiſtance of the people, obtaining the ſuperiority over the former, the biſhop had no other power in the city of Metz and the country of Meſſin than a ſhare in the election of the magiſtrates, and in the adminiſtration of the oath of office. The magiſtrates enjoyed an unlimited authority in the city and in the country of Meſſin, and the biſhop in the domains of his biſhopric on this ſide the Vis; though in certain caſes appeals lay to the imperial chamber, which they acknowledged as the ſupreme power of the empire. In 1552 Metz, Verdun, and Toul, put themſelves under the protection of France, which kept poſſeſſion of theſe three cities under the name of the protected diſtrict, till the year 1648, when, at the peace of Weſtphalia, the three biſhopricks were abſolutely tranſfered to France.

Metz, in Latin Metæ and Metis, the capital of the country, lies between the Moſelle and Seille, which here unite their ſtreams, and is ſituated twenty-eight miles to the north of Nancy. The Old Town is large, but the ſtreets are narrow; and though the houſes are built in the old taſte, they are handſome ſtructures. The New Town is likewiſe large, and much more beautiful than the former. Beſides the cathedral, this city contains three chapters, ſixteen pariſh churches, ſix abbies, and as there are here many Jews they have a ſynagogue. There is here a parliament, an intendency, a chamber of accompts and impoſts, a mint, a country and foreſt court, beſides other public offices. Among its fortifications are three citadels. The biſhop, who ſtiles himſelf a prince of the Roman empire, is ſuffragan to the archbiſhop of Treves, and has a dioceſe of ſix hundred and thirteen pariſhes, with a revenue of a hundred and twenty thouſand livres, out of which he annually pays to the court of Rome ſix thouſand florins.

The biſhopric of Metz and its diſtrict muſt be diſtinguiſhed from the Meſſin, and is a long but irregular tract of land, the lord of which is the biſhop; but he has been deprived of his temporal juriſdiction, which chiefly belongs to the duke of Lorrain, particularly the ſalt-works, in lieu of which the biſhop receives thirty thouſand livres, and four hundred buſhels of ſalt, which the duke, or at preſent the French king, cauſes to be annually delivered into the biſhop's magazine.

Sare-Louis is a new town and fortification begun by Lewis XIV. on the river Sare in 1688, and finiſhed about four or five years after. It is ſituated about thirty-two miles to the north-eaſt of Metz. Its ſtreets are regular, and the fortifications form a regular hexagon. It is the ſeat of the county court, and contains one pariſh-church, with two convents. This town, with a diſtrict belonging to it, has been ceded by the duke of Lorrain to France.

The country of Verdun extends along the Maeſe; has many large towns and villages; but has only one city, which is that of Verdun.

The city of Verdun, in Latin Verodunum, or Veredunum, the capital of the country, is ſituated about thirty-eight miles to the north-weſt of Nancy; it is the ſee of a biſhop, and has a provincial and a manor court. It conſiſts of three parts, namely, the Upper, Lower, and New Town; and, beſides its other fortifications, is defended by a fine citadel. The biſhop, before the city and diſtrict were annexed to the crown of France, was a prince of the empire, and ſtill ſtyles himſelf ſuch, as alſo count of Verdun. The archbiſhop of Treves is his metropolitan. His dioceſe conſiſts of a hundred and ninety-two pariſhes, his revenue is fifty thouſand livres, and he pays to the court of Rome four thouſand four hundred and ſixty-ſix florins. Beſides the cathedral, there are in this city one collegiate and nine pariſh-churches, ſix abbies, and a college of Jeſuits. It was formerly an imperial city, but in the year 1552 the inhabitants put themſelves under the protection of France, and in 1648 they fell abſolutely under the power of the French king.

The earldom of Toulois being ſmall, is hemmed in by Lorrain; and, together with the city of Toul, and the other biſhoprics of Metz and Verdun, put itſelf in 1552 under the protection of France, which in 1648 obtained the abſolute ſovereignty over them.

Toul, in Latin Tullum, the principal city in this earldom, and the ſee of a biſhop, is ſeated on the Moſelle, over which is a fine ſtone bridge, with a regular fortification. This town, which ſtands ten miles to the weſt of Nancy, has a provincial and diſtrict court, and was formerly an imperial city. Its biſhop was a prince of the empire, which title, together with that of earl of Toulois, he ſtill aſſumes: he is ſuffragan to the archbiſhop of Treves; and his dioceſe contains fourteen hundred pariſhes; yet his revenue is little more than ſeventeen thouſand livres, and he pays at the court of Rome two thouſand five hundred florins. In this city is a fine cathedral, one collegiate and four pariſh-churches, three abbies, two priories, ſeven convents, two hoſpitals, one commandery of the knights of Malta, and one ſeminary.

SECT. X.

Of French Flanders; its Situation, Produce, and principal Places; with a particular Deſcription of Gravelines, L'Iſle, Douay, Cambray, and Dunkirk.

WE have already given a deſcription of Flanders in general in page 277, where we have deſcribed that part belonging to the houſe of Auſtria, and with this we

have concluded our account of Germany, that country making a part of the circle of Burgundy. We have given Dutch Flanders under the ſection which treats of the Generalité Lands, in page 297, under which name the Dutch include that country; and we ſhall now give a deſcription of French Flanders, which is properly inſerted here, as it conſtitutes a part of France, and is in no reſpect a ſeparate country.

French Flanders contains a part of the antient earldom of Flanders, the Cambreſis, the country of Hainault, and a ſmall part of the earldom of Namur. This country is bounded on the north by the Seine and the German ocean, on the eaſt by the Auſtrian Netherlands, on the ſouth by Artois, and on the weſt by the German ocean.

French Flanders being a part of the earldom of Flanders which Lewis XIV. over-run in 1667, it thence obtained its name. It abounds in corn and vegetables of all kinds, as alſo in flax. Its paſtures are excellent, and conſequently produce fine cattle; but for want of wood, or coal, the inhabitants are obliged to make uſe of turf for their fuel.

The principal places in French Flanders are the following:

Gravelines, or Gravelingen, a ſmall but ſtrong town ſeated near the mouth of the Aa, on the Engliſh channel, fifteen miles to the ſouth-weſt of Dunkirk, and, beſides its other fortifications, is defended on the land-ſide by a good citadel, and to the ſea by a fort. It was taken and burnt by the Engliſh in the year 1383, but afterwards rebuilt to better advantage, and walled round. In 1528 it was fortified by the emperor Charles V. but its works have been ſince conſiderably improved by marſhal de Vauban, ſo that it is now a pretty ſtrong place. In 1644 it was taken by the French, and in 1652 by the archduke Leopold. In 1658 it was again taken by the French, and was at laſt yielded to them by the treaty of the Pyrenees; but in 1694 was entirely laid in aſhes.

L'Iſle, Liſle, or Ryſſel, the capital of French Flanders, and of all the French conqueſts in the Netherlands, is ſituated on the Deule, thirty-ſeven miles to the ſouth-eaſt of Dunkirk. It is beautifully built, and is large, handſome, and populous; it is the reſidence of the governor-general; and has an intendency, a mint, a caſtellany, a bailliwic, and foreſt court. It has a collegiate church, and about thirty other churches, ſeven of which are parochial, a great number of convents, and a noble hoſpital called *L'hôpital Comteſſe*. Several of the buildings are very fine, particularly the exchange, which is a ſquare ſtructure, ſurrounded with piazzas.

This city is ſtrongly fortified, which the Engliſh and their allies experienced in the reign of queen Anne, when prince Eugene, after the battle of Oudenarde, having ſat down before it in 1708 for near three months, took it at laſt, though with the loſs of a great number of men; but it was reſtored to the French by the treaty of Utrecht in 1713.

Both the antient and new fortifications are very numerous and conſiderable, they having been greatly improved by marſhal de Vauban. The citadel, which was the firſt built by that great engineer, is a pentagon, compoſed of five regular baſtions, defended by ſeveral works, and ſurrounded with a deep ditch, a covert-way, and glacis. To this fortreſs are two gates, one towards the city, and the other towards the country. The eſplanade, or ſpace between the city and citadel, is planted with four rows of trees, which form very pleaſant walks. The general governor of French Flanders is alſo governor of this city, in whoſe abſence his place is ſupplied by the king's lieutenant. The citadel has alſo a governor, and a lieutenant of the king.

The governor preſides at the meeting of the ſtates, which is commonly held about the cloſe of the year. The other members of this aſſembly are the magiſtrates of L'Iſle, who have always the firſt rank, the lords who have ſovereign juriſdiction, and the deputies from Douay and Orchis. The ſum demanded by the king from the ſtates generally amounts to two hundred and fifty thouſand livres, which is always granted and raiſed from the twentieth part of the revenue of eſtates, and from duties on taxes. Beſides which the city of L'Iſle annually pays thirty-ſeven thouſand five hundred livres toward the repairs of the fortifications. The clergy and nobility pay no ſubſidy, and do not aſſiſt at the meeting of the ſtates; but three or four days after they break up, theſe are called together by the governor, &c. and a ſum demanded in the king's name; and then theſe two bodies commonly grant a twentieth part and a half of the income of their eſtates. The body of the magiſtracy of L'Iſle and its diſtrict is compoſed of a mayor, ſtyled *revart*, and twelve echevins, all of whom are annually changed. There are here conſiderable manufactures of ſilk, cambric, fine linen, and other ſtuffs; and their camblets are highly eſteemed. The trade of L'Iſle through France by land-carriage, or by way of Dunkirk, is pretty conſiderable. The moſt profitable commerce is that to Spain and the Weſt Indies, either on their own account or by commiſſion.

Douay, a pretty large and well fortified city, lies on the river Scarpe, twelve miles to the eaſt of Arras, and is of an oval form, larger than L'Iſle, but leſs populous by one-third. It is defended by Fort Scarpe, which ſtands about a mile below the city, and the whole country may be laid under water by means of ſluices. Here is an univerſity founded in the year 1559, one collegiate church, and ſeven that are parochial, with a famous Engliſh ſeminary.

The principal trade of this city conſiſts in the making and ſelling of worſted camblets, which are bought up by all the neighbouring people, eſpecially at the annual fair kept here in September. The magiſtracy conſiſts of twelve echevins, the firſt of whom is ſtyled the chief. In 1710 the confederates made themſelves maſters of the city; but loſt it again in the year 1712.

The Cambreſis is about ten leagues in length, and from five to ſix broad, though in ſome places not above two or three. It is fruitful and populous.

Cambray, in Latin Cameracum, and Camaracum, the capital of the Cambreſis, is ſituated on the Scheld, fifteen miles to the ſouth-eaſt of Douay, and is a pretty large well fortified city, defended by a citadel and fort. It is the ſee of an archbiſhop, and, beſides its cathedral, contains two chapters, ten pariſh-churches, two abbies, and two hoſpitals. The archbiſhop ſtyles himſelf prince of the holy Roman empire, as indeed he formerly was, and count of Cambreſis. He is, however, lord of the city. His dioceſe conſiſts of eight hundred pariſhes, and his revenue is a hundred thouſand livres, out of which he is annually obliged to pay ſix thouſand florins to the court of Rome. This city is famous for its cambric, which took its name from it. It has been ſubject to France ever ſince the year 1667.

Chateau-Cambreſis, the capital of the earldom of Cambreſis, lies thirteen miles to the ſouth-eaſt of Cambray, and was once fortified; but at preſent lies open, and contains one abbey. The archbiſhop, who has here a very magnificent palace, and fine gardens, is lord of this palace.

In the year 1559 the famous treaty of this name was concluded here, between Henry II. king of France, and Philip II. king of Spain, by which the French gave up a hundred and ninety-eight towns for St. Quintin.

French Hainault is a part of the earldom of Henegau, and its principal city is the following:

Valenciennes, a large and populous city, ſeventeen miles to the north-eaſt of Cambray, is ſeated on the river Scheld, which not only divides it into two parts, but almoſt runs round it. The fortifications are after the manner of Vauban; it has a good citadel on the Scheld, and very fine ſluices. That part on the right of that river belongs to the dioceſe of Cambray, and has one collegiate church, and one abbey; the other ſide belongs to the dioceſe of Arras. The inhabitants have manufactures of woollen ſtuffs, and very fine linen. This city was taken by the French in 1677.

The government of Dunkirk contains only the town of the ſame name, and ſome neighbouring villages. At the peace of Utrecht, and all the other treaties that have been concluded ſince, it was agreed, that the fortifications and harbour ſhould be demoliſhed.

Dunkirk, called by the French Dunquerque, is ſeated on the Colne, which here falls into the Britiſh channel, in

in the fifty-firſt degree two minutes north latitude, and in the ſecond degree twenty-ſeven minutes eaſt longitude, twenty-ſix miles to the eaſt of Calais. It derives its name from a church built there on the Duns, or ſand-banks, erected, as it is ſaid, by St. Eloi, who firſt preached Chriſtianity among the Flemings. Some houſes were gradually built near it, ſo as to form a little town, which Baldwin, earl of Flanders, in the tenth century, encompaſſed with a wall; and it enjoying a harbour commodious for trade, the inhabitants engaged in commerce, by which it grew large and wealthy, and had even ſome ſhips of war; ſo that in the twelfth century the inhabitants fitted out a ſmall fleet againſt the Norman pyrates, and performed ſuch eminent ſervices, that Philip, earl of Flanders, conferred ſome conſiderable privileges on the town. In the thirteenth century it was ſold to the biſhop of Cambray, who enlarged the town and improved the harbour. It was afterwards in the poſſeſſion of ſeveral different families, and in 1538 the emperor Charles V. erected a caſtle here; but in 1551 it was taken and deſtroyed by the French. It was afterwards poſſeſſed by Spain; and, though the town recovered itſelf again, the inhabitants had a great ſhare in the diſturbances which aroſe in the Netherlands. In 1646 and 1658 it was taken by the French, and in the laſt-mentioned year ceded to the Engliſh for aſſiſting France againſt Spain. In 1662 Charles II. king of England, ſold the town to France for five millions of livres, by which means Lewis XIV. acquired alſo Mardyke, and the other villages which the Engliſh had built round Dunkirk.

Lewis upon this ordered the city to be well fortified, erected a fine citadel, and built Fort Lewis, which ſtands to the ſouth on the canal of Bergen, about a mile and a half from the town. The harbour was alſo put into a moſt excellent condition, two moles of piles forming a canal in the ſea, a thouſand fathoms in length, and about forty in breadth, and at each end of the moles were erected two batteries. Beſides theſe, on each ſide of the dyke was a fort, together with the battery of Revers; the caſtle of Gaillard on the eaſt, and a little farther Fort Blanc. Between all theſe forts ſhips were to paſs in their way to the harbour, contiguous to which was alſo a large baſon.

This city enjoyed a flouriſhing trade, and in 1706 contained ſixteen hundred and thirty-nine houſes, in which were fourteen thouſand two hundred and ſeventy-four inhabitants. The Engliſh, for the ſecurity of their commerce, which had ſuffered immenſe damage from the privateers of Dunkirk, compelled France to promiſe at the peace of Utrecht to deſtroy the fortifications, to fill up the harbour, to demoliſh the dams and ſluices, and never to repair them. This was actually begun; but it was found, or at leaſt pretended, that by filling up the harbour, the country round, for about ten French leagues, would be in danger of being overflowed. To remedy this inconvenience ſeveral fruitleſs negotiations paſſed between France and England, and in the mean while a new canal was made at Mardyke. By the treaty concluded at the Hague between France, England, and Holland, in 1717, it was agreed, that the large entrance of the new ſluice at Mardyke, which was forty-four feet broad, ſhould be entirely demoliſhed; and that no harbour, ſluice, or baſon, ſhould ever be made either at Dunkirk or Mardyke, or within two French leagues round; and that the demolition of the works of Dunkirk ſhould be entirely completed: but France making no great haſte in this work, it was in 1748 made an article of the peace at Aix la Chapelle. After which France, inſtead of fulfilling theſe engagements, began ſome new works, which gave freſh umbrage to the court of England, who received certain intelligence that the city was again fortified on the land-ſide, the baſon widened, and rendered as commodious for the reception of ſhips as ever the harbour had been. The French court replied, that theſe works had no other view than to free the inhabitants from the exhalations of the ſtagnating water, a pretence as falſe as it was ridiculous, ſince the French made the greateſt advantage of this place during the late war; but at the concluſion of it, again agreed to demoliſh the works, and fill up the bar, which is the more neceſſary to be inſiſted upon, as the French have no other harbour in the Channel, but that of St. Malo's, which is only capable of receiving ſhips of between thirty and forty guns.

Mardyke is a village about four miles to the eaſt of Dunkirk, and was formerly conſiderable only on account of its fort, built on the ſea ſhore, which has often been beſieged and taken, and was at laſt demoliſhed. Mardyke at length became celebrated for its noble canal, which Lewis XIV. cauſed to be formed under the direction of Le Blanc, it being three thouſand three hundred and thirty-eight fathoms and two feet in length. It began at the canal of Bergen, near Dunkirk, and extending itſelf, with the breadth of between twenty-five and thirty fathoms, no leſs than fifteen hundred from eaſt to weſt in length; it then winded from ſouth to north, and three hundred fathoms farther had an incomparable ſluice with two baſons, one of which was forty-four feet broad, it being contrived for the reception of large veſſels; the other twenty-ſix feet in breadth, and intended for thoſe that were ſmall. By all the above treaties ſince that of Utrecht, the French have agreed to deſtroy this canal, and other works.

SECT. XI.

Of the County of Artois; its Situation, Extent, Produce, Government, and principal Cities.

THE county of Artois, which forms a part of the Netherlands, is bounded on the north by Flanders, on the eaſt by Hainault, and on the ſouth and weſt by Picardy. It is twenty-ſix French leagues in length, and about half as much in breadth. This is one of the beſt and fineſt provinces in the whole kingdom, and, beſides its great fertility, carries on a conſiderable trade in flax, hops, wool, oil of turnip-ſeed, and has ſeveral manufactures of linen.

Its principal rivers are the Scarpe, the Aa, and the Canche.

This country, together with Picardy, is ſubject to one governor-general, a lieutenant-general, and two deputy-governors, one for Arras and Bapaume, and the other for Aire and St. Omer's. Here is a provincial council, which in civil affairs is ſubordinate to the parliament of Paris. The raiſing of the royal revenues is here adminiſtered by conſent of the ſtates, which conſiſt of the clergy, a great number of abbots, and the deputies from every chapter: beſides theſe there are the nobility, who amount to about ſeventy perſons, and the commoners, who conſiſt of the council of Arras, and the deputies of the magiſtracy of the eight principal towns of the country. No cuſtoms are paid here; the free gift required is in ſome meaſure ſettled at four hundred thouſand livres; but the charges of forage are more or leſs according to the number of cavalry in the country.

The principal places in the county of Artois are the following:

Arras, the Origiacum of Ptolemy, and the Atrebatæ of Cæſar, is ſituated in a diſtrict of the ſame name, and ſtands on the Scarpe, twelve miles to the ſouth-weſt of Douay. It is a very antient and large place, divided into two parts, the one called the city, and the other the town, which is the more modern of the two; each of theſe is ſurrounded with old walls, which have round towers, built after the antient manner, and a gate, over which was an inſcription in French, "That when the "French ſhall take Arras, the mice ſhall eat the cats," as if that event was impoſſible; but the event ſhewed that it was not, for the French took it in 1640.

The old walls were repaired by Vauban, who added ſeveral baſtions, and a great number of new works in the ditch, which is large and very deep, particularly lunettes, built after Vauban's manner, and the firſt works of that kind which that excellent engineer performed. The ditch is ſurrounded with a covert-way, and a glacis as uſual, beyond which are ſeveral redoubts of a pentagonal figure, placed in the re-entering angles, and each has its particular ditch, covert-way, and glacis. The citadel is ſomewhat higher, towards the country; it is not very large, but is eſteemed one of the ſtrongeſt in the kingdom; it being an oblong pentagon, compoſed of five

baſtions, as many half-moons, four tenailles, placed in the curtains, and a fauſſe-braye, which cover the front on the city-ſide. All theſe works are ſurrounded with a ditch, into which the Scarpe runs, or at leaſt a canal drawn from that river.

This town has handſome broad ſtreets, and is inhabited by wealthy traders and artificers, who make ſail-cloth and tapeſtry, eſpecially the latter, which was invented here, and therefore that manufacture obtained the name of Arras, which is indeed very beautiful, tho' inferior to the tapeſtry made at Paris, Bruſſels, and Antwerp. The large market-place here is ſurrounded with fine buildings, among which is the governor's houſe. There are eleven pariſh churches, ſeveral convents, one ſeminary, and there was lately a college of Jeſuits. The cathedral, which is dedicated to the Virgin Mary, is a fine ſtructure, in which are preſerved ſome famous relics. The abbey of St. Vaſt has a magnificent church belonging to it; and among the chapels here, is one called the chapel of the Holy Candle, in which was kept a candle, which it is pretended was given by the Bleſſed Virgin, to the inhabitants, to cure them of an inward heat, which burnt and conſumed them. The biſhop is ſuffragan to the archbiſhop of Cambray, and has a dioceſe of four hundred pariſhes, with a revenue of twenty-two thouſand livres a year, and is taxed at the court of Rome four thouſand florins. He is lord of the city, and preſident in the aſſembly of the ſtates.

Aire, in Latin Aeria, and Aria, a conſiderable fortreſs on the river Lys, near the confines of Flanders, and about ten miles to the ſouth-eaſt of St. Omer's. This is a ſtrong and well fortified place, having, beſides the walls, baſtions, half-moons, horn-works, redoubts, counter-ſcarps, ditches, and a moraſs, which encompaſſes it on three ſides. On that ſide which is acceſſible, at the diſtance of a cannon-ſhot from the city, and the river Lys, ſtands fort St. Francis, to which you go from the city by a regular canal. This fort is a ſmall, but regular pentagon, compoſed of five baſtions, encompaſſed by a ditch, a covert-way, and glacis. The Lys divides the city into two unequal parts, which contain a collegiate church, with ſeveral convents, and had, till lately, a college of Jeſuits, with two hoſpitals, one of which is inſtituted for ſoldiers.

Notwithſtanding the ſtrength of this place, the French took it in 1641, and ſoon after it was retaken by the Spaniards. In 1676, it was again taken by the French, and was confirmed to them at the peace of Nimeguen. In November 1710, it ſurrendered to the allies, after a very vigorous ſiege, and the trenches had been open for ſix weeks; but by the treaty of Utrecht, it was reſtored again to the French.

Between Aire and St. Omer's, are the ruins of the once conſiderable city of Terouenne, which alſo ſtood on the river Lys. It was famous on account of its being inveſted by Henry VIII. king of England, in perſon, in the year 1503, aſſiſted by the emperor Maximilian, who on this occaſion wore a St. George's croſs. At this ſiege the French, attempting to throw proviſions into the town, were defeated by the Engliſh, with great ſlaughter, and from the hurry with which they fled, this was called the Battle of the Spurs, intimating that theſe were the principal weapons they made uſe of to eſcape in ſafety. A fortnight after this battle, the city was taken, but diſmantled and quitted. The French afterwards repaired it, but the emperor Charles V. taking it in 1553, levelled it with the ground, ſince which time it has never been rebuilt.

St. Omer's, the capital of a bailiwic, is called in Latin Andomaropolis, and was formerly called Sithin. It is a conſiderable city, ſeated on the Aa, eight miles north-weſt of Aire, partly on an eminence, and partly on a moraſs, and is one of the beſt fortifications in the Netherlands; it being defended not only by a caſtle, but by large baſtions, between which are half-moons, ſurrounded with large ditches, which are indeed too high to have any water in them; but are ſo deep, that it would be very difficult to mount from them to the walls of the ramparts. It is the ſee of a biſhop, ſuffragan to the archbiſhop of Cambray, and has a revenue of forty thouſand livres, and its taxation to the court of Rome is a thouſand florins.

In this city are ſeveral fine ſtreets, and a large ſquare, with many handſome houſes, among which is the town-houſe. The cathedral dedicated to St. Omer, is a noble ſtructure, chiefly remarkable for its chapels, which are embelliſhed with fine marble and beautiful paintings. Beſides the cathedral, are ſix pariſh churches, and a very rich abbey of the order of Benedictines. On each ſide of the portico belonging to it ſtands a large ſquare ſteeple of great height, where a conſtant watch is kept, to give notice whether there is an enemy in the neighbourhood of the city, the gates of which are never opened till it be day-light, and the watch has given notice, by a ſignal, that he has diſcovered no danger. Here are alſo ſeveral convents and nunneries, two hoſpitals for maidens, a general hoſpital for the ſick, an orphan houſe for poor boys, another for girls, and a houſe for twelve poor old men, in memory of the twelve apoſtles; beſides ſeveral other foundations, particularly one for annually giving a ſum of money to poor girls in marriage. Here is alſo an Engliſh ſeminary.

The city is populous and has ſome trade, a number of ſmall veſſels coming up here from the ſea by means of the river Aa. The government of St. Omer's is under a mayor, who is annually changed, and twelve echevins, and under its juriſdiction are above an hundred villages.

To the north-eaſt of St. Omer's are floating iſlands that move backwards and forwards, according to whatever motion is imparted to them. Upon theſe iſlands are ſeen graſs always growing, and the people draw them with ropes to the ſhore in order to drive their cattle into them: they have alſo ſome trees growing here, but theſe they keep very low, for fear the wind ſhould have too much hold of them, and drive the iſlands with too much violence.

SECT. XII.

Of the Province of Picardy; its Situation, Extent, Produce, Rivers, Commerce, and principal Cities, particularly Amiens, Abbeville, Calais, and Boulogne.

PICARDY is bounded on the north by Hainault, Artois, and the Streights of Calais; on the Eaſt by Champagne; on the ſouth by the Iſle of France; and on the weſt by Normandy and the Engliſh Channel. This province is long and narrow, it being uſually compared to a bent arm, and in this figure is nearly one hundred and fifty miles in length, but not above forty in breadth, and in many places not above twenty. It is generally a plain country, and produces wine, fruit of all kinds, plenty of corn, and great quantities of hay; but wood being ſcarce, moſt of the inhabitants burn turf; they have, however, ſome pit-coal, but it is not ſo good as that of England.

Its principal rivers are the Somme, the whole extent of which is confined to Picardy; it becomes navigable at Bray, and, after receiving ſeveral ſmall rivers, divides into twelve channels which are afterwards united, after which it falls into the Britiſh Channel. The Oiſe has its ſource in Picardy, on the confines of Hainault, and, after receiving ſeveral rivers, becomes navigable at La Fere, and falls into the Seine at Conflans. The Canche, which falls into the Britiſh Channel below Eſtaples. The Lanthie, which alſo falls into the Channel. The Lys, which falls into the Scheld. The Aa, which is made navigable at St. Omer's, by means of ſluices, and at laſt diſcharges itſelf into the Channel. The Scarpe, which falls into the Scheld, and the Deule, which was formerly no larger than a brook, but now by means of cannals and ſluices is become a conſiderable river.

The ſituation of this province on the ſea, its many navigable rivers and canals, with the induſtry of the inhabitants, render it the ſeat of a flouriſhing trade. In it are made beautiful ſilk ſtuffs, woollen ſtuffs, coarſe linen, lawn, and ſope; it alſo carries on a large trade in corn and pit-coal. In the government of Calais and Boulogne, are annually bought up five or ſix thouſand colts, which

which being afterwards turned looſe in the paſtures of Normandy, are ſold for Norman horſes. The fiſheries on this coaſt are alſo very advantageous.

In Picardy are four biſhoprics, two provincial courts, two governments, five courts of admiralty, four foreſt manors, and four lordſhips.

Picardy is divided into Upper, Middle, and Lower Picardy, and is again ſubdivided into four deputy governments, the principal places in which are the following:

Amiens, in Latin Ambianum, the capital of Picardy, and of the earldom of Amienois, is ſeated on the Somme, ſixty-five miles to the ſouth of Calais, and eighty to the north of Paris. It appears very delightful from the largeneſs of its ſtreets, the beauty of the houſes, and the extent of the ſquares, in two of which ſeven fine ſtreets meet. On the ramparts are planted two rows of trees, which form a very agreeable walk. The river Somme enters this city in three different channels, thro' the ſame number of bridges; ſo that after watering ſeveral parts of the town, theſe unite again at the other end near St. Michael's bridge.

The cathedral, dedicated to the Virgin Mary, is one of the fineſt and beſt embelliſhed in all France: the pillars, choir, chapels, tombs, and paintings, are particularly adorned; and more eſpecially the principal entrance, which is flanked with two lofty towers, on which are placed ſeveral ſtatues. Among other relics they pretend to have here the heart of St. John the Baptiſt. In this city is alſo a collegiate church, a chapter of St. Nicholas, fourteen pariſh churches, ſeveral abbies and convents, and an academy of the Arts and Sciences, with ſeveral hoſpitals. The biſhop is ſuffragan to the archbiſhop of Rheims, and within his dioceſe, beſides the above cathedral, are twelve collegiate churches, twenty-ſix abbies, fifty-five priories, ſeven hundred and fifty rectories, one hundred and three chapels of eaſe, and forty-eight communities. His annual revenue is thirty thouſand livres, and his taxation to the court of Rome is four thouſand nine hundred florins. Here is the ſeat of a preſidial court, an independent bailiwic and provoſtſhip, an office for the finances, and a mint. In this city and the neighbouring villages, the inhabitants carry on a manufacture of ferrets, and alſo make a conſiderable quantity of black and green ſoap.

Abbeville, that is, the Abbot's Town, is the capital of Ponthieu, a diſtrict of Picardy, and is ſeated twenty miles to the north-weſt of Amiens, and fifty-two to the ſouth of Calais, in a very delightful plain on the Somme, which divides itſelf into ſeveral branches, and parts the city into two main diviſions, the one towards the Low Countries, and the other towards Normandy. It is alſo watered by the rivulets of Scardon, Sottins, and Corneille, or Taniere. The tide here flows up the Somme, to the height of about ſix feet, by which means, and its ſituation, it is rendered a commodious port; it being but fifteen miles from the Engliſh Channel.

Abbeville was originally no more than a farm or manor belonging to the abbey of St. Requier, from which it had its name: it afterwards became a borough, from the concourſe of people who came and ſettled in it. It is now well fortified, and encompaſſed with walls, which are flanked with baſtions and large deep ditches. The houſes are moſtly of timber, old and meanly built; it is likewiſe extremely dirty, and next to Amiens is the moſt populous town in all Picardy. It contains a collegiate church dedicated to St. Ulfranc, which is a lofty ſtone building, fourteen pariſh churches, fifteen convents, a commandery of the order of Malta, and a college. It has a provincial court, with a bailiage, a foreſt court, a court of commerce, a court of admiralty, and a ſalt office. As it is conveniently ſituated for commerce, it carries on a great trade in corn, oil, hemp, flax, cordage, and ſoap. The woollen manufacture eſtabliſhed here in 1665, by Mr. Roberts; a Dutchman, has ſucceeded ſo well, that at preſent its cloths are little inferior in fineneſs and goodneſs to thoſe of England. In it are alſo made very beautiful barragons, together with mocades, a kind of carpets, dimity, pluſh, coarſe linen, ſpun wool, and fire arms.

Calais, a ſtrong ſea-port town, in the fifty-firſt degree two minutes north latitude, and in the third degree fifteen minutes weſt longitude, one hundred and forty-three miles to the north of Paris, in a marſhy plain, on the narroweſt part of the Britiſh Channel, which is here only about ſeven leagues broad; here the white chalky cliffs of Dover may be ſeen from the coaſt; and between Dover and Calais, go two packet-boats twice a week. The figure of this city, including the citadel, is an oblong ſquare, the two long ſides of which are each about two hundred and twenty perches in length; and the two ſhorteſt about ninety. One of the largeſt ſides is towards the ſea, and very well fortified; the other is towards the land, defended by baſtions lined with ſtone, and covered with half-moons and deep ditches, nine or ten perches broad, that can be filled either with ſalt or freſh water, as they pleaſe. The ſhort ſide that lies oppoſite to the fort of Nieulai, may be defended by being laid under water, and the other ſide, called the Attack of Gravelines, is ſtill better fortified. The whole is encompaſſed by a covert-way, and fort Nieulai, juſt mentioned, is ſaid to be a perfect piece of fortification in its kind: it has four baſtions, and from thence the whole country about Calais may be laid under water in leſs than twenty-four hours. The citadel has ſtill its ancient circuit and ditches, but the chevalier de Ville has ſurrounded it with a new encloſure with three regular baſtions; and it is ſo advantageouſly ſituated, that it not only commands the town and fort, but likewiſe all the neighbouring country. Ships enter the port by a long canal, made by order of Lewis XIV. between two moles; at the head of each is a horn-work, defended by a half-moon, and encompaſſed by a wall, a deep ditch, and covert-way.

This port is very happily ſituated, but has ſeveral inconveniencies, for no veſſel can enter it without running a great riſque; it being almoſt choaked up, and there is no road for ſhips to ride at anchor. The canal at Calais is, however, of great uſe to the inhabitants for inland navigation; for by means of this canal one may eaſily paſs by water from Calais to St. Omer's, Gravelines, Dunkirk, Bruges, and Ypres. However, notwithſtanding the convenient ſituation of Calais, with reſpect to England and Holland, it is leſs populous than might be expected, it being ſuppoſed to contain only five thouſand inhabitants.

The ſtreets of Calais are ſtraight, well paved, and adorned with ſeveral houſes in the modern taſte. In the city is only one pariſh church, which is a fine building, and has a very magnificent dome, and a very beautiful altar of marble; there is another church in the ſuburbs of St. Peter. It has four convents, two communities for the inſtruction of youth, and two alms-houſes.

The inhabitants carry on a good trade in wine, brandy, ſalt, flax, horſes, and butter. They are exempt from all taxes, but the aſſeſſments for the repairs of the fortifications and canals run high. The city has a particular governor, a deputy-governor, and a mayor; and to the government of Calais belong twenty-four pariſhes.

Edward III. king of England, took the city after a memorable ſiege in the year 1347; and after the Engliſh had it in their poſſeſſion about two hundred years, it was retaken by the duke of Guiſe in 1558. It was, however, agreed by the treaty of Chateau-Cambreſis, that Calais ſhould continue in the hands of the French during the ſpace of eight years, after the expiration of which term it was to be reſtored to the Engliſh. Queen Elizabeth accordingly demanded it, but the chancellor de L'Hopital refuſed to reſtore it, under pretence that during the firſt religious war in France, which began three years after the above treaty of peace, the Engliſh had ſeized Havre de Grace, and by this means had violated the treaty, and forfeited their right to Calais, which the French kept, though the Engliſh did not keep Havre de Grace, it being retaken by the French. Albert, archduke of Auſtria, and governor of the Low Countries, made himſelf maſter of Calais in the year 1596; but it was reſtored two years after to Henry IV. of France, by virtue of the treaty of Vervins. In ſhort, this city was bombarded by the Engliſh in the years 1694, 1695, and 1696.

Boulogne, the ancient Geſoriacum, or Giſoriacum, and ſince Bononia, is the capital of a diſtrict, called the Boulonois, a particular government entirely independent of the governor-general of Picardy. This city ſtands upon a hill, at the mouth of the little river Liane, ſixteen miles to the ſouth-weſt of Calais. The harbour is very incommodious, with a narrow entrance, into which merchant-ſhips can only enter at time of flood; and St. John's road before the city, for ſhips of war can come no farther, is extremely bad, no veſſels being able to weather it there, unleſs the wind blows from ſome point between the north and ſouth-eaſt; for with all other winds the ſea is extremely rough and boiſterous. Here formerly ſtood a watch-tower, called by the French *La Tour d'Ordre*, the Tower of Orders, and by the Engliſh the Old Man, ſaid to have been firſt built by Julius Cæſar, and repaired by the emperor Charlemagne; but having been neglected, it fell down, and in the room of it was erected a ſmall fort, which ſerves for the defence of the harbour.

The city is divided into the Upper and Lower Town, the former of which is well fortified with a ſtrong citadel, and in it are ſeveral public ſquares and beautiful fountains, together with a palace, where juſtice is adminiſtered. Here is alſo a cathedral dedicated to the Virgin Mary, more venerable for its antiquity than for any thing elſe; alſo the parochial church of St. Joſeph; an abbey of St. Vilemar; beſides ſome monaſteries, a ſeminary for the education of ſuch as deſign to take holy orders, and an hoſpital built at the expence of the family of Aumont. The Lower Town, which is not inhabited by ſo many perſons of quality as the other, is larger and more conſiderable for its trade, it being chiefly inhabited by merchants and tradeſmen, and extends along the little port at the mouth of the river. The biſhop of this place is ſuffragan to the archbiſhop of Rheims, and has under his juriſdiction two hundred and ſeventy-ſeven pariſhes, with one hundred and forty-ſeven chapels of eaſe, and a revenue of twelve thouſand livres, out of which he pays fifteen hundred florins to the court of Rome.

In the year 1478, Lewis XI. ſurrendered this country to the Virgin Mary, declaring that for the future he and his ſucceſſors ſhould hold it from her immediately as her vaſſals, paying her for homage a golden heart at their acceſſion to the crown; in purſuance of which Lewis XIV. paid twelve thouſand livres for himſelf and his father Lewis XIII.

Boulogne was taken by Henry VIII. king of England, in the year 1544, and afterwards reſtored to the French king Henry II. by a treaty of peace in 1550, in conſideration of his paying three hundred thouſand crowns.

SECT. XIII.

The Situation, Extent, Produce, Rivers, and Government of Champagne and Brie; with a Deſcription of the principal Cities, as Troyes, Chalons, Rheims, and Sens.

THE province of Champagne is bounded on the north by Hainault and part of the biſhopric of Liege; on the eaſt by Luxemburg and Lorrain; on the ſouth by Burgundy; and on the weſt by the Iſle of France and Picardy; it being one of the moſt conſiderable provinces in the whole kingdom. This province extends from the weſt to the ſouth-eaſt, or from Lagny to Bourbon, forty-ſix leagues in length, and from ſouth to north, or from Ravieres to Rocrois, about fifty-four. It derives its name from the large plains in its center, but its borders are full of foreſts, hills, and mountains.

This country produces plenty of grain, but is particularly famous for its wine, which is exported in great quantities; and the natural commodities in which the inhabitants trade, are corn, wine, iron, wood, and cattle, with hay, woollen and ſilk ſtuffs, linen, &c.

Its principal rivers are the Meuſe or Maeſe, which receives its ſource near the village of Meuſe; the Seine; the Maine, which riſes in Baſſigny; the Aube, which has its ſource on the frontiers; and the Aiſne or Aine.

In this country are two archbiſhoprics and four biſhoprics. It is governed by the parliament, the chamber of accounts, and exchequer of Paris, except the territory of Sedan, which belongs to the parliament of Metz. It has ten provincial and diſtrict courts, ſeveral foreſt-courts, two courts of mintage, and a generalité. The military government of this province is lodged in a governor, four general-lieutenants, under whom are four hereditary ſub-governors. The principal cities in this country are the following:

Troyes, the ancient Auguſtomana, or Auguſtobona, the capital of the province, is ſeated in Lower Champagne, on the river Seine, about ſeventy miles to the ſouth-eaſt of Paris, and is pretty large, but far from being ſo flouriſhing and populous as formerly. It has fourteen pariſh churches, including the cathedral, and two collegiate churches, with four abbies, ten convents, one college, one ſeminary, and one hoſpital. The cathedral, which is dedicated to St. Peter, is a very noble ſtructure; its portico is in a fine taſte, but the tower on the left-ſide of it has been left unfiniſhed.

The city is ſurrounded with walls, but they are not kept in good repair; and formerly it had three caſtles, from which it is ſuppoſed to have obtained its preſent name; but there are now few remains of them left. The biſhop of Troyes is ſuffragan to the archbiſhop of Sens; his dioceſe contains three hundred and ſeventy-two pariſhes, ninety-eight chapels of eaſe, with ſeventeen abbies; his yearly revenue is fourteen thouſand livres, and his taxation at the court of Rome is two thouſand florins. This city ſtill carries on a tolerable trade, eſpecially in linen, flax, hemp, and cotton fuſtians, canvas, wax and tallow-candles, needles, ſerges, and tapeſtry.

Chalons, a large city ſeated on the Maine, in the Chalonois, a ſmall territory, and ninety-five miles to the eaſt of Paris. In this city is a cathedral, two chapters, eleven pariſh-churches, three abbies, nine convents, and there was till lately a college of Jeſuits. The biſhop, who is alſo a count and peer, is ſuffragan to the archbiſhop of Rheims, and in his dioceſe are comprehended three hundred and four pariſhes, ninety-three chapels of eaſe, with nineteen abbies. His yearly revenue is twenty-four thouſand livres, and his taxation at Rome three thouſand florins. The inhabitants carry on a conſiderable trade in ſhalloons, which took their name from this place, and in other woollen ſtuffs.

Rheims, the antient Durocortorum, and Civitas Remorum, the capital of a diſtrict called the Rheimois, is ſituated ſixty-two miles to the north of Troyes, and eighty-five to the north-eaſt of Paris, and is one of the moſt antient and celebrated cities in the whole kingdom. It is about four miles in circumference, and contains ſeveral fine ſquares, large ſtreets, well built houſes, and magnificent churches. Among theſe is the cathedral of Our Lady, which is a fine ſtructure, though of Gothic architecture; the principal door is remarkable for its workmanſhip, and the great altar, at which the coronation of the kings of France is performed, is plated with gold. The treaſury of this cathedral muſt be very great, as every king at his coronation makes an offering here. The book of the Goſpel upon which the king takes the coronation oath, is ſaid to be written in the Sclavonic tongue, and the cover is of gold ſet with gems. The archbiſhop of this place is the firſt duke and peer of France, perpetual legate of the ſee of Rome, and primate of all Gallia Belgica. He alſo crowns the king; he has an annual revenue of fifty thouſand livres, and his taxation at the court of Rome is four thouſand ſeven hundred and fifty florins. Here are alſo three collegiate churches, five abbies, nine convents, a commandery belonging to the order of St. Anthony, a commandery of the knights of Malta, and, till the Jeſuits were expelled, they had here a large ſeminary, and a fine college.

The abbey of Benedictines of St. Remy in this city is one of the nobleſt belonging to that order in all France; and on the altar of its church is kept the holy phial, which at the baptiſm of Clovis, in 496, by biſhop Remigius, they pretend was brought from heaven by a dove, at the prayer of that ſaint, the crowd being ſo great that he was unable to get to the font with the uſual oil.

oil. This phial is of a dark red glaſs, about the length of one's little finger, and nearly reſembles in ſhape a ſmall Hungary-water bottle. It has a gold ſtopper, and is fixed in a perforated ſquare caſket faſtened on a ſilver ſalver, it being ſeen only through a cryſtal cover placed over the caſket. The oil is ſaid to be grown dry, but on every unction of a king of France a ſmall quantity of it is taken out, and mixed with the oil prepared for the unction. The univerſity here was founded in the years 1547 and 1549. Among the other public buildings are three ſpacious hoſpitals. The city carries on a conſiderable trade in wine, woollen and ſilk ſtuffs, and gingerbread. It has ſeveral remarkable remains of Roman antiquities, particularly three gates of the city, which to this day bear the names of ſo many pagan deities, namely, of Mars, of the Sun, and Ceres.

Sens, the Agendicum of the antients, the capital of a diſtrict called the Senonois, is ſeated on the Yonne, and is large but not very populous, though it is well ſituated for trade. This city is the ſee of an archbiſhop, whoſe revenue amounts to fifty thouſand livres, and its taxation to the court of Rome is ſix thouſand one hundred and ſixty-ſix florins. The cathedral, which is dedicated to St. Stephen, is admired for its ſtately front, it being adorned with various figures and lofty towers; as alſo on account of its rich chapels, antient tombs, and the magnificence of the high altar, where is a table of gold enriched with precious ſtones, and on which is repreſented in relievo the four Evangeliſts, together with St. Stephen. There are here alſo ſixteen pariſh-churches, five abbies, nine convents, and there was till lately a college of Jeſuits.

Several councils have been held in this city, one of the moſt famous of which is that in the year 1140. It contains a provincial diſtrict, and foreſt court, together with a ſalt-office.

Meaux, in Latin Meldi, the capital of a diſtrict called Brie Champenoiſe, is ſeated on the river Marne, twenty-five miles to the north-eaſt of Paris, and contains a provincial and diſtrict court, a ſalt-office, &c. It has alſo a general-lieutenant, and a particular governor. The biſhop is ſuffragan to the archbiſhop of Paris: his dioceſe is divided by the river Marne into two large archdeaconries, to each of which belong three rural deanries; under both theſe are nine abbies, ſeven chapters, and two hundred and twenty-ſeven pariſhes. The biſhop's annual revenue amounts to twenty-two thouſand livres, and his taxation at the court of Rome to two thouſand florins. Beſides the cathedral there are in this city one chapter, five abbies, ſeveral convents, one alms-houſe, and one hoſpital.

SECT. XIV.

Of the Government of Burgundy; its Name, Situation, Extent, Rivers, Government, and a Deſcription of the principal Cities; particularly Dijon, Autun, and Trevoux, the Capital of the ſmall Principality of Dombes.

BURGUNDY, called by the French Burgogne, derives its name from the Burgundians, who, towards the beginning of the fifth century, ſettled in Swiſſerland and Franche Comté, whence ſpreading themſelves towards the rivers Soane and Rhone, they erected a kingdom of their own, which was gradually reduced by the kings of the Franks. This country is bounded on the north by Champagne, on the eaſt by Franche Comté, on the ſouth by Lyonnois, and on the weſt by the Bourbonnois and Nivernois. It extends from eaſt to weſt above thirty French leagues, and from north to ſouth above forty-five.

It is very fertile in corn and fruit, producing in particular excellent wine.

The rivers here are the Seine; the Dehune, which runs into the Soane; the Brebince, or Bourbince, which iſſues out of the lake of Longpendu; with the Armançon, the Ouche, and Tille, with ſeveral mineral ſprings.

In this government are four biſhopricks. The diſtrict and provincial courts are ſubordinate to the parliament of Dijon, which was erected in 1476; except the provincial courts of Maçon and Auxerre, and the diſtrict of Bar-ſur-Seine, which are ſubject to the parliament of Paris. The ſtates of the country, conſiſting of the repreſentatives of the nobility, clergy, and commons, meet regularly every three years by writ from the king, in order to raiſe the ſums required of them.

Dijon, in Latin Divio, the capital of the country, and government of Burgundy, is ſituated in the Dijonois, about a hundred and forty miles to the ſouth-eaſt of Paris. It is fortified after the antient manner, and defended by a caſtle flanked with great round towers. It is a pretty large city; the ſtreets are well paved, broad, and ſtraight; the houſes are handſome, and the churches and ſquares beautiful. The neighbouring country is fruitful, pleaſant, and watered by the rivers Suſon and Ouche; the firſt of which is but a rivulet, and, after running through the city moat, paſſes through the city itſelf, where it falls into the Dijon.

In this city are ſeven pariſh-churches, four abbies, three large hoſpitals, or alms-houſes, ſeveral convents, with a chapel in which is kept a ſuppoſed miraculous hoſt; and the Jeſuits had here a magnificent houſe. There are in this city likewiſe an academy of ſciences, and in 1723 a college of law was alſo erected here.

The walks before the city are a quarter of a league in length, planted with three rows of linden-trees, and terminated by a delightful grove. This city is the reſidence of the governor, the parliament, an intendancy, a taillage-office, a provincial, ſupreme, and particular court, a ſalt-office, &c. The biſhop is ſuffragan to the archbiſhop of Lyons, and enjoys a revenue of eighteen thouſand livres a year, out of which he pays to the court of Rome twelve hundred and thirty-three florins.

Autun, the Auguſtodunum of the antients, ſtands on an eminence near three hills on the river Arux, and is about a mile in length and as much in breadth. It conſiſts of the Upper city, which is commanded by Mount Cenis, and the Lower city, in which is the citadel, and where are held the provincial tribunal, a foreſt court, a ſalt-office, and ſeveral other courts. The biſhop of this place is ſuffragan to the archbiſhop of Lyons, though he is preſident of the aſſembly of the ſtates of Burgundy, and has a dioceſe of ſix hundred and eleven pariſhes and fourteen abbies under him. His revenue amounts to ſeventeen thouſand livres, and his taxation at the court of Rome is four thouſand and eighty florins. In this city is one cathedral, five abbies, two ſeminaries, two priories, one collegiate and twelve pariſh-churches. There was here alſo a college of Jeſuits, and there are at preſent ſix convents, particularly a fine chartreuſe, ſituated in the ſuburbs, in the church of which lie the laſt dukes of Burgundy, and two hoſpitals. In the midſt of the city is an open place called The Field of Mars, and there are ſtill the remains of three pagan temples, one of them dedicated to Janus, and another to Diana. Here are likewiſe two antient gates of excellent workmanſhip, which ſome have taken for triumphal arches, with a circus and the remains of a pyramid; which laſt, to all appearance, has been a tomb.

Auxerre, in Latin Antiſſiodorum, the capital of the earldom of Auxerrois, is ſituated on a hill near the river Yonne, ninety-two miles to the ſouth of Paris. It has a provincial and foreſt court, a chamber of tythes, a ſalt-office, &c and is the ſee of a biſhop, ſuffragan to the archbiſhop of Sens; his dioceſe contains two hundred and thirty-eight pariſhes, and he has a yearly revenue of thirty-five thouſand livres, out of which he pays four thouſand four hundred florins to the court of Rome. His palace is a moſt noble ſtructure. In this city are alſo a collegiate and eight pariſh-churches, five abbies, ſix convents, one commandery of the knights of Malta; and, till the expulſion of the Jeſuits, they had a ſeminary and a college in this city; there are here likewiſe two hoſpitals. This place, by means of the Yonne, carries on a good trade.

Trevoux, the antient Tivurtium, the capital of the principality of Dombes and of the caſtellany of Trevoux, is ſeated on a hill by the Saone, a hundred and eighty-eight miles to the ſouth-by-weſt of Paris, and is the reſidence of a governor, a parliament, a diſtrict court, and a mint.

a mint. It is ſaid to have derived its name from its ſituation on one of the highways which Agrippa made into Gaul, and which here divides into three branches. It has one chapter, three convents, and an hoſpital.

This city, with the little principality of Dombes, belongs to the duke of Maine, and was declared by Lewis XIV. an abſolute principality. Hence the prince of Dombes has here the power of life and death, can confer nobility, coin money, and impoſe what taxes he pleaſes on his ſubjects, though he has his own parliament. His certain revenue is about a hundred and fifty thouſand livres, and this little principality is governed by a governor-general in the prince's name.

SECT. XV.

Of the Situation, Produce, Government, and principal Cities of the Government of Lionnois; with a particular Deſcription of the City of Lyons.

LYONNOIS is bounded on the north by Burgundy, on the eaſt it is ſeparated by the Soane and Rhone from Dauphiné, on the ſouth it is bounded by Vivarais and Velais, and on the weſt by Auvergne. It comprehends the three ſmall provinces of Lyonnois, Beaujolois, and Forez; and produces corn, wine, and fruit, particularly an excellent kind of large cheſnuts called marrons.

The principal rivers are the Rhone, Soane, and Loire; beſides ſeveral ſmall ones, as the Furan, Azerque, Rhin, Lignon, &c. Here is alſo a mine of copper and vitriol, with ſeveral mineral ſprings.

The courts of this government proceed according to the civil law, and appeals from them lie to the parliament of Paris. Beſides its governor and general-lieutenant, it has two ſub-governors, one over Lyonnois and Beaujolois, the other over Forez.

We ſhall begin with Lyonnois, which is about twelve French leagues in length, and ſeven in breadth.

Lyons, in Latin Lugdunum, the capital of the Lyonnois, and of the whole government, ſtands fifteen miles to the north of Vienne, in Dauphiné, at the conflux of the Soane and the Rhone; the former runs through a part of the city, and has two bridges of wood, and a narrow one of ſtone; but the ſtone bridge over the Rhone is a noble ſtructure. This city is about a fourth part as large as Paris, and is very populous; but moſt of the ſtreets are narrow. The houſes, which are ſaid to amount to four thouſand, are generally high and well built, but diſgraced by the raggedneſs and mean appearance of their paper windows; and they are ſaid to contain above ninety thouſand ſouls.

In Lyons are ſeveral fine ſquares, in one of which is the town-houſe, the moſt elegant in Europe, which was begun in 1647, and finiſhed in 1655. It is a large building in the form of an oblong ſquare, and on each ſide of the front is a wing four hundred and twenty feet in length. In the middle of the front is a tower, with a cupola on the top, and in the angles project two large pavilions. The great gate is adorned with two columns of the Ionic order, and leads into a large hall arched over, where are to be ſeen the buſts of Philip the Fair, Charles VIII. and Henry IV. with the pictures of all the kings of France of the name of Lewis: the roof is alſo finely painted. There are here alſo the conſular chamber, where the provoſt and the four echevins uſually ſit; the hall where the merchants hold their meetings; and in another hall are the pictures of the echevins. Before the houſe is a handſome ſquare, in which is a large fountain.

The cathedral of Lyons is dedicated to St. John, and the chapter conſiſts of gentlemen of the beſt families. They boaſt of their having formerly had ſeveral kings and princes, who were members of it; particularly in the thirteenth century, when at one time they had the ſon of an emperor, nine ſons of kings, fourteen ſons of dukes, thirty of counts, and twenty of barons. To this chapter belong not only the cathedral, but the churches of St. Stephen and the Holy Croſs. The cathedral is indeed a large ſtructure, particularly famous for its clock, which like that at Straſburg, is celebrated for the variety of its motions; for at every hour a cock at the top claps his wings thrice, and crows twice, after which an angel coming out of a door, ſalutes the Virgin Mary, and at the ſame time the Holy Ghoſt deſcends, and an image of God the Father gives the benediction. The minute motion has an oval circle, and yet the hand always touches the circumference. Beſides the cathedral, are three chapters or collegiate churches, thirteen pariſh churches, and till lately there were two colleges of Jeſuits, the largeſt of which was the moſt ſtately in all the kingdom. This ſtructure is a regular quadrangle, curiouſly painted in freſco, though ſomething defaced on the eaſt-ſide, where the winds from the mountains beat upon it. Over the front-door, and over part of the church of that college is an obſervatory, one of the boldeſt pieces of architecture in Europe. Their chapel has a fine altar-piece of lapis-lazuli, and an excellent piece of painting by Blanchard. Their library is a ſpacious and handſome apartment, in which were ſome manuſcripts of the Bible, but not very ancient; but one of the moſt valuable pieces was a manuſcript of Pliny's Natural Hiſtory, of conſiderable antiquity.

Without the gate of St. Juſtus, is a large ſuburb where the bare-footed Carmelites have a delightful convent, with ſpacious gardens, from which there is a fine proſpect of the city: in their church is an altar of agate and lapis-lazuli. The Capuchins have alſo the pretended miracles of their ſaint painted on the walls of their cloiſter, among which is one of his paying his apothecary with prayers, inſtead of money. The nunnery of St. Peter is a fine ſtructure, and the pariſh church of St. Niege is adorned with ſeveral fine pieces of painting by Le Brun.

In one of the ſquares ſtands an equeſtrian ſtatue of braſs of Lewis XIV. La Belle Cour is a ſpacious area, and near it are a mall and a delightful walk. The monument of the two Lovers ſtands on the other ſide of the Soane, and ſeems to have been ſome Roman building, conſtructed with very large ſtones. The Fryars in Lyons are very importunate beggars, coming into the chambers of ſtrangers.

The arſenal here is a fine building, well ſtored with military implements; here are alſo three forts, but one of them is only garriſoned, and that ſerves for the priſon of the city. In this city are here ſtill to be ſeen ſome remains of Roman antiquities, as baths, aqueducts, and part of an amphitheatre.

This place is an archbiſhopric, and has an intendancy, a mint, with a provincial and other courts. Its archbiſhop is primate over the archbiſhoprics of Rouen, Tours, Sens, and Paris; ſo that appeals lie from them to him. He has alſo ſix biſhops for his ſuffragans, with a dioceſe of ſeven hundred and ſixty-four pariſhes, and a revenue of forty-eight thouſand livres, out of which he is taxed by the court of Rome three thouſand florins, and beſides the title of archbiſhop, he has that of count of Lyons.

Round the city lie ſome mountains which being variegated with convents, ſeats, gardens, and vineyards, form a very delightful proſpect.

Moſt of the inhabitants are makers of ſilk, gold, and ſilver laces. Formerly the looms in and about this city amounted to eighteen thouſand; but in 1698, this number was found reduced to four thouſand. It is ſtill, however, in great repute for the above manufactures, particularly for its bombaſines, which are admired for their beautiful luſtre; and its trade extends not only over all France, but even to Spain, Italy, Swiſſerland, Germany, and the Netherlands.

Forez, the next diviſion of this province, is equal in extent to Lyonnois and Beaujolois put together, and has ſeveral ſmall towns. Its capital is Montbriſon, ſituated on the little river Veziza, ſeventeen miles to the ſouth-weſt of Lyons, and has ſeveral courts of juſtice and public offices: it has alſo a collegiate church, with ſome other churches and convents.

Beaujolois is a diſtrict ten French leagues in length, and eight in breadth. This is a very fruitful country. Its capital is Ville Franche, which is ſeated on the little river Morgon, near the Soane; and has a collegiate church, and an academy of the polite Arts, with ſeveral public offices.

SECT. XVI.

Of Languedoc; its Situation, Extent, Climate, remarkable Winds, Minerals, Mountains, and Produce; with a Deſcription of the Plant called Woad, and the Fork-Tree. The Springs and Rivers of this Province, with a Deſcription of the Canal which forms a Communication between the Ocean and the Mediterranean. The Trade and Government of this Province; with an Account of its principal Cities, Toulouſe, Narbonne, Montpellier, Niſmes, with its Antiquities, and a Deſcription of the Aqueduct called Pont du Guard, &c.

LANGUEDOC is bounded on the eaſt by the Rhone, which ſeparates it from Provence and Dauphiné; on the north by Lyonnois, Auvergne, and Guienne; on the weſt a part of it is divided by the Garonne from a part of Gaſcony; and on the ſouth it terminates on the countries of Rouſſillon and Foix, and alſo on the Mediterranean. The eaſtern coaſt from Agde as far as the Rhone is remarkably increaſed, the ſea having retired from it conſiderably, as evidently appears on conſulting the accounts of antient geographers with reſpect to the ſituation of ſeveral of its maritime places when compared with the preſent. The figure of this country is very irregular; its extent, however, from eaſt to weſt may be computed at about ſeventy leagues, but from north to ſouth in the narroweſt part it is between ten and twelve; but in the broadeſt weſtward it is almoſt thirty, and to the eaſtward near thirty-two.

The winds in this country are very remarkable. Along the ſouthern coaſt, which is properly a long valley, extending from Toulouſe to the ſea, generally blows a weſt wind, though it is ſometimes north and ſometimes ſouth-weſt. This wind gradually increaſes, and being cool refreſhes the country in ſummer. The inhabitants call it Cirs, in conformity to its antient name Circius. Oppoſite to this blows another from the eaſt or ſouth-eaſt, which is called Autun. This is firſt perceived near Narbonne, and at Caſtelnaudari is very violent. It is hot, cauſes head-achs, with loſs of appetite, and ſeems to ſwell the whole body. In the eaſtern part of Languedoc is frequently felt a cold and very ſtrong north wind, which follows the courſe of the Rhone in the valley through which it runs from north to ſouth, and is called Biſe, or Black. Sometimes, in direct oppoſition to the latter, blows a ſea-wind, which is uſually accompanied with a drizzling rain; but when dry, has the ſame morbid effects as the Autun in Upper Languedoc: beſides, in the heat of ſummer, from the coaſt of Leucate to the Rhone, ſea-breezes conſtantly ſet in, at nine or ten o'clock in the morning, and, to the great refreſhment of the air, laſt till about five in the evening. Laſtly, it is alſo obſervable, that at the foot of the Pyrenees, near the village of Blaud, in a narrow valley wholly environed with mountains, except towards the north-weſt, and through certain openings two or three hundred paces wide, blows a very cool weſt or north-weſt gale, which chiefly prevails in ſummer, and then only in the night. In clear and warm weather this gale is much ſtronger than in a thick and cold air. In ſummer it cools the whole valley, and in winter prevents white froſts; and, as it blows only in the night, the inhabitants of the village of Blaud can winnow their corn at no other time.

This province produces ſome very beautiful marble, and in ſeveral places in Lower Languedoc are found turquoiſes. There are here alſo lead and iron mines.

This country is very mountainous, particularly the Cevennes, which are of great height and very ſteep; yet theſe being, as it were, the head-quarters of the Proteſtants, abound in people. It produces plenty of corn, fruit, and fine wine; with large plantations of olives and mulberry-trees, the latter for ſilk-worms and the former for oil, though this laſt is inferior to that of Provence. They here tread out the corn in the manner practiſed in the Eaſt, by cauſing a number of mules and horſes to turn round a circle upon the grain, which is ſtrewed under them, and afterwards alſo tread the ſtraw into ſmall pieces to ſave the trouble of chopping it.

Among the products of the ſoil may be reckoned woad, which particularly grows in Upper Languedoc. This plant has its root uſually an inch thick, and a foot or a foot and a half in length, with five or ſix leaves growing from it, that are a foot long, and ſix inches broad. The flower repreſents a croſs, and bears an oblong ſeed, which is ſometimes of a violet, and ſometimes of a yellow colour; but the former is the beſt. It is uſually ſown in February, and requires a good ſoil, with great care after it begins to ſhoot. When the herb is ripe, it is cut off cloſe to the ground, and immediately pounded to a paſte, which is made up into cakes, or balls; and theſe, when thoroughly dried in the ſun, are reduced to a powder, which gives a very beautiful and laſting blue.

The fork-tree is alſo one of the curioſities of this country, though it is alſo found in Spain and Italy. The ſtem of this tree is from two to four feet high, when its farther growth is generally checked. At the top of its ſtem grow a conſiderable number of ſtraight ſhoots, which are ſuffered to riſe five or ſix feet, and about the third year are cut into the form of three-pronged forks; and in the ſixth, ſeventh, and frequently not till the ninth, when they have completed their growth, are carefully cut off cloſe to the ſtem, and undergo a ſecond formation in a hot oven.

There are here ſeveral periodical and medicinal ſprings. The principal rivers are the Rhone; the Garonne, which iſſues from the Pyrenean mountains; the Aude; the Tarne, which proceeds from the Gevaudan; the Allier, which riſes in the ſame country; and the Loire, which iſſues from the Vivarez, and falls into the Mediterranean.

The royal canal formed in order to make a communication between the ocean and the Mediterranean ſea, that veſſels might paſs from one ſea into the other without going round by Spain, is one of the nobleſt works that any country has ever produced, and therefore deſerves an ample deſcription. Under Lewis XIV. Riquet, after employing twenty years in a minute conſideration of every particular, during which he had no other counſeller than his gardener, completed his plan, which he executed between the years 1666 and 1680.

This canal begins at the harbour of Cette on the Mediterranean, and traverſes the lake of Thau, and a quarter of a mile below Toulouſe is conveyed by three ſluices into the Garonne. It is forty French leagues in length, and every where ſix feet deep; ſo that a cargo of eighteen hundred quintals may be forwarded to any place upon it, and its breadth, from one bank to the other, is a hundred and forty-four feet. In the whole canal are ſixty-four large ſluices, many of which conſiſt of two, three, and four ſmaller ones, by means of which the water is confined in the riſing grounds.

At St. Ferreol, a quarter of a mile below Revel, between two rocky hills, that are in the form of a half-moon, is a large reſervoir twelve hundred fathoms in length, five hundred in breadth, and twenty deep, the whole ſurface being ſix hundred and eighty-ſeven thouſand four hundred and thirty-eight feet. Into this baſon of water the rivulet of Laudot, which runs down the hills, is received, and encloſed by a wall two thouſand four hundred feet long, a hundred and thirty-two in height, and twenty-four feet thick, having a ſtrong dam defended by a ſtrong wall of free-ſtone. Under the dam runs an arched paſſage reaching to the main wall, where three large cocks, of caſt braſs, are turned and ſhut by means of iron bars; and theſe cocks diſcharge the water through mouths as large as a man's body into an arched aqueduct, where it runs through the outer wall, and when got beyond it goes on under the name of the river Laudot, continuing its courſe to the canal called Rigole de la Plaine. From thence it is conveyed to another fine reſervoir near Naurouſe, two hundred fathoms in length, a hundred and fifty in breadth, with the depth of ſeven feet; and out of this baſon it is conveyed by means of ſluices, as well to the Mediterranean ſea as to the ocean, according as the canal wants it. Though the above cocks remain open for ſome months ſucceſſively, yet there is no viſible diminution of the water in the great reſervoir. Near Bezieres are eight ſluices, which form a regular and

grand caſcade nine hundred and thirty-ſix feet long, and ſixty-ſix high, by means of which veſſels may paſs croſs the river Orb, and continue their voyage on the canal. Above it, between Bezieres and Gapeſtan, is the Mal Pas, where the canal is conveyed for the length of a hundred and twenty fathoms under a mountain cut into a very lofty arcade, the greateſt part of which is lined with free-ſtone, except towards the end, where it is only hewn through the rock, which is of a ſoft ſulphureous ſubſtance. At Agde is a round ſluice, with three openings, three different depths of the water meeting there; and the gates are ſo ingeniouſly contrived, that veſſels may paſs through by opening which the maſter pleaſes; an invention which ſtruck the great Vauban himſelf with admiration. The leſſer rivers and ſtreams that might have prejudiced the canal have been carried under it by watercourſes, of which there are forty-four, and eight bridges.

This canal coſt thirteen millions of livres, part of which money was furniſhed by the king, and part by the ſtates of Languedoc. The king generouſly granted to Riquet, the inventor, and his male heirs, all the juriſdiction and revenues belonging to it; ſo that the crown does not come into poſſeſſion till the extinction of that line. Ships paſſing on it for every hundred weight pay twenty ſous, and even the king himſelf pays the ſame toll for military ſtores, &c. ſent by way of this canal; ſo that the revenue, eſpecially in time of a briſk trade, is very conſiderable. However, the charges attending it are alſo very great; for the ſalaries of the ſeveral directors, receivers, comptrollers, lieutenants, clerks, and watchmen, annually amount to one hundred thouſand livres, beſides the great expence of repairs. The counts of Caraman, deſcendants of the above-mentioned Riquet, are alſo obliged to keep paſſage-boats, which are drawn by mules or horſes; and though there are no paſſengers, they muſt go and come at ſtated times.

The coaſt of Languedoc is dangerous, and alſo in want of good and ſecure harbours. With reſpect to its trade, the city of Montpellier, by means of the river Lez, and the lakes near it, carries on, at the harbour of Cette, the greateſt maritime trade in all the province; but the whole is not very conſiderable. The commerce of this province principally conſiſts of manufactures and other goods. Wine is exported hence to the coaſts of Italy; oil to Swiſſerland and Germany; and, when the harveſt is uncommonly good, corn to Italy and Spain; dried cheſnuts and raiſins are ſent to Tunis and Algiers; and cloth to Swiſſerland, Germany, and the Levant.

Towards the middle of the ſixteenth century the Reformation made an extraordinary progreſs in this country; but was ſoon attended with civil war, and all the rage of perſecution, which was carried on here with greater fury than in other parts of France; and Languedoc was the ſcene of continual troubles and cruelties for above an hundred years; but though more blood was ſhed here than in the whole kingdom beſides, there are ſtill in this province a great number of ſecret Proteſtants.

The Popiſh clergy are here extremely numerous and wealthy, there being in Languedoc three archbiſhops and twenty biſhops, and the whole eccleſiaſtical revenues amount to twenty-five millions forty-one thouſand eight hundred and fifty-two livres per annum. It has alſo a great number of inferior courts ſubject to the ſupreme ones, which are the parliament of Toulouſe, and the chamber of accompts and taxes at Montpellier. The governors of diſtricts here reſemble the bailiffs in the other provinces, and are eight in number. Every diſtrict has a court of juſtice, to which lie appeals from the Vigueries or royal courts. In it is alſo a ſuperior foreſt court, with ſeven dependent on it. The parliament conſiſts of the clergy, the nobility, and the commons, who are called together by the king every October. Under the governor of Languedoc are three general lieutenants, namely, one over Upper Languedoc, the ſecond over Lower Languedoc, and the third over the dioceſes of Niſmes, Alais, Mende, Puy, Viviers, and Uſez. It has alſo nine inferior governors, each of which has his reſpective department.

The principal places in this province are the following;

Toulouſe, or Thoulouſe, the capital of Languedoc, and one of the moſt ancient cities in the kingdom, is ſituated in latitude forty-three degrees thirty-five minutes forty ſeconds, and in one degree ten minutes eaſt longitude, in a diſtrict called the Toulouſain, in a moſt delightful plain on the Garonne, and, next to Paris, is ſaid to be the largeſt city in all France. The ſtreets are moſtly broad, and the houſes built of brick; it is not, however, very populous, and though ſo finely ſituated, its trade is inconſiderable, its principal article being Spaniſh wool. This is chiefly imputed to the vanity of the merchants, who no ſooner acquire a conſiderable fortune, than they make it their chief aim to obtain a ſeat in the city council, and to lay aſide all commerce.

This city is the ſeat of an intendency and receiver's office, of a governor, a provincial court, a royal tribunal, an admiralty, a foreſt court, a mint, and other public offices; it is alſo the reſidence of an archbiſhop, and the ſecond parliament of the kingdom. The dioceſe of the archbiſhop contains two hundred and fifty pariſhes, his revenue amounts to ſixty thouſand livres a year, and his taxation at the court of Rome is five thouſand florins.

The cathedral is an ancient handſome ſtructure, but contains nothing remarkable: in the ſpacious area before it is a fountain, over which is an obeliſk curiouſly wrought. In the church of St. Sernin, or St. Saturnin, are ſaid to lie thirty bodies of ſaints, and among them ſeven of the Apoſtles, one of whom they pretend to be St. James the Younger, though St. Jago de Compoſtella in Spain alſo boaſts of being poſſeſſed of the body of that apoſtle. Near this city ſtands a ſecularized abbey. The church of La Dorade is thus called from a gilded, but now a coal black image of the Virgin Mary, which ſtands on the great altar, and in any time of calamity is the conſtant refuge of the inhabitants. The name of the ſtatuary was Luke, which being marked on the baſe, has made the common people imagine that this image was carved by St. Luke. The church of the Carmelites has a large and magnificent chapel; that of the Dominicans is alſo large and ſplendid. Under the choir of the Franciſcan church is a vault, where bodies dry without mouldering or putrefaction; but become extremely light. The ſociety of the Blue Penitents in this city is one of the moſt renowned fraternities in the whole kingdom, having in its regiſters kings, princes of the blood, and eminent eccleſiaſtics.

The univerſity of Toulouſe is reputed the ſecond in France, and conſiſts of ſeveral colleges. The four faculties, namely, divinity, law, philoſophy, and phyſic, with the liberal arts, are taught here. Here is alſo an academy of polite literature, founded by royal patent in September 1694; it is compoſed of a chancellor, and forty-two members or fellows, who employ their talents chiefly in poetry. This is in the room of a ſociety called the Floral Games; and ſtill every year, on the third day of May, they give away four prizes, one gold and three ſilver flowers, to thoſe who diſtinguiſh themſelves by writing the beſt copy of verſes.

The above ſociety meet in the town-houſe, which is a ſpacious building called the Capitolium, in which there is a white marble ſtatue of Clementia, who is ſaid to have inſtituted the above-mentioned Floral prizes in the year 1540. The hall of this ſtructure is adorned with the buſts of the illuſtrious and celebrated natives of Toulouſe, as alſo of two Gothic kings, ſome counts of Toulouſe, and ſeveral diſtinguiſhed civilians. There are here preſerved five large parchment folios, finely written and illuminated, being the annals of the city from the year 1288 to the preſent time.

Here is alſo an academy of the ſciences and liberal arts. The ſtone bridge over the Garonne, which is a hundred and thirty-five fathoms long, and twelve broad, reſts on ſeven arches of different magnitudes; but, except the cantons, which are of ſtone, is wholly built of brick. In this city are made Bergamo carpets, but of little value, together with ſome ſlight ſilk and woollen ſtuffs.

Narbonne, the ancient Narbo, is a fortified city, ſixty-four miles to the weſt of Montpellier, ſeated on a canal which paſſes through it, and joins the river Aude. It is the reſidence of an archbiſhop, whoſe province contains a hundred

a hundred and forty-four pariſhes, and its revenue amounts to ninety thouſand livres per annum, out of which he pays at Rome nine thouſand florins. The cathedral, called St. Juſtus and St. Paſtor, is remarkable for its fine organs and curious painting, in which are repreſented the raiſing of Lazarus from the dead, the laſt judgment, and other pieces. There are alſo five other pariſh-churches, the principal of which is the collegiate church of St. Paul, with a college of the fathers of the Chriſtian doctrine, and ſeveral convents for perſons of both ſexes. The remains of Roman antiquities ſtill to be ſeen here conſiſt of ſtones and inſcriptions, chiefly placed in the walls of the court of the archbiſhop's palace, and in the garden is a beautiful Roman ſepulchre of white marble.

Montpellier, in Latin Mons Peſſalanus, is ſeated on a hill by the river Lez, fifty miles to the north-eaſt of Narbonne, and, next to Toulouſe, is the moſt conſiderable city in all Languedoc. It contains a chamber of taxes and accompts, with an intendancy, a treaſurer's office, a provincial court of juſtice, a ſheriff's court, an independant court, a foreſt court, a mint, &c. It has many fine houſes; but the ſtreets are very narrow, which is attended with this convenience, that in hot weather they have linen awnings drawn over them, under which a perſon may walk without being incommoded by the ſun. The air here is ſo pleaſant and healthy, that numbers of foreigners, and eſpecially of the Engliſh, reſort hither for the recovery of their health, particularly when labouring under hectic diſorders. The city is adorned with ſeveral ſtately edifices, as the hall of juſtice, the churches of St. Peter and the Virgin Mary, and a ſtrong citadel, flanked with four royal baſtions, which commands the town and the neighbouring country. In the ſquare of Lewis the Great, which is without the city, is the pleaſant walk of Peyron, in which ſtands an equeſtrian ſtatue of that monarch in bronze, upon a pedeſtal of a greyiſh white marble. This the ſtates of Languedoc erected in honour of him. The city gate leading to this ſquare is built in the form of a triumphal arch. The biſhop of this place is ſubject to the archbiſhop of Narbonne; his dioceſe contains a hundred and ſeven pariſhes; his revenue is thirty-two thouſand livres, and he is taxed at the court of Rome four thouſand florins.

The univerſity here is particularly famous for phyſic, it being founded by phyſicians who were expelled Spain in the year 1180. The celebrated ſcarlet gown of Rabelais, with which all doctors of phyſic are inveſted at taking their degrees, has long ſince ceaſed to be an original, the ſtudents having, from time to time, cut off little ſlips, ſo that the robe now uſed is ſaid to be at leaſt the third or fourth ſubſtitute. In 1706, a royal academy of ſciences was founded here, and they have an excellent phyſic garden, in which public lectures on botany are read. The inhabitants are principally employed in making verdigris, likewiſe in dimities, ſilks, and woollen ſtuffs; they have alſo a conſiderable trade in wool brought from the Mediterranean, in wine, aquavitæ, Hungary water, cinnamon-water, &c.

This city formerly belonged to the proteſtants, as one of their cautionary towns; and though Henry IV. made over to them this and other places, his ſon Lewis XIII. took it from them after a vigorous defence in 1622.

Frontigniac, or Frontignan, a ſmall town ſeated on the lake of Thau, ſeventeen miles to the ſouth-weſt of Montpellier, is remarkable for its excellent muſcadine wine, its jar-raiſins, and its handſome town-houſe. This wine is called by the Engliſh Frontiniac. The above lake, which is alſo called Maguleone, is twelve leagues in length, and ſeparated from the ſea only by a narrow tract of land; but in one place has a communication with the gulf of Lyons, which, according to Dr. Buſching, takes not its name from the city of Lyons, which is ſeated at a great diſtance from the ſea, but rather from the violent ſtorms ſo frequent in this ſhallow part of the Mediterranean, and which deſtroy the ſhips as a furious lion does its prey.

Niſmes, or Nimes, in Latin Nemauſus, a large city, thirty miles to the north of Montpellier, is very pleaſantly ſituated, it having on one ſide, hills covered with vines, and on the other, a very fertile plain. The ſtreets are in general narrow, but kept pretty clean, and the houſes of ſtone handſomely built. One-third of the inhabitants are ſecret proteſtants. Here is a collector's office, an intendency, and a provincial court of juſtice. Its biſhop is ſuffragan to the archbiſhop of Narbonne, and his dioceſe contains two hundred and fifteen pariſhes: he has an annual revenue of twenty-ſix thouſand livres, out of which his taxation at the court of Rome is twelve hundred florins. In this city are ſeveral convents, and it had a jeſuit's college; it has an academy of polite literature, founded in 1682; and is defended by a citadel conſiſting of four baſtions. There are here ſuch a multitude of manufacturers, that its cloth and ſilk trade alone exceeds that of the whole province.

In the city and its neighbourhood are ſeveral illuſtrious monuments of antiquity: one of the principal of theſe is an amphitheatre, ſaid to be the leaſt damaged of any in Europe. It is built of free-ſtone, the outſide of which is very entire, the ſtones are in many places of an amazing length and thickneſs: it is two ſtories high, and has ſixty arches and columns in each ſtory; on theſe and their cornices are to be ſeen the Roman eagles, with figures of Romulus and Remus ſucking a wolf. The ſteps or ſeats are ruined, and the arena filled with houſes. Over the large entrance are two half bulls cut in ſtone, alſo a triple and winged Priapus, and the figure of a woman holding by a bridle.

The other antiquities are an oblong ſtructure embelliſhed with thirty-two columns of the Corinthian order, ſuppoſed to be a temple erected by the emperor Adrian in honour of Plotina, conſort to Trajan. A temple conſiſting of moſt beautiful free-ſtone, above half of which is ſtill ſtanding, and is ſuppoſed to have been dedicated to Diana; and cloſe by it is the fountain of Diana mentioned by Auſonius, which firſt diffuſing itſelf into a deep and wide pond, furniſhes water enough to ſupply all the gardens of the city. From ſeveral remains, it appears that this was a public bath. Here is alſo an octangular tower fifteen fathoms high, the whole being a ſolid ſtructure from the bottom to the top. It is remarkable, that the heads of all the Roman eagles found here are ſtruck off; which is imputed to the Goths, who, on their reduction of this country, are ſuppoſed to have done this by way of inſult of the haughty enemy they had ſubdued. The eſplanade or walking-place without the city, is extremely delightful.

At no great diſtance from the city, and a mile and a half from the market-town of Remoulins, is a bridge called the Pont du Guard, a moſt valuable piece of Roman antiquity, it being part of the great aqueduct by which the ſpring of Eure was carried the length of nine hours diſtance to Niſmes, and there diſtributed in the amphitheatre, public fountains, and private houſes. The above bridge conſiſts of three ranges of arches, built one upon another, over the river Gardon, and thus connecting the high rocks on both ſides the river, ſo as to afford a free paſſage to the water of the ſpring abovementioned from one mountain to the other. The lower part conſiſts of ſix arches, four hundred and thirty-eight feet in length, and eighty-three in height. The ſecond conſiſts of eleven arches each, fifty-ſix feet in dameter, and ſixty-ſeven in height; and is of ſuch an extraordinary width, that, beſides the pillars on which the upper part or range of arches reſts, there is a horſe and footway leading through it, ſecured by a breaſt-work. The third range, which reſts on the ſecond, and is five hundred and eighty-five feet and a half in length, conſiſts of thirty-five arches, each of which is ſeventeen feet in diameter; and over this uppermoſt range runs the aqueduct, which is of ſuch a height and breadth, that with a little inclination of the body a perſon may walk in it. The whole is of a very hard and durable free-ſtone. From an eminence towards Uzez, a ſmall epiſcopal town near the ſpring of Eure, are here and there ſeen entire ranges of arches, all which belong to this vaſt aqueduct.

Quiſſac is a ſmall place ſeated on the Vidourle, between which and the town of Sauve, at the foot of a mountain near the river, is a periodical ſpring, which runs and intermits twice in twenty-four hours. The flow laſts ſeven hours twenty-five minutes, and the intermiſſion five hours. This is ſuppoſed to be occaſioned by a cave or reſervoir in the mountain, which being filled

every five hours, diſcharges itſelf through a canal in the form of a ſiphon. This water is drank as a mineral, and when heated is uſed for bathing. It contains a conſiderable quantity of ſulphur, and is reputed very good for all diſorders of the eyes.

In Languedoc is the diſtrict of Albigeois, from whence the Albigenſes take their name, they being a brave and upright people, who ſo early as the eleventh century oppoſed popery, and adhered to the doctrines of the Goſpel, amidſt the violent perſecutions which their integrity drew upon them. The country produces plenty of corn, wine, fruit, and ſaffron; but the people are poor.

The capital of this country is Alby, which ſtands on an eminence near the river Tarn; it is the reſidence of an archbiſhop, and has a royal tribunal, with ſeveral other courts. This dioceſe contains three hundred and twenty-ſeven pariſh churches, and the annual revenue of the archbiſhop amounts to ninety-five thouſand livres, out of which he pays two thouſand florins to the court of Rome. He is lord alſo of the city, though the high and low juriſdiction, and the high domains, are in the king's hands. The cathedral is one of the richeſt and fineſt buildings in the kingdom: the archiepiſcopal palace is alſo very noble. The walk called La Lice, a little above the city, is extremely pleaſant, and the little town of Chateauvieux forms a handſome ſuburb. At a council held here in 1176 the doctrines of the Albigenſes were anathematized.

Alais, or Alez, a pretty large populous city ſeated on the river Gardon, thirty-five miles to the north of Montpellier. It is the ſee of a biſhop ſuffragan to the archbiſhop of Narbonne, who has an annual revenue of ſixteen thouſand livres, out of which he pays to the court of Rome five hundred florins. This dioceſe conſiſts of eighty pariſhes, and the biſhopric was founded ſo lately as the year 1691, in order to bring over to the church of Rome the great number of Proteſtants in that part of the country, and a college of Jeſuits was added as auxiliaries to it. The quantity of unwrought ſilk annually carried out of this city, is ſaid to amount to at leaſt one million two hundred thouſand pounds weight.

SECT. XVII.

Of the Governments of Rouſſillon and Foix; their Situation, Extent, Mountains, Produce, Rivers, and Trade; with a Deſcription of the City of Perpignan.

THE county of Rouſſillon is ſeparated to the north from Languedoc by the Leſſer Pyrenees, to the eaſt it borders on the Mediterranean, and to the ſouth and weſt is divided by the large Pyrenean mountains from Catalonia and Cerdagne. Its length from eaſt to weſt is above fifty miles, and it is twenty-five in breadth. Its name of Rouſſillon is derived from its ancient capital Ruſcino.

Among the ſeveral mountains here, the higheſt are thoſe of Maſſane and Canigou; the latter of which is ſaid to be fourteen hundred fathoms in height. This country is on all ſides environed with mountains; and the ſummer-heats are ſo intenſe, that the inhabitants are almoſt univerſally ſwarthy and meagre.

The ſoil is very fruitful in corn, wine, and forage; and in ſome parts ſo uncommonly fertile, that, after the corn harveſt is got in, they ſow millet, and thus procure two, and ſometimes three harveſts in a year. Mules are here uſed for the plough. The great wealth of the country conſiſts in olives and oranges, which are almoſt as common here as apples and pears in Normandy. They have very little wood, and that only of ſhrubs; and from their want of navigable rivers, the only way of being ſupplied with goods from other countries is by means of mules.

The inhabitants have a conſiderable number of ſheep, which are much eſteemed for the uncommon delicacy of their fleſh. Oxen are alſo fattened here, for the gratification of the wealthy; but the breeding of cows is neglected, their milk being bad; however, the pigeons, quails, and partridges of Rouſſillon are excellent. The chief branch of trade in this province is oil, which they ſell to the annual amount of two hundred thouſand livres; they alſo export corn, millet, and wool.

The Tet, Tec, and Agly, its only rivers, are no more than rapid brooks, which diſcharge themſelves into the ſea. Here are alſo hot baths, and at Cannet and the lake of St. Nazaire the ſea-water is conveyed into canals, and there converted into ſalt by the heat of the ſun.

This county, which formerly belonged to the king of Arragon, was taken by Lewis XIII. and by the peace of the Pyrenees in 1669 was ceded to France. It contains but one biſhopric. At Perpignan is a ſuperior court, or council, to which lie appeals from all the inferior courts. In it is alſo a mint. The contributions payable by the inhabitants conſiſt of a poll-tax, which produces about forty thouſand livres. This country, beſides a governor, has a lieutenant-general, and deputy-governor.

Perpignan, in Latin Perpeniacum, the capital of the country, is ſeated on the river Tet, ſixty-five miles to the north-eaſt of Bourdeaux, partly in a plain, and partly on a hill. It is fortified with a high and thick wall, ſtrengthened with baſtions: it has alſo a citadel, which is a fine work, and the ſuburbs are likewiſe defended by a fort. It is, however, a place of no great extent; but is very populous, there being here a ſuperior royal council, or high court of juſtice, an intendency, a chancery, a ſalt-office, and a mint. Its biſhop is ſuffragan to the archbiſhop of Narbonne, and has a dioceſe of a hundred and eighty pariſhes. His revenue is about eighteen thouſand livres, out of which he is taxed by the court of Rome fifteen hundred florins. Beſides the cathedral it has four pariſh-churches, a ſeminary, twelve convents, and had two colleges of Jeſuits. It has likewiſe an univerſity founded in 1349, with ſeveral alms-houſes and hoſpitals. Among the other public buildings is a large cannon foundery. The greateſt diſadvantage of this city is the want of good water fit for drinking.

We now come to the government of Foix, which contains the diſtrict and county of Foix, with the territories of Andorre and Donezan. It is bounded on the north and eaſt by Languedoc, on the ſouth by the Pyrenean mountains and Rouſſillon, and on the weſt by Gaſcony. The principal rivers are the Auviege and the Rize. This country is a dependency of the parliament of Toulouſe, and conſtitutes part of the lands of the ſtates, who are annually called together by the king. Its trade conſiſts of cattle, raiſins, turpentine, pitch, cork, jaſper, and particularly iron; and, beſides, the governor has a lieutenant-general.

Upper Foix lies among the mountains, and all its products are wood, iron, and mineral waters, with ſome paſtures. In this country are ſeveral caverns, in which are very ſingular figures formed by the petrifying waters. Lower Foix produces ſome grain and wine. There are in this government four principal towns; but theſe are very ſmall, and too inconſiderable to require any deſcription.

The little diſtrict and ſovereignty of Donezan, juſt mentioned, is nine miles in length, and the ſame in breadth; it is ſeparated from the county of Foix by a chain of mountains, and contains nine market-towns and villages; and the territory or valley of Andorre has alſo ſeveral villages.

SECT. XVIII.

Of the Government of Lower Navarre and Bearn; their Situation, Extent, Hiſtory, Produce, and principal Cities.

WE have already deſcribed that part of Navarre which belongs to Spain, in treating of that kingdom, and now come to French or Lower Navarre, which is united under the ſame government with the principality of Bearn. Theſe two contiguous countries are bounded on the north and eaſt by Gaſcony, on the ſouth by the Pyrenean mountains, and on the weſt by another part of Gaſcony.

Lower Navarre is one of the ſix bailiwics which formerly compoſed the kingdom of Navarre; but in 1512 Ferdinand, king of Arragon and Caſtile, having, under

frivolous

frivolous pretences, poſſeſſed himſelf of the kingdom of Navarre, all that Catharine, the lawful heireſs, and her huſband John d'Albret, could procure to be reſtored to them was this little ſpot. They were alſo poſſeſſed of Bearne. John, their ſon, had no better ſucceſs; he poſſeſſed the ſame countries, but the title of ſovereign was confined to the ſcanty remnant of Navarre, which was called a kingdom. Johanna, his daughter, in 1584, married Anthony of Bourbon, to whom ſhe brought the above-mentioned countries as a dowry. Their ſon Henry IV. arrived to be king of France, and his ſon and ſucceſſor Lewis XIII. annexed Lower Navarre and Bearne to the crown of France.

The kingdom or province of Lower Navarre, ſeparately conſidered, is bounded on the north by Gaſcony; on the eaſt by a part of Gaſcony and Bearne; on the ſouth it is ſeparated from Upper Spaniſh Navarre by the Pyrenean mountains; and on the weſt borders on Labourd, a diſtrict of Gaſcony; it extending only twenty-four miles in length, and fifteen in breadth.

The country is mountainous, and produces little. The inhabitants ſpeak the Baſque dialect, which is the ſame with that of Biſcay. The principal rivers are ſmall; theſe are the Nive, which has its ſource in the Spaniſh mountains, and the Bidouſe, which has its ſource here, and both fall into the Adour.

In the whole country of Lower Navarrre there is neither abbey, collegiate church, nor convent; the only eccleſiaſtical buildings remaining here being four parochial priories. The Reformation took place here under the reign of Henry II. king of Navarre; but in 1694, there was, at leaſt in appearance, a general return to the Romiſh church. In Bearne are two biſhopricks. The whole government is ſubject to the juriſdiction of the parliament of Pau: yet both Lower Navarre and Bearn have ſtates of their own, each paying the king annually four thouſand eight hundred and ſixty livres, as an ordinary contingent, with two thouſand more to the maintenance of the troops. To the governor they allow ſeven thouſand ſeven hundred and forty, and to the deputy-governor two thouſand ſeven hundred and forty.

Lower Navarre is divided into five diſtricts, the principal place in which is the following:

St. Jean Pie de Port, or St. John at the Foot of the Gate, which is ſituated at the entrance of the paſs that leads through the Pyrenean mountains into Spain. It ſtands on the river Nive, twenty miles to the ſouth-eaſt of Bayonne, and has a citadel placed on an eminence that commands the above paſs.

In Lower Navarre are only three or four other ſmall towns, and ſome ſmall villages.

The principality of Bearn is of much greater extent, it being about forty-eight miles in length, and thirty-ſix in breadth; but is mountainous, and, except in the plains, generally barren. However, ſome of the mountains contain mines of copper, iron, and lead, and are covered with pines fit for maſts and planks; very little wheat or rye is produced in this country; but great quantities of mailloc, which is a kind of Indian corn, and alſo flax: but the very rocks are planted with vines, and in ſome places the inhabitants make excellent wine.

The principal cities in this principality are Pau, Oleron, and Navarreins.

Pau, in Latin Palum, the capital, ſtands on an eminence, at the foot of which runs the river Gave Bernois. It is ninety-ſeven miles to the ſouth of Bourdeaux, and is the ſeat of a parliament and a bailiwic. Is has a caſtle in which king Henry IV. of France was born. It has five convents, two hoſpitals, and at the late expulſion of the Jeſuits they had a college here. It is a ſmall but pretty town, and has manufactures of cloth.

Oleron, a ſmall but populous city, ſeated on the banks of the river Gave, which, from this city, is called the Gave of Oleron, ten miles to the weſt of Pau. It has a bailiwic court, and is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Auch, and has a dioceſe containing two hundred and ſeventy-three pariſhes, with a yearly revenue of thirteen thouſand livres, out of which he pays ſix hundred florins to the court of Rome. Its trade was formerly much more conſiderable than it is at preſent.

Navarreins, a town built by Henry d'Albret, king of Navarre, and prince of Bearne, is alſo ſituated on the Gave of Oleron, ſixteen miles to the ſouth of Bayonne. It ſtands in the midſt of a fertile plain, and is a ſquare city pretty well built. It is the ſeat of a governor, and a king's lieutenant. It is ſurrounded with walls; but is not very ſtrong, it being commanded by the neighbouring hills.

SECT. XIX.

Of Guienne and Gaſcony; their Situation, Extent, Produce, Rivers, Hiſtory, Government, and principal Cities; particularly Bourdeaux, Perigord, Agen, Montauban, Auch, and Bayonne.

THE government of Guienne and Gaſcony is bounded on the north by Saintonge, Angoumois, Limoſin, and Auvergne; on the eaſt by Auvergne and Languedoc; on the ſouth by the Pyrenean mountains; and on the weſt by the bay of Biſcay. Its extent from ſouth to north is about eighty leagues, and from eaſt to weſt about ninety. This country was formerly a part of the ancient kingdom of Aquitain, and abounds in corn, wine, fruit, hemp, and tobacco. Its trade in wine in particular is ſo very conſiderable, that the city of Bourdeaux alone exports annually a hundred thouſand tons. It alſo produces brandy, prunes, and many other commodities. It has likewiſe mines of copper, and fine quarries of marble of all colours.

It has ſeveral ſprings of medicinal waters, and its principal rivers are the Garonne, which receives many ſmall ſtreams, and the Adour, which riſes in the mountains of Bigorre, and falls into the ocean.

Charlemagne created his ſon Lewis king of Aquitaine, but ſoon after this kingdom was divided into the duchies of Aquitaine and Gaſcony, which, by the marriage of William IV. duke of Aquitaine, with Briſce, heireſs to Gaſcony, were united, and continued in that family till the year 1150, when, by the marriage of Eleanor with Henry II. king of England, this duchy fell to that crown, and during almoſt three hundred years was ſubject to the Engliſh, who were diſpoſſeſſed of it by Charles VII. in 1453. Lewis XI. in 1469, conferred it on his brother Charles, who was the laſt duke of Guienne, it being on his deceaſe again annexed to the crown of France. However, in 1753 the title of duke of Aquitaine was revived in the perſon of the Dauphin's ſecond ſon.

In this government is an archbiſhop, with nine ſuffragans. It alſo contains two generalities, namely, that of Bourdeaux, which is under the parliament of that city, and that of Montauban under the parliament of Toulouſe. The former is compoſed of nine, and the latter of four large feneſchalſhips, or bailiwics. In each is alſo a court of aids, under the direction of the governor, whoſe ſalary amounts to about ten thouſand livres; with two lieutenant-generals, one for Guienne, and the other for Gaſcony and Bigorre. Beſides theſe, there are thirteen other deputy-governors.

Bourdeaux, in Latin Burdigala, the capital of Guienne, is ſeated on the Garonne, in the forty-fourth degree fifty minutes north latitude, and in forty minutes weſt longitude, two hundred and ſixty miles to the ſouth-weſt of Paris. It is pretty large and populous, it having a great number of ſtately houſes built of ſtone; but they are old, and the ſtreets very narrow. The inhabitants are ſaid to amount to forty thouſand. The neweſt and handſomeſt part of the city is the Royal ſquare, near the harbour, in which ſtands a grand magazine, with the exchange, and it is adorned with a ſtatue of Lewis XIV. in braſs. This city is a place of conſiderable traffic, it being reſorted to by merchants from moſt parts of Europe. Its haven, which is very capacious and ſafe, is called Le Port de la Lune, or the Port of the Moon, from its being in the form of a creſcent. The tide flows into it very high, and carries ſhips of large burthen up to the quay. The city itſelf is in the form of a triangle, the two ſhort ſides towards the ſea, and the largeſt towards the river Garonne. The palace, the town-houſe, the handſome markets, the public fountains, the quay, and

the cathedral dedicated to St. Andrew, are worthy the curioſity of a traveller; as is alſo the caſtle called the Chateau-Trompette, which ſtands at the entrance of the quay, and commands the whole harbour. There is alſo another caſtle at the other end of the quay, called Le Chateau de Haa, which is alſo very ſtrong: in both theſe fortreſſes there is a garriſon conſtantly kept. There is alſo a fort called St. Louis, or St. Croix; but it is of no great importance. During the reign of Lewis XIV. Bourdeaux was fortified in the modern taſte by Vauban; but the ramparts are now ſaid to be ruinous. At the mouth of the Garonne, ſix leagues below the city, ſtands on a ſmall iſland a ſtately watch-tower, where they light flambeaux every night for the direction and ſecurity of ſuch veſſels as ſail up or down that river; a precaution the more neceſſary, on account of the many rocks and ſhelves which lie in it.

This city is the ſee of an archbiſhop, the ſeat of a parliament, a court of aids, a ſeneſchalſhip, a provincial tribunal, an admiralty, and of a treaſurer's office. It has alſo an exchange and a mint. The archbiſhop has nine ſuffragans under him, with a province of four hundred and fifty pariſhes, beſides about fifty chapels of eaſe. His revenue is fifty-five thouſand livres per annum, and his taxation at the court of Rome four thouſand florins. The cathedral is a large Gothic ſtructure, which contains nothing remarkable but the ſilver ſhrine of relics on the great altar. The church and convent of the Dominicans are new and elegant ſtructures, but thoſe belonging to the Carthuſians have a ſplendor ſeldom ſeen in any convents of that order. In this city is likewiſe an abbey of Benedictines of the order of St. Maur. The Jeſuits had, till their expulſion, a fine college here. The univerſity was founded in 1441, and in 1712 the king erected here an academy of the ſciences and polite arts, the library to which does not contain a great number of books, but conſiſts entirely of ſelect pieces, placed in a moſt elegant hall.

There are ſtill here ſome viſible remains of Roman antiquities, particularly an amphitheatre built by the emperor Gallienus, whoſe palace it is called; only ſome parts of the ſide walls are ſtanding, with the two principal gates.

The trade of this city is very conſiderable, and for its improvement a kind of toleration is granted to the Engliſh, Dutch, Danes, Hamburghers, and Lubeckers, and even to the Portugueſe Jews; but theſe laſt have no ſynagogue, nor are any Proteſtants indulged in the public exerciſe of their religious worſhip, only the Engliſh are connived at and have a miniſter in a lay habit, and the other foreign Proteſtants are not prohibited reading a ſermon privately to their families. The Scots, on account of the ſervices they formerly performed for the French, have conſiderable privileges allowed them in this city, and a gate of Bourdeaux bears the enſigns of one of the name of Douglas; even to this day Scottiſh veſſels have peculiar immunities allowed them in trade, and from this port they generally ſhip their wines. In this city Edward the Black Prince reſided for ſome years, during which time his ſon, afterwards Richard II. king of England, was born.

Perigueux, the capital of a very large diſtrict named Perigord, the ſee of a biſhop and the ſeat of a bailiwic, and a court of juſtice, is ſeated on the river Iſle, in a fine country, ſixty-five miles to the north-eaſt of Bourdeaux; the biſhop is ſubordinate to the archbiſhop of Bourdeaux, and has a dioceſe containing four hundred and fifty pariſhes, with a revenue of twenty-four thouſand livres, out of which he is taxed two thouſand five hundred and ninety florins at the court of Rome. It has four convents, one hoſpital, and had a college of Jeſuits. The old town is called La Cité, and the new town, which is about a hundred paces diſtant, is named La Ville.

Agen, the capital of a diſtrict called the Agenois, is pretty large and well inhabited. It is ſeated on the river Garonne, ſeventy-five miles to the ſouth-eaſt of Bourdeaux. The biſhop ſtyles himſelf count of Agen, but this is only a titular honour; he is ſuffragan to the archbiſhop of Bourdeaux, under whom he has a dioceſe of three hundred and ſeventy-three pariſhes, and one hundred and ninety-one chapels of eaſe, with a yearly revenue of thirty-five thouſand livres, out of which he is taxed by the court of Rome, two thouſand four hundred and forty florins. There is here a cathedral and a collegiate church, two pariſh churches, with ſeveral convents; and there was here a college of Jeſuits. This city is finely ſituated for trade, but makes little advantage of it.

Montauban, in Latin Mons Albanus, a well-built handſome city, in the diſtrict of Lower Quercy, is ſeated on the river Tarn, twenty-ſeven miles to the north of Toulouſe, and is the ſee of a biſhop, with the ſeat of a court of aids, a provincial court, and a bailiwic. It properly conſiſts of three parts, the Old and New Towns, with the town of Bourbon, which lies on the other ſide of the river, and is a ſuburb. The biſhop is ſuffragan to the archbiſhop of Toulouſe, and has a dioceſe of ninety-ſix pariſhes, with a revenue of twenty-five thouſand livres per annum, out of which he pays a tax of two thouſand five hundred florins to the court of Rome. In this city are two collegiate churches, an academy of polite literature, one ſeminary, eight convents, and a general hoſpital; it had alſo till lately a college of Jeſuits. Its principal trade conſiſts in woollen ſtuffs.

In 1562, the inhabitants became Proteſtants, and fortified the city in ſo ſtrong a manner, that Lewis XIII. beſieged it in 1621 without ſucceſs, and was unable to reduce it till the year 1629, when he cauſed its fortifications to be razed.

Gaſcony, called by the French Gaſcogne, conſtitutes the ſouth part of the government of Guienne, and includes the country lying between the Garonne, the ocean, and the Pyrenean mountains. It receives its name from the Gaſcones and Vaſcones, by the moderns called Baſques or Vaſques, a people who lived on the Pyrenean mountains in Spain, and towards the cloſe of the ſixth century ſettled on the north-ſide of the Pyrenees, where they defended themſelves againſt the Franks; but were at laſt obliged to ſubmit. It is bounded on the north by Guienne; on the weſt by Languedoc and the county of Foix; on the ſouth by the Pyrenean mountains, which ſeparate it from Spain; and on the weſt by the ſea of Gaſcony. The inhabitants are ſaid to have quick parts, but are ſo addicted to boaſting, that the name of Gaſconade has been given to all bragging ſtories. The country is not very fertile, it producing little corn, tho' it has great plenty of fruit, and the mountains afford timber fit for building of ſhips. The principal places in this province are the following.

Auch, the ancient Eluſaberris, and afterwards Auguſta, is the capital of the diſtrict of Armagnac, and of all Gaſcony. It ſtands on the ſide and top of a hill, at the foot of which runs the river Gers, thirty-ſeven miles to the weſt of Toulouſe, and is divided into the Upper and Lower Town, between which there is a communication by means of two hundred ſtone ſteps. This place is the ſee of an archbiſhop, and has an intendency, a treaſurer's office, a bailiwic, a provincial and royal court. The lordſhip of the city is divided between the archbiſhop and the count of Armagnac. The dioceſe conſiſts of three hundred and ſeventy two pariſh churches, and two hundred and ſeventy-ſeven chapels of eaſe, and the revenue of the archbiſhop is ninety thouſand livres, out of which he pays to the court of Rome ten thouſand florins. The cathedral is one of the moſt magnificent in the kingdom; the chapter is compoſed of fifteen dignitaries, and twenty-five canons; and among the latter there are five who are only honorary. The king himſelf is the firſt of them, as count of Armagnac; the four others are the barons of Montſquieu, Montaut, Pardaillau, and L'Iſle.

Bayonne, in Latin Lapurdum, the capital of the diſtrict of Labourd, is ſeated in the forty-third degree thirty minutes north latitude, and in one degree twenty minutes weſt longitude, at the junction of the Adour and Nive, near the mouth of the former, and a little below the city they diſcharge themſelves into the bay of Biſcay. It is of pretty conſiderable extent, and is the ſee of a biſhop; it has alſo a bailiwic court, an admiralty, and a mint. The name of Bayonne is compounded of two Baſque words, Baia and Ona, ſignifying a good harbour,

and it well deſerves that title; it is accordingly much frequented, though the ſhallows render the entrance to it ſomewhat difficult.

This is the only place in France that has the advantage of being ſituated on two rivers, into which the tide flows; the Nive runs through it, and the Adour cloſe by its walls; ſoon after which they unite, and divide the city into three parts: that called the Great Town, lies on the ſide of the Nive; the Little Town is between the Nive and the Adour; and the ſuburb of St. Eſprit, in which great numbers of Jews reſide, lies on the other ſide of the river. The two firſt parts, beſides their other works, have each a ſmall fort; the ſuburb has good fortifications, and a regular ſquare citadel, which ſtanding on an eminence, commands the three ſeveral parts of the city, the harbour, and the adjacent country. Moſt of theſe works have been repaired and improved by Vauban; for though the city is not very large, it is of the utmoſt importance, from its being one of the keys of France on the ſide of Spain.

Beſides its cathedral and collegiate church, the ſuburb alſo has another collegiate church; in this city are likewiſe five convents, and one college. But neither the cathedral, which is dedicated to the Holy Virgin, nor any of the other public or private buildings, have any thing remarkable. Its biſhop is ſuffragan to the archbiſhop of Auch, and his dioceſe contains ſeventy-two pariſhes. He has a revenue of nineteen hundred livres, out of which he pays only a hundred florins to the court of Rome.

SECT. XX.

Of the Situation, Extent, Produce, and Rivers of the Government of Auvergne; with an Account of its principal Cities.

THE government of Auvergne, which takes its name from its ancient inhabitants the Arverni, is bounded on the north by Bourbonnois; on the eaſt by Forez, a large diſtrict in the government of Lionnois; on the ſouth by Guienne and the Cevennes; and on the weſt by Limoſin, the diſtrict of Quercy in Guienne, and La Marche; and is about a hundred miles in length, and ſeventy-five in breadth.

Lower Auvergne is a very pleaſant fertile country, abounding in corn, wine, fruit, forage, and hemp; it far excels Upper Auvergne, which is cold, and full of mountains, that are covered with ſnow ſeven or eight months in the year, though its paſtures are excellent, and the inhabitants deal largely in cattle. The ſituation of the mountains occaſions the winds blowing in ſuch eddies, that no wind-mills ſucceed there.

The principal rivers are the Allier, which riſes in the Gevaudan, and falls into the Loire; the Dordogne, which ſprings from Mont d'Or, the higheſt mountain in the country; the Allagnon, which riſes in Mount Cantal, and after a rapid courſe falls into the river Allier.

The higheſt mountains in this country are Le Pui de Dome, the perpendicular height of which is eight hundred and ten fathoms; the Cantal nine hundred and eighty-four; and Mont d'Or one hundred and thirty: the two latter are no leſs famous for the curious plants that grow on them. At Pontgibaud is a ſilver mine, but the produce not anſwering the expence, the working of it has been diſcontinued; however, the coal mines in the neighbourhood of Briſac are very profitable.

Beſides the corn, wine, cattle, cheeſe, coals, and other products of the earth, this country carries on many manufactures, as all kinds of ſilk ſtuffs, cloths, very beautiful laces, and paper, which is eſteemed the beſt in all Europe. Every year ſome thouſands of labourers go from hence to get in the harveſt in Spain, and return with the beſt part of their earnings.

The whole country is ſubject to the parliament of Paris, but is governed by different laws; Lower Auvergne having a particular code of its own, while in Upper Auvergne the civil law takes place. This country is divided into five large diſtricts, and two bailiwics. Under its governor are two lieutenants-general and two ſubgovernors.

St. Flour, the capital of Upper Auvergne, ſtands on a mountain of difficult acceſs. It is the ſee of a biſhop whoſe dioceſe conſiſts of two hundred and ſeventy pariſhes; he has a revenue of twelve thouſand livres, and pays nine hundred florins to the court of Rome. Beſides its cathedral, it has a collegiate church, and had a college of Jeſuits. The inhabitants carry on a good trade in grain, this city being, as it were, the general magazine of the neighbouring country, which produces a great deal of rye. Its cloth, carpets, and knives, are alſo greatly eſteemed.

Aurillac, a town which diſputes the title and rank of capital with St. Flour, is ſeated in a valley on the banks of the river Jordane, two hundred and fifty miles to the ſouth of Paris, and thirty to the ſouth-weſt of St. Flour. It is pretty well built and populous; it alſo confers the title of count. Here is a diſtrict and bailiwic court; it has likewiſe a caſtle ſeated on a high rock, and a collegiate church, which is properly a ſecularized abbey, the abbot of which is lord of the town, and holds immediately of the pope. Here is alſo an abbey, and four convents. The Jeſuits had alſo here a college. In this town are ſome manufactures of tapeſtry and lace.

Clermont, the ancient Auguſtonemetum, afterwards Auvergne, the capital of the whole country, ſtands on a ſmall eminence in Lower Auvergne, between the rivers Artier and Bedat. It is the capital of the whole country, and is populous; but has very narrow ſtreets, and the houſes are dark. It contains a tax chamber, a bailiwic, and a county-court, &c. This was formerly the principal place belonging to the counts of Auvergne, who therefore ſtyled themſelves counts of Clermont. The biſhop is firſt ſuffragan to the archbiſhop of Bourges; he is alſo lord of the ſmall towns of Billon and Croupieres, and enjoys a dioceſe of eight hundred pariſhes, with a revenue of fifteen thouſand livres, out of which he is taxed at the court of Rome four thouſand five hundred and fifty florins. Beſides its cathedral, it has three collegiate churches, and three abbies; in that of St. Allier the bodies of ſeveral ſaints are ſaid to be depoſited. In the chapel of St. Venerand, and in that of St. André, are the tombs of the old counts of Clermont, and the dauphines of Auvergne. It has likewiſe many convents, and had a college of Jeſuits.

In the neighbourhood of this city are wells where any ſubſtance laid in them ſoon contracts a ſtony cruſt. The moſt remarkable of theſe is that in the ſuburb of St. Allire, which has formed a famous ſtone bridge mentioned by many hiſtorians. This bridge is a ſolid rock, compoſed of ſeveral ſtrata formed during the courſe of many years, by the running of the petrifying waters of this ſpring. It has no cavity or arches, till after above ſixty paces in length, where the rivulet of Tiretaine forces its way through. This petrifying ſpring, which falls on a much higher ground than the bed of the rivulet, gradually leaves behind it ſome lapideous matter, and in proceſs of time has thus formed an arch, through which the Tiretaine has a free paſſage. The neceſſity which this petrifying matter ſeemed to be under of forming itſelf into an arch, could continue no longer than the breadth of the rivulet, after which the water of the ſpring ran regularly under it, and there formed a new petrifaction reſembling a pillar. The inhabitants of theſe parts, in order to lengthen this wonderful bridge, have diverted the brook out of its old channel, and made it paſs cloſe by the pillar, by which means they cauſed the ſpring to form a ſecond arch, and thus they might have produced as many arches and pillars as they pleaſed; but the great reſort of people to ſee this natural curioſity becoming troubleſome to the Benedictines of the abbey of St. Allire, within whoſe juriſdiction the ſpring lies; in order to leſſen its petrifying virtue, they divided the ſtream into ſeveral branches, which has ſo well anſwered their intent, that at preſent it only covers with a thin cruſt thoſe bodies on which it falls perpendicularly. But in thoſe over which it runs in its ordinary courſe, no traces of its petrifying qualities are any longer perceivable. It is the only water uſed for drinking in this ſuburb, and no bad effect is felt from it.

SECT. XXI.

Of the two Governments of Limoſin and La Marche; their Situation, Extent, Climate, Produce, Rivers, and principal Towns.

LIMOSIN, or Limouſin, derives its name from the ancient Lemovices, and is bounded on the eaſt by Auvergne; on the ſouth by Guienne; on the weſt by Perigord in Guienne, and Angoumois; and on the north by La Marche and Poitou. Its extent from north to ſouth is about twenty-five French leagues, and from eaſt to weſt ſomewhat leſs.

Upper Limoſin is very mountainous, and conſequently cold, but Lower Limoſin is more temperate. The former produces but little wine, and that too but very indifferent, but that of Lower Limoſin is extremely good. It produces ſuch numbers of cheſnut-trees, that the inhabitants derive their principal maintenance from them. The grain which grows here is rye, barley, and Turkiſh corn. They have alſo mines of copper, tin, iron, and lead, and in this country are ſome iron works.

Its chief rivers are the Vienne, the ſource of which lies in the borders of Lower Limoſin and La Marche; the Vezere, which riſes in the ſame country; the Coureze, which falls into the Vezere; and the Dordogne, which divides Limoſin from Auvergne, and the diſtrict of Quercy in Guienne.

The country is ſubject to the parliament of Bourdeaux, and beſides its governor, has one lieutenant-general, and two ſub-governors. The principal places it contains are;

Limoges, in Latin Lemovicæ, the capital of the country, which is ſituated on the river Vienne, partly on a hill and partly in a valley, thirty leagues to the weſt of Clermont. The town is about a league and a half in circumference, but ill built, the houſes being generally of wood, ſmall, and dark; but the cathedral is a magnificent ſtructure; beſides which it has a collegiate church, three abbies, one convent, and a college and ſeminary, which lately belonged to the Jeſuits. It contains a bailiwic, a country and royal court, with other public offices, and alſo a mint. Its biſhop is ſuffragan to the archbiſhop of Bourges, and his dioceſe, which extends over Upper and part of Lower Limoſin, La Marche, and a part alſo of Angoumois, contains nine hundred pariſhes; and his revenue amounts to twenty thouſand livres, out of which he pays ſixteen hundred florins to the court of Rome.

Tulle, properly Tuelle, is a town ſituated in Lower Limoſin, near the confluence of the little rivers Coureze and Solane, fifteen leagues to the ſouth of Limoges, and a mile and a half in circumference. It contains about twelve hundred houſes, and five thouſand people. Its biſhop, who is lord and viſcount of the town, is ſuffragan to the archbiſhop of Bourges; and his dioceſe, which conſiſts of ſeventy pariſhes, brings him in a revenue of twelve thouſand livres, out of which he pays to the court of Rome fourteen hundred florins. It has ſix convents and had a college of Jeſuits.

Brive la Gaillarde is ſeated near the confluence of the Coureze and Vegere, ſeventeen leagues to the ſouth of Limoges, and five to the weſt of Tulle, in a valley environed with little hills planted with vines and cheſnut-trees; the ſituation being extremely beautiful. It is the only fine town of the province: the houſes are elegantly built, and the walls about it extremely pleaſant. In this little town are found all the pleaſures and conveniences of life. It contains about a thouſand houſes and five thouſand perſons.

The government of La Marche is bounded on the north by Berry; on the eaſt by Auvergne; on the ſouth by Limoſin; and on the weſt by Poitou; it being about twenty-two French leagues in length from north to ſouth, and eight in breadth from eaſt to weſt.

It is, like Limoſin, divided into Upper and Lower, and the ſoil and climate are both the ſame. Its principal rivers are the Vienne; the great and little Creuſe, which diſcharge themſelves into the Vienne; the Cher, and the Gartempe, the latter of which falls into the Creuſe. The upper parts of the diſtrict are pretty fruitful in corn.

This province contains two bailiwics, and is governed by its own laws. Subordinate to its governor, is one lieutenant-general, and two ſub-governors.

Gueret, the capital of the Upper and Lower Marche, is ſeated on the river Gartempe, ten leagues to the north-eaſt of Limoges, and is the place where the courts of juſtice are held; but it has only one pariſh church, one college, one priory, two convents, and an hoſpital. The other places in this government are equally inconſiderable.

SECT. XXII.

Of the Government of Saintonge and Angoumois; their Situation, Extent, Produce, Rivers, and principal Cities.

SAINTONGE is bounded by Poitou and Aunis on the north; by Angoumois and Perigord on the eaſt; by Guienne and the river Gironde on the ſouth; and by the Bay of Biſcay on the weſt; extending twenty-five leagues in length, and twelve in breadth. It derives its name from the Santoni, the ancient inhabitants.

This country abounds in corn, wine, and all kinds of fruit; and the inhabitants, who are ſituated near the ſea, make great quantities of excellent ſalt. Its horſes are alſo much eſteemed. In it are ſome mineral ſprings. Its principal rivers are the Charente, which abounds in fiſh; it riſes near Charennac, and runs into the ſea; and the Butonne, which riſes in Poitou, and falls into the Charente.

This country is divided by the Charente into the ſouth, or Upper Saintonge, and into the north part, or Lower Saintonge. It is ſubject to the parliament of Bourdeaux, a few pariſhes excepted, which are within the juriſdiction of Angoumois. The governor-general is alſo deputy-governor of this country. The principal places in Upper Saintonge are,

Saintes, the capital, which is ſeated on the Charente, fifty-eight miles to the northward of Bourdeaux, and twenty to the eaſt of the Bay of Biſcay. It is a little ill-built city; but contains a provincial and a bailiwic court, with other public offices, and is the ſee of a biſhop, ſuffragan to the archbiſhop of Bourdeaux. His dioceſe contains five hundred and ſixty-five pariſhes and chapels, and his revenue amounts to twenty thouſand livres, out of which his Roman tax is two thouſand florins. The ſtreets are narrow and mean, but in the ſuburbs is an abbey, and the Jeſuits had here a college. Some ancient ruins diſcover its antiquity, as a triumphal arch ſuppoſed to be erected in the reign of Tiberius, the ruins of an amphitheatre, of ſeveral aqueducts, and a capitol.

Pons, a handſome town, ſtands high on the little river Seigne, over which it has ſeveral bridges, whence it probably received its name. It is divided into the Upper and Lower, and contains three pariſh-churches, three convents, three alms-houſes, and a commandery of the knights of Malta.

St. John d'Angeli, in Latin Angeliacum, ſtands on the river Butonne, five leagues to the north-eaſt of Saintes, and has a royal court of juſtice. While this place continued in the poſſeſſion of the Proteſtants, it was populous and well fortified; but being reduced in 1621 by Lewis XIII. the fortifications were razed, and the city deprived of its privileges. It has an abbey and three convents. Its brandy is much eſteemed, and the inhabitants alſo make woollen ſtuffs.

Angoumois is bounded by Poitou on the north, by Limoſin on the eaſt, by Perigord on the ſouth, and by Saintonge on the weſt; it being between fifteen and ſixteen French leagues in length, and about ſixteen in breadth.

The country is full of little hills, and has none of any conſiderable ſize. It produces wheat, rye, barley, Spaniſh corn, oats, ſaffron, wine, and fruit: it alſo yields ſome excellent mines of iron, and is particularly famous for making of paper. Its principal rivers are the Charente and Touvre, the latter of which riſes here, and runs into the former.

This country is ſubject to the parliament of Paris, and con-

contains a bailiwic and territorial jurisdiction. In it are the following places:

Angoulesme, the capital of Angoumois, is seated on the top of a hill surrounded with rocks, at the foot of which runs the river Charente, thirty miles to the eastward of Saintes. It confers the title of duke, is the see of a bishop, and has a bailiwic, a country and forest court, an office of the five great farms, &c. and is said to contain eight thousand persons. Its bishop is suffragan to the archbishop of Bourdeaux, and has a diocese of two hundred parishes, with a revenue of twenty thousand livres, out of which he is taxed by the court of Rome a thousand florins. Here are twelve parish-churches, and the abbey of St. Cibard, in which lie buried the old counts of Angoumois; together with ten convents, a college which lately belonged to the Jesuits, and a general hospital.

Coignac, or Cognac, the second town of the country, stands seven leagues to the westward of Angoulesme, in a most delightful situation on the Charente. It has a castle, in which Francis I. was born, and three convents; but it is better known to us by its excellent wine and brandy.

SECT. XXIII.

Of the two Governments of Nivernois and Bourbonnois; their Situation, Extent, Rivers, Produce, Government, and principal Towns.

THE government of Nivernois is bounded on the north by Burgundy and the Gatinois, on the east by Burgundy, on the south by Bourbonnois, and on the west by Berry. Its figure is pretty nearly circular, and it is about twenty leagues over either way.

It produces corn, wine, and fruit; except in the district of Morvant, which is a mountainous country, that produces scarce corn enough for the subsistence of the inhabitants. It has large woods, some pit-coal, and mines of iron. Among the many rivers which water Nivernois, three of them are navigable; these are the Loire, which runs from south to north along the western borders of this country; the Allier, which runs into the Loire; and the Yonne, which rises on the south-east part of this province, and running northward falls into the sea. The other streams serve to render the country fruitful and pleasant: there are here also some mineral springs.

This country is subject to the parliament of Paris, and has its own particular laws. Over it is a governor, a lieutenant-general, and a deputy-governor. It is divided into eight districts, the principal places in which are the following:

Nevers, the ancient Noviodunum, and afterwards Nivernum, is situated in the district called Le Vaux de Nevers, and is the capital of the country. It is built in the form of an amphitheatre on the banks of the Loire, which is here joined by the little river Nievre, thirty leagues to the south-east of Orleans. It has a handsome stone bridge of twenty arches; but the streets are narrow, and the ground uneven. The cathedral, dedicated to St. Cyr, is a fine structure; besides which there are eleven parish-churches, two abbies, several convents, and the Jesuits had here a college. It is computed that the inhabitants amount to about eight thousand. Among the other buildings is an old castle, which fronts a large square that consists of handsome houses uniformly built. There are here a forest and a bailiwic court, with a salt-office. The bishop is suffragan to the archbishop of Sens, and his diocese consists of two hundred and seventy-one parishes. His revenue amounts to twenty thousand livres, and he pays twelve hundred and fifty florins to the court of Rome. This place is celebrated for its porcelain and glass-houses, and for its works in enamel. The inhabitants also carry on a great trade in corn, hemp, wood, pit-coal, iron, and tin-wares. The fields about the town are extremely pleasant, particularly the public walks in the adjoining park.

Clamecy, a town seated in a district called the Vale of Yonne, and upon the banks of that river, which is here joned by the Buvron, and rendered navigable. In it is a castellany, and a salt-office. Pantenor, one of its suburbs, stands on the other side of the Yonne, and in the year 1180 was the residence of the bishop of Bethlehem, who had been compelled to leave Palestine. The bishop of the city, who still styles himself bishop of Bethlehem, is created by the count de Nevers, and enjoys all the privileges of the other French bishops, though his revenue amounts to no more than a thousand livres, and this town is his whole diocese.

The government of Bourbonnois is bounded on the north by Nivernois and Berry, on the east by the duchy of Burgundy, on the south by Auvergne, and on the west by Upper Marche. It is about thirty French leagues in length, and twenty in breath.

It is pretty fertile, particularly in corn, fruit, and forage: it also produces good wine, though not in a sufficient quantity for exportation. It has likewise a few coal-pits, and a great number of mineral springs and warm baths. Its rivers are the Loire, the Allire, the Cher, with some other smaller ones. In July, when the snow melts on the mountains of Auvergne, great damages are done by the inundations of the Allire.

This country is subject to the parliament of Paris; though the duke of Bourbon, to whom it belongs, has the nomination of all civil officers, yet their proper master is the king. Besides the governor and lieutenant-general, here are also two sub-governors; and in the whole country are twenty-two small towns, the principal of which are,

Moulins, in Latin Molinæ, the capital of the country, is seated on the Allire, in a pleasant fertile plain, almost in the middle of France, thirty miles to the south of Nevers, and fifty-five to the north of Clermont. It is well built, and one of the most agreeable places in the kingdom. It contains an intendency, a chamber of domains, a castellany, and several courts. It has likewise a collegiate church, five convents, an hospital, and a college, which lately belonged to the Jesuits.

Bourbon l'Archambaud, a small town fifteen miles to the west of Moulins, environed by four hills, on one of which stands an old castle that contains three chapels, among which that called the Holy is very splendid. In this town are a royal castellany, and a district court. There are here also one parish and one collegiate church, a priory, a convent, and two hospitals. This town is famous for its hot baths and cold mineral springs.

SECT. XXIV.

Of the Governments of Berri and Touraine; their Situation, Extent, Produce, Rivers, Government, and principal Towns.

THE country of Berri is bounded on the north by the Orleanois, on the east by the Nivernois, on the south by the Bourbonnois and La Marche, and on the west by La Marche and Touraine. Its extent from east to west is between twenty-seven and twenty-eight French leagues, and from north to south between thirty-five and thirty-six.

The air here is temperate, and the soil produces wheat, rye, and wine; and in some places it is equal to that of Burgundy. Its other products are also good, particularly its hemp and flax, in which it abounds; and its rich pastures feed great numbers of cattle, especially sheep, which are valued for the fineness of their wool. In one place in this country is found oker, which is seldom met with in France.

The principal rivers here are the Loire, the Creuse, and the Cher; the large and lesser Sandre, the Nerre, and the Indre; these two last have their sources in this country: the Orron, the Aurette, the Moulon, and the Evre. In this country is also the lake of Villiers, which is between seven and eight leagues in circuit.

Berry is under the jurisdiction of the parliament of Paris, and is governed by laws of its own. Subordinate to the governor are one lieutenant-general and two sub-governors, and it is divided into Upper and Lower Berry, the principal places in which are the following:

Bourges, the capital of Upper Berry, and of the whole country, is ſituated on a hill between the rivers Evre and Orron, to the banks of which it gradually deſcends, thirty-five leagues to the ſouth of Paris, and ſeventeen almoſt ſouth-eaſt of Orleans. Theſe two rivers encompaſs it on every ſide, except on that next the gate of Bourbonnoux. It is a large ſpacious city, containing a cathedral, four collegiate churches, beſides two annexed to the ſeminary, four abbies, and ſixteen pariſh-churches, with a beautiful and large college, which lately belonged to the Jeſuits. You meet here with many eccleſiaſtics, gentlemen, and ſcholars; and it is computed that there are in this city about fifteen thouſand ſouls; but not many of them are tradeſmen; the place having no other trade than what is neceſſary for the ſubſiſtence of the inhabitants. It is the ſee of an archbiſhop, and has an intendency, a ſalt-office, an independent royal tribunal, and ſeveral other offices and courts. The cathedral, which is dedicated to St. Stephen, is a fine Gothic ſtructure ſtanding on the higheſt part of the city: the archbiſhop, who is ſtiled patriarch and primate of Aquitaine, has five ſuffragans, with a dioceſe of nine hundred pariſhes, and a revenue of thirty thouſand livres, out of which he pays four thouſand and thirty-three florins to the court of Rome.

The palace built by prince John of France, duke of Berry, is a magnificent edifice, in one part of which, called the king's apartment, the governor reſides, and the other ſerves for the courts of juſtice; the great hall in the latter, which has no pillars to ſupport it, is eſteemed one of the fineſt and largeſt rooms in the kingdom. The town-houſe, erected by Jaques Coeur, is one of the moſt elegant buildings ever erected by a private man, and was purchaſed by Colbert, prime-miniſter of France, who gave it to the corporation of this city. The ſquare of Bourbon is the largeſt in Bourges, and here antiently ſtood a Roman amphitheatre. The public walks and the malls are much admired, and the great number of religious houſes are another conſiderable ornament to the city. The univerſity of Bourges was either founded or revived in the year 1463, and conſiſts of four faculties.

Cæſar took Bourges by ſtorm; and the inhabitants having exerciſed ſome cruelties on the Roman ſoldiers that had fallen into their hands, he glutted his revenge by deſtroying near forty thouſand of the natives. In the fifteenth century Charles VII. made this the place of his reſidence, while the Engliſh were maſters of almoſt all the reſt of the kingdom; on which occaſion the Engliſh called him, by way of deriſion, king of Berry.

Iſſoudun, in Latin Exolidunum, a large town, the ſecond in rank in the province, ſtands in a beautiful plain ſeventeen miles to the ſouth-weſt of Bourges, and is the principal place in Lower Berry. It contains a ſalt-office, a manor court, and other public courts and offices. It is divided into the Upper and Lower Town, and has a caſtle, which commands the place: it has alſo one abbey, two collegiate and four pariſh-churches, five convents, and two hoſpitals.

The province of Touraine, which derives its name from the Turones, is bounded on the north by the river Maine, on the eaſt by the Orleanois, on the ſouth by Berry and Poitou, and on the weſt by Anjou. Its greateſt extent from eaſt to weſt is twenty-two French leagues, and from north to ſouth twenty-four.

The air is temperate, and the country ſo delightful, that it is called the Garden of France; but it is not every where alike. The tract called the Varennes, which lies along the Loire, has a ſandy ſoil, which produces rye, barley, millet, garden plants, and an herb which makes a good yellow dye. That called the Verron is richer, and yields corn, wine, very fine fruit, and particularly large plums. La Champagne is a ſmall ſtrip of land between the rivers Cher and Indre, abounding in grain, and particularly wheat. La Brenne is a ſwampy country: but the eminences along the Loire and Cher are covered with vineyards. In ſhort, La Gaſtine is a ſtiff land very difficult to plough; and the country of Noyers is diſtinguiſhed by its having ſome mines of iron, and one of copper.

This country is governed by laws of its own; but the inhabitants have a right of appeal to the parliament of Paris. It has a governor, a lieutenant-general, and a ſub-governor. There are twenty-ſeven towns or boroughs in the country; the principal places of which are the following:

Tours, the Cæſarodunum, or Turoni, of the ancients, and the capital of the country, lies in a plain extending between the river Loire and the Cher, and is fifty-two miles to the north-eaſt of Poitiers, and a hundred and twenty-ſeven to the ſouth-weſt of Paris. The city is large and well built, and the ſtreets very clean, on account of ſeveral rivulets running through them from ſix public fountains. In this city is a very fine mall above a thouſand paces in length, and adorned on each ſide with two rows of fine elms. The inhabitants are ſo ſcrupulous, that after it has rained no perſon is ſuffered to play, nor even walk in it till it be dry, under a penalty of ten livres. This city has a mint, a receiver's office, and a ſalt-office, an intendency, a provincial, bailiwic, and foreſt court. The cathedral is a fine ſtructure, with two lofty towers, a curious clock, and a library, where are ſeen ſeveral antient manuſcripts faſtened by chains upon deſks. The two moſt valuable of theſe manuſcripts are, one of the Pentateuch, written in ſmall capitals, which is reckoned to be a thouſand years old; and another of the four Goſpels, in Saxon characters, which ſome think to be of the ſame age as the Pentateuch, and others twelve hundred years old. There are here alſo five collegiate churches, three abbies, twelve convents, and the Jeſuits had here a college. The city is the ſee of an archbiſhop, under whom are eleven ſuffragans, ſeventeen abbies, twelve collegiate churches, ninety-eight priories, three hundred pariſhes, and a hundred and ninety-one chapels. His revenue is forty thouſand livres, and he pays to the court of Rome nine thouſand five hundred florins. Here is alſo a royal palace, and an academy of polite literature.

While the manufactures of gold, ſilver, and ſilk brocades were in a flouriſhing condition, this city was computed to contain ſixty thouſand inhabitants, which number is reduced to thirty thouſand. The city is governed by a mayor and twelve echevins.

Amboiſe, in Latin Ambacia, or Ambaſia, is ſeated at the confluence of the Loire and the Amaſſe, twelve miles to the eaſtward of Tours, and contains a ſalt office, and a royal and foreſt court. In it are two pariſh-churches, four convents, and one hoſpital. Near the town is a large caſtle ſtanding on a high rock, in which are the ſtatues of Charles VIII. and his conſort Anne; as alſo a ſtag's head of very extraordinary dimenſions, it being ten feet high and eight feet broad, from the extremity of one horn to the other. This was ſuppoſed to be natural, till it was at laſt diſcovered to be factitious, and only made of wood. There are here alſo ſeveral other curioſities. In this town Charles VIII. was ſlain, either by running againſt a door, or, according to others, by being ſhot through the head. This was alſo the place where the civil war in 1561 firſt broke out, and where the name of Huguenot had its riſe.

SECT. XXV.

Of the two Governments of Poitou and Aunis; their Situation, Extent, Produce, Rivers, and principal Cities; with a more particular Deſcription of Poitiers and Rochelle.

THE province of Poitou is bounded on the north by Touraine and Anjou, on the eaſt by La Marche and part of Berri, on the ſouth by Angoumois and Aunis, and on the weſt by the Bay of Biſcay. It extends from north to ſouth twenty-two French leagues, and from eaſt to weſt forty-eight. It received its name from the antient Pictavi, or Pictoni.

The country is diverſified with champaign lands, woods, and paſture grounds, with a few foreſts. The ſoil is various, according to the different parts of the country; but it in general abounds in corn and cattle. The principal trade of the inhabitants conſiſts in oxen, mules, horſes, and woollen ſtuffs.

The largeſt rivers are the Vienne, which riſes on the borders of Limoſin, and being joined by the Creuſe falls into the Loire; the Sevre Niortoiſe, which riſes in this country,

country, and, after receiving the Venotee, diſcharges itſelf into the ſea; theſe are all navigable: here is alſo the Clain, which riſes in the frontiers of Angoumois and falls into the Vienne.

This province was erected into an earldom by Charlemagne. Eleanor, daughter to the laſt duke of Aquitaine, brought it to her ſpouſe Henry II. king of England, to which it continued ſubject, with ſome interruptions, till the unfortunate reign of Henry VI. when it was taken in 1436, ſince which time it has been perpetually annexed to the crown of France. It is ſubject to the parliament of Paris, and has but one provincial court. Under the governor is a lieutenant-general, and two deputy-governors.

This province is divided into two parts. Upper Poitou, which conſtitutes the eaſtern part of the country, is larger, more fruitful, pleaſant, and healthy, than the Lower; we ſhall begin with the former, the principal places in which are the following:

Poitiers, or Poictiers, in Latin Auguſtoritum, the capital of the country, is ſeated upon a hill on the left bank of the little river Clain, into which falls another rivulet. It lies about eighteen leagues to the eaſt of the ſea coaſt, and ſeventy miles to the north-eaſt of Rochelle, Were its circuit to be only conſidered, it would, perhaps, be eſteemed the firſt in the kingdom, next to Paris; but it is far from being peopled in proportion to its extent, there being corn-fields and meadows within the walls; for the city has been ſo reduced by the civil wars, that it is almoſt become a deſart, and is a mean ſmoky place. It is, however, a ſeat of a ſeneſchalſhip, a preſidial court, an office of the finances, and a country court. It is the ſee of a biſhop, who is ſuffragan to the archbiſhop of Bourdeaux, and has a dioceſe of ſeven hundred and twenty-two pariſhes, with a revenue of twenty-two thouſand livres, out of which he pays to the court of Rome two thouſand eight hundred florins. The cathedral is of an uncommon ſize, and built in the Gothic ſtyle. In this city are alſo four collegiate churches, ſeventeen other pariſh-churches, four abbies, twenty-one convents, and two ſeminaries; the Jeſuits had alſo a college here. An univerſity was founded in 1431, and there are likewiſe three hoſpitals. In 1687 the inhabitants erected in the Royal ſquare a pedeſtrian ſtatue of Lewis XIV. The inhabitants in this town are principally employed in making gloves and combs; they alſo export woollen caps and ſtockings.

There are here ſome remains of Roman antiquities; among theſe is an amphitheatre, which lies among gardens and ſmall houſes, a triumphal arch, or rather gate, erected at the beginning of a military way, of which nothing at preſent remains but the arch, with the two pillars which ſupport it. The palace and thick round tower cloſe by it are ſaid to be Roman works; but they carry evident traces of their being of Gothic ſtructure.

In the neighbourhood of this city Edward the Black Prince obtained a memorable victory over the French, in the year 1356, at which he took John their king, with his ſon Philip, priſoners.

Niort is the beſt trading town in the province; it is ſeated on the river Soure, and has a bailiwic, a royal juriſdiction, and a foreſt court. It contains a caſtle, two pariſh churches, and nine convents, a general hoſpital, and has ſome manufactures of wool.

Luçon, a city in Lower Poitou, is ſeated in a moraſs twenty-three leagues to the ſouth-weſt of Poitiers, and enjoys the title of a barony. It is the ſee of a biſhop, who is lord and baron of the town, and ſuffragan to the archbiſhop of Bourdeaux. His dioceſe conſiſts of two hundred and thirty pariſhes, and he has a revenue of twenty thouſand livres, out of which he pays to the court of Rome one thouſand florins. The air of this place is unwholeſome, and, beſides the cathedral, it contains only one pariſh church, one ſeminary, and two convents.

The government of Aunis is bounded on the north and weſt by Poitou; on the ſouth by Saintonge; and on the weſt by the Bay of Biſcay. It is watered by the Soure, which riſes in Poitou, and there are good harbours along the coaſt. The country is ſomewhat barren, but produces ſome corn, and a great deal of wine; the marſhes afford good paſturage.

This little province depends on the parliament of Paris, but is partly governed by its own common law, founded on cuſtom. Under the governor is a lieutenant-general and a deputy-governor.

Rochefort, a new regular built town, ſeated on the river Charente, twenty-three miles to the ſouth of Rochelle; it was formerly a ſmall village belonging to a private family, from whom Lewis XIV. bought it in 1664, in order to build a city here; for it having been obſerved, that from this place to the ſea, which is about four miles diſtant, the river was large enough to carry the biggeſt ſhips, the bottom excellent for anchorage, and the banks very even and ſolid; it was reſolved to erect this city, and this reſolution was accordingly executed. It has a very commodious harbour, and is one of the ſtations for the royal navy of France; ſo that here are all the neceſſary magazines for ſhipping, and a ſpacious and convenient dock. Here are alſo a victualling warehouſe, a foundery, a manufactory of ſail-cloth, the Hôtel called Cazernes, which was originally uſed for the education of three hundred gentlemen of noble families, deſigned to ſerve in the navy, and who are taught at the king's expence; but it now ſerves to lodge the marines, and is an hoſpital for ſick ſoldiers, &c.

The entrance of the river is well defended by ſeveral forts, particularly one in the Iſle of Aix, the redoubt facing it called Aiguille, fort Fourax, de la Pointe, and Vergeron; and about a league below Rochefort, is a long ſtoccado acroſs the river. On the twenty-firſt of Sept. 1757, the Iſle of Aix, with the fort upon it, was taken by the brave captain Howe, in the Magnanime, after about an hour's reſiſtance, when the whole garriſon, which conſiſted of near ſix hundred men, were made priſoners of war.

Rochelle, in Latin Rupelle, the capital of the province and government, in forty-ſix degrees ſixteen minutes north latitude, and one degree ten minutes weſt longitude, is ſeated on the ſea. It has a good harbour, but is rather handſome than large. The city has broad and ſtraight ſtreets, with neat houſes, ſupported by piazzas and porticos, which afford ſhelter both from the rain and ſun. It is the ſee of a biſhop, ſuffragan to the archbiſhop of Bourdeaux, with a dioceſe of one hundred and eighty pariſhes, and a revenue of ſeventeen thouſand livres, out of which he is taxed by the court of Rome ſeven hundred and forty-two florins. Here is alſo an intendency, a provincial and a bailiwic court, an admiralty, a chamber of commerce, and a mint. The Jeſuits had alſo a college here; and there is likewiſe a college of phyſic, anatomy, and botany, for the inſtruction of young ſurgeons and apothecaries.

Rochelle was the principal ſeat of the reformed in France, whoſe inhabitants embracing Calviniſm in the ſixteenth century, ſuffered extremely during the civil wars, and having been fortified by them, was frequently defended with the utmoſt bravery. It was long poſſeſſed by that body, till at length Lewis XIII. after a long and famous ſiege, made himſelf maſter of it in 1628, chiefly for want of the promiſed ſuccours from England, which did not arrive in time, and by means of an admirable bank of earth that cardinal Richelieu cauſed to be raiſed againſt it on the ſide of the ocean, to prevent their receiving ſuccours. Famine at length obliged them to capitulate, in conſequence of which their privileges were taken from them, and the fortifications demoliſhed, except only two towers that defend the port; but his ſon Lewis XIV. cauſed new and very ſtrong fortifications to be raiſed round it. The port is almoſt of a circular figure, and near fifteen hundred paces in circuit. One of the above-mentioned towers defending the port, is a priſon for ſtate criminals, and the other is called the Tower of the Chain. No veſſel can enter into the harbour without leave of the governor, or captain of this laſt tower.

The principal manufacture carried on here is the refining of ſugar; and they have lately ſet up a manufacture of earthen ware which ſucceeds very well. A conſiderable trade is carried on here to the iſlands of America, to which all the neceſſaries of life are ſent, and from thence the veſſels employed in it bring back the produce of thoſe countries. The Engliſh in time of peace, with the Dutch, Danes, and the Swedes, annually ſend to

Rochelle a great number of ships, in order to take wine, brandy, salt, paper, linen, cloth, and serges.

The isle of Ré, in Latin Radis, lies between two and three French leagues from the Continent, and is four miles in length, and two in breadth. It produces plenty of wine, of which is made a very fine sort of brandy, and is very populous. It has a little fortified town, named St. Martin, which has a harbour and citadel, and is likewise defended by three other forts.

The isle of Oleron, in Latin Uliarus, is about three French leagues distant from the main land; it is five in length, two in breadth, and extremely fruitful. The inhabitants here having been able and expert sailors for these six or seven hundred years past, have drawn up rules for the marine, called the Laws of Oleron, which have served as a model to other matitime powers with regard to sea affairs. These islanders have always enjoyed very considerable privileges, both under the dukes of Aquitaine, and the kings of France, and had a governor peculiar to themselves, who had a very extensive authority. This island, together with that of Ré, was taken in the sixteenth century by the citizens of Rochelle; and as these islanders were very well affected to them, on account of the reformed religion, which most of them professed, they continued masters of these islands till the year 1625, at which time Lewis XIII. took them again.

SECT. XXVI.

Of the two Governments of Anjou and Saumur; their Situation and Extent; with a Description of Angers and Saumur.

THE government of Anjou, which received its name from the ancient Andes, or Andegavi, is bounded on the north by the river Maine; on the east by Touraine; on the south by Poitou; and on the west by Brittany. Its greatest length from east to west is twenty-six French leagues, and from north to south twenty-four.

The country is a pleasant succession of hills and vallies, producing corn, wine, pease, beans, flax, hemp, and fruit-trees. Its fine pastures also furnish great herds of cattle. It has likewise mines of coal, iron, and salt-petre, together with quantities of marble, stone, and slate.

In this country are reckoned no less than forty-nine great and small rivers; but only six of these are navigable. These are the Loire, the Vienne, the Toue, the Magenne, the Loir, and the Sarte. This country is under the parliament of Paris, but has laws of its own. Subordinate to the governor, is one lieutenant-general, and two sub-governors. The principal city in this government is

Angers, anciently Juliomagus, and in Latin Andegavum, the capital of the country, lies a little above the place where the rivers Loire and Sarte fall into the Mayenne, which divides the city into two equal parts. The first walls were raised by John, surnamed Lackland, king of England and duke of Anjou; but prince Lewis, afterwards king Lewis VIII. son of Philip Augustus, caused those walls to be demolished; however, St. Lewis his son and successor rebuilt them as they now are. This is a large and populous city, containing nine thousand houses, and about thirty thousand inhabitants; it has sixteen parishes, twelve of which are within the town, and four in the suburbs. Here are likewise eight collegiate churches, and a great number of convents both of men and women. This city is the see of a bishop, who is suffragan to the archbishop of Tours. His diocese contains six hundred and sixty-eight parishes; his revenue amounts to twenty-six thousand livres, and his taxation at the court of Rome is seventeen hundred florins. The cathedral is remarkable for three very high steeples built on its portico, of which that in the middle rests upon the foundations of the two others. Its roof is very high, large, and bold; it is not supported by any pillars; and the whole structure is in general elegant. Part of the town stands very low; so that it is proverbially said in the neighbouring country, "that Angers is a low town, "has high steeples, rich strumpets, and poor scholars."

It has a strong castle built on a rock, and encompassed with ditches cut into it, though very steep on the side of the river which runs at its foot. This castle is flanked with several large towers, and has a half-moon at the gate which leads to the suburbs. It was built by St. Lewis during the wars with the English, and it now serves as a prison for state criminals.

The university, which is one of the most famous in France, was founded by St. Lewis. They teach here the civil and canon-law, divinity, physic, and the liberal arts. A chair for a professor of the mathematics has been lately erected here, in the college of the fathers of the Oratory. Lewis XIV. in 1615, established in this city a royal academy, with the same privileges as that of Paris: it consists of thirty-six members, who must all be natives or inhabitants of the province. Here is a great procession annually celebrated at a festival called la Fête du Dieu, which is on Corpus Christi day, when all the priests and monks, with the principal inhabitants, and numbers of strangers, carry lighted torches in their hands, and representations of Scripture histories engraved, to atone for the pretended crime of their archdeacon Berengarius, who opposed transubstantiation about the year 1019, when that doctrine was first preached here.

This city is under the government of a mayor and four aldermen, annually chosen; twelve counsellors, eight assessors, a city attorney, a commissary, and a recorder. Their jurisdiction extends over the manufactories set up in the town, suburbs, and liberty. These manufactures consist of fine woollen stuffs, striped with silk and gold. They also bleach wax and linen cloth. In the town are likewise some sugar-bakers.

The Saumurois, or government of Saumur, contains a part of Anjou and Upper Poitou: it is under the direction of a governor, a lieutenant-general, and a sub-governor. The principal place it contains is

Saumur, in Latin Salmurus, the capital, and the seat of the public courts and offices, stands twenty-two miles to the south-east of Angers, and a hundred and sixty to the south-west of Paris. It contains a fine castle, three parish-churches, nine convents, and one royal college. Here is an important passage over the Loir, upon which there is a famous bridge. This city was much more opulent while in the possession of the Protestants; but has still an university. Near it is the magnificent abbey of the Benedictines of the congregation of St. Maur.

SECT. XXVII.

Of the Government of Orleanois; its Situation, Extent, Divisions, Rivers, Canals, and principal Cities.

THE government of Orleanois consists of several small countries, and is bounded on the north by Normandy and the Isle of France; on the east by the Isle of France, Champagne, and Burgundy; on the south by Nivernois and Berry; and on the west by Touraine and Maine; including Orleanois Proper, Sologne, Beausse Proper, or Chartraine, Dunois, Vendomois, Blaisois, the greatest part of Gatinois, and Perche Gouet. The whole government extends about thirty-two leagues in length from east to west, and twenty-eight in breadth from north to south.

The rivers which run through this government, or have their source in it, are the Loire; the Loiret, which rises a league from Orleans, and falls into the Loire; the Cher, which also runs into the Loire; the Laconie, which rises in the wood of Orleans, and loses itself in the same river; the Aigle, which rises in this government, and also mingles with the Loire; the Hyere, which loses itself under ground, and, when it afterwards appears again near Montigny, is called le Ganelon, falls into the same river.

In this district are likewise some remarkable canals. That of Briare, which receives its name from a small town, joins the river Loire to the Loing, which falls into the Seine, and consequently opens a communication between the countries lying on the Loire and the city of Paris. The canal of Orleans also joins the above-men-

tioned rivers; this canal, which was begun in 1682, and finiſhed in 1692, is near eighteen leagues in length, and contains thirty ſluices.

The whole government is ſubject to the parliament of Paris, and contains four large and three ſmall juriſdictions. The trade carried on here by means of the Loire is the moſt extenſive in the whole kingdom, comprehending not only all that comes from the ſouthern and weſtern parts, but likewiſe from foreign countries. The principal ſtaple is at Orleans. Under the governor are three lieutenant-generals, and three ſub governors.

Orleanois Proper is one of the fineſt countries in France; it being fertile in corn, wine, and excellent fruit; and abounding in cattle, game, and fiſh. The principal places in this government are the following:

Orleans, antiently Genabum, or Cenabum, and afterwards Aurelianum and Aureliana, the capital of the government, is ſeated on the Loire, over which it has a fine ſtone bridge of ſixteen arches, leading to a ſuburb on the ſouth ſide of the river. On this bridge is to be ſeen a beautiful monument of caſt braſs ſtanding on a ſtone pedeſtal, that has ſome ornaments in the Gothic taſte. In the center of the monument is a crucifix, on the top of which ſtands a pelican with its brood pecking its own breaſt; before the crucifix is the Virgin Mary ſitting with the dead body of Chriſt reclined on her lap. On the right ſide is king Charles VII. kneeling and ſtretching out both his hands towards the croſs, and on the left ſide the famous maid of Orleans, alſo repreſented kneeling, both armed cap-a-pie with ſwords by their ſides; the king has the French coat of arms, and wears a crown on his helmet. But the helmet of the maid is placed by her: her hair is tied behind, and the reſt of it hangs looſe on her back. Theſe ſtatues are not ſo big as the life. A ſolemn proceſſion is annually obſerved here on the twelfth of May, in commemoration of the deliverance of the city. It ſtands in a moſt agreeable plain, and is built in the form of a bow; the ſtreets in general are narrow, but ſome of them are broad and ſtraight. This city, which is about four miles in circuit, is but meanly built, and, except a few of the tradeſmen, the inhabitants are poor. It is the ſee of a biſhop, and contains an intendancy, a caſtellany, a country court, a foreſt court, a ſalt-office, and other courts and offices. It has a fine cathedral built in the Gothic ſtyle, an abbey, three collegiate churches, twenty-two pariſh-churches, an univerſity conſiſting only of civilians, which was formerly very famous, though it is at preſent in no great repute, one ſeminary in which divinity is taught, and a public library. The Jeſuits had alſo a college here. Its biſhop, who is ſubordinate to the archbiſhop of Paris, has a dioceſe of two hundred and ſeventy-two pariſhes, and a revenue of twenty-four thouſand livres, out of which he pays two thouſand florins to the court of Rome. The public walk is properly a part of the city ramparts, levelled and planted with beautiful rows of trees. The ſuburb on the farther ſide of the river makes a tolerable appearance, and has a Carthuſian monaſtery. This city, on account of its ſituation in the middle of the Loire, is the magazine of the whole trade of the kingdom, eſpecially in corn, wine, brandy, and ſpices: it alſo carries on a conſiderable trade in ſheep-ſkins, and likewiſe in ſtockings, of which great quantities are made here.

In the year 1344 it was raiſed to a dukedom and peerage, and Lewis XIV. gave it his brother Philip, in which houſe it continues.

This city was beſieged by the Engliſh in 1428, and ſo ſtraitened, that the inhabitants reſolved to ſurrender to the duke of Burgundy, then in the Engliſh army, and their ally. But the Engliſh not being willing that the city ſhould be given up to him, he was diſguſted at it, and Joan of Arc heading the ſoldiers, raiſed the ſiege in 1429, from which ſhe obtained the name of the Maid of Orleans. The French language is ſpoken here in the greateſt purity.

The foreſt of Orleans lies to the north of the city and of the river Loire, and is the largeſt in the whole kingdom. It contains about fourteen thouſand acres planted with wood; but is interſperſed with ſeveral plains and villages. It is twenty leagues, or ſixty miles, in length, and in ſome places ſeven or eight leagues, and in others only two or three in breadth. It contains high and lofty trees, as oaks, elms, &c. In this foreſt they fell timber every year to the value of a hundred thouſand livres, the profits of which belong to the duke of Orleans.

Chartres, the Autricum of the antients, is the capital of the country of Chartrain; it is ſituated on the river Eure, about fourteen leagues to the ſouth-weſt of Paris, and is divided into two parts by the above river, the largeſt of which ſtands on an eminence. It is the ſee of a biſhop, and has a noble cathedral; but the city has little beauty to recommend it, the ſtreets being narrow, and the buildings old. It has three abbies, one priory, ſix pariſh-churches, without including thoſe in the ſuburbs, nine convents, one ſeminary, and two hoſpitals. In the city are alſo held a provincial and bailiwic court, together with a ſalt office. The biſhop, who is ſuffragan to the archbiſhop of Paris, has a dioceſe of eight hundred and ten pariſhes; his annual revenue amounts to twenty-five thouſand livres, out of which he pays four thouſand florins to the court of Rome.

Blois, in Latin Bleſæ, the capital of the diſtrict of Blaiſois, ſtands partly on an eminence, and partly in a plain on the river Loire, over which it has a well-built ſtone bridge. It is ſituated ten leagues to the ſouth-weſt of Orleans, in a pure air, and in the midſt of one of the fineſt countries in France. It is a large handſome city; but the greateſt beauty of it is the palace, or caſtle, the reſidence of ſeveral of their kings, with gardens adorned with fountains and other water-works, and a park ſuitable to the magnificence of the buildings. The ſtair-caſe of the palace is much admired, as well as the gallery, which is ſaid to be ſix hundred feet long; and over the great gate is a ſtatue of Lewis XII. In the grand court before the palace ſtands one of the largeſt collegiate churches in France. It is remarkable that there is an image of the Virgin over every gate of the city; theſe were ſet up in 1631, when, after having ſuffered much by the plague, they imagined, on its ceaſing, that they were miraculouſly delivered by the queen of heaven, as they ſtile her. The pariſh-church of St. Solenne, the largeſt in Blois, having been deſtroyed by a tempeſt, was magnificently rebuilt by Lewis XIV. and converted into a cathedral. The Jeſuits had alſo a beautiful college here, the front of which is adorned with the Doric, the Ionic, and the Corinthian orders of architecture. The other public edifices, as the town-houſe, and the building where the courts of juſtice are held, are well worth viewing. Their fountains are alſo large, and well ſupplied by a noble aqueduct, ſuppoſed to be the work of the ancient Romans.

The biſhop, who is ſuffragan to the archbiſhop of Paris, has in his dioceſe about two hundred pariſhes, and his revenue amounts annually to twenty thouſand livres, out of which he is taxed two thouſand five hundred and thirty-three florins at the court of Rome. There are here ſeveral churches beſides thoſe we have mentioned, and likewiſe a conſiderable number of convents.

The natives are repreſented as being remarkable for their good ſenſe and gentle behaviour, as well as their ſpeaking French in perfection, which is ſuppoſed to proceed from the frequent reſidence of the court in this city.

The principal trade here is in wine and brandy, which are ſent to Orleans, Paris, Tours, Laval, and even into Holland; and the city is alſo diſtinguiſhed for making the beſt watches in the kingdom.

Chambord, a royal palace ſeated in a wood on the river Coſſon, is a magnificent edifice of free-ſtone, built by Francis I. It is ſaid to exceed any Gothic edifice in France, and to have ſuch various beauties, that the greateſt maſters may learn ſomething from it. The body of the building is compoſed of four large pavilions, and the whole is ſurrounded with a wall of hewn-ſtone, flanked with towers, which at a diſtance give it a magnificent appearance. The tower over the center looks very grand, and the principal winding ſtair-caſe is much admired. The halls, anti-chamber, chambers, wardrobes, cabinets, and galleries, are of exquiſite architecture, and the garden and park anſwerable to the beauty of the building. In this palace Staniſlaus, the dethroned king of Poland, reſided nine years. It was afterwards con-

ferred on the celebrated general count Maurice of Saxe, who died here in the year 1750, when the king gave it his heir the count de Friſe, who died here in the year 1755.

Montargis, the capital of the Gatinois Orleanois, is ſituated on the river Loing, near the place where the canal of Orleans falls into it, twenty-five leagues to the ſouth of Paris. The town is not large; but having been burnt down, is handſomely rebuilt, and has a caſtle pleaſantly ſituated on a hill, that commands the town and the neighbouring country. Here is a bailiwic, a foreſt, a provincial court, and a ſalt-office. Beſides the pariſh-church, there are ten chapels founded by the inhabitants, with a college, and ſeveral convents.

SECT. XXVIII.

Of the Government of Maine and Perche; the Situation and Extent of thoſe Provinces; their Produce, Rivers, and principal Towns.

THE government we are now going to deſcribe comprehends the province of Maine, the earldom of Laval, and the greateſt part of the earldom of Perche.

The county of Maine is bounded on the north by Normandy, on the eaſt by Perche, on the ſouth by Touraine and Orleanois, and on the weſt by Anjou and Brittany, extending eighty-eight miles in length from eaſt to weſt, and fifty in breadth from north to ſouth.

It has mines of iron, quarries of marble, and, being very fruitful, abounds in corn, wine, flax, and cattle: their fowls are particularly admired, and are well known at Paris. Its principal rivers are the Mayenne, or Maine; the Huiſne, which riſes in Perche, and runs into the Sarte; the Sarte, which alſo riſes in Perche, and after receiving the Orne, the Huiſne, the Enferne, and the Little Loire in its paſſage, falls into the Mayenne.

This country was formerly an earldom, but has been united to the crown ever ſince the year 1584. It is governed by its own laws; but is ſubject to the parliament of Paris, and has a particular ſub-governor.

The principal places in this government are the following:

Mans, in Latin Cenomanum, the capital of the province of Maine, is ſituated on a hill, at the foot of which runs the river Sarte, which here unites its water with the river Huiſne, thirteen leagues to the north-weſt of Tours, and thirty-two to the ſouth-weſt of Paris. It is the ſee of a biſhop, and has a ſalt-office, a provincial and foreſt-court, &c. Its biſhop, who is ſuffragan to the archbiſhop of Tours, has a dioceſe of ſix hundred and ninety-ſix pariſhes, and a revenue of thirty-five thouſand livres, out of which he pays two thouſand two hundred and ſixteen florins to the court of Rome. In this city, beſides the cathedral and two collegiate churches, are four abbies, thirteen pariſh-churches, eight convents, one college, and one ſeminary.

Laval, the capital of an earldom, is ſeated on the Maine, eight leagues to the weſtward of Mans, and is encompaſſed by a wall and other fortifications in the antique taſte: it has alſo an ancient caſtle of the ſame kind; but incapable of making any great defence, ſince the improvement of the art of war. It has a ſalt-office, a country and foreſt court, &c. and contains two collegiate churches, two pariſh-churches, one priory, and eight convents. This town was taken by ſcalade in 1446, by the brave Talbot earl of Shrewſbury, general of the Engliſh.

Perche is bounded by Normandy on the north, by the Iſle of France and Orleanois on the eaſt, by the river Maine on the ſouth, and by Normandy on the weſt; it not being above fifteen leagues in length, and twelve in breadth.

It is a hilly country, and the eminences produce only graſs for cattle; but the valleys and plains bear all kinds of grain and hemp; they alſo abound in apples, of which they make cyder, the uſual drink of the country: they have indeed a few vineyards, but the wine is ſo poor, that cyder is generally preferred before it. They have here alſo ſome iron mines, and mineral waters.

This country enjoys its own laws; is ſubject to the parliament of Paris, and governed by a particular ſub-governor. The whole country does not belong to this government, Perche Gouet being ſubject to that of Orleanois, and Timerais to that of the Iſle of France. The principal places in this country are the following:

Mortagne, the capital of Perche, is ſituated eighty-five miles to the weſt of Paris, and is the ſeat of a ſalt-office, a viſcounty, a diſtrict court, a foreſt court, &c. It has one collegiate and three pariſh-churches, four convents, with one hoſpital, and has ſome conſiderable manufactures of coarſe linen.

Belleſme, a ſmall town ten miles to the ſouth of Mortagne, and ninety to the weſt-by-ſouth of Paris, diſputes the rank of capital with Mortagne, and is alſo the ſeat of a royal viſcount, a foreſt court, and a ſalt-office. In a neighbouring wood is the mineral ſpring of Herſe, the water of which is in many caſes very ſalutary.

SECT. XXIX.

Of the Government of Paris; with a particular Deſcription of that City, and the neighbouring Places.

THE boundaries of this government are not eaſily determined, the French geographers themſelves being not agreed about them. It, however, includes, beſides the city, a part of the neighbouring country; and, beſides the governor, here are two lieutenant-generals, one of which is appointed for the city, the other for the *prevoté* and *vicomté*, through its utmoſt extent. Within the boundaries of this juriſdiction are contained four others; theſe are the Louvre and the Tuilleries, as alſo thoſe of the Baſtile and the royal hoſpital of invalids, the four governors of which receive their orders immediately from the king.

Paris, in Latin Lutetia, Pariſii, and Lutetia Pariſiorum, the capital of France, is ſeated in a large plain on the river Seine, in the middle of the Iſle of France, in the forty-eighth degree fifty minutes north latitude, and in the ſecond degree twenty-five minutes eaſt longitude, two hundred and twenty-five miles to the ſouth-eaſt of London, ſeventy miles to the ſouth of Rouen, five hundred and fifty to the weſt of Vienna, ſeven hundred to the north-weſt of Rome, and ſix hundred and twenty-five to the north-eaſt of Madrid.

This city is of a circular form, about ſix or ſeven miles in diameter, and, including the ſuburbs, is eighteen or twenty in circumference. Its ſtreets have been computed to amount to nine hundred and twelve, in which are about twenty thouſand houſes, from four to ſeven ſtories high; beſides churches, convents, chapels, colleges, communities, and ware-houſes. "The number of its "inhabitants, ſays Dr. Buſching, cannot much exceed "four hundred thouſand; for from the year 1728 to "1736 the annual bills of mortality were at a medium "ſeventeen thouſand eight hundred; and it is calculat-"ed, upon very probable computations, that of twenty-"five perſons in this city, one dies yearly, whence the "above number of deaths make the number of living "inhabitants four hundred and forty-five thouſand."

This great city contains forty-ſeven pariſh-churches, beſides twenty others; three abbies and twelve priories for men, ſeven abbies and ſix priories for women; ſeventeen collegiate churches, thirteen of which have chapters; fifty convents and fraternities of eccleſiaſtics and laics, forty-three nunneries, and fourteen female communities; eleven ſeminaries, twenty-ſix hoſpitals, and forty chapels; an univerſity, ſix academies, beſides three others where young gentlemen are taught bodily exerciſes; five public libraries, four royal palaces, four caſtles, above a hundred hotels, ſome of which are ſtately ſtructures; ſeventy-three market-places, ſixty fountains, twelve bridges over the Seine, ten of which are of ſtone, and eleven gates.

Among the diſadvantages of this city it muſt be obſerved, that Paris affords no good water fit for drinking, the inhabitants being obliged to uſe that of the Seine, which is fetid, and occaſions dyſenteries; or another ſort of water that is ſtill worſe, it being productive of the

gravel and ſtone. The ſtreets are lighted at night ſix months in the year; but this is performed in a very inelegant manner, by hanging up lanterns in the middle of the ſtreets upon cords, which are put acroſs from one window to another.

The new regulations for keeping the ſtreets clean, formed by M. Turgot, provoſt of the merchants, conſiſt in a canal lined with free-ſtone, ſix feet broad, and about the ſame depth, which receives all the ſoil from thoſe parts of the city through which it runs. This canal is kept clean by means of a large reſervoir formed in a particular building erected for that purpoſe, which is ſupplied with water from all the ſprings in the neighbourhood. In it are ſix pumps worked by a machine kept going by four horſes, and theſe diſcharge the water into a large reſervoir likewiſe lined with free-ſtone, whence it runs under ground through two ranges of pipes of a conſiderable bore, diſcharging itſelf with great violence into the above canal, and thus carries off all the filth into the Seine.

Here are good regulations in caſe of fire, for the firſt preſident of the parliament, and the lieutenant of the police, the horſe and foot patrole, and ſome companies of the French and Swiſs foot guards, are obliged to repair to a fire with all the expedition the diſtance of the place will admit; but the actual extinguiſhing of it is committed to the care of the monks of the four Mendicant orders, who on ſuch occaſions are to expend, for the benefit of the public, part of the ſtock they have acquired by begging.

To give a more particular deſcription of this city: it conſiſts of three parts, namely, the Town, which lies on the north of the Seine, the City, which is environed by that river, and the Univerſity, which lies to the ſouth of it, with twelve ſuburbs. In 1702 it was alſo ſub-divided into twenty quarters, or wards.

The city is in the centre, and is the moſt cleanly and wealthy; it conſiſts of three iſlands formed by the Seine; theſe are the Iſle Du Palais, the Iſle of Notre Dame, and the Iſle Louviers. The laſt is ſmall, and contains only ſtore-houſes for wood; it fronts the arſenal, and has a communication with the quarter of St. Paul by means of a wooden bridge.

The Iſle of Notre Dame, or Our Lady, is ſo called from the cathedral of that name; the ſtreets of which are very ſtraight: by means of a ſtone bridge it has a communication with the quarter of St. Paul, by another with that of Maubert, and it is alſo joined by a wooden bridge to the Iſle Du Palais: it has alſo ſome fine hôtels, with the pariſh-church of St. Lewis.

The Iſle Du Palais, or the Iſland of the Palace, properly conſiſts of Old Paris, and is ſo called from the place in which the parliament meets, and which takes up a great part of it. The metropolitan church ſtands at one end of this iſland, where are alſo ſeveral little pariſh-churches, the hoſpital of Hotel Dieu, or the Houſe of God, which extends to the other ſide of the river towards the ſouth, and a vaſt number of ſmall crooked ſtreets or lanes, built with very high houſes, moſt of which are inhabited by ſeveral families.

Beſides the above wooden bridge, which joins this iſland to that of Notre Dame, it has a communication with other parts of the city by means of ſeven ſtone bridges. The principal of theſe is the Pont Neuf, or New Bridge, which is the fineſt bridge in Paris. It conſiſts of twelve arches, and is ſeventy-two feet broad, reckoning the parapets. The middle or carriage-way is thirty feet broad, and on each ſide is a foot-way raiſed. Over the piles on each ſide are alſo ſemicircular lodgements, in which are a hundred and ſeventy-eight ſmall ſhops belonging to the king's footmen, which only ſerve to obſtruct a moſt beautiful proſpect. In the center of the bridge is a fine equeſtrian ſtatue of Henry IV. in braſs, larger than the life, and ſtanding on a marble pedeſtal, on the ſides of which are baſſo relievos, with inſcriptions repreſenting the victories and principal actions of that hero. At the four corners are tied four ſlaves, alſo of braſs, who trample upon antique arms. This ſtately monument is incloſed within iron rails. Another ornament of the Pont Neuf is the Samaritaine, a building three ſtories high, in which is an engine that ſupplies ſome parts of the city with water. It is thus named from there being in the front a groupe of figures repreſenting the ſtory of Chriſt and the Samaritan woman.

Another bridge, called the Pont au Change, has a ſtatue of Lewis XIV. in braſs; and both this and the bridge of Notre Dame, on which are alſo water-works, have each two rows of houſes upon them; thoſe of the firſt being four, and of the laſt two ſtories high.

In the above iſland ſtands the cathedral of Notre Dame, which is a large and Gothic ſtructure, three hundred and ninety-ſix feet long, a hundred and forty broad, and a hundred and two in height: on the inſide are four rows of pillars, thirty in a row, with forty-five chapels, built between the outermoſt rows and the wall. The pillars in the nave of the church are adorned with large and beautiful pictures; and the choir was ſplendidly repaired and beautified by Lewis XIV. It has a ſmall ſpire in the middle, and at the weſt end two ſquare towers three hundred and eighty ſteps high; theſe are flat at the top, with a baluſtrade of free ſtone, whence you have a noble proſpect of the city and the neighbouring country. In one of theſe towers are two large bells, one of which weighs forty thouſand, and the other thirty-one thouſand pounds.

Near this ſtructure ſtands the palace of the archbiſhop, in one of the halls of which is the library of the advocates, founded for the public uſe. There are alſo in the iſland a great number of pariſh-churches.

To the north of theſe iſlands ſtands that diviſion called Le Ville, or the Town, which is daily beautified by rebuilding the old houſes. On the eaſt is the arſenal near the river, which conſiſts of ſeveral courts, and has beautiful walks in the garden near the city wall; and towards the north-eaſt is the Baſtile, a kind of fortreſs conſiſting of eight large round towers, joined together by other ſtrong buildings, and ſurrounded with ditches and baſtions. It is a priſon for ſtate criminals, and here the king keeps a governor, a lieutenant, and an independent company of ſoldiers.

Among the moſt conſiderable palaces in Paris, that of the Louvre is eſteemed the principal ornament of the city. It is commonly divided into the Old and New. The old part of this royal palace was begun to be built with ſtone by Francis I. in 1528, and was finiſhed by Henry II. in 1548. Succeeding kings improved and enlarged it, till Lewis XIV. ordered it to be rebuilt on a new plan, which, if completed, would have rendered it a moſt magnificent ſtructure. The plan of the whole building forms an equilateral quadrangle, containing a court in the center three hundred and ſeventy-ſix feet ſquare. The principal of the four main wings was built by Lewis XIV. as alſo the greateſt part of the two others, which form the ſides, together with a new front to that part which lies next the Seine. The four inner fronts, according to the plan, were to have conſiſted of eight pavilions, and eight *corps de logis*. The whole building is three ſtories high in the new part; the firſt of the Corinthian order, the ſecond of the Compoſite, and the third of the Attic.

In the hall of the hundred Swiſs is a kind of gallery ſupported by four gigantic figures. In this hall great entertainments were given, and queen Catharine of Medicis cauſed plays and interludes to be exhibited there for the amuſement of the court. Henry IV. built a gallery along the river ſide quite to the Tuilleries, which is reckoned the fineſt in Europe; and under it is the royal printing-houſe.

At ſome diſtance behind the Louvre ſtands the palace called the Tuilleries, built in 1564 by order of queen Catharine de Medicis, in a place where they formerly made tiles, in French *tuilles*, from which the palace takes its name; and this ſtructure was alſo improved by Lewis XIV. It is one range of building, with a dome in the middle, and a pavilion at each end. Before it is a handſome large ſpace divided into three courts; the whole adorned with columns, pilaſters, and other ornaments. Behind this palace are pleaſant gardens adorned with fine walks, planted with evergreens and other trees, with beautiful parterres, where may be ſeen all the year round every flower in ſeaſon. It has alſo three beautiful fountains, and a large octogonal canal. Towards the river is a fine terrace planted with three rows of trees, above a hundred perches long and eighty-four broad,

broad, and from this terrace is a moſt beautiful proſpect over the adjacent country. Theſe gardens are public, and great numbers of well dreſſed people in ſummer evenings reſort thither. All who wear a black bag and a ſword are permitted to walk here, though all their other cloaths are not worth a crown.

On the bank of the river beyond the Tuilleries, is the place called le Cours, compoſed of four rows of elms, eighteen hundred paces in length, forming three avenues that are all together a hundred and twenty feet in breadth; that in the middle is the broadeſt, and has room for ſix coaches to paſs a-breaſt. In the midſt of the Cours is a large ring, encompaſſed with trees at the ſame diſtance from each other as in the other parts of the walks.

The palace of Luxemburg was built by queen Mary de Medicis, on the ruins of the old hôtel of Luxemburg, which name it has retained. It is one of the moſt perfect and regular pieces of architecture in all France. Here is a gallery of fine paintings done by the celebrated Rubens, who ſpent two years in that work. It conſiſts of the hiſtory of the life of Mary de Medicis, repreſented allegorically in twenty-four large pictures, nine feet broad and ten feet high, placed in the piers between the windows. The other apartments are alſo richly furniſhed, and adorned with a fine collection of valuable paintings. The gardens of this palace are elegantly laid out, and ornamented with fountains. They are daily viſited in ſummer-time by the nobility and others, like thoſe of the Tuilleries; but more eſpecially on Sundays, when ſeveral thouſands of all ranks make their appearance there. It is here the cuſtom for the gentlemen and ladies of the firſt quality, though richly dreſſed, to ſit down to diſcourſe on the graſs.
